Changes in this release include the following:

- 1) Lisabug has been modified to use only 512 bytes of global data.
- 2) The Monitor and Sysmgr have been modified to support Lisa 1.5 (Lisa with Built-In Profile).

The I/O slots are assigned as follows:

	<u>Lisa 1.0</u>		<u>Lisa 1.5</u>
Slot 1	Free	Slot 1	Apple PIA Card
Slot 2	4 or 2 port card	Slot 2	4 or 2 port card
Slot 3	Apple PIA card	Slot 3	Built-In Profile

Note: The device numbers are unchanged for Lisa 1.0. For Lisa 1.5 the third port on the 4 port card has been used for the Built-In Profile (ie. device &6).

Note: To use this boot disk with Lisa 1.5 replace the file CONFIG.DATA with a copy of CONFIG1.5.DATA and then boot.
