

The AP Instrument Rental Program

The latest AP technology at low upfront cost

AP's Instrument Rental program allows audio R&D, production test engineers and sound design academics in the USA to rent or lease Audio Precision instruments on a month-to-month basis with the option to buy the unit at the end of the rental period.

The new rental program gives audio engineers access to the latest AP technology at a low upfront cost. Available instruments include the new APx585 multichannel audio analyzer; the 2700 Series, the highest performance analyzer in the industry; the general-purpose ATS-2; and the Portable One or ATS-1 audio analyzers.

The minimum rental period is one month; longer-term leases can also be arranged. New and used instruments are available for rent or lease.

AP's program offers several benefits over third-party leasing firms including a larger selection of available models, factory-certified instruments, full factory warranty, and free tech support for the life of the rental agreement.

Contact your local Audio Precision Sales Partner or visit www.ap.com/rentals today for more information.

The AP Instrument Rental Program Advantage

- The latest audio analyzer technology with no commitment and low upfront cost
- Delivery within days of agreement
- Factory-certified instrument
- Full warranty for every instrument
- Free tech support for the life of the rental agreement

Low cost for short-term projects

R&D departments often have short term projects that require an audio analyzer but don't justify the purchase of a new piece of equipment. Production lines sometimes require extra testing units to meet a temporary jump in production numbers. In either case renting a unit makes more sense than outright purchase.

Lease-to-own for easier cash flow management

Capital expenditures can take months to approve through the corporate budgeting process. Renting gets the instrument on the bench in days with an extremely low upfront cost. Your accounting department can consider the rental as an expense rather than a capital asset and partial rental payments are credited towards the total price if you decide to buy the unit at the end of the rental agreement.

Long-term evaluation with no commitment

Choosing which audio analyzer to purchase is not an easy decision. Those who desire a long-term evaluation before committing to a purchase can compare models side-by-side with no time-limit or obligation to buy.

All backed by Audio Precision, maker of the highest performance audio test and measurement equipment in the world for over twenty years.

Instruments available through the program

APx585 Multichannel Audio Analyzer

The APx585 is a true 8-channel audio analyzer that is fast and easy-to-use. Capable of taking 14 measurements in 14 seconds across 8 channels. Designed for R&D or production test users who need speed and ease-of-use and multiple channel capability.

2700 Series Dual Domain Audio Analyzer

The 2700 Series is designed for audio engineers who need the highest performance, lowest distortion and greatest flexibility possible in their audio analyzer. It has the best performance of any audio analyzer in the world.

ATS-2 Audio Analyzer

The ATS-2 is a general-purpose audio analyzer well suited to the design lab, broadcast facility or production line—anywhere you need high-precision, feature-rich audio test and measurement.

Portable One Dual Domain Self-Contained Audio Analyzer

Portable One audio analyzers offer a complete, easy-to-use audio test set housed in a rugged fan-cooled clamshell case ideal for maintenance, engineering and production facilities.

ATS-1 Self-Contained Audio Analyzer

Designed for rack-mount and production applications, the ATS-1 offers the same measurement functionality and ease of use as an equivalent Portable One, but is housed in a fan-cooled metal case, designed for front or rear modular connector placement and rack mounting.

Notes

- The AP Instrument Rental program is available only to US-based customers
- Leases or rental agreements are available
