

DEALER NOTICE

For aircraft types not listed on
the **Approved Model List**,
please review your intended
certification basis
(STC or Field Approval)
with the FAA prior to
initiating installation.

Avidyne has secured a Supplemental Type Certificate with an Approved Model List (AML). A copy of the AML can be found on the Avidyne website at www.avidyne.com. If you are seeking installation approval of the EX500 on an aircraft type not listed on the AML, traditional approval methods apply (STC or Field Approval). This STC is primarily suited for the use as the certification basis for reciprocating engine and single-turbine engine aircraft under 6,000 lbs maximum weight. Avidyne urges installers to secure agreement of the installation approval basis from the FAA prior to initiating any aircraft modifications. This can reduce any unnecessary aircraft down time associated with gaining FAA approval of installation related data. FAA Policy Statement, PS-ACE100-2002-002, gives background on the AML STC and its applicability.
