

Ready Track Quick Reference Guide

Manual Emergency Lower

May be used in event of power failure or lift malfunction.

Auxiliary UP/ DOWN switches

May be used in event Handset does not operate.

L.E.D. Panel

POWER - GREEN light indicates power ON.

DIAGNOSTIC - Flashes RED in various sequences indicating various internal trouble situations. Solid RED light indicates low battery condition. Battery should be charged immediately.

CHARGING - Yellow indicates active charging. GREEN indicates fully charged.

Auxiliary POWER/ Emergency DOWN switches

For use if Handset has malfunctioned.

EMERGENCY DOWN may be used to lower patient in event of malfunction in lift circuitry.

Power ON/OFF

UP/DOWN

Handset

RETURN-TO-CHARGE

Press button until beeping stops (approx. 3 - 5 seconds). Lift will raise carrybar then travel horizontally to charger docking station.

NOTE: Ensure obstacles are cleared from path prior to operating this feature.

Emergency OFF Pull Cord Switch

If lift does not operate and POWER LED does not light, pull cord once gently to turn power ON.

May be used to cut power to lift entirely in an urgent situation.

POWER TRAVERSE

Press either RIGHT or LEFT button to move the lift horizontally along the track.

NOTE: Ensure path is free from obstructions while operating this feature.

1

Select and position the sling around the patient according to the appropriate sling application instructions.

2

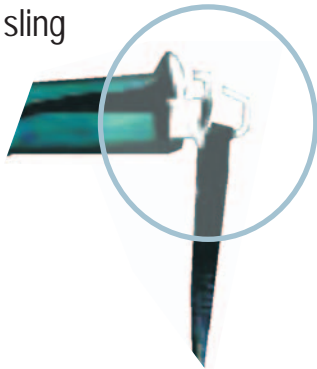

Using the TRAVERSE buttons on the handset, position the carrybar directly above the patient

Lower the carrybar (DOWN button on handset) to the patient.

**3**

Attach the sling loops to the carrybar so the patient is properly positioned.

**4**

Raise the patient (UP button on the handset). As the carrybar raises, check to ensure the straps are firmly in place.

**5**

Using the TRAVERSE buttons, move the patient horizontally along the track to desired position.

Use the DOWN button on the handset to lower the patient to the surface. Use the grab handles on the sling to help position the patient as they are lowered. Continue to lower until all straps are slack.

**6**

Remove the straps from the carrybar and raise the carrybar out of the way (UP button on handset). Ensuring all obstacles are cleared from its path, press and hold the "RTC" button (if applicable) for 5 seconds. The lift will automatically lift the carrybar all the way. Return to its charging position on the track.
