

## 767 MAINTENANCE PLANNING DATA

### APPENDIX G. STRUCTURES AND FATIGUE CROSS-REFERENCE INDEXES

The “Structures and Fatigue Cross-Reference Indexes” contained herein, Appendix G, contains the cross-references from the old numbering scheme to the new numbering scheme. These indexes will assist an operator to smoothly transition between the two different numbering schemes.

This renumbering effort came about as a recommendation from the Air Transport Association (ATA).

#### **Current MPD Number**

This is the new Task Number in the new numbering scheme, which was implemented in the August 2005 revision of the MPD, and corresponds exactly to the Task Number in the April 2004 revision of the MRB. This number incorporates one or more tasks from the old CPCP and/or Structures Program into the new program. Performing the new task precludes all the corresponding CPCP and Structures Tasks from the old program.

#### **Integrated CPCP Task**

The Integrated CPCP Task corresponds to the CPCP Task that has transitioned into a Zonal Task or a new Structures Task.

#### **Integrated Structures Task**

The Integrated Structures Task corresponds to the Structures Task of the old numbering scheme that has transitioned into a Zonal Task or a new Structures Task.

#### **Precluding Zonal Task**

The Precluding Zonal Task corresponds to the Zonal Task that is precluding CPCP Tasks and/or Structures Tasks of the old program.
