DESCRIPTION

The ENDEVCO® Model 7221A is a small, piezoelectric accelerometer designed specifically for general vibration measurement. The accelerometer offers wide bandwidth and operational temperature range, it is also hermetically sealed for high reliability. Its light weight (10.5 gm) effectively minimizes mass loading effects on small structures. This accelerometer is a self-generating device that requires no external power source for operation.

The Model 7221A features ENDEVCO's PIEZITE® Type P-8 crystal element, operating in annular shear mode, which exhibits low base strain sensitivity and excellent output stability over time. Signal ground is connected to the outer case of the unit. When used with an isolated mounting screw, it is electrically isolated from ground. The centrally located mounting bolt permits 360° cable orientation, a very desirable feature in many applications. The supplied low-noise coaxial cable is required for error-free operation.

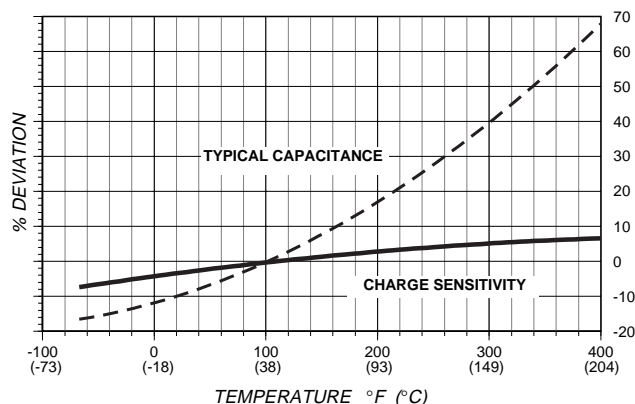

ENDEVCO Signal Conditioner Models 133, 2775A or OASIS 482A, 433, 428 are recommended for use with this accelerometer.

NOTES

- Low-end response of the transducer is a function of its associated electronics.
- Short duration shock pulses, such as those generated by metal-to-metal impacts, may excite transducer resonance and cause linearity errors. Send for TP290 for more details.
- Mounting torque for use with optional mounting screws, or

equivalent 6-32 screw.

- Maintain high levels of precision and accuracy using Endevco's factory calibration services. Call Endevco's inside sales force at 800-982-6732 for recommended intervals, pricing and turn-around time for these services as well as for quotations on our standard products.
