

# Mink MI 2124 – 2122 BV

# Description

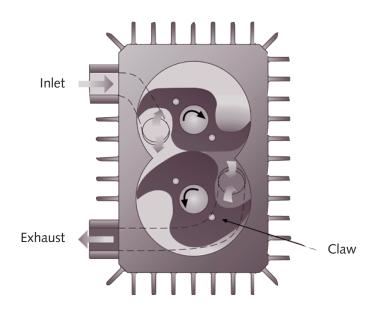

The Busch Mink MI BV Series positive displacement vacuum pumps feature a compact rotary claw design that is air-cooled, dry-running and non-contacting. These features along with quality construction results in a pump that offers extremely high reliability and a long service life.

### **Features**

- Two stages for operation at vacuum levels to 29.3" HgV
- Non-contacting design
- Dry (oil-free) pumping chamber
- Air-cooled
- Low maintenance no wear in pumping chamber
- Simple, modular construction
- Suitable for variable speed applications
- Discharge silencer
- Suitable for dusty environments

# **Dry Rotary Claw Vacuum Pumps**

## **Operating Principle**

#### **Operating Principle**

Inside the first stage pump housing, two claw shaped rotors take in air as they rotate in opposite directions. The air is compressed by the rotors, then delivered to the second stage pump housing where it is compressed to a deeper level, then discharged through a silencer to atmosphere. The non-return valve incorporated into the inlet

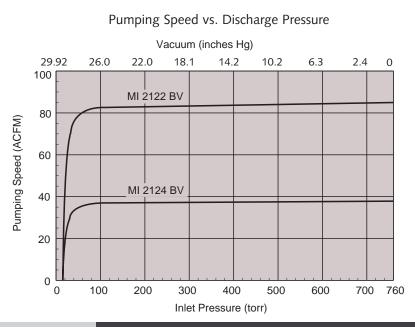

flange prevents air from back flowing into the pumping chamber when the pump is turned off. Mink MI dry rotary claw direct drive pumps are driven by a C-face motor, and the two rotors are synchronized by gears. A wide range of accessories allows optimum adaptation to many applications.

## **Applications**

- Wood Industry
- Pneumatic conveying
- Transport and lifting systems
- Medical technology
- Central vacuum systems
- Packaging industry
- Plastics industry
- Food industry
- Printing industry
- Ceramics and brick industry
- Environmental technology
- Vacuum sewage
- Textile industry
- Paper industry
- Beverage industry

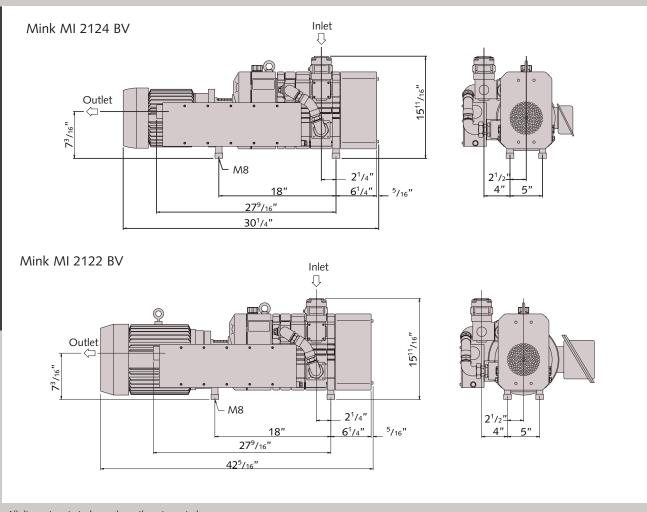

# **Technical Data**

| Technical Data<br>Model MI (Vacuum) |        | 2124 BV                       | 2122 BV |  |
