Subject:

Release of Send Setup Tool v2.02

Details:

Launching Send Setup Tool after attaching a dongle first time, which is as it was shipped from the factory, causes the initialization of the data. If you disconnect the dongle from the workstation during the initialization, the initialization stops and the data of dongle become improper, thus the data cannot be used any longer.
To avoid this problem, "**Initializing the Protect Key Device... Please don't remove it**" message came to be displayed in Send Setup Tool v2.02.
