
Model : Network Printer Board-F1

Number: FF-T01-V1-000088-01

(00-OIPD0-B0051)

Date : May 22, 2000

© Canon (UK) Limited

Location : System Software

Subject : Patch File 1-G5SH Release

Reason :

Since Canon USA reported on a market claim, that in printing via Netware in connecting Finisher-D1, Banner Page and the print job are printed out to different Trays, "Patch file 1-G5SH.ps" to correct this defect and "Patch File 1-G5SHR.ps" to delete the patch file will be released.

Detail :

In printing via Netware with "Banner Page = On", in connecting Finisher-D1, Banner Page is printed out to Tray A, and the print job is printed out to Tray B.

(Cause)

In internal processing of Network Printer Board-F1, Banner Page and a print job are interpreted as different jobs. The print job is regarded as "sort job" and printed out to Tray B, and Banner Page is regarded as "non-sort job" and printed out to Tray A.

(Measures)

By installing this patch, Banner Page is changed to be regarded as "sort job".

Installation Notes :

Followings are the steps for a correct Installation of patch 1-G5SH.ps:

Download the file 1-G5SH.PS with Fiery Downloader to the Direct queue or Print Queue, and reboot the controller.

When the controller is back in idle state, check if the string "1-G5SH" appears on the config page under the section Update Information.

Followings are the steps for removal of the patch:

Download the file 1-G5SHR.PS with Fiery Downloader to the Direct queue or Print Queue, and reboot the controller.

When the controller is back in idle state, check if the string "r.1-G5SH" appears on the config page under the section Update Information.

Remarks :

- (1) The system software to which this patch can be applied is "v2.0".
- (2) In connecting Saddle Finisher-D2, the same phenomenon occurs if the output Tray of Print job is assigned to "Tray A/B".
