                                1.0   GENERAL INFORMATION

                                1.1   PROGRAM ABSTRACT

                                THIS DIAGNOSTIC REPRESENT A FUNCTIONAL TEST FOR THE KMS11-K
                                OPTION. KMS11-K PROVIDES A HIGH SPEED LINK BETWEEN UNIBUS
                                AND RS422 SIGNALS. THE KMS11-K OPTION CONSISTS OF TWO MODULES:
                                THE KMC11-B MICROPROCESS MODULE AND THE M8935 RS422 LINE
                                UNIT MODULE THAT CAN BE ACCESSED ONLY THROUGH KMC11-B BUT
                                NOT THE UNIBUS.

                                THIS DIAGNOSTIC HAS BEEN WRITTEN FOR USE WITH THE DIAGNOSTIC
                                RUNTIME SERVICES SOFTWARE (SUPERVISOR).  THESE SERVICES PROVIDE
                                THE INTERFACE TO THE OPERATOR AND TO THE SOFTWARE ENVIRONMENT.
                                THIS PROGRAM CAN BE USED WITH XXDP+, ACT, APT, SLIDE AND PAPER
                                TAPE.  FOR A COMPLETE DESCRIPTION OF THE RUNTIME SERVICES, REFER
                                TO THE XXDP+ USER'S MANUAL.  THERE IS A BRIEF DESCRIPTION OF
                                THE RUNTIME SERVICES IN SECTION 2 OF THIS DOCUMENT.

                                1.2   SYSTEM REQUIREMENTS

                                PDP-11 TYPE UNIBUS PROCESSOR
                                MINIMUM OF 16K OF MEMORY
                                LOAD DEVICE
                                CONSOLE TERMINAL
                                KMC11-B MICROPROCESSOR WITH CABLE FOR LINE UNIT
                                M8935 LINE UNIT WITH OPTIONAL LOOPBACK CABLE

                                1.3   RELATED DOCUMENTS AND STANDARDS

                                XXDP+ USER'S MANUAL - CHQUS
                                KMS11-K FUNCTIONAL SPECIFICATION
                                EVDIN VAX LEVEL 3 STANDALONE DIAGNOSTIC FROM WHICH THIS
                                                ONE WAS TRANSLATED

                                1.4   DIAGNOSTIC HIERARCY PREREQUISITES

                                THE DIAGNOSTIC ASSUMES THAT THE MAIN PROCESSOR, MEMORY, LOAD
                                DEVICE AND CONSOLE TERMINAL ARE FUNCTIONAL. THE DIAGNOSTIC
                                DOES NOT FULLY VERIFY THE KMC11-B MODULE, ONLY THE FUNCTIONS
                                RELATED TO THE OPERATION OF THE LINE UNIT ARE TESTED.

                                1.5   ASSUMPTIONS

                                2.0   OPERATING INSTRUCTIONS

                                THIS SECTION CONTAINS A BRIEF DESCRIPTION OF THE RUNTIME SERVICES.
                                FOR DETAILED INFORMATION, REFER TO THE XXDP+ USER'S MANUAL (CHQUS).
```

2.1 COMMANDS

THERE ARE ELEVEN LEGAL COMMANDS FOR THE DIAGNOSTIC RUNTIME SERVICES (SUPERVISOR). THIS SECTION LISTS THE COMMANDS AND GIVES A VERY BRIEF DESCRIPTION OF THEM. THE XXDP+ USER'S MANUAL HAS MORE DETAILS.

COMMAND	EFFECT
START	START THE DIAGNOSTIC FROM AN INITIAL STATE
RESTART	START THE DIAGNOSTIC WITHOUT INITIALIZING
CONTINUE	CONTINUE AT TEST THAT WAS INTERRUPTED (AFTER ↑C)
PROCEED	CONTINUE FROM AN ERROR HALT
EXIT	RETURN TO XXDP+ MONITOR (XXDP+ OPERATION ONLY!)
ADD	ACTIVATE A UNIT FOR TESTING (ALL UNITS ARE CONSIDERED TO BE ACTIVE AT START TIME
DROP	DEACTIVATE A UNIT
PRINT	PRINT STATISTICAL INFORMATION (IF IMPLEMENTED BY THE DIAGNOSTIC - SECTION 4.0)
DISPLAY	TYPE A LIST OF ALL DEVICE INFORMATION
FLAGS	TYPE THE STATE OF ALL FLAGS (SEE SECTION 2.3)
ZFLAGS	CLEAR ALL FLAGS (SEE SECTION 2.3)

A COMMAND CAN BE RECOGNIZED BY THE FIRST THREE CHARACTERS. SO YOU MAY, FOR EXAMPLE, TYPE "STA" INSTEAD OF "START".

2.2 SWITCHES

THERE ARE SEVERAL SWITCHES WHICH ARE USED TO MODIFY SUPERVISOR OPERATION. THESE SWITCHES ARE APPENDED TO THE LEGAL COMMANDS. ALL OF THE LEGAL SWITCHES ARE TABULATED BELOW WITH A BRIEF DESCRIPTION OF EACH. IN THE DESCRIPTIONS BELOW, A DECIMAL NUMBER IS DESIGNATED BY "DDDDD".

SWITCH	EFFECT
/TESTS:LIST	EXECUTE ONLY THOSE TESTS SPECIFIED IN THE LIST. LIST IS A STRING OF TEST NUMBERS, FOR EXAMPLE - /TESTS:1:5:7 10. THIS LIST WILL CAUSE TESTS 1,5,7,8,9,10 TO BE RUN. ALL OTHER TESTS WILL NOT BE RUN.
/PASS:DDDDD	EXECUTE DDDDD PASSES (DDDDD = 1 TO 64000)
/FLAGS:FLGS	SET SPECIFIED FLAGS. FLAGS ARE DESCRIBED IN SECTION 2.3.
/EOP:DDDDD	REPORT END OF PASS MESSAGE AFTER EVERY DDDDD PASSES ONLY. (DDDDD = 1 TO 64000)
/UNITS:LIST	TEST/ADD/DROP ONLY THOSE UNITS SPECIFIED IN THE LIST. LIST EXAMPLE - /UNITS:0:5:10-12 USE UNITS 0,5,10,11,12 (UNIT NUMBERS = 0-63)

EXAMPLE OF SWITCH USAGE:

```
START/TESTS:1-5/PASS:1000/EOP:100
```

THE EFFECT OF THIS COMMAND WILL BE: 1) TESTS 1 THROUGH 5 WILL BE EXECUTED, 2) ALL UNITS WILL TESTED 1000 TIMES AND 3) THE END OF PASS MESSAGES WILL BE PRINTED AFTER EACH 100 PASSES ONLY. A SWITCH CAN BE RECOGNIZED BY THE FIRST THREE CHARACTERS. YOU MAY,

SEQ 0005

FOR EXAMPLE, TYPE "/TES:1-5" INSTEAD OF "/TESTS:1-5".

BELOW IS A TABLE THAT SPECIFIES WHICH SWITCHES CAN BE USED BY EACH COMMAND.

	TESTS	PASS	FLAGS	EOP	UNITS
START	X	X	X	X	X
RESTART	X	X	X	X	X
CONTINUE		X	X	X	
PROCEED			X		
DROP					X
ADD					X
PRINT					
DISPLAY					X
FLAGS					
ZFLAGS					
EXIT					

2.3 FLAGS

FLAGS ARE USED TO SET UP CERTAIN OPERATIONAL PARAMETERS SUCH AS LOOPING ON ERROR. ALL FLAGS ARE CLEARED AT STARTUP AND REMAIN CLEARED UNTIL EXPLICITLY SET USING THE FLAGS SWITCH. FLAGS ARE ALSO CLEARED AFTER A START COMMAND UNLESS SET USING THE FLAG SWITCH. THE ZFLAGS COMMAND MAY ALSO BE USED TO CLEAR ALL FLAGS. WITH THE EXCEPTION OF THE START AND ZFLAGS COMMANDS, NO COMMANDS AFFECT THE STATE OF THE FLAGS; THEY REMAIN SET OR CLEARED AS SPECIFIED BY THE LAST FLAG SWITCH.

FLAG	EFFECT
HOE	HALT ON ERROR - CONTROL IS RETURNED TO RUNTIME SERVICES COMMAND MODE
LOE	LOOP ON ERROR
IER*	INHIBIT ALL ERROR REPORTS
IBE*	INHIBIT ALL ERROR REPORTS EXCEPT FIRST LEVEL (FIRST LEVEL CONTAINS ERROR TYPE, NUMBER, PC, TEST AND UNIT)
IXE*	INHIBIT EXTENDED ERROR REPORTS (THOSE CALLED BY PRINTX MACRO'S)
PRI	DIRECT MESSAGES TO LINE PRINTER
PNT	PRINT TEST NUMBER AS TEST EXECUTES
BOE	"BELL" ON ERROR
UAM	UNATTENDED MODE (NO MANUAL INTERVENTION)
ISR	INHIBIT STATISTICAL REPORTS (DOES NOT APPLY TO DIAGNOSTICS WHICH DO NOT SUPPORT STATISTICAL REPORTING)
IDR	INHIBIT PROGRAM DROPPING OF UNITS
ADR	EXECUTE AUTODROP CODE
LOT	LOOP ON TEST
EVL	EXECUTE EVALUATION (ON DIAGNOSTICS WHICH HAVE EVALUATION SUPPORT)

*ERROR MESSAGES ARE DESCRIBED IN SECTION 3.1

SEQ 0006

SEE THE XXDP+ USER'S MANUAL FOR MORE DETAILS ON FLAGS. YOU MAY SPECIFY MORE THAN ONE FLAG WITH THE FLAG SWITCH. FOR EXAMPLE, TO CAUSE THE PROGRAM TO LOOP ON ERROR, INHIBIT ERROR REPORTS AND TYPE A "BELL" ON ERROR, YOU MAY USE THE FOLLOWING STRING:

```
/FLAGS:LOE:IER:BOE
```

2.4 HARDWARE QUESTIONS

WHEN A DIAGNOSTIC IS STARTED, THE RUNTIME SERVICES WILL PROMPT THE USER FOR HARDWARE INFORMATION BY TYPING "CHANGE HW (L) ?" YOU MUST ANSWER "Y" AFTER A START COMMAND UNLESS THE HARDWARE INFORMATION HAS BEEN "PRELOADED" USING THE SETUP UTILITY (SEE CHAPTER 6 OF THE XXDP+ USER'S MANUAL). WHEN YOU ANSWER THIS QUESTION WITH A "Y", THE RUNTIME SERVICES WILL ASK FOR THE NUMBER OF UNITS (IN DECIMAL). YOU WILL THEN BE ASKED THE FOLLOWING QUESTIONS FOR EACH UNIT.

```
# UNIT (D) ?

CSR ADDRESS (O) ?
EXTERNAL LOOPBACK (L) N ?
```

THE FIRST QUESTION REFER TO THE INSTALATION OF THE KMC11-B. THE FIFTH QUESTION REFERS TO THE FACT WHETHER THE DIAGNOSTIC WILL RUN IN EXTERNAL OR INTERNAL LOOPBACK MODE.

2.5 SOFTWARE QUESTIONS

NONE

2.6 EXTENDED P-TABLE DIALOGUE

WHEN YOU ANSWER THE HARDWARE QUESTIONS, YOU ARE BUILDING ENTRIES IN A TABLE THAT DESCRIBES THE DEVICES UNDER TEST. THE SIMPLEST WAY TO BUILD THIS TABLE IS TO ANSWER ALL QUESTIONS FOR EACH UNIT TO BE TESTED. IF YOU HAVE A MULTIPLEXED DEVICE SUCH AS A MASS STORAGE CONTROLLER WITH SEVERAL DRIVES OR A COMMUNICATION DEVICE WITH SEVERAL LINES, THIS BECOMES TEDIOUS SINCE MOST OF THE ANSWERS ARE REPETITIOUS.

TO ILLUSTRATE A MORE EFFICIENT METHOD, SUPPOSE YOU ARE TESTING A FICTIONAL DEVICE, THE XY11. SUPPOSE THIS DEVICE CONSISTS OF A CONTROL MODULE WITH EIGHT UNITS (SUB-DEVICES) ATTACHED TO IT. THESE UNITS ARE DESCRIBED BY THE OCTAL NUMBERS 0 THROUGH 7. THERE IS ONE HARDWARE PARAMETER THAT CAN VARY AMONG UNITS CALLED THE Q-FACTOR. THIS Q-FACTOR MAY BE 0 OR 1. BELOW IS A SIMPLE WAY TO BUILD A TABLE FOR ONE XY11 WITH EIGHT UNITS.

```
# UNITS (D) ?  8<CR>

UNIT 1
CSR ADDRESS (O) ?  160000<CR>
SUB-DEVICE # (O) ?  0<CR>
```

```
300                                     Q-FACTOR (0) 0 ?  1<CR>
301
302                                     UNIT 2
303                                     CSR ADDRESS (0) ?  160000<CR>
304                                     SUB-DEVICE # (0) ?  1<CR>
305                                     Q-FACTOR (0) 1 ?  0<CR>
306
307                                     UNIT 3
308                                     CSR ADDRESS (0) ?  160000<CR>
309                                     SUB-DEVICE # (0) ?  2<CR>
310                                     Q-FACTOR (0) 0 ?  <CR>
311
312                                     UNIT 4
313                                     CSR ADDRESS (0) ?  160000<CR>
314                                     SUB-DEVICE # (0) ?  3<CR>
315                                     Q-FACTOR (0) 0 ?  <CR>
316
317                                     UNIT 5
318                                     CSR ADDRESS (0) ?  160000<CR>
319                                     SUB-DEVICE # (0) ?  4<CR>
320                                     Q-FACTOR (0) 0 ?  <CR>
321
322                                     UNIT 6
323                                     CSR ADDRESS (0) ?  160000<CR>
324                                     SUB-DEVICE # (0) ?  5<CR>
325                                     Q-FACTOR (0) 0 ?  <CR>
326
327                                     UNIT 7
328                                     CSR ADDRESS (0) ?  160000<CR>
329                                     SUB-DEVICE # (0) ?  6<CR>
330                                     Q-FACTOR (0) 0 ?  1<CR>
331
332                                     UNIT 8
333                                     CSR ADDRESS (0)  160000<CR>
334                                     SUB-DEVICE # (0) ?  7<CR>
335                                     Q-FACTOR (0) 1 ?  <CR>
336
337                             NOTICE THAT THE DEFAULT VALUE FOR THE Q FACTOR CHANGES WHEN A
338                             NON-DEFAULT RESPONSE IS GIVEN.  BE CAREFUL WHEN SPECIFYING
339                             MULTIPLE UNITS!
340
341                             AS YOU CAN SEE FROM THE ABOVE EXAMPLE, THE HARDWARE PARAMETERS
342                             DO NOT VARY SIGNIFICANTLY FROM UNIT TO UNIT.  THE PROCEDURE SHOWN IS
343                             NOT VERY EFFICIENT.
344
345                             THE RUNTIME SERVICES CAN TAKE MULTIPLE UNIT SPECIFICATIONS HOWEVER.
346                             LET'S BUILD THE SAME TABLE USING THE MULTIPLE SPECIFICATION
347                             FEATURE.
348
349                                     # UNITS (D) ?  8<CR>
350
351                                     UNIT 1
352                                     CSR ADDRESS (0) ?  160000<CR>
353                                     SUB-DEVICE # (0) ?  0,1<CR>
354                                     Q-FACTOR (0) 0 ?  1,0<CR>
355
356                                     UNIT 3
```

```
                        CSR ADDRESS (O) ?  160000<CR>
                        SUB-DEVICE # (O) ?  2-5<CR>
                        Q-FACTOR (O) O ?  O<CR>

                        UNIT 7
                        CSR ADDRESS (O) ?  160000<CR>
                        SUB-DEVICE # (O) ?  6,7<CR>
                        Q-FACTOR (O) O ?  1<CR>
```

AS YOU CAN SEE IN THE ABOVE DIALOGUE, THE RUNTIME SERVICES WILL BUILD AS MANY ENTRIES AS IT CAN WITH THE INFORMATION GIVEN IN ANY ONE PASS THROUGH THE QUESTIONS. IN THE FIRST PASS, TWO ENTRIES ARE BUILT SINCE TWO SUB-DEVICES AND Q-FACTORS WERE SPECIFIED. THE SERVICES ASSUME THAT THE CSR ADDRESS IS 160000 FOR BOTH SINCE IT WAS SPECIFIED ONLY ONCE. IN THE SECOND PASS, FOUR ENTRIES WERE BUILT. THIS IS BECAUSE FOUR SUB-DEVICES WERE SPECIFIED. THE "-" CONSTRUCT TELLS THE RUNTIME SERVICES TO INCREMENT THE DATA FROM THE FIRST NUMBER TO THE SECOND. IN THIS CASE, SUB-DEVICES 2, 3, 4 AND 5 WERE SPECIFIED. (IF THE SUB-DEVICE WERE SPECIFIED BY ADDRESSES, THE INCREMENT WOULD BE BY 2 SINCE ADDRESSES MUST BE ON AN EVEN BOUNDARY.) THE CSR ADDRESSES AND Q-FACTORS FOR THE FOUR ENTRIES ARE ASSUMED TO BE 160000 AND 0 RESPECTIVELY SINCE THEY WERE ONLY SPECIFIED ONCE. THE LAST TWO UNITS ARE SPECIFIED IN THE THIRD PASS.

THE WHOLE PROCESS COULD HAVE BEEN ACCOMPLISHED IN ONE PASS AS SHOWN BELOW.

```
        # UNITS (D) ?  8<CR>

        UNIT 1
        CSR ADDRESS (O) ?  160000<CR>
        SUB-DEVICE # (O) ?  0 7<CR>
        Q-FACTOR (O) O ?  0,1,0,,,,1,1<CR>
```

AS YOU CAN SEE FROM THIS EXAMPLE, NULL REPLIES (COMMAS ENCLOSING A NULL FIELD) TELL THE RUNTIME SERVICES TO REPEAT THE LAST REPLY.

2.7 QUICK START-UP PROCEDURE (XXDP+)

TO START-UP THIS PROGRAM:

1. BOOT XXDP+

2. GIVE THE DATE AND ANSWER THE LSI AND 50HZ (IF THERE IS A CLOCK) QUESTIONS

3. TYPE "R ZKMVA0", WHERE NAME IS THE NAME OF THE BIN OR BIC FILE FOR THIS PROGRAM

4. TYPE "START"

5. ANSWER THE "CHANGE HW" QUESTION WITH "Y"

6. ANSWER ALL THE HARDWARE QUESTIONS

```
414                     WHEN YOU FOLLOW THIS PROCEDURE YOU WILL BE USING ONLY THE
415                     DEFAULTS FOR FLAGS AND SOFTWARE PARAMETERS.  THESE DEFAULTS
416                     ARE DESCRIBED IN SECTIONS 2.3 AND 2.5.
417
418                     3.0 ERROR INFORMATION
419
420                     3.1 TYPES OF ERROR MESSAGES
421
422                     THERE ARE THREE LEVELS OF ERROR MESSAGES THAT MAY BE ISSUED BY
423                     A DIAGNOSTIC: GENERAL, BASIC AND EXTENDED.  GENERAL ERROR MESSAGES
424                     ARE ALWAYS PRINTED UNLESS THE "IER" FLAG IS SET (SECTION 2.3).
425                     THE GENERAL ERROR MESSAGE IS OF THE FORM:
426
427                             NAME  TYPE  NUMBER  ON UNIT NUMBER  TST NUMBER PC:XXXXXX
428                             ERROR MESSAGE
429
430                     ,WHERE; NAME = DIAGNOSTIC NAME
431                             TYPE = ERROR TYPE (SYS FATAL, DEV FATAL, HARD OR SOFT)
432                             NUMBER = ERROR NUMBER
433                             UNIT NUMBER = 0 - N (N IS LAST UNIT IN PTABLE)
434                             TST NUMBER = TEST AND SUBTEST WHERE ERROR OCCURRED
435                             PC:XXXXXX = ADDRESS OF ERROR MESSAGE CALL
436
437                     BASIC ERROR MESSAGES ARE MESSAGES THAT CONTAIN SOME ADDITIONAL
438                     INFORMATION ABOUT THE ERROR.  THESE ARE ALWAYS PRINTED UNLESS
439                     THE "IER" OR "IBE" FLAGS ARE SET (SECTION 2.3).  THESE MESSAGES
440                     ARE PRINTED AFTER THE ASSOCIATED GENERAL MESSAGE.
441
442                     EXTENDED ERROR MESSAGES CONTAIN SUPPLEMENTARY ERROR INFORMATION
443                     SUCH AS REGISTER CONTENTS OR GOOD/BAD DATA.  THESE ARE ALWAYS
444                     PRINTED UNLESS THE "IER", "IBE" OR "IXE" FLAGS ARE SET (SECTION 2.3).
445                     THESE MESSAGES ARE PRINTED AFTER THE ASSOCIATED GENERAL ERROR
446                     MESSAGE AND ANY ASSOCIATED BASIC ERROR MESSAGES.
447
448                     3.2 SPECIFIC ERROR MESSAGES
449
450                      KMC11-B ERROR MESSAGES
451
452                     KMC11-B NOT PRESENT AT SPECIFIED ADDRESS
453                     CSR REGISTER FAILURE
454                     BRG REGISTER FAILURE
455                     MASTER CLEAR DID NOT INITIALIZE BRG REGISTER

```
                        RNDR FAILED TO SET
                        RNDR FAILED TO CLEAR
                        DT FAILED TO SET
                        DT FAILED TO CLEAR
                        REGISTER ADDRESS UNIQUENESS FAILURE

                        4.0 PERFORMANCE AND PROGRESS REPORTS

                        AT THE END OF EACH PASS, THE PASS COUNT IS GIVEN ALONG WITH THE
                        TOTAL NUMBER OF ERRORS REPORTED SINCE THE DIAGNOSTIC WAS STARTED.
                        THE "EOP" SWITCH CAN BE USED TO CONTROL HOW OFTEN THE END
                        OF PASS MESSAGE IS PRINTED.  SECTION 2.2 DESCRIBES SWITCHES.

                        5.0 DEVICE INFORMATION TABLES

                        P TABLE CONTAINS CSR ADDRESS AND MODE OF OPERATION FLAG
                        (EXTERNAL OR INTERNAL LOOPBACK).

                        6.0 TEST SUMMARIES

                    6.1   TEST 1

                    SUBTEST 1

                          THIS SUBTEST IS USED TO CHECK WHETHER THE UNIBUS CAN
                          BE RESET AND THE UNIBUS STATUS REGISTER CLEARED.

                          ERRORS:

                                KMC11 NOT PRESENT AT SPECIFIED ADDRESS

                    SUBTEST 2

                          VERIFY THAT CSR'S CAN BE WRITTEN WITH
                          FLOATING 1 PATTERN

                           ERRORS:

                                CSR REGISTER FAILURE

                    6.2   TEST 2

                    SUBTEST 1

                          THIS SUBTEST VERIFIES CRAM ON KMC11 B BY WRITING AND READING
                          EVERY LOCATION WITH FLOATING 0'S PATTERN

                           ERRORS:

                                CRAM  ERROR
```

```
528                             SUBTEST 2
529
530                                   THIS SUBTEST VERIFIES THAT BRG CAN BE LOADED
531                                   WITH A UNIQUE DATA PATTERN AND THAT MASTER
532                                   CLEAR CLEARS BRG.
533
534                                    ERRORS:
535
536                                          BRG ERROR
537
538
539                           SUBTEST 3
540
541                                   THIS SUBTEST VERIFIES KMC11-B DATA MEMORY.
542                                   MEMORY IS TESTED WITH FLOATING 0 PATTERN.
543
544                                    ERRORS:
545
546                                          DATA RAM ERROR
547
548                           6.3   TEST 3
549
550                                   THIS CHECKS VALIDATES THAT ALL REGISTERS ARE ZERO AFTER
551                                   MASTER CLEAR EXCEPT FOR  MAINT REGISTER BIT 2 WHICH IS
552                                   CABLE OK BIT.
553
554
555                           SUBTEST 1
556
557                                 THIS TEST VEFIRIES THAT MAINT REGISTER IS ZERO
558                                 AFTER ISSUING MASTER CLEAR EXCEPT FOR CABLE OK BIT
559
560                                 SUBTEST STEPS:
561
562                                 1. ISSUE MASTER CLEAR
563                                 2. VERIFY MAINT TO BE A ZERO EXCEPT FOR CABLE OK BIT
564
565                                  ERRORS:
566
567                                        CABLE OK IS CLEAR
568                                        MASTER CLEAR FAILED TO INITIALIZE REGISTERS
569
570                           SUBTEST 2
571
572                                 THIS SUBTEST VERIFIES THAT THE MODULE CAN BE PUT IN
573                                 LOOPBACK MODES.
574
575                                  SUBTEST STEPS:
576
577                                 1. WRITE MAINT REGISTER WITH BITS 3,4 SET
578                                 2. VERIFY ITS PRESENSE
579                                 3. VERIFY THAT MASTER CLEAR CLEARS BITS 3,4
580
581                                  ERRORS:
582
583                                        INTERNAL LOOPBACK FAILED TO SET
584                                        INTERNAL LOOPBACK FAILED TO CLEAR
```

```
                                        EXTERNAL LOOPBACK FAILED TO SET
                                        EXTERNAL LOOPBACK FAILED TO CLEAR
                                        MASTER CLEAR FAILED TO INITIALIZE REGISTERS

                                SUBTEST 3

                                     THIS TEST VEFIRIES THAT DATA_LO BYTE REGISTER IS ZERO
                                     AFTER ISSUING MASTER CLEAR.

                                      SUBTEST STEPS:

                                     1. ISSUE MASTER CLEAR
                                     2. SET UP MAINTENANCE MODE ACCORDING TO EVENT FLAG
                                     3. VERIFY DATA_LO TO BE A ZERO

                                      ERRORS:

                                            MASTER CLEAR FAILED TO INITIALIZE REGISTERS

                                SUBTEST 4

                                     THIS TEST VEFIRIES THAT DIN_HI BYTE REGISTER IS ZERO
                                     AFTER ISSUING MASTER CLEAR.

                                      SUBTEST STEPS:

                                     1. ISSUE MASTER CLEAR
                                     2. SET UP MAINTENANCE MODE ACCORDING TO EVENT FLAG
                                     3. VERIFY DIN_HI TO BE A ZERO

                                      ERRORS:

                                            MASTER CLEAR FAILED TO INITIALIZE REGISTERS

                              SUBTEST 5

                                     THIS TEST VEFIRIES THAT CONTROL REGISTER IS ZERO
                                     AFTER ISSUING MASTER CLEAR.

                                      SUBTEST STEPS:

                                     1. ISSUE MASTER CLEAR
                                     2. SET UP MAINTENANCE MODE ACCORDING TO EVENT FLAG
                                     3. VERIFY CONTROL TO BE A ZERO

                                      ERRORS:

                                            MASTER CLEAR FAILED TO INITIALIZE REGISTERS

                              6.4   TEST 4
```

```
642                     THIS TEST VERIFIES THAT THE MODULE UNDER TEST CAN
643                     SEND AND RECEIVE DATA IN INTERNAL LOOPBACK PROPERLY.
644
645                     ALL SUBTESTS WILL RUN IN EITHER INTERNAL OR EXTERNAL
646                     LOOPBACK MODE DEPENDING ON WHETHER THE EVENT FLAG IS
647                     SET.
648
649
650
651
652             SUBTEST 1
653
654                     THIS SUBTEST VERIFIES THAT THE MODULE THE DATA_LO BYTE REGISTER
655                     CAN BE WRITTEN TO AND READ FROM IN LOOPBACK MODE.
656
657                      SUBTEST STEPS:
658
659                     1. SET UP LOOPBACK MODE ACCORDING TO EVENT FLAG
660                     2. WRITE/VERIFY FLOATING 0 PATTERN IN DATA_LO REGISTER
661                     3. VERIFY THAT MASTER CLEAR CLEARS DATA_LO
662
663                      ERRORS:
664
665                             DATA PATH ERROR
666                             MASTER CLEAR FAILED TO INITIALIZE REGISTERS
667
668
669             SUBTEST 2
670
671                     THIS SUBTEST VERIFIES THAT THE MODULE THE DATA_HI BITS 5 THROUGH 0
672                     CAN BE WRITTEN TO AND READ FROM IN A LOOPBACK MODE.
673
674                      SUBTEST STEPS:
675
676                     1. SET LOOPBACK MODE ACCORDING TO EVENT FLAG 3
677                     2. WRITE/VERIFY FLOATING 0 PATTERN IN DATA_HI<5-0> REGISTER
678                     3. VERIFY THAT MASTER CLEAR CLEARS DATA_HI
679
680                     ERRORS:
681
682                             DATA PATH ERROR
683                             MASTER CLEAR FAILED TO INITIALIZE REGISTERS
684
685             SUBTEST 3
686
687                     THIS SUBTEST VERIFIES THAT THE MODULE THE DATA_HI<7,6> BYTE REGISTER
688                     CAN BE WRITTEN TO AND READ FROM CONTROL REGISTER IN A
689                     LOOPBACK MODE.
690
691                      SUBTEST STEPS:
692
693                     1. SET LOOPBACK MODE ACCORDING TO EVENT FLAG 3
694                     2. WRITE/VERIFY FLOATING 0 PATTERN IN DATA_HI<7,6> BY READING
695                             THEM BACK THROUGH CONTROL REGISTER BITS 0 AND 1
696                     3. VERIFY THAT MASTER CLEAR CLEARS CONTROL REGISTSTER
697
698                     ERRORS:
```

```
699
700                                     DATA PATH ERROR

702
703
704
705                             SUBTEST 4
706
707                                 THIS SUBTEST VERIFIES THAT THE MODULE THE DATA_HI REGISTER
708                                 BITS 7 AND 6 CAN BE READ FROM BY WRITING TO EXTRA REGISTER
709                                 IN A LOOPBACK MODE.
710
711                                 SUBTEST STEPS:
712
713                                 1. SET LOOPBACK MODE ACCORDING TO EVENT FLAG 3
714                                 2. WRITE/VERIFY FLOATING 0 PATTERN IN DATA_HI<7,6> BY WRITING
715                                 THEM THROUGH EXTRA REGISTER
716                                 3. VERIFY THAT MASTER CLEAR CLEARS DATA_HI
717
718                                  ERRORS:
719
720                                     DATA PATH ERROR
721                                     MASTER CLEAR FAILED TO INITIALIZE REGISTERS
722
723
724                             SUBTEST 5
725
726                                 THIS SUBTEST VERIFIES ADDRESS UNIQUENESS BETWEEN ALL THE REGISTERS.
727                                 EACH ONE IS WRITTEN WITH A UNIQUE PATTERN AND READ BACK AGAINST
728                                 EVERY OTHER ONE.
729
730                                  SUBTEST STEPS:
731
732                                 1. SET LOOPBACK MODE ACCORDING TO EVENT FLAG 3
733                                 2. WRITE REGISTER 10 AND 11 WITH ALL ONE'S
734                                 3. READ BACK AND COMPARE WITH ALL THE REGISTERS
735
736                                  ERRORS:
737
738                                     DATA PATH ERROR
739                                     REGISTER ADDRESS UNIQUENESS ERROR
740
741
742                         6.5   TEST 5
743
744                                 THIS TEST CHECKS .25 MICROSECOND IRDY SIGNAL AFTER WRITING
745                                 REGISTER 2. THIS IS ACCOMLISHED BY LOADING FIRMWARE IN
746                                 INTERNAL LOOPBACK MODE AND CHECKING SIGNALS THROUGH

          6.8   TEST 8
```

```
813
814                          TEST DESCRIPTION:
815
816                     THIS TEST TURNS ON AND OFF ON-BOARD LED'S THAT CORRESPOND
817                     TO THE FOLLOWING BITS: INTERNAL LOOPBACK AND
818                     EXTERNAL LOOPBACK. THE ONLY WAY TO VERIFY IT IS VISUALLY.
819
820
821                          TEST STEPS:
822
823                     1. WRITE ZEROES TO BITS 3 AND 4 OF MAINTENANCE REGISTER
824                           TO TURN ON CORRESPONDING LED'S
825                     2. REPEAT 5 TIMES STEP 1
826
827               6.9   TEST 9
828
829                     THIS TEST VERIFIES DATA TRANSFER OF ≤56 BYTES THROUGH
830                     LINE UNIT. FIRMWARE IS LOADED INTO KMC11 TO COPY A DATA
831                     BUFFER FROM MEMORY, SEND EACH BYTE IN A LOOPBACK MODE,
832                     AND DUMP RECEIVED CHARACTERS BACK INTO MAIN MEMORY.
833
834                          TEST STEPS:
835
836                     1. INITIALIZE THE MODULE UNDER TEST
837                     2. SET LOOPBACK MODE ACCORDING TO EVENT FLAG
838                     3. WRITE TRANSMIT BUFFER WITH A DATA PATTERN
839                     4. LOAD FIRMWARE TO TRANSMIT A DATA BUFFER THROUGH
840                        THE LINE UNIT UNDER TEST
841                     5. WAIT FOR DONE BIT IN SEL0<BIT7>
842                     6. VERIFY THAT RECEIVED BUFFER IS THE SAME ONE AS
843                        TRANSMITTED
844
845                     ERRORS:
846
847                             KMC11-B ERROR
