                        .IDENT /V0.0/

                        ;++
                        ; MODULE NAME:
                        ;       PCDATA
                        ;
                        ; FUNCTIONAL DESCRIPTION:
                        ;       THIS IS A TWO ENTRY MODULE (PCDATA & PDATCK BEING ENTRY POINTS).
                        ;       THIS MODULE IS CALLED AS A RESULT OF CDATA OR DATCK TRAP CALL
                        ;       EXECUTED BY AN OPTION MODULE, TO CHECK A BLOCK OF DATA
                        ;       TRANSFERRED BY A DEVICE.
                        ;
                        ;       IF THERE ARE NO ERRORS IN THE BLOCK, CONTROL RETURNS IMME-
                        ;       DIATELY TO THE INSTRUCTION FOLLOWING THE TRAP CALL IN THE MODULE.
                        ;
                        ;       IF THERE ARE ERRORS, HOWEVER, AN ERROR MESSAGE IS ENQUEUED (WITH
                        ;       TRAP ADDRESS FILLED AS THE MODULE'S RETURN ADDRESS), WORD
                        ;       COUNT AND ERROR COUNT ARE SAVED IN THE MODULE HEADER.
                        ;
                        ;       IF 'PRINT ALL DATA ERRORS' SWITCH IS SET, ALL ERRORS ARE
                        ;       ENQUEUED, OTHERWISE ONLY THE FIRST THREE ERRORS ARE ENQUEUED AND
                        ;       THE REST ARE LOGGED. THE SOFT ERROR COUNT IS INCREMENTED EVERY
                        ;       TIME AN ERROR OCCURS AND AT THE END OF THE BLOCK CHECK, A SUMMARY MESSAGE
                        ;       IS PRINTED FOR CDATA CALLS. SOFT
                        ;       ERROR WORD AND SOFT ERRORS PER PASS WORD ARE INCREMENTED IN THE MODULE'S
                        ;       HEADER.
                        ;
                        ;       IF THE TRAP CALL IS DATCK, THE TOTAL NUMBER OF ERRORS IS PASSED
                        ;       TO A LOCATION SPECIFIED IN THE TRAP CALL.
                        ;

                        ; MODULE NAME:
                        ;       RPIRQ
                        ;
                        ; FUNCTIONAL DESCRIPTION:
                        ;       THIS MODULE SERVICES THE PIRQ TRAP CALL (WHICH IS AN IOT).
                        ;       IT ENQUEUES HEADER ADDR. AND RETURN PC OF THE MODULE
                        ;       INTO THE CONTROL QUEUE, UPDATES THE SYSTEM STACK AND RETURNS TO
                        ;       THE INTERRUPTED ROUTINE.  TO ENSURE THAT THE ENQUEUEING ROUTINE
                        ;       IS NOT INTERRUPTED, THIS MODULE IS HANDLED AT PRIORITY 7.
                        ;       IF A BACKGROUND MODULE IS THE INTERRUPTED MODULE, IT WILL
                        ;       BE TAKEN OFF THE AIR.
                        ;

                        .TITLE  BDACNV  -  BINARY TO DECIMAL-ASCII CONVERSION ROUTINE
                        .IDENT  /V0.0/

                        ;++
                        ; MODULE NAME:
                        ;       BDACNV
                        ;
                        ; FUNCTIONAL DESCRIPTION:
                        ;       THIS ROUTINE CONVERTS A 16-BIT UNSIGNED BINARY NUMBER
                        ;       TO A 5-DIGIT DECIMAL-ASCII NUMBER. THE TECHNIQUE USED
                        ;       IS THAT OF REPEATED DIVISION BY POWERS OF 10 (10), WITH THE RE-
                        ;       MAINDERS, WHICH COMPOSE THE DECIMAL NUMBER, BEING
                        ;       CONVERTED TO ASCII.
                        ;
                        ; INPUTS:
                        ;       1. 16-BIT BINARY NUMBER THAT IS TO BE CONVERTED
                        ;       2. ADDRESS AT WHICH THE RESULT IS TO BE STORED
                        ;

                        .TITLE  NUMCHK OCTAL ASCII TO BINARY CONVERSION ROUTINE
                        .IDENT /V0.0/

                        ;++
                        ; MODULE NAME:
                        ;       NUMCHK
                        ;
                        ; FUNCTIONAL DESCRIPTION:
                        ;       THIS ROUTINE CONVERTS A 6 DIGIT OCTAL ASCII NUMBER
                        ;       INTO A 16 BIT BINARY NUMBER. IT WILL VERIFY THAT THE NUMBER
                        ;       IS NOT MORE THAN 16 BITS IN LENGTH(LEADING ZEROES ARE
                        ;       ARE NOT COUNTED AS PART OF THE 16 BITS) AND THAT IT IS AN OCTAL NUMBER.
                        ;       A RETURN WITH ERROR OCCURS IF THE NUMBER IS GREATER THAN 16
                        ;       BITS IN LENGTH OR IT IS NOT OCTAL ( I.E. SOMETHING
                        ;       OTHER THAN THE NUMBERS 0-7 WAS DETECTED IN THE NUMBER).
                        ;

.SBTTL  PRPSCNT   PROCESS PASS COUNT TIME
.IDENT /V0.0/

;++
; MODULE NAME:
;       PRPSCNT
;
; FUNCTIONAL DESCRIPTION:
;       THIS MODULE WILL BE CALLED IF SYSTEM CLOCK IS AVAILABLE.
;       THE PASS COUNT TIME IS DETERMINED BY FIRST SEARCHING THE MODULE TIME TABLE
;       (IN CLOCK OPTION MODULE) AND THEN SUBSTRACTING PASS COUNT TIME
;       FROM THE SYSTEM ELAPSED TIME. THEN THE PASS COUNT TIME WILL BE CON-
;       VERTED TO HOURS, MINUTES AND SECONDS, AND THEN WILL RETURN CONVERTED TIME TO
;       CALLING MODULE.
;               NOTE - THIS MODULE WILL RETURN THE CONVERTED TIME IN THE
;                      FOLLOWING FORMAT:
;                       HHH:MM:SS
;                       THE COLON (:) WILL BE GENERATED BY THIS MODULE.
;
; INPUTS:
;       DTABLE ADDRESS
;       ADDRESS OF MODULE DOING END OF PASS
;       ADDRESS OF STORAGE FOR CONVERTED TIME
;
; IMPLICIT INPUTS:
;       DT.SCT
;       DT.MLST
;       SC.CLO
;       SC.CKL
;       SC.CKP
; OUTPUTS:
;       NONE
;
; IMPLICIT OUTPUTS:
;       CONVERTED TIME IN HOURS, MINUTES AND SECONDS
;                HHH:MM:SS
;
; PATHOLOGICAL CONNECTIONS:
;       NONE
;
; SUBORDINATE ROUTINES CALLED:
;       SAVREG - SAVE REGISTERS
;       HMS    - CONVERT TIME
;       RESREG - RESTORE REGISTERS
;       LDTIME - LOAD RESULTANT TIME
;
; FUNCTIONAL SIDE EFFECTS:

.SBTTL  HMS    HOURS, MINUTES, AND SECONDS CONVERSION
.IDENT /V0.0/

;++
; MODULE NAME:
;       HMS
;
; FUNCTIONAL DESCRIPTION:
;       THIS MODULE WILL CONVERT THE GIVEN TIME IN SECONDS INTO
;       DECIMAL ASCII HOURS, MINUTES, AND SECONDS. THEN LOAD THE INFORMATION
;       INTO A TABLE AND THE ADDRESS OF THIS TABLE IS RETURNED TO THE CALLER
;                  CONVERTED TIME TABLE:
;                   3 BYTES DEFINED FOR HOURS
;                   2 BYTES DEFINED FOR MINUTES
;                   2 BYTES DEFINED FOR SECONDS
;
;       NOTE: MAXIMUM NUMBER OF HOURS THAT WILL BE CONVERTED WILL
;             BE 999 DECIMAL.
;
; INPUTS:
;       ELAPSED TIME
;       EXTENDED ELAPSED TIME
;
; IMPLICIT INPUTS:
;       NONE
;
; OUTPUTS:
;       ADDRESS OF CONVERTED TIME TABLE
;
; IMPLICIT OUTPUTS:

.SBTTL CKHUNG CHECK FOR HUNG OPTION MODULES
.IDENT /V0.0/

;++
; MODULE NAME:
;       CKHUNG
;
; FUNCTIONAL DESCRIPTION:
;       THIS MODULE WILL CHECK TO SEE IF ANY IOMOD, IOMODP, IOMODR OR IOMODX
;       HAVE NOT COMPLETED AN END OF PASS IN A SPECIFIED PERIOD OF TIME.
;       THE CRITERIA WILL BE CHECKED BY COMPARING THE TIME OF THE MODULES LAST
;       END OF PASS AGAINST THE CURRENT ELAPSED TIME OF THE SYSTEM RUN. THE MODULE TIME
;       IS CONTAINED IN A TABLE WHICH CONTAINS TWO ENTRIES PER MODULE (TIME AND EXTENDED
;       TIME WORDS), THIS TABLE IS LOCATED IN EITHER THE KW11-L OR KW11-P
;       OPTION MODULE DEPENDING ON WHICH IS THE SYSTEM CLOCK. IF A MODULE
;       IS DETERMINED TO BE HUNG THEN THE MODULE IS DROPPED WITH AN APPROPRIATE
;       MESSAGE OUTPUTTED.
