151                                   1.0 INTRODUCTION
152
153                                   1.1 PROGRAM ABSTRACT
154
155
156                                   THIS  DIAGNOSTIC IS  DESIGNED TO TEST OUT THE KMV11 C IN-
157                                   TERFACE WHICH IS PHYSICALLY A FULL MULTI LAYER QUAD MODULE
158                                   NAMED M7502
159                                   THE MAJOR FEATURES OF THIS INTERFACE ARE:
160                                   - HIGH SPEED DATA COMMUNICATION INTERFACE FOR A Q BUS
161                                   BASED SYSTEM.
162                                   - USE OF THE DCT11 MICROPROCESSOR.
163                                   - FIT INTO ANY POWERED BACKPLANE FOR Q-BUS SYSTEM WHICH
164                                   ACCEPTS QUAD MODULES.
165                                   - HIGH SPEED DATA TRANSFFR BY USE OF A FIFO AND IN/OUT DMA
166                                   ACCESS COMPLETELY CONTROLLED BY HARDWARE.
167                                   - 8K BYTES OF EPROM CONTAINING EXECUTIVE AND ROOT FIRMWARE,
168                                   THE LATTER CONTAINING THE SELF TESTS AND TEST ROUTINES USED
169                                   WITH THIS DIAGNOSTIC.
170                                   - 32K BYTES OF RAM FOR THE LOADABLE APPLICATION FIRMWARE.
171                                   - A SET OF 16 CSR'S USED TO COMMUNICATE WITH THE HOST COM-
172                                   PUTER.
173                                   - INTERRUPT VECTORING.
174                                   - BIT STUFFING SYNCHRONOUS MODE OF TRANSMISSION.
175                                   - CONNECTION  TO A NETWORK USING THE RS-422 ELECTRICAL IN-
176                                   TERFACE.
177
178                                   THE PURPOSE OF  THIS PROGRAM IS TO PERFORM DIAGNOSTIC TES
179                                   TING OF ALL THE  M7502 LOGIC IN A STATIC MANNER
180                                   THAT MEANS, TESTING OF:
181                                   - THE M7502 MEMORY  INCLUDING CSR'S,INTERNAL REGISTERS,THE
182                                   PROM AND RAM.
183                                   - Q-BUS LOGIC FOR DMA AND INTERRUPTS
184                                   - DCT11 INTERRUPT LOGIC
185                                   - LINE AND REAL TIME CLOCKS
186                                   - USART AND FIFO
187                                   - MODEM CONTROL AND MONITORING
188                                   - RS422 INTERFACE
189                                   A CONTROL IS  ALSO DONE TO VERIFY THAT THE PROGRAM AND THE
190                                   RESIDENT  FIRMWARE  HAVE THE  SAME REVISION. MOREOVER, THE
191                                   PROM PART NUMBER IS AUTOMATICALLY PRINTED DURING THE FIRST
192                                   PASS OF THE DIAGNOSTIC.
193                                   NOTICE THAT THE TEST ON MODEM SIGNALS REQUIRES THE  USE OF
194                                   AN EXTERNAL LOOP  BACK CONNECTOR AND IT WILL ONLY RUN  IF
195                                   THE OPERATOR HAS PREVIOUSLY  INSERTED THIS CONNECTOR.
196
197                                   IN ORDER TO TEST THE DIFFERENT LOGIC FUNCTIONS, TWO  MAIN
198                                   TENANCE MODES ARE REQUIRED; MAINT MODE 2 AND 3.
199                                   - IN THE MAINTENANCE MODE 3, THE DCT11 IS INOPERATIVE  (IT
200                                   LOOPS ON ITSELF AND, LETS THE HOST TO WORK ON CSR'S ALONE)
201                                     IN THE MAINTENANCE MODE 2, THE HOST ACTIVATES  SOME TEST
202                                   ROUTINES IN THE ROOT FIRMWARE AND LETS  THE DCT11 TO CHECK
```

THE HARDWARE FUNCTIONS BY ITSELF EXCEPT IN THE CASE OF DMA,
Q BUS LOGIC AND CSR'S DATA TRANSFERS. THE MAINT MODE IS
SELECTED JUST AFTER THE MASTER CLEAR AND, FOR EACH TEST.

THE STATIC DIAGNOSTIC DOES NOT REQUIRE ANY MANUAL INTER
VENTION DURING TEST PERIOD. A VISUAL CHECK OF THE TEST
PROCESSING IS POSSIBLE BY MEANS OF TWO MAINTENANCE LEDS
(GREEN AND YELLOW) ON THE KMV11-C DEVICE:
. GRN - APPLICATION FIRMWARE RUNNING
. YEL - SELFTEST RUNNING
. YEL+GRN - MAINTENANCE IS RUNNING
. GRN FLASH - APPLICATION ERROR
. YEL FLASH - SELF TEST ERRROR
. YEL+GRN FLASHING - MAINTENANCE ERROR
. BOTH LIGHT OFF - ERROR

THIS PROGRAM WILL BE IMPLEMENTED USING THE DIAGNOSTIC
SUPERVISOR AND A STRUCTURED PROGRAMMING APPROACH. BECAUSE
THE DESIGN CONFORMS TO THE SUPERVISOR (STANDALONE VERSION)
THE PROGRAM WILL BE COMPATIBLE WITH ACT, APT, XXDP+ AND SLIDE.

THROUGH DIALOGUE WITH THE OPERATOR, THE PROGRAM WILL ALLOW
MODIFICATION OF DEVICE PARAMETERS, SUCH AS Q-BUS ADDRESS,
VECTOR ADDRESS,LINE SPEED AND PROCESSOR TYPE.

1.2 HARDWARE INTRODUCTION

THE FOLLOWING HARDWARE IS REQUIRED TO RUN THE KMV11-C LOGIC
DIAGNOSTIC:

PDP11/23A,23B
24K MEMORY
CONSOLE TERMINAL
THE M7502 MODULE
ONE BC08S 10 CABLE WITH RS422 BERG/CINCH MODEM CONNECTION
BOX LOOP-BACK CONNECTORS(REMOTE AND LOCAL)

```
241
242
243
244
245
246                     3.0 PRELIMINARY PROGRAM REQUIREMENTS
247
248                     THE PROCESSOR AND MEMORY SHOULD BE THOROUGHLY  TESTED  PRIOR
249                     TO RUNNING THIS DIAGNOSTIC.
```

4.0 GENERAL PROGRAM CONSIDERATIONS

4.1 DIAGNOSTIC SUPERVISOR

THIS PROGRAM IS COMPATIBLE WITH THE STANDALONE DIAGNOSTIC SUPERVISOR, AND MUST BE LOADED TO BE CO RESIDENT WITH THE SUPERVISOR, OR BE PREVIOUSLY COMBINED WITH THE SUPERVISOR AND LOADED AS A SINGLE FILE. IN EITHER CASE, THE COMBINED PROGRAM WILL NOT EXCEED 16K OF MEMORY.

4.2 EXECUTION TIME

THE TOTAL TIME REQUIRED TO RUN THE M7502 STATIC TESTS IS LESS THAN 300 SECONDS FOR TESTS 1-35 AND ABOUT 1H15 FOR THE LONG RAM TEST, TEST36 PER PASS FOR EACH UNIT.

4.3 XXDP+

THIS PROGRAM MAY BE LOADED UNDER XXDP+, AND MAY BE RUN IN DUMP MODE OR CHAIN MODE.

4.4 ACT/SLIDE

THIS PROGRAM MAY BE LOADED UNDER ACT OR SLIDE AND MAY BE RUN IN DUMP MODE OR CHAIN MODE.

4.5 APT

THIS PROGRAM MAY BE LOADED BY THE APT SYSTEM (INCLUDING APT RD) AND RUN IN PROGRAM MODE OR SCRIPT MODE.

4.6 MEMORY MANAGEMENT

MEMORY MANAGEMENT IS NOT UTILIZED IN THIS PROGRAM. IF IT IS INSTALLED, IT IS DISABLED BY THE PROGRAM.

4.7 MEMORY PARITY OPTION

IF PARITY MEMORY IS INSTALLED, MEMORY PARITY TRAPS ARE DISABLED BY THE PROGRAM.

4.8 ERROR LOGGING

```
308                     THE  NUMBER  OF  ERRORS  WHICH  HAVE OCCURRED ON EACH DEVICE
309                     UNDER TEST SINCE THE LAST START OR RESTART COMMAND  IS  KEPT
310                     IN  AN  ERROR  LOG.   THIS  LOG  MAY BE PRINTED BY USING THE
311                     "PRINT" COMMAND (SEE SECTION 6.3.8).
```

5.0 PROGRAM LOAD MEDIA

THIS PROGRAM CAN BE LOADED FROM PAPER TAPE USING THE ABSOLUTE LOADER OR FROM ACT, SLIDE, OR APT SYSTEMS, OR FROM ANY MEDIA SUPPORTED BY XXDP+. WHEN USING THE PAPER TAPE ABSOLUTE LOADER, THE PROGRAM SHOULD BE LOADED FIRST, FOLLOWED BY THE DIAGNOSTIC SUPERVISOR. WHEN USING XXDP+, THE DIAGNOSTIC SUPERVISOR SHOULD BE LOADED FIRST, FOLLOWED BY THE DIAGNOSTIC PROGRAM.

6.0 OPERATING INSTRUCTIONS

6.1 LOADING AND STARTING PROCEDURES

6.1.1 LOADING PROCEDURES

THIS PROGRAM MAY BE LOADED FROM PAPER TAPE USING THE ABSOLUTE LOADER. IT MAY ALSO BE LOADED FROM ANY XXDP+ LOAD MEDIA. WHEN LOADED UNDER XXDP+, THE DIAGNOSTIC SUPERVISOR WILL BE LOADED AUTOMATICALLY.

6.1.2 STARTING PROCEDURES

THE PROGRAM STARTS AT LOCATION 200. USE STANDARD DEC PROCEDURES TO START THE PROGRAM.

6.1.3 STEPS FOR QUICK AND SIMPLE EXECUTION

THE DIAGNOSTIC CAN BE EXECUTED STANDALONE UNDER XXDP+ WITHOUT READING THE REMAINDER OF THIS DOCUMENT, AS FOLLOWS:

A) LOAD AND START DIAGNOSTIC USING RUN COMMAND
B) RECEIVE DIAGNOSTIC SUPERVISOR PROMPT (DR>)
C) ENTER STA<CR>
D) ANSWER HARDWARE AND SOFTWARE QUESTIONS
E) GET END OF PASS MESSAGES OR ERROR MESSAGES
F) TO END EXECUTION, ENTER CONTROL/C

6.2 INITIAL DIALOGUE

AFTER THE PROGRAM AND THE SUPERVISOR ARE LOADED AND THE PROGRAM IS STARTED , THE FOLLOWING IDENTIFICATION IS TYPED:

```
200GDRS LOADED
DIAG.  RUN-TIME SERVICES REV. D APR-79
CVKMHAO KMV11-C LOGIC DIAGNOSTIC
UNIT IS M7502
DR>...
```

THE OPERATOR THEN PROCEEDS BY TYPING ONE OR MORE OF THE COMMANDS DESCRIBED IN THE FOLLOWING SECTION 6.3.(FOR MORE DETAILED INFORMATION, REFER TO THE DIAGNOSTIC SUPERVISOR FUNCTIONAL SPECIFICATION).

6.3 PROGRAM OPTIONS

6.3.1 START COMMAND

```
**********************************************************************
STA(RT)/TESTS:<TEST-LIST>/PASS:<PASS-CNT>/FLAGS:
   <FLAG-LIST>/EOP:<INCR>
**********************************************************************
```

6.3.1.1 TESTS SWITCH (/TESTS:<TEST-LIST>)

<TEST-LIST> IS A SEQUENCE OF DECIMAL NUMBERS (1:2 ETC.) OR RANGES OF DECIMAL NUMBERS (1-5:8-10 ETC.) THAT SPECIFY THE TESTS TO BE EXECUTED. THE NUMBERS ARE SEPARATED BY COLONS. THE NUMBERS RANGE FROM 1 TO THE LARGEST TEST NUMBER IN THE DIAGNOSTIC. THEY MAY BE SPECIFIED IN ANY ORDER. TESTS WILL BE EXECUTED IN NUMERICAL ORDER REGARDLESS OF THE ORDER OF SPECIFICATION. THE DEFAULT IS TO EXECUTE ALL TESTS. ON THIS AND ALL SWITCHES, THE ANGLE BRACKETS <> ARE PUNCTUATION USED IN THE DEFINITION ONLY, AND ARE NOT TO BE TYPED BY THE OPERATOR. SEE EXAMPLE AT END OF 6.3.1.5.

6.3.1.2 PASS SWITCH (/PASS:<PASS-CNT>)

<PASS-CNT> IS A DECIMAL NUMBER INDICATING THE DESIRED NUMBER OF PASSES. A PASS IS DEFINED AS THE EXECUTION OF THE FULL DIAGNOSTIC (ALL SELECTED TESTS) AGAINST ALL UNITS SUBMITTED. THE DEFAULT IS NON-ENDING EXECUTION. IN THIS CASE EXIT FROM THE PROGRAM IS ACCOMPLISHED EITHER BY TYPING A CONTROL/C OR BY OCCURANCE OF AN ERROR WITH THE HALT ON ERROR FLAG BEING SET. THE EXIT IS A RETURN TO COMMAND MODE. SEE EXAMPLE AT END OF 6.3.1.5.

6.3.1.3 FLAGS SWITCH (/FLAGS:<FLAG-LIST>)

<FLAG-LIST> IS A SEQUENCE OF ELEMENTS OF THE FORM <FLAG>, <FLAG=1>, OR <FLAG=0>, SEPARATED BY COLONS, WHERE <FLAG> HAS ONE OF THE FOLLOWING VALUES:

HOE	HALT ON ERROR, CAUSING COMMAND MODE TO BE ENTERED WHEN AN ERROR IS ENCOUNTERED
LOE	LOOP ON ERROR, CAUSING THE DIAGNOSTIC TO LOOP CONTINUOUSLY WITHIN THE SMALLEST DEFINED BLOCK OF CODING (SEGMENT, SUBTEST, OR TEST) CONTAINING THE ERROR
IER	INHIBIT ERROR REPORTING
IBE	INHIBIT BASIC ERROR REPORTS
IXE	INHIBIT EXTENDED ERROR REPORTS
PRI	DIRECT ALL MESSAGES TO A LINE PRINTER
PNT	PRINT NUMBER OF TEST BEING EXECUTED
BOE	BELL ON ERROR
UAM	RUN IN UNATTENDED MODE, BYPASSING MANUAL INTERVENTION TESTS
ISR	INHIBIT STATISTICAL REPORTS

```
443                         IDU   INHIBIT DROPPING OF UNITS BY DIAGNOSTIC
444                         LOT   LOOP ON TEST
445
446                 THE FLAGS NAMED OR EQUATED TO 1 ARE SET, THOSE EQUATED TO 0
447                 ARE CLEARED.  A FLAG NOT SPECIFIED IS CLEARED.  IF THE FLAGS
448                 SWITCH IS NOT GIVEN ALL FLAGS ARE CLEARED.  SEE EXAMPLE AT
449                 END OF 6.3.1.5.
450
451
452                 6.3.1.4 END OF PASS SWITCH (/EOP:<INCR>)
453
454                 <INCR> IS A DECIMAL NUMBER INDICATING HOW OFTEN (IN TERMS OF
455                 PASSES) IT IS DESIRED THAT THE END OF PASS MESSAGE BE
456                 PRINTED.  THE DEFAULT IS AT THE END OF EVERY PASS.  SEE
457                 EXAMPLE AT END OF 6.3.1.5.
458
459
460                 6.3.1.5 EFFECT OF START COMMAND
461
462                 THE EFFECT OF THE START COMMAND IS TO INITIATE THE HARDWARE
463                 PARAMETER DIALOGUE, THE SOFTWARE PARAMETER DIALOGUE, AND
464                 THEN THE DIAGNOSTIC TESTS THEMSELVES.
465
466                 THE HARDWARE PARAMETER DIALOGUE COMMENCES WITH THE QUESTION
467                 "# UNITS?" TO WHICH THE OPERATOR REPLIES WITH A DECIMAL
468                 NUMBER N FROM 1 TO 16. THE TERM "UNIT" REFERS TO THE DEVICE
469                 TO WHICH THIS SERIES OF DIAGNOSTICS IS DEDICATED.  FOLLOWING
470                 THIS ARE THE QUESTIONS WHEREBY THE P-TABLES THEMSELVES WILL
471                 BE BUILT.  EACH P TABLE IS A CORE-RESIDENT TABLE CONTAINING
472                 ALL THE HARDWARE INFORMATION FOR ONE UNIT.  THE OPERATOR
473                 MUST SUPPLY N (NUMBER OF UNITS) VALUES FOR EACH QUESTION.
474                 HE MAY DO THIS BY GIVING ONE ANSWER TO EACH QUESTION (IN
475                 WHICH CASE THE SERIES OF QUESTIONS WILL BE POSED N TIMES) OR
476                 BY GIVING N VALUES, SEPARATED BY COMMAS, TO EACH QUESTION
477                 (SERIES WILL BE POSED ONCE).  EACH QUESTION IS FOLLOWED BY
478                 THE RESPONSE RADIX (D FOR DECIMAL, B FOR BINARY, O FOR
479                 OCTAL, L FOR YES/NO) IN PARENTHESES AND THE DEFAULT VALUE
480                 AFTER THE PARENTHESES.
481                 FOLLOWING THE HARDWARE QUESTIONS ARE THE SOFTWARE QUESTIONS
482                 TO BUILD THE SOFTWARE TABLES, WHICH DEFINE THE MODE (QUICK
483                 VERIFY ETC.) THAT THE DIAGNOSTIC WILL EXECUTE IN.
484
485                 WHEN THE QUESTION "# UNITS?" IS ANSWERED, MEMORY STORAGE IS
486                 ALLOCATED FOR THE P-TABLES, AND IF THERE IS NOT ENOUGH TO
487                 ACCOMMODATE THEM THE MESSAGE "TOO MANY UNITS" IS ISSUED.  IN
488                 THIS CASE THE DIAGNOSTIC MUST BE EXECUTED MORE THAN ONCE TO
489                 TEST ALL UNITS.
490
491                 EXAMPLE:
492
493                 STA/TESTS:1:2-4:6:8-10/PASS:3/FLAGS:IER:HOE=1:UAM:LOE
494
495                 THIS COMMAND WILL CAUSE THREE PASSES TO BE MADE, EACH PASS
496                 CONSISTING OF TESTS 1,2,3,4,6,8,9, AND 10 EXECUTED AGAINST
497                 ALL UNITS.  THERE IS NO DIFFERENCE BETWEEN SAYING <FLAG> AND
498                 SAYING <FLAG=1>. THE NOTATION <FLAG=0> IS MEANINGFUL ONLY ON
499                 A COMMAND OTHER THAN START TO CLEAR A FLAG THAT WAS
```

PREVIOUSLY SET. NOTE THAT ON ALL COMMANDS ONLY THE FIRST
THREE LETTERS ARE SCANNED.

6.3.2 RESTART COMMAND

```
**************************************************************
RES(TART)/TESTS:<TEST-LIST>/PASS:<PASS CNT>/FLAGS:
   <FLAG-LIST>/UNITS:<UNIT-LIST>
**************************************************************
```

6.3.2.1 TESTS, PASS, AND FLAGS SWITCHES

<TEST-LIST>, <PASS-CNT>, AND <FLAG-LIST> ARE AS IN THE START COMMAND.

6.3.2.2 UNITS SWITCH (/UNITS:<UNIT-LIST>)

<UNIT-LIST> IS A SEQUENCE OF DECIMAL NUMBERS (0,1 ETC.) OR RANGES OF DECIMAL NUMBERS (0-5, 8-10 ETC.) THAT SPECIFY THE UNITS TO BE TESTED. THE NUMBERS ARE SEPARATED BY COLONS. THE NUMBERS MAY RANGE FROM 0 THRU N-1 (N IS THE NUMBER OF UNITS SPECIFIED IN THE PREVIOUS START COMMAND). THE NUMBER INDICATES THE POSITION OF THE P-TABLE AS THE DATA WAS ENTERED DURING THE HARDWARE DIAGLOGUE. THE UNITS WHICH ARE SELECTED MUST NOT HAVE BEEN DROPPED BY THE DROP COMMAND. SEE THE DISCUSSION OF ADD AND DROP COMMANDS BELOW. DEFAULT IS TO TEST ALL UNITS WHICH HAVE NOT BEEN DROPPED BY A DROP COMMAND.

6.3.2.3 EFFECT OF RESTART COMMAND

THE RESTART COMMAND DIFFERS FROM THE START COMMAND IN THAT THE P-TABLES FROM THE PREVIOUS START COMMAND (THERE MUST HAVE BEEN ONE) ARE USED, INSTEAD OF NEW ONES BEING BUILT. THE UNITS SWITCH GIVES THE ABILITY TO SELECT A SUBSET OF THE E. THE SOFTWARE DIALOGUE MAY OPTIONALLY BE REEXECUTED (OPERATOR WILL BE ASKED). THE COMMAND CAN BE USED AFTER COMMAND MODE HAS BEEN REENTERED IN ANY OF THE THREE NORMAL WAYS: A) THE REQUESTED NUMBER OF PASSES HAVE BEEN MADE B) AN ERROR WAS ENCOUNTERED WITH THE HALT ON ERROR FLAG SET C) A CONTROL/C WAS ENTERED BY THE OPERATOR.

6.3.3 CONTINUE COMMAND

```
**************************************************************
CON(TINUE)/PASS:<PASS-CNT/FLAGS:<FLAG-LIST>
**************************************************************
```

6.3.3.1 PASS SWITCH (/PASS:<PASS-CNT>)

<PASS CNT> IS SAME AS IN START COMMAND, BUT THE DEFAULT IS

```
557                     THE UNSATISFIED PASS CNT FROM THE PREVIOUS START OR RESTART.
558                     IF NONE REMAINS, THE DEFAULT IS NON ENDING EXECUTION.
559
560
561                     6.3.3.2 FLAG SWITCH (/FLAGS:<FLAG LIST>)
562
563                     <FLAG LIST>  IS  SAME  AS  IN START COMMAND, BUT UNSPECIFIED
564                     FLAGS RETAIN THEIR CURRENT VALUE.
565
566
567                     6.3.3.3 EFFECT OF CONTINUE COMMAND
568
569                     CONTINUE MUST FOLLOW A START OR RESTART,  AND  COMMAND  MODE
570                     MUST  HAVE  BEEN  ENTERED  DUE  TO  A  HALT  ON  ERROR  OR A
571                     CONTROL/C. THE EFFECT  OF  THE  COMMAND  IS  TO  GO  TO  THE
572                     BEGINNING  OF THE TEST THAT WAS BEING EXECUTED WHEN THE HALT
573                     OR CONTROL/C TOOK PLACE.  SOFTWARE DIALOGUE  MAY  OPTIONALLY
574                     BE REEXECUTED.  HARDWARE PARAMETERS MAY NOT BE CHANGED.
575
576
577                     6.3.4 PROCEED COMMAND
578
579                     ************************************************************
580                     PRO(CEED)/FLAGS:<FLAG-LIST>
581                     ************************************************************
582
583
584                     6.3.4.1 FLAGS SWITCH (/FLAGS:<FLAG-LIST>)
585
586                     <FLAG-LIST>  IS  AS  IN  THE  START COMMAND, BUT UNSPECIFIED
587                     FLAGS RETAIN THEIR CURRENT VALUE.
588
589
590                     6.3.4.2 EFFECT OF PROCEED COMMAND
591
592                     PROCEED MUST FOLLOW A START, RESTART, OR CONTINUE.   COMMAND
593                     MODE MUST HAVE BEEN ENTERED VIA A HALT ON ERROR.  THE EFFECT
594                     OF  THE  COMMAND  IS  TO  BEGIN  EXECUTION  AT  THE  LOCATION
595                     FOLLOWING  THE  ERROR  CALL.   NEITHER HARDWARE NOR SOFTWARE
596                     PARAMETERS MAY BE ALTERED.
597
598
599                     6.3.5 ADD COMMAND
600
601                     ************************************************************
602                     ADD/UNITS:<UNIT-LIST>
603                     ************************************************************
604
605
606                     6.3.5.1 UNITS SWITCH (/UNITS:<UNIT-LIST>
607
608                     <UNIT-LIST> IS AS IN THE RESTART COMMAND.
609
610
611                     6.3.5.2 EFFECT OF ADD COMMAND
612
613                     THE  UNITS  SPECIFIED  ARE  ADDED  TO  THE   TEST   SEQUENCE.    EACH
```

UNIT MUST HAVE A P-TABLE IN MEMORY DUE TO AN EARLIER HARDWARE DIALOGUE. THIS COMMAND MUST BE FOLLOWED BY A RESTART OR CONTINUE. THE UNITS SWITCH MUST BE SPECIFIED. THE ADD COMMAND IS MEANINGFUL ONLY FOR UNITS THAT WERE PREVIOUSLY DROPPED.

6.3.6 DROP COMMAND

****
DRO(P)/UNITS:<UNIT-LIST>
****

6.3.6.1 UNITS SWITCH (/UNITS:<UNIT-LIST>)

<UNIT-LIST> IS AS IN THE RESTART COMMAND.

6.3.6.2 EFFECT OF DROP COMMAND

THE UNITS SPECIFIED WILL BE DROPPED FROM TESTING. THE UNITS WILL BE RESELECTED ONLY BY THE EXECUTION OF AN ADD OR START COMMAND. THE UNITS SWITCH MUST BE ENTERED. THIS COMMAND MUST BE FOLLOWED BY A RESTART OR A CONTINUE COMMAND.

6.3.7 PRINT COMMAND

****
PRI(NT)
****

6.3.7.1 EFFECT OF PRINT COMMAND

THE TOTAL NUMBER OF ERRORS FOR EACH UNIT SINCE THE LAST START OR RESTART COMMAND ARE PRINTED. THE ISR (INHIBIT STATISTICAL REPORTING) FLAG IS CLEARED.

6.3.8 DISPLAY COMMAND

****
DIS(PLAY)/UNITS:<UNIT-LIST>
****

6.3.8.1 UNITS SWITCH (/UNITS:<UNIT-LIST>)

<UNIT-LIST> IS AS IN THE RESTART COMMAND.

6.3.8.2 EFFECT OF DISPLAY COMMAND

THE HARDWARE P-TABLES FOR ALL UNITS UNDER TEST ARE PRINTED OUT IN THE FORMAT IN WHICH THEY WERE ENTERED. ANY UNITS

THAT WERE DROPPED BY THE OPERATOR DROP COMMAND ARE SO DESIGNATED.

6.3.9 FLAGS COMMAND

****
FLA(GS)
****

6.3.9.1 EFFECT OF FLAGS COMMAND

THE CURRENT SETTINGS OF ALL FLAGS ARE PRINTED.

6.3.10 ZFLAGS COMMAND

****
ZFL(AGS)
****

6.3.10.1 EFFECT OF ZFLAGS COMMAND

ALL FLAGS ARE CLEARED.

6.3.11 CONTROL CHARACTERS

A CONTROL C (C) ENTERED DURING THE EXECUTION OF A DIAGNOSTIC CAUSES A RETURN TO COMMAND MODE.

A CONTROL Z (Z) ENTERED DURING ONE OF THE THREE OPERATOR DIALOGUES- INITIAL DIALOGUE (SEE 6.2),HARDWARE DIALOGUE (SEE 6.3.1.5), OR SOFTWARE DIALOGUE (SEE 6.3.1.5) CAUSES THE DEFAULTS TO BE TAKEN FOR THE REMAINDER OF THAT DIALOGUE.

A CONTROL O (O) ENTERED DURING THE EXECUTION OF A DIAGNOSTIC CAUSES ALL TELETYPE OUTPUT TO BE SURPRESSED FOR THE REMAINDER OF THE DIAGNOSTIC OR UNTIL ANOTHER O IS TYPED, WHICH RESTORES NORMAL TELETYPE OUTPUT.

6.3.12 HARDWARE PARAMETERS

THE FOLLOWING 4 QUESTIONS WILL BE ASKED ON A START COMMAND. THE VALUE LOCATED TO THE LEFT OF THE QUESTION MARK IS THE DEFAULT VALUE THAT WILL BE TAKEN ON A CARRIAGE RETURN RESPONSE.

1. KMV11-C CSR ADDRESS : (O) 177000 ?

THIS IS THE ADDRESS AT WHICH THE CSR REGISTERS (SELO) RESIDE ON THE QBUS. THE ALLOWABLE RANGE IS 160000-177776

(OCTAL), AND THE DEFAULT IS 177000.

2. DEVICE VECTOR ADDRESS : (O) 300 ?

THIS IS THE ADDRESS OF THE FIRST INPUT INTERRUPT VECTOR FOR
THIS DEVICE. THE ALLOWABLE RANGE IS 000 674 (OCTAL), AND THE
DEFAULT VALUE IS 300.

3. LOOPBACK CONNECTOR USED : (L) Y ?

THIS TELLS THE PROGRAM IF THE LOOP-BACK CONNECTOR IS PLUGGED
OR NOT. IF IT IS NOT THE INTERNAL LOOPBACK IS AUTOMATICALLY SELECTED
THE ALLOWABLE VALUES ARE Y OR NO, AND THE DEFAULT IS YES.

4. DEVICE LINE CLOCK RATE SELECTED : (O) 7 ?

THIS TELLS THE PROGRAM AT WHICH CLOCK RATE THE TRANSMISSION
LINE WILL BE TESTED (K BIT PER SECONDS). THE ALLOWABLE VALUES ARE:

        0=2.4K
        1=9.6K
        2=19.2K
        3=48K
        4=56K
        5=64K
        6=72K
        7=ALL CLOCK RATES

THE DEFAULT VALUE IS 7.

5. DO YOU WANT TO RUN LONG RAM TEST : (L) N ?

THIS TELLS THE PROGRAM IF THE LONG RAM TEST HAS TO BE RUN.
IF ANSWER IS YES TEST DURATION IS 1H15.

6.3.13 SOFTWARE PARAMETERS

NO SOFTWARE PARAMETERS ARE REQUESTED BY THE LOGIC DIAGNOSTIC

6.3.14 EXTENDED DISCUSSION OF P-TABLE DIALOGUE

THE FULL CAPABILITY OF THE HARDWARE DIALOGUE IS REVEALED BY
THE FOLLOWING DISCUSSION OF WHAT HAPPENS INTERNALLY.

AFTER THE INITIAL DIALOGUE, THE SUPERVISOR ISSUES THE QUES
TION BELOW:

CHANGE HW (L)   ?

IF YOUR RESPONSE IS Y (YES), THE SUPERVISOR ASKS FOR THE
NUMBER OF UNITS UNDER TEST:

UNITS (D) ?

AS SOON AS THE QUESTION "# UNITS ?" IS ANSWERED (WITH THE
NUMBER N, SAY) SPACE IN CORE IS ALLOCATED FOR N P TABLES.

```
785                     ALL OF THE P-TABLES ARE OF THE SAME FORMAT, AND THERE IS A
786                     ONE-TO ONE CORRESPONDENCE BETWEEN THE HARDWARE PARAMETER
787                     QUESTIONS AND THE SLOTS IN THE P TABLE FORMAT.
788
789                     ON THE FIRST TRIP THRU THE QUESTIONS, ALL OF THE SLOTS IN
790                     ALL OF THE P-TABLES ARE FILLED.  IF THE OPERATOR TYPES IN
791                     LESS THAN N EXPLICIT VALUES IN RESPONSE TO A PARTICULAR
792                     QUESTION, THESE VALUES ARE PLACED IN THE P-TABLES (ONE VALUE
793                     GOING INTO THE PROPER SLOT OF EACH P-TABLE BEGINNING WITH
794                     THE FIRST P-TABLE) UNTIL THE STRING OF VALUES IS EXHAUSTED.
795                     THE LAST VALUE IN THE STRING BECOMES THE NEW DEFAULT AND IS
796                     USED TO FILL THAT SLOT IN THE REMAINING P-TABLES.
797
798                     ON SUBSEQUENT TRIPS THRU THE QUESTIONS, THE SAME PROCESS IS
799                     CARRIED OUT, EXCEPT THAT THE EARLIEST P-TABLE NOT TO HAVE
800                     RECEIVED AN EXPLICIT VALUE IN ANY OF ITS SLOTS NOW ASSUMES
801                     THE ROLE THAT TABLE NUMBER ONE PLAYED IN THE FIRST TRIP.
802
803                     THE SERIES OF QUESTIONS IS REISSUED UNTIL AT LEAST ONE
804                     QUESTION HAS RECEIVED N EXPLICIT VALUES FROM THE OPERATOR.
805
806                     IN GIVING A STRING OF VALUES, COMMAS WITHOUT INTERVENING
807                     VALUES MAY BE USED TO INDICATE A REPETITION OF THE LAST
808                     NAMED VALUE.
809
810                     A STRING OF VALUES MAY BE GIVEN AS A RANGE (6-10 FOR
811                     EXAMPLE). IF THE VALUES REPRESENT PURE NUMERICAL DATA, THIS
812                     SAMPLE RANGE TRANSLATES TO THE STRING 6,7,8,9,10 (AN
813                     INCREMENT OF 1). IF THE VALUES ARE ADDRESSES, THE SAMPLE
814                     RANGE TRANSLATES TO THE STRING 6,8,10 (AN INCREMENT OF 2).
815                     NOW LET US SEE HOW WE COULD USE THESE CAPABILITIES TO
816                     CONSTRUCT A SET OF P-TABLES.  ASSUME THAT WE HAVE 16 UNITS,
817                     AND THAT THERE ARE THREE HARDWARE PARAMETERS FOR EACH (THREE
818                     SLOTS IN THE P-TABLE, THREE HARDWARE QUESTIONS IN THE
819                     DIALOGUE).  LET THE DESIRED VALUE FOR THE FIRST PARAMETER BE
820                     THE NUMBER 75 FOR ALL 16 TABLES.  LET THE DESIRED VALUE FOR
821                     THE SECOND PARAMETER BE EQUAL TO THE UNIT NUMBER
822                     (0,1,2,...,15) EXCEPT FOR UNIT 12, WHICH SHOULD RECEIVE THE
823                     VALUE 11.  LET THE DESIRED VALUE FOR THE THIRD PARAMETER BE
824                     THE NUMBER 76 FOR THE FIRST 7 UNITS AND THE NUMBER 77 FOR
825                     THE LAST 9 UNITS.
826
827                     THE FOLLOWING DIALOGUE WOULD ACCOMPLISH THIS GOAL:
828
829                     # UNITS (D) ? 16
830
831                     UNIT 1
832                     <QUESTION 1> ? 75
833                     <QUESTION 2> ? 0-6
834                     <QUESTION 3> ? 76
835
836                     UNIT 21
837                     <QUESTION 1> ?
838                     <QUESTION 2> ? 7-11,,13-15
839                     <QUESTION 3> ? 77
840
841                     THE FIRST TIME THE SERIES IS ASKED, SLOT ONE RECEIVES A 75
```

```
                        IN ALL 16 TABLES.  SLOT TWO RECEIVES THE VALUES  0,1,2,...,6
                        IN  TABLES  0  THRU  6 AND A CONSTANT 6 IN TABLES 7 THRU 15.
                        SLOT THREE RECEIVES A CONSTANT 76 IN ALL 16 TABLES.

                        THE SECOND TIME THRU THE SERIES, TABLES 16 THRU THE END  ARE
                        GOING TO BE AFFECTED (NOTE THAT THIS PIECE OF INFORMATION IS
                        PRINTED OUT FOR THE THE OPERATOR IN THE FORM  "UNIT  XX"  AT
                        THE  BEGINNING  OF EACH SERIES).  QUESTION 1 IS RESPONDED TO
                        BY A <CR>, SO SLOT ONE STAYS AT CONSTANT 75 IN TABLES 7 THRU
                        15, SINCE NO NEW EXLICIT VALUES ARE TYPED IN.  SLOT TWO GETS
                        THE VALUES 7,8,9,10,11 IN TABLES 7 THRU 11, AND GETS A 11 IN
                        SLOT  12, AND GETS THE VALUES 13,14,15 IN TABLES 13 THRU 15.
                        SLOT THREE GETS THE VALUE 76 IN TABLES 7 THRU 15.

                        THE DIALOGUE IS TERMINATED WHEN THE SOFTWARE RECOGNIZES THAT
                        16 EXPLICIT VALUES HAVE BEEN GIVEN FOR AT LEAST ONE QUESTION
                        (NAMELY QUESTION 2).

7.11 TEST11

 ** - CONTROL OF THE KMV11-C EPROM'S PART NUMBER

 DESCRIPTION:   THIS CONTROL IS TAKEN OUT ON THE  FIRST PASS
                ONLY.THE GOAL IS TO GET THE 2 PART NUMBERS STO-
                RED IN THE KMV EPROM THEN TO PRINT IT.
                IN ORDER TO DO THAT, THE HOST ASKS THE DCT11
                TO RETURN BACK THE PART NUMBER ADDRESS, SUCH
                AS:
                        SEL0 = 0 FOR KMV ROUTINE 27 JOB DONE
                        SEL2 = PART NUMBER ADDRESS

                THEN THE HOST BY MEANS OF THE  KMV 'MAILBOX'
                ROUTINE READS ALL PART NUMBER CHARACTERS. FOR
                THIS ROUTINE THE HOST PASSES PARAMETERS:

                        SEL2 = SEL10 ADDRESS
                        SEL4 = PART NUMBER ADDRESS
                        SEL6 = 4 FOR READ BYTE INDICATION
                        SEL10= WILL BE  LOADED BY  THE DCT11
                               WITH A CHARACTER
                THEN THE HOST PRINTS THE LOW AND HIGH PROM NUMBERS.

TEST23: TEST OF DMA IN (TRX) TRANSFER USING A SHORT FRAME OF DATA
        THE FRAME USED IS THE PATTERN TABLE:
                        ALL 0
                        ALL 1
                        052525
                        125252
                        ROTATING 0
                        ROTATING 1

TEST24: TEST OF DMA IN (TRX) TRANSFER USING A LONG FRAME OF DATA
        THE FRAME USED IS 1020. BYTES LONG AND CONTAINS THE FOLLOWING DATA:
        0,1,2...376,0,1,2...376...0,1,2...376

TEST25:TEST OF NON EXISTENT MEMORY TEST DURING A TRANSMIT DMA TRANSFER
        THE NON EXISTENT MEMORY ADDRESS USED IS THE REVERVED ONE 760000.

 DESCRIPTION:   THE HOST LOADS THE FRAME PARAMETERS IN THE CSR.
                THEN IT ACTIVATES THE FW ROUTINE TO TRANSFER
                BY DMA THE FRAME INTO THE XMT  FIFO , TO
                TRANSMIT IT,AND RECEIVE IT BACK. THE DCT11
                CHECKS THE RECEIVED FRAME. IN ORDER TO  INIT
                DMA TRANSFER THE  HOST PASSES PARAMETERS  TO
                THE DCT11, SUCH AS:

                        SEL2 = LINE CLOCK RATE
                        SEL4 = DMA IN BYTE COUNT(2'S COMP)
                        SEL6 = DMA IN BUS ADDRESS(EVEN)
                        SEL10= EXT ADDRESS
                        SEL12= SUBTEST CODE

                NOTICE  THAT  DMA IN  IS WORD WIDE BUT, EACH
                WORD IS LOADED IN FIFO BYTE BY BYTE.
                PERIODICALLY THE HOST POLLS SEL0 FOR ANY RES
                PONSE FROM THE KMV11:

                        SEL0 = 0 IF TEST CORRECTLY ENDED
                        SEL0 = 100 IF ANY ERROR
