## October 2013 Newsletter

### Greetings

Earlier this month, we launched our redesigned website. Also, this month, we are pleased to share the new low noise chassis release of the 1020L and 1040L amplifiers. Additionally, this issue features highlights from the recent IEEE-IUS show.

### Low Noise Chassis Release

The new revisions of the 1020L and 1040L amplifiers have now been released. There are no changes to the electrical performance, but as requested by our customers, we have put a circuit breaker on the front panel as opposed to an on/off switch on the rear. Additionally, we have made improvements to reduce the fan noise - making them much quieter units, while still delivering the same power, gain, and robust performance.

### IEEE 2013 - Prague, Czech Republic

This past July, E&I exhibited at the annual IEEE-IUS Symposium, in Prague, Czech Republic. The show was held at the Prague Congress Center and celebrated the 60th anniversary of the IEEE Ultrasonics, Ferroelectrics, and Frequency Controls Society.

### UIA 2013 Report

Check out the latest issue of Vibrations which features:

- 42nd Annual UIA Symposium
- Upcoming 2014 Symposium Info

### MedTech 2013

Check out the Post-Conference newsletter, from the MedTech 2013 Annual Conference.

We featured a demo of our [Locked-On](#) series switchable impedance transformers at our booth - displaying how you can achieve maximum power transfer. Due to logistics with import/export, we had to pack up our demo a day early. As it turned out, Max, Nigel and Bob drew in a lot more attention than the transformers!

If you would like a [quote](#) for a Locked-On, we'll be happy to send you one - or, if you'd like to learn more about Max, Nigel and Bob, please check out their [facebook page](#) and stay tuned to see which shows they'll be attending with us in 2014.

## Website Launch

We are happy to announce our redesigned website has officially been launched. The new site provides a fresh new look with improved navigation and functionality. All of our products are now featured in a database - allowing you to easily view the specs and compare side-by-side. Please [check it out](#) and let us know what you think!

## Feedback

As always, we welcome your feedback. If there is a specific topic you would like addressed, please let us know. All questions and comments can be sent to [Jen Elkins](#).
