KitKabs

Shared Storage Charger Cabinets

Description

The KitKabs provide a cost effective method of charging a wide variety of electronic devices. Both the 6 and 20 position versions provide a high degree of flexibility and future proofing. OEM plug-top chargers are used enabling a mix of devices to be housed and charged simultaneously. The KitKab 20F features ten separate trays designed to house 2 devices side by side such as PDAs and personal printers. The KitKab 6W is ideal for smaller teams who require a compact form factor and can be wall mounted. This standard version provides 6 charging slots along with an additional 2 storage slots.

The robust electronic lock restricts access to only authorised users. Entry to the cabinet is by a 4 digit PIN as standard. If the door isn't opened within 6 seconds the lock automatically re-engages securing your investment. Manager bypass keys are available and can be programmed to access 1 or more cabinets. The manager's bypass key also acts as the Battery back-up to enter the cabinet in the event of power failure. User keys are also available and are designed to international standards for disabled users. The lock is secured by a ½-inch deadlatch.

The KitKab is the smart choice for any electronic equipment which may be pooled or shared between a small team. If your organisation requires individual secure charging then the FNET3 & tetraNET series of cabinets are more appropriate. The kitKab series can be built to house almost any electronic device. Let us know what you want to put in yours!

- Wall Mounting or Floor Standing
- Access via Programmable PIN
- Secure Device Charging
- Ideal for Pool Issue Kit
- Custom Versions

Selection Table

Part Number	Charging Positions	Mounting Options	Dimensions (W x D x H)
