HOT SALE!

# General Description

The Model 635 tube tester is a portable instrument providing high speed testing of T.V., Radio and Industrial types of tubes.

An accessory compartment in the luggage-type carrying case holds the test cable for picture tubes and the line cord.

The cable supplied in this compartment will enable you to test the standard 12 pin and the 8 pin 110° tubes. A listing of these types of picture tubes is not necessary (since an emission test is made and all tubes are tested alike).

# WARRANTY

Please read the enclosed warranty and note that the registration card accompanying each unit should be filled in and returned to the company within 10 days of purchase. The warranty applies only if we have your registration card on file,

## General Information

- 1. Set all switches before inserting the tube in its socket,
  - 2. 1st test for shorts before making quality test.
- 3. If "shorts-grid leakage" indicator glows when tube is inserted in its proper socket do not test for quality. Damage to the circuit of the tube tester may occur or you may damage the tube.
  - 4. Tubes listed with a "#" next to it is read on diodes O.K. scale.

# Tube Testing Procedure

- 1. Connect the line cord to a 117 V. 80 cycle supply.
- 2. Set switches as indicated next to tube listing. If more than 1 line is indicated remove the tube before setting the switches for the 2nd test.
  - 3. Insert the tube in its proper socket and allow a sufficient time for the tube
    - to warm up.

      4. Check the "shorts-grid leakage" jewel, if there is a glow it indicates a shorted tube, make no further tests on the tube.
- 5. If there is no glow on the "shorts-grid leakage" jewel, test for quality. (Read correct scale).
  - 6. If the tube tests good then check for a screen short.
- Move that designated switch to the position indicated in the column. Any glow 7. Under the column listed as Sht Test you may find a notation listed as 2 or 4. on the "shorts-grid leakage" jewel will indicate a short between Grid I and This will indicate a shorted tube and it should be discarded.

# Testing Picture Tubes (Standard 12 pin and 8 pin 1100 tubes only)

- Set switch "1" to position "A".
- Set switch "2" to position "12".
- Set switch "3" to the proper filament voltage for the tube under test. (You will find the proper filament voltage listed in your tube manuals). د. د. د.
  - "2.35 to 2.68" volts use position "C". Voltage selection 'switch #3" 4

    - "4. 7 volts" use position "D"
- "6.3 to 8.4 volts" use postion "E".
- Allow a sufficient time for the tube to warm up. "12. 6 volts use position "F".
- If the "shorts-grid leakage" jewel lights brightly a low resistance short is indicated. If the jewel lights up with a faint glow it indicates a high resistance က်တဲ့
- Press the "test for quality" switch to test and read the meter. Any reading of above 20 on the upper scale "0 to 100" represents a good tube. short or a gassy tube. Ľ

#### EICO MODEL 635 TUBE TESTER MANUAL

The accompanying GIF files represent the entire operating manual and tube listings for EICO Model #635 tube tester. Manufactured by the EICO Electronic Instrument Company.

The manual is dated 1968.

This tester was purchased as a kit Feb. 22, 1972 and to-date has never required any repairs. While possibly not the most accurate of tube testers it is certainly one of the easiest and quickest to use. The 635 generally gives a good indication of tube "go no go" condition, however on occasion, I have had to turn to my Heathkit IT-21 to find internal leakage and shorts that did not show up on the Eico 635.

In the past 30 plus years I've tested literally thousands of tubes with it.

Gord
