

# ELECRAFT K3 OWNER'S MANUAL ERRATA

Rev. D7-1, April 13, 2010

**CAUTION REGARDING THE EXTERNAL SPEAKER JACK:** This jack is stereo, not mono, because of the K3's stereo speaker outputs. If you use a mono speaker plug, turn off the right channel amplifier by setting the SPKRS configuration menu entry to 1. This will eliminate the possibility of damaging the right-channel amplifier. (You will still hear stereo when using headphones in this case, unless you also set the SPKR+PHones menu entry to YES.)

**The features below are described in the Owner's manual but not yet available in firmware.**

- "Method 3" compensation for the high-stability TCXO option, model KTCXO3-1. **Note:** Even without this compensation step, the KTCXO3-1 typically exhibits stability of +/- 0.5 PPM over 0-50 C, meeting Elecraft's stated goal for the high-stability option.

See [http://www.elecraft.com/K3/k3\\_software.htm](http://www.elecraft.com/K3/k3_software.htm) for firmware release notes and update instructions.
