

# KAT500 OWNER'S MANUAL ERRATA

Rev. C4-1, November 24, 2014

## MAKE THESE CHANGES TO YOUR REV. C4 MANUAL

1. **Page 16:** Under Tune Operation, replace the last paragraph (just before Memories) that starts with “If the SWR is below 1.2...” with the following:

If the SWR is 1.2 or less when a tune operation begins, the KAT500 bypasses the matching network without searching for a tuning solution. The KAT500 remains in either AUTO or MAN mode but the matching network is switched out of the RF path (bypassed). The bypass setting will be stored as the tuning solution so the matching network will be bypassed whenever you return to that frequency. This SWR threshold can be changed with the Utility Program (see *Automatic Bypass on Selected Bands* on page 18 and *VSWR Thresholds* page 21)
