

Internet by satellite - satellite modem F-10

Easy to install and to use

Access to Internet and all it's possibilities by following a few simple instructions is what this satellite modem is all about. It is designed to be easy to install and to use. At the same time the modem is the right solution also for more complex needs.

Speed 10 Mb/sec

Computer communication has never been easier and more effective to consumers than now. The satellite modem handles speeds up to 10 Mb/sec. Thereby it works as a useable substitute to a fair cost at sites were broad band isn't planned in a reasonable future.

One or more users

The satellite modem is equipped with an inbuilt network card which allows not only one but several computers to connect. This possibility makes the modem a perfect solution at home, as well as at the small office.
