- F&G -- ADVANCED QUALITY MANAGEMENT SYSTEM -- ISO9001:2000**  
(EVALUATED BY SGS UNITED KINGDOM LTD. IN JULY, 2002)
- F&G -- MANUFACTURER AND EXPORTER IN CHANGZHOU, CHINA.**  
(SPECIALIZED IN ELECTRONICS & TELECOM & NETWORKS.)
- F&G -- FOUNDED IN 1985 AS A LEADING ELECTRONIC EXPORTER.**  
(ADVANCED EXPERIENCES IN ELECTRONICS AREA)
- F&G -- HOLDING A TRADING BRANCH IN HONG KONG.**  
(FULLING ELECTRONIC (H.K.) LIMITED.)
- F&G -- HOLDING AN INDUSTRIAL BRANCH IN CHANGZHOU.**  
(CHANGZHOU FULLING ELECTRONIC CO., LTD.)
- F&G -- SHAREHOLDER OF QUALITY FACTORY**  
(MOTOR, DIODE, ACOUSTIC COMPONENTS, ETC.)
- F&G -- ANNUAL SALES IN 2002 -- OVER 25 MILLION U.S.DOLLARS**  
(100% PRODUCTS EXPORT TO OVERSEAS MARKETS.)

(JH9401D)

**JH9401D** Telephone Dialing/Caller ID Analyzer is a new kind of digitized test meter designed specially for the test of telephone dial characteristics (Pulse/DTMF) and Caller ID. The tester has reached advanced level of the same kind at home and abroad in test functions speed and precision. The tester is an indispensable appliance both for telephone design and research. It can be also used in quality test factory assemblage production test and maintenance departments.

**FEATURES:**

- Test the characteristics of telephone pulse dial (including pulse number, pulse speed, break/make ratio, pulse width, duration between pulse serials, R key electric resistance.)
- Test the characteristics of telephone DTMF dial (including high, low frequency group, voltage level, frequency deviation, non-linear distortion and so on).
- Self set up of a high/low limit parameter of DTMF dial according to national standard or factory self-control target.
- Test the telephone ringing sound level according to the ring current by national standard, Ring Frequency and Ring Voltage level adjustable.
- Caller ID test parameters changeable to meet different standards.
- A printer port to output the test result.
- Spectrum analyses of DTMF dialing.

**FC-G-0255**  
(JH9201A)

**JH9201A** Telephone Transmission Tester is an electro-acoustic instrument designed specially for testing telephone transmission characteristics. It takes digital structure and screen display with all the functions controlled by CPU and has a dynamic range more than 70 dB with high stability and reliability. Its fully automatic testing function is very useful for production line. It's easy and quick in operation, and can print out test result when connecting to printer. It is an advanced instrument necessary in development, production, maintenance and test of telephone.

**FEATURES:**

- Test Send, receive and sidetone of Reference Equivalent (RE) and Loudness Rating (LR) in 0, 3, 5Km simulation subscriber line with frequency response curve.
- Test telephone return loss of 0.2Km
- Test telephone amplitude characteristics
- Providing 60V, 48V feeding bridge in active or inactive status
- Full-automatic test with the function to judge whether or not the test data of the telephone sets meet the requirements or limits defined by customer and alarm automatically if not.
- Print interface to output test result to printer
- Full-screen display the test conditions, test results and frequency response curve instantly, and center the frequency response curve automatically
- Connected with JH9301 to test non-linear distortion of send and receive in 0, 3, 5Km as national standard required.
- Ambient noise reduction by frequency tracing filter.

The terminal crimping neon lamp is to connect neon lamp or fluorescent neon lamp with terminal machine particularly used for resistor. The welding is durable, Customers could order them with requirements.

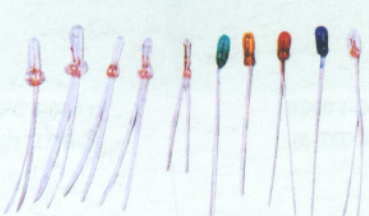

Electric welding neon lamp or fluorescent lamp is to weld neon lamp or fluorescent lamp on resistor through electric welding machine without sparks. The welding is reliable with tiny welding point. We could process them according to customer's requirements.

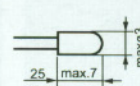

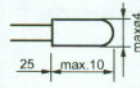

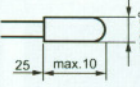

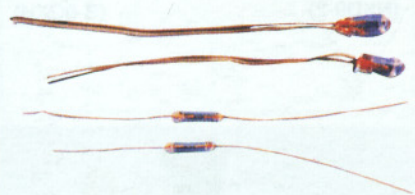

It can be used different types and colors wires as the customer's demand, as well as the terminal.
