

FLUKE®

80PK-4A Type K Air Probe

Instruction Sheet

WARNING

TO AVOID ELECTRICAL SHOCK, DO NOT USE THIS PROBE WHEN VOLTAGES EXCEEDING 24V AC RMS OR 60V DC ARE PRESENT. THE PROBE TIP IS ELECTRONICALLY CONNECTED TO THE OUTPUT TERMINALS.

INTRODUCTION

The 80PK-4A Type K Air Probe is designed for measuring the temperature of air or gases. The measuring bead of the probe is protected by a perforated stainless steel baffle to prevent accidental damage. The sheath material is 304 Stainless Steel. The 4-foot cable is terminated with a Type K miniature thermocouple connector with 0.792-mm (.312-in) pin spacing. The 80PK-4A can be used with any temperature-measuring instrument that is designed to accept Type K thermocouples and has a miniature connector input.

SPECIFICATIONS

Type: K Standard Grade Ni-Cr vs Ni-Al (Chromel vs Alumel)

Measurement Range: -196°C to 816°C (-320°F to 1500°F)

Accuracy (With respect to ANSI MC96.1-1982-Standard Limits of Error):

NOTE

All error calculations should be done in °C, then scaled to °F.

RANGE	ACCURACY (% of reading)
-196°C to -110°C (-320°F to -166°F)	±4% (°C)
-110°C to -40°C (-166°F to -40°F)	±4.4°C
-40°C to 275°C (-40°F to 527°F)	±2.2°C
275°C to 816°C (527°F to 1500°F)	±0.75% (°C)

P/N 828798

November 1987

© 1987, Fluke Corporation. All rights reserved. Litho in U.S.A.

Output: @ 25°C (77°F) =1.00 mV (reference junction @ 0°C)

Seebeck Coefficient: @ 25°C (77°F) =40.50 $\mu\text{V} / ^\circ\text{C}$

Measurement Time (Time Constant): 3.0 seconds in 100°C air moving at 3.33 meters/second (10.9 feet/second) at sea level pressure (5 time constants = 1 complete step change, i.e., 15 seconds).

Maximum Voltage: 24V ac rms or 60V dc

Maximum Temperature of Tip: 816°C (1500°F)

Baffle

Material: 304 Stainless Steel Dimensions

Diameter: 5.6 mm (0.220 in)

Length: 3.3 cm (1.3 in)

Sheath

Material: 304 Stainless Steel Dimensions

Diameter: 5 mm (.2 in)

Length: 20.32 cm (8 in) from handle body to end of baffle

Grounding: Junction welded to sheath.

Cable

Length: 1.2 meters (4 ft) Insulation

Material: PVC

Maximum Temperature: 105°C (220°F)

Jacket Color: Gray

Conductors

Type: K

Size: AWG #24 stranded (7 strands of #32)

Handle

Material: Gray Hytrel

Maximum Temperature: 125°C (257°F)

Connector

Type: Mini-thermocouple connector with .792 mm (0.312 in) pin spacing

Material: Yellow Hytrel

Maximum Temperature: 125°C (257°F)

Overall Length: 31.9 cm (12.55 in) from baffle tip to end of cable strain relief.

Protection: Class 3. Relates solely to insulation and grounding properties defined in IEC 348.

MEASUREMENT CONSIDERATIONS

Instrument Compatibility

The 80PK-4A is compatible with any temperature-measuring instrument that accepts Type K thermocouples, has a miniature thermocouple connector, and has cold reference junction compensation. Accuracy of the temperature-measuring instrument must be considered along with the 80PK-4A accuracy specification to determine the overall accuracy of the combination.

Temperature Limitations

The baffle tip of the 80PK-4A has a continuous temperature rating of 816°C (1500°F). However, the opposite end of the sheath nearest the handle should not be subjected to temperatures greater than 125°C (257°F). This is the maximum temperature limitation of the handle.

Media Limitations

The stainless steel baffle and sheath should not be exposed to halides or sulfides. Even though the sheath to junction transition is sealed, it is not recommended to immerse the probe in liquid or saturated vapor. The 80PK-4A should not be used in reducing atmospheres or in a vacuum.

OPERATION

Use the 80PK-4A as follows:

1. Use the miniature (0.312-inch spacing) thermocouple connector to connect the 80PK-4A to a compatible Type K temperature-measuring instrument.
2. Turn on the measuring instrument, and select the appropriate range and scale.
3. Check the read out on the measuring instrument. With no heat or cold source applied to the tip of the probe, the measuring instrument should display the ambient (room) temperature. If the instrument does not read out properly, refer to the TROUBLESHOOTING paragraphs that follow.

MINIMIZING THERMAL SHUNTING

The 80PK-4A Air Probe should be inserted at least 6.35 cm (2.5 in) into the environment to be measured to minimize the shunting effect of the sheath.

TROUBLESHOOTING

With no heat or cold applied to the probe, the measuring instrument should display the ambient temperature. If the measuring instrument does not read out properly, try the following:

1. Verify that the temperature-measuring instrument is designed to be used with Type K thermocouples. The temperature-measuring instrument should have a yellow input connector and / or be marked with a "K".
2. Check for an open circuit indicator on the measuring instrument. Some temperature measuring instruments have a built-in circuit to indicate if the connected probe is open. (All Fluke Temperature-measuring instruments have this feature.) Refer to the owners manual accompanying the measuring instrument to see if this feature is available.

Short the two input pins of the measuring instrument with a piece of wire. If the instrument is functioning, it should indicate the ambient temperature.

3. If you suspect a broken connection, use an ordinary ohmmeter to read the continuity of the probe from pin to pin. The ohmmeter should read 20 ohms or less if there is continuity.

SCALE CONVERSIONS

Use the following equation to convert °C to °F:

$$(^{\circ}\text{C} \times 1.8) + 32 = ^{\circ}\text{F}$$

Use the following equation to convert °F to °C:

$$(^{\circ}\text{F} - 32) \times 0.5556 = ^{\circ}\text{C}$$

PROBE MOUNTING GROOVE

The probe finger guard contains a groove to simplify mounting the probe in a fixed position. The figure below shows nominal dimensions for the finger guard and groove, and suggests a temporary quick mounting method. However, any mounting method should be carefully designed to prevent damage to the probe or the measured medium.

CAUTION

The handle and plug of the probe are made of material that may deteriorate when exposed to some solvents on a long-term basis.

CLIP NOT INCLUDED WITH PROBE

ONE YEAR LIMITED WARRANTY

John Fluke Mfg. Co., (Fluke) warrants your accessory to be free from defects in material and workmanship under normal use and service for one year from date of purchase if you are the original purchaser. The warranty does not apply to batteries or fuses or when the accessory has been misused, altered, or damaged by accident or abnormal conditions of operation.

For warranty service, send the accessory with a description of the difficulty, postage prepaid to a Fluke Service Center. Fluke assumes no risk for damage in transit. Fluke will at our option, repair or replace the defective instrument free of charge. However, if we determine that the failure was caused by, misuse, alteration, accident or an abnormal condition of operation, you will be billed for the repair. The repaired accessory will be returned, transportation prepaid.

FLUKE MAKES NO WARRANTY OTHER THAN THE LIMITED WARRANTY STATED ABOVE. ALL WARRANTIES, INCLUDING IMPLIED WARRANTIES OF MERCHANTABILITY OR FITNESS FOR ANY PARTICULAR PURPOSE, ARE LIMITED TO A PERIOD OF ONE YEAR FROM THE DATE OF PURCHASE. FLUKE SHALL NOT BE LIABLE FOR ANY SPECIAL, INCIDENTAL, OR CONSEQUENTIAL DAMAGES, WHETHER IN CONTRACT, TORT, OR OTHERWISE.

NOTE (USA only): Some states do not allow limitation of implied warranties, or the exclusion of incidental or consequential damages, so the above limitations or exclusions may not apply to you. This warranty gives you specific legal rights, and you may have other rights, which vary from state to state.
