

Calibration setup:

Connect the banana jack COM to the BNC common

**Procedure:**

- A - Apply a 1 MHz square wave signal with an amplitude of approximately 600 mV peak-to-peak to both channel A and B. Set the generator to the FAST RISE position. Use 50Ω terminations.
- B - Press the READY softkey.
- C - Now press the SCOPE softkey to go back to the CALIBRATE menu.

Continue with the meter calibration adjustment procedure, section 5.7
