## Measuring input

for connection to intrinsically safe circuits with the following  
max. value: U = 30 V

$$U_o = \mathbf{6 \text{ V}} \quad L_i = 20 \mu\text{H}$$
$$I_o = 63 \mu\text{A} \quad C_i = 20 \text{ nF}$$

## Verification of the Intrinsic Safety acc. to EN 60 079-14

With the measurement of DC currents resp. DC voltages two intrinsically safe circuits are connected. The **certified** tables on page 22 give the values for  $L_o$  and  $C_o$  for typical applications. The tables are calculated by PTB and serve to be used as the verification of the intrinsic safety.

|            | Output       | Power supply                            |
|------------|--------------|---|
| Rated data | 12 V / 20 mA | 24-60 V resp.<br>85-230 V AC / 110 V DC |
| $U_m$      | 253 V        | 253 V AC resp. 125 V DC                 |
