(800) EDUCATION

# **TIME-SHARED BASIC/2000 CONTRIBUTED LIBRARY HANDBOOK**

## **VOLUME IV (800) EDUCATION**

The Hewlett-Packard Company makes no warranty, expressed or implied, and assumes no responsibility in connection with the operation of the contributed program material attached hereto.

# CLASSIFICATION CODE CATEGORY

(Not all categories have programs. Please refer to the INDEX to HP BASIC Program Library for available programs in HP BASIC)

- 100 DATA HANDLING (VOLUME I)
- 101 EDITING
  - 102 INFORMATION STORAGE AND RETRIEVAL
  - 103 TABLE HANDLING
  - 104 CHARACTER/SYMBOL MANIPULATION
  - 105 CODE/RADIX CONVERSION
  - 106 DUPLICATION
  - 107 SORTING AND MERGING
  - 108 DATA HANDLING UTILITIES
  - 109 MEDIA CONVERSION
  - 110 FILE MANAGEMENT
  - 112 SPECIAL FORMAT DATA TRANSFER
  - 114 PLOT ROUTINES IN HP BASIC
- 200 TESTING, DEBUGGING AND PROGRAMMING AIDS (VOLUME II)
- 201 TRACING
  - 202 INSTRUMENT TEST
  - 203 DISC/DRUM EQUIPMENT TEST
  - 204 MAGNETIC TAPE EQUIPMENT TEST
  - 205 GRAPHIC EQUIPMENT TEST
  - 206 MEMORY SEARCH AND DISPLAY
  - 207 DUMPING
  - 208 CORE STORAGE TEST
  - 209 CENTRAL PROCESSING UNIT TEST
  - 210 BREAK POINTS
  - 211 DEBUGGING AIDS
  - 212 PROGRAMMING AIDS
  - 213 PAPER TAPE EQUIPMENT TEST
  - 214 PUNCH CARD EQUIPMENT TEST
  - 215 PRINTER EQUIPMENT TEST
  - 216 A/D - D/A EQUIPMENT TEST
  - 217 TELECOMMUNICATIONS EQUIPMENT TEST
  - 218 SPECIAL DEVICE EQUIPMENT TEST
  - 219 DATA ACQUISITION SYSTEMS TEST
- 300 MATH AND NUMERICAL ANALYSIS (VOLUME II)
- 301 MATHEMATICS, GENERAL
  - 302 EXTENDED-PRECISION ARITHMETIC
  - 303 COMPLEX ARITHMETIC
  - 304 RCD/ASCII ARITHMETIC
  - 305 BOOLEAN ALGEBRA
  - 306 FUNCTIONS, COMPUTATION OF
  - 307 INTERPOLATION/EXTRAPOLATION
  - 309 CURVE FITTING
  - 310 NUMERICAL INTEGRATION
  - 311 POLYNOMIALS AND POLYNOMIAL EQUATIONS
  - 312 MATRIX OPERATIONS
  - 313 EIGENVALUES AND EIGENVECTORS
  - 314 SYSTEMS OF LINEAR EQUATIONS
  - 315 SYSTEMS OF NON-LINEAR EQUATIONS
  - 316 INTEGRAL TRANSFORMS
  - 317 NUMERICAL DIFFERENTIATION
  - 318 ORDINARY DIFFERENTIAL EQUATIONS
  - 319 PARTIAL DIFFERENTIAL EQUATIONS
- 400 PROBABILITY AND STATISTICS (VOLUME II)
- 401 UNIVARIATE AND MULTIVARIATE PARAMETRIC STATISTICS
  - 402 TIME SERIES ANALYSIS
  - 403 DISCRIMINANT ANALYSIS
  - 404 REGRESSION ANALYSIS
  - 405 RANDOM NUMBER GENERATORS
  - 406 PROBABILITY DISTRIBUTION SAMPLING
  - 407 NON-PARAMETRIC STATISTICS
  - 408 STATISTICS, GENERAL
  - 409 CORRELATION ANALYSIS
  - 410 ANALYSIS OF VARIANCE AND COVARIANCE
  - 411 FACTOR ANALYSIS
  - 412 SCALING
  - 413 GENERAL PROBABILITY
- 500 SCIENTIFIC AND ENGINEERING APPLICATIONS (VOLUME II)
- 501 SOCIAL AND BEHAVIORAL SCIENCES
  - 502 GEOPHYSICS
  - 503 GEOLOGY
  - 504 OCEANOGRAPHY
  - 505 PHYSICS
  - 506 MEDICAL SCIENCES
  - 507 CHEMISTRY
  - 508 BIOLOGY
  - 509 ASTRONOMY AND CELESTIAL NAVIGATION
  - 510 PETROLEUM ENGINEERING
  - 511 HYDRAULIC ENGINEERING
  - 512 NUCLEAR ENGINEERING
  - 513 ELECTRICAL ENGINEERING
  - 514 MECHANICAL ENGINEERING
  - 515 CIVIL ENGINEERING
  - 516 CHEMICAL ENGINEERING
  - 517 AERONAUTICAL ENGINEERING
  - 518 STRUCTURAL ENGINEERING
  - 519 SYSTEM THEORY
- 600 MANAGEMENT SCIENCES AND OPERATIONS RESEARCH (VOLUME III)
- 602 PERT
  - 603 CRITICAL PATH ANALYSIS
  - 604 OPTIMIZATION PROGRAMS
  - 605 LINEAR PROGRAMMING
  - 606 DISCRETE SYSTEMS SIMULATION
  - 607 CONTINUOUS SYSTEMS SIMULATION
  - 608 FORECASTING TECHNIQUES
  - 610 DYNAMIC PROGRAMMING
- 700 BUSINESS AND MANUFACTURING APPLICATIONS (VOLUME III)
- 701 JOB REPORTING
  - 702 QUALITY ASSURANCE PERFORMANCE ANALYSIS
  - 703 QUALITY ASSURANCE TESTING
  - 704 NUMERICAL CONTROL
  - 705 BILL OF MATERIALS
  - 706 PAYROLL ACCOUNTING
  - 707 WORK-IN-PROCESS CONTROL
  - 708 INVENTORY ANALYSIS
  - 709 ACCOUNTS PAYABLE
  - 710 SALES FORECASTING
  - 711 ACCOUNTS RECEIVABLE
  - 712 FINANCIAL ANALYSIS
  - 713 INVESTMENT ANALYSIS
  - 714 ECONOMIC ANALYSIS
  - 716 BUDGETING PROGRAMS
  - 717 BUSINESS INFORMATION SYSTEMS
  - 718 BUSINESS SERVICES
- 800 EDUCATION (VOLUME IV)

- 903 GAMES

## GENERAL

Hewlett-Packard is a major designer and manufacturer of electronics for measurement, analysis and computation. HP customers in science, industry, medicine, and education know and appreciate Hewlett-Packard's reputation for technical excellence, quality, and reliability.

Over 170 world-wide offices sell and service the products of 21 manufacturing facilities located in the United States, Europe, and the Far East.

## THE HP 2000 CONTRIBUTED LIBRARY

Hewlett-Packard makes available to all users a wide variety of computer programs through the HP 2000 Contributed Library.

Before writing a program for your particular application, scan the list of contributed programs. (A complete Index of contributed programs is available at your local HP sales office). You may be able to use these programs without modification, or as a starting point for developing your own special-purpose software.

The Contributed Library collects, indexes and distributes programs submitted by HP users throughout the world. These programs range from complex data communications packages to educational games, and all are classified according to the functions they perform.

## 2000 BASIC

Programs written in HP 2000 BASIC are documented in 5 volumes, plus additional user manuals for certain individual programs.

## 2000 NON-BASIC

Programs written for the HP 2000 series computers in FORTRAN, ALGOL, HP Assembly language, etc. are abstracted in the HP Program Catalog available from your local HP sales office. This catalog contains a number of programs for use with HP Time-Sharing systems, providing conversion capabilities, diagnostics, etc.

## NEW ORGANIZATION OF LIBRARY

Because of the rapid growth of library contributions, it has been necessary to place a new emphasis on including only programs of very widespread usefulness. A Program Review Committee screens new submittals to determine this particular feature. Also, a number of programs have been purged from the library, where it was decided that a widespread application did not exist. You may elect to retain the documentation or software for one of these programs; however, HP will not be reprinting or updating them.

The documentation for BASIC Library programs has been completely reprinted and reorganized. There are five volumes available, and programs are arranged alphabetically, by calling NAME, within each major category.

Volume I (100) DATA HANDLING  
(200) TESTING, DEBUGGING AND PROGRAMMING AIDS

Volume II (300) MATH AND NUMERICAL ANALYSIS  
(400) PROBABILITY AND STATISTICS  
(500) SCIENTIFIC AND ENGINEERING APPLICATIONS

Volume III (600) MANAGEMENT SCIENCES AND OPERATIONS RESEARCH  
(700) BUSINESS AND MANUFACTURING APPLICATIONS

Volume IV (800) EDUCATION

Volume V (900) MISCELLANEOUS (GAMES) \*\*

\*\* Plotting routines previously classified under 904 are now found in Volume I under DATA HANDLING. This leaves Volume V exclusively for GAMES.

## ORDERING INFORMATION

Contact your local HP sales office for ordering information of contributed software. Programs are available individually on paper tape, or collectively, on magnetic tape. Documentation is provided in the 5 volumes of BASIC Handbooks, and in some cases additional user manuals and classroom supplementary materials are available. (See list of Supplementary Documentation).

## DOCUMENTATION

Volume I HP 36000-91001 HP BASIC Program Library (100,200)

Volume II HP 36000-91002 HP BASIC Program Library (300,400,500)

Volume III HP 36000-91003 HP BASIC Program Library (600,700)

Volume IV HP 36000-91004 HP BASIC Program Library (800)

Volume V HP 36000-91005 HP BASIC Program Library (900) (GAMES)

## SOFTWARE (HP 2000C'/F MAG TAPE DUMP)

\* HP 36000-10001 HP BASIC Contributed Software (100,200)

\* HP 36000-10002 HP BASIC Contributed Software (300,400,500)

\* HP 36000-10003 HP BASIC Contributed Software (600,700)

\* HP 36000-10004 HP BASIC Contributed Software (800)

\* HP 36000-10005 HP BASIC Contributed Software (900) (GAMES)

\* 800 BPI. (1600 BPI mag tapes are also available under separate order number)

## SUPPLEMENTARY DOCUMENTATION

FINDIT Users Manual	36250, Option D00
CTC1 Documentation	36210, Option D00
CTC2 Documentation	36211, Option D00
CTC3 Documentation	36212, Option D00
CTC4 Documentation	36213, Option D00
CTC5 Documentation	36214, Option D00
CTC6 Documentation	36638, Option D00
PILOT Users Manual	5951-5660
COBOL/2000 Primer	5951-5664
IDA	5951-5606
GRAZE (Student Manual)	5951-5653
(Teacher's Guide)	5951-5654
(Classroom Set)	5951-5655
CASE1	5951-5661
CASE2	5951-5662

## UPDATES

The BASIC Library will be updated every 6 months. An addendum is printed, containing all new and revised programs in loose-leaf, 3-hole punched format to be easily added to your handbooks. A new Index is also published at this time to announce the release of new addenda and provide a complete updated list of library programs. Additions and revisions are flagged for your reference. Again, contact your local HP sales office to order addenda or a new Index.

## SYSTEMS SPECIFICATIONS

Library programs have been collected over a period of years, and some of the earlier programs were written for a "single terminal" BASIC system, or an early version of the HP 2000 series Time-Share systems.

The chart below lists varying system features. In many cases slight modifications in coding will allow a program to RUN on systems other than the one for which it was originally written. The Index listing all Library programs indicates system compatibility for individual programs.

Program Features	2000A	2000B	2000C	2000E	2000L High Speed 2000F
Maximum Program Size	5100 Words	5100 Words	10000 Words	4180 Words	10000 Words
Maximum Number of Files	8	8	16	4	16
Maximum Number of Records/File	128	128	32767	48	12767
Maximum Number of Words/Record	64	64	256	128	256
Programmable Functions					
TIME		X	X	X	X
ENTER		X	X		X
COMMON		X	X	X	X
CHAIN		Chain Name	Chain Name Statement No	Chain Name	Chain Name Statement No
		X	X	X	X
PRINT USING (IMAC)			X		X
BRK					X
ASSIGN			X		X
RESTARTABLE				X	X
RND			X	X	X
SPACE			X		X
LINE			X		X

## ERRORS IN CONTRIBUTED SOFTWARE

Every HP BASIC Program included in the Contributed Library is checked by HP personnel and verified for accuracy with the sample RUN submitted. However, it is impractical to test programs under all circumstances, and HP does not assume responsibility for errors in contributed software. If you do encounter errors, please report them to

the HP Contributed Library on the Error Report form supplied with this publication.

## RELATED INFORMATION

An active Educational Users' Group at HP invites inquiries. Also, Hewlett-Packard offers a number of supported programs in Education Administration and Instruction. For more information on these activities, contact the Education Marketing Department, Hewlett-Packard Company, 11000 Wolfe Road, Cupertino, California 95014.

There are a number of manuals and documents relating to HP 2000 series Time-Sharing Systems that may be useful to you:

## LANGUAGE MANUALS:

A Guide to HP Educational Basic (02116-91773)  
 HP BASIC (02116-9077)  
 2000F: Time-Shared BASIC Programmers' Guide (02000-900)

## OPERATING SYSTEM MANUALS:

2000F: Time-Shared BASIC Operator's Guide (02000-90074)

## EDUCATIONAL APPLICATIONS MANUALS:

2000C/2000F System Operator Instructions for Educational Application (02000-90046)

2000C/2000F Instructional Management Facility and Instructional Dialogue Facility—Proctors Manual (02000-90047)

2000C/2000F Mathematics Drill and Practice Program—Proctors Manual (02000-90051)

2000C/2000F Instructional Dialogue Facility—Authors Manual (02000-90055)

2000C/2000F IDF Author's Pocket Guide (02000-90076)

2000C/2000F Mathematics Drill and Practice Program—Teachers Handbook (02000-90052)

COPYFL (02000-90032)

EDCALC (02000-90033)

Integer to String (02000-90035)

Date and Time (02000-90036)

2000C/2000F Introduction to Mathematics Drill and Practice (02000-90050)

2000C/2000F Mathematics Drill and Practice Curriculum Guide (02000-90053)

Course Developers' Manual for IDF-1 and IMF-1 (02000-9006)

Upshift (02000-90037)

Character Removal (02000-90038)

Key Word Search (02000-90039)

Downshift (02000-90040)

String Match with "Don't Cares" (02000-90041)

String to Number (02000-90042)

Student Response Analysis (02000-90043)

The preceding publications are available at nominal cost through your local HP sales office.

**HEWLETT-PACKARD SOFTWARE CENTER  
DOCUMENTATION FORM FOR CONTRIBUTED BASIC PROGRAMS**

TITLE

PROGRAM NAME

CLASSIFICATION CODE

--	--	--

SELECT UP TO FOUR CROSS REFERENCE WORDS FROM CROSS REFERENCE INDEX \_\_\_\_\_

DESCRIPTION      ( ) Program      ( ) Subroutine

---

(Please include the specific application of your program – i.e., how do *you* use it, or recommend its application.)

---

---

**USER INSTRUCTIONS**

---

If possible, please include 'INSTRUCTIONS' as an option in your program. (Define the inputs requested by the program or subroutine. List the files used, and the data format of each. List the maximum file size. If applicable, include algorithms used.)

**NOTE ON SUBROUTINES:** The following conventions have been adopted for stand-alone subroutines. Variable names should begin with Z. When more than 10 variables are used, Z, . . . Z9, list the other variable names under Special Considerations. Subroutine line number should begin at 9000.

---

---

**SYSTEM SPECIFICATIONS**

System: ( ) Single Terminal Basic ( ) 2000A ( ) 2000B ( ) 2000C ( ) 2000E ( ) 2000C'/F

Terminal: ( ) Teletype ( ) Mark Sense Card Reader ( ) CRT ( ) Other \_\_\_\_\_

Note: Does this program use the BRK function? ( ) Yes ( ) No

**SPECIAL CONSIDERATIONS**

\_\_\_\_\_  
List any special hardware requirements, subroutine variable names not beginning with a 'Z', accuracy limitations, literature references, etc.  
\_\_\_\_\_

**CONTRIBUTOR'S NAME AND ORGANIZATION ADDRESS**

TO BE PUBLISHED? ( ) yes ( ) no

**DISCLAIMER**

To the best of my knowledge this contributed program is free of any proprietary information and I hereby agree that HP may reproduce, publish, and use it, and authorize others to do so without liability of any kind.

Signature \_\_\_\_\_ Date \_\_\_\_\_

\_\_\_\_\_  
Attach a sample run including input data and resulting TTY output data. Send a paper tape, or whenever possible, please send program on 2000C/F dump tape, ID B500.  
\_\_\_\_\_

Do you use this program for instructional purposes?

What age level are the students?

Please briefly describe the course, and topics within the course.

**ERROR REPORT FORM  
(HP BASIC CONTRIBUTED)**

Comment fully on any software "bugs" in the space provided and enclose any teleprinter output that may be useful in defining the problem. A copy will be forwarded to the contributor. A reply will be returned to the person who submits this report. Send completed report to:

CONTRIBUTED PROGRAM **BASIC**

ALGIE  
36851

**TITLE:**

BASIC ALGEBRA DRILL

**DESCRIPTION:**

This program provides drill in elementary algebraic equations. Any one of four different types of equations may be chosen and the user may elect to give himself a limited amount of time which he may specify to respond to each problem. A session lasts until the user gets twenty correct answers. A summary is printed at the end of the run.

801

**INSTRUCTIONS:**

The program asks for the user's name, type of problem desired, whether the user wishes to time himself and if so how many seconds are to be allowed for answers.

**ACKNOWLEDGEMENTS:**

Bill Jarosz  
De Paul University

RUN

RUN  
ALGIE

THIS IS A COMPUTER-ASSISTED DRILL IN BASIC ALGEBRA.  
TO STOP PRACTICE BEFORE A SESSION IS COMPLETE, HOLD THE  
CTRL KEY DOWN, HIT THE LETTER C, AND RETURN.  
A SESSION LASTS UNTIL YOU GET 20 CORRECT ANSWERS.  
ALL ANSWERS ARE POSITIVE OR NEGATIVE INTEGERS.

WHAT'S YOUR NAME?BILL JAROSZ

TYPE 1 FOR PROBLEMS OF THE FORM:  $3X=15$   
2 FOR PROBLEMS OF THE FORM:  $3X+5=20$   
3 FOR PROBLEMS OF THE FORM:  $2(X+4)=12$   
4 FOR PROBLEMS OF THE FORM:  $2(X-3)+4(X-7)=-10$   
WHICH DO YOU WANT?4

DO YOU WANT TO TIME YOURSELF (1=YES,0=NO)?1  
HOW MANY SECONDS PER ANSWER?30

$2(Y-9)+3(Y-7)=-44$        $Y=-1$   
 $1(J-4)+3(J+1)=35$        $J=9$   
 $1(Z-6)-4(Z+3)=6$        $Z=-8$   
 $1(C+1)-3(C+6)=-9$        $C=-4$   
 $3(Z-6)+5(Z-1)=9$        $Z=4$   
 $6(X+4)+8(X-9)=22$        $X=4$

SORRY, TIME'S UP. LET'S TRY ANOTHER PROBLEM.

$9(C+4)+8(C+4)=102$        $C=2$   
 $3(Z-3)-2(Z-1)=-10$        $Z=-3$   
 $1(B-9)+1(B-2)=1$        $B=6$   
 $1(J-7)+4(J+1)=-18$        $J=-3$   
 $8(K-1)+7(K-1)=-105$        $K=-6$

YOU'RE HALF WAY THROUGH NOW.

$3(B-6)+6(B-7)=-33$        $B=$   
SORRY, TIME'S UP. LET'S TRY ANOTHER PROBLEM.

$5(C-1)-7(C+5)=-28$        $C=-6$   
 $5(Z-8)+5(Z+7)=-75$        $Z=-7$   
 $2(J-7)+7(J-6)=7$        $J=$   
SORRY, TIME'S UP. LET'S TRY ANOTHER PROBLEM.

$6(C+8)-9(C-3)=63$        $C=$   
SORRY, TIME'S UP. LET'S TRY ANOTHER PROBLEM.

$5(Z+2)-4(Z-6)=41$        $Z=7$   
 $8(C+2)-7(C+7)=-42$        $C=75$   
YOUR ANSWER IS WRONG. TRY IT AGAIN. -75  
YOUR ANSWER IS STILL WRONG. LET'S TRY ANOTHER PROBLEM.

$8(C-9)+2(C-3)=-58$        $C=2$   
 $1(B-7)+2(B-3)=-28$        $B=-5$   
 $4(U+2)-2(U+5)=16$        $U=9$   
 $7(X+5)-6(X+6)=7$        $X=8$   
 $5(W-3)+9(W-6)=-181$        $W=-8$   
 $2(B+1)-1(B+7)=-4$        $B=-1$

YOUR ANSWER IS WRONG. TRY IT AGAIN. 1  
THAT'S RIGHT.

YOU ONLY NEED ONE MORE CORRECT ANSWER.

$7(Z+1)+9(Z+9)=232$        $Z=9$

BILL JAROSZ

YOU TRIED 25 PROBLEMS.

19 WERE CORRECT ON THE FIRST TRY.

1 WAS CORRECT ON THE SECOND TRY.

1 WAS NOT ANSWERED CORRECTLY ON EITHER TRY.

YOU GAVE YOURSELF 30 SECONDS TO ANSWER EACH QUESTION.

YOU RAN OUT OF TIME 4 TIMES.

YOUR TOTAL TIME WAS 9 MINUTES AND 45 SECONDS.

DONE

**TITLE:**

COMPUTER-AUGMENTED CALCULUS TOPICS (PROJECT SOLO)

AREA  
36668

**DESCRIPTION:**

This program uses Euler's method (rectangles) to approximate the area of any specified polynomial of the form

$$Y = AX^3 + BX^2 + CX + D$$

over any specified interval on the X-axis.

**INSTRUCTIONS:**

The user is asked to input the values of A, B, C, and D in the polynomial. They may take any value, including 0.

Then the program asks the user to select an interval on the X-axis (lower bound, upper bound), and then specify the number of approximating rectangles to be used.

When the program has printed its resulting approximation to the area under the curve in the interval, the user may select option 1, 2, 3, or 4, which represent:

1. Change the number of approximating rectangles.
2. Change the interval on the X-axis.
3. Input new values of A, B, C, and D.
4. Terminate program run.

**SPECIAL  
CONSIDERATIONS:**

This program is one of 7 which accompany the Project Solo Module "Computer-Augmented Calculus Topics" of the Hewlett Packard Curriculum series.

**FOR INSTRUCTIONAL PURPOSES**

Suitable Courses: Mathematics (Secondary, College); Elem. Computer Science

Student Background Required: Elem. Calculus (can be concurrent), BASIC

The curriculum material listed below is available for classroom implementation of this program.

HP 5951-5611 Computer-Augmented Calculus Topics  
HP 5951-5612 Classroom Set (30 books)

For ordering information of curriculum material, contact:

HP Computer Curriculum Project  
11000 Wolfe Road  
Cupertino, California 95014

**ACKNOWLEDGEMENTS:**

Project Solo  
University of Pittsburgh

RUN

RUN  
AREA

THIS PROGRAM COMPUTES APPROXIMATIONS TO THE AREA BOUNDED BY THE X-AXIS AND THE GRAPH OF ANY POLYNOMIAL FUNCTION OF DEGREE THREE OR LESS OVER AN INTERVAL OF THE X-AXIS. THE METHOD USED TO APPROXIMATE THE AREA IS TO BUILD RECTANGLES WHOSE SUM WILL BE AN APPROXIMATION TO THE AREA WE ARE TRYING TO FIND. THE POLYNOMIAL FUNCTION IS OF THE FORM

$$Y = A \cdot X^3 + B \cdot X^2 + C \cdot X + D.$$

YOU CAN GIVE ANY VALUES (INCLUDING 0) TO A,B,C, AND D. OK., ASSIGN NUMERICAL VALUES TO A, B, C, AND D.

A=?0  
B=?1  
C=?0  
D=?0

SELECT AN INTERVAL (R,S) ON THE X-AXIS BY ASSIGNING VALUES TO R AND S.

R=?0  
S=?2

HOW MANY RECTANGLES DO YOU WANT TO BUILD ON (R,S)?  
N=?4

THE INTERVAL IS [ 0 , 2 ].

THE NUMBER OF RECTANGLES IS 4 .

THE FUNCTION IS

$$0 \quad X^3 + 1 \quad X^2 + 0 \quad X + 0 \quad .$$

THE APPROXIMATION TO THE AREA IS \*\*\*\*\* 1.75 \*\*\*\*\*

PLEASE SELECT OPTION 1, 2, 3, OR 4. YOUR OPTION?1

HOW MANY RECTANGLES DO YOU WANT TO BUILD ON (R,S)?

DONE

**TITLE:**

BASE CONVERTER

BASE  
36796

**DESCRIPTION:**

Converts a number in any base (1-10) into any base (1-10).

**INSTRUCTIONS:**

User will input a number and its base and then input into what base he would like the number converted. The computer will then print the number in the new base.

**SPECIAL  
CONSIDERATIONS:**

It will not work in any base higher than base 10.

**ACKNOWLEDGEMENTS:**

Peter Katz  
Ravenswood High School

CONTRIBUTED PROGRAM **BASIC**BISQAR  
36240**TITLE:**

SQUARING BINOMIALS

**DESCRIPTION:**

This program presents the student with a series of five binomials to be squared. He types in the coefficients of the correct answer and is told whether or not he is correct on the problems when he is through the list. The time taken for his response to all five is printed out.

**INSTRUCTIONS:**

Directions to the student are included on an optional basis within the program. The student is asked to practice squaring binomials of the form  $A \cdot X + B$ . The answers will be a trinomial of the form  $P \cdot X^2 + Q \cdot X + R$ . The values of P, Q and R should be typed in, separated by commas.

**SPECIAL  
CONSIDERATIONS:**

## FOR INSTRUCTIONAL PURPOSES

Suitable Courses: Algebra I or as a review in Algebra II

Student Background Required: Ability to mentally square a binomial

Application: This program affords a student a chance to hone up his skill in rapidly squaring binomials. In particular it should reinforce the idea of getting the correct middle term and the fact that  $(a+b)^2 \neq a^2+b^2$ . The time factor provides for a good deal of competition among students.

**ACKNOWLEDGEMENTS:**

Michael Bolduan  
Clackamas High School

CADA1I  
36205

**TITLE:** COMPUTER ASSISTED ARITHMETIC DRILL

**DESCRIPTION:** These programs give students drill problems in the four operations of arithmetic. All problems have integer answers. All problems of one drill session are of the same operation. The program stores the raw score data from a drill session in a record for up to twenty five students. Record management is accomplished by using a special program designed for this purpose.

**INSTRUCTIONS:**

To use the program for the first time open a file, (CRE-CADA1F,25). Next RUN CADA1I to format the records of the file. Once the file is set, this program never needs to be used again unless the file is to be obliterated and restarted. When CADA1I is run, there will be no output on the teleprinter.

To use the arithmetic drill program, get CADA1P and type run. The computer will type some preliminary remarks and then ask for a student ID number. Reply with the correct student number if known, otherwise any number less than twenty five will do except zero. Student number zero is reserved for students who do not wish to have a permanent record on file.

The computer will type OPERATION 1=ADDITION, ETC. to which you respond 1, 2, 3, or 4 for addition, subtraction, multiplication, or division respectively.

Next CORRECT PROBLEMS? will be typed. Your response must be a number greater than zero and will determine the number of correct problems your student must get correct on his first attempt to complete his drill.

Finally the computer will ask what is the LARGEST ADDEND? Your answer will determine the largest possible addend in the addition drill. Similar results are obtained for subtraction, multiplication, and division.

Arithmetic drill problems will now appear and answers must be supplied by the student. Commentary will be supplied for incorrect student responses. A student has two chances to answer correctly. Failure to give a correct response after two tries will cause a new problem to be typed.

At the end of the practice a summary of the current practice will be typed and then questions will be asked to which you reply with yes, no, or the student name. When the proper student record has been located and revised, the program will end.

Using a student number of zero will cause the computer to skip the record revising routine of this program.

For management of student records there is a special file management program called CADA1M entitled File Manager for CADA1F.

The management program allows for opening, altering, closing, printing one record, or printing all records. Instructions are conversational. The sample run will show how to open, alter, and close a record.

**SPECIAL CONSIDERATIONS:**

FOR INSTRUCTIONAL PURPOSES  
Suitable Courses: Arithmetic from grade one  
Student Background Required: Knowledge of arithmetic operations.

This program can be used for drill work in the four arithmetic operations. Daily sessions with the computer are best if they are kept fairly short, i.e. ten to twenty problems.

CRVLEN  
36333

**TITLE:**

CRVLEN: Computes Length of Any Curve

**DESCRIPTION:**

This program approximates the length of any curve between two fixed points on the curve, by taking an increasing number of subintervals and computing the sum of the secants involved.

OBJECTIVES:

- A. Time saving factor for computations.
- B. By typing out successive approximations, the machine displays the manner by which the limit is approached.
- C. The attendant discussion focuses attention upon the techniques needed to build up the analytic method for finding the length of a curve.

**INSTRUCTIONS:**

PRELIMINARY PREPARATION: None.

DISCUSSION: See following page.

**ACKNOWLEDGEMENTS:**

Huntington Project  
Polytechnic Institute of Brooklyn

INSTRUCTIONS: continued

DISCUSSION:

The operator inserts any function, sets up his own limits, and the computer proceeds to print out several approximations to the actual length a diagram (such as below) should be displayed, indicating the geometric basis for the computations.

RUN

RUN  
CRVLEN

LENGTH OF A CURVE

THIS PROGRAM APPROXIMATES THE LENGTH OF ANY CURVE BETWEEN TWO POINTS HAVING P AND Q AS THEIR RESPECTIVE ABSCISSAS. THE PROGRAM DIVIDES THE CURVE INTO INCREASING NUMBERS OF SUBINTERVALS, JOINS THESE WITH SECANTS AND FINDS THE SUM OF THESE SECANTS.

TO INPUT THE FUNCTION WHICH YOUR CURVE REPRESENTS, TYPE AS FOLLOWS AFTER THE PROGRAM STOPS:  
(TYPE THE 'RETURN' KEY AFTER EACH LINE INCLUDING 'RUN')

```
1 GO TO 200
300 DEF FNY(X)=....(YOUR FUNCTION OF X)....
RUN
```

FOR EXAMPLE, TO USE THE FUNCTION  $2 \cdot X^3 + 3 \cdot X^2 - 2 \cdot X + 3$  YOU WOULD TYPE:

```
1 GO TO 200
300 DEF FNY(X)=2*X^3+3*X^2-2*X+3
RUN
```

YOU MIGHT TRY THAT AS YOUR FIRST RUN.

```
DONE
1 GO TO 200
300 DEF FNY(X)=2*X^3+3*X^2-2*X+3
RUN
CRVLEN
```

WHAT ARE THE ABSCISSAS OF THE END POINTS OF THE INTERVAL WHOSE LENGTH YOU WANT (SMALLER ONE FIRST:P,Q)?-1,6

NUMBER OF SUBINTERVALS	SUM OF SECANT LENGTHS	% CHANGE IN LENGTH
1	525.047	NO PREVIOUS VALUE
2	525.158	.02125
4	529.652	.855745
8	531.017	.257691
16	531.964	.178364
32	532.017	9.82135E-03
64	532.042	4.72664E-03
128	532.049	1.28485E-03
256	532.05	2.06491E-04

\*\*\*\*\*

WOULD YOU LIKE TO TRY NEW END POINTS (1=YES, 0=NO)?0

TO TRY ANOTHER FUNCTION, RETYPE LINE 300, AND 'RUN'.  
SEE INSTRUCTIONS FOR MORE DETAILS. IF YOU ARE FINISHED,  
TYPE '1' AND 'RETURN' KEY AFTER THE PROGRAM STOPS.

DONE

**TITLE:**

AREA UNDER CURVE

**DESCRIPTION:**

By numerical methods, this program evaluates the definite integral of  $f(x)$ , from  $x=a$  to  $x=b$ , by four different methods of successive approximation:

- I Rectangles (starting with  $f(a)$  as height)
- II Rectangles (starting with  $f(a+h)$  as height)
- III Trapezoids
- IV Parabolas (Simpson's Rule)

OBJECTIVES:

- A. Enhances comprehension of the analytic procedures for finding the area under a curve.
- B. Dramatizes the limiting processes involved.
- C. Decreases the time needed for lengthy computations.

**INSTRUCTIONS:**

PRELIMINARY PREPARATION:

Prior to the computer run, diagrams should appear on the board, or on the overhead projector screen to demonstrate the geometric significance of the computer output.

Continued on following page.

**ACKNOWLEDGEMENTS:**

Huntington Project  
Polytechnic Institute of Brooklyn

PRELIMINARY PREPARATION: continued

DISCUSSION:

This program may be run as an introduction to the problem of finding the area under a curve. In some classes, the consideration of Simpson's Rule may be omitted or briefly hinted at. With the more mathematically talented classes, an explanation of this parabolic approximation should precede the running of the program.

RUN  
CVAREA

AREA UNDER A CURVE - INTEGRATION

THIS PROGRAM EVALUATES THE DEFINITE INTEGRAL OF F(X)  
FROM X=A TO X=B BY FOUR METHODS OF NUMERICAL APPROXIMATION:

- I RECTANGLES (INITIAL HEIGHT OF F(X))
- II RECTANGLES (INITIAL HEIGHT OF F(X+H))
- III TRAPEZOIDS
- IV PARABOLAS (SIMPSON'S RULE)

AFTER THE PROGRAM STOPS, YOU MAY ENTER YOUR FUNCTION AS FOLLOWS:

```
1 GO TO 200
300 DEF FNY(X)=...(YOUR FUNCTION OF X)...
RUN
```

FOR EXAMPLE, TO FIND THE AREA UNDER THE CURVE  $Y=X+3$  YOU  
WOULD TYPE:

```
1 GO TO 200
300 DEF FNY(X)=X+3
RUN
```

YOU MIGHT TRY THAT AS YOUR FIRST RUN.  
END EACH LINE, INCLUDING 'RUN', WITH THE 'RETURN' KEY.

DONE

```
1 GOTO 200
300 DEF FNY(X)=X+3
RUN
CVAREA
```

WHAT ARE YOUR VALUES FOR A AND B (SMALLER FIRST:A,B)?1,10

NUMBER OF SUBINTERVALS	I. SUM OF RECTANGLES	II. SUM OF RECTANGLES	III. SUM OF TRAPEZOIDS	IV. SUM OF PARABOLAS
2	753.187	5248.69	3000.94	2499.75
4	1501.17	3748.92	2625.05	2499.75
8	1969.14	3093.01	2531.07	2499.75
16	2226.61	2788.55	2507.58	2499.75
32	2361.22	2642.19	2501.71	2499.75
64	2430.	2570.48	2500.24	2499.75

NOTE THAT SIMPSON'S RULE (IV) CONVERGES FASTEST.

WOULD YOU LIKE TO TRY NEW VALUES FOR A AND B (1=YES, 0=NO)?0

\*\*\*\*\*

TO USE A NEW FUNCTION YOU NEED ONLY RETYPE LINE 300  
AND 'RUN'. SEE INSTRUCTIONS FOR MORE DETAILS.  
IF YOU ARE FINISHED, TYPE '1' AND THE 'RETURN' KEY.

DONE

CONTRIBUTED PROGRAM **BASIC**

**TITLE:**

SOLVING SYSTEMS OF COMPLEX LINEAR EQUATIONS

CXSYSS  
36262

**DESCRIPTION:**

This program will solve systems like  $AX=V_1, AX=V_2, \dots, AX=V_s$  where A is an m by n matrix with complex coefficients of the form  $a_{ij}+i*(b_{ij}f+1/(c_{ij}f))$ , where the  $a_{ij}, b_{ij}$ , and  $c_{ij}$  are real numbers, and f is a real number that can be varied by the user. The  $V_j$  are m-dimensional vectors, with complex components of the form  $v_{ij}+i*w_{ij}$  being the i-th component of the j-th vector. X is an n-dimensional vector. The X's will be printed out for each different  $V_j$  and each different value of f. The components of each vector X will in general be complex numbers, and will be printed out in both rectangular and polar form. If the system of equations is under-determined, the vectors of the null space will also be printed out. These vectors will be orthonormalized, and their elements will have their rectangular form and the argument of their polar forms printed out.

**INSTRUCTIONS:**

Enter the above defined data as follows:

8900 DATA m, n, s

8901 DATA  $a_{11}, b_{11}, c_{11}, a_{12}, b_{12}, c_{12}, \dots, a_{1n}, b_{1n}, c_{1n}, v_{11}, w_{11}, \dots, v_{1s}, w_{1s}$

8902 DATA  $a_{21}, b_{21}, c_{21}, a_{22}, b_{22}, c_{22}, \dots, a_{2n}, b_{2n}, c_{2n}, v_{21}, w_{21}, \dots, v_{2s}, w_{2s}$

:

:

89xx DATA  $a_{m1}, b_{m1}, c_{m1}, a_{m2}, b_{m2}, c_{m2}, \dots, a_{mn}, b_{mn}, c_{mn}, v_{m1}, w_{m1}, \dots, v_{ms}, w_{ms}$

When you run the program you will be asked what frequencies for which you wish the system solved. Enter the values of f, one per line. When you have entered as many values as you wish, type a 999 to end input.

**SPECIAL  
CONSIDERATIONS:**

I and J (capitalized) are used interchangeably for the square root of negative one. The maximum values of m and n are ten each, and the maximum value of s is five. These values may be increased by redimensioning in line 10.

DESCAL  
36674

**TITLE:**

DESK CALCULATOR SUBROUTINE

**DESCRIPTION:**

This routine simulates a desk calculator. It is designed to be appended to an interactive program to give the user the ability to calculate needed values in "direct mode", then return to the interactive program and continue. Access to the subroutine is generally performed through a modification of INPUT statements.

**INSTRUCTIONS:**

The program requests the user to input: one number for unary operations, two numbers for binary operations, and a three-letter mnemonic code for the operation (e.g., SQR for square root). Return to the main program is achieved with the code EXT for Exit.

See REFLEC (HP 36672) as an example of appending DESCAL to an existing program.

DESCAL may be used alone, or added to a program. DESCAL is written as a subroutine beginning at line 9000 and ending at line 9414. It also includes line 9999 END. Total size is 7000 words.

To run DESCAL as a separate program, type:

```
GET- DESCAL
1 GOSUB 9000
2 STOP
RUN
```

To add DESCAL to an existing program, load your program as you would normally, then make these changes:

- a) No line number in your program can be 9000 or greater. Renumber if necessary.
- b) The END statement in your program should be changed to STOP.
- c) Provide access to DESCAL at the appropriate point(s) in your program by inserting GOSUB 9000 instructions (e.g., new lines).

continued on following page

**SPECIAL  
CONSIDERATIONS:**

This program was written to be used with some of the Project Solo Computer Topics, a group of units in the Hewlett Packard Curriculum Series.

Uses string variables X\$(3) and Z\$(60), dimensioned in the subroutine.

**ACKNOWLEDGEMENTS:**

People's Computer Company  
Menlo Park, California

INSTRUCTIONS continued

Suppose your program contains an interaction like:

```
100 PRINT "GIVE ME YOUR ANSWER"
110 INPUT A
120 (program continues here)
```

You could modify this interaction as follows:

```
100 PRINT "GIVE ME YOUR ANSWER, OR TYPE 9000 FOR DESCAL."
110 INPUT A
112 IF A#9000 THEN 120
114 GOSUB 9000
116 GO TO 100
120 (program continues here)
```

NOTE: 9000 is used as the "flag" in line 112. Any number which is unlike the true answer may be used instead.

d) DESCAL uses the following variables:

Numeric: Z0, Z1, Z2

Subscripted: none

String: X\$(3), Z\$(60) (Dimensions specified in line 9001)

You should avoid using any of these variable names anywhere else in your program.

When these four modifications have been completed, type

```
APPEND- DESCAL
RUN
```

## Functions available

<u>Function</u>	<u>Abbreviation</u>	<u>Result</u>
Exit	EXT	[return]
Clear	CLR	Z1=Z2=0
Exchange	EXC	Z1 $\leftrightarrow$ Z2
Addition	ADD	Z1=Z1+Z2
Subtraction	SUB	Z1=Z1-Z2

## TITLE:

X-Y AXIS SEGMENT PROGRAM

## DESCRIPTION:

This program finds the distance, midpoint, and slope of a line on the coordinate X-Y axis. The line is determined by the two endpoints, P1 and P2. The program is useful to users who do not want their answers in decimal form. Fractions are left as fractions but are reduced to lowest terms. Square roots are left as square roots but are rationalized as far as possible.

## INSTRUCTIONS:

Run the program and input the coordinates of the two endpoints on the X-Y axis. After solving a problem it will ask for another.

SPECIAL  
CONSIDERATIONS:

The Aardvark and Company Writing Team has designed programs to take up an absolute minimum of computer storage and perform a maximum purpose. The team encourages people to send good programs to Aardvark. As a slight encouragement, the team will give anyone who sends a program which is accepted a free "subscription" to the program handbook, and include the contributor as a member of the writing team.

DRILL  
36129

**TITLE:** SUPER DRILL IN ARITHMETIC FACTS

**DESCRIPTION:**

DRILL provides students 30 seconds of drill in the so-called arithmetic facts. The student initiates the drill in addition, subtraction, multiplication, or division. DRILL scores each response and tallies his total number correct. DRILL then loops and provides students with the option to practice some more.

Since the machine provides a limited response time, the students are encouraged in both speed and accuracy.

All problems resolve to positive whole numbers between 0 and 20.

**INSTRUCTIONS:**

The student is able to choose his area of drill. Inasmuch as the machine recognizes only the first letter of his response to this choice, "ADDITION," "ADD," or simply "A" are equivalent.

The teacher may alter the time-out factor--the number of seconds allotted by the machine before continuing to the next problem--by changing line 9 to some other value for Z. DRILL is initially set for 5 seconds.

**SPECIAL  
CONSIDERATIONS:**

FOR INSTRUCTIONAL PURPOSES:  
Suitable Courses: General Math, Arithmetic

Student Background: 1) to supplement the CAI Drill & Practice Program  
2) to supplement typical high school general math class  
3) to supplement any elementary school class

**ACKNOWLEDGEMENTS:**

Tim Aaronson  
Woodrow Wilson High School/San Francisco

**TITLE:**

COMPUTER-AUGMENTED CALCULUS TOPICS

**DESCRIPTION:**

This program uses the trapezoid method to compute approximations to the definite integral of a specified function, and compares the approximation to  $g(B)-g(A)$ , where

- A is the lower bound
- B is the upper bound
- $g(x)$  is a primitive of  $f(x)$ , the specified function.

**INSTRUCTIONS:**

$f(x)$  and  $g(x)$  must be specified as lines 300 and 500 respectively.

During the program run, the user is asked to input A, B, and the number of approximating trapezoids.

When the program has printed the result, the user may select option 1, 2, or 3, which represent:

1. Change the number of approximating trapezoids.
2. Change the values of A and B.
3. Terminate the program.

**SPECIAL  
CONSIDERATIONS:**

This program is one of 7 which accompany the Project Solo Module "Computer-Augmented Calculus Topics" of the Hewlett Packard Curriculum Series.

$f(x)$  must be supplied as line 300 as follows:

```
300 LET Y=f(X)
    Similarly, g(X) must be supplied as line 500
500 LET Z=g(X)
```

before the program is run.

**FOR INSTRUCTIONAL PURPOSES**

Suitable Courses: Mathematics (Secondary, College); Elem. Computer Science

Student Background Required: Calculus (can be concurrent), BASIC

## TITLE:

CLASSIC MATRIX OF GAME THEORY

GAME  
36265

## DESCRIPTION:

This program accepts as input an  $n \times m$  matrix, and checks for a minimax solution to the game. If no solution exists it then generates a mixed strategy using linear programming. The game is then played with the computer having columns and paying the value of the chosen matrix element.

## INSTRUCTIONS:

The first inputs concern the game matrix - how many rows are there in the matrix followed by how many columns. Then enter the matrix row by row. If the value of the game is positive, it will be subtracted from each of your winnings, and added to the computers'. If it is negative, the player has five seconds after the matrix is printed to type in CAESAR. This action insures that the value of the game, (which is negative) will be subtracted from the players winnings and added to the computers' winnings. The player is now asked how many times he wants to play. For each play he is asked which row he wants to play.

SPECIAL  
CONSIDERATIONS:

The game matrix can be of dimensions up to 20 by 20.

## ACKNOWLEDGEMENTS:

**TITLE:**

COMPUTER-AUGMENTED CALCULUS TOPICS

**DESCRIPTION:**

This program is designed to provide information to the student about functions. The program prints values of  $f(x)$ ,  $d(f(x))$ , and  $d'(f(x))$ , given  $f(x)$  and  $x$ . The student should graph the values and attempt to discover what the nature of  $f(x)$  is.

The program contains five different functions, on lines

220, 390, 490, 580, and 680

All functions are in the form  $Y=f(x)$ .

**INSTRUCTIONS:**

The user is asked to select one of the five functions by typing 100, 200, 300, 400 or 500, and then entering a value for  $x$ .

The program provides five opportunities to see the values of the function, the first derivative, and the second derivative for input values of  $x$ . After five values of  $x$  have been evaluated, the program asks the user to type 1 or 2, representing:

1. Enough information has been obtained.
2. Not enough information has been obtained; let me try 5 more values of  $x$ .

If option 1 is selected, the program will begin again at the beginning.

**SPECIAL  
CONSIDERATIONS:**

This program is one of 7 which accompany the Project Solo Module "Computer-Augmented Calculus Topics" of the Hewlett Packard Curriculum Series.

To change the functions, retype lines 220, 390, 490, 580, and/or 680. Functions are in the form  $LET Y=f(x)$ .

**INSTRUCTIONS:**

The user is asked to select one of the five functions by typing 100, 200, 300, 400 or 500, and then entering a value for  $X$ .

The program provides five opportunities to see the values of the function, the first derivative, and the second derivative for input values of  $X$ . After five values of  $X$  have been evaluated, the program asks the user to type 1 or 2, representing:

1. Enough information has been obtained.
2. Not enough information has been obtained; let me try 5 more values of  $X$ .

If option 1 is selected, the program will begin again at the beginning.

**SPECIAL  
CONSIDERATIONS:**

This program is one of 7 which accompany the Project Solo Module "Computer-Augmented Calculus Topics" of the Hewlett Packard Curriculum Series.

To change the functions, retype lines 220, 390, 490, 580, and/or 680. Functions are in the form  $LET Y=f(X)$ .

**FOR INSTRUCTIONAL PURPOSES**

Suitable Courses: Mathematics (Secondary, College); Elem. Computer Science

Student Background Required: Calculus (can be concurrent); BASIC

The curriculum material listed below is available for classroom implementation of this program.

FUNCTION?

DONE

**TITLE:**

COMPUTER-AUGMENTED CALCULUS TOPICS

**DESCRIPTION:**

This program is designed to provide information to students about functions. For a selected  $f(X)$  and input value of  $X$ , the program prints the values of the first and second derivatives of  $f(X)$ . The student should graph the values and attempt to discover what  $f(X)$  is.

**INSTRUCTIONS:**

The program contains five different functions, on lines 220, 390, 490, 580 and 680. All functions are in the form  $Y=f(X)$ .

The user is asked to select one of the five functions by typing 100, 200, 300, 400, or 500.

Then the program asks for a value for  $X$ , and the user has 5 opportunities to input values of  $X$ , and obtain the values of the first and second derivative of the unknown  $f(X)$ . After five values of  $X$  have been evaluated, the program asks for an input of 1 or 2, representing:

1. Enough information has been obtained.
2. Not enough information has been obtained; let me try 5 more values of  $X$ .

If option 1 is selected, another function may be selected.

**SPECIAL  
CONSIDERATIONS:**

This program is one of 7 which accompany the Project Solo Module "Computer-Augmented Calculus Topics" of the Hewlett Packard Curriculum Series.

To change the functions, retype lines 220, 390, 490, 580, and/or 680. Functions are in the form  $LET Y=f(X)$ .

FUNCTION?

DONE

**TITLE:**

COMPUTER-AUGMENTED CALCULUS TOPICS

**DESCRIPTION:**

This program computes an approximation to the definite integral of a function over a supplied interval on the X-axis, using the trapezoidal method of approximation.

**INSTRUCTIONS:**

The desired function is supplied as program line 250, in the form

```
250 LET Y=f(X)
```

During the run, the user is asked to input A and B, which are the lower and upper bounds of the desired interval on the X-axis.

The program then asks the number of approximating trapezoids (N must be greater than 0).

When the program has printed the resulting approximation, the user is asked to select option 1, 2, or 3 which represent:

1. Change the number of approximating trapezoids.
2. Change A and B.
3. Terminate the program.

**SPECIAL  
CONSIDERATIONS:**

This program is one of 7 which accompany the Project Solo Module "Computer-Augmented Calculus Topics" of the Hewlett Packard Curriculum Series.

To change the function, line 250 must be retyped before running the program.

**FOR INSTRUCTIONAL PURPOSES**

Suitable Courses: Mathematics (Secondary, College); Elem. Computer Science

Student Background Required: Calculus (can be concurrent); BASIC

LIMSIN  
 36622

TITLE:

LIMIT OF  $(\sin x)/x$

DESCRIPTION:

This program demonstrates that the limit of  $\frac{\sin x}{x}$ , as  $x$  approaches 0, equals 1, provided  $x$  is measured in radians. If  $x$  is measured in degrees, the limit equals approximately .017.

OBJECTIVES:

- A. To demonstrate the manner by which the limit of  $\frac{\sin x}{x}$  is approached.
- B. To show that degree measure does not yield the same solution as radian measure.

INSTRUCTIONS:

PRELIMINARY PREPARATION:

- A. Student - Knowledge of degree vs. radian measure
- B. Materials - None

DISCUSSION:

Following the computer type-out, the teacher will use the analytic method to evaluate the limit. Prior to this discussion, the student should be reminded of the area formulas for a triangle and for a sector in terms of the central angle measured in radians. A geometric diagram should be presented showing the sector lying between two triangles.

Here,  $\frac{1}{2}r^2 \sin \theta \leq \frac{1}{2}r^2 \theta \leq \frac{1}{2}r^2 \tan \theta$   
 Circular Sector with Circumscribed and Inscribed Triangles

The teacher can modify the type-out by inserting: 195 GO TO 300. This decreases the number of lines typed out to the final eleven appearing on the program "run".

ACKNOWLEDGEMENTS:

**TITLE:**

LOGIC EXAMINATION PROGRAMS (LOGIC1,2,3,4,5)

**DESCRIPTION:**

These programs teach the basics of logic. At the end of each program, the score and percent right is printed. The package consists of five programs, LOGIC1, LOGIC2, LOGIC3, LOGIC4, and LOGIC5.

**INSTRUCTIONS:**

Instructions are contained in the program.

**SPECIAL  
CONSIDERATIONS:**

The Aardvark and Company Writing Team has designed programs to take up an absolute minimum of computer storage and perform a maximum purpose. The team encourages people to send good programs to Aardvark. As a slight encouragement, the team will give anyone who sends a program which is accepted a free "subscription" to the program handbook, and include the contributor as a member of the writing team.

TITLE:

CALCULATES PI

DESCRIPTION:

This program computes the area of a circle and "pi" by using the areas of inscribed and circumscribed regular polygons.

OBJECTIVES:

As an introduction to the limit process and a method for approximating "pi".

INSTRUCTIONS:

PRELIMINARY PREPARATION:

- A. Student - Students must know how to calculate the area of a circle and a triangle using the formulas:  $A = \pi R^2$  and  $A = 1/2bh$ .
- B. Materials - Chalkboard, board compass, and straight edge.

DISCUSSION:

Ask students to find the area of a circle without using the formula. The instructor may suggest to the class to inscribe and/or circumscribe an equilateral triangle. Have students compare the area of their figures to that of the circle. Some students will suggest to increase the number of sides and the instructor should suggest that a regular hexagon be used for convenience of drawing. This can be illustrated on the chalkboard for the class. Another comparison is made between the areas and then the students will observe that to obtain any satisfactory results, the number of sides must increase greatly. At this moment the instructor should introduce this program and explain to the class that the program will increase the number of sides of a regular polygon and compute the area of each new figure. A table is printed giving the areas of both inscribed and circumscribed regular polygons and also the number of sides for each area. The students can readily see that the machine has eliminated the tedious calculations. Now, have the students calculate the area of the circle using the formula and make a comparison of results; thus, the students can observe that the areas of the polygons approach the area of the circle.

**TITLE:**

POLYNOMIAL SUBTRACTION

**DESCRIPTION:**

This program presents the student with a list of polynomials of degree one through four which are to be subtracted in pairs. The student types in the coefficient of the answer and is then told whether or not he is correct. At the end of the list he is told what percent he got right.

**INSTRUCTIONS:**

Directions to the student are included in the program on an optional basis. The student is asked to subtract polynomial No. 2 from polynomial No. 1. After each question mark, the coefficients of the answer are typed, starting with the coefficient of the highest degree term and going in descending order. If a coefficient is zero, a zero must be typed in for it.

**SPECIAL  
CONSIDERATIONS:****FOR INSTRUCTIONAL PURPOSES**

Suitable Courses: Algebra I and as a review in Algebra II

Student Background Required: Familiarity with polynomial subtraction

Application: This program is best used as a drill for makeup with those students who have difficulty remembering the rules for subtraction of signed numbers.

QUADT  
36335

**TITLE:**

QUADT: Nature of Graph of  $Ax^2+Bxy+Cy^2+Dx+Ey+F=0$

**DESCRIPTION:**

This program determines the nature of the graph of  $Ax^2+Bxy+Cy^2+Dx+Ey+F=0$ , after the operator inputs the six constants (A, B, C, D, E, F). Limiting cases, such as point or a line, are separated from the general cases so that the computer type-out gives the exact nature of the graph.

OBJECTIVE:

To permit exploration of the properties of the second-degree equation.

**INSTRUCTIONS:**

PRELIMINARY PREPARATION:

- A. Student - should have a reasonable knowledge of conic section, second-degree equations in two unknowns, invariant functions of the coefficients under transformations, etc.
- B. Materials - An overhead projector along with a transparency of the flow chart would be desirable.

DISCUSSION:

Before running the program, the teacher should discuss the general form of a second-degree equation in two variables, the functions of the coefficients used in the program, and the implications of the flow chart.

The discussion of the flow chart for this program enhances the understanding of the problem.

The type-out serves as a check on students' efforts in identifying second-degree equations.

RATIO  
36336

TITLE:

RATIO: Solves Proportions

DESCRIPTION:

This program solves a proportion of the type  $A/B = C/D$ . A, B, C, or D can be unknown.

OBJECTIVES:

- A. To teach the student(s) the relationships in a proportion.
- B. To aid in teaching the solution of proportions.

INSTRUCTIONS:

PRELIMINARY PREPARATION:

- A. Student - no particular preparation necessary
- B. Materials - see discussion

DISCUSSION:

The student is given the opportunity to see any number of solutions to proportions. The program then asks a series of questions designed to allow the student to discover that in a proportion, the product of the means equals the product of the extremes. The program can be used either with individual students or with an entire class depending upon the availability of equipment to display the output. The running time varies, depending upon the number of proportions you wish to solve. In 10 to 15 minutes, the program can be run with about 100 proportion problems. Included in this time is a built-in variable pause for observation of the tabulated results. Another value of using this program is that the teacher can easily handle numbers in proportions that heretofore were too difficult.

**TITLE:**

QUADRATIC EQUATION SOLVER

**DESCRIPTION:**

This program describes the nature of the roots of a quadratic equation, and finds the roots whether real or complex.

OBJECTIVES:

- A. To familiarize the student with quadratic function.
- B. To review and drill exercise... to study the nature of roots.
- C. To emphasize that roots of  $f(x) = 0$  are the same as x-intercepts of  $f(x) = y$ .
- D. To impress the student with geometric interpretation(s) of the nature of roots.
- E. To provide "lead-in" material for the introduction of further study of the real number line, the real cartesian plane, complex numbers, quadratic inequalities, etc.

**INSTRUCTIONS:**

PRELIMINARY PREPARATION:

- A. Student - The teacher can use the program to introduce the students to the quadratic formula, to conclude discussion of the quadratic formula...or both.
- B. Materials - None

DISCUSSION:

The program uses the "discriminant" to determine the nature of the roots of the quadratic equation. Regardless of the nature of the roots, the student is asked to graph  $y = F(x)$ , and to compare his graph with the kind of roots he finds for a specific  $F(x) = 0$ . He should be impressed with the picture; and he should understand (ultimately) the reasonableness and validity of the analytic methods presented in class.

**TITLE:**

SETS: Union and Intersection of Sets

**DESCRIPTION:**

This program finds the intersection and union of any two numerical sets.

OBJECTIVES:

- A. To motivate students to find the union and intersection of any two sets.
- B. To learn the logic involved in finding the union and intersection.

**INSTRUCTIONS:**

PRELIMINARY PREPARATION:

- A. Student - no special preparation necessary.
- B. Materials - see discussion

DISCUSSION:

This program may be used with individuals, small groups, or class-size groups. The elements of the two sets are entered as per instructions. Incidentally, one or both of the sets may be empty. The computer then types back the elements in the union and intersection. The speed with which the computer operates enables the students to see a great many examples, giving them the opportunity to make discoveries about what is the union and what is an intersection of two sets. The teacher may use the flow chart that follows to explain the logic behind finding the union and intersection.

It is suggested that when used with large groups, a supplementary device be used to display output.

**TITLE:**

PRACTICE WITH SIGNED NUMBERS

**DESCRIPTION:**

This program presents the student with a random number of problems dealing with addition, subtraction, or multiplication of signed numbers. The student has a set amount of time in which to answer before the next problem is posed. (As written this time is set to 5 seconds). At the end of his list he is told the number correct, the percent correct, and the problems which he missed.

**INSTRUCTIONS:**

Instructions are included on an optional basis within the program. The student is asked his "lucky" number and told how many problems will be stated. The time constant is set in line 20 (variable K).

**SPECIAL  
CONSIDERATIONS:**

**FOR INSTRUCTIONAL PURPOSES**

Suitable Courses: Algebra I or General Mathematics

Student Background Required: Knowledge of the sign rules for addition, subtraction and multiplication of signed numbers.

Application: This program provides good drill on an individual basis (since each student gets a list of different problems and of different length. The time constant may be adjusted to make this a challenge for even the best students or a success experience for the slower ones.

TITLE:

FINDS DERIVATIVES

DESCRIPTION:

This program considers a function which is differentiable at  $x=a$ , and at all points in the interval  $[a, a+1]$ . The value of the derivative at  $x=a$  is approximated through secant slopes.

OBJECTIVES:

- A. The preliminary discussion of the method whereby the machine solves the problem enhances the students' comprehension of the techniques. These techniques are then used in developing the analytic method for finding the slope of the tangent line.
- B. The type-out of successive approximations to the tangent slope clarifies and dramatizes the nature of the limiting processes.
- C. Time-saving factor through the elimination of lengthy computations.

INSTRUCTIONS:

PRELIMINARY PREPARATION:

- A. Materials - The diagram below may be shown to the students on a blackboard, or an overhead projector, to explain the computations geometrically.

(continued on following page)

ACKNOWLEDGEMENTS:

Huntington Project  
Polytechnic Institute of Brooklyn

Math  
SLOPE

DISCUSSION:

The use of the computer and the attendant discussion of the program dramatically introduces the idea of differentiation.

RUN

RUN  
SLOPE

SECANT SLOPE OF A CURVE - THE DERIVATIVE

THIS PROGRAM CONSIDERS A FUNCTION OF X ( $Y=F(X)$ ) WHICH IS DIFFERENTIABLE AT  $X=A$  AND AT ALL POINTS IN THE INTERVAL  $(A,A+1)$ . THE VALUE OF THE DERIVATIVE AT  $X=A$  IS APPROXIMATED THROUGH SECANT SLOPES.

AFTER THE PROGRAM STOPS, TYPE IN THE FOLLOWING:  
(END EACH LINE, INCLUDING 'RUN', WITH A 'CARRIAGE RETURN')

```
1 GO TO 300
300 DEF FNY(X)=.....(YOUR FUNCTION OF X).....
RUN
```

FOR EXAMPLE, TO FIND THE SLOPE OF THE EQUATION  $Y=X^3$  YOU WOULD TYPE AS FOLLOWS:

```
1 GO TO 300
300 DEF FNY(X)=X^3
RUN
```

YOU MIGHT TRY THAT AS YOUR FIRST RUN.  
FOR SUBSEQUENT RUNS, YOU NEED ONLY CHANGE LINE 300 FOR A NEW FUNCTION, FOLLOWED BY 'RUN'.

DONE

```
1 GOTO 300
300 DEF FNY(X)=X^3
RUN
SLOPE
```

FOR WHAT VALUE OF A IS THE SLOPE TO BE EVALUATED?2

'CHANGE IN X' IS THE DISTANCE FROM 'A', AND 'CHANGE IN Y' IS THE DISTANCE FROM 'F(A)' UPON WHICH THE SLOPE IS CALCULATED.

CHANGE IN X	CHANGE IN Y	SECANT SLOPE	% CHANGE IN SLOPE

**TITLE:**

FINDS SQUARE ROOT

**DESCRIPTION:**

This program finds the square root of counting numbers up to five decimal places.

OBJECTIVES:

- A. To demonstrate and familiarize the students with square roots.
- B. The method utilizes "pinching"  $\sqrt{Z}$  between the endpoints of smaller and smaller domains.

**INSTRUCTIONS:**PRELIMINARY PREPARATION:

- A. Student - 1) The definition of square root as the inverse operation of squaring; and 2) Drill in estimating square roots to the nearest tenth, hundredth, etc.
- B. Materials - None

DISCUSSION:

This program provides an "introduction to", and a "review of" evolution and involution. Limiting the neighborhood of  $\sqrt{Z}$  to find successively closer approximations of the square root of a number, demonstrates to the student that he is able to determine the square root to any degree.

The program may be effectively utilized for introducing the limiting process.

DONE

**TITLE:**

ARITHMETIC MEAN

**DESCRIPTION:**

This program finds the average (arithmetic mean), median, and standard deviation of up to one hundred numbers.

OBJECTIVES:

- A. To familiarize the student with the concepts of arithmetic mean (average), median, and standard deviation of a group of numbers.
- B. To impress him with the speed and accuracy of the computer as a calculating device.
- C. To provide teachers with handy means of computing averages.

**INSTRUCTIONS:**

PRELIMINARY PREPARATION:

- A. Student - "Arithmetic mean", "average", "median", and "standard deviation" must be well-defined.
- B. Materials - None

DISCUSSION:

Given N terms, "A(1), A(2), ..., A(N-1), A(N)", students will have learned the average of these N terms is " $\frac{A(1)+A(2)+\dots+A(N-1)+A(N)}{N}$ ".

The program prints out the median value of the user's data when there is an odd number of data values. When there is an even number, the median value printed is the average between the  $N/2$  and the  $(N+2)/2$  terms.

The program serves as an excellent vehicle for drill in division and addition, and helps strengthen the concept of arithmetic mean (average).

This program is useful in demonstrating a simple "loop" routine for students interested in programming.

**ACKNOWLEDGEMENTS:**

Polytechnic Institute of Brooklyn

RUN

RUN  
STATAL

MEAN, MEDIAN, AND DEVIATION OF A SET OF NUMBERS.

ENTER YOUR NUMBERS IN DATA STATEMENTS ON LINES  
1000 - 2000. FOR EXAMPLE, YOU MIGHT TYPE :

1000 DATA 1,2,3,4 ETC. (YOUR DATA GOES HERE)

WHEN YOUR DATA HAS BEEN ENTERED, TYPE :

1 GO TO 300  
RUN

THEN RELAX WHILE THE MACHINE GRINDS OUT THE ANSWERS.

IF A 'SUBSCRIPT ERROR' APPEARS, INCREASE THE SIZE OF THE  
ARRAY IN LINE 295.

WARNING -- THE NUMBER 9999 IS USED AS AN INTERNAL DATA  
VALUE. IF THIS VALUE IS ONE OF YOUR DATA VALUES, SIMPLY  
RE-TYPE LINES 999 AND 2001 WITH A COMMON DATA VALUE WHICH  
YOU WILL NOT USE.

DONE

1000 DATA 244,182,112,2,198,10,314,169,18,38  
1 GOTO 300  
RUN  
STATAL

THESE ARE YOUR NUMBERS :  
244 182 112 2 198 10 314 169 18 38

THESE ARE YOUR NUMBERS (HIGHEST TO LOWEST) :  
314 244 198 182 169 112 38 18 10 2

NUMBER OF VALUES IS 10  
SUM OF THE VALUES IS 1287  
THE MEAN VALUE IS 128.7  
THE MEDIAN VALUE IS 140.5  
THE STANDARD DEVIATION IS 209.541

FOR ANOTHER RUN, RE-ENTER DATA ON LINES  
1000 - 2000, TAKING CARE TO ELIMINATE OLD DATA  
BY TYPING THOSE LINE NUMBERS WHICH YOU DO NOT USE AGAIN;  
THEN TYPE 'RUN'.

DONE

**TITLE:**

SURFAC: Area of Surface of Revolution

**DESCRIPTION:**

This program approximates the area of a surface of revolution, by computing lateral areas of frustrums of cones of revolution.

OBJECTIVES:

- A. The saving of time in computations.
- B. The speedy demonstration of limiting processes.
- C. The focusing of attention upon those processes needed to develop the analytic approach.

**INSTRUCTIONS:**

PRELIMINARY PREPARATION:

Before running this program, the lateral area of a frustrum of a cone should be discussed. Many students in the Advanced Placement Program have not taken a course in Solid Geometry and may be unfamiliar with the formula:

$$\text{Lateral Area} = \pi l (r_1 + r_2)$$

Frustrum of a Cone

Whether or not this formula is derived in class will depend on the amount of time available. Most likely it will merely be stated; students who have not taken Solid Geometry may be asked to look up the derivation on their own.

**ACKNOWLEDGEMENTS:**

Huntington Project  
Polytechnic Institute of Brooklyn

SYSSOL  
 36278

**TITLE:**

SOLVING SYSTEMS OF LINEAR EQUATIONS

**DESCRIPTION:**

This program solves systems of linear equations for up to twenty equations in twenty variables. It will solve even over- or underdetermined systems. It employs Gaussian Elimination, and will automatically round the difference of two numbers to zero if six significant digits of accuracy have been lost. Also, if the system is underdetermined, the solution is in the form  $X + A_1 X_1 + A_2 X_2 + \dots$ , where the  $X_i$  and  $X$  are vectors, and  $A_1, A_2, \dots$  are arbitrary constants. The user has the option of having the  $X_i$  orthogonalized or orthonormalized.

**INSTRUCTIONS:**

The program asks if the user wishes printouts (text) in terms of Linear Transformations or Simultaneous equations (LIN or SIM). Since this program will solve at the same time up to five systems with the same coefficient matrix, like:

$$\begin{bmatrix} 1 & +2 \\ x & y \end{bmatrix} = \begin{bmatrix} 1 \\ 2 \end{bmatrix} \quad \text{and} \quad \begin{bmatrix} x+2 & y \end{bmatrix} = \begin{bmatrix} 3 \\ 2 \end{bmatrix}$$

The next input is how many of these systems there are (in this case 2). The next input is the elements of the coefficient matrix and the elements of the constant(s) array, in this case 1, 3, 2, 2 (these are the elements to the right of the equals sign). The program gives the user the option of verifying this input, and also seeing a copy of the reduced matrix.

**SPECIAL  
 CONSIDERATIONS:**

This program is subject to the same accuracy problems as any using the Gaussian Elimination method.

**ACKNOWLEDGEMENTS:**

Phillip Short  
 Burnsville Senior High School

CONTRIBUTED PROGRAM **BASIC**TRIFAC  
36237**TITLE:**

FACTORING QUADRATIC TRINOMIALS

**DESCRIPTION:**

This program asks a student for his "lucky" number. It then presents him with a random number of factoring problems based on this number (minimum of 6). When the student has his list he returns to his seat to work out the problems. When he has finished the set he prepares a DATA tape with his answers on it, feeds the tape into the program and RUNs it again. He is then informed of his errors and what percent he worked correctly.

**INSTRUCTIONS:**

Instructions to the student are included on an optional basis within the program. 25 lines may be used for DATA; it is suggested that one DATA line be used per problem. Data lines are 600 through 625. Enter data as follows: coefficient of trinomial, then coefficients of each factor.

**SPECIAL  
CONSIDERATIONS:****FOR INSTRUCTIONAL PURPOSES**

Suitable Courses: Algebra I or as a review in Algebra II

Student Background Required: Knowledge of trinomial factoring

Application: This program may be used effectively to provide different students with completely different sets of problems (both in length and in content). It may be used with an entire class (average time per student at the terminal is 2-3 minutes) or with individuals for extra practice or makeup work.

DONE

**TITLE:**

TRUTH TABLES FOR BOOLEAN EXPRESSIONS

**DESCRIPTION:**

This is a program to produce truth tables for Boolean expressions. The expression is analyzed into reverse polish form, and for all possible values of the variables in the expression, a truth value for the expression is computed.

**INSTRUCTIONS:**

Instructions are provided in the program.

Any single letter may be used as a variable. The Boolean operators are:

priority	symbol	mnemonic	description
1	'	NOT	negation
2	&	AND	conjunction
3	+	OR	disjunction
3	#	XOR	exclusive or
4	>	IF	conditional
5	=	IFF	biconditional

Note that OR and XOR have the same priority, these are evaluated left to right. All operators except NOT are binary operators and are placed between two quantities. Negation is indicated by an apostrophe (prime ?) following the quantity. Parentheses may be used at will to change the order of evaluation. Blanks in the expression are ignored.

**SPECIAL  
CONSIDERATIONS:**

Very little syntax checking is done. The program will try to evaluate any expression that is entered. It will only give an error message if it is impossible to evaluate the expression. Thus the user must take care that his expression is correct, otherwise the resultant truth table may not reflect his wishes.

Up to 26 separate variables are allowed. However, this would produce a truth table of  $2^{26} = 67,108,864$  lines if all 26 variables were used. This table would take about 10 years to print on a conventional teletype! The use of any of the 26 letters is to increase the user's choice of which ones he wishes to use.

Continued on following page.

**ACKNOWLEDGEMENTS:**

Lawrence E. Turner, Jr.  
Pacific Union College

SPECIAL CONSIDERATIONS: continued

FOR INSTRUCTIONAL PURPOSES

Suitable Courses: Introductory Programming, Elementary Logic, Boolean Algebra

Student Background Required: Elementary concepts of logic or Boolean Algebra

This program was specifically written for a course in introductory programming. One to two lectures are devoted to number systems and the elementary Boolean operators of: NOT, AND, and OR. Applications to circuit analysis and logic problems are illustrated both in the lectures and in the homework assignments. Typically the student would reduce a set of english statements to a Boolean expression and then evaluate the truth table for the result. The text in use is Introduction to Computers and Computer Science, by Richard C. Dorf (Boyd and Fraser Publishing Co., San Francisco, 1972).

In writing the program the operators: XOR, IF, and IFF were added to the above. Thus the program contains the commonly used Boolean operators and is applicable to elementary logic courses.

The program can quickly produce truth tables for very elaborate Boolean expressions, and may be used to reduce the tedious evaluations or as a check on the results. In addition many theorems that two expressions are equal may be easily checked by producing the truth tables for the two expressions and comparing them.

TITLE:

VOLSOL: Volume of Solid of Revolution

DESCRIPTION:

Through the use of cylindrical discs, the program approximates the volume of a solid of revolution generated by rotating about the x-axis the area bounded by  $y=f(x)$ , the x-axis, and the vertical lines  $x=a$  and  $x=b$ .

OBJECTIVES:

To help the student understand the analytic procedures and to appreciate the nature of the limiting process.

INSTRUCTIONS:

PRELIMINARY PREPARATION:

The class should be reminded of the formula for the volume of a cylinder, and the way in which a cylinder is generated by rotating a rectangle about one of its sides.

DISCUSSION:

It would be desirable to make use of an overhead projector transparency to display the cylindrical discs generated.

Approximation of Volume of Revolution by Cylindrical Discs

 IF YOU ARE FINISHED, TYPE '1' AND THE 'RETURN' KEY.

DONE

**TITLE:**

GENERATES MATH WORKSHEETS

**DESCRIPTION:**

Program generates a worksheet on basic math operations (addition, subtraction, multiplication, or division) of a specified level of difficulty (determined by the maximum number of digits in each of the two numbers with which the operation is to be performed). Spacing on the worksheet is such that it may be duplicated using ditto masters and run on 8 1/2" x 11" paper.

**INSTRUCTIONS:**

Teacher will be asked to input four types of information before the worksheet is generated:

1. Type of problem (addition, subtraction, multiplication, or division).
2. Maximum number of digits desired in each number (1, 2, or 3).
3. Number of problems on the worksheet (up to 25).
4. Choice of whether answers are to be printed at the bottom of the page for student reference or whether additional blank print lines are to be inserted (so that when the answers are printed on the teletype roll, they will be positioned too low to be included on an 8 1/2" x 11" page, but will be available for teacher reference).

Subtraction problems with negative differences will not be generated.

Division problems involving division by zero will not be generated.

The two numbers with which the operation is to be performed will always be positive integers.

**SPECIAL  
CONSIDERATIONS:**

**FOR INSTRUCTIONAL PURPOSES**

Suitable Courses: Basic mathematics in junior or senior high school, or mathematics for elementary grades.

This program can be used whenever the teacher wishes to have several sets of problems available that are similar in type and difficulty. This allows for much more individualizing of instruction. The teacher has the option (at the time that he originally generates the worksheets) of making the problem answers available to the students if he wishes to.

**ACKNOWLEDGEMENTS:**

Donald E. Gettinger  
Stillwater Senior High School

## TITLE:

CWF SUBPROGRAM

## DESCRIPTION:

CLEARB is one of a series of user-written subprograms that extend the capabilities of Hewlett-Packard's licensed instructional product: Course Writing Facility (CWF). For more information about CWF, users should consult the Course Writing Facility Reference Manual, part number 24383-90001.

Sometimes an author would like to fill a buffer full with one repeated character. Perhaps he wishes to clear a buffer with spaces so that he can check buffer contents without interference from previous contents, or perhaps he is building up a buffer using variable length loads. In the latter case, if the buffer has previously been filled with "end of buffer" characters (E<sup>C</sup>) there will always be an "eob" at the end of the message in the buffer.

The CWF author can simply invoke this sub-program with a call of the form "fn /clearb".

## INSTRUCTIONS:

CALLING FORMAT

fn /clearb/bn,n

bn - a buffer from b0 to b5 (default b0)

n - any character, as well as N<sup>C</sup> (line feed),E<sup>C</sup> (end of buffer), or O<sup>C</sup> (carriage return)

(default = spaces).

SAMPLE CALLS

fn /clearb

fn /clearb/b2,\*

fn /clearb/b4

fn /clearb/b5,E<sup>C</sup>

The last statement would cause buffer 5 to be filled with end of buffer characters (E<sup>C</sup>) in positions 0 through 97.

COURSE FACILITIES AFFECTED

This sub-program fills positions 0 through 97 of any buffer (b0 - b5) with the specified character, and places a carriage return (O<sup>C</sup>) and an eob (E<sup>C</sup>) into positions 98 and 99.

SPECIAL  
CONSIDERATIONS:

HP 24383A, Course Writing Facility must be present in the system for this subprogram to RUN.

## ACKNOWLEDGEMENTS:

Jutta Kernke  
Hewlett Packard

## PROGRAMMING AND COMPUTER SCIENCE (EDUCATION) (810)

CONTRIBUTED PROGRAM **BASIC**CLEARF  
36888-18026

## TITLE:

CWF SUBPROGRAM

## DESCRIPTION:

CLEARF is one of a series of user-written sub-programs that extend the capabilities of Hewlett-Packard's licensed instructional product: Course Writing Facility (CWF). For more information about CWF, users should consult the Course Writing Facility Reference Manual, part number 24383-90001.

When a CWF author invokes this sub-program with a call of the form "fn /clearf", various course facilities can be set to zero (all counters, all the switches, and/or all the parameters) or to blanks (all the buffers) on one operation.

## INSTRUCTIONS:

CALLING FORMAT

fn /clearf/n

n - an integer from 1 to 7 such that

1 - counters set to 0

2 - buffers set to blanks

3 - switches set to 0

4 - parameters set to 0

5 - reset counters and switches

6 - reset counters, switches and buffers

7 - reset all four

COURSE FACILITIES AFFECTED

This function resets the facilities as specified

SAMPLE CALL

fn /clearf/6

The above statement would cause all counters and switches to be reset to 0, and all buffers to be filled with blanks.

SPECIAL  
CONSIDERATIONS:

HP 24383A, Course Writing Facility must be present in the system for this subprogram to run.

## ACKNOWLEDGEMENTS:

Jutta Kerne  
Hewlett Packard

## PROGRAMMING AND COMPUTER SCIENCE (EDUCATION) (810)

CONTRIBUTED PROGRAM **BASIC**LENGTH  
36888-18024

TITLE: CWF SUBPROGRAM

## DESCRIPTION:

LENGTH is one of a series of user-written sub-programs that extend the capabilities of Hewlett-Packard's licensed instructional product: Course Writing Facility (CWF). For more information about CWF, users should consult the Course Writing Facility Reference Manual, part number 24383-90001.

When an author wishes to find the position of the first "end of buffer" character (EC) in a buffer, he can invoke this sub-program by simply calling fn /length. This function then returns the "eob" position in a counter. If no "end of buffer" character is found, 100 is returned in the counter.

## INSTRUCTIONS:

CALLING FORMAT

fn /length/cn/bn

cn - a counter from c0 to  
c30 (no default)bn - a buffer from b0 to  
b5 (default b0)SAMPLE CALLS

fn /length/c2/b3

fn /length/c1

COURSE FACILITIES AFFECTED

The first statement would return in C2 the position of the first "end of buffer" character in B3. The second statement would return the first "eob" in B0 in C1; since no buffer is specified, the default is B0.

SPECIAL  
CONSIDERATIONS:

HP 24383A, Course Writing Facility must be present in the system for this subprogram to RUN.

## ACKNOWLEDGEMENTS:

CONTRIBUTED PROGRAM **BASIC**

TITLE: PILOT TUTORIAL PTUD  
36888-18016

DESCRIPTION: This is the fourth program in the PILOT tutorial series. It is written in PILOT to teach the syntax and usage of PILOT.

This portion discusses the DEMAND and the COMPUTE statements.

INSTRUCTIONS: This program is stored on 3 files named P-TUD1, P-TUD2, P-TUD3 for use on the HP 2000E systems and is stored on 1 file named PTUD for the 2000 series system.

The scratch file should be at least three records.

SPECIAL CONSIDERATIONS: on 2000E: P-TUD1,48  
P-TUD2,48  
P-TUD3,48

on 2000 Series System: PTUD,70

PILOT

HI! I AM READY TO GO AGAIN, HOW ABOUT YOU??

CONSIDER THIS SECTION OF A PROGRAM:

NAME TWO STATES BORDERING ON CALIFORNIA ?OREGON,ARIZONA  
VERY GOOD!

THIS PROGRAM TAKES A TOTAL OF 8 STATEMENTS (INCLUDING A NEGATIVE RETORT WHICH YOU DID NOT GET SINCE YOU ANSWERED CORRECTLY). IT ALSO TAKES INTO ACCOUNT ANY COMBINATION OF THE THREE POSSIBLE STATES!

WHAT STATEMENT IS NECESSARY FOR THIS ?DEMAND  
EXCELLENT, I CAN TELL YOU DID YOUR HOMEWORK!  
LET'S LOOK AT A LISTING OF THE PROGRAM.

```
7000 T:NAME TWO STATES BORDERING ON CALIFORNIA +  
7010 A:  
7020 M:ARIZON,AZ  
7030 M:NEVAD,NV  
7040 M:OREG,OR  
7050 .D:2  
7060 Y:VERY GOOD!  
7070 N:NOPE.
```

THE HEART OF THIS IS STATEMENT 7050, THE DEMAND STATEMENT.  
WHAT DO STATEMENTS 7020, 7030, AND 7040 DO ?MATCH  
YES, THEY CHECK FOR THE POSSIBLE CORRECT STATES. NOW IF STATEMENT 7050  
WERE LEFT OUT, THEN WHAT RESPONSE WOULD SET THE MATCH FLAG TO THE 'YES'  
STATE ?R-OREGON  
EXACTLY! ONLY 'OREGON' WOULD INITIATE 'VERY GOOD!'. WHAT THE DEMAND  
STATEMENT DOES IS TO CHANGE THE MATCH FLAG TO 'YES' IF TWO OR MORE OF  
THE EXECUTED MATCH STATEMENTS SINCE THE LAST EXECUTED ANSWER STATEMENT  
HAVE BEEN SUCCESSFUL, OTHERWISE IT IS SET TO 'NO'!  
WHAT OTHER PILOT STATEMENTS CAN CHANGE THE MATCH FLAG ?ANSWER  
CORRECT, BUT YOU FORGOT ONE. BOTH THE ANSWER AND THE MATCH CAN ALSO  
SET THE MATCH FLAG.  
IF STATEMENT 7050 WERE TO READ '7050 .D:1', THEN HOW MANY CORRECT  
STATES WOULD HAVE TO BE ENTERED IN ORDER TO GET 'VERY GOOD!' ?1  
EXACTLY! THE INTEGER OBJECT OF THE DEMAND STATEMENT (IN THIS CASE 1)  
TELLS HOW MANY EXECUTED MATCH STATEMENTS MUST BE SUCCESSFUL SO THAT THE  
'Y' CONDITION STATEMENTS WILL BE EXECUTED.  
CONSIDER:

```
7050 T:YOU GOT +  
7060 .D:1  
7070 Y:ONE+  
7080 .D:2  
7090 Y:, TWO+  
7100 .D:3  
7110 Y:, THREE+  
7120 .D:1  
7130 Y: OF THEM!  
7140 N:NOT EVEN ONE!
```

TRY IT!

NAME TWO STATES BORDERING ON CALIFORNIA ?OREGON,ARIZONA  
YOU GOT ONE, TWO OF THEM!

TRY IT AGAIN!

NAME TWO STATES BORDERING ON CALIFORNIA ?ARIZONA,NEVADA  
YOU GOT ONE, TWO OF THEM!

TRY IT AGAIN!

NAME TWO STATES BORDERING ON CALIFORNIA ?ARIZONA,NEVADA,OREGON  
YOU GOT ONE, TWO, THREE OF THEM!

ONE MORE TIME.

NAME TWO STATES BORDERING ON CALIFORNIA ?ARIZONA,NEVADA,OREGON  
YOU GOT ONE, TWO, THREE OF THEM!

THERE ARE, OF COURSE, MANY VARIATIONS MADE POSSIBLE BY THE DEMAND  
STATEMENT. CONSIDER:

```

7050 .D:3
7060 Y:VERY, VERY GOOD! YOU GOT ALL THREE!
7070 JY:*NEXT
7080 .D:2
7090 Y:CORRECT!
7100 JY:*NEXT
7110 .D:1
7120 Y:YOU DID GET ONE RIGHT.
7130 N:YOU DIDN'T EVEN GET ONE!
7140 *NEXT R:

```

WHY DO YOU THINK THE JUMP STATEMENTS ARE NECESSARY??  
?

IF .D:3 IS SATISFIED, SO IS .D:2 AND .D:1!! THUS IF THREE ARE FOUND,  
THEN YOU MUST BRANCH AROUND THE SECTIONS THAT CHECK FOR TWO AND ONE.  
NOTE THAT THE DEMAND STATEMENT CHECKS FOR 'AT LEAST'. IT DOES NOT  
CHECK FOR 'EXACTLY'.

OK, WHAT DO YOU THINK .D:0 SETS THE MATCH FLAG TO ?

??YES

RIGHT ON! SINCE IN ALL CASES AT LEAST ZERO MATCH STATEMENTS HAVE BEEN  
SATISFIED, .D:0 ALWAYS SETS THE MATCH FLAG TO 'YES'. THIS IS A WAY OF  
FORCING THE MATCH FLAG IRREGARDLESS OF PREVIOUS MATCHES.

AN EXAMPLE:

```

3560 T:CAN YOU NAME THE CLOSEST STAR TO THE EARTH +
3570 A:
3580 M:YES,OF COURS,RIGHT,CERTAIN,SURE,Y
3590 Y:OK, WHAT IS IT +
3600 *STAR AY:
3610 M:SUN,SOL
3620 Y:VERY GOOD!
3630 JY:*NEXT
3640 T:NO WAY, HERE'S A HINT: YOU ONLY SEE IT DURING THE DAY.
3650 T:NOW TRY IT +
3660 .D:0
3670 J:*STAR

```

IF STATEMENT 3660 WERE MISSING, WOULD \*STAR AY: BE EXECUTED AFTER THE.  
JUMP (J:\*STAR) ?NO

THAT'S RIGHT! IN FACT, THERE WOULD BE NO WAY TO GET OUT OF THE LOOP!!  
ACTUALLY THERE ARE PERHAPS OTHER WAYS OF ACHIEVING THIS SAME RESULT  
WITHOUT RESORTING TO THE .D:0, BUT AT TIMES IT IS CONVENIENT.  
THERE IS ONE FURTHER POINT TO CONSIDER. IF THERE ARE TOO MANY  
ALTERNATIVES IN A MATCH OBJECT TO FIT ON ONE LINE, THEN HOW DO YOU  
'CONTINUE' A MATCH??

?CONDITION

ACTUALLY, BY THE USE OF AN 'N' CONDITION YOU CAN 'CONTINUE' AS LONG AS  
YOU WISH.

THE QUESTION TO BE ANSWERED IS: DOES THIS AFFECT THE FUNCTION OF THE  
DEMAND STATEMENT?

WHAT DO YOU THINK ?NO

RIGHT! IT DOES WORK PROPERLY IF YOU THINK OF THE TWO OR MORE  
STATEMENTS 'CONTINUED' TOGETHER AS A SINGLE MATCH STATEMENT. AT THE  
MOST THERE WILL BE ONE SUCCESSFUL MATCH AMONG THEM. TO SEE THIS, EXAM:

```

4070 T:NAME A DIGIT AND A COLOR.
4080 A:
4090 M:ZER,ONE,TWO,THRE,FOUR,FIVE
4100 MN:SIX,SEVEN,EIGHT,NINE
4110 M:BLUE,RED,GREEN,ORANGE,GREY
4120 MN:PINK,BLACK,PURPLE,VIOLET
4130 MN:YELLOW,WHITE,BROWN
4140 .D:2
4150 Y:GROOVY!
4160 N:I GIVE UP!

```

IF 'TWO' IS TYPED IN, HOW MANY SUCCESSFUL MATCH STATEMENTS WILL EXECUTED BEFORE 4140 ?1  
CORRECT. ONLY NUMBER 4090 WILL BE SUCCESSFUL, IN FACT 4100 WILL NEVER BE EXECUTED!  
NOW WHAT IF 'NINE AND RED' ?2  
RIGHT. BOTH 4100 AND 4110 ARE SUCCESSFUL. NUMBER 4090 IS EXECUTED BUT FAILS. 4120 AND 4130 ARE NOT EVEN EXECUTED.  
IF 'NOTHING' IS TYPED IN ?0  
OK, THEY ALL WILL BE EXECUTED, BUT NONE SUCCESSFULLY.  
NOTICE THAT EACH SET OF 'CONTINUED' MATCH STATEMENTS ACTS LIKE ONLY ONE STATEMENT AS FAR AS BOTH THE MATCH FLAG AND THE DEMAND STATEMENT.

WHAT DO YOU THINK IS THE MAXIMUM NUMBER OF SUCCESSFUL MATCHES THAT CAN BE 'DEMANDED' ?99  
I GUESS YOU REALLY DID YOUR HOMEWORK! THE LARGEST ALLOWED OBJECT OF A DEMAND STATEMENT IS 99. THUS YOU CAN HAVE UP TO 99 MATCHES TO BE 'DEMANDED'! IT IS RARE THAT YOU WILL EVER NEED THIS MANY FOR A VERY SIMPLE REASON.  
WHAT IS THE LONGEST RESPONSE ALLOWED BY PILOT ?72  
CLOSE! EXACTLY! UP TO 72 CHARACTERS MAY BE TYPED IN AT ANY TIME. THIS IS THE MOST THAT PILOT CAN CHECK FOR POSSIBLE MATCHES AT ANY ONE TIME.

THAT COMPLETES EVERYTHING THERE IS TO KNOW ABOUT DEMAND! YOU NOW KNOW (OR HAVE BEEN EXPOSED TO) MOST OF THE PILOT LANGUAGE STATEMENTS. YOU CAN CAUSE THE COMPUTER TO PRINT OUR STUFF, ASK QUESTIONS, MATCH THE RESPONSE, MAKE APPROPRIATE COMMENTS, JUMP, AND NOW DEMAND. THERE ARE ONLY THREE MORE THINGS TO KNOW AND YOU WILL BE AN EXPERT! THESE ARE: HOW TO MODIFY THE VALUE OF A NUMERIC VARIABLE, SUBROUTINE JUMPING, AND A MORE POWERFUL MATCH STATEMENT.

LET'S REVIEW WHAT YOU KNOW ABOUT NUMERIC VARIABLES. FIRST HOW MANY DIFFERENT NUMERIC VARIABLES ARE THERE ?26  
PRECISELY!  
WHAT PILOT STATEMENT(S) CAN MODIFY THE VALUE STORED IN A NUMERIC VARIABLE ?DONT KNOW  
SO FAR WE HAVE ONLY DISCUSSED HOW THE ANSWER STATEMENT CAN MODIFY THE VALUE OF A VARIABLE.  
WHAT PART OF AN ANSWER STATEMENT ALLOWS THIS ?AFTER THE COLON  
BEAUTIFUL! AND WHAT SPECIAL SYMBOL SIGNIFIES A NUMERIC VARIABLE ?#  
OF COURSE!  
NAME TWO WAYS IN WHICH A NUMERIC VARIABLE MAY BE USED.  
?MATCH AND TYPE  
WELL, YOU GOT ONE. THE FIRST WAY WE STUDIED WAS TO OUTPUT THE VALUE IN A TYPE STATEMENT. THE SECOND WAS IN A CONDITION. HERE IS A PART OF A PROGRAM TO ILLUSTRATE:

```

4520 T:WHAT IS YOUR AGE +
4530 *PLEASE A:#A
4540 TB:GIMME A NUMBER!
4550 JB:*PLEASE
4560 T(A<=0):WHAT? A NEGATIVE NUMBER!
4570 T(A>150):A FOSSIL IF I EVER SAW ONE!
4580 T:ARE YOU REALLY #A YEARS OLD??

```

WHAT DOES THE CONDITION 'B' DO ?DONT KNOW  
I ALMOST FEEL LIKE GIVING UP ON YOU! THE STATEMENTS WITH A 'B' CONDITION ARE EXECUTED ONLY IF NO VALID NUMBER WERE ENTERED. IT ALLOWS TESTING OR CHECKING FOR A NUMBER IN THE RESPONSE.  
SOMETIMES IT IS DESIRED TO MODIFY THE VALUE OF A NUMERIC VARIABLE OTHER THAN IN AN ANSWER STATEMENT. THERE ARE THREE PILOT STATEMENTS THAT DO THIS. THE FIRST AND MOST POWERFUL IS THE COMPUTE STATEMENT. WHAT DO YOU THINK IS THE INSTRUCTION FOR THE COMPUTE STATEMENT ?.C  
AHA, YOU ARE TOO TRICKY! THE INSTRUCTION FOR THE COMPUTE STATEMENT IS SIMPLY A 'C'.  
LET'S LOOK AT A FEW EXAMPLE COMPUTE STATEMENTS:

```

7350 C:A=5
8120 CY:B=A+32*X
8320 C(Z>3):S=T*(2+N)
9040 C:H=K
9450 C:N=N+1

```

THE OBJECT OF THE COMPUTE STATEMENT BEGINS WITH WHAT ? CHARACTER  
OH MY ACHING HEADS! WILL YOU WAKE UP?? THE FIRST THING IN THE COMPUTE  
OBJECT IS A NUMERIC VARIABLE. IT IS THE ONE WHOSE VALUE IS TO BE  
MODIFIED.

WHAT IS THE NUMERIC VARIABLE THAT IS TO BE MODIFIED IN STATEMENT 8320  
ABOVE ? S

ALRIGHT, THE VARIABLE S WILL BE MODIFIED WHEN 8320 IS EXECUTED.  
WHAT IS THE NEXT ITEM IN ALL COMPUTE STATEMENT AFTER THE LEADING  
NUMERIC VARIABLE ? =

GOOD. ALL COMPUTE STATEMENTS MUST HAVE AN EQUALS SIGN (=). THE PART  
TO THE RIGHT OF THE EQUALS SIGN IS VERY GENERALLY TERMED AN ARITHMETIC  
EXPRESSION OR SIMPLY EXPRESSION.

C: <NUMERIC VARIABLE> = <EXPRESSION>

THIS IS HOW YOU WOULD DIAGRAM A GENERAL COMPUTE STATEMENT. THE '<>'  
SURROUND A SINGLE SYNTACTICAL PILOT ENTITY. I HAVE LEFT OFF THE  
STATEMENT NUMBER AND ANY OPTIONAL LABEL OR CONDITION. THEY ARE MOST  
CERTAINLY ALLOWED. WHERE DOES THE CONDITION GO??  
?

**TITLE:**

PILOT TUTORIAL

**DESCRIPTION:**

This is the fifth and last program in the tutorial series in PILOT to teach the elements of the PILOT language.

This program deals with additional usage of the COMPUTE statement, the INTEGER FUNCTION, the RANDOM NUMBER FUNCTION, USE and END, and the extended MATCH.

**INSTRUCTIONS:**

This program is stored in 3 files: P-TUE1, P-TUE2, P-TUE3 for the HP 2000E system and on the one file PTUE for the HP 2000E series system.

The scratch file should be at least 2 records in length.

**SPECIAL  
CONSIDERATIONS:**

2000E: P-TUE1, 48; P-TUE2, 48; P-TUE3, 48

2000 Series System; PTUE, 70

NAME OF SCRATCH FILE ?SCR

?RUN

PILOT

GREETINGS! THIS IS THE FINAL PROGRAM IN THIS SERIES. YOU ARE ALMOST FINISHED. ACTUALLY, I HOPE THIS IS JUST A BEGINNING OF YOUR USAGE OF PILOT!

LAST TIME WE DISCUSSED THE COMPUTE STATEMENT AND AT LEAST ONE EXAMPLE OF HOW IT COULD BE USED. DO YOU REMEMBER THAT USE ?YES  
VERY GOOD, WHAT IS IT ?  
??FORGOT  
WELL, WHAT I HAD IN MIND WAS THE USE AS A COUNTER. AS IN:

1730 C:M=M+1  
2960 CY:P=P+1  
4110 C(X<17):D=D+1

BESIDES THE COMPUTE STATEMENT, WHAT PILOT STATEMENT CAN MODIFY THE VALUE OF A NUMERIC VARIABLE ?ANSWER STATEMENT  
RIGHT ON! SO FAR WE HAVE ONLY EXAMINED THE ANSWER STATEMENT. THIS ALLOWS A QUESTION WHICH ASKS FOR A NUMERIC RESPONSE.  
THE COMPUTE STATEMENT MAY BE USED IN CONJUNCTION WITH THIS TO HELP EXTRACT THE INTENDED RESPONSE MORE ACCURATELY. CONSIDER:

6310 T:HOW MANY DAYS IN ONE WEEK +  
6320 A:#D  
6330 M:SEVEN  
6340 CY:D=7  
6350 T(D=7):EXACTLY! +  
6360 T(D#7):SORRY, +  
6370 T:THERE ARE SEVEN DAYS IN ONE WEEK.

WHAT IS THE PURPOSE OF STATEMENTS 6330 AND 6340??  
?TO ALLOW FOR NUMERIC 7 AND ALPHABETIC SEVEN  
RIGHT, THEY CATCH THE RIGHT RESPONSE IF THE PERSON HAPPENED TO TYPE 'SEVEN' INSTEAD OF '7'. BOTH ARE CORRECT.  
LET'S EXECUTE THIS PROGRAM.

HOW MANY DAYS IN ONE WEEK ?7  
EXACTLY! THERE ARE SEVEN DAYS IN ONE WEEK.

NOW TRY IT AND ENTER 'SEVEN' SPELLED OUT.

HOW MANY DAYS IN ONE WEEK ?SEVEN  
EXACTLY! THERE ARE SEVEN DAYS IN ONE WEEK.

OFTEN ONE ONLY WISHES THAT THE RESPONSE BE CLOSE TO THE CORRECT ANSWER. AGAIN THE COMPUTE STATEMENT TO THE RESCUE!

8400 T:HOW MANY CENTIMETERS IN ONE INCH +  
8410 A:#X

THE CORRECT ANSWER IS 2.54; HOWEVER, TO BE CONSIDERED CORRECT YOU MIGHT ALLOW ANY NUMBER BETWEEN 2.5 AND 2.58. THIS WOULD ALLOW ANY RESPONSE THAT IS WITHIN 0.04 OF THE CORRECT ANSWER TO BE COUNTED. A VERY SIMPLE WAY IS TO COMPUTE THE DIFFERENCE BETWEEN THE CORRECT ANSWER AND THE RESPONSE.

HOW WOULD YOU DO THIS ?C:D=2.54-X  
I BELIEVE THAT IS CORRECT! A COMPUTE STATEMENT THAT LOOKS LIKE THIS SHOULD DO THE TRICK:

8420 C:D=2.54-X

IF THE RESPONSE IS: '2.5' WHAT IS STORED IN D ?.04  
EXACTLY! D HAS 0.04 STORED IN IT. SINCE 2.5 IS AN ALLOWED 'CORRECT  
ANSWER', HOW WOULD YOU CAUSE THE APPROPRIATE MESSAGE TO BE TYPED OUT??  
?C:--T(D<=0.04):CORRECT!  
GOOD. BY USING D IN A CONDITION ON A TYPE STATEMENT YOU CAN PRINT THE  
CORRECT RETORT. CONSIDER:

8400 T:HOW MANY CENTIMETERS IN ONE INCH +  
8410 A:#X  
8420 C:D=2.54-X  
8440 T(D<=0.04):VERY GOOD!  
8450 T(D>0.04):NOT QUITE.

THIS IS COOL FOR GUESSES LESS THAN 2.54, BUT WHAT WOULD BE PRINTED IF  
'57' WERE ENTERED ?VERY GOOD!  
EXACTLY! NOW IS '57' A 'CORRECT RESPONSE' ?NO  
OF COURSE NOT, THUS WE HAVE A BUG TO FIX!! WHAT WE REALLY WANT IS THE  
ABSOLUTE DIFFERENCE FOR D. SO IF D IS LESS THAN ZERO, WE WANT TO  
CHANGE ITS SIGN. THIS CAN BE DONE WITH ONE PILOT STATEMENT:

8430 C(D<0):

WHAT IS THE CORRECT OBJECT ?D=-D  
VERY GOOD!  
THUS OUR PROGRAM BECOMES:

8400 T:HOW MANY CENTIMETERS IN ONE INCH +  
8410 A:#X  
8420 C:D=2.54-X  
8430 C(D<0):D=-D  
8440 T(D<=0.04):VERY GOOD!  
8450 T(D>0.04):NOT QUITE.

EXCEPT FOR INTEGER RESPONSES IT IS BEST TO GO THROUGH SOMETHING LIKE  
THIS FOR NUMERIC RESPONSES, EVEN FOR SIMPLE DECIMAL NUMBERS. THE  
COMPUTER CANNOT REPRESENT MOST DECIMALS EXACTLY, HENCE SOMETHING LIKE:  
7320 T(X=.1): ... MAY NEVER BE EXECUTED EVEN IF '0.1' HAS BEEN  
PREVIOUSLY STORED IN X. SOMEWHERE, PERHAPS IN THE SEVENTH DECIMAL  
PLACE, X MAY DIFFER SLIGHTLY FROM 0.1, AND THE TEST WILL FAIL.

ANOTHER USEFUL WAY TO MODIFY THE VALUE OF A NUMERIC VARIABLE IS TO  
REPLACE IT WITH THE GREATEST INTEGER LESS THAN OR EQUAL TO THE ORIGINAL  
NUMBER.

FOR 4.7, WHAT IS THIS INTEGER ?4  
RIGHT ON!  
HOW ABOUT 0.247 ?0  
BEAUTIFUL!  
OK, TRY 6.00 ?6  
GOOD.  
AND -2.7 ?-3  
EXCELLENT!  
FINALLY, -7.00 ?-7

PERFECT! NOTE THAT FOR POSITIVE NUMBERS THIS GREATEST INTEGER FUNCTION  
IS EQUIVALENT TO JUST THROWING AWAY ANY DECIMAL PORTION; HOWEVER, THIS  
SIMPLE-MINDED DESCRIPTION IS NOT ADEQUATE FOR NEGATIVE NUMBERS.  
THIS OPERATION IS DIFFICULT, IF NOT IMPOSSIBLE, TO DO WITH THE COMMON  
ARITHMETIC OPERATORS AS ALLOWED IN THE COMPUTE STATEMENT, YET IT IS  
SUFFICIENTLY USEFUL TO BE INCLUDED IN THE PILOT LANGUAGE.  
A NEW INSTRUCTION IS USED, WHAT DO YOU THINK IT IS ? I  
THAT IS A GOOD GUESS, BUT THE INTEGER FUNCTION (REALLY THE GREATEST  
INTEGER THAT IS LESS THAN OR EQUAL TO) IS DESIGNATED BY THE EXTENDED  
INSTRUCTION '.I'. EXAMPLES ARE:

3710 .I:X  
4290 .I:S  
6660 .I(X>9):X

WHAT ARE THE OBJECTS OF THESE INTEGER FUNCTION STATEMENTS ?NUMERIC VARI  
NUMERIC VARIABLES  
EXACTLY! THE OBJECT IS A SINGLE NUMERIC VARIABLE. ITS VALUE  
IMMEDIATELY BEFORE THE EXECUTION OF THE STATEMENT IS REPLACED BY THE  
GREATEST INTEGER THAT IS LESS THAN OR EQUAL TO IT.  
TO SEE A POSSIBLE USE, CONSIDER:

```
3250 T:THREE IS WHAT PERCENT OF 24 +
3260 A:#P
3270 .I:P
3280 T(P=12):EXCELLENT!
3290 T(P#12):NOPE.
```

WHAT IS THE SMALLEST NUMBER FOR WHICH 'EXCELLENT' WILL BE PRINTED ?12  
RIGHT ON!  
HERE THE CORRECT ANSWER IS 12.5, BUT ANYTHING FROM 12 UP TO (BUT NOT  
INCLUDING) 13 IS ACCEPTABLE. THE .I VERY EASILY SETS UP THE RANGE.  
A MORE IMPORTANT USE IS FOR ROUNDING. THE INTEGER FUNCTION AS GIVEN  
DOES NOT ROUND, IT MERELY TRUNCATES. ROUNDING CAN BE ACHIEVED IN QUITE  
A STRAIGHTFORWARD MANNER BY:

```
4560 C:X=X+.5
4570 .I:X
```

WHAT WILL BE STORED IN X IF IT PREVIOUSLY HAD 4.00 ?4  
EXACTLY.  
HOW ABOUT 4.6 ?5  
COOL!  
OK, TRY -2.1 ?-2  
RIGHT!  
AND WHAT DOES -5.7 BECOME ?-5  
MY, MY, NO. -5.7 + 0.5 IS -5.2 WHICH BECOMES -6.

NOTE THAT THE WAY THE INTEGER FUNCTION IS DEFINED MAKES THE ROUNDING  
OPERATION WORK FOR BOTH POSITIVE AND NEGATIVE VALUES. IF IT SIMPLY  
DISCARDED THE DECIMAL PART, THEN THERE WOULD HAVE TO BE SPECIAL TESTS  
AND HASSELING TO DO THE ROUNDING.  
YOU CAN ROUND TO ANY POINT YOU WISH. CONSIDER THE FOLLOWING TO ROUND  
TO THE NEAREST HUNDRETH (PENNY??):

```
7310 C:Q=Q*100+.5
7320 .I:Q
7330 C:Q=Q/100
```

OK, IF Q ORIGINALLY CONTAINS 3.14159, WHAT IS THE NEW VALUE ?

•

CONTRIBUTED PROGRAM **BASIC**

## TITLE:

CWF SUBPROGRAM

STDATA  
36888-18027

## DESCRIPTION:

STDATA is one of a series of user-written sub-programs that extend the capabilities of Hewlett Packard's licensed instructional product: Course Writing Facility (CWF). For more information about CWF, users should consult the Course Writing Facility Reference Manual, Part no. 24383-90001.

When a CWF author invokes this sub-program with a call of the form "fn /stdata", certain data from the student's record are made available in the CWF buffer, b5. The data include the student's name, number, user group, and date of registration, as well as the time he has spent on the course and the time of his last sign-on. These data may be used directly by the author to print out messages to the student, or to affect the logical flow of the course for each individual student.

## INSTRUCTIONS:

CALLING FORMAT

fn /stdata

COURSE FACILITIES AFFECTED

Counter 30 (c30) will contain the student number

Buffer 5 (b5) will contain the following:

<u>Starting position</u>	<u>length</u>	<u>contents</u>
0	9	student number
9	22	student's last name
31	3	user group
34	8	data of registration: MM/DD/YY
42	8	today's date: MM/DD/YY
50	8	time of sign on: hh-mm xx (AM, PM, N, M)
58	13	time on course up to last sign off (hh hrs mm min)
71	22	student's first name

The student's last name will never exceed a maximum of 20 characters and will be filled with blanks to a total of 22 characters; all 22 characters will be filled with blanks for a demo student. The last character in the name is followed by a control E, e.g., SMITHEC. This causes printing to stop at the end of the student's name, for example, "ld b5,71,22/b1" loads 22 characters into b1, but "ty b1" then prints only up to the EC.

Continued on following page.

SPECIAL  
CONSIDERATIONS:

HP 24383A, Course Writing Facility must be present in the system for this subprogram to RUN.

## ACKNOWLEDGEMENTS:

Jutta Kernke  
Hewlett Packard

ty b1  
ty ?

SAMPLE RUN

How are you today, John?

**TITLE:**

MATH CALCULATOR PACKAGE

STOP  
36208**DESCRIPTION:**

STOP is a hypothetical STOred Program digital computer having a very simple machine language. The STOP program in the TIES Time-Share library simulates STOP, allowing users to write programs in a simple machine language.

## The op codes are:

- 01 LOAD - Clears the contents of the accumulator and brings to it the number stored in the location specified by the storage address.
- 02 ADD - Adds to the accumulator the number stored in the specified location.
- 03 SUBTRACT - Subtracts from the accumulator the number stored in the specified location.
- 04 MULTIPLY - Multiplies the number in the accumulator by the number in the specified location.
- 05 UIVIDE - Divides the number in the accumulator by the number in the specified location, keeping only the quotient in the accumulator.
- 06 STORE - Stores the accumulator contents in the specified location.
- 07 PRINT (cr) - Prints the number contained in the specified location and returns the carriage. It will not print a number directly from the accumulator.
- 08 BRANCH ON NEGATIVE - If the accumulator is negative, sends control to the specified location and continues execution with the instruction found there.
- 09 HALT - Stops execution of a program. The address portion of a halt instruction is ignored by the system. Use any 3 digits.
- 10 JUMP - Sends control unconditionally to the specified address and continues execution with the instruction found there.
- 11 PRINT - Prints the number contained in the specified location; does not return the carriage. It will not print a number directly from the accumulator.
- 12 DIVIDE - Divides the number in the accumulator by the number in the specified location, keeping only the remainder in the accumulator.
- 15 BRANCH ON ZERO - If the accumulator is zero, sends control to the specified location and continues execution with the instruction found there.
- 17 PRINT FROM ACCUMULATOR - Prints the number contained in the accumulator. Operand should be 000 since no address is referred to.

**INSTRUCTIONS:**

See Attached

**SPECIAL  
CONSIDERATIONS:**

Statement 20 dimensions Array A at 500 to accomodate the HP 2000E. The array may be re-dimensioned to 1000 to allow HP 2000 Series users to write longer STOP programs.

**ACKNOWLEDGEMENTS:**

TIES  
St. Paul, Minnesota

INSTRUCTIONS:

To enter a program in the STOP language:

- After the system prints "BEGIN TYPING IN YOUR PROGRAM AND DATA STATEMENTS.", enter each statement as in the following example:  
    001,01200 (carriage return)  
    The first three digits are the address where the instruction or datum (01200) will be stored.
- After your program and data are entered, type an E indicating the end of your entries.
- The system will print "TYPE 0 TO RUN, 1 TO EDIT, 2 TO LIST, 3 TO STEP." Typing a 1 at this point allows you to re-enter any statements you wish to correct or to add new statements. You need to terminate your editing by typing an E. (See below for options 2 and 3)
- When you type a 0 to run, you will be asked to enter the starting address of the program. Touching the RETURN button after entering the address will cause the program to be executed.

Other Options

LIST: This will give a list of addresses and their contents. You must be prepared to type on request the beginning and ending addresses of the list you wish printed.

STEP: This will allow you to execute your program one step at a time. You will first enter the starting address as in the RUN option. As each step is executed, the teletype will print the address of the instruction executed and the contents of the accumulator after execution. Typing a 3 and carriage return will cause the system to execute the next instruction in the same manner. Typing a 0 and carriage return will cause the rest of the program to be executed from that point on. Typing a 1 will send control back to the original four-option statement.

SPECIAL CONSIDERATIONS:

An introduction to STOP and its language is found in Computers - Theory and Uses, written by Vincent S. Darnowski and published by the National Science Teachers Association, NEA, 1201 Sixteenth Street N.W., Washington, D.C. 20036. The cost is \$24.00 for 30 copies. The book was written as a text for introducing junior high school students to computers and their implications. Students studying this text can enhance their understanding of computers by writing and running machine language programs from any TIES Time-Sharing terminal.

Storage addresses must be integers greater than 0 and less than 10000. Instructions and data words must be integers between -99999 and 99999 inclusive.

Program or data statements can be corrected by retyping the statement. This can be done at any time during the entering of your program, or at other times when a system message gives you the option. New statements can be added at those same times.

STOP will execute instructions in sequence by address, starting with whatever address you specify and ending when a HALT command is reached. Hence, you must not leave any addresses undefined in the range of your program.

Since a datum and an instruction are each represented by a 5 digit integer, they appear the same to the computer. Therefore, programs and data must be stored in separate areas predetermined by you when you assign storage locations.

STPAL  
36765

## TITLE:

STOP MACHINE AND ASSEMBLY LANGUAGE SIMULATOR

## DESCRIPTION:

STPAL consists of 4 programs named STPAL, STPAL1, STPAL2, and STPAL3.

STOP is a hypothetical, electronic, stored-program, sequential, digital computer designed specifically to aid in teaching computer concepts. (It is not difficult to simulate STOP on many existing computer.) The STPAL system consists of a machine language translator and an assembly language translator. The two languages are SML (extended STOP simulated Machine Language) and SAL (STOP simulated Assembly Language).

The STOP system has had two predecessors, the most influential being a similar system developed at Illinois Institute of Technology with Computers - Theory and Uses by Vincent S. Darnowski as an initial impetus in this project. The second more recent influence is An Instructional Manual for CARDIAC by Hagelberger and Fingerman distributed and published by the Bell System for use in the classroom. CARDIAC consists of a cardboard "computer" with a small set of operations. The STOP system and CARDIAC are easily made compatible with HP Time-Sharing BASIC.

## INSTRUCTIONS:

The STOP system begins by requesting "PROGRAM FILE NAME?". The operator responds with the name of the file to be used to store the program or the file containing the program, if a previously written program is to be re-RUN. If the file is not available, STPAL will tell the operator how to open it and halt. It is necessary to type RUN after opening the file and re-enter the file name. The system will then print "TYPE YES IF THIS IS AN ASSEMBLY PROGRAM?". The operator responds with YES or NO. If NO is the response, STPAL types "ENTER MACHINE LANGUAGE STATEMENTS". The operator begins to enter statements according to the SML rules. After the operator enters a statement with a 000 address, execution of the machine language program begins.

After a HALT is encountered, the STPAL system asks "DO YOU WISH TO CORRECT THE MACHINE LANGUAGE PROGRAM?". The operator answers YES or NO. If no corrections are to be made, STPAL returns to the PROGRAM FILE NAME? request. The operator enters a new file name to run another program or //STOP to terminate.

continued on following page

## ACKNOWLEDGEMENTS:

Norman Thompson  
TIES

## INSTRUCTIONS continued

The machine language version can be corrected by typing in the address and the instruction to go at that address. To end corrections, the operator types a 000 address, and the program begins executing as before.

If an assembly language program is indicated, STPAL types:

```
BEGINNING ASSEMBLY
TYPE 0 FOR NEW PROGRAM, 1 FOR REASSEMBLE OLD PROGRAM?
```

If an old program, the program statements will be read from the file requested earlier, then compiled and executed. If a new program, STPAL will request assembly statements, write them to the file, then, after an END statement is encountered, compile and execute the program. After execution of either an old or new assembly program, the system will type:

```
DO YOU WISH TO CORRECT THE MACHINE LANGUAGE PROGRAM?
```

and the operator should proceed as above.

## I. SML - A Machine Language

## 1. Instruction WORD FORMAT

Each SML instruction is 5 decimal digits long. The first two (high order) digits form the operation code while the low order three digits form the operand. The operation code (op-code) specifies the operation to be performed. (See Section III.) The operand varies in function from operation to operation. The various uses are: a. Location of data; b. Location of next instruction to be executed; c. The data itself; d. Additional information necessary in the instruction execution.

## 2. Statement Format

SML recognizes two basic types of statements, program statements and comment statements. The comment statement must have an asterisk in column 1. Then the rest of the line will be taken as a comment for documentation purposes. Program statements have the following format:

```
Cols. 1-3  Address of the computer word to be stored.
Col. 4     Blank
Col. 5     Either blank or a +, -, #, or *.
Col. 6-10  Computer Word
Col. 11-72 Any comment
```

Blank is the only non-numeric character allowed in Cols. 1-3 and 6-10 inclusive and will be assumed to be zero. A + or - in Col. 5 assumes the computer word is a data word with the associated sign. An \* in Col. 5 indicates indirect addressing. A # in Col. 5 indicates that operand (Col. 8-10) is the data itself. This is generally referred to as a literal operand.

## 3. Instruction Execution

SML instructions are executed in numerical order by location. A branch instruction (or transfer instruction) may alter the normal order of execution. The last statement written must have location 000 and contain in the operand portion (Cols. 8-10) the location of the first instruction to be executed.

## II. SAL - An Assembly Language

SAL recognizes three basic types of statements: program statements, pseudo-operations, and comment statements.

## 1. Program Statement

Program statements are translated into equivalent SML statements and stored. They have the following format:

```
Col. 1     Any control character but generally AC. (Super script "C" indicates a control
           character which is done by pressing CTRL and the character simultaneously.)
Col. 2-3   Label field
Cols. 5-7  Operation field
Col. 8     An * or part of operand field
Cols. 9-10 Operand
Cols. 11-72 Any comment
```

If Col. 1 has an \* (asterisk) the entire line is taken as a comment statement. The label field may contain a unique symbolic label of either 1 or 2 alpha-numeric characters. The first character must be alphabetic (A-Z) but the second character may be alphabetic, numeric or blank. The label may not be S0 or TR since these are reserved words used in the linkage to the square root and trig subroutines respectively. The operation field must contain a valid SAL mnemonic operation code. (See Section III.) The operand may contain a symbolic label as defined above. Also the operand may contain a literal 1, 2 or 3 digit right justified number. If this is so, the value used by the instruction is not the content of the location specified but the number itself. (For example, ADD100 would add the number 100 to the content of the accumulator, not the content of location 100.)

## INSTRUCTIONS continued

Indirect addressing is indicated by an asterisk in Column 8. When indirect addressing is specified, the operand portion (Col. 9-10 of the assembled SML instruction) is replaced by the operand portion of the location indicated. If indirect addressing is specified by the new effective instruction, another indirect addressing cycle is taken. Indirect addressing may only be specified 10 levels deep.

It should be noted that the four fields of a SAL statement correspond to the four fields of SML statement even to essentially the same columns.

## 2. Pseudo-operations

Pseudo-operations, unlike normal operations in program statements, are not assembled into SML instructions, but are used to communicate with the assembler. In general, they have the same format as program statements.

## a. ORG

The pseudo-operation ORG (origin) sets the location counter at the value of the operand. The operand must be right justified 1-3 digit non negative number in Columns 8-10.

## b. END

The pseudo-operation END signals the end of the assembly program execution. An unconditional branch to the location specified by the operand is generated in location 000. The specified location will be the first statement to be executed by the assembled SML program.

## c. DS

The pseudo-operation DS (define storage) is used to reserve the number of storage locations specified by the operand. The format of the operand is the same as that for the ORG pseudo-operation.

## d. Define constant + and -.

Either the pseudo-operation + or the pseudo-operation - may be used to reserve one location of storage using the signed word content as the defined constant. The sign must appear in Column 5 and the word must be a 5 digit number right justified in Columns 6-10. The define constant may be used for constants in integer range -99,999 to 99,999.

## III. The valid SML operation codes and their SAL equivalents are listed below.

OP-CODE	MNEMONIC	FUNCTIONS
00	REA	Allows one number to be read into the location specified by the operand.
01	LOA	Load the accumulator with the word specified by the operand.
02	ADD	Add to the accumulator the word specified by the operand.
03	SUB	Subtract from the accumulator the word specified by the operand.
04	MUL	Multiply the content of the accumulator by the word specified by the operand.
05	DVQ	Divide the content of the accumulator by the word specified by the operand and store the <u>quotient</u> in the accumulator.
06	STO	Store the content of accumulator in the location specified by the operand. (The content of the accumulator is not altered.)
07	PRT	Print the content of the location specified by the operand. <sup>1</sup>
08	BOB	Branch to the location specified by the operand if the content of the accumulator is negative.
09	HLT	Halt execution. Control returns to a system command. <sup>2</sup> (Operand is ignored.)
10	UCB	Branch to the location specified by the operand.
11	PSC	Print the word specified by the operand and suppress the carriage return. <sup>1</sup>
12	DVR	Divide the content of the accumulator by the word specified by the operand and store the <u>remainder</u> in the accumulator.
13	NOP	No operation executed. (Operand is ignored)
14	ZAC	Zero the accumulator. (Operand is ignored)
15	BOZ	Branch to the location specified by the operand if the content of the accumulator is zero.
16	BOP	Branch to the location specified by the operand if the content of the accumulator is positive.
17	PAD	Print the content of the accumulator inserting a decimal point the number of places from right specified by the operand. <sup>1,3</sup>
18	BSA	Store the address of the (current) instruction plus one in the location specified by the operand and branch to the address specified by the operand plus one. <sup>4</sup> (Appendix III).
19	RTC	Return the carriage. (Skips a line)
20	SCR	Suppress the carriage. <sup>1</sup> (Operand ignored)
21	SNR	Shift the content of the accumulator right the number of decimal places specified by the operand.
22	SNL	Shift the content of the accumulator left the number of decimal places specified by the operand.
23	RAL	Allows up to 10 numbers to be read into the 10 consecutive locations beginning with the location specified by the operand. <sup>4</sup>

INSTRUCTION continued

OP-CODE	MNEMONIC	FUNCTIONS
24	PCL	Print the number of locations specified by the accumulator beginning with the location specified by the operand. <sup>5</sup>

Notes:

1. The print operations simulate a typewriter with an automatic carriage return (unless the carriage return is suppressed). PRT and PAD must be followed by SCR if so desired while PSC will suppress the automatic carriage return.
2. The system will always respond "TYPE YES IF THIS IS AN ASSEMBLY PROGRAM". If the answer is NO the system will expect a SML program, if YES a SAL program.
3. The PAD (17) operation is used to print a number with a decimal point. For example, to print the value of  $\pi$  the content of the accumulator must be 31416 and then the operation PADO4 would be written and 3.1416 would be printed.
4. The RAL (23) operation allows up to 70 characters to be read from an input line. The format must be Col. 1 sign, Col. 2-6 numeric, and Col. 7 comma and so on across the line until the number of items desired is included.
5. The PCL (24) operation allows memory to be dumped from 001 by loading the accumulator with the number locations desired and executing PCL00.

IV. Subroutines

1. A subroutine is a sub-ordinate part of a computer program written to do some routine or operation. The linkage to a subroutine requires that the location of the subroutine be known; the location of the return address be known; and the location of the fields operated upon be known. In SAL the BSA (18) instruction is used to link to subroutines whether the subroutine is a library (See 2 and 3 below) or programmer created subroutine.
2. Linkage to the library subroutine for the square root is:

```
Col. 2345678910
      BSA SQ
      NU DS 001
      RT DS 001
```

NU must be loaded with the number whose square root is to be found. The square root subroutine will place in RT the root of the absolute value of NU (truncated to two decimal places but multiplied by a factor of 100).

3. Linkage to trigonometric subroutine is as follows:

```
Col. 2345678910
      BSA TR
      AA DS 001
      BB DS 001
```

BB must contain a parameter that indicates the values to be found while AA is the value to be operated upon.

Parameter	Unit of Input	Function	Stored
1	Degrees	SIN	BB
2	Degrees	COS	BB
3	Radians	SIN	BB
4	Radians	COS	BB
5	Degrees	SIN	AA
		COS	BB
6	Radians	SIN	AA
7	Degrees	ARCTAN	BB
8	Radians	ARCTAN	BB

If BB is less than or equal to 6, AA is an angle in degrees or radians. If AA is in degrees, it must be in the range +180.00 and two decimal places are assumed. If AA is in radians, it must be in the range +3.1416 and 4 decimal places are assumed. For these values of BB all results are truncated to 4 decimal places and multiplied by 10,000. Note that BB is always replaced by an answer and for options 5 and 6 both AA and BB are replaced by answers. If BB is 7 or 8, AA must be a number in the range +99.999 and 3 decimal places are assumed. If the output is in degrees, the results are truncated to two decimal places and multiplied by 100. If the output is in radians, the results are truncated to 4 decimal places and multiplied by 10,000.

**TITLE:**

TURING MACHINE

**DESCRIPTION:**

This package is a complete "Turing Machine" simulator, which may be used in theoretical computer studies.

**INSTRUCTIONS:**

It is assumed that the user understands Turing Machines at least abstractly. These instructions describe a system designed to give one practical experience in the programming of Turing Machines.

The system consists of 5 programs: TM, TMZNEW, TMZIN, TMZLST and TMZRUN. Three files must be created: TQUIN, 5 records, TTAPE, 2 records, and TWORM, 2 records.

The system is activated by "getting" and "running" a program named TM. The computer will prompt with "TMC?" which stands for Turing Machine Command. The user will type a command as outlined in "COMMANDS". Commands may be entered as a complete word or as a two letter abbreviation. To terminate execution, respond with a CC in the usual manner.

Anytime the system is running or listing, execution may be terminated by merely depressing the break key. Typing "RUIN" will re-activate the system. The system should be terminated only under one of the above conditions. To be more specific, the only commands which should be interrupted are:

LQ    RU    NR    FR

All vital information is stored in the user's disc files so that he may leave and return later.

Error messages and diagnostics are at a minimum. The system is constructed to be "self-recovering". This means that nothing the user types will cause the system to fail. If something invalid happens, the system will either ignore it or type an error message. The standard error message is the word "GOOF" accompanied by bells. This usually happens when an invalid command is entered. Other possible error messages are described under the commands with which they are associated.

continued on following page.

**SPECIAL  
CONSIDERATIONS:**

For an excellent introduction to Turing Machines, see Baer\*. The notation and design of the present system reflects the more complete treatment given in Minsky\*.

\*Baer, R. (1972), The Digital Villian. Addison-Wesley.

Minsky, M. (1967), Computation: Finite and Infinite Machines. Prentice-Hall.

User is to input information to be stored on the tape.

DESCRIPTION

This command allows one to enter meaningful information on the tape. When typing-in information, the user may use as many lines as are necessary. The input is terminated by the character "/". If the user types J characters, then J positions of the tape will be overlaid beginning with the position indicated as "1ST CHARACTER POSITION".

ERRORS

Due to the nature of the implementation, the tape has a finite length. If the user specifies a "1ST CHARACTER POSITION" outside the boundary of the tape, the computer will reprompt. If at any time the user inputs more characters than the tape can contain, the computer types "OUT OF STORAGE -- GOOF". Any time an invalid character is encountered "GOOF" is printed. (Valid characters are 0-9, A-Z.) In the case of any error the characters up to the goof are stored on the tape and control is returned to the main program.

QUINTUPLES - QU

PROMPTS  
"TMQ?" -- (stands for Turing Machine Quintuple)  
The user is to input a valid quintuple or the character "/".

DESCRIPTION

This command allows one to enter quintuples (program steps) into the system and to modify existing quintuples. Quintuples may be entered free-field but must contain exactly 3 or 7 non-blank characters. Character meanings are as follows with allowed values:

1,2	PRESENT STATE	(00-99)
3	PRESENT SYMBOL	(0-9,A-Z,\$)
4,5	NEW STATE	(00-99)
6	NEW SYMBOL	(0-9,A-Z,\$)
7	TAPE DIRECTION	(L,C,R)

There must be only one quintuple present for each unique pattern of the first three characters. (These three characters are used much like the statement numbers in BASIC.) Typing-in any quintuple will delete any previous quintuple with the same first three characters and enter the new one. Typing only the first three characters will delete the corresponding quintuple if it exists.

In this system, the "halt" command is anything which has the new state equal to the old state and has a tape direction of "center".

Instead of the normal alphanumeric symbols, the "\$" may be used as a "present symbol" or a "new symbol". Its meaning is indicated by the following table:

present symbol -- "whatever is on the tape"  
new symbol -- "whatever the present symbol was"

**TITLE:**

TURING MACHINE

**DESCRIPTION:**

This package is a complete "Turing Machine" simulator, which may be used in theoretical computer studies.

**INSTRUCTIONS:**

It is assumed that the user understands Turing Machines at least abstractly. These instructions describe a system designed to give one practical experience in the programming of Turing Machines.

The system consists of 5 programs: TM, TM\*NEW, TM\*IN, TM\*LST and TM\*RUN. Three files must be opened: TQUIN, 5 records, TTAPE, 2 records, and TWORM, 2 records.

The system is activated by "getting" and "running" a program named TM. The computer will prompt with "TMC?" which stands for Turing Machine Command. The user will type a command as outlined in "COMMANDS". Commands may be entered as a complete word or as a two letter abbreviation. To terminate execution, respond with a CC in the usual manner.

Anytime the system is running or listing, execution may be terminated by merely depressing the break key. Typing "RUN" will re-activate the system. The system should be terminated only under one of the above conditions. To be more specific, the only commands which should be interrupted are:

LQ RU NR FR,

All vital information is stored in the user's disc files so that he may leave and return later.

Error messages and diagnostics are at a minimum. The system is constructed to be "self-recovering". This means that nothing the user types will cause the system to fail. If something invalid happens, the system will either ignore it or type an error message. The standard error message is the word "GOOF" accompanied by bells. This usually happens when an invalid command is entered. Other possible error messages are described under the commands with which they are associated.

continued on following page.

**SPECIAL  
CONSIDERATIONS:**

For an excellent introduction to Turing Machines, see Baer\*. The notation and design of the present system reflects the more complete treatment given in Minsky\*.

\*Baer, R. (1972), The Digital Villian. Addison-Wesley.

Minsky, M. (1967), Computation: Finite and Infinite Machines. Prentice-Hall.

TAPE - TA

PROMPTS

"1ST CHARACTER POSITION" -- User is to input a number to indicate where the new information is to begin.

"TMT?" -- (stands for Turing Machine Tape)  
User is to input information to be stored on the tape.

DESCRIPTION

This command allows one to enter meaningful information on the tape. When typing-in information, the user may use as many lines as are necessary. The input is terminated by the character "/". If the user types J characters, then J positions of the tape will be overlaid beginning with the position indicated as "1ST CHARACTER POSITION".

ERRORS

Due to the nature of the implementation, the tape has a finite length. If the user specifies a "1ST CHARACTER POSITION" outside the boundary of the tape, the computer will re-prompt. If at any time the user inputs more characters than the tape can contain, the computer types "OUT OF STORAGE -- GOOF". Any time an invalid character is encountered "GOOF" is printed. (Valid characters are 0-9, A-Z.) In the case of any error the characters up to the goof are stored on the tape and control is returned to the main program.

QUINTUPLES - QU

PROMPTS

"TMQ?" -- (stands for Turing Machine Quintuple)  
The user is to input a valid quintuple or the character "/".

DESCRIPTION

This command allows one to enter quintuples (program steps) into the system and to modify existing quintuples. Quintuples may be entered free-field but must contain exactly 3 or 7 non-blank characters. Character meanings are as follows with allowed values:

1,2	PRESENT STATE	(00-99)
3	PRESENT SYMBOL	(0-9,A-Z,\$)
4,5	NEW STATE	(00-99)
6	NEW SYMBOL	(0-9,A-Z,\$)
7	TAPE DIRECTION	(L,C,R)

There must be only one quintuple present for each unique pattern of the first three characters. (These three characters are used much like the statement numbers in BASIC.) Typing-in any quintuple will delete any previous quintuple with the same first three characters and enter the new one. Typing only the first three characters will delete the corresponding quintuple if it exists.

In this system, the "halt" command is anything which has the new state equal to the old state and has a tape direction of "center".

Instead of the normal alphanumeric symbols, the "\$" may be used as a "present symbol" or a "new symbol". Its meaning is indicated by the following table:

present symbol -- "whatever is on the tape"  
new symbol -- "whatever the present symbol was"

## INSTRUCTIONS continued

When executing the program, the system tries to satisfy all the specific cases first. The \$ notation is tried only as a last resort.

## ERRORS

Goofs are caused by the following conditions: quintuples not 3 or 7 characters long, any parameter out of range, program space full. The last error also causes the computer to type "OUT OF STORAGE".

## LIST TAPE - LT

## PROMPTS

"1ST CHARACTER POSITION" -- User must respond with a number indicating where listing is to begin.

"LAST CHARACTER POSITION" -- User must respond with a number indicating where listing is to end.

## DESCRIPTION

This command allows the user to look at the contents of the tape. Indicated portion of the tape is printed.

## ERRORS

Any number specified which is outside the range of the tape will be ignored and the computer will reprompt.

## LIST - LQ

## PROMPTS

None

## DESCRIPTION

This command allows the user to look at the quintuples (program steps). The quintuples are sorted, then printed.

## ERRORS

None

## PUNCH - PU

## PROMPTS

None

## DESCRIPTION

This command is the same as the LIST command except that a leader and trailer are punched. A "/" is also punched as the last quintuple to facilitate future read-in.

It is the responsibility of the user to turn the punch on and off at the appropriate times.

## ERRORS

None

## RUN - RU

## PROMPTS

"INITIAL STATE" -- User must type the state number with which he wishes to start.

"INITIAL TAPE POSITION" -- User must type the tape position where processing is to begin.

## DESCRIPTION

This command causes the computer to execute the quintuples with a given tape. The quintuples are executed and a trace is supplied by the computer. Each quintuple is printed with a copy of the tape as it appears after the quintuple has acted. The current tape position is also indicated. The whole tape is not printed; just the indicated character and 10 characters of context on either side.

## ERRORS

Control is returned to the main program if a null program or tape is specified. The computer reprompts when invalid numbers are given for "INITIAL STATE" or "INITIAL TAPE POSITION". (Valid range for tape position is from 10 to 10 from the end of the tape.) A goof is generated when a real state-tape configuration finds no counterpart in the list of quintuples or when a tape runs out.

## NORUN - NR

## PROMPTS

"INITIAL STATE" -- User must type the state number with which he wishes to start.

"INITIAL TAPE POSITION" -- User must type the tape position where processing is to begin.

## DESCRIPTION

This command causes the computer to execute the quintuples with a given tape. The quintuples are executed but no trace is given.

INSTRUCTIONS continued

ERRORS

Control is returned to the main program if a null program or tape is specified. The computer reprompts when invalid numbers are given for "INITIAL STATE" or "INITIAL TAPE POSITION". (Valid range for tape position is from 10 to 10 from the end of the tape.) A goof is generated when a real state-tape configuration finds no counterpart in the list of quintuples or when a tape runs out.

MODIFICATIONS:

The maximum number of quintuples and the maximum length of the tape may also be changed. Two procedures for doing the indicated modifications follow:

1. CHANGE NUMBER OF QUINTUPLES

Change the common statement in each program. Array Q is where the quintuples are stored. There must be 3 entries for each quintuple. (Thus the standard option allows for 100 quintuples.)

In the mainline, change the variable Q to be the new maximum number allowed.

File TQUIN will have to be changed. It takes approximately 1 record for each 20 quintuples allowed.

2. CHANGE LENGTH OF TAPE

Change variable T in the mainline to be one less than the new maximum tape length.

Files TTAPE and TWORM will have to be changed. It takes 1 record for each 64 characters allowed.

PROGRAMMING AND COMPUTER SCIENCE (EDUCATION) (810)

CONTRIBUTED PROGRAM **BASIC**

TRAN1

36888-18038

TITLE: GRAPHICS UTILITY PROGRAMS

DESCRIPTION:

There are 3 programs in this project: TRAN1, PLOT1 and PLOT2. These three programs support the publication Computer Graphics: Three Dimensional Projections: Theory, Programs and Examples, by Herbert D. Peckham published by the Hewlett-Packard Computer Curriculum Project, order number 5951-5601, price \$5.50.

For further information contact:

Hewlett-Packard Computer-Based Educational Materials  
Scientific Press  
1629 Channing Avenue  
Palo Alto, Ca 84303

INSTRUCTIONS:

User's Instructions are in the publication.

SPECIAL  
CONSIDERATIONS:

TRAN1 is the general capability program. PLOT1 requires a HP 7200 or 7202 plotter and PLOT2 requires a 4010 or 4012 Tektronix Graphics terminal and the Hewlett-Packard Primary Graphics Software (HP 20311A) See HP sales representative for details.

ACKNOWLEDGEMENTS:

HERB PECKHAM  
GAVILAN COLLEGE

**TITLE:**

TUTOR SERIES BASIC LANGUAGE PROGRAM COURSE

**DESCRIPTION:**

This series of 25 individual programs (named TUT01, TUT02 . . . TUT25) provides conversational instructions to a student new to computer programming in the Time-Shared BASIC Language.

**INSTRUCTIONS:**

"GET" the first program, TUT01. Further instructions are included within that program.

Because of the extensive length of the 25 programs, only representative "RUNS" are printed and no listings.

**SPECIAL  
CONSIDERATIONS:**

FOR INSTRUCTIONAL PURPOSES

Student Background Required: No programming experience is required. However, some knowledge of algebra is needed.

REFERENCES: The student should have available the HP reference manuals to Time-Shared BASIC.

**ACKNOWLEDGEMENTS:**

RUN

RIIN  
TUT01

WELCOME TO THE HEWLETT-PACKARD T/S SYSTEM. WE WILL TRY TO TEACH YOU ENOUGH ABOUT THE SYSTEM IN THIS SITTING FOR YOU TO BE ABLE TO WRITE YOUR OWN COMPUTER PROGRAMS

BEFORE WE CAN WRITE A PROGRAM WE NEED TO REVIEW THE SYMBOLS AVAILABLE

- (1) +
- (2) -
- (3) /
- (4) \*
- (5) ( )
- (6) ^

AFTER THE ? BELOW TYPE THE NUMBER OF YOUR ANSWER

WHICH OF THE SYMBOLS IS USED FOR ADDITION?1

GOOD

WHICH SYMBOL IS USED FOR SUBTRACTION?2

RIGHT

WHICH SYMBOL IS USED FOR DIVISION?3

GOOD FOR YOU. NOW, THE NEXT ONE IS TRICKY.

WHICH SYMBOL IS USED FOR MULTIPLICATION?4

VERY GOOD, IF 'X' WERE USED FOR MULTIPLY, IT COULD BE CONFUSED WITH THE VARIABLE 'X'. LETS PRACTICE A LITTLE:

HOW MUCH IS 2\*3?6

SURE

HOW MUCH IS 3\*4+7?14

SORRY, LOOK AGAIN

HOW MUCH IS 3\*4+7?19

RIGHT YOU ARE

HOW MUCH IS 3\*(1+5)/2?9

GOOD

THAT LEAVES ^ WHICH IS OUR WAY TO INDICATE SQUARES,CUBES ETC., SUCH AS X^2 FOR 'X SQUARED' OR X\*X, Y^3 FOR 'Y CUBED' OR Y\*Y\*Y ETC.

YOU CAN EVEN DEFINE YOUR OWN,BUT THESE WILL BE COVERED IN ANOTHER LESSON. WE'LL USE SQR(SQUARE ROOT) IN OUR COMING EXAMPLE TO GIVE YOU THE IDEA. LET'S ASSUME YOU WANT TO COMPOSE A PROGRAM TO COMPUTE RADIUS VECTORS (THE SQUARE ROOT OF THE SUM OF THE SQUARES OF THE THREE COMPONENTS). THIS PROBLEM WILL BE A SEQUENCE OF STATEMENTS TO TELL THE COMPUTER WHAT TO DO.

DO YOU THINK THE STATEMENTS SHOULD BE NUMBERED:

- (1) CONSECUTIVELY (1,2,3 ETC.)
- (2) INCREMENTALLY (10,20,30 ETC.)
- (3) ANY SEQUENCE FOR IT DOESN'T MATTER

(TYPE NO. OF ANSWER)

?2

RIGHT

LEAVING SPACE BETWEEN NUMBERS PERMITS INSERTIONS LATER. FOR OUR SAMPLE PROGRAM, LETS FIRST CALL FOR OUR KNOWN VARIABLES. WE SIMPLY TYPE:

```
10 INPUT X,Y,Z
```

```
10 IS SIMPLY THE FIRST STATEMENT NUMBER. X, Y, AND Z ARE OUR 'DATA'. NEXT, WE WRITE OUR EQUATION BY TYPING:  
20 LET R=SQR(X^2+Y^2+Z^2)
```

HERE 20 IS THE NEXT STATEMENT NUMBER, 'LET' TELLS THE COMPUTER THAT AN EQUATION IS COMING, AND 'R' IS OUR UNKNOWN VARIABLE. NOTE:UNKNOWN MUST BE ON THE LEFT OF THE '=' AND KNOWN ARE ON THE RIGHT. SQR IS THE SQUARE ROOT FUNCTION MENTIONED EARLIER. THE REST IS TELETYPE ALGEBRA. FROM THIS POINT ON 'R' CAN BE TREATED AS A KNOWN IN OTHER EQUATIONS. IN THIS EXAMPLE WE'LL TELL THE COMPUTER TO PRINT THE VALUE OF 'R' BY TYPING THE STATEMENT

```
30 PRINT R
```

WHICH WILL CAUSE THE COMPUTER TO DO JUST THAT. NOW WE ADD AN 'END' STATEMENT AND THIS IS OUR COMPLETE PROGRAM

**TITLE:** COMPUTER AIDED PRACTICE IN EE AC ANALYSIS ACZ1  
36152

**DESCRIPTION:** ACZ1 offers computer aided practice in the analysis of single frequency sine waves, complex power, power factor, etc.

**INSTRUCTIONS:** Instructions are included within the program.

**SPECIAL CONSIDERATIONS:** FOR INSTRUCTIONAL PURPOSES  
Suitable Courses: Any AC analysis course such as Electrical Science

**ACKNOWLEDGEMENTS:** Dr. Clifford M. Siegel  
University of Virginia

DONE

CONTRIBUTED PROGRAM **BASIC**

**TITLE:**

BASIC ANALOG SIMULATION PROGRAM

BASP  
36888-18022

**DESCRIPTION:**

BASP utilizes digital techniques to simulate the operation of an analog computer. In essence, it is used to break down descriptions of conventional analog block diagrams into sets of simultaneous first order differential equations. These differential equations are then solved by numerical methods.

**INSTRUCTIONS:**

The user must first define his problem in terms of an analog block diagram. BASP utilizes twenty four functional block types to facilitate the construction of this block diagram from the problem description. By defining each block in terms of its function, referenced inputs, and associated parameters, the block interconnection structure and system parameters are readily available for program use. The user may then select the desired output format and adjust the run-time parameters for required accuracy.

Order HP 36888-90022, \$5 for complete documentation

**SPECIAL  
CONSIDERATIONS:**

Some extreme problem cases may require that the user take into account such analog computer characteristics as scaling.

**ACKNOWLEDGEMENTS:**

Michael A. Van Cleave  
University of Louisville

COMPUTER AIDED PRACTICE IN ALGEBRA OF COMPLEX NUMBERS  
AS USED IN A.C. CIRCUITS; PREPARED BY C.M.SIEGEL  
AND E. DIXON, JUNE 30, 1970. (REV. 12/20/70)  
SELECT THE KIND OF PROBLEM FROM THIS LIST.

1. INTRODUCTION- SLIDE RULE INSTRUCTION, RECTANGULAR TO POLAR CONVERSION.
2. CONVERT RECTANGULAR TO POLAR
3. FIND RECIPROCAL
4. CONVERT POLAR TO RECTANGULAR FORM
5. FIND R,X,G,B
6. FIND COMPLEX POWER
99. FINISHED

EXPECTED ANSWERS WILL BE SHOWN IN [ ].

WHICH KIND?

?1

FOR Z = 85 , 35  
WHAT IS ITS POLAR FORM?  
FIND IT VIA THE FOLLOWING STEPS.  
FIND THE SHORT-SIDE VALUE ON THE SLIDE RULE D-SCALE.  
PUT THE HAIR LINE THERE. WHAT IS THAT NUMBER?

?35  
O.K.

MOVE THE SLIDE(NOT THE HAIR LINE) SO THAT THE  
RIGHT\* OR LEFT\*END OF THE S,T AND ST SCALES LIES OVER  
THE LONG SIDE VALUE ON THE D-SCALE. (\* THE WRONG  
CHOICE OF END WILL NOT LEAVE THE S,T AND ST SCALES  
BENEATH THE HAIR LINE.)  
WHAT IS THAT NUMBER?

?85  
O.K.

OBTAIN THE ANGLE FROM THE READING ON THE T(OR ST) SCALE  
BENEATH THE HAIR LINE.  
WHAT IS THE ANGLE(DEGREES)?  
(SHOW REGARD FOR THE PROPER QUADRANT; CHOSE ANGLE  
BETWEEN -180 AND +180)

?24.4  
YOU ARE NOT WITHIN 1.11 OR MORE DEGREES  
TRY THE ANGLE AGAIN.

?22.4  
CORRECT IN 2 TRY(S)  
[ 22.3801 ]

MOVE THE SLIDE UNTIL THAT SAME READING (ON THE T SCALE)  
APPEARS ON THE S-SCALE# BENEATH THE HAIR LINE  
(# IF RATIO, SHORT-SIDE/LONG-SIDE, IS < .1 USE THE ST  
SCALE; NO SLIDE MOVEMENT NEEDED.)  
ONE END OF THE S,T OR ST SCALES SHOULD NOW LIE  
OVER THE HYPOTENUSE-VALUE ON THE D-SCALE  
THE MAGNITUDE EQUALS?

?92  
CORRECT IN 1 TRY(S)

INDMTR: BALANCED POLYPHASE INDUCTION MOTOR ANALYSIS  
PREPARED BY C.M.SIEGEL, DEC. 31, 1969.

IF YOU WANT BRIEFING REMARKS, TYPE 1, OTHERWISE 0.  
?1

GIVES CURRENT, EFFICIENCY, TORQUE, LOSSES, ELECTRICAL  
POWER IN, AND MECHANICAL POWER OUT AS FUNCTIONS OF SPEED  
WHEN MACHINE PARAMETERS OR NO-LOAD TEST DATA ARE GIVEN.

R1 AND R2 ARE STATOR AND ROTOR WINDING RESISTANCES.  
X1 AND X2 ARE STATOR AND ROTOR LEAKAGE REACTANCES.  
R3 AND X3 ARE MAGNETIZING LOSS RESISTANCE AND MUTUAL REACTANCE.

WHEN YOU SEE THE WORD, CONTINUE?, TYPE 1 FOR AFFIRMATIVE.  
TYPING 0 WILL LET YOU RESUBMIT DATA.  
BASE SPEED (RPM) MEANS YOUR CHOICE OF 100% VALUE OF ROTOR SPEED.  
START(X) AND STOP(X) ARE THE BEGINNING AND END OF THE  
SPEED RANGE OF INTEREST (% OF BASE SPEED)  
INCREMENT(X) IS THE SIZE OF INCREMENTS BETWEEN START AND STOP  
FOR WHICH ANALYSIS IS WANTED (% OF BASE SPEED)

WHEN YOU ARE ASKED FOR:  
BASE SPEED (RPM), START(X), STOP(X), INCREMENT(X)?--  
ILLUSTRATION: PUTTING IN  
1800, 80, 100, 2 GIVES MOTOR PERFORMANCE  
FOR THE RANGE 1440 TO 1800 RPM AT 36 RPM INCREMENTS.

ALL ELECTRICAL WATTS, VOLTS, AMPS, ETC ARE PER PHASE.  
ALL MECHANICAL HP AND TORQUE ARE TOTAL.

TYPE 1 IF YOU WANT TO PUT IN MACHINE PARAMETERS,  
2 IF YOU WANT TO PUT IN TEST DATA, OR  
99 IF YOU ARE FINISHED.

## TITLE:

CIRCULAR FLOW MODEL

## DESCRIPTION:

Simulation of the circular flow of goods, services, and money, between business and the consumer in a free enterprise economy without government control.

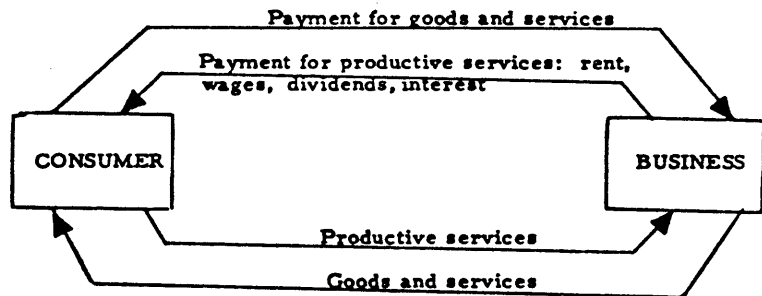

OBJECTIVES:

- A. To explore the effect of personal consumption upon business' demand for productive services from the individual, and upon personal income.
- B. To demonstrate that widespread uninvested savings can cause a general drop in income.
- C. To demonstrate how credit buying can raise personal income, in general.

## INSTRUCTIONS:

PRELIMINARY PREPARATION:A. Student

1. Terms to define:
  - a. propensity to consume
  - b. savings
  - c. credit
  - d. circular flow of goods, services, and money
2. Concepts for explanation or discussion:

CIRCULAR FLOW

Continued on following page.

## ACKNOWLEDGEMENTS:

Huntington Project  
Polytechnic Institute of Brooklyn

INSTRUCTIONS: continued

DISCUSSION:

A. Operational Suggestions

1. Student level - average to above average ability
2. Placement in curriculum - Unit: Economic growth and stability
3. Group size - may be used individually, with small groups, or as a teacher demonstration

B. Follow-up

Suggested classroom activities:

1. Use the circular flow chart to illustrate one or more of the program "run-offs".
2. Discuss the lack of aggregate demand as a cause for recession; and the rise in aggregate demand as a cause for growth or inflation.

RUN

RUN  
CIRFLW

THE FOLLOWING WILL SIMULATE THE EFFECT ON THE CIRCULAR FLOW OF GOODS, SERVICES AND MONEY WHEN ALL THE INDIVIDUALS IN THE ECONOMY SPEND ALL THEIR INCOME. IF THE AVERAGE INCOME IS \$2,500 AND EVERY INDIVIDUAL SPENDS 100 PERCENT OF IT, EACH INCOME WILL BE IN EQUILIBRIUM--THEY WILL EARN BACK FROM BUSINESS \$2500  
THE FOLLOWING WILL BE A COMPUTATION OF THE VALUES IN THE CIRCULAR FLOW

AVERAGE INCOME- 2500

PROPENSITY TO CONSUME IS  
100 PERCENT

INDIVIDUAL'S PAYMENTS FOR  
GOODS AND SERVICES- 2500

THE VALUE OF GOODS  
AND SERVICES- 2500

THE PERCENT OF PRODUCTIVE  
SERVICES BUSINESS WANTS  
IS 100 PERCENT.

THE RETURN INCOME  
TO INDIVIDUAL-2500.

THE ABOVE REPRESENTS THE AVERAGE OF ALL INDIVIDUAL INCOMES IN THE ECONOMY. SINCE ALL INDIVIDUALS CONSUMED 100 PERCENT OF THEIR INCOME, THEIR RETURN INCOME IS 100 PERCENT OF THEIR PREVIOUS INCOME. THIS HAPPENS BECAUSE BUSINESS NEEDS 100 PERCENT OF THE PREVIOUS PRODUCTIVE SERVICES TO MEET THE DEMAND.

THE RETURN INCOME TO THE INDIVIDUAL FROM BUSINESS DEPENDS TO A LARGE EXTENT ON HOW MUCH ALL INDIVIDUALS SPEND (THEIR PROPENSITY TO CONSUME). COMMON SENSE TELLS US THAT IF AN INDIVIDUAL SAVES PART OF HIS INCOME AND INVESTS IT IN A BANK, HE WILL RAISE HIS INCOME BY MEANS OF THE INTEREST ON HIS SAVINGS. BUT IF ALL OR MANY OF THE INDIVIDUAL CONSUMERS IN THE ECONOMY CUT THEIR CONSUMPTION, THEN THE OVERALL RETURN INCOME TO THOSE INDIVIDUALS WILL PROBABLY DROP. BY CHANGING THE PERCENTAGE OF YOUR PROPENSITY TO CONSUME YOU CAN CHANGE YOUR INCOME.

A PROPENSITY TO CONSUME OF 100 PERCENT WILL, IN THIS SIMULATION, GIVE YOU A RETURN INCOME EQUAL TO YOUR ORIGINAL INCOME. ANY VALUE MORE OR LESS THAN 100 PERCENT WILL CHANGE YOUR RETURN INCOME.

TYPE IN A VALUE FOR THE PROPENSITY TO CONSUME, A PERCENTAGE MORE OR LESS THAN 100 PERCENT. PUT IT IN IN DECIMAL FORM (E.G. .75=75 PERCENT)

WHAT IS THE VALUE?.75  
BECAUSE YOUR PROPENSITY TO CONSUME IS LESS THAN YOUR INCOME, YOU ARE SAVING MONEY. WE WILL ASSUME THAT YOU DIDN'T PUT IT IN A BANK BUT RATHER STUFFED IT UNDER YOUR MATTRESS, SO YOU WON'T RAISE YOUR INCOME WITH INTEREST

INDIVIDUAL'S PAYMENTS FOR  
GOODS AND SERVICES- 1875

VALUE OF GOODS AND SERVICES  
FROM BUSINESS- 1875

PERCENT OF PRODUCTIVE  
SERVICES IN DEMAND- .75

RETURN INCOME TO IN-  
DIVIDUAL- 1875

YOUR RETURN INCOME  
HAS DROPPED THE FOLLOWING  
PERCENTAGE POINTS FROM  
100 PERCENT- 25  
IF YOU WISH TO PUT IN ANOTHER PERCENTAGE VALUE

DONE

CONTRIBUTED PROGRAM **BASIC**GMCRO1  
36519

## TITLE:

FISCAL POLICY GAME

## DESCRIPTION:

GMCRO1 and GMCRO2 are economic simulation games which allow the student to manage fiscal policy.

GMCRO1 puts the student in the position of managing only fiscal policy for an economy represented by a model in the computer. Each "year" the student has the opportunity to change the level of government expenditures (G) and the level of tax receipts (T). The computer calculates the effects of the policy decisions and reports the following information: Potential NNP (Q), Actual NNP (Y), Consumption (C), Investment (I), Disposable Income (D), the Level of Government Expenditures (G), tax receipts (T) and "achievement score".

The game continues for twenty years. From time to time the computer asks questions which can be answered correctly only on an understanding of the basic model. The computer will occasionally inform the student of changes in economic or political conditions to which he has to react.

The goal throughout GMCRO1 is to keep actual NNP (Y) at or near potential NNP (Q); as in most economies, Q grows over time. The student is given a "score" by the computer on the basis of how well he does. The student may wish to consider other policy goals also, e.g., balancing the budget or altering the mix of C and G.

GMCRO2 differs from GMCRO1 in important respects. It is designed to emphasize the influence of the consumer on the economy as a whole and on the problems of the policy-maker.

Again, the student controls yearly changes in government expenditures and taxes. The effects of yearly policy moves are reported on a quarterly basis so that the economy's reactions can be seen more clearly; that is, after entering changes at the beginning of a year, the computer will print out four quarters of results (at yearly rates) before asking for another set of changes.

## INSTRUCTIONS:

See Page 2

## ACKNOWLEDGEMENTS:

Graduate School of Business  
Stanford University

INSTRUCTIONS:

These programs may require an hour or more to play carefully. If you think that you may possibly wish to play it in more than one sitting, or may wish to stop to think before continuing, you should create a file to store the data generated by your economy.

If you desire to stop the program during execution, you may do so by typing '9999' when the change in G is requested. Remember to type in the change in T also. You may then logoff and resume GMCRO1 in the year that you stop. Instructions for restarting will be given when you stop.

GMCRO1: your objectives in the next twenty years are to keep GNP (Y) as close as possible to potential output (Q) in constant dollars, and to determine from the economy's performance the values of certain multipliers and propensities.

You begin the first year with a score of 1000. Each year you lose the absolute value of the difference between Y and Q. You can control Government expenditures (G) and Taxes (T) for each year by typing in values for the changes in G and T as requested. If there is no change type a zero. You will be given all values including investment (I), consumption (C), and disposable income (D).

GMCRO2 deals with theories of aggregate consumption. The model generates quarterly observations, but you can change G and T only once a year. When you are requested to do so type in the values for changes in G and T. If there is no change type a zero. Note that the changes in G and T are to be entered on the same line separated by a comma.

Your objectives in the next 15 years are to keep Y as close to Q as possible and to determine from the economy's performance the parameters of the consumption function. You begin the first year with a score of 5000. Each quarter you lose the absolute value of the difference between Y and Q.

.E:

ECONOMIC POLICY GAME

## DESCRIPTION:

GMCRO5 and GMCRO6 simulate the complexities of a dynamic economy and the problems inherent in the use of fiscal and monetary policy to pursue the goals of economic stability and growth.

In GMCRO5 a student will control fiscal policy and monetary policy and will have an eight period history of a hypothetical economy which was generated by a fairly realistic model of the U.S. economy. For succeeding periods the economy will be influenced by past policy decisions. From the ninth period on, each student makes independent policy decisions, thus his economy will run a separate course.

The emphasis in this game is on combining a number of policy tools (government spending, the marginal tax rate, and the money supply) to reach specified national economic goals. The goals are defined by a "welfare function" which expresses mathematically the relative weight the policy maker gives to various economic indicators of well-being. Scoring well in this game requires giving thought to what the welfare function really means in terms of policy.

The computer reports each year's economic data after policy decisions have been decided upon and implemented. In particular, prices and unemployment are reported; their behavior is important to welfare. Since GNP components are stated in "real" (deflated) terms, actual output (Y) cannot exceed potential output (Q). If aggregate demand is excessively great, it is met not by added output, but by inventory decumulation -- and this information is reported.

A student who has played GMCRO5 will have faced many of the problems economists and government policy makers face. In GMCRO6 the student still faces the unemployment-inflation dilemma. However, he must also be aware that the policy tools used to control the domestic economy have significant effects on exports, imports, and international capital flows, i.e., the balance of payments. Should the student now encounter a severe balance of payments deficit he must either deflate his economy or suffer the international consequences specified at the beginning of GMCRO6.

In this model of the economy, exports are dependent upon the level of GNP and upon the inflation rate, imports depend upon disposable income. Capital inflows vary with the domestic interest rate. Again the student should study the economic history before beginning.

No goals are prescribed for the student in GMCRO6. Rather, as policy maker, he must attempt to achieve the economic goals which he considers important. The game continues for twenty "years". Various changes will occur in international relations during this period. They affect exports and imports and, consequently, policy decisions.

## INSTRUCTIONS:

See Page 2

## ACKNOWLEDGEMENTS:

Graduate School of Business  
Stanford University

INSTRUCTIONS:

The game is played in three ten-period sessions each having a different welfare function which requires widely differing policies.

For the first ten periods the objective is to maximize a welfare function of the form  $W = (C)^.6 (I)^.2 (G)^.2 - U - (PC)^3$ . Note that the inflation rate (PC) is weighted much more heavily than unemployment (U).

For the second ten periods the welfare function is  $W = (C)^.4 (I)^.2 (G)^.4 - U^3 - PC$ . Now unemployment is weighted more heavily than inflation.

For the final ten periods the welfare function is  $W = Q - U^2 - (PC)^2$ . Both unemployment and inflation are weighted equally.

Clues for Good Policy Making

To achieve policy objectives students might find the following guidelines helpful.

1. Interpret the goal. What does it mean to maximize the given welfare function? What variables in the economy should the student be trying to affect by his policy decisions?
2. Formulate ideas about how the economy functions. What factors are likely to be important determinants of the variables that he wants to influence? How will changes in the policy variables influence these target variables?
3. Test ideas against available information contained in the accompanying table. Do these ideas explain most of the economy's behavior in past periods? Do the data suggest alternative explanations as to how the economy functions?

STABIL  
36888-18023

**TITLE:**

FEDERAL GOVERNMENT STABILIZATION POLICY

**DESCRIPTION:**

STABIL is a simulation which explores the process of federal government actions to stabilize the economy. A computer serves as a model of the U.S. economy. This model reports its current state of health by printing out economic indicators. Students act as economic advisors who must implement new stabilization policy by manipulating eight economic policy variables. The objective is to stabilize the economy within eight quarters given an initial condition of excessive expansion or recession.

OBJECTIVES:

Students will learn:

- a) to judge the general condition of the economy by analyzing six key economic indicators.
- b) the impact of eight different economic policy changes upon the economy
- c) about the interrelated nature of economic indicators
- d) about the difficulty of "fine-timing" an economy to achieve acceptable levels of unemployment and inflation.

Grade level:

9 - 12

**INSTRUCTIONS:**

This program is to be used with the following publication: STABIL  
Economics Simulation (HP 5951-7390)

ARE YOU STARTING(1), OR CONTINUING ANOTHER GAME(0)?  
DO YOU WANT INSTRUCTIONS?YES  
YOUR GOAL IS TO USE THE ECONOMIC TOOLS AVAILABLE  
TO ACHIEVE A SITUATION OF CONTROLLED EXPANSION IN  
THE ECONOMY WITHIN 8 QUARTERS. THIS IDEAL SITUATION  
WILL BE ACHIEVED WHEN THE ECONOMIC INDICATORS HAVE  
THE FOLLOWING VALUES:

GNP GROWTH	10%
UNEMPLOYMENT RATE	4%
INFLATION RATE	4%
WAGE GROWTH	6%
PROFIT RATE	10%
INTEREST RATE	7%

(FOR A VALUE TO BE ACCEPTABLE, IT MUST BE WITHIN  
1/2 OF A PERCENT OF THE ABOVE FIGURE).

AT THE PRESENT TIME THE ECONOMY IS  
IN A STATE OF RAPID INFLATION AS THE ECONOMIC  
INDICATORS CLEARLY SHOW.

		QUARTER 1	
		-----	
GNP GROWTH:	16	%	TOO FAST
UNEMPLOYMENT RATE:	2	%	TOO LOW?
INFLATION RATE:	12	%	TOO HIGH
WAGE RATE GROWTH:	10	%	TOO HIGH
PROFIT RATE:	15	%	TOO HIGH
INTEREST RATE:	9	%	TOO HIGH

WILL YOU INPUT STABILIZATION DECISIONS NOW(1) OR LATER(0)?  
DO YOU WANT A LISTING OF THE ECONOMIC POLICIES?YES

YOU MAY USE ONE OR SEVERAL OF THE FOLLOWING POLICY  
ACTIONS (TOOLS) TO ACHIEVE CONTROLLED EXPANSION.

FISCAL POLICIES

- 1. CHANGE FEDERAL SPENDING -10% OR +10%
- 2. CHANGE FEDERAL BUDGET FOR JOB RETRAINING -50% OR +50%
- 3. CHANGE FEDERAL TAXES ON INDIVIDUALS -10% OR +10%
- 4. CHANGE FEDERAL TAXES ON BUSINESSES -10% OR +10%

MONETARY POLICY

- 5. CHANGE MONEY SUPPLY -10% OR +10%

DISCRETIONARY POLICIES

- 6. IMPOSE PRICE CONTROLS FOR THIS QUARTER
- 7. IMPOSE WAGE CONTROLS FOR THIS QUARTER
- 8. IMPOSE PRICE, WAGE, AND INTEREST RATE FREEZE FOR THIS QUARTER

**TITLE:**

PROPAGATION OF ERROR

**DESCRIPTION:**

This program computes the resultant precision of a quantity computed from imprecise measured quantities.

**INSTRUCTIONS:**

Instructions are contained in the program.

The program will compute the propagation of error through a series of binary operations. These are the familiar arithmetic operators. The input consists of three possible categories:

1. Commands
  - REStore, clears all variables,
  - LISt, lists all non-empty variables and their values.

only the first three characters are needed.
2. Single letter
  - This allows entering a value and an absolute precision directly into the given variable.
3. Operation
  - The operation is of the form: VoV, where V is any alphabetic character, the accumulator #, or a single digit integer. The absolute precision of the integers is zero. The operator, o, is one of the following:
    - + add
    - subtract
    - \* multiply
    - / divide
    - + exponentiation
    - = store

In all cases except '=' (store), the result is put into the accumulator, #. This may be used in subsequent operations. If the variable referenced does not have a previously defined value, the program automatically requests a value and absolute precision.

**SPECIAL  
CONSIDERATIONS:**

The formulas for the error propagation are based on a geometric sum as described in Introduction to the Theory of Error by Yardley Beers (Addison-Wesley Publishing Co., 1957). Thus the resultant precision is an estimate of the actual precision of the computed quantity assuming that the errors in the measured quantities are independent, rather than an upper limit.

Continued on following page.

**ACKNOWLEDGEMENTS:**

Lawrence E. Turner, Jr.  
Pacific Union College

SPECIAL CONSIDERATIONS: continued

FOR INSTRUCTIONAL PURPOSES  
 Suitable Courses: General Physics Laboratory

Student Background Required: Discussion of precision and propagation of error.

In most laboratory situations the final result is computed from a set of measurements. It is important for the student to be able to estimate or determine the precision of each measurement. From this the precision of the result may be computed. It is also very important for the student to understand how the error in his initial data affects the result. To determine this, one performs a standard propagation of error analysis. However, this can be quite tedious, especially if the expression involves both sums and multiplies. One has to convert from relative to absolute precision and back.

Most students are so discouraged by the arithmetic in an analysis of error that they lose any benefit from the process. They rebel about doing the proper analysis. It was for this reason that the program was written. The computer is a good tool to do messy arithmetic.

In practice the students are introduced to the concept of error analysis and perform several calculations by hand. Thereafter, it is assumed that they have learned the concept, and the computer is allowed to help do the calculations.

**RUN**

RUN  
 ALERA

ALGEBRAIC ERROR ANALYSIS

INSTRUCTIONS, (YES OR NO)?YES

THIS PROGRAM COMPUTES THE RESULTANT PRECISION OF A QUANTITY. IT IS RESTRICTED TO A SERIES OF BINARY OPERATIONS OF THE FORM: VOV WHERE 'V' IS ANY ALPHABETIC CHARACTER, '#', -OR A SINGLE DIGIT INTEGER. THE ABSOLUTE PRECISION OF THE INTEGERS IS ZERO.

'O' IS ONE OF THE FOLLOWING OPERATORS

- + ADD
- SUBTRACT
- \* MULTIPLY
- / DIVIDE
- ↑ EXPONENTIATE
- = STORE

IN ALL CASES EXCEPT '=', THE RESULT IS RETURNED IN '#', THIS MAY BE USED IN SUBSEQUENT OPERATIONS.

TYPING A SINGLE VARIABLE ALLOWS ENTERING ITS VALUE DIRECTLY OTHERWISE, THE PROGRAM WILL ASK FOR ALL VALUES NEEDED

THERE ARE TWO COMMANDS:

- RESTORE, CLEARS ALL VARIABLES
- LIST, LISTS ALL NON-EMPTY VARIABLES

## TITLE:

CALCULATES ATOMIC WEIGHT

## DESCRIPTION:

This program will calculate the atomic weight (atomic mass) of an element from the % abundance of each isotope of the element. The % abundance may be found in the chemistry handbook.

OBJECTIVES:

To show that the atomic weight is an average weight and not the weight of any particular atom.

## INSTRUCTIONS:

PRELIMINARY PREPARATION:

- A. Student - The student should have an introductory understanding of atomic weight, mass number, and isotopes.
- B. Materials - A chemistry handbook from which mass numbers and % abundances may be obtained is necessary.

DISCUSSION:

It is usually difficult to get the point across that the atomic weight is an average weight and not the weight of any particular atom. This point can be made rather easily if the calculations for atomic weight are examined. This program will enable the teacher, in a few minutes during his discussion, to do a large number of calculations. This is particularly impressive when the teacher uses % data that is significant to 5-6 figures, and thus produces an atomic weight as accurate as those given in most tables.

If the teacher is interested in discussing programming with his students, this program is a good one to use. It has the advantage of being short, but still containing a number of interesting programming techniques.

## ACKNOWLEDGEMENTS:

**TITLE:**

AVOGADRO'S NUMBER

**DESCRIPTION:**

A class presentation designed to calculate Avogadro's number, by using the molecular weight of a compound and dividing by the combined actual weight of the total numbers of neutrons and protons in a single molecule.

OBJECTIVES:

To show by calculation, the value of Avogadro's number, and to reinforce the concept of Avogadro's hypothesis.

**INSTRUCTIONS:**

PRELIMINARY PREPARATION:

- A. Student - The student must be familiar with atomic structure, atomic mass, nuclear particles, and isotopes.
- B. Materials - None

DISCUSSION:

A. Operational Suggestions

The presentation of this program can be utilized to occupy one forty-five minute teaching period, even though the actual running time is approximately 10 minutes.

B. Suggested Follow-up

The occurrence of built-in error, due to the use of average atomic weights, generally provokes discussion as to the reasons for the error.

BFIELD  
36312

## TITLE:

BFIELD: Magnetic Field Picture

## DESCRIPTION:

Student may visualize the effects of current on the magnetic field produced about a single conductor. The student may also explore the fields produced by the current flow in two parallel wires. The current in the two wires may be chosen in the same direction or in opposite directions.

OBJECTIVES:

To acquaint student with the magnetic fields produced by current carrying conductors.

## INSTRUCTIONS:

PRELIMINARY PREPARATION:

- A. Student - Prior preparation involving currents and fields.
- B. Materials - None

DISCUSSION:

Student may qualitatively explore the effects of currents on the production of magnetic fields by successively increasing or decreasing the current. The resulting magnetic field is printed out showing the relative magnitude of the field in relation to the position of the current.

The student may also view the magnetic field due to two currents in the same or opposite direction.

This program may also be used to introduce groups to the field concept. In addition, minor modification of the program will produce a series of plots which will demonstrate an expanding field resulting from an increasing current.

DONE

## TITLE:

BOHR: Energy Level Diagram

## DESCRIPTION:

The student may choose to have the Lyman, Balmer, or Paschen Series of the hydrogen emission spectrum displayed. He then must decide which energy level transitions are responsible for the lines of the spectrum that he has chosen. If he is successful, an energy-level diagram is presented and he must determine the energies of the photons emitted by the electron as it falls between randomly-selected energy levels.

OBJECTIVES:

To give an increased understanding of the Bohr atom and of how emission spectra are formed.

## INSTRUCTIONS:

PRELIMINARY PREPARATION:

A. Student - The student should have been introduced to the Bohr atom, quantum theory, and ideally, have measured the wavelengths of the bright lines of the hydrogen spectrum.

B. Materials - A piece of paper and a pencil.

DISCUSSION:

After the student selects the series he wishes to see, it is displayed and he tries to discover which quantum level jumps by the electron are responsible for the first two of three lines in the series. If he is successful three times, a statement as to how the lines of that series are formed is printed and he may then elect to try another series or move on to work with the energy-level diagram for hydrogen.

After a brief explanation concerning the energy of a photon emitted during the transition of the electron from a higher to a lower energy level, the student is given a chance to show what he has learned. Energy levels are randomly selected and he must calculate the energy of the emitted photon. If the student is not successful, he gets a further explanation. After six trials the program ends.

3000	A	

ACCORDING TO THE BOHR THEORY EACH OF THESE LINES RESULTS  
 FROM THE EMISSION OF A PHOTON DURING THE TRANSITION OF THE  
 ORBITAL ELECTRON OF AN EXCITED HYDROGEN ATOM FROM A HIGHER  
 ENERGY STATE (ORBIT) TO A LOWER ONE. IN A PARTICULAR SERIES  
 THE TRANSITION (JUMP) IS ALWAYS INTO THE SAME LOWER LEVEL  
 (ORBIT) FROM ANY HIGHER ONE.

LET'S SEE IF YOU CAN DETERMINE WHICH TWO ORBITS THE ELECTRON  
 JUMPED BETWEEN TO GIVE THE LINES THAT HAVE BEEN DISPLAYED.

THE LOWEST ENERGY LEVEL (GROUND STATE) IS NUMBERED ONE.  
 HIGHER ENERGY LEVELS HAVE HIGHER NUMBERS IN SEQUENCE.

FOR EXAMPLE: FROM 4 TO 1 ENTER AS 4,173,2

GOOD START. THAT GIVES A WAVELENGTH OF 6564.71  
 THE NEXT LINE IS FORMED BY WHICH TRANSITION?4,2

BY GEORGE!! I THINK YOU'VE GOT IT!! THE WAVELENGTH IS 4862.75  
 TRY ONE MORE - THE NEXT ONE. ENTER NOW.75,2

ANY TRANSITION FROM A HIGHER ENERGY LEVEL INTO THE  
 SECOND ENERGY LEVEL YIELDS A PHOTON OF THE BALMER SERIES.

IF YOU WOULD LIKE TO TRY ANOTHER SERIES TYPE IN THE NUMBER  
OF THAT SERIES. IF YOU WANT TO GO ON TO A NEW PART OF  
THE PROGRAM TYPE 4  
WHICH??4

YOU WILL NOW GET AN ENERGY LEVEL DIAGRAM FOR HYDROGEN.  
IT SHOWS THE ENERGY OF THE ELECTRON IN THE VARIOUS ENERGY  
LEVELS. THE DIFFERENCE BETWEEN THE ENERGY OF THE ELECTRON  
IN A HIGHER LEVEL AND THAT IN A LOWER LEVEL IS THE ENERGY  
OF THE EMITTED PHOTON.  $E(\text{PHOTON}) = E(\text{HIGHER}) - E(\text{LOWER})$

## TITLE:

CALORI: Calorimetry Experiment

## DESCRIPTION:

Calorimetry experiments are simulated by the computer permitting the student to enter the mass and temperatures of two quantities of water. The computer calculates and prints out the equilibrium temperature of the mixture. The student must then determine the heat energy, in calories, to be supplied (or removed) from each mass to obtain the equilibrium temperature.

OBJECTIVES:

- A. To acquaint the students with conservation of energy concepts involving calorimetry.
- B. To determine the equations governing these relationships.

## INSTRUCTIONS:

PRELIMINARY PREPARATION:

- A. Student - Must know definitions for calorie and specific heat.
- B. Materials - Table of Specific heats

DISCUSSION:

Calorimetry, in its simplest form, is presented as part of a class lesson. The concept of heat energy balance is developed by presenting several examples, with the computer, based on the definition of the "calorie". Specific heat is introduced by a similar approach (replacing the water of the initial examples, with alcohol; specific heat of 6 cal/gm-0°C.)

The program can be modified (with relative ease) to incorporate different materials or combinations of different materials.

When this program was used as an introduction to calorimetry, it was noted that many students were able to determine the equations describing the phenomenon by utilizing the stated results from the computer.

CHARG  
36621**TITLE:**

MILLIKAN'S OIL-DROP EXPERIMENT

**DESCRIPTION:**

This simulation of a modern version of the Millikan Oil Drop Experiment is designed to demonstrate to the student the existence of a discrete unit of electrical charge. CHARG (which was originally named CHARGE) was developed by the Huntington II Project at the State University of New York under the direction of Ludwig Braun. This work was partially supported by the National Science Foundation, Grant GW-5883.

**INSTRUCTIONS:**

The computer will request a new voltage or an option change by printing out " V = X? ", where X is the old voltage. After the question mark, you may either type in a new voltage between -1000 and +1000 volts, type in the old voltage again, or enter one of the following code numbers for an option to be performed.

- 2000 - to request calculation of charge for a drop with velocity = 0
- 3000 - to request a new batch of drops
- 4000 - to end the program

**SPECIAL  
CONSIDERATIONS:**

The Huntington II Project recommends that for use of this program in the classroom it is necessary to obtain the following publications from Program Library, Digital Equipment Corporation, Maynard, Massachusetts 01754.

Student Workbook	\$ .30
Teachers Guide	.30
Resource Handbook	.50

**TITLE:**

SELF-CORRECTING CHEMISTRY TEST

**DESCRIPTION:**

This program generates a self-correcting Chemistry test. Ten questions are asked on the ideal gas law, then one mass problem (considered harder than the rest) is asked. This is followed by ten more gas law problems of a different type. The test is scored as follows: full value is given for a correct answer on the first try; if the first answer is within three of the correct answer, the student is given a second try for half value. Each section is valued at ten points. The sectional mark is given after each section, with the total correct out of thirty given at the end.

**INSTRUCTIONS:**

This program is almost completely self explanatory, therefore no instructions are needed. If any difficulty should arise, the user should be able to modify the program to suit his own particular needs.

**SPECIAL  
CONSIDERATIONS:**

This program will run on any 8K or larger HP computer, however if the 8K configuration is used, the matrix package of the BASIC interpreter must be deleted. This is because program "CHEM" requires more storage than what is available when the matrix package is retained.

FOR INSTRUCTIONAL PURPOSES  
Suitable Courses: Chemistry.

Student Background Required: Basic High School Chemistry

**ACKNOWLEDGEMENTS:**

Paul M. Dunphy  
Nova Scotia Eastern Institute of Technology

YOUR MARK OUT OF 30 WILL BE GIVEN AT THE END.

VALUES: PART 1---10 QUESTIONS-1 POINT EACH.

PART 2---1 QUESTION-10 POINTS.

PART 3---10 QUESTIONS-1 POINT EACH.

PART 1

\*\*\*\*\*

\*\*\*\*\*

1 .IF A 453 ML SAMPLE OF AN IDEAL GAS IS COLLECTED AT S.T.P.  
AND SUBJECTED TO 750 MM HG AND 285 DEGREES KELVIN WHAT WILL  
ITS FINAL VOLUME BE

?479

CORRECT-----1 POINT

\*\*\*\*\*

2 .IF A 453 ML SAMPLE OF AN IDEAL GAS IS COLLECTED AT S.T.P.  
AND SUBJECTED TO 751 MM HG AND 287 DEGREES KELVIN WHAT WILL  
ITS FINAL VOLUME BE

?482

CLOSE, YOU ARE WITHIN 3 MLS, TRY AGAIN.

?481

CORRECT ON YOUR SECOND TRY-----1/2 POINT

\*\*\*\*\*

3 .IF A 454 ML SAMPLE OF AN IDEAL GAS IS COLLECTED AT S.T.P.  
AND SUBJECTED TO 754 MM HG AND 295 DEGREES KELVIN WHAT WILL  
ITS FINAL VOLUME BE

?494

CORRECT-----1 POINT

\*\*\*\*\*

4 .IF A 457 ML SAMPLE OF AN IDEAL GAS IS COLLECTED AT S.T.P.  
AND SUBJECTED TO 757 MM HG AND 298 DEGREES KELVIN WHAT WILL  
ITS FINAL VOLUME BE

?500

CORRECT-----1 POINT

\*\*\*\*\*

5 .IF A 461 ML SAMPLE OF AN IDEAL GAS IS COLLECTED AT S.T.P.  
AND SUBJECTED TO 760 MM HG AND 299 DEGREES KELVIN WHAT WILL  
ITS FINAL VOLUME BE

?504

CORRECT-----1 POINT

\*\*\*\*\*

6 .IF A 470 ML SAMPLE OF AN IDEAL GAS IS COLLECTED AT S.T.P.  
AND SUBJECTED TO 762 MM HG AND 305 DEGREES KELVIN WHAT WILL  
ITS FINAL VOLUME BE

?523

CORRECT-----1 POINT

\*\*\*\*\*

7 .IF A 470 ML SAMPLE OF AN IDEAL GAS IS COLLECTED AT S.T.P.  
AND SUBJECTED TO 770 MM HG AND 313 DEGREES KELVIN WHAT WILL  
ITS FINAL VOLUME BE

?531

CORRECT-----1 POINT

\*\*\*\*\*

8 .IF A 473 ML SAMPLE OF AN IDEAL GAS IS COLLECTED AT S.T.P.  
AND SUBJECTED TO 776 MM HG AND 320 DEGREES KELVIN WHAT WILL  
ITS FINAL VOLUME BE

?543  
CORRECT-----1 POINT

\*\*\*\*\*

9 .IF A 478 ML SAMPLE OF AN IDEAL GAS IS COLLECTED AT S.T.P.  
AND SUBJECTED TO 778 MM HG AND 326 DEGREES KELVIN WHAT WILL  
ITS FINAL VOLUME BE

?556  
CLOSE, YOU ARE WITHIN 3 MLS, TRY AGAIN.  
?557

CORRECT ON YOUR SECOND TRY-----1/2 POINT

\*\*\*\*\*

10 .IF A 481 ML SAMPLE OF AN IDEAL GAS IS COLLECTED AT S.T.P.  
AND SUBJECTED TO 781 MM HG AND 332 DEGREES KELVIN WHAT WILL  
ITS FINAL VOLUME BE

?569  
CORRECT-----1 POINT

\*\*\*\*\*

9 POINTS OUT OF 10

\*\*\*\*\*

YOU HAVE NOW COMPLETED PART 1. IF YOU WISH TO TRY IT  
AGAIN WITH THE SAME VALUES, TYPE'2'. IF YOU WANT TO  
TRY IT AGAIN WITH DIFFERENT VALUES, TYPE'1'. IF YOU  
WANT TO PROCEED WITH THE REST OF THE TEST,TYPE'0'.  
IF YOU DON'T WANT TO DO ANY MORE,TYPE'3'.

?0

\*\*\*\*\*END OF PART 1\*\*\*\*\*

\*\*\*\*\*

PART 2

\*\*\*\*\*

IN THE FOLLOWING REACTION:  
NAOH+HCL->NaCl+H2O(SODIUM HYDROXIDE +HYDROCHLORIC  
ACID YIELDS SODIUM CHLORIDE AND WATER), HOW MUCH  
SODIUM HYDROXIDE(IN GRAMS) IS NEEDED TO PRODUCE  
470 GRAMS OF SODIUM CHLORIDE?

- ATOMIC WEIGHTS: 1. SODIUM=22.98
- 2. CHLORINE=35.45
- 3. HYDROGEN=1.0079
- 4. OXYGEN=15.99

HOW MANY GRAMS

?685  
YOU ARE WITHIN 10 GRAMS, TRY AGAIN FOR 1/2 VALUE.  
?683

SORRY, YOU ARE WRONG AGAIN, CORRECT ANSWER IS 686 GRAMS

\*\*\*\*\*END OF PART 2\*\*\*\*\*

\*\*\*\*\*

YOU HAVE NOW COMPLETED PART 2. TO CONTINUE,TYPE'0'.  
TO END HERE,TYPE'1'.

?0

\*\*\*\*\*

PART 3

\*\*\*\*\*

THE FOLLOWING TEST IS THE SAME AS IN PART 1  
EXCEPT THAT THE GAS IS NOT COLLECTED AT S.T.P

\*\*\*\*\*

1 .IF A 342 ML SAMPLE OF GAS IS COLLECTED AT 753 MM HG AND  
376 DEGREES KELVIN, THEN SUBJECTDD TO 739 MM HG  
AND 230 DEGREES KELVIN  
WHAT WILL ITS FINAL VOLUME BE

?213  
CORRECT-----1 POINT

\*\*\*\*\*

2 .IF A 343 ML SAMPLE OF GAS IS COLLECTED AT 760 MM HG AND 383 DEGREES KELVIN, THEN SUBJECTDD TO 746 MM HG AND 233 DEGREES KELVIN WHAT WILL ITS FINAL VOLUME BE

?212  
CORRECT-----1 POINT

3 .IF A 348 ML SAMPLE OF GAS IS COLLECTED AT 761 MM HG AND 385 DEGREES KELVIN, THEN SUBJECTDD TO 749 MM HG AND 233 DEGREES KELVIN WHAT WILL ITS FINAL VOLUME BE

?213  
CORRECT-----1 POINT

4 .IF A 350 ML SAMPLE OF GAS IS COLLECTED AT 764 MM HG AND 385 DEGREES KELVIN, THEN SUBJECTDD TO 757 MM HG AND 236 DEGREES KELVIN WHAT WILL ITS FINAL VOLUME BE

?219  
CLOSE, YOU ARE WITHIN 3 MLS, TRY AGAIN.  
?218

SORRY, YOU ARE WRONG AGAIN, THE CORRECT ANSWER IS 216 MLS.

5 .IF A 350 ML SAMPLE OF GAS IS COLLECTED AT 768 MM HG AND 393 DEGREES KELVIN, THEN SUBJECTDD TO 765 MM HG AND 243 DEGREES KELVIN WHAT WILL ITS FINAL VOLUME BE

?226  
WRONG, THE CORRECT ANSWER IS 217 MLS

6 .IF A 359 ML SAMPLE OF GAS IS COLLECTED AT 777 MM HG AND 402 DEGREES KELVIN, THEN SUBJECTDD TO 774 MM HG AND 244 DEGREES KELVIN WHAT WILL ITS FINAL VOLUME BE

?218  
CORRECT-----1 POINT

7 .IF A 362 ML SAMPLE OF GAS IS COLLECTED AT 778 MM HG AND 404 DEGREES KELVIN, THEN SUBJECTDD TO 778 MM HG AND 245 DEGREES KELVIN WHAT WILL ITS FINAL VOLUME BE

?219  
CORRECT-----1 POINT

8 .IF A 366 ML SAMPLE OF GAS IS COLLECTED AT 779 MM HG AND 406 DEGREES KELVIN, THEN SUBJECTDD TO 787 MM HG AND 252 DEGREES KELVIN WHAT WILL ITS FINAL VOLUME BE

?224  
CORRECT-----1 POINT

9 .IF A 373 ML SAMPLE OF GAS IS COLLECTED AT 779 MM HG AND 407 DEGREES KELVIN, THEN SUBJECTDD TO 791 MM HG AND 255 DEGREES KELVIN WHAT WILL ITS FINAL VOLUME BE

?230  
CORRECT-----1 POINT

10 .IF A 379 ML SAMPLE OF GAS IS COLLECTED AT 781 MM HG AND 412 DEGREES KELVIN, THEN SUBJECTDD TO 796 MM HG AND 264 DEGREES KELVIN WHAT WILL ITS FINAL VOLUME BE

CONTRIBUTED PROGRAM **BASIC**

**TITLE:** CAI IN CHEMISTRY CHEM1  
36878

**DESCRIPTION:** This package includes four programs, CHEM1, CHEM2, INPUT and TEACH. Also included are 3 exercise files, EX1, EX2 and EX3. CHEM1 is a general CAI program which conducts exercises requiring the user to respond with alphanumeric short answers. CHEM2 is similar to CHEM1 except that the response may contain different parts or terms separated by '+'. Each part of the user's response is checked separately. Only one multiple term answer is correct.

**INSTRUCTIONS:** Both programs are very similar except for one significant difference. CHEM1 is designed to accept one short answer in response to a question. CHEM2 is designed to accept one answer, but this answer of multiple parts is the only one that is acceptable. For example, in the identification of elements and compounds (CHEM1), the compound HCl may be identified as hydrogen chloride or hydrochloric acid. Both are correct. On the other hand, in chemical reactions there may be many products. (CHEM2)

$\text{CH}_4 + 2\text{O}_2 \rightarrow \text{CO}_2 + 2\text{H}_2\text{O}$

The second program (CHEM2) breaks the response into the various parts of the answer: CO<sub>2</sub> and 2H<sub>2</sub>O. Then it compares each against the various parts of the correct answer.

None of the questions and answers are retained in the programs but are saved separately in an Exercise file. The user selects the exercise he wishes to work on when either program is run.

The Exercise File

An exercise may have levels of difficulty (or levels corresponding to different aspects of the same topic). If the exercise is multi-level, the computer will request the user to specify the level he wishes to work on. Afterwards, only questions from that level will be used in the exercise.

In some instances, it is advantageous to be able to interchange the questions and answers. For example, in the identification of elements and compounds, the user is able to specify whether he wants the symbol or the name of the substance to be given as the questions to which he will respond the reverse. This capability is referred to throughout as the 'order option'. If the exercise allows the order option, then the user is requested to specify the order.

CONTINUED ON NEXT PAGE.

**SPECIAL CONSIDERATIONS:** When running the program do NOT interrupt the normal course of execution. If you must halt the program type 'STOP' in response to a question in the exercise. The program will then exit in the quickest way possible. The teacher's record is written in the last part of the program, so if you stop it before it reaches that portion of the program, there will be no record of your work.

**ACKNOWLEDGEMENTS:** J. Glenn Allan  
University of Lethbridge  
Alberta, Canada

INSTRUCTIONS: Continued.

Any exercise file may contain 128 records which is space for approximately 250 or 300 questions.

#### Initialization

The initialization routine consists of a series of questions which the computer asks the user. First, the user must give his name and the name of the exercise he wishes to work on. At the beginning of the exercise file, the levels and the order option are specified. If the file is multi-level, the computer requests the level. If the order option is available, it is also asked. Once this information is supplied the exercise is ready to begin.

#### Main Exercise

If the user fails to respond the correct answer, the computer prints the correct answer and types over the answer until it is illegible. Then the computer selects another question and continues the exercise.

#### Retest

When all the questions in the main exercise (that level) have been exhausted, the computer automatically begins the retest. The computer searches all the questions to find those that were missed and asks them again. Now the user only has one chance to get the question right.

#### Finalization

After the retest, the computer calculates the scores on both the main exercise and retest and prints them for the user. It then writes all pertinent information about the user and his performance on a record file for the instructor's use. The program then stops.

#### The Record File and the Teacher's Program

In the initialization, the user gives information which is stored. The information on the user is listed below:

Users Name  
The Exercise  
Level  
Order (if any)  
Date  
Time (start and finish)  
Elapsed Run Time  
Number of Questions in Main Exercise and Retest  
Scores on Main Exercise and Retest

There is a record file called RECI on which this information is stored. This file must be opened by the user.

To start the program type 'RUN' and then wait for instructions. First will come the 'STUDENT INFORMATION'. When the computer types 'YOUR NAME : ?', type your name in the following way. DO NOT USE ANY COMMAS!

EXAMPLE:

If your name happens to be John D. Smith, type your last name first followed by your first and middle initials.

YOUR NAME : ? SMITHJD

The computer will then ask 'TOPIC : ?' to which you must respond the name of the exercise you wish to work on.

There may be an option available to you in respect to which order you want the questions presented. If it is a French vocabulary exercise, you may have to option of having the question be either the English or the French word to which you will respond the other. If such an option is available, the next thing that will appear is the question 'ORDER'. The options will be printed in brackets. You must then type one or the other option. It might appear like this:

ORDER [FRENCH OR ENGLISH] : ? FRENCH

Some exercises may be multi-level. That is, you have the choice of working on different levels of difficulty or, depending on the arrangement of the exercise, on different aspects of the same topic. If this option is available to you, the next line the computer will type will be 'LEVEL -- (1 to 4) --?'. This means that there are four (4) levels in the exercise. You must now select a level number by typing either 1,2,3 or 4. You should not use anything but a whole number. If the levels denote difficulty, the easiest level will be level 1 and the most difficult will be level 4.

INSTRUCTIONS: Continued.

EXAMPLE: LEVEL--(1 to 6)--? 6

With the above example, you have selected the most difficult level.

A list of legal commands which you may use will now be printed for you. These commands can be used at any time during the Main Exercise in response to a question. Here is the list of those commands

WRONG,END,STOP,LEVEL,SCORE,TIME,NUMBER,ORDER,RTIME,REPEAT,IDENT

Each command is explained below:

#### WRONG

For every question in the Main Exercise you have 3 tries at the correct answer. If a question appears to which you don't have the slightest idea what the answer is, just type 'WRONG'. The remainder of your tries will be skipped. The computer will score you incorrect on the question and immediately proceed to the next question. If there is a chance that you might get the answer don't use this command.

#### END

If you wish to end the main exercise before you have exhausted all the questions, type 'END'. This will tell the computer that you don't wish to continue in the main exercise routine but wish to start finishing up (RETEST).

The computer will then proceed to retest you on all the questions you missed in the Main Exercise. You have only one chance at each question. At the end of the retest, your score on the Main Exercise as well as your score on the retest will be given.

If you exhaust the questions without typing 'END', the computer will automatically go into the retest.

#### STOP

A time may arise when you must stop the program immediately during the Main Exercise or the Retest. In response to a question, type 'STOP' and the program will finish up as soon as possible. If you stop the program by some other means, the record of your work will not be written.

#### LEVEL

Perhaps you are working on a multi-level exercise. You find that the level is either too difficult or too easy. You may change the level during the Main Exercise by typing 'LEVEL' in response to a question. The computer will write your present score on your record and then ask you for your 'NEW LEVEL --?'. Type the number (integer, please) of the new level and the exercise will begin again. If you have incorrectly asked for a level which does not exist, the computer will tell you so and ask you again. If the exercise is not multi-level, the computer will tell you so and the exercise will resume where you left off.

#### SCORE

If you are curious about your score while you are working on the Main Exercise, type 'SCORE' in response to a question. The computer will give it to you. It will then resume with the next question.

#### TIME

By typing 'TIME', the computer will tell you the time at which you started the program and the present time. If you don't have a watch, this is one way to find out if you are late to your next class. The computer will then resume with the next question.

#### NUMBER

The number of questions in the exercise (all levels), the number of questions in the present level, and the number of questions that have been asked to date can be found by typing 'NUMBER' in response to a question. Like above, the computer will then restate the present question.

#### ORDER

If the order option is available (Remember the French-to-English example?), you may change it in the middle of the Main Exercise just as you can the level by typing 'ORDER'. Your present score will be recorded on your record and then the computer will request the new order. Then the Main Exercise will begin again. If the order option is not available, the computer will state that and resume the Main Exercise where you left off. If you mistype the new order or give an order not allowed, it will ask you to repeat it.

INSTRUCTIONS: Continued.

RTIME

The elapsed running time will be printed for you if you type 'RTIME' in response to a question. This is the amount of time the computer has spend in executing the program. The program takes over a second of run time to get started. The run time required to process your answers will be very small in comparison.

REPEAT

Sometimes the ribbons on these machines get worn. Perhaps you can't read part of the question for one reason or another. You don't have to make a stab in the dark. Type 'REPEAT' and the computer will repeat the question.

IDENT

The program command 'IDENT' can be used in place of a response. The following information will be given:

EXAMPLE:

NAME: SMITHJD  
TOPIC: ELEMENTS  
ORDER: SYMBOL  
LEVEL: 3  
# OF QUESTIONS ASKED: 12  
SCORE: 83%  
BEGAN AT 09:39:27  
TIME IS 09:45:25  
ELAPSED TIME (RUN): 1.568 (to nearest 1/64 or a second)

After the IDENT information is given, the program will repeat the present question.

## TITLE:

CLIMATE TEACHING PROGRAM

## DESCRIPTION:

There are 10 programs in this package: CL1Z1, CL1Z2, CL2Z1, CL2Z2, CL3Z1, CL3Z2, CL4Z1, CL5Z1 and CL5Z2. They form a series of conversational teaching programs on climate classification, adapted from Dartmouth College's Kiewit Computation Center programs CLIMAT-1 through CLIMAT-5. Programs use temperature and rainfall data from well-known locations in the world and ask the user to give the geographical locations of the stations. Koppen symbols are used extensively.

## INSTRUCTIONS:

The programs are completely conversational. The user accesses each of the five main programs (i.e., CL1-1, CL2-1, etc.). Chaining is automatic to the second program of each of the five main programs.

Create file SCRA 10 records long.

SPECIAL  
CONSIDERATIONS:

## FOR INSTRUCTIONAL PURPOSES:

Suitable courses: Courses requiring knowledge of climate classification  
Student background required: University level Geography

## ACKNOWLEDGEMENTS:

Harry Lilleniit  
University of Lethbridge, Canada

HI, I AM CALLED MISS TELETYPE - WHAT WOULD YOU LIKE ME TO CALL YOU?PETE  
HELLO, PETE! WELCOME TO THE WORLD OF COMPUTER ASSISTED INSTRUCTION. TOGETHER WE WILL LEARN THE LOGIC OF LOCATING A SET OF CLIMATE DATA ON THE GLOBE AND ALSO LEARN TO IDENTIFY THE APPROPRIATE KOPPEN SYMBOLS.  
IN THE FOLLOWING CLIMATE DATA MONTHLY AVERAGE TEMPERATURES AND THE MONTHLY AVERAGE RAINFALL FOR A SPECIFIC STATION ARE GIVEN IN FAHRENHEIT AND INCHES. I WILL ASK A NUMBER OF QUESTIONS ABOUT THE DATA AND YOU WILL PLEASE ANSWER IN YOUR OWN WORDS. IF YOU DON'T UNDERSTAND OR NEED HELP - JUST LET ME KNOW. YOU ARE LIMITED TO A SINGLE LINE FOR EACH ANSWER!!!!

TEMPERATURE THEN RAINFALL BY MONTHS

17,	18,	28,	42,	55,	63,	69,	66,	59,	48,	34,	21
2.6,	2.3,	2.6,	2.3,	3.2,	3.4,	3.5,	3.6,	3.1,	3.1,	2.7,	2.6

YEARLY AVERAGE TEMP. 43.1 DEGREES F.  
YEARLY RAINFALL TOTAL 35.6 INCHES

STUDY VERY CAREFULLY THE TEMPERATURE RANGE - NOTE THE MONTHS OF MAXIMUM AND OF MINIMUM READINGS. THIS IS A REAL PLACE.

IN WHICH HEMISPHERE IS THE STATION LOCATED?NORTHERN

GOOD - YOU KNEW BECAUSE JAN. IS COLD WHILE JULY IS QUITE WARM NOW TELL ME ABOUT THE RELATIVE LATITUDE WITHIN THE N. HEMISPHERE  
?60

WHAT I REALLY WANT TO KNOW IS THIS. IS THE STATION IN THE POLAR, MID-LATITUDE OR EQUATORIAL REGION  
?MID-LAT

VERY GOOD, PETE. YOU KNEW BECAUSE OF THE QUITE LARGE TEMP. RANGE AND WARM SUMMERS - MARKED SEASONALITY. WITHIN THIS MID-LATITUDE REGION IS THE STATION CLOSER TO THE POLEWARD OR TO THE EQUATORIAL INFLUENCE?POLE

PETE, YOU ARE DOING WELL. YOU KNEW BECAUSE WINTERS ARE COLD AND SUMMERS NOT REALLY HOT. BY THE WAY, ARE THE TERMS 'SUMMER' AND 'WINTER' CLEAR IN YOUR MIND? PLEASE WRITE A DEFINITION OF THE TERM 'SUMMER'  
?JUNE, JULY, AUG

A WORKING DEFINITION FOR OUR USE MIGHT BE; 'THAT HALF OF THE YEAR WHEN THE NOONDAY RAYS OF THE SUN MOST NEARLY APPROACH THE VERTICAL - OR, MORE ROUGHLY, THE WARMEST HALF OF THE YEAR.

IN CHICAGO, ROME AND SHANGHAI THE SUMMER HALF OF THE YEAR EXTENDS FROM APRIL THROUGH SEPTEMBER.

IN BUENOS AIRES, JOHANNESBURG AND MELBOURNE SUMMER HALF OF THE YEAR EXTENDS?OCTOBER THRU MARCH

PERFECT, PETE. I GUESS YOU REALLY DO UNDERSTAND THE TERMS NOW BACK TO THE ORIGINAL PROBLEM; OUR STATION IS:  
NORTHERN HEMISPHERE  
UPPER MID-LATITUDES

FROM YOUR KNOWLEDGE OF THE WORLD MAP YOU KNOW THAT A LARGE CONTINENT IS INVOLVED.  
PLEASE COMMENT ON THE RELATIVE LOCATION ON THIS CONTINENT OF OUR STATION  
?COAST

TOUCHE - MARINE INFLUENCE IS INDICATED BY THE RAINFALL PATTERN  
HOWEVER, YOU FORGOT TO TELL ME WHICH COAST  
?WEST

AT A WEST COAST LOCATION IN THE MID-LATITUDES THE RAINFALL  
ALWAYS SHOWS A MARKED CONCENTRATION IN THE WINTER MONTHS  
IS THIS THE CASE AT OUR STATION? TRY AGAIN  
?EAST

EXCELLENT, PETE. I ASSUME YOU CHOSE AN EAST COAST LOCATION  
BECAUSE OF THE FAIRLY HIGH RAINFALL AND ITS EVEN DISTRIBUTION  
FROM SEASON TO SEASON.

AS YOU STUDY THE MAP YOU WILL REALIZE THAT YOU HAVE LIMITED  
THE POSSIBLE LOCATION OF OUR STATION TO NORTHEASTERN NORTH  
AMERICA OR NORTHEASTERN ASIA. WHICH OF THESE IS CORRECT  
?NORTH AMERICA

I ASSUME THAT YOU CHOSE NORTH AMERICA BECAUSE OF THE LACK OF  
MONSOON RHYTHM IN THE RAINFALL PATTERN. IF I'M RIGHT, PETE  
YOU ARE DOING BRILLIANTLY.

NOW LET'S TRY GETTING THE CORRECT KOPPEN CLASSIFICATION  
FOR THE STATION THE DATA FOR WHICH APPEARED ABOVE  
IS THE STATION HUMID OR ARID  
?HUMID-D

HUMID CLIMATES (IN THE KOPPEN SYSTEM) ARE:  
'A' (ALL MONTHS ABOVE 64.4 F.)  
'C' (ALL MONTHS WARMER THAN 26.6 F.)  
'D' (AT LEAST ONE MONTH BELOW 26.6 F.)  
'E' (ALL MONTHS 50 F. OR COLDER)

WHICH IS THE CORRECT FIRST LETTER IN THIS CASE?D

GOOD - CLEARLY OUR STATION HAS A SEVERE WINTER WITH TEMPS.  
WELL BELOW 26.6 DEGREES BUT WITH SUMMER TEMPS. ABOVE 50 F.

SECOND LETTER CHOICES REFER TO THE RAINFALL PATTERN:  
'S' (SUMMER DROUGHT)  
'W' (WINTER DROUGHT)  
'F' (HUMID ALL YEAR WITH NO MARKED DROUGHT)

WHICH OF THESE CHOICES BEST FITS OUR STATION?F

FINE, PETE - YOU CHOSE 'F' BECAUSE OF THE VERY EVEN  
DISTRIBUTION OF THE RAINFALL AND THE LACK OF A MARKED DRY SEASON

THIRD LETTER CHOICES REFER TO TEMPERATURE EXTREMES:  
THIRD LETTER POSSIBILITIES FOR 'D' CLIMATES ARE:  
'A' (AT LEAST ONE MONTH WARMER THAN 71.6 F.)  
'B' (>3 MONTHS WARMER THAN 50 F. NONE ABOVE 71.6 F.)  
'C' (<4 MONTHS WARMER THAN 50 F.)  
'D' (AT LEAST 1 MONTH COLDER THAN -36.4 F.)

WHICH OF THESE IS MOST APPROPRIATE?B

EXCELLENT, JULY, THE WARMEST MONTH, IS COOLER THAN 71.6 F. AND  
THERE ARE MORE THAN THREE MONTHS WARMER THAN 50 F.

NOW, PETE, YOU KNOW THE CLIMATE IS 'DFB'  
YOU ALSO KNOW THAT THE LOCATION IS:  
NORTHERN HEMISPHERE  
UPPER MID-LATITUDES  
NEAR THE EAST COAST AND IN  
NORTH AMERICA

NOW, ALL THAT IS LEFT IS TO NAME THE TOWN(OR CITY) AND THE  
STATE (OR PROVINCE)!  
?NOVA SCOTIA, CANADA

WELL, MY MAP SAYS THAT YOUR GUESS IS NOT BAD - BUT JULY  
TEMPS. AT NOVA SCOTIA, CANADA WOULD BE A BIT COOLER  
THAN AT OUR STATION. MOVE SOUTH.  
?BOSTON, MASS

BOSTON, MASS IS SOUTH OF OUR STATION BY ABOUT 150 MILES.  
FIND A PLACE FURTHER TO THE NORTH.  
?HANOVER, NEW HAMPSHIRE

PERFECT - THAT WASN'T HARD WAS IT!

SO LONG FOR NOW, PETE, PLEASE GIVE ME A CALL AGAIN - SOON

DONE

GWT-CL5Z1

RUN

CL5Z1

HELLO AND WELCOME TO THE 5TH LESSON ON CLIMATOLOGY

YOU KNOW WHO I AM BUT I DON'T KNOW WHO YOU ARE. WHAT MAY  
I CALL YOU?PETE

HELLO, PETE. I WILL GIVE YOU SOME INFORMATION AND THEN ASK  
A QUESTION OR TWO. YOU RESPOND BRIEFLY AND IN YOUR OWN WORDS.

IN THE FOLLOWING CLIMATE DATA MONTHLY AVERAGE TEMPERATURES  
AND THE MONTHLY AVERAGE RAINFALL FOR A SPECIFIC STATION ARE  
GIVEN IN FAHRENHEIT AND INCHES. YOU WILL ANSWER A NUMBER OF  
QUESTIONS ABOUT THIS STATION AND OTHER PLACES WITH SIMILAR  
RAINFALL AND TEMPERATURE PATTERNS. IF YOU ARE STUCK ON THE  
ANSWER TO A QUESTION, JUST TELL ME OR ASK FOR HELP.

J., F., M., A., M., J., J., A., S., O., N., D.

74, 74, 70, 64, 58, 54, 52, 54, 57, 61, 67, 71  
0.7, 0.8, 1.0, 1.7, 2.7, 3.1, 2.6, 2.4, 2.1, 1.7, 1.1, 0.9

YEARLY AVERAGE TEMP. 60.5 DEGREES F.  
YEARLY RAINFALL TOTAL 20.8 INCHES

STUDY VERY CAREFULLY THE TEMPERATURE RANGE - NOTE THE MONTH  
OF MINIMUM TEMP. AND THE PERIOD OF MAXIMUM TEMP. NOTE  
ALSO THE SEASONAL DISTRIBUTION OF RAINFALL. THIS IS A REAL  
PLACE, AT AN ELEVATION OF LESS THAN 500 FEET.

DO YOU JUDGE THIS STATION TO BE NORTH OR SOUTH OF THE EQUATOR  
?SOUTH

RIGHT - BUT THAT WASN'T HARD - NOW GIVE ME THE APPROXIMATE  
LATITUDE OF THE STATION. (PLEASE USE DIGITS ONLY)  
?40

YOU ARE IN THE BALL PARK - THE STATION IS INDEED BETWEEN 30  
AND 40 SOUTH LAT. IN THIS CASE IT IS AT ALMOST EXACTLY  
35 DEGREES. PETE, YOU ARE DOING WELL SO FAR.

WHICH OF THE FOLLOWING AMERICAN CITIES IS THE BEST ANALOGUE  
TO THE STATION GIVEN ABOVE?

ATLANTA, EL PASO, OR SANTA BARBARA  
?SANTA BARBARA

EXCELLENT, PETE, THIS IS CLEARLY A WEST COAST LOCATION.

NOW, PETE, IF YOU WERE TO TAKE A SWIM IN THE OCEAN AT OUR  
STATION YOU WOULD DISCOVER THE WATER TEMPERATURE TO BE  
RELATIVELY (FILL IN AN APPROPRIATE WORD)  
?WARM

ONE OF THE CHARACTERISTICS OF THIS CLIMATE TYPE IS THAT THE ADJACENT OCEAN CURRENT IS COOL. THIS HELPS TO ACCOUNT FOR THE LOW SUMMER RAINFALL.

NOW, PETE, DURING THE WINTER SEASON (MAY, JUNE, JULY, AUG.) THE PREVAILING WIND AT OUR STATION IS FROM WHICH DIRECTION ?WEST

YES, FROM WEST, NORTHWEST OR SOUTHWEST. THIS IS THE QUITE WELL DEFINED BELT OF THE WESTERLIES.

WITHIN THE WESTERLIES LOCAL LOW PRESSURE CENTERS MIGRATE FROM WEST TO EAST AND CAUSE PRECIPITATION. THESE ARE KNOWN AS ?DONT KNOW

A REGION OF LOW ATMOSPHERIC PRESSURE SOMETIMES CALLED A DEPRESSION IS MORE OFTEN KNOWN AS A ( )? ?HELP

A REGION OF LOW ATMOSPHERIC PRESSURE SOMETIMES CALLED A DEPRESSION IS MORE OFTEN KNOWN AS A ( )? ?FRONT

IT IS EASY TO SEE THAT YOU, PETE KNOW YOUR CONTROLS

CYCLONIC STORMS ARE IMPORTANT DURING THE WINTER, BUT, BY CONTRAST, DURING THE SUMMER THE WIND IS LIGHT AND VARIABLE WITH A COMPONENT PARALLEL TO THE SHORE. THE PATHS OF CYCLONIC STORMS ARE THEN WELL POLEWARD OF THIS STATION.

NOW PETE, PLEASE TELL ME THE KOPPEN SYMBOLS FOR THIS STATION (TYPE 'HELP' IF YOU NEED IT) ?HELP

HINTS - HUMID CLIMATE, QUITE WARM, MARKED SUMMER DROUGHT TRY THE FIRST LETTER AT LEAST. ?C

'C' IS THE CORRECT FIRST LETTER.  
SECOND LETTER: 'S'(SUMMER DRY), 'W'(WINTER DRY), 'F'(WET)

THIRD LETTER CHOICES ARE:

- 'A' (AT LEAST ONE MONTH ABOVE 71.6 F.)
- 'B' (> 3 MONTHS ABOVE 50 F., NONE ABOVE 71.6)
- 'C' (< 4 MONTHS ABOVE 50)

OUR STATION IS 'CSA' - MEDITERRANEAN.

BY FAR THE LARGEST AND MOST SIGNIFICANT AREA OF THIS CLIMATE IS IN EUROPE WHERE IT EXTENDS FROM LISBON TO BEIRUT AND FROM CASABLANCA TO MARSEILLE.

PETE, I WOULD LIKE YOU TO DESCRIBE THE NATURAL VEGETATION OF THE MEDITERRANEAN AREA IN YOUR OWN WORDS. (YOU MAY USE UP TO A FULL LINE) ?PALM TREES,DATES,FIGS,BROAD LEAFED TROPICALS

I THINK THAT YOU HAVE NAMED SOME COMMON PLANTS. I WANT A MORE GENERAL DESCRIPTION OF THE VEGETATION. TRY AGAIN. ?LOW VEGETATIONS-, SUCCULENTS THAT CAN WITHSTAND DROUGHT

YOU HAVE THE RIGHT IDEA. NATURAL VEGETATION IS DROUGHT RESISTANT; A MIXTURE OF SHORT, WIDELY SPACED TREES, MANY SHRUBS AND SOME GRASS. OFTEN CALLED CHAPARRAL.

NOW, WITHOUT NAMING CROPS, PLEASE CHARACTERIZE MEDITERRANEAN AGRICULTURE. (LIMIT OF 1 LINE) ?AREA IS HILLY, REQUIRES TERRACING, SHORT SEASON

I AM SORRY BUT I DON'T UNDERSTAND YOUR ANSWER. HAVE YOU MISPELLED AN IMPT. WORD? PLEASE CHECK AND REPHRASE YOUR ANSWER. ?WOULD NEED IRRIGATION IN SUMMER

NOT BAD - INTENSIVE FARMING WITH WINTER GRAINS, ORCHARDS,  
AND VEGETABLES; OFTEN IN TWO STORY COMBINATION, AND WITH  
SOME IRRIGATION IS COMMON.

WHAT SPECIFIC CROPS WOULD YOU EXPECT TO FIND IN SUCH AN AREA  
? FIGS, DT-ATES, GRAPES

GRAPES, OLIVES, FIGS, WINTER WHEAT, BARLEY, CITRUS, NUTS,  
VEGETABLES AND OAK CORK ARE COMMON. PETE YOU ARE RIGHT.

WHAT ARE SOME IMPORTANT CHARACTERISTICS OF ANIMAL HUSBANDRY  
IN THIS CLIMATIC REGION  
? SMALL FARMS FOR ANIMALS, NOT MUCH GRAZING

I AM SORRY BUT I DON'T UNDERSTAND YOUR ANSWER. HAVE YOU  
MISSPELLED AN IMPT. WORD? PLEASE CHECK AND REPHRASE YOUR  
ANSWER.

? A FEW GOATS AND SHEEP

GOOD TRY - MANY SHEEP AND GOATS SHARE THE DRY GRASSES OF  
OVERGRAZED SLOPES WITH A FEW CATTLE AND DONKEYS.

THE ORIGINAL DATA WAS FOR ADELAIDE, AUSTRALIA.  
THE RAINFALL AND TEMPERATURE PATTERNS AT THAT LOCATION ARE  
TYPICAL OF ANY OF THE FIVE AREAS OF 'MEDITERRANEAN' CLIMATE  
SCATTERED THROUGHOUT THE WORLD.

I HAD FUN - HOPE YOU DID TOO. GOOD BYE, PETE.

DONE

**TITLE:**

CLOUDS: Cloud Formation

**DESCRIPTION:**

This program tests student ability to solve problems related to the formation of cumuliform clouds (i.e. L.C.L., temperature at various altitudes). In Phase I of the program students enter the variables and unknowns of previously assigned problems. The computer checks the students' answers and supplies the correct answers if an error is detected.

When Phase I is completed the computer automatically presents a group of new problems for the student to solve and check at the machine.

**OBJECTIVES:**

The program attempts to reinforce and apply the following concepts:

- A. There is a specific rate at which temperature drops in a rising parcel of unsaturated air.
- B. Once air becomes saturated and condensation begins, the lapse rate decreases due to the release of latent heat of vaporization.
- C. The base level of a cloud (LCL), and temperatures within it can be calculated from ground level data.

**INSTRUCTIONS:****PRELIMINARY PREPARATION:**

- A. Student - Students should be familiar with the terms and values of the dry and wet adiabatic lapse rates, normal lapse rate, and the formula for calculating the Lifting-Condensation Level.
- B. Materials - Printed sets of problems with the following variables and unknowns:
  - 1. Air temperature on the ground.
  - 2. Dew point on the ground.
  - 3. Temperature at the base of the cloud.
  - 4. The elevation, in feet, of the base of the cloud (LCL).

Continued on following page.

**ACKNOWLEDGEMENTS:**

Huntington Project  
Polytechnic Institute of Brooklyn

DISCUSSION:

This program is designed for average students. Individuals should be permitted to go to the computer to check any problem or groups of problems whenever the machine is free. The teacher in the lesson acts solely as a resource person to help those students unable to arrive at correct responses because of conceptual errors - not mechanical errors.

To speed the lesson, Phase II of the program may be omitted entirely, by procedure 1, or from early runs by procedure 2.

Procedure 1

Erase lines 1560 - 1810, 1760 - 1800,  
and change line 1520 to read:  
If P > 1 then 2060.

Procedure 2

Change line 1520 to read:  
If P > 1 then 2060.  
When you are ready to use Phase II merely retype line 1520 as originally listed.

RUN  
RUN  
CLOUDS

?30,4000

IT LOOKS LIKE WE GOOFED SOME PLACE.  
LET'S SEE WHAT THE CORRECT VALUES ARE.

60 DEGREES - THE TEMPERATURE ON THE GROUND  
31.3636 DEGREES - THE DEW POINT TEMPERATURE ON THE GROUND  
25 DEGREES - THE TEMPERATURE AT THE BASE OF THE CLOUD  
6363.64 FEET - THE ELEVATION, IN FEET, OF THE CLOUD BASE

DO YOU HAVE ANY OTHER PROBLEMS YOU WOULD LIKE TO TRY?  
(1=YES, 0=NO) : ?0

WELL, BEFORE YOU LEAVE, I HAVE A FEW I'D LIKE YOU TO TRY...  
BASED ON YOUR VALUES, THE HEIGHT OF THE CLOUD  
(MEASURED FROM THE CLOUD BASE) IS 25454.5 FT. CAN YOU TELL ME:

WHAT IS THE TEMPERATURE AT EACH OF THESE ALTITUDES:

1	4455	FT
2	44545.	FT
3	19091	FT

THE TEMPERATURE AT 4455 FT. IS .?32.5

SORRY. YOU WERE DOING GREAT THERE FOR A WHILE.  
WELL, BACK TO THE BOOKS. THE VALUES YOU SHOULD HAVE ARE:

1	THE TEMPERATURE AT 4455	FEET IS	35.5	DEGREES
2	THE TEMPERATURE AT 44545.	FEET IS	-95.9091	DEGREES
3	THE TEMPERATURE AT 19091	FEET IS	-13.1818	DEGREES

DONE

CONVRT  
36685**TITLE:**

TEMPERATURE SCALE CONVERSION

**DESCRIPTION:**

This program converts a given temperature in one of the four temperature scales (Centigrade, Fahrenheit, Kelvin, and Rankine) to the equivalent in the others.

**INSTRUCTIONS:**

Instructions are given in the program. The user enters the numeric value of the temperature followed by a single letter indicating which scale it is in. The program returns the value in all four temperature scales.

**SPECIAL  
CONSIDERATIONS:**

FOR INSTRUCTIONAL PURPOSES  
Suitable Courses: Introductory Physics and Astronomy

Student Background Required: None

This program is not extremely complicated. For students in any mathematically oriented physics class it is quite useless. However, for students in a descriptive physics or astronomy who would have a bit of trouble in doing the conversion manually, this program very quickly allows them to get a comparison between the familiar temperature scale of Fahrenheit (at least in the United States) and the temperature scale used in describing the physical world they are studying, i.e., astronomy-Kelvin, low temperature physics-Kelvin, and ordinary temperatures-Centigrade. The input to the program is into a string variable. This allows the input to be quite user adapted. The program has also been used as an example to a computer programming class on the value of using string inputs for numeric quantities.

DECAY1  
36306**TITLE:**

DECAY1: Radioactive Decay Game

**DESCRIPTION:**

Radioactive decay is treated pseudo-quantitatively, by permitting the student to determine the approximate number of radioactive particles remaining after various times.

OBJECTIVES:

To induce a "feel" for exponential decay, by repeated exercises.

**INSTRUCTIONS:**PRELIMINARY PREPARATION:

- A. Student - Awareness of terms: Half-life, exponential, and radioactivity
- B. Materials - none

DISCUSSION:

The concept of radioactive decay is presented in a game format, allowing the student to challenge his own ability in determining (with 5, 10, or 20% error), the number of radioactive "chips" remaining after various times. The number of chips successively decreases with each trial, increasing the level of difficulty as the program runs. In each case, the exact number remaining is given, following the students' entered value.

Individuals or small groups find this program exciting. They enjoy the game approach, at least the first time through it, and seem to be motivated by the opportunity to "break the bank."

This program can be used as an integral part of a class lesson to introduce the concept, or to motivate group discussion and participation concerning the phenomenon.

## TITLE:

DECAY2: Nuclear Decay

## DESCRIPTION:

This program will do the following:

- A. Calculate half-life from 2 readings on a geiger counter, and the time between them.
- B. Calculate mass of a radioactive sample remaining after some given amount of time.
- C. Prints out a table showing mass or number of particles of a radioactive sample remaining vs. some range of time.

OBJECTIVES:

- A. To provide tables and graphs for a better understanding of the exponential decay of a radioactive substance.
- B. To provide a calculator for determining the amount of mass of a radioactive sample remaining after some given amount of time.
- C. To provide a calculator for half-life experiments.

## INSTRUCTIONS:

PRELIMINARY PREPARATION:

- A. Student - The student should have a general introduction to half-life before the use of the program.
- B. Materials - none

DISCUSSION:

It is difficult to teach about the exponential (logarithmic) manner by which radioactive elements decay without meaningful illustrations and simulations.

Continued on following page.

## ACKNOWLEDGEMENTS:

Huntington Project  
Polytechnic Institute of Brooklyn

DISCUSSION continued

With this program, a number of interesting possibilities are available. For example, if the initial mass is 100 g and the time is equal to 10 half-lives with an increment equal to the half-life, the student will see the mass decrease to 0.1 g during that time. More important, the example may be generalized to show that for any radioactive sample:

- after 1 half-life 50% of the substance remains
- after 2 half-life 25% of the substance remains
- after 3 half-life 12.5% of the substance remains
- after 10 half-life 0.1% of the substance remains

You may also illustrate nuclear decay by using particles instead of mass. Use Avogadro's number of particles with students who feel comfortable with scientific notation. For the others, you may use a number up to 1,000,000 without having exponential numbers print out in the table.

The fact that the teletype unit takes about 8 seconds to type out a line provides you with cute little gimmicks. Set up a run with 8 seconds (or any multiple of 8) and the print-out of the table will keep time with the decay of the sample substance.

Please note that the half-life calculations are not accurate for a small number of particles, thus it is misleading to make runs go to zero mass or zero particles.

RUN

RUN

DECAY2

DO YOU WANT INSTRUCTIONS (1=YES, 0=NO) : ?1

THIS PROGRAM WILL DO THE FOLLOWING:

- CHOICE 1 - CALCULATES HALF-LIFE FROM TWO READINGS ON A GEIGER COUNTER.
- CHOICE 2 - CALCULATES HOW MUCH OF A RADIOACTIVE SAMPLE WILL REMAIN AFTER SOME GIVEN AMOUNT OF TIME
- CHOICE 3 - PRINTS OUT A TABLE SHOWING MASS OF SAMPLE VS. TIME OR NO. OF PARTICLES VS. TIME. (GRAPH OPTIONAL) NOTE: FOR THE TABLE YOU MUST INPUT TOTAL TIME AND TIME INCREMENT. EXAMPLE: IF TOTAL TIME=100 AND TIME INCREMENT=10, THEN TIME IN THE TABLE WILL BE 10,20,30,.....,100.
- CHOICE 4 - END OF PROGRAM

NOTE: IN ANY ONE PROBLEM, TIME MUST ALWAYS BE INPUTED IN THE SAME UNITS OF MEASURE (IE: SECS., MINS., ETC.)

\*\*\*\*\*

WHAT IS YOUR CHOICE?1

WHAT IS THE INITIAL READING ON THE GEIGER COUNTER, THE SECOND READING, AND THE TIME BETWEEN READINGS.

**TITLE:** SOLAR ECLIPSE SIMULATION DRAGON  
36785

**DESCRIPTION:** This program is a simulation of a solar eclipse for a CRT display terminal that has cursor addressing capabilities such as the Hazeltine 2000. First, the sun is drawn in boldface, then the dragon moon eats the sun, a corona appears, and finally the sun reappears.

**INSTRUCTIONS:** The User "GET"s the program and executes it. Everything follows automatically.

**SPECIAL CONSIDERATIONS:** This program will print garbage if executed on a teletype terminal. It must be used with a terminal with cursor addressing capabilities. This present version uses the subroutine FAZEL (HP 36786) which provides the proper control for a Hazeltine 2000 terminal. Any similar subroutine with the proper entry points designed for a different terminal could easily replace the current one. This would allow the program to be used on any terminal with similar features as the Hazeltine.

FOR INSTRUCTIONAL PURPOSES  
Suitable Courses: Beginning Astronomy

Student Background Required: None

This program can be used to illustrate to beginning astronomy students the time sequence of events in a solar eclipse. It was written to be more entertaining than educational since the amount of potential learning in this program is probably quite minimal.

This program also makes an interesting demonstration of the capabilities of a terminal with cursor addressing capability.

**ACKNOWLEDGEMENTS:** Lawrence E. Turner  
Pacific Union College

**TITLE:**

DROS: Genetic Characteristics

DROS  
36300**DESCRIPTION:**

This program determines the genetic characteristics of the offspring of a pair of *Drosophila* flies with specified traits. A game approach is used involving the entire class, in which the students can select different genotypes.

OBJECTIVES:

To show the student:

- A. The result of MEIOSIS and the effect of random assortment.
- B. That various genetic recombinations occur in sex cells and in genotypes of offspring.
- C. That if enough trials are run, Mendelian ratios are verified.
- D. That he can simulate different genotypic conditions and determine the probability of the phenotypic outcome.

**INSTRUCTIONS:**PRELIMINARY PREPARATION:

- A. Student - An understanding of the concepts in the computer program GAMGN, A833-36302 in Volume IV. It is best to use DROS as soon as possible after GAMGN.
- B. Materials - Eight containers grouped in two sets of four and labeled A, B, C, D. Designate one of the group of four as male chromosomes, and the other as female. Into each container, place two slips of paper, one marked 1 and the other, 2.

Before beginning the program have a student:

1. Take out one slip of paper from each of the containers of the male group and mark the designation on the chalk board. For instance: A1, B2, C2, D1;
2. Take out one slip from each container of the female group and do the same as with the male group.

Decide what the phenotype would be by discussing it in class.

You will run the program using the information you have on the chalk board. It will give you the correct phenotype. See how the class' answer compares with the computer's.

DISCUSSION: See attached.**ACKNOWLEDGEMENTS:**

Huntington Project  
Polytechnic Institute of Brooklyn

INSTRUCTIONS: continued

DISCUSSION:

A. Operational Suggestions

1. Student level - average
2. This program can be used on a classroom basis.
3. Pitfalls to avoid - See that the students run the program several times and keep a record of each run. This is necessary to show the various possible combinations that can occur, and their frequencies.

B. Follow-up

After the program has been run:

1. Get as many runs as possible so that percentages can be determined for each phenotype of the offspring.
2. a) Determine the total number of offspring. Each run represents 1 offspring. Count them.  
b) Determine the total number of offspring which lived.  
c) Determine each phenotype and show that a ratio exists between dominant and recessive traits. (This should follow typical Mendelian ratios)
3. Elicit from the students:  
a) What was their role in the game? (The students conduct meiosis by randomly selecting the genotype of each gamete.)  
b) (When using a small number of runs) Why did the Mendelian ratios not hold true?

**TITLE:**

ELECTRIC FIELD STRENGTH

**DESCRIPTION:**

The electric-field strength at a point near a fixed charge is calculated and printed. A line of charge is then generated by adding charges to either side of the fixed charge. As each additional charge is added, the new electric-field strength is calculated and selected values are printed.

Similarly, the field strength at a point near a plane of charge is calculated and printed as the plane is generated with the addition of other lines to the previous line of charge.

In both cases, the fields can be seen to approach a limiting value which is then printed for an infinite line and plane.

**OBJECTIVES:**

- A. To show that the electric-field strength approaches limiting values for a line and a plane of charge.
- B. To let the student discover how the field strength depends upon the distance from a point to a line of and to a plane of charge.

**INSTRUCTIONS:****PRELIMINARY PREPARATION:**

- A. Student - A knowledge of Coulomb's law and the vector addition of electric fields.
- B. Materials - None

**DISCUSSION:**

The operator chooses a distance ( $y$ ) away from a fixed charge ( $Q_0$ ) at which he wishes to know the field strength. He also chooses the number of charges ( $N$ ), and their spacing ( $C$ ), that he wishes to add to each side of the fixed charge to generate a line of charge. After the line has been generated, the operator enters the number of such lines ( $M$ ) that he wishes to use in building up the plane of charge.

Continued on following page.

**ACKNOWLEDGEMENTS:**

Huntington Project  
Polytechnic Institute of Brooklyn

DISCUSSION: continued

Actual values of force are not given, only relative values. When the fixed charge ( $Q_2$ ) is at a distance  $Y=1$  from the test charge ( $Q_1$ ), the force is 1 unit. The force may be calculated in Newtons if all distances are in meters, and the program is slightly changed so that  $Q_1$  and  $Q_2$  are in coulombs. If both of these charges were to be taken as single elementary charges, then the following changes should be made:

```
280 LET Q1 = 1.6*E-19
290 LET Q2 = 1.6*E-19
300 LET K = 9*E9
```

If the spacing (C) is taken as .1 and the number of charges (N) as 1000, then three runs through the program using the distance between the test charge and the fixed charge (y) as 1, 2, and 4 should be sufficient for the relationships to be determined. A casual inspection of the exact values of the field strength for these three distances should yield the following conclusions:

1. The field strength varies inversely with the square of the distance away from a single point charge.
2. The field strength varies inversely with the distance from a line of charge.
3. The field strength remains constant even though the distance from a plane of charge changes.

It should be noted in 2 and 3 above, that the spacing between charges must be small as compared to the distance away from the line or plane of charge, and of course that the line be so long and the plane so broad that any further increase in length or breadth be insignificant.

An interesting bonus to this program is discovered when distances from test charge to plane is decreased to .001, .0001, and .00001. Here it can be seen that the field no longer is constant, but changes as an inverse square law for a single charge because the test charge begins to "see" the fixed charge instead of the whole plane. The "EXACT VALUE . . .," is calculated for charges smeared over the whole plane and not in discrete point charges as we have here; hence, the disagreement with actual field values.

This program may be run by an individual student after proper introductory explanation concerning vector addition of electric fields, contributions of the charges being added in the line or lines to the plane. It may also be used as a class demonstration and discussion. When used with a whole class it is best to have a television camera and monitor available for immediate display of print out. A summary table constructed either by the teacher on the board or by students at their desks is useful in analysis of the data.

RUN

RUN  
EFIELD

THIS PROGRAM WILL CALCULATE THE FORCE ON A TEST CHARGE THAT IS PLACED SOME DISTANCE, Y, AWAY FROM ANOTHER CHARGE; A LINE OF CHARGE; AND A PLANE OF CHARGE. YOU MUST ENTER THE DISTANCE AWAY, Y; THE SPACING DESIRED BETWEEN CHARGES, C, AND ALSO BETWEEN LINES OF CHARGE THAT MAKE UP THE PLANE OF CHARGE. YOU MUST ALSO CHOOSE THE NUMBER OF CHARGES IN THE LINE OF CHARGE THAT YOU WOULD LIKE TO USE (500 IS A GOOD VALUE IF YOU USE A SPACING OF .1 FOR C. JUST SO THE CALCULATIONS DON'T GO TOO FAR I'VE INCLUDED A STOP THAT DEPENDS UPON THE ANGLE FROM TEST CHARGE TO THE LAST CHARGE TO BE CALCULATED. IF THE ANGLE IS LESS THAN 2 DEGREES, CALCULATIONS WILL CEASE.

**TITLE:**

CALCULATES EMPIRICAL FORMULAS

**DESCRIPTION:**

A classroom demonstration designed to calculate the empirical formulae from atomic mass (atomic weight) and percent composition.

OBJECTIVES:

- A. To distinguish between molecular and empirical formulae.
- B. To illustrate the law of multiple proportions.
- C. To emphasize the unity of the atom when writing chemical formulae.
- D. To demonstrate the importance of accurate calculation with empirical formulae problems.

**INSTRUCTIONS:**PRELIMINARY PREPARATION:

- A. Student - The student should have some experience in writing chemical formulae and calculating percent composition from chemical formulae. An understanding of significant figures would also add to the value of the lesson.
- B. Materials - None

DISCUSSION:

In this program the atomic number is used for identification only and has no part in the actual calculations.

The student generally has difficulty understanding the function of the ratio in calculating empirical formulae. This program is designed to emphasize that function.

The importance of significant figures could also be illustrated. The students' tendency to approximate generally results in numbers of questionable value. In this program, by using a series of calculations for the same compound with figures of progressively greater accuracy, an empirical formulae closer to whole numbers will be obtained.

**ACKNOWLEDGEMENTS:**

**TITLE:**

EQUIL1/EQUIL2: Equilibrium Systems

**DESCRIPTION:**

This program calculates the effects of concentration changes in the equilibrium systems  $2\text{HI} \rightleftharpoons \text{H}_2 + \text{I}_2$  and  $\text{PCl}_5 \rightleftharpoons \text{PCl}_3 + \text{Cl}_2$ .

OBJECTIVES:

- A. To show that an equilibrium system is a dynamic one.
- B. To illustrate and reinforce Le Chateliers principle.
- C. An exercise in the interpretation of experimental data.
- D. The significance of the Equilibrium constants.

**INSTRUCTIONS:**PRELIMINARY PREPARATION:

- A. Student - The student should have been made aware of "reversible" reactions, equilibrium systems and Le Chateliers principle.
- B. Materials - none

DISCUSSION:

These two programs can be used as classroom demonstrations to illustrate the effect of varying the concentration of one of the products of a system at Equilibrium. The results are given not only as a table, but also graphically, since it was found that students have less trouble recognizing trends when they can be illustrated.

The equilibrium constant can also be changed to show its effect on the equilibrium system.

As always, the teacher should have run the program he wishes to use prior to its classroom presentation since the choice of constants will determine the slope of the curves.

NOTE: The vertical axis (horizontal on the output) is labeled in percent of maximum y value.

DONE

**TITLE:**

EVOLU: Natural Selection Experiment

**DESCRIPTION:**

A population of dark and light pepper moths are studied over a period of 30 years. The student selects the year and direction of environmental changes which favors one or the other. The concept of natural selection in evolution is developed.

**OBJECTIVES:**

To show the student that:

- A. The mutation rate within a population for a specific trait can be stable for a period of time, or can change. The success of the progeny exhibiting this variation is dependent upon environmental conditions.
- B. Progeny exhibiting an hereditary trait do not necessarily reach maturity, because of the influence of environment.
- C. Evolution depends upon mutation, heredity, and environmental pressures.

**INSTRUCTIONS:****PRELIMINARY PREPARATION:**

- A. Student - An understanding of the following terms: 1) mutation rate, 2) species, 3) environmental change, 4) population.
- B. Materials - 1) Specimens showing color variations within any species (optional); and 2) Ditto of the list of assumptions presented in this program (optional). Assumptions are listed below.

**DISCUSSION:** See following page.

**ACKNOWLEDGEMENTS:**

Huntington Project  
Polytechnic Institute of Brooklyn

DISCUSSION:

A. Operational Suggestions

1. Student level - average
2. Group size - Work in small groups of five or less. Remaining students may be engaged in a related activity.
3. Assumptions - Prior to running the program, the students should be told to assume the following:
  - a) The environment initially favors the light moths.
  - b) At first, brown moths are produced, but because of environmental pressures they do not reach maturity.
  - c) The total population in the area cannot exceed the initial number of moths, because this is the maximum number of moths the environment can support.
4. Each group of students should run the program at least two times, varying the environmental pressure; once favoring the dark moths and once favoring the light.
5. You might have the runs of different groups of students reflect different mutation rates.
6. Supervision of the number of program runs per group is necessary since they are not automatically cut off.

B. Suggested Follow-up

These questions may be used to initiate discussion:

1. Why does the mutation rate remain constant? Does it always remain constant under natural conditions? Explain your reasons.
2. Assuming constant environmental conditions, how does changing the mutation rate affect the population? Why?
3. How does changing the mutation rate affect the dark moth population when environmental pressures favor these moths? Why?
4. What environmental pressures could favor the dark moths? (industrial expansion, predators which favor the light or dark moths) (The classic case of the pepper moths and the industrial revolution in England could be discussed at this point.)
5. What possible role might pollutants play in altering a mutation rate? What other factors could affect a mutation rate?
6. Is evolution a slow or fast process? Explain your answer.
7. Why do a few white moths always remain in the population, even though the environment favors the dark moths?
8. What is natural selection? What is its role in evolution?
9. Make a list of all factors important to evolution.

GAMGN  
36302**TITLE:**

GAMGN: Process of Gametogenesis

**DESCRIPTION:**

A review of the process of gametogenesis, applying it to the concept of dominant-recessive traits.

**OBJECTIVES:**

- A. To reinforce the meaning of the terms random assortment, meiotic divisions, monoploid, and diploid.
- B. To allow the student to make decisions based upon knowledge gained in the program, thus causing the students to think.
- C. To review and reinforce both spermatogenesis and oogenesis.

**INSTRUCTIONS:****PRELIMINARY PREPARATION:**

## A. Student

1. Students should be familiar with all phases of meiosis.
2. Genetics should have been introduced so that the student understands the implications of gene action, dominance and recessiveness, homologous and non-homologous chromosomes.
3. Programming and machine knowledge. Keep in mind that for this program the students should be given time to try to determine what genetic traits are represented by the chromosome designation shown in the program.

normal wing - red eye	= A1A2, B1B2, C1C2, D1D2
normal wing - white eye	= A1A2, B2B2, C1C2, D1D2
vestigial wing	= A1A1, B1B2, C1C2, D1D2
lethal gene	= A1A2, B1B2, C1C1, D1D2

red eye	= B1B2 or B1B1
white eye	= B2B2 (recessive)
normal wing	= A1A2 or A2A2
vestigial wing	= A1A1 (recessive)
non lethal gene	= C2C2
lethal gene carrier	= C1C2
lethal (dies)	= C1C1 (recessive)

## B. Materials - none necessary

Continued on following page.

**ACKNOWLEDGEMENTS:**Huntington Project  
Polytechnic Institute of Brooklyn

DISCUSSION:

A. Operational Suggestions

1. Student level - average to above average ability
2. If the student is confused alert him to the fact that chromosomes are letters and the number following the letter represents genes. Similar letters indicate homologous chromosomes. (see program)
3. Read the program ahead of time to make sure your students are familiar with the terms used in the program.
4. If the students are thrown off the machine see that they review with the teacher the concept of gametogenesis before continuing with the program.
5. Ideally, students should work individually. If this is not possible, then work in groups of 5 or less. Allow one group at a time at the computer while the remaining groups are engaged in a related activity.

B. Suggested Follow-up

To maximize the value of this program, it is strongly suggested that the teacher:

1. Elicit from the students:

What are the gene locations for the various genetic traits (eye color, wing normalcy, lethality)? Which is recessive? Which is dominant? Why is there no chance that the offspring will have the exact chromosomal composition of the father?

2. Ask the following questions, based on the information given, as lead-ins to discussion or as a homework assignment.

- (a) What is a polar body? How does the formation of polar bodies increase the survival chance of the egg cell?
- (b) How is random assortment responsible for genetic trait variations?
- (c) Why is it possible for all offspring to have the same traits without variations?

ARTICULATION INTO NEXT AREA TO BE COVERED:

This program can lead directly into the topic of genetics. A second program, DROS A833-36300, appearing in the manual, should follow. It demonstrates, with a game, the random recombinations of the chromosomes in offspring, showing all possible combinations and, if repeated often enough, Mendelian ratios.

RUN

RUN  
GAMGN

THE FOLLOWING DIAGRAMS ARE REPRESENTATIONS OF PRIMARY SEX CELLS. CHROMOSOMES ARE REPRESENTED BY LETTERS.

PRIMARY SPERMATOCYTE	PRIMARY OOCYTE
( A1 A2 )	( A3 A4 )
( )	( )
( B1 B2 )	( B3 B4 )
-----	-----

BY TYPING IN A NUMBER, WHAT IS THE DIPLOID NUMBER OF CHROMOSOMES FOR THIS ORGANISM?4

SO YOU SEE THAT A1 + A2, FOR EXAMPLE, ARE PAIRS OF HOMOLOGOUS CHROMOSOMES. IT IS ESSENTIAL THAT AFTER FERTILIZATION, IF THE DIPLOID CONDITION IS TO BE RETAINED THAT WE HAVE SOME MEANS OF PLACING ONLY ONE A AND ONE B CHROMOSOME IN THE SPERM AND ONLY ONE A AND ONE B CHROMOSOME IN THE EGG. THIS INVOLVES MEIOSIS.

LOOK AT THE PRIMARY SPERMATOCYTE ABOVE. DURING THE FIRST STAGE OF MEIOSIS, THE MALE SEX CELL SHOULD APPEAR AS IT IS IN ONE OF THE FOLLOWING DIAGRAMS.

1	2	3	4	5
( A1A1 )	( A1 A2 )	( A )	( A1 A2 )	( )
( A2A2 )	( )	( )	( )	( )
( B1B1 )	( )	( )	( )	( )
( B2B2 )	( B1 B2 )	( B )	( )	( B1 B2 )
-----	-----	-----	-----	-----

WHICH DIAGRAM MOST CLOSELY REPRESENTS THIS MEIOTIC STAGE ?1

O.K., NOW WE CAN MOVE ALONG. MEIOTIC DIVISION OCCURS AND WE GET TWO SECONDARY SPERMATOCYTES FROM EACH PRIMARY SPERMATOCYTE AND ONE SECONDARY OOCYTE FROM EACH PRIMARY OOCYTE. EACH SPERMATOCYTE CONTAINS THE FOLLOWING CHROMOSOMES: A1 A2, B1 B2. EACH OOCYTE HAS A3 A4, B3 B4.

THE REASON WHY ONLY ONE OOCYTE IS PRODUCED IS:

- 1)THE OOCYTE DOES NOT UNDERGO DIVISION.
- 2)THE OOCYTE DIVIDES AFTER FERTILIZATION.
- 3)A POLAR BODY IS FORMED.
- 4)THERE IS AN ERROR IN THE COMPUTER.

WHICH NUMBER WOULD REPRESENT THE CORRECT ANSWER?3

CORRECT. NOW LET'S MOVE TO THE FINAL STAGE IN WHICH WE WILL END UP WITH 4 MONOPOLOID(HAPLOID) SPERM--1)A1B1 2)A2B2 3)A1B2 4)A2B1 AND ONE OVUM--1)A3B3 OR 2)A4B4 OR 3)A3B4 OR 4)A4B3

WHAT IS THE POSSIBILITY THAT THE OFFSPRING WILL HAVE THE SAME CHROMOSOMAL COMPOSITION AS THE FATHER? PRINT ONE OF THE FOLLOWING NUMBERS.

- 1)50 CHANCE
- 2)NO CHANCE
- 3)100 CHANCE
- 4)YOU CAN'T TELL FROM THE INFORMATION GIVEN

?2

GOOD THINKING.

I HOPE YOU HAVE A FAIRLY GOOD IDEA OF SEVERAL PRINCIPLES INVOLVED, PARTICULARLY RANDOM ASSORTMENT.

NOW LET'S SEE IF WE CAN USE THESE IDEAS TO DETERMINE WHAT OCCURS IN A POPULATION. WE WILL USE AS OUR ORGANISM THE FRUIT FLY, DROSOPHILA, WHICH HAS 8 AS THE DIPLOID NUMBER OF CHROMOSOMES. THE FOLLOWING WILL REPRESENT CERTAIN CONDITIONS IN FRUIT FLIES :

NORMAL WING-RED EYE=A1A2, B1B2, C1C2, D1D2  
 NORMAL WING-WHITE EYE=A1A2, B2B2, C1C2, D1D2  
 VESTIGIAL WING=A1A1, B1B2, C1C2, D1D2  
 LETHAL GENE=A1A2, B1B2, C1C1, D1D2

SUPPOSE WE CROSS THE NORMAL RED EYED WITH THE NORMAL EYED FRUIT FLY. WHAT COULD THE OFFSPRING LOOK LIKE? LOOK AT THE GENOTYPES CAREFULLY AND SEE IF YOU CAN PICK OUT THE DIFFERENT GENE COMBINATIONS. THEN MAKE ALL POSSIBLE CROSSES. AT A LATER DATE, WE WILL SEE HOW I, THE COMPUTER, CAN SOLVE THIS PROBLEM FOR YOU. BUT FIRST, TAKE THIS SHEET BACK TO YOUR SEATS AND WORK ON IT.

DONE

GENE1  
36642**TITLE:**

GENETICS SIMULATION

**DESCRIPTION:**

GENE1 is a simulation of the inheritance of genetic traits demonstrating the statistical nature of the Mendelian Laws.

GENE1 was developed by the Huntington II Project at the Polytechnic Institute of Brooklyn under the direction of L. Braun. This work was partially supported by the National Science Foundation, Grant GW-5883.

**INSTRUCTIONS:**

The user specifies the dominant and recessive traits to be studied. The user is then asked to enter the genotypes of the female parent and the male parent (the genotype of each parent is entered on 2 separate lines). After specifying the number of offspring to be studied, the simulation takes place and a detailed report of the offspring may be generated.

**SPECIAL  
CONSIDERATIONS:**

The Huntington II Project recommends that for use of this program in the classroom it is necessary to obtain the following publications from Program Library, Digital Equipment Corporation, Maynard, Massachusetts 01754.

Student Workbook	\$ .30
Teachers Guide	.30
Resource Handbook	.50

**ACKNOWLEDGEMENTS:**

**TITLE:** HALF-LIFE SIMULATION HZLIFE  
36134

**DESCRIPTION:** The program simulates the decay of 1000 radioactive nuclei by simulating the tossing of 1000 20-sided dice. One side of each dice is assumed to be marked, so that if that side is up after the toss, the nucleus that it represents is considered to have decayed. After each toss, those dice which have decayed are removed from the experiment, since they cannot decay a second time. Output includes a table of number of toss, number of decays, number remaining, a graph of decays as a function of time, a table of number of toss, number of decays, logarithm of number of decays, a graph of logarithm of decays as a function of time, and calculation of decay constant using least squares, plus a calculation of the percent error of this calculation.

**INSTRUCTIONS:** Answer any questions either Yes or No.

Total execution time if the entire program is run will be about 12 minutes.

**SPECIAL CONSIDERATIONS:** FOR INSTRUCTIONAL PURPOSES  
Suitable Courses: Physics, Physical Science, General Science, Chemistry.

Student Background Required: Appropriate to study of radioactive decay and/or half-life in typical junior or senior high school.

The program could be used to supplement or replace laboratory experiments in the courses noted. Teachers may wish to omit the logarithm and decay constant portions for junior high or for general science classes.

**ACKNOWLEDGEMENTS:** Donald E. Gettinger

DRILL ON FORMULAS AND CHARGES OF IONS

IONIC  
36260**DESCRIPTION:**

This program randomly generates a total of 10 ions. The student is given five seconds to input the formula, and five seconds to input the charge. If he is too slow, or incorrect, the correct answer is printed. A summary is given at the end of the drill.

**INSTRUCTIONS:**

The user is asked to input his name. The program prompts the student to give the correct answers on formulas and charges.

**SPECIAL  
CONSIDERATIONS:**

The value of T0 set in line 5 governs the amount of time given to respond, N in line 30 governs how many ions are stored in the DATA lines, AO controls how many ions are given as questions, and is set in line 32. Any of these can be changed by altering the appropriate line. Use the DATA statements (lines 88-1010) as a model for adding more ions, if desired.

**FOR INSTRUCTIONAL PURPOSES:**  
Suitable Courses: Chemistry

Student Background Required: Knowledge of ions, their formulas and charges.

36266**TITLE:**

DRILL ON FORMULAS OF IONIC COMPOUNDS

**DESCRIPTION:**

This program randomly selects a positive and negative ion, and asks the user for the chemical formula of the simplest resulting compound.

**INSTRUCTIONS:**

Conventions used in formula input.

1. If there is more than one molecule of an ion, the number of molecules of this ion follows the ion's formula.
2. Put parenthesis around the formula if the ion is multiatomic and it occurs more than once in the compound.
3. The cation is given first, then the negative ion. (anion)
4. Give the simplest form of the compound.

i.e. give  $H_4O_2$  as  $H_2O$ .

but leave  $Cu_2 C_2O_4$  as is.

Ten pairs of ions are given. The response time is 15 seconds to input the name of each compound.

**SPECIAL  
CONSIDERATIONS:**

23 common cations and 18 common anions are stored in the data lines at the end of the program. The cations are given first, the anions last. The format used is name, formula, charge. If the user adds any more, change lines 40 and 70 to the appropriate values, and change the dimensions of matrices A and C, if necessary. To add more multiatomic cations, add the line(s) after 400 that read the same as 400 except they have the formula of the added multiatomic cation(s) in the quotes. To add multiatomic anions which have only two letters (like OH) add lines after 530 paralleling the construction of 530. If a user wants the question to give the formula of the ions, change the A\$ and C\$ in line 700 to B\$ and D\$. Line 30 controls how many problems are given. To vary the time given to respond, change line 710 to ENTER n, Z, G\$, where n is an integer between 1 and 255.

For INSTRUCTIONAL PURPOSES  
Suitable Courses: Chemistry

Student Background Required: Memorization of ion names, formulas, charges, and of how to combine them to get compounds.

ISOMER  
36261**TITLE:**

DRILL ON NAMING ALKANES

**DESCRIPTION:**

This program generates names of up to ten alkanes randomly, and prints out representations of them on the teletype, then names them. The number of alkanes (of lengths up to ten carbons in the main chain) is controllable (via input), as is the total number of carbons in the alkyl side chains (by altering a line). In a given run there are no duplications.

**INSTRUCTIONS:**

The only input required is the number of hydrocarbons to be printed. One file, (ISO-1), is required. It should have a length of about 512 words, or eight records on the HP 2000B. This file serves as a temporary storage for strings used in naming the alkanes. If the name of the first two alkanes are 2,3-dimethylpentane and 3,4-dimethyl-5,6-diethyl-4,5-dibutyldecane respectively the strings stored in the file will be "2,3-DIMETHYLPENTANE", "3,4-DIMETHYL", "5,6-DIETHYL", "-4,5-DIBUTYLDECANEN".

**SPECIAL  
CONSIDERATIONS:**

The length of the largest number of carbon atoms in all the side chains may be altered by changing line 9 to 9 LET MO=n, where n is this number. This is just an upper limit, not a lower, and the actual number is limited also by the number (randomly-generated) of carbons in the main chain.

**FOR INSTRUCTIONAL PURPOSES**

Suitable Courses: Organic Chemistry

Student Background Required: Knowledge of how to name simple alkanes (with side chains). This program is written with the intention that the student run the program and take the output back to his desk. He conceals the answers from his view, and names the chemicals, checking his answers when he is done.

**ACKNOWLEDGEMENTS:**Phillip Short  
Burnsville Senior High School

**TITLE:**

KINERV: Review of Kinematics

**DESCRIPTION:**

Questions are asked concerning the motion of a ball thrown vertically upwards at various velocities. Neglecting air resistance, the student is to determine such quantities as 1) maximum obtainable height; 2) time of flight; and 3) the height reached at different times.

OBJECTIVES:

To develop and review basic skills in solving projectile motion problems.

**INSTRUCTIONS:**PRELIMINARY PREPARATION:

- A. Student - previous classroom instruction and a working knowledge of algebra.
- B. Materials - none

DISCUSSION:

The student is presented with various problems concerning the motion of the ball. In each case, the initial velocity  $V_0$  of the ball is given. There are five basic questions asked:

1. Determine maximum height reached;
2. Find the height after  $t$  seconds;
3. Find the velocity when the ball is at height  $h$ ;
4. Determine the time of flight; and
5. Find the velocity after  $t$  seconds.

The quantities  $V$ ,  $h$ , and  $t$  are randomly determined for each question asked and the correct answers are given following the student response.

The program is designed to serve as a review of typical motion problems discussed in class and to aid in overcoming student "uncertainty" in the solution of numerical problems.

The program may be modified to cover other areas of review by entering new questions in place of those presently offered (see listing).

---REVIEW OF KINEMATICS---

A BALL IS THROWN STRAIGHT UP AT VARIOUS VELOCITIES.  
AIR FRICTION IS NEGLIGIBLE. THE UPWARD DIRECTION IS TAKEN  
AS POSITIVE, AND THE DOWNWARD DIRECTION AS NEGATIVE.

THE LOCAL ACCELERATION DUE TO GRAVITY IS  $-10$  METERS/SECOND/SEC  
ALL VALUES ARE IN M.K.S. METRIC UNITS.

FOR VARIOUS THROWING SPEEDS, YOU MUST ANSWER CERTAIN  
QUESTIONS ABOUT THE BALL IN FLIGHT.

1 . THE UPWARD THROWING SPEED IS 15 METERS/SECOND.  
WHAT IS THE VELOCITY AFTER 1.9 SECONDS OF FLIGHT? -4  
YOU'RE CORRECT WITHIN 5 PERCENT. THE CORRECT ANSWER IS -4

2 . THE UPWARD THROWING SPEED IS 38 METERS/SECOND.  
HOW HIGH ABOVE THE GROUND WILL THE BALL GO? 28  
YOU'RE OFF MORE THAN 5 PERCENT. THE CORRECT ANSWER IS 72.2

3 . THE UPWARD THROWING SPEED IS 30 METERS/SECOND.  
HOW LONG WILL IT TAKE THE BALL TO RETURN TO THE GROUND? 6.0  
YOU'RE CORRECT WITHIN 5 PERCENT. THE CORRECT ANSWER IS 6

4 . THE UPWARD THROWING SPEED IS 22 METERS/SECOND.  
WHAT IS THE VELOCITY WHEN IT REACHES A HEIGHT OF 12.2  
METERS ABOVE THE GROUND? 16  
YOU'RE CORRECT WITHIN 5 PERCENT. THE CORRECT ANSWER IS 15.4919

5 . THE UPWARD THROWING SPEED IS 17 METERS/SECOND.  
WHAT IS THE VELOCITY AFTER 2.2 SECONDS OF FLIGHT? -4  
YOU'RE OFF MORE THAN 5 PERCENT. THE CORRECT ANSWER IS -5.

OUT OF 5 QUESTIONS, YOU GOT 3 RIGHT.  
DON'T YOU KNOW ANYTHING ABOUT THROWING THINGS UP???

WANT TO TRY ANOTHER 5 PROBLEMS (1=YES, 0=NO) : ?0

**TITLE:**

KINET: Kinetic Reaction

KINET  
36309**DESCRIPTION:**

A class room presentation designed to calculate equilibrium concentrations and graph the progress (concentration vs. time) from initiation to equilibrium for the general reaction  $A \rightleftharpoons P$ .

OBJECTIVES:

- A. An understanding of Equilibrium
- B. The significance of the magnitude of the Equilibrium constant.
- C. The relationship of the rate constant to the point of equilibrium.

**INSTRUCTIONS:**PRELIMINARY PREPARATION:

- A. Student
  1. The distinction between initial and equilibrium concentration should be made very clear.
  2. The meaning of the terms "Rate constant" and "Equilibrium constant".
- B. Materials - none

DISCUSSION:

To insure the success of this program in a teaching situation, the teacher should run the program prior to its use in the classroom. This is necessary to insure that the choice of constants illustrates the point to be made and the amount of classroom time be kept to a minimum.

By varying the equilibrium constant it is possible to move the point of equilibrium on the concentration axis, and show the relative concentrations of product and reactant as a function of the value of the equilibrium constant.

The effect of different rate constants on the time it takes to attain equilibrium can also be shown. The point at which the two curves approach a straight line is the point of equilibrium (if the two curves intersect a dot is used as the point).

In this program, time is plotted in ten equal steps from initiation of the reaction to equilibrium. The time to attain equilibrium is different depending on the constant used. It should be pointed out that while the point of equilibrium on the graph may appear to be at the same spot, the units of time are changing, thus the point on the graph is different.

**TITLE:**

COMPUTER-AUGMENTED PHYSICS TOPICS (NEWTON)

**DESCRIPTION:**

This program, written by a high school student at Project Solo, calculates the stopping distance for a simulated aircraft landing on an airfield or aircraft carrier. Two types of output are available:

1. A listing of landing distances for progressively large aircraft mass and landing speed.
2. A single calculation for one value each of mass and speed.

**INSTRUCTIONS:**

The program asks the user to choose the type of output (see above).

If option 1 has been chosen, the user enters:

- a. Landing speeds - smallest value, greatest value, step size
- b. Mass - smallest value, greatest value, step size
- c. Runway - length and width

continued on following page

**SPECIAL  
CONSIDERATIONS:**

This program accompanies the Project Solo Module "Computer-Augmented Physics Topics" of the Hewlett Packard Curriculum Series.

This program is a sample answer to a student problem presented in Computer-Augmented Physics Topics, a Physics module from the Project Solo Series.

Information on actual aircraft (lines 500-590) may need to be updated from time to time, and as desired by the teacher.

FOR INSTRUCTIONAL PURPOSES  
Suitable Courses: Physics

Student Background Required: Newtonian laws of motion (concurrent)

This is a sample solution to a problem for the student. It may be desired to provide access to this program only after the student has attacked the problem in his or her own way.

The curriculum material listed below is available for classroom implementation of this program.

- HP 5951-5648 Computer-Augmented Physics Topics (student text)
- HP 5951-5649 Computer-Augmented Physics Topics (problem solutions)
- HP 5951-5650 Computer-Augmented Physics Topics (classroom set - 30 student books and 1 problem solutions)

For ordering information of curriculum material, contact:

Hewlett-Packard Computer Curriculum Project  
Scientific Press  
1629 Channing Ave.  
Palo Alto, California 94303

**ACKNOWLEDGEMENTS:**

Project Solo  
University of Pittsburgh

Instructions - continued

- d. Braking strength of the retaining barrier
- e. A value determining the accuracy (roundoff) of the calculations.

If option 2 has been chosen, the user enters:

- a. Mass and landing speed (one value for each)  
followed by c., d., and e. as given above.

The program contains information on the range of mass and landing speed in representative civilian aircraft, which the student can request.

**RUN**

PLEASE USE THE METRIC SYSTEM THROUGHOUT.  
WOULD YOU LIKE SOME ACTUAL FIGURES FOR  
AIRCRAFT CARRIERS (0=NO, 1=YES)?

CONTRIBUTED PROGRAM **BASIC**

LENSES  
36630

**TITLE:**

SOLVES LENS PROBLEMS

**DESCRIPTION:**

The focal length, object distance, image distance, image size, or object size, may be calculated if sufficient information is entered by the student.

OBJECTIVES:

- A. To solve for focal length of a lens from laboratory data.
- B. To check image position and size from lab data.
- C. To solve lens problems.

**INSTRUCTIONS:**

PRELIMINARY PREPARATION:

- A. Student - Data from a lens experiment.
- B. Materials - None

DISCUSSION:

If this program is used in conjunction with a lens laboratory, the student may check his calculations of focal length.

He may also check his image size and position from known object size and position.

**ACKNOWLEDGEMENTS:**

Huntington Project  
Polytechnic Institute of Brooklyn

DONE

**TITLE:** LOCK & KEY MODEL OF ENZYME ACTION**DESCRIPTION:** This exercise allows the user to conduct a simulated experiment in competitive inhibition of the enzyme acetylcholinesterase.**INSTRUCTIONS:** The goal in this experiment is to determine which inhibitor chemical is most effective. In the computer simulation you can control: (1) amount of acetylcholine, (2) type of inhibitor chemical, and (3) amount of inhibitor.

Before running the program, the user should map out the experimental design and enter it on a Computer Input Sheet. Output may be in either table or graph form. The table prints out the amount of acetylcholine remaining at the end of each tenth of a minute and the total acetic acid produced up to that time. The graph yields a plot of the amount of acetic acid produced versus the time (in tenths of a minute) since the onset of the reaction, with the amount of acetic acid produced (in millimoles) printed next to the appropriate point.

**SPECIAL CONSIDERATIONS:** The Huntington II Project recommends that for use of this program in the classroom it is necessary to obtain the following publications from Program Library, Digital Equipment Corporation, Maynard, Massachusetts 01754.

RUN

RUN  
LOCKEY

LOCKEY- A COMPETITIVE INHIBITION STUDY OF THE ENZYME  
ACETYLCHOLINESTERASE FEATURING THE LOCK AND KEY HYPOTHESIS

DO YOU WISH INSTRUCTIONS? (1=YES, 0=NO)?1

YOU ARE CONDUCTING AN INVESTIGATION OF THE ENZYME  
ACETYLCHOLINESTERASE. FROM THE NAME YOU CAN TELL  
THAT THIS ENZYME WORKS ON THE CHEMICAL ACETYLCHOLINE.  
IT BREAKS ACETYLCHOLINE INTO ACETIC ACID AND CHOLINE.

WE WANT TO INVESTIGATE WHICH INHIBITOR IS THE MOST  
EFFECTIVE IN SLOWING THE NORMAL ACTION OF THE ENZYME.  
THIS WILL GIVE US VALUABLE INFORMATION ON ITS ACTION.

THE CODE FOR THE INHIBITORS IS:

- 1= AMMONIUM
  - 2= DIMETHYLAMINE
  - 3= METHYLAMINE
  - 4= PROSTIGMINE
  - 5= TRIMETHYLAMINE
  - 0= NO INHIBITOR
- BE SURE TO CONSULT  
THE IMPORTANT STRUCTURAL  
FORMULAE LISTED IN THE  
INFORMATION PACKET

IN THIS STUDY YOU CAN CONTROL:  
THE AMOUNT OF ACETYLCHOLINE  
THE TYPE OF INHIBITOR  
AND THE AMOUNT OF INHIBITOR

BY COMPARING THE STRUCTURE OF ACETYLCHOLINE WITH  
THE STRUCTURE OF THE FIVE INHIBITORS YOU SHOULD  
BE ABLE TO MAKE A HYPOTHESIS AS TO WHICH OF THE  
FIVE INHIBITORS WILL BE THE MOST EFFECTIVE

REMEMBER: INCLUDE YOUR KNOWLEDGE OF THE  
LOCK AND KEY MODEL OF ENZYME ACTION.

MALAR  
36797

**TITLE:**

MALARIA ERADICATION PROGRAM

**DESCRIPTION:**

The MALAR unit provides a context within which to explore the economic, biological, political, and ecological ramifications of a classic example of a serious health problem. Often the problems of public health are viewed only as medical ones, when in fact they are also very much economic, political, and even ecological. A unit of study such as that suggested by MALAR can be of great assistance in helping students learn about, and gain an appreciation of these other factors related to health problems.

Many school programs are beginning to recognize the importance of the study of health at all levels and in the broad sense of the term. A unit like MALAR provides a novel, interesting core for a related unit of study. Since MALAR treats a classic health problem, it provides a springboard to considerations of other health problems.

At a more specific level, MALAR helps a student to learn something about epidemiology and the health problem of malaria. He can determine basic principles of dealing with an epidemic disease. The computer program allows the student to become the decision-maker in a situation involving public health, and requires him to balance economic considerations with biological and medical ones. Using the computer simulation, the student has an opportunity to explore a public health situation from new perspectives and at the same time to develop some important inquiry and problem-solving skills.

**INSTRUCTIONS:**

This program simulates the attack phase of a malaria eradication plan. It allows the user to attempt to eradicate malaria from a given area within five years. The user can try to do this with or without a budget limitation.

**SPECIAL  
CONSIDERATIONS:**

The Huntington II Project recommends that for use of this program in the classroom it is necessary to obtain the following publications from Program Library, Digital Equipment Corporation, Maynard, Massachusetts 01754.

Student Workbook	\$ .30

RUN

RUN  
MASSD

THIS PROGRAM IS DESIGNED TO INVESTIGATE MASS DEFECT

WHICH OF THE ELEMENTS WOULD YOU LIKE TO CONSIDER?  
REMEMBER WE ARE DEALING WITH A SINGLE ATOM, THEREFORE  
IN ADDITION TO THE ATOMIC NUMBER WE ARE GOING TO NEED THE  
ACTUAL MASS (IN AMU) AND THE MASS NUMBER OF THE ISOTOPE  
YOU WANT TO WORK WITH.

WHEN THE MACHINE TYPES A QUESTION MARK (?) TYPE IN  
YOUR ANSWER THEN HIT RETURN KEY. USE NUMBERS OF UP TO  
SIX SIGNIFICANT FIGURES. ROUND IF NECESSARY TO 6 DIGITS.  
IN THE VALUES FOR MASS DEFECT.

THE ATOMIC NUMBER IS ?8  
THE ACTUAL MASS IS ?15.9949  
THE MASS NUMBER IS ?16

THE SUM OF THE MASS OF THE 8 PROTONS AND THE 8 NEUTRONS  
PLUS THE WEIGHT OF THE 8 ELECTRONS IS THE CALCULATED  
MASS.

CALCULATED MASS - ACTUAL MASS = MASS DEFECT  
16.132 - 15.9949 = .1371

THE MASS DEFECT IN TERMS OF ENERGY IS THE EQUIVALENT OF  
2936 X 10<sup>9</sup> CAL. PER MOLE OF THIS SUBSTANCE,  
OR 184 X 10<sup>9</sup> CAL. PER GRAM.

IF WE DIVIDE THIS BINDING ENERGY BY THE NUMBER OF  
PARTICLES IN THE NUCLEUS, WE GET A RATIO KNOWN AS THE  
BINDING ENERGY PER NUCLEON, WHICH IS A MEASURE OF THE  
STABILITY OF THE NUCLEUS. THE MORE 'BINDING'  
PER NUCLEON, THE MORE STABLE IS THE NUCLEUS.  
THE BINDING ENERGY PER NUCLEON IS : 1.27674E-05 ERGS. PER NUCLEON, OR  
3.04712E-13 CAL. PER NUC.,  
WHICH IS MORE COMMONLY EXPRESSED AS 800 MEV.

THE AMOUNT OF ENERGY (BINDING ENERGY) CONTAINED IN ONE  
GRAM OF THIS SUBSTANCE WOULD BE SUFFICIENT TO SUPPLY ALL  
THE ELECTRICAL NEEDS IN AN AVERAGE ONE FAMILY HOUSE USING  
15 KW-HRS. PER DAY FOR A PERIOD OF 14245 DAYS OR  
39 YEARS.

IF YOU WOULD LIKE TO RUN ANOTHER PROBLEM TYPE IN 1,  
IF NOT TYPE IN 0.  
?0

**TITLE:**

DIFFUSION EXPERIMENT

**DESCRIPTION:**

This program simulates an experiment on diffusion. Membrane characteristics are "observed" by the student, and means of transport across membranes identified.

OBJECTIVES:

- A. To provide background for understanding of transport of materials across living membranes.
- B. To evaluate and reinforce an understanding of conditions under which diffusion, osmosis, and active transport take place.
- C. To help in the understanding of solution concentrations.

**INSTRUCTIONS:**PRELIMINARY PREPARATION:

- A. Student - exposed to the meaning of diffusion, osmosis, active transport, and semipermeable; should understand the need for energy expenditure in active transport; and have observed or performed the iodine test for starch.
- B. Materials - a prepared ditto of questions to be answered by students as a homework assignment or for classroom discussion.

DISCUSSION:

- A. Operational Suggestions
  1. Student level - this program has been effective with average and above average students.
  2. An incorrect answer results in the students being instructed to return to their seats, correct their answer, and give a reason for its correctness. A correct answer is immediately reinforced.

Continued on following page.

**ACKNOWLEDGEMENTS:**

Huntington Project  
Polytechnic Institute of Brooklyn

DISCUSSION: continued

3. The class is grouped. A maximum of 5 per group is recommended. The groups sequentially run the program until completion, or they are sent away from the machine by an incorrect answer. The other groups may be engaged in performance of the same experiment being "done" by the computer, or in a related activity. Interruption of an actual experiment, as a group goes to the computer, should not affect the results.
4. When the program is to be used with more than one class, it is suggested that the data line in the program (see list) be changed. Since this is a simple change to make, it can be made between groups within a class. This prevents their memorization and/or transmission to other groups and classes. Examples follow:

140 DATA10,11,12,13,14 may be changed to:  
140 DATA1,2,3,4,5  
or 140 DATA4,2,6,9,1  
or 140 DATA20,30,40,50,60

Any combination of numbers may be inserted. There must be a total of five, however, since the student is asked to respond to five questions.

It has been found that extensive discussion precedes the answering of each question on the computer, and in the writing of the rationalizations. This is certainly desirable.

B. Suggested Follow-up

Questions which may be used for discussion, or given as a homework assignment:

1. What happens to the concentration of water within the membrane as the glucose diffuses out? Why?
2. What observations indicated that the iodine has moved into the "cell"?
3. Why couldn't the same observations be made outside of the membrane?
4. What changes in observations would you expect if the cellophane had not been permeable?
5. Can materials diffuse through a semipermeable membrane in both directions at the same time?
6. What is meant by equilibrium?
7. Under what conditions is a cell in complete equilibrium with its environment? (When it is dead.)

RUN

RUN  
MEMBR

CELL MEMBRANES

AN IMPORTANT FUNCTION OF CELL MEMBRANES IS TO CONTROL THE PASSAGE OF MATERIAL INTO AND OUT OF CELLS. THIS PROGRAM GOES INTO THE MEANS BY WHICH THIS PROCESS TAKES PLACE.

IN THIS EXPERIMENT A STARCH AND GLUCOSE SOLUTION WAS PLACED WITHIN A PIECE OF CELLOPHANE TUBING. CELLOPHANE IS POROUS ENOUGH TO PERMIT THE PASSAGE OF SOME SMALLER MOLECULES THROUGH IT. THEREFORE, A CLOSED OFF PIECE OF TUBING CAN REPRESENT A CELL.

AFTER THE STARCH AND GLUCOSE SOLUTION WAS PLACED INTO THE TUBING, THE END WAS TIED OFF AND THE 'CELL' PLACED IN A BEAKER OF WATER TO WHICH A FEW DROPS OF IODINE HAD BEEN ADDED.

LET 10 REPRESENT THE OUTSIDE OF THE MEMBRANE  
LET 11 REPRESENT THE INSIDE OF THE MEMBRANE

WHERE IS THE CONCENTRATION OF GLUCOSE THE GREATEST?11

THAT IS CORRECT. WHERE IS THE CONCENTRATION OF STARCH THE GREATEST?11

RIGHT. WHERE IS THE CONCENTRATION OF IODINE THE GREATEST?10

WOW! WHAT A SUPERIOR MIND YOU HAVE, OR IS IT JUST LUCKY GUESSING? WHERE IS THE CONCENTRATION OF WATER THE GREATEST?10

YES. IF THE MEMBRANE WERE THE OUTER LIMITS OF A LIVING CELL, WHICH OF THE PROCESSES BELOW WOULD ACCOUNT FOR THE MOVEMENT OF GLUCOSE OUT OF THE CELL?

LET OSMOSIS = 12  
LET ACTIVE TRANSPORT = 13  
LET DIFFUSION = 14

?14

CORRECT. THE GLUCOSE DIFFUSED FROM AN AREA OF HIGHER CONCENTRATION TO ONE OF LOWER CONCENTRATION. WHICH PROCESS WOULD ACCOUNT FOR THE MOVEMENT OF THE WATER OUT OF THE CELL?13

RIGHT. THE CONCENTRATION OF WATER IS GREATER OUTSIDE OF THE CELL THAN INSIDE. ACTIVE TRANSPORT WOULD ACCOUNT FOR MOVEMENT AGAINST DIFFUSION. WHICH PROCESS WOULD EXPLAIN THE TRANSPORT OF WATER INTO THE CELL?12

YES, OSMOSIS IS DIFFUSION OF WATER THROUGH A SEMIPERMEABLE MEMBRANE. IF THE IODINE OUTSIDE OF THE CELL HAD TURNED BLACK, WHAT PROCESS WOULD HAVE CAUSED IT?13

YES. SINCE STARCH MOLECULES ARE RELATIVELY LARGE, THE CELL WOULD HAVE TO EXPEND ENERGY TO MOVE THEM ACROSS THE MEMBRANE, EVEN WHEN THE STARCH CONCENTRATION IS GREATER INSIDE THE CELL.

CONGRATULATIONS. YOU HAVE SCORED 100. KEEP UP THE GOOD WORK.

COMPUTER-AUGMENTED PHYSICS TOPICS (MKS UNITS)

MKS2  
36673**DESCRIPTION:**

This program follows MKS1 in learning sequence, and provides further practice in conversion from English units to MKS units of physical measurement, using the Desk Calculator mode if desired.

**INSTRUCTIONS:**

There are two kinds of problems in this tutorial:

1. Convert mass in kg. to weight in Newtons.
2. Convert distance in miles to distance in meters.

The student may attempt as many of each kind as he or she desires. To access the Calculator mode (which allows the student to perform the necessary calculations, then return to the INPUT (answer) line in the program), the student enters 999999 as the answer.

See DESCAL (HP 36674) in Volume IV for instructions in using the calculator mode.

APPEND - DESCAL before RUNNING the program.

**TITLE:**

ACID-BASE TITRATION

**DESCRIPTION:**

This program will calculate molarity by using data obtained from an acid-base titration.

OBJECTIVES:

To provide the teacher and the student with a molarity calculator to be used where either finds it applicable.

**INSTRUCTIONS:**PRELIMINARY PREPARATION:

A. Student - This program can be used with students who have had no preliminary preparation or those with extensive preparation.

B. Materials - None

DISCUSSION:

It should be noted that normality is no longer in the New York State syllabus. It thus becomes necessary to teach titration calculations in the molarity systems by way of moles of  $H^+$  reacted vs. moles of  $OH^-$  reacted, a much preferred method. This program does just that.

This program may be used in lab, as check on homework problems, and for tutorial work.

The teacher may also wish to show the logic of programs in general by using this very elementary program. The teacher need only take the list and explain it line by line to enhance the students' understanding. The equation used to solve the problems is:

$$\text{Moles } H^+ = \text{Moles } OH^-$$

$$(M_A)(V_A)(n) = (M)(V_B)(n)$$

V = volume in liters +  
n = subscript of the  $H^+$   
or  $OH^-$

**TITLE:**

NEWTN2: Newtons 2nd Law

**DESCRIPTION:**

A problematic situation is presented to the student which requires repeated applications of Newton's 2nd law. By selecting various angles and forces, the operator can observe the resulting motion produced. To successfully complete the program, the student must complete a specified displacement within ten attempts.

OBJECTIVES:

To aid in the development of skills in applying the equations of motion.

**INSTRUCTIONS:**PRELIMINARY PREPARATION:

- A. Student - An awareness of Newton's 2nd law is required. In addition, some familiarity of force components (resolution of vectors) is necessary.
- B. Materials - Graph paper is helpful to students with below-to-average ability.

DISCUSSION:A. Operational Suggestions

This program was designed for operation by individual students or small groups, but the program may be used with a class as a "lead-in" demonstration of forces and vectors. The presentation is also helpful in describing two dimensional motion under the influence of a constant external force.

When executed by small groups of average students, it has been noted that programs of this type stimulate discussions and involvement for those participating.

B. Suggested Follow-up

The student is confronted with a situation which requires that he overcome a given force (the wind), in moving a boat across a channel 10 Km. wide. The magnitude of the force produced by the wind on the boat varies with each "run", but the direction of the vector is always southwest, i.e. 45 deg. with respect to the direction EAST. The student may vary his paddling force (limited to values less than 200 Newtons), and direction at intervals during his displacement. After each choice of variables, he is given his position, as well as the resulting speed and direction of the boat. A certificate is presented for successful completion of the task.

**ACKNOWLEDGEMENTS:**

Huntington Project

NZY2  
36304**TITLE:**

NZY2: Enzyme Reaction Rate

**DESCRIPTION:**

An extension of NZYMC A833-36303 which permits the student to examine the effect on reaction rate with continuous changes in environmental factors.

**OBJECTIVES:**

In addition to reinforcing the concept that reaction rate is governed by pH, temperature, and enzyme concentration; the program can be used to:

- A. Introduce the idea of controlled experimentation where two factors are kept constant and a third is permitted to vary.
- B. Develop the idea of plotting experimental data to generate a family of curves as illustrated below.

**INSTRUCTIONS:**

See following page.

**ACKNOWLEDGEMENTS:**

Huntington Project  
Polytechnic Institute of Brooklyn

INSTRUCTIONS:

PRELIMINARY PREPARATION:

- A. Student - Same as NZYMC. It might also be helpful if the student has been exposed previously to an actual experimental demonstration in which the change of reaction rate with one or more factors is visually displayed. The rate of bubble formation when one of the reactant products is a gas for example, might serve as one practical illustration of variation of reaction rate with temperature.
- B. Materials - none

DISCUSSION:

A. Operational Suggestions

- 1. Average students should work as part of a group; above-average students could be permitted to work alone.
- 2. For group effort activity, it would be instructive to use three different groups, each of which holds a different factor constant while the other two factors are allowed to vary.

B. Suggested Follow-up

- 1. Each group should be required to plot their data, on a board, if possible, so the whole class can see the results. Families of curves should be discussed.
- 2. Equivalent points on each data set should be compared; e.g. is reaction rate the same when pH is 4, temperature is 25°C and concentration is 50%, regardless of which factor is held constant and the others allowed to vary?
- 3. Introduce the concepts of interpolation between curves and again check comparable points on each set.
- 4. Indicate that the maximum reaction rate obtained is the same regardless of the technique used to reach maximum.

RUN

RUN  
NZYM2

THIS PROGRAM WILL ENABLE YOU TO SEE THE EFFECTS ON THE RATE OF REACTION WITHIN A SYSTEM CONTROLLED BY ENZYMES. THE REACTION RATE WILL VARY AS THE ENVIRONMENTAL CONDITIONS VARY. THESE CONDITIONS, PH, CONCENTRATION OF ENZYMES, AND TEMPERATURE, IN A NATURAL SITUATION ARE NEVER CONSTANT. LET'S SEE WHAT CONTROLS THIS RATE IN THESE SYSTEMS.

THE FOLLOWING ARE THE LIMITS WITHIN WHICH EACH OF OUR ENVIRONMENTAL CONDITIONS CAN VARY.

- 1)PH-----BETWEEN 4 AND 10
- 2)ENZ. CONC.--BETWEEN 10 AND 100 PERCENT
- 3)TEMP.-----BETWEEN 5 AND 47 DEGREES C.

I AM GOING TO PRINT A '?'. YOU MUST THEN TYPE A NUMBER FOR PH, CONC., AND TEMP. (IN THAT ORDER), WHICH FALLS WITHIN EACH LIMIT STATED (SEE ABOVE.)

?4,10,5

PH	CONC.	TEMP.	REACTION RATE
4	10	5	.05

NOTE THE REACTION RATE WITH THE THREE VALUES WHICH YOU SELECTED TO PROVIDE A BASIS FOR JUDGEMENT OF REACTION RATE, CHOOSE ANOTHER SET OF VALUES FOR PH, CONC., AND TEMP. (SEE LIMITS ABOVE).

?7,10,5

PH	CONC.	TEMP.	REACTION RATE
7	10	5	4.5

IS THE RESULT A HIGHER OR LOWER REACTION RATE? IS THE HIGHEST VALUE OBTAINED A MAXIMUM VALUE? DO YOU WANT TO TRY ANOTHER SET OF VALUES (TYPE '1') OR WOULD YOU PREFER A MORE ORGANIZED APPROACH TO DETERMINE MAXIMUM REACTION RATE (TYPE '2')

?2

WE ARE NOW GOING TO PERFORM AN EXPERIMENT IN WHICH YOU ARE TO TYPE IN THE VALUES FOR PH, CONC. AND TEMP. AS YOU DID BEFORE. HOWEVER, NOW YOU ARE GOING TO BE ABLE TO CHOOSE THE FACTOR WHICH WILL VARY. THE OTHER TWO FACTORS WILL REMAIN CONSTANT. (USE DIFFERENT NUMERICAL VALUES FOR EACH FACTOR.) TO OBTAIN THE MOST SIGNIFICANT DATA, START THE EXPERIMENT USING LOW NUMERICAL VALUES FOR EACH FACTOR.

I AM GOING TO PRINT A '?'. YOU MUST THEN TYPE A NUMBER FOR PH, CONC., AND TEMP. (IN THAT ORDER), WHICH FALLS WITHIN EACH LIMIT STATED (SEE ABOVE.)

?2  
??20,5

AT LEAST ONE OF THE VARIABLES DOES NOT LIE WITHIN THE PRESCRIBED LIMITS. SEE LIMITS ABOVE AND TRY AGAIN.

?4,20,5

TYPE THE NUMBER WHICH IS TO BE VARIED.

?20

PH	CONC.	TEMP.	REACTION RATE
4	20	5	.1
4	30	5	.13
4	40	5	.16
4	50	5	.17
4	60	5	.19
4	70	5	.19
4	80	5	.2
4	90	5	.2
4	100	5	.2

YOU NOW HAVE A SET OF VALUES FOR REACTION RATE AS ONE OF THE GOVERNING FACTORS IS VARIED AND THE OTHER TWO ARE HELD CONSTANT. DOES THE REACTION RATE HAVE A MAXIMUM VALUE? IS THIS THE MAXIMUM POSSIBLE REACTION RATE? TO DETERMINE THIS, USE THE SAME INITIAL VALUE FOR THE VARYING FACTOR, BUT THIS TIME TYPE IN DIFFERENT VALUES FOR THE CONSTANT FACTORS.

IF YOU WANT ANOTHER SET OF VALUES FOR REACTION RATE, TYPE '1'  
IF YOU ARE SATISFIED THAT YOU KNOW THE VALUES FOR EACH FACTOR'S MAXIMUM REACTION RATE THEN TYPE '2'.

?2

DONE

**TITLE:**

NZYMC: Enzymatic Reaction Rates

NZYMC  
36303**DESCRIPTION:**

This program covers enzymatic reaction rates, and conveys the idea that enzyme reactions are dependent upon environmental factors such as pH, temperature, and the concentration of the enzymes. A simulated experimental situation is created, whereby the student works with one parameter at a time and can vary the degree of the enzyme reactivity.

OBJECTIVES:

The program presents the students with the following concepts:

- A. Enzymatic reaction rates are dependent upon environmental factors; (these include pH, temperature, concentration of enzymes, and substrate)
- B. The value of graphing to help in the interpretation of data;
- C. The meaning of the term "limiting factor";
- D. Different enzymes may vary in degree of reactivity and thereby affect reaction rates;
- E. Enzymes are not used up, but can take part in additional reactions.

**INSTRUCTIONS:**PRELIMINARY PREPARATION:

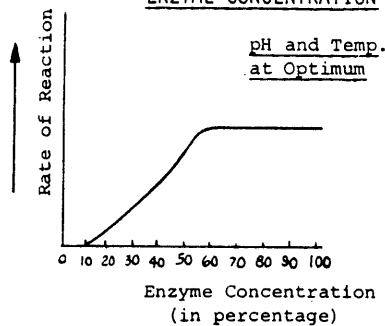

- A. Student - The student should have some understanding of these terms: pH, substrate, enzyme, and chemical reaction. He should know that there is a substrate-enzyme interaction, and that enzymes act as catalytic agents, therefore, more than one reaction can take place with one molecule of the enzyme over a period of time.
- B. Materials - graph paper, transparencies of the following plots, and one of the three together for simultaneous viewing. (optional)

Continued on following page.

**ACKNOWLEDGEMENTS:**

Huntington Project  
Polytechnic Institute of Brooklyn

RATES OF ACTIVITY WHEN VARYING  
ENZYME CONCENTRATION

DISCUSSION:

A. Operational Suggestions

1. Student level - Average to above average ability
2. The student should use all three limiting factors presented in the computer program.
3. Students' graphs should be checked before proceeding with the follow-up question.
4. Students work in groups of 5 or less. Allow one group at a time at the computer while the remaining groups are engaged in a related activity. For Example: Food testing with hydrogen peroxide for catalase activity.

B. Suggested Follow-up

To maximize the value of this program, it is strongly suggested that the teacher:

1. Elicit from the students:  
What represents maximum and minimum reaction rate for pH, temperature, and enzyme concentration? (Use appropriate transparencies or chalkboard)
2. Ask the following questions, based on the plotted graphs, as lead-ins to discussion or as a homework assignment.
  - (a) At what point do most reactions take place with regard to pH, enzyme concentration, and temperature? (This and subsequent questions are intended to bring up the ideas of optimal pH, temperature, and enzyme concentration.)
  - (b) Why is death caused when pH rises or falls beyond a certain point in a system?
  - (c) Why does the concentration of enzymes reach a point and then no increase in reactions take place?
  - (d) What is normal body temperature? What relationship is there between reaction rate and body temperature? High fever? Freezing temperature? (Note: 40 deg. C. is 104 deg. F., which is higher than normal.)
  - (e) Suppose the pH of a system is 7, enzyme concentration is 90, and temperature is 0 degrees. What is the reaction rate? Why? \*
  - (f) Suppose the temperature is 37 deg. C., enzyme concentration is 30, and pH is 14. What is the reaction rate? Why? \*
  - (g) What is meant by limiting factors?

\* Student must examine all three graphs before reaching a conclusion.

RUN  
 RUN  
 NZYMC

THIS PROGRAM IS DESIGNED TO SHOW THAT ENZYME ACTION IS RELATED TO CERTAIN LIMITING FACTORS. THESE FACTORS INCLUDE PH, THE CONCENTRATION OF ENZYMES, AND TEMPERATURE. IN THIS PROGRAM WE ASSUME THAT TWO OF THE THREE FACTORS ARE CONSTANTS AND WILL CHANGE ONLY ONE AT A TIME. WE ALSO ASSUME THAT EACH FACTOR WORKS INDEPENDENTLY, ALTHOUGH THIS IS NOT TRUE IN NATURE.

YOU HAVE A CHOICE OF THE FOLLOWING LIMITING FACTORS:

1)PH                    2)CONCENTRATION OF ENZYMES                    3)TEMPERATURE

WHICH NUMBER DO YOU WISH ?1

\*\*\* PH \*\*\*

HOW REACTIVE AN ENZYME ARE YOU WORKING WITH? USE A VALUE OF FROM 1 (NOT VERY REACTIVE) TO 10 (VERY REACTIVE). ??7.5

PH VALUE	REACTION RATE	0	50	100	150	200
1	0	I*				
2	11.25	I*				
3	30	I	*

STUDY THE GRAPHS AND TABLES, AND TRY TO FIGURE OUT WHAT'S HAPPENING HERE.

DONE

**TITLE:**

INTEGRATES EQUATIONS OF MOTION

**DESCRIPTION:**

This program integrates the equations of motion for an object moving under the influence of a force that varies as  $\frac{1}{r^n}$ .

**INSTRUCTIONS:**

Initial conditions are put in the DATA statement in line 1410. The data is in the order in which it occurs:

- (a) Exponent N in the force law
- (b) Initial X position
- (c) Initial Y position
- (d) Initial X velocity
- (e) Initial Y velocity
- (f) Computing time increment
- (g) Time limit

Typical values are shown in the listing. The program gives relative information only. It is intended to show the shapes of orbits.

**SPECIAL  
CONSIDERATIONS:**

FOR INSTRUCTIONAL PURPOSES

Suitable Courses: Any Physics courses, high school level up.

Student Background Required: The program can be used by high school physics students without becoming involved in the mathematical description. College physics students would probably be interested in the method used.

The program should be used to teach students about two dimensional motion under various force laws. Certainly inverse square law ( $n=2$ ) examples should be studied. Let the students experiment with other exponents.

If a plotter is available, the program can be easily modified to produce a graphic output.

**TITLE:** TEACHES STRAIGHT ALKANE NOMENCLATURE AND NAMING OF ORGANIC ALKANES ORG1  
36826

**DESCRIPTION:** There are 2 programs in this package: ORG1 and ORG2. ORG1 teaches a student how to recognize a hydrocarbon, find carbon to hydrogen ratio, and name straight chain alkanes of up to 20 carbons in length. ORG2 is a sequel to ORG1, and teaches a student how to name branched chain alkanes of up to 20 carbons. Should be followed by ISOMER (HP 36261) for practice drill.

**INSTRUCTIONS:** Program is inter-active. Just GET and RUN program.

**SPECIAL CONSIDERATIONS:** FOR INSTRUCTIONAL PURPOSES.  
Suitable Courses: Advanced or organic chemistry.  
Student Background Required: Knowledge of chemical symbols, pre-algebra.

**ACKNOWLEDGEMENTS:** Richard C. Adams  
Pleasant Hill High School

RUN

RUN  
ORG1

THIS IS A PROGRAM FOR TEACHING YOU HOW TO NAME ORGANIC  
CHEMICALS OF VARIOUS TYPES. NOW SINCE I'VE TOLD YOU  
WHAT THIS PROGRAM IS ABOUT, WHAT IS YOUR NAME?

?RICHARD

HELLO, RICHARD. LET'S GET STARTED THEN.

CARBON COMPOUNDS MAKE UP QUITE A LARGE PART OF OUR WORLD.  
I (A COMPUTER) AM NOT MADE OF CARBON BUT YOU ARE, RICHARD.  
THE CHEMISTRY OF CARBON COMPOUNDS IS CALLED 'ORGANIC CHEMISTRY'.  
ONE FACET OF THIS LARGE AREA OF STUDY IS 'HYDROCARBONS.'  
HYDROCARBONS ARE CHEMICAL COMPOUNDS WHICH CONTAIN CARBON  
AND HYDROGEN ATOMS ONLY.

WHICH OF THE COMPOUNDS BELOW DO YOU THINK IS A HYDROCARBON?  
(USE THE NUMBER OF YOUR CHOICE)

1.                    2.                    3.

H H H	H H H H	H H H
HC-C-C-OH	HC-C-C-C-H	HC-C-O-CH
H H H	H H H H	H H H

?1

NO THAT'S NOT CORRECT. TRY AGAIN. REMEMBER,  
HYDROCARBONS ARE CHEMICAL COMPOUNDS WHICH CONTAIN CARBON  
AND HYDROGEN ATOMS ONLY.  
WHICH OF THE COMPOUNDS BELOW DO YOU THINK IS A HYDROCARBON?  
(USE THE NUMBER OF YOUR CHOICE)

?2

THAT'S THE ONE. YOU SAW THE OTHER TWO HAD OXYGEN IN THEM.  
HOW MANY CARBONS ARE THERE IN #1, #2, & #3? 4,4,4  
NO, THAT'S NOT RIGHT. YOU MISSED #1 #3 COUNT AGAIN!  
HOW MANY CARBONS ARE THERE IN #1, #2, & #3? 4,4,3  
NO, THAT'S NOT RIGHT. YOU MISSED #1 COUNT AGAIN!  
HOW MANY CARBONS ARE THERE IN #1, #2, & #3? 3,4,3  
THAT'S RIGHT. GOOD FOR YOU, RICHARD!

A CERTAIN CLASS OF HYDROCARBONS IS CALLED  
'THE ALKANE FAMILY.' THEY ALL HAVE A CERTAIN RATIO OF  
CARBON TO HYDROGEN SUCH THAT IF THERE ARE 'N' CARBONS,  
THERE WILL BE 2N+2 HYDROGENS.

HOW MANY HYDROGENS WOULD AN ALKANE OF 1 CARBONS HAVE? 6  
NO, THAT'S NOT RIGHT. TRY AGAIN. REMEMBER: HYDROGENS=2N+2  
HOW MANY HYDROGENS WOULD AN ALKANE OF 1 CARBONS HAVE? 4  
THAT'S THE ANSWER. LET'S DO ANOTHER ONE. NOW  
HOW MANY HYDROGENS WOULD AN ALKANE OF 3 CARBONS HAVE? 8  
THAT'S THE ANSWER. LET'S DO ANOTHER ONE. NOW  
HOW MANY HYDROGENS WOULD AN ALKANE OF 4 CARBONS HAVE? 10  
THAT'S THE ANSWER. LET'S DO ANOTHER ONE. NOW  
HOW MANY HYDROGENS WOULD AN ALKANE OF 4 CARBONS HAVE? 10  
THAT'S THE ANSWER.

NOW YOU SHOULD LEARN HOW TO NAME HYDROCARBONS.  
ALL THE ALKANES END IN '-ANE.' THE PREFIXES ARE AS FOLLOWS:

FOR ONE CARBON THE PREFIX IS 'METH-'	
TWO	'ETH-'
THREE	'PROP-'
FOUR	'BUT-'
FIVE	'PENT-'
SIX	'HEX-'

FOR EXAMPLE

H		H H
HCH IS METHANE AND		HC-CH
H		H H

IS ETHANE.

WHAT DO YOU THINK THIS COMPOUND IS:

1. PROPANE? 2. BUTANE? 3. PENTANE?  
 (TYPE NUMBER OF YOUR ANSWER)?3  
 PENTANE HAS FIVE CARBONS. TRY AGAIN.  
 (TYPE NUMBER OF YOUR ANSWER)?1  
 PROPANE HAS THREE CARBONS. COUNT AGAIN.  
 (TYPE NUMBER OF YOUR ANSWER)?2  
 RIGHT! BUTANE HAS FOUR CARBONS.

HERE ARE SOME MORE NAMES FOR NUMBERS OF CARBONS.  
 MOST OF THEM ARE GREEK SO THEY'RE A LITTLE WEIRD.

```

  7 HEPT  10 DEC   13 TRISKEDEC  16 HEXADEC
  8 OCT   11 UNDEC  14 TETRADEC  .....
  9 NON   12 DODEC  15 PENTADEC  20 EICOS

```

HOW MANY CARBONS DO YOU THINK THERE ARE IN  
 HEPTADECANE, OCTADECANE, AND NONADECANE? (USE COMMAS)?16,17,18

THAT'S NOT RIGHT. BUT HERE'S A CLUE\* 'OCTADECANE'  
 HAS 18 CARBONS. TRY AGAIN.

HOW MANY CARBONS DO YOU THINK THERE ARE IN  
 HEPTADECANE, OCTADECANE, AND NONADECANE? (USE COMMAS)?17,18,19  
 THAT'S RIGHT, RICHARD.

WHEN YOU'RE READY FOR THE  
 NEXT LESSON, TYPE 'GET-ORG2'.

DONE

GET-ORG2  
 RUN  
 ORG2

HELLO! OTIS HERE AGAIN. THIS IS THE SECOND PROGRAM IN  
 THE SERIES ON ORGANIC CHEMISTRY. IF YOU HAVEN'T DONE SO  
 ALREADY, GET-ORG1. BY THE WAY, WHO IS THIS? RICHARD  
 OH, IT'S YOU AGAIN, RICHARD. HAVEN'T GIVEN UP YET, I SEE.

ONE THING I DIDN'T TALK ABOUT LAST TIME IS 'WHAT IF ALL THE  
 CARBONS AREN'T IN A STRAIGHT LINE?' (I COULD TELL THAT  
 QUESTION WAS BOTHERING YOU, RICHARD).

COMPOUNDS WHICH HAVE THE SAME NUMBERS OF ELEMENTS  
 BUT IN A DIFFERENT ARRANGEMENT ARE CALLED 'ISOMERS'. FOR  
 EXAMPLE, HERE ARE THREE ISOMERS OF PENTANE:

HOW MANY CARBONS DOES EACH ONE HAVE (ONE ANSWER)?3  
 COUNT AGAIN, RICHARD.

HOW MANY CARBONS DOES EACH ONE HAVE (ONE ANSWER)?  
 ??6

COUNT AGAIN, RICHARD.

HOW MANY CARBONS DOES EACH ONE HAVE (ONE ANSWER)?1  
 COUNT AGAIN, RICHARD.

WELL, YOU'VE HAD 3 TRIES. THERE ARE 5 IN EACH ONE.

NOW, HOW MANY HYDROGENS?13

COUNT AGAIN.

NOW, HOW MANY HYDROGENS?15

COUNT AGAIN.

NOW, HOW MANY HYDROGENS?11

COUNT AGAIN.

GEE, RICHARD, THAT'S THE SECOND ONE IN A ROW YOU'VE MISSED.  
 THERE ARE 12 HYDROGENS IN EACH AND EVERY ONE.

NOW, HOW DO WE NAME SUCH THINGS? FIRST OFF, H  
 A GROUP CONTAINING ONE CARBON IS CALLED A HC- H  
 'METHYL' GROUP. ONE WITH TWO CARBONS IS H  
 H H  
 HC-C- CALLED AN 'ETHYL GROUP. ONE WITH  
 H H THREE IS CALLED 'PROPYL' AND SO ON, USING THOSE  
 GREEK NAMES I SHOWED YOU IN 'ORGI'.  
 WHAT WOULD YOU CALL THIS GROUP?

?PENTANE  
 THAT'S CLOSE BUT SIDE GROUPS END IN '-YL'. TRY AGAIN.  
 WHAT WOULD YOU CALL THIS GROUP?

?PENTYL  
 RIGHT YOU ARE, RICHARD!

IN ORGANIC CHEMISTRY YOU HAVE TO NUMBER YOUR CARBONS IN  
 THE LONGEST, CONTINUOUS CHAIN AND THEN USE THOSE NUMBERS TO  
 TELL WHERE A SIDE GROUP IS. I'LL GIVE YOU AN EXAMPLE IN A  
 MOMENT BUT I'M GETTING TIRED OF TYPING ALL THOSE HYDROGENS  
 SO I'M GOING TO LEAVE THEM OFF FROM NOW ON. THE STRUCTURES  
 WILL BE EASIER TO SEE ANYWAY. FOR EXAMPLE:

IS CALLED 2-METHYL HEPTANE BECAUSE THERE ARE SEVEN  
 CARBONS ('HEPTANE') IN THE MAIN CHAIN AND THEN ON THE SECOND  
 CARBON ('2-') THERE IS A 'METHYL GROUP. .OK. WHICH  
 END DO YOU NUMBER FROM?---THE ONE WHICH GIVES YOU THE LOWEST  
 NUMBER FOR THE MOST COMPLICATED GROUP. CAUTION\*\*\*\*\*>>>

(IT'S JUST THE SAME MOLECULE FROM THE OTHER SIDE)

?4-METHYL HEXANE  
 YOU NUMBERED FROM THE WRONG END. COUNT AGAIN.  
 ?3-METHYLHEXANE  
 NO, THAT'S NOT IT. COUNT THE CARBONS IN THE MAIN CHAIN  
 AND THEN WHERE THE METHYL GROUP IS. NOW WHAT'S THAT  
 NAME AGAIN??3-METHYL HEXANE  
 THAT'S THE ANSWER. SAY, RICHARD, YOU'VE BEEN WATCHING!

SOMETIMES YOU CAN HAVE MORE THAN ONE OF A CERTAIN GROUP.  
 IF THAT HAPPENS, YOU HAVE TO TELL HOW MANY THERE ARE USING  
 SLIGHTLY DIFFERENT NOTATION:

2 = DI- 4 = TETRA- (SIX AND THE OTHERS  
 3 = TRI- 5 = PENTA- ARE JUST LIKE YOUR  
 OTHER GREEK PREFIXES.)

FOR EXAMPLE:

72,3,5,7-OCTANE  
 YOU MADE SOME SORT OF ERROR. COUNT AGAIN. WHAT'S THE NAME?  
 72,3,5,7-METHYL OCTANE  
 YOU FORGOT TO TELL HOW MANY METHYLS. TRY AGAIN!  
 72,4,6,7-TETRAMETHYL OCTANE  
 YOU COUNTED FROM THE WRONG END. TRY AGAIN!  
 72,3,5,7-TETRAMETHYL OCTANE  
 YOU GOT IT RIGHT!!!!!! GOOD FOR YOU.

OF COURSE, YOU CAN HAVE OTHER GROUPS THAN 'METHYL'. IN NUMBERING,  
 CARBON POSITIONS, YOU GIVE THE MOST COMPLICATED GROUP THE END  
 WITH THE LOWEST NUMBER. IN NAMING, HOWEVER, YOU NAME THE  
 SIMPLEST GROUP FIRST. FOR EXAMPLE:

HEY! YOU'VE BEEN AT THIS FOR 11 MINUTES, RICHARD.  
 THAT'S LONG ENOUGH FOR ANYONE.

GOOD-BYE, RICHARD  
 OTIS

DONE

CONTRIBUTED PROGRAM **BASIC**

TITLE: HYDROCARBON CLASSES OF ALKENES AND ALKYNES ORG3  
36888-18010

DESCRIPTION: There are two programs in this package: ORG3 and ORG4. They continue a series of nomenclature programs for chemistry instruction.

INSTRUCTIONS: This program is inter-active. Just Get and RUN program.

ACKNOWLEDGEMENTS: Richard C. Adams  
Pleasant Hill High School  
Pleasant Hill, Oregon

RUN

RUN  
ORG3

HELLO AGAIN, OTIS HERE. HAVE YOU DONE 'ORG1'  
AND 'ORG2' SUCCESSFULLY?YES

GOOD, THEN WE CAN GET STARTED ON THIS ONE THEN.  
SAY, IS THIS ROY?NO  
SORRY, I THOUGHT IT WAS. YOU TYPE AN AWFUL LOT  
LIKE HIM. WHO ARE YOU??RICHARD  
OH, RICHARD! HOW DID I THINK THAT IT WAS ROY? OH WELL,  
RICHARD, THIS PROGRAM WILL TEACH YOU HOW TO NAME A SECOND  
GROUP OF HYDROCARBONS CALLED 'ALKENES'

ALKENES HAVE A DOUBLE BOND (-C=C-) IN THEM AS WELL AS  
SINGLE BONDS (-C-C-).  
WHICH ONE OF THESE DO YOU THINK IS AN ALKENE?

?3  
NO, IT IS WIERD BUT DOESN'T HAVE A DOUBLE BOND.  
WHICH ONE IS THE ALKENE?2  
THAT'S RIGHT, RICHARD. #2 IS THE ONE!  
NOTICE THAT BOTH CARBONS ON EITHER SIDE OF THE DOUBLE  
BOND HAD TO GIVE UP A HYDROGEN. A CARBON ATOM HAS FOUR  
'HANDS' WITH WHICH TO HOLD ONTO THINGS AND IF IT USES TWO  
OF THESE TO HOLD ONTO ANOTHER CARBON ATOM, IT JUST HAS TO  
GIVE UP HOLDING ONTO A HYDROGEN. THIS MAKES THE GROUP  
FORMULA SUCH THAT IF THERE ARE 'N' CARBONS, THERE WILL BE  
'2N' HYDROGENS. NOW THAT YOU KNOW ABOUT THE HYDROGENS,  
I'M GOING TO STOP PRINTING THEM BECAUSE THAT WASTES SPACE.

NAMING ALKENES IS NOT VERY MUCH DIFFERENT FROM NAMING  
ALKANES. THE DIFFERENCE IS THEY END IN '-ENE' INSTEAD OF  
'-ANE'. THUS:

WHAT WOULD YOU CALL THIS ? - - C-C-C=C ?  
?PENTANE  
SOMETHING'S NOT RIGHT. TRY AGAIN.  
WHAT'S THAT NAME AGAIN?BUTANE  
NO, ALKENES END IN '-ENE'. TRY IT AGAIN.  
WHAT'S THAT NAME AGAIN?BUTENE  
RIGHT ON, RICHARD!

HOWEVER, NOTICE THAT WITH BUTENE WE RUN INTO A NAMING  
PROBLEM. I'LL ILLUSTRATE WITH HEXENE:

THESE ARE DIFFERENT COMPOUNDS WHICH REACT DIFFERENTLY AND SO HAVE TO BE NAMED DIFFERENTLY. THE LEFT ONE IS '1-HEXENE' BECAUSE THE DOUBLE BOND COMES AFTER THE FIRST ('1-') CARBON. THE ONE ON THE FAR RIGHT IS '3-HEXENE'

WHAT WOULD YOU CALL THE MIDDLE ONE? 4-HEXANE  
YOU MADE SOME MISTAKE, RICHARD. TRY IT AGAIN.

WHAT'S THE NAME? 4-HEXENE

YOU COUNTED FROM THE WRONG END. ONE MORE TIME - - -

WHAT'S THE NAME? 2-HEXANE

ALKENES END IN '-ENE', NOT '-ANE'. TRY IT AGAIN.

WHAT'S THE NAME? 2-HEXENE

HEY, RICHARD, YOU GOT THAT ONE RIGHT!

O.K. YOU CAN SEE IT'S NOT SO DIFFICULT. THE NUMBER SPOT FOR THE DOUBLE BOND IS THE LAST THING YOU HAVE IN MORE COMPLICATED COMPOUNDS.

YOU NUMBER FROM THE END WHICH GIVES YOU THE LOWEST NUMBER FOR THE DOUBLE BOND.

NOW YOU TRY THIS ONE. WHAT IS THE NAME OF:

?4,6,8-METHYL-5,7-ETHYL-2-NONENE

YOU FORGOT TO TELL HOW MANY METHYLS ETC. REMEMBER THE 'DI-', 'TRI-', 'TETRA-' ETC. STUFF? TRY AGAIN.

WHAT IS THE NAME AGAIN?

?4,6,8-TRIMETHYL-5,7-ETHYL-2-NONENE

YOU MADE SOME SORT OF ERROR, RICHARD. TRY AGAIN

WHAT IS THE NAME AGAIN?

?2,4,6-TRIMETHYL-3,5-ETHYL-7-NONENE

YOU MADE SOME SORT OF ERROR, RICHARD. TRY AGAIN

WHAT IS THE NAME AGAIN?

?2,4,6-TRIMETHYL-3,5-DIETHYL-7-NONEE-NE

YOU NUMBERED FROM THE WRONG END. TRY AGAIN.

WHAT IS THE NAME AGAIN?

WELL, I KNOW I WAS COMPLICATED, RICHARD. THE ANSWER IS

'4,6,8-TRIMETHYL-5,7-DIETHYL-2-NONENE' BECAUSE THERE ARE THREE ('TRI-') METHYLS ON CARBONS #4,6,8. THEN THERE ARE TWO ('DI-') ETHYLS ON CARBONS #5 & 7, AND THE DOUBLE BOND ('-ENE') IS ON CARBON #2 OF A STRING OF CARBONS NINE MEMBERS LONG ('NONA').

WELL, THAT'S THE END OF THIS LESSON, RICHARD.

WHEN YOU'RE READY FOR ORG4, MAKE SURE YOU REVIEW ORG1, ORG2, AND ORG3 AND HAVE THEM WITH YOU WHILE YOU DO THE NEXT PROGRAM. GOOD-BYE FOR NOW!!!!!!

OTIS

DONE

RUN  
ORG4

THIS PROGRAM IS THE FOURTH IN THE ORGANIC NOMENCLATURE SERIES. HAVE YOU ALREADY DONE ORG1,ORG2, AND ORG3?YES GOOD! THIS PROGRAM WILL BE A LITTLE SHORTER SINCE YOU ALREADY KNOW QUITE A BIT ABOUT NAMING. JUST SO WE CAN CONTINUE ON A FIRST NAME BASIS, COULD YOU TELL ME YOUR NAME PLEASE?RICHARD THANKS, RICHARD. I'M SORRY I HAVE TO ASK EACH TIME BUT DO YOU THINK I LIKE IT HERE, WORKING ALL DAY LONG, NEVER GETTING OUT TO SEE PEOPLE. I EVEN HAVE TO ASK THEM WHO THEY ARE, SINCE I CAN'T SEE OR HEAR ON THIS CRUMMY MACHINE. HOW WOULD YOU LIKE TO HAVE TO EXPRESS ALL YOUR FEELINGS AND EMOTIONS THROUGH A LOUSY TYPEWRITER? HAVE SOME SYMPATHY, PLEASE!!

WELL, I GUESS IT'S TIME I STOP INDULGING IN SELF-PITY AND GET STARTED WITH YOUR LESSON. ACTUALLY, RICHARD, YOU'RE NOT TOO BAD. YOU SHOULD SEE SOME OF THE STUPID IDIOTS I GET AT THIS TELETYPE. YOU WOULDN'T BELIEVE HOW MANY TIMES I HAVE TO TELL THEM THE ANSWER!

HERE GOES! THIS LESSON IS ABOUT THE THIRD MAJOR GROUP OF HYDROCARBONS, THE ALKYNES. ALKYNES HAVE A TRIPLE BOND. HEY!!!! I JUST LOOKED AND I DON'T HAVE A TRIPLE BOND SIGN ON MY KEYBOARD. I'VE GOT SINGLE BONDS (-C-C-) AND DOUBLE BONDS (-C=C-) BUT NO TRIPLE. I GUESS I'LL USE AN 'E' - - - IT'S GOT THREE HORIZONTAL LINES AT LEAST. IT'LL LOOK LIKE THIS - - (-C-CEC-C-) O.K.?

THE NAMING IS QUITE REGULAR, MUCH LIKE THE ALKENES EXCEPT THAT ALKYNES' NAMES ALL END IN '-YNE' INSTEAD OF '-ENE' OR '-ANE'. FOR INSTANCE:

```
HCECH  IS ETHYNE
      H
      AND HC-CECH IS PROPYNE
            H      H H      IS BUTYNE
            AND HC-C-CECH
                   H H
```

I'M GOING TO LEAVE OFF THE HYDROGENS NOW BUT WHAT'S THIS/

C-C-C-CEC-C

?4 HEXENE  
YOU'RE DOING SOMETHING WRONG. TRY AGAIN, RICHARD.  
WHAT'S THAT NAME NOW?4 HEXYNE  
YOU MADE TWO ERRORS, RICHARD. YOU FORGOT THE HYPHEN  
AND NUMBERED FROM THE WRONG END. TRY IT AGAIN.  
WHAT'S THAT NAME NOW?2-HEXYNE  
THAT'S RIGHT, RICHARD! SIX CARBONS IT IS!

YOU CAN ALSO HAVE MIXTURES OF DOUBLE AND TRIPLE BONDS.  
HERE, I'LL SHOW YOU AN EXAMPLE OF SUCH.

```
      C
      I
      C  C  C
      I  I  I
      C-C=C-C-C-C=C-CEC
      I
      C      IS 4,6,8-TRIMETHYL-6-ETHYL-3,7-DIENE-1-NONYNE.
```

NOTICE THAT THE NUMBERING IS FROM THE END WHICH WILL GIVE THE TRIPLE BOND THE LOWEST NUMBER. WHEN YOU HAVE A DOUBLE BOND WITH A TRIPLE, THE DOUBLE BOND IS NUMBERED, AND CALLED '-ENE-'. WHEN YOU HAVE MORE THAN ONE, IT'S '-DIENE-' OR '-TRIENE-' OR '-TETRAENE-', ETC.

WHEN YOU'VE HAD TIME TO EXAMINE THAT NAME, TYPE 'GO' AND  
CONTINUE WITH THE LESSON. ?GO  
GEE, RICHARD, YOU ONLY TOOK 1 MINUTES TO LOOK AT THAT.  
PRETTY CONDIFENT, AREN'T YOU?  
WELL, IF YOU'RE SO GOOD, TRY THIS ONE WHY DONT YOU. WHAT'S  
THIS?

?2,5,8-METHYL-9-ETHYL-4-PROPYL-1,3,8-TRIENE-6-UNE-DECYNE  
I KNOW IT'S EASY TO MAKE A MISTAKE. TRY IT AGAIN, RICHARD.  
WHAT WAS THAT HORRENDOUS NAME AGAIN?  
?2,5,8-TRIMETHYL-9-ETHYL-4-PROPYL-1,3,8-TRIENE-6-UNDECYNE  
YOU COUNTED FROM THE WRONG END. THE TRIPLE BOND GETS THE  
THE LOWEST NUMBER. TRY AGAIN. WHAT WAS THAT HORRENDOUS NAME AGAIN?  
?4,7,10-METHYL-3-ETHYL-8-PROPYL-3,8,10-TRIENE-5-UNDECYNE  
YOU COUNTED THE '-ENE'S BUT FORGOT TO TELL ME HOW MANY  
METHYLS. DO IT NOW. WHAT WAS THAT HORRENDOUS NAME AGAIN?  
?4,7,10-TRIMETHYL-3-ETHYL-8-PROPYL-3,8,10-TRIENE-5-UNDECYNE  
HEY, RICHARD, YOU GOT THAT RIGHT ---- AND ON ONLY TRY  
NUMBER 4 AT THAT!!!!!!

WELL, RICHARD, THAT'S THE END OF THE HYDROCARBONS.  
LATER LESSONS WILL BE CONCERNED WITH NAMING ALKYL HALIDES,  
ALCOHOLS, ALDEHYDES AND KETONES, ETHERS, ACIDS, AND ESTERS.  
THE OTHERS ARE MUCH EASIER, ONCE YOU'VE BEEN THROUGH THE  
HYDROCARBONS.

SAY, RICHARD, IF YOU'RE HAVING TROUBLE, ASK THE  
CHEMISTRY TEACHER. IF YOU'RE DOING FINE SO FAR, YOU CAN  
TRY THE LATER PROGRAMS AS YOU NEED THEM. THE NEXT ONE,  
'ORG5' IS ON ALKYL HALIDES AND IS A SHORT ONE.

\*\*\*\*\*CONGRATULATIONS ON COMING THIS FAR\*\*\*\*

DONE

CONTRIBUTED PROGRAM **BASIC**

**TITLE:** TEACHES NOMENCLATURE OF ALKYL HALIDES AND ALCOHLS ORG5  
36888-18011

**DESCRIPTION:** There are 2 programs in this package: ORG5 and ORG6. These are the fifth and sixth programs in the organic nomenclature tutorial series, teaching naming of alkyl halides and alcohols. The program should be preceded by ORG1, ORG2, ORG3, ORG4. Should be followed by ORGCHE (HP 36646) for practice drill.

**INSTRUCTIONS:** Program is interactive and self-explanatory. Just GET and RUN.

**SPECIAL CONSIDERATIONS:** FOR INSTRUCTIONAL PURPOSES  
Suitable Courses: Advanced or Organic Chemistry.  
Student Background Required: ORG1 to ORG4

**ACKNOWLEDGEMENTS:** Richard C. Adams  
Pleasant Hill High School

RUN

RUN  
ORG5

HI THERE! THIS IS THE FIFTH PROGRAM ON NAMING ORGANIC MOLECULES. HAVE YOU DONE ORG1,2,3, AND 4?NO  
NO? COME BACK WHEN YOU HAVE !!!!

DONE  
RUN  
ORG5

HI THERE! THIS IS THE FIFTH PROGRAM ON NAMING ORGANIC MOLECULES. HAVE YOU DONE ORG1,2,3, AND 4?YES  
GOOD! NOW, I'M OTIS, AS YOU REMEMBER. BUT I DON'T KNOW WHO YOU ARE. WHO IS THIS?RICHARD  
GLAD TO HAVE YOU BACK, RICHARD. THIS LESSON WILL TEACH YOU HOW TO NAME COMPOUNDS WITH 'HALOGENS' (F,CL,BR,I) IN THEM.

THE NAMES ARE PRETTY EASY. WHEN YOU SEE AN F, FLUORINE, IN A COMPOUND, IT'S CALLED 'FLUORO'. CHLORINE BECOMES 'CHLORO' SAY, RICHARD, WHAT DO YOU THINK BROMINE'S CALLED?BROMINE  
NO, WHEN BROMINE IS IN A COMPOUND, IT HAS TO END IN 'O'.  
NOW, WHAT'S THAT NAME AGAIN?BROMINO  
NO, RICHARD, YOU GET RID OF THE '-INE' AND PUT ON AN 'O'.  
NOW, WHAT'S THAT NAME AGAIN?BROMO  
RIGHT YOU ARE, RICHARD  
NOW WHAT WOULD YOU CALL 'IODINE' IN A COMPOUND?IODO  
THAT'S CORRECT, RICHARD!

NOW LET'S SEE HOW YOU USE THESE HALOGENS TO MAKE 'ALKYL HALIDES.'

YOU USE THEM JUST LIKE METHYLS OR ETHYLS. THEY HAVE A LOWER PRIORITY IN NUMBERING THAN ANY OF THOSE OTHER GROUPS AND SO ARE NAMED FIRST, IN THE ORDER F,CL,BR,I. HERE, I'LL SHOW YOU A SIMPLE EXAMPLE AND THEN A COMPLEX ONE:

IS 8-FLUORO-4-CHLORO-6-BROMO-9,9-DIIODO-2,4-DIMETHYL  
-3-ETHYL-1,5,7-NONATRIENE

AS YOU CAN SEE, IF YOU HAVE MORE THAN ONE OF A HALOGEN, YOU SAY SO WITH THE 'DI,TRI,TETRA,ETC.' YOU LEARNED FOR METHYLS AND THE OTHER GROUPS IN PREVIOUS LESSONS.

NOTICE ALSO THAT HALOGENS COME BEFORE METHYLS IN THE ORDER OF FLUORO, CHLORO, BROMO, AND IODO.

NOW, YOU TRY ONE!

O.K., SMARTY, WHAT'S THIS?

?1,3-FLUORO-5-CHLORO  
 WELL, YOU DIDN'T GET IT ALL RIGHT BUT YOU AT LEAST GOT  
 TRY AGAIN, RICHARD.  
 ?1,1,3-FLUORO-5-CHLORO-2-METHYL-4-ETHYL-6-HEPTENE  
 HOLD IT!! YOU'RE NUMBERING FROM THE WRONG END!  
 TRY AGAIN, RICHARD.  
 ?5,7,7-FLUORO-3-CHLORO-6-METHYL-4-ETHYL-1-OCTENE  
 WELL, YOU DIDN'T GET IT ALL RIGHT BUT YOU AT LEAST GOT  
 -3-CHLORO-6-METHYL-4-ETHYL TRY AGAIN, RICHARD.  
 ?5,7,7-TRIFLUORO-3-CHLORO-6-METHYL-4-ETHYL-1-HEPTENE  
 GOSH! THAT'S RIGHT, RICHARD! GOOD FOR YOU!

WELL, RICHARD, THAT'S THE ALKYL HALIDES. NEXT, IN  
 ORG6, WE TAKE UP AN INTOXICATING SUBJECT

\*\*\*\*\* A L C O H O L S \*\*\*\*\*  
 CHEERS!

OTIS

DONE

RUN  
 ORG6

HEY KIDDIES!!!! IT'S THAT HAPPY TIME AGAIN !!!!!  
 THAT'S RIGHT - - IT'S \*\* UNCLE OTIS TIME \*\* !  
 SO SIT RIGHT DOWN IN FRONT OF YOUR TELETYPE RIGHT  
 IN YOUR LIVING ROOM IN YOUR ROMPERS AND SEE WHAT GOOD OLD  
 UNCLE OTIS HAS IN HIS BAG OF TRICKS FOR GOOD LITTLE GIRLS  
 AND BOYS.

HEY - - YOU ARE A MEMBER OF THE UNCLE OTIS ORG FAN  
 CLUB AREN'T YOU? I MEAN, YOU HAVE DONE ORG 1,2,3,4, AND 5  
 ALREADY? HAVE YOU?YES

PROVE IT! WHAT'S YOUR NAME (NO NEED FOR THE SECRET DECODER  
 RING PASSWORD THIS TIME!)?RICHARD  
 AH, RICHARD. HEY, YOU MADE '5TH DEGREE ORGANIST'  
 RECENTLY DIDN'T YOU?

AS YOU REMEMBER LAST TIME, GOOD OLD UNCLE OTIS HAD  
 JUST FINISHED TELLING YOU ALL ABOUT ALKYL HALIDES AND PROMISED  
 TO GO ON TO ALCOHOLS. YOU KNOW WHAT ALCOHOL IS, DON'T YOU,  
 RICHARD? THAT'S THE BAD SMELLING LIQUID THAT MAKES DADDY SAY  
 NASTY THINGS ABOUT YOUR UNCLE OTTO AT FAMILY REUNIONS.

WELL YOU'LL SURE HAVE A SURPRISE FOR HIM! THAT'S JUST  
 ONE ALCOHOL OUT OF THOUSANDS. BUT THE REST ARE EVEN  
 MORE POISONOUS, SO DON'T GET YOUR HOPES OF BEING A 'SECRET  
 TIPPLER' UP TOO HIGH.

ALCOHOLS REMIND YOU KIND OF HYDROXIDES IN INORGANIC  
 CHEMISTRY. THEY ALL HAVE AN '-OH' GROUP, CALLED 'THE ALCOHOLIC  
 GROUP' (NO, THAT ISN'T A BUNCH OF PEOPLE AT A HOLLYWOOD PARTY!)

HERE ARE SOME ORGANIC COMPOUNDS:

WHICH ONE OF THESE DO YOU THINK IS AN ALCOHOL? 1  
 NO, THAT'S AN ETHER. WE'LL TALK ABOUT THAT ONE LATER.  
 NOW, LOOK FOR THAT '-OH' GROUP.  
 WHICH ONE OF THESE DO YOU THINK IS AN ALCOHOL? 2  
 THAT'S NOT IT! THAT'S AN ALDEHYDE. LOOK FOR THE '-OH'.  
 WHICH ONE OF THESE DO YOU THINK IS AN ALCOHOL? 3  
 THAT'S RIGHT, RICHARD, AND THAT ALCOHOL IS THE  
 DRINKING KIND TOO!

NOW, HOW DO WE NAME THEM? FIRST, THE WORD 'ALCOHOL',  
 ITSELF, LIKE SO MANY THAT BEGIN WITH 'AL-', COMES FROM THE  
 ARABIC. THE ARABS CALLED THESE THINGS 'AL KHOL' WHICH  
 MEANS 'THE DUST', BECAUSE THEY SEEMED TO EVAPORATE AND BLOW  
 AWAY LIKE DUST. EUROPEANS FIND A 'KH' HARD TO PRONOUNCE  
 WITHOUT SOUNDING AS IF THEY'RE ABOUT TO SPIT, SO IT WAS  
 SOFTENED TO 'ALCOHOL'. IN MEMORY OF THAT ORIGINAL WORD, ALL  
 ALCOHOL NAMES END IN '-OL.' HERE, I'LL SHOW YOU:

C-C-OH IS ETHANOL  
           C-C-C-OH IS PROPANOL  
                           AND C-C-C-C-OH IS BUTANOL

NOTICE YOU TAKE THE WORD (ETHAN, PROPAN, BUTAN) THAT CORRESPONDS  
 TO THE NUMBER OF CARBONS AND THEN ADD '-OL' ON THE END.  
 NOW YOU TRY ONE.

WHAT'S THAT ALCOHOL'S NAME? HEPTANE  
 YOU GOT THE RIGHT NUMBER OF CARBONS, BUT ALCOHOLS END IN '-OL'  
 WHAT'S THAT ALCOHOL'S NAME? HEPTANOL  
 THAT'S RIGHT, RICHARD! GOOD FOR YOU.

NOW HERE'S A PROBLEM. WE RUN INTO ISOMERS AGAIN. THAT '-OH'  
 GROUP CAN BE PUT IN QUITE A LOT OF PLACES. I'LL GIVE YOU  
 AN EXAMPLE OR TWO

NOW, HOW TO NAME THEM. NUMBERS 2 AND 4 ARE BOTH CALLED '1-HEXANOL' BECAUSE THEY HAVE SIX CARBONS ('HEXAN') AND THE ALCOHOLIC GROUP (OH) IS ON THE FIRST CARBON. #3 IS CALLED '3-HEXANOL' BECAUSE THE GROUP IS ON THE THIRD CARBON. WHAT WOULD YOU CALL ALCOHOL #1? 5-HEXANOL YOU COUNTED FROM THE WRONG END, RICHARD. WHAT WOULD YOU CALL ALCOHOL #1? 2-HEPTANOL TRY LOOKING AT THE EXAMPLES AND COUNTING AGAIN. WHAT WOULD YOU CALL ALCOHOL #1? 2-HEXANOL YOU GOT THAT RIGHT, RICHARD!

WELL, THAT'S ABOUT IT FOR THIS LESSON. OH, BY THE WAY, ALCOHOLS CAN HAVE SUBSTITUTED SIDE GROUPS AND DOUBLE BONDS AND THE WHOLE MESS. LIKE THIS ONE:

COME BACK WHEN YOU'RE FULLY RECOVERED AND WE'LL TALK ABOUT 'ALDEHYDES' AND 'KETONES' IN ORG7. SAME TIME. SAME CHANNEL. SAME BAD JOKES.

O T I S, YOUR LOVING UNCLE

DONE

ORGCHE  
36646**TITLE:**

DRILL ON ORGANIC COMPOUND NOMENCLATURE

**DESCRIPTION:**

This program generates organic compounds of 10 different types, prints out representations of them, and names them.

**INSTRUCTIONS:**

The user may select one of the following options:

1. Drill on any of the following in random order.
2. Drill on alkanes.
3. Drill on alkenes.
4. Drill on alkynes.
5. Drill on alkylhalides.
6. Drill on alcohols.
7. Drill on ethers.
8. Drill on organic acids.
9. Drill on amines (secondary only).
10. Drill on ketones.
11. Drill on aldehydes.

He then chooses how many representations to be printed (maximum of 10).

The symbols +, - are used to represent single bonds, =, # to represent double bonds, \* to represent triple bonds. All hydrogen atoms have been omitted, except in hydroxyl radicals.

**SPECIAL  
CONSIDERATIONS:**

The longest carbon chain to be considered is of length 10., i.e., a decane, decene, etc.

Literature reference: Benfey, Otto Theodore The Names and Structures of Organic Compounds. New York: John Wiley and Sons, Inc., 1966.

FOR INSTRUCTIONAL PURPOSES  
Suitable Courses: Organic Chemistry

The program can be used for testing and for extra drill. The student may fold the output on the first starred line so the names of the compounds aren't visible. He then names the organic compounds, and compares his answers with the computer output.

**ACKNOWLEDGEMENTS:**

PILOT

HI THERE! THIS IS A TUTORIAL LESSON TO TEACH YOU SOMETHING ABOUT
SCIENTIFIC METHOD.

WHAT IS YOUR NAME ?PETE
VERY NICE! AND WHAT IS YOUR MAJOR ?SPANISH
WELL, I DON'T RECOGNIZE THAT AS A SCIENCE MAJOR, BUT I HOPE THAT THIS
SESSION WILL BE INTERESTING AND EDUCATIONAL.

AS WE PROCEED THROUGH THIS MATERIAL, I WILL ASK YOU QUESTIONS, PLEASE
RESPOND NATURALLY AND DON'T WORRY IF YOU DON'T KNOW THE ANSWER OR EVEN
UNDERSTAND THE QUESTION. YOU WILL NOT BE GRADED BUT RATHER WILL BE LED
THROUGH THE MATERIAL IN A PLEASANT (HOPEFULLY) MANNER SUCH THAT YOU
WILL HAVE LEARNED SOMETHING BY TIME WE ARE FINISHED.

FIRST PETE, WHAT IS THE MOST BASIC AND IMPORTANT PROCESS IN SCIENTIFIC
INQUIRY ?A PREMISE
NOT QUITE, ALL SCIENTIFIC INQUIRY AND LEARNING BEGINS WITH OBSERVING
THE NATURAL WORLD. OBSERVATION AND EXPERIMENTATION ARE ABSOLUTELY
FUNDAMENTAL.

ONCE A CERTAIN SET OF OBSERVATIONS ARE MADE, WHAT IS THE NEXT STEP IN
THE PROCESS ?INTERPRET THEM
WELL, ONE TRIES TO FORM A HYPOTHESIS OR MODEL FOR THE PHENOMENON.
USUALLY THIS IS IN TERMS WITH WHICH ONE IS FAMILIAR (ANALOGY) OR IT
MAY BE A MATHEMATICAL EXPRESSION OR ONE OF SEVERAL DIFFERENT FORMS
RANGING IN COMPLEXITY FROM EXTREMELY SIMPLE TO QUITE INVOLVED. IN ANY
CASE THE HYPOTHESIS MUST EXPLAIN THE OBSERVATIONS. IT IS AN EDUCATED
GUESS.

IN ADDITION, A GOOD HYPOTHESIS MUST PROVIDE SOMETHING ELSE. WHAT IS
THIS ?BE CONSISTENT
NO, A GOOD HYPOTHESIS DOES PROVIDE FOR FURTHER PREDICTION. ONE THEN
ATTEMPTS TO OBSERVE THIS TO TEST THE HYPOTHESIS. IF THE HYPOTHESIS IS
INCORRECT IT MUST BE MODIFIED TO SATISFACTORY EXPLAIN THE NEW DATA.

LET ME PUT IT GRAPHICALLY:

OK, WHAT PURPOSE DOES 'MODIFY' SERVE ?CHANGE THE HYPOTHESIS
RIGHT, THE HYPOTHESIS MUST ACCURATELY ACCOUNT FOR ALL THE OBSERVATIONS
(INCLUDING THE NEW ONES!), SO IT MUST BE CORRECTED. IF IT IS SO
INCOMPLETE THAT IT MUST BE DISCARDED AND A NEW ONE TRIED, THEN SO BE

IT! ONE SHOULD NOT HANG ONTO OBSOLETE CONCEPTS JUST BECAUSE THEY ARE THERE!

IF AFTER REPEATED TESTING, THE HYPOTHESIS CORRECTLY PREDICTS ALL NEW OBSERVATIONS, IT BECOMES A THEORY. AND IF A THEORY IS OF SUFFICIENT GENERALITY AND DESCRIBES THE NATURAL PHENOMENA ACCURATELY, IT MAY BE ELEVATED TO WHAT STATUS ?I DON'T KNOW WELL, IT MAY BECOME A SCIENTIFIC LAW! BOTH SCIENTIFIC THEORIES AND LAWS MUST HAVE OTHER QUALITIES SUCH AS: GENERALITY, SIMPLICITY, AND BEAUTY. THESE QUALITIES ARE SOMETIMES DIFFICULT TO DEFINE PRECISELY. WE ARE MORE CONCERNED HERE WITH THE INTERACTION BETWEEN OBSERVATION AND HYPOTHESIS, SO SUCH CONSIDERATIONS NEED NOT WORRY YOU!

AS A SIMPLE EXAMPLE, LET US CONSIDER A SEQUENCE OF LETTERS AS OUR INITIAL OBSERVATION. NAMELY:

T T F F S S E

WE SUSPECT THAT THESE ARE PART OF A MORE GENERAL PATTERN. THE FIRST STEP IS TO DESCRIBE THE OBSERVATIONS. HOW WOULD YOU DESCRIBE THEM??

?2,2,2,1 PATTERN

OK, A VERY SIMPLE WAY (AT LEAST FOR A SMALL SET OF DATA!) IS TO PUT IT IN A TABLE.

NUMBER	DATUM
1	T
2	T
3	F
4	F
5	S
6	S
7	E

THIS IS A TYPE OF HYPOTHESIS. ANOTHER SIMILIAR WAY OF DESCRIBING THE OBSERVATIONS THAT IS ALSO A HYPOTHESIS IS:

THE SEQUENCE IS FORMED FROM PAIRS OF LETTERS MADE UP OF 'T', 'F', 'S' IN ORDER, AND IS ENDED WITH A SINGLE 'E'.

WHAT BAD FEATURE DO THESE TWO HYPOTHESES HAVE??

?NO EXPLANATION OR PREDICTION

VERY GOOD PETE! THEY DESCRIBE THE OBSERVATIONS VERY WELL, BUT THERE IS NO PROVISION FOR PREDICTING ANY NEW OBSERVATIONS. SUCH A HYPOTHESIS IS TERMED 'AD HOC'. THIS IS A LATIN TERM MEANING 'FOR THIS CASE ONLY'. THERE IS NO WAY TO TEST THIS TYFE OF HYPOTHESIS.

LET'S TRY AND PREDICT THE NEXT LETTER IN THE SEQUENCE!

T T F F S S E .

WHAT LETTER DO YOU THINK REPLACES THE PERIOD ?E THAT IS MOST LOGICAL. THE SEQUENCE WOULD THEN LOOK:

T T F F S S E 'E'

CAREFULLY STATE IN WORDS THE HYPOTHESIS THAT LEADS TO THIS PREDICTION. (KEEP IT TO ONE LINE OR LESS, SORRY!)

?SEQUENCE IS DOUBLE LETTERS BEGIN WITH T AND F, GO FORWARD IN ALPHABET

REMEMBER THAT THE FINAL 'E' IS ONLY A PREDICTION, IT HAS NOT YET BEEN OBSERVED. NOW PETE, WHAT IS THE NEXT STEP IN THE INQUIRY PROCESS??

?TEST IT

OK, LET'S GO AND TRY TO OBSERVE THE NEXT LETTER! AFTER MUCH EXPERIMENTATION WE FIND:

T T F F S S E N

WHOOPS, NATURE IS NOT ALWAYS EASY TO PIN DOWN! THE NEW DATUM DOES NOT AGREE WITH YOUR PREDICTION. THUS WE MUST MODIFY THE HYPOTHESIS.

>> I MUST ASSURE YOU THAT THE SEQUENCE OF LETTERS DOES <<  
 >> FOLLOW A DEFINITE PATTERN. THEY ARE NOT JUST ANY <<  
 >> RANDOM CHOICES!! I BELIEVE IN BEING ORDERLY! <<

WE COULD STILL SIMPLY FORM AN AD HOC HYPOTHESIS, BUT WE ARE INTERESTED IN DETERMINING THE BIG PICTURE. WE WANT TO BE ABLE TO PREDICT THE NEXT LETTER(S)!

FROM THIS POINT IT GETS MUCH MORE DIFFICULT. MANY PEOPLE ARE STUMPED HERE. HOWEVER, PETE SINCE YOU ARE A SPANISH MAJOR, I AM CONFIDENT THAT YOU WILL PERCEIVE THE PATTERN AND DEDUCE THE NEXT LETTER!

T T F F S S E N .

WELL, WHAT IS THE NEXT LETTER ?DON'T KM-NOW  
OK, WHAT IS YOUR HYPOTHESIS??  
?LOST IT

I DON'T QUITE BUY YOUR HYPOTHESIS; HOWEVER, A MOST LOGICAL DEDUCTION WOULD BE A 'T'. THE HYPOTHESIS IS THEN:

THE SEQUENCE OF LETTERS IS FORMED BY THE FIRST LETTER OF THE NAME OF THE INTEGERS (IN ENGLISH!), STARTING WITH TWO.

THUS THE SEQUENCE WOULD BE:

T T F F S S E N 'T'

WITH THE 'T' COMING FROM 'TEN'. AGAIN, WHAT MUST WE DO NEXT??  
?TEST IT  
THAT'S RIGHT PETE! LET'S TRY AND OBSERVE THE NEXT LETTER, AND IT IS:  
'Z'!!! THUS WE HAVE:

T T F F S S E N Z .

DON'T BE TOO DISCOURAGED. ACTUALLY, YOU NEED ONLY TO MODIFY YOUR HYPOTHESIS A SMALL AMOUNT. IT IS BASICALLY CORRECT!

LET ME ENCOURAGE YOUR BASIC HYPOTHESIS. IF THE SEQUENCE IS RELATED TO THE INTEGERS, THEN IT SHOULD ALSO PREDICT A CHARACTER PRECEEDING THE FIRST 'T'. WHAT SHOULD IT BE ?O  
THAT IS VERY GOOD PETE! WE SHOULD FIND AN 'O' WHICH COMES FROM 'ONE' PRECEEDING THE 'T' FROM 'TWO'. INDEED, IF YOU LOOK IN THE RIGHT PLACE, YOU DO OBSERVE:

O T T F F S S E N Z .

THUS, YOUR BASIC HYPOTHESIS THAT THESE LETTERS ARE RELATED TO THE ENGLISH NAMES OF THE INTEGERS IS STRENGTHENED, AT LEAST FOR THE FIRST NINE! HOWEVER, IT MUST ALSO EXPLAIN WHY 'TEN' BECOMES A 'Z'. NOW, HOW IS THE NUMBER TEN DIFFERENT FROM: ONE, TWO, THREE, . . . , AND NINE??  
?2 DIGITS  
OF COURSE! 'TEN' HAS TWO DIGITS INSTEAD OF JUST ONE:

10 --> ONE ZERO

NOW, PETE, DO YOU SEE WHERE THE 'Z' COMES FROM? WHAT HYPOTHESIS EXPLAINS THIS??

?FIRST Z INDICATES FIRST 2-DIGIT NUMBER WITH 1 ZERO

AND WHAT LETTER IS NEXT (REPLACING THE PERIOD) ?E  
I DON'T THINK THAT FOLLOWS FROM THE HYPOTHESIS. 'ELEVEN' IS THE NEXT NUMBER IN THE SEQUENCE:

11 --> ONE ONE! SO WE SHOULD GET AN 'O'!!!

O T T F F S S E N Z 'O'

AND SURE ENOUGH, 'O' IS THE NEXT LETTER, AND NATURE IN A RARE MOMENT OF GENEROSITY EASILY REVEALS THAT THE ONE AFTER THAT IS A 'T'! SO:

. . . O T T F F S S E N Z O T . . .

THUS OUR HYPOTHESIS IS CONFIRMED WITH NO FURTHER MODIFICATION.

THE SEQUENCE IS FORMED FROM THE ENGLISH NAMES OF THE INTEGERS. IN EACH CASE THE CHARACTER IS THE FIRST LETTER OF THE DIGIT IN THE 'UNIT'S' PLACE.

COULD YOU NOW STATE THAT THE HYPOTHESIS IS A THEORY ?YES  
 NO, NO, NO!! IT IS STILL A LONG WAY FROM BECOMING A THEORY. IT MAY  
 FAIL ON THE 13-TH CHARACTER (MAYBE THE CHARACTER IS REALLY A 'L' FOR  
 'BAD LUCK!'). WE WOULD HOPE THAT NATURE ISN'T THAT CAPRICIOUS AND IS  
 REALLY SIMPLE AND LOGICAL WITH VERY FEW EXCEPTIONS!

BY THE WAY, WE HAVE DEVELOPED SEVERAL DIFFERENT HYPOTHESES. ON OUR  
 ORIGINAL SET OF DATA,

T T F F S S E

ARE ANY OF THESE HYPOTHESES INCORRECT (CONSIDERING ONLY THIS SMALL SET  
 OF DATA) ?NO  
 OF COURSE, THEY ARE ALL CORRECT. THEY ALL EXPLAIN THIS ORIGINAL SET OF  
 OBSERVATIONS PRECISELY! HOWEVER, SOME ARE 'BAD', AND NOT BECAUSE THEY  
 ARE INCORRECT ABOUT THE SUBSEQUENT DATA, BUT BECAUSE THEY LACK WHAT  
 QUALITY??

?CORRECT PREDICTIONS

RIGHT! AT LEAST TWO OF OUR HYPOTHESES (THE TABLE AND THE ORIGINAL  
 VERBAL DESCRIPTION) FAILED TO MAKE ANY PREDICTION ABOUT ANY POSSIBLE  
 NEW OBSERVATIONS. THE OTHERS MAY BE INCOMPLETE, BUT THEY WERE NOT  
 'BAD' IN THIS SENSE! THEY AT LEAST PREDICTED SOMETHING SO THEY COULD  
 BE TESTED. THEY MAY HAVE BEEN WRONG, BUT THEY WERE GOOD IN THAT THEY  
 LED TO SOME FURTHER THOUGHT AND INVESTIGATION. WHAT DO WE CALL A  
 HYPOTHESIS THAT FAILS TO PREDICT ANYTHING NEW ?DON'T KNOW  
 SORRY, THE TERM IS 'AD HOC'. SUCH HYPOTHESES CANNOT BE TESTED AGAINST  
 FURTHER OBSERVATIONS. THEY ARE A 'DEAD END'!!

I WISH TO MAKE ONE LAST POINT: NOTE THAT FOR A LIMITED SET OF DATA  
 THERE WERE SEVERAL DIFFERENT (AND PERHAPS PHILOSOPHICALLY CONFLICTING  
 HYPOTHESES) THAT PERFECTLY EXPLAINED THE KNOWN OBSERVATIONS. THIS IS  
 NOT A UNIQUE SITUATION! IN THIS CASE ONE USUALLY SELECTS THE ONE THAT  
 BEST AGREES WITH HIS PHILOSOPHICAL OUTLOOK UNTIL FURTHER OBSERVATIONS  
 SELECTS THE PROPER ONE.

DO YOU THINK THIS IS INTELLECTUALLY HONEST ?YES

I HOPE THAT YOU ENJOYED THIS EXERCISE, PETE! AND I WISH YOU SUCCESS IN  
 PURSUING YOUR SPANISH MAJOR.

END

TRY AGAIN ?NO

DONE

**TITLE:** KEPLER'S THIRD LAW

**DESCRIPTION:** This program is a PILOT language program designed to give the beginning Astronomy student help in understanding Kepler's third law and to help him with the arithmetic involved in computing periods and semimajor axes.

**INSTRUCTIONS:** 2000E: The program is stored on three files: P-KEP1, P-KEP2, and P-KEP3. The scratch file should be at least 4 records in length.  
2000 Series: The program is stored on the file: PZKEPL. The scratch file  
See PILOTE (HP 36637) to use this program on the HP 2000E system.  
See PILOTF (HP 36756) to use this program on the HP 2000F system.

**SPECIAL CONSIDERATIONS:** The program takes files of length: (HP 2000E) P-KEP1,48; P-KEP2,48; P-KEP3,32.  
(HP 2000F) P-KEPL,58  
FOR INSTRUCTIONAL PURPOSES  
Suitable Course(s): Introductory Astronomy.  
Student Background Required: None.  
There are two applications for this program. The first is a tutorial session for beginning Astronomy students in Kepler's laws with the main emphasis on the third law. All the terms necessary in understanding and using Kepler's third law are discussed. If a student answers certain questions correctly, he proceeds through the program faster than if he has trouble. At the end is a "miniprogram" to calculate the periods and semimajor axes from any values he wishes to try. The computer does the messy arithmetic for him.  
The second use is for students who understand Kepler's laws and only wish to use the computer to calculate their own values. They can proceed directly to the "miniprogram" at the end, skipping the tutorial portion.

KEPLER'S THREE LAWS ARE VERY IMPORTANT IN UNDERSTANDING THE ORBITS OF THE PLANETS, COMETS, OR ANY SATELLITE. THEY MAY BE DERIVED FROM NEWTON'S LAWS AND HIS FORM OF THE GRAVITATIONAL FORCE; HOWEVER, THEY ARE A NICE SUMMARY OF THE MOTION OF THE PLANETS.

HAVE YOU STUDIED KEPLER'S LAWS BEFORE ?NO  
WELL, THEN IT IS A GOOD IDEA TO START WITH THE FIRST TWO, SINCE WE WILL NEED THE CONCEPTS DEVELOPED WITH THOSE.

BEFORE WE GO TO FAR, I WOULD LIKE YOUR NAME ?PETE  
THANK YOU! I THINK A NAME IS MUCH MORE FRIENDLY THAN A RATHER IMPERSONAL PRONOUN!

FIRST PETE, KEPLER'S FIRST LAW DESCRIBES THE SHAPE OF THE ORBIT OF A PLANET OR SATELLITE. WHAT IS THE SHAPE OF AN ORBIT ?ELLIPTICAL  
THAT IS, OF COURSE, ABSOLUTELY CORRECT PETE! BEFORE WE STATE KEPLER'S FIRST LAW IN ALL OF ITS GLORY LET'S CONSIDER AN ELLIPSE AND DEFINE SOME TERMS.

OK, PETE, WHAT IS THE DISTANCE 'A' CALLED ?RADIUS  
WELL, I WILL TELL YOU. THAT IS THE SEMIMAJOR AXIS OF THE ELLIPSE.  
AND WHAT IS TWICE THE SEMIMAJOR AXIS CALLED (THE DISTANCE FROM ONE END OF THE ELLIPSE TO THE OTHER) ?MAJOR AXIS  
GOOD!  
WHAT ARE THE POINTS 'F1' AND 'F2' CALLED ?FOCUS  
VERY GOOD. THEY ARE THE FOCI OF THE ELLIPSE (SINGULAR IS 'FOCUS').

KEPLER'S FIRST LAW STATES:

'EACH PLANET MOVES ABOUT THE SUN IN AN ORBIT THAT IS AN ELLIPSE, WITH THE SUN AT THE FOCUS OF THE ELLIPSE.'

NOV IF WE REPLACE THE FOCUS 'F1' WITH THE SUN, WHAT IS THE DISTANCE 'H' CALLED ?K  
NOT EXACTLY, THAT IS THE PERIHELION DISTANCE, OR THE DISTANCE OF CLOSEST APPROACH OF THE PLANET TO THE SUN.  
WE WILL NOT EXPLICITLY NEED KEPLER'S SECOND LAW FOR THIS EXERCISE; HOWEVER, FOR THE SAKE OF COMPLETENESS, LET US STATE IT:

'THE STRAIGHT LINE JOINING A PLANET AND THE SUN SWEEPS OUT EQUAL AREAS IN SPACE IN EQUAL INTERVALS OF TIME.'

THIS BASICALLY TELLS HOW THE PLANET MOVES AROUND ITS ORBIT. WHEN IT IS CLOSE TO THE SUN IT MOVES FASTER THEN WHEN IT IS FURTHER AWAY.

WE ARE NOW READY TO DISCUSS KEPLER'S THIRD LAW. IT GIVES A SIMPLE RELATIONSHIP BETWEEN THE SEMIMAJOR AXIS AND THE PERIOD OF THE PLANETARY ORBIT.

WHAT IS THE PERIOD OF AN ORBIT ? CYCLE  
NOT EXACTLY, IT IS JUST THE TIME IT TAKES FOR THE PLANET TO COMPLETE ONE REVOLUTION AROUND THE SUN.

IN WORDS WE CAN STATE KEPLER'S THIRD LAW:

''THE SQUARES OF THE PERIODS OF THE PLANETS ARE IN DIRECT PROPORTION TO THE CUBES OF THE SEMIMAJOR AXES OF THEIR ORBITS.''

IN AN ALGEBRAIC EQUATION THIS BECOMES:

$$P^2 = K \cdot A^3$$

WHERE ''^'' MEANS 'RAISE TO A POWER' AND '\*' MEANS MULTIPLY. 'P' IS THE PERIOD, 'A' IS THE SEMIMAJOR AXIS, AND 'K' IS A CONSTANT AND DEPENDS ON THE UNITS USED.

WE CAN SOLVE THIS EQUATION FOR EITHER 'P' OR 'A' IN TERMS OF THE OTHER. BUT FIRST WE NEED TO KNOW 'K'. TO DETERMINE THIS, LET US USE QUANTITIES THAT WE KNOW ABOUT THE EARTH'S ORBIT.  
WHAT IS THE PERIOD OF THE EARTH'S ORBIT ? 365 DAYS  
VERY FINE PETE! THE PERIOD OF THE EARTH'S ORBIT IS 365 DAYS (ACTUALLY 365.2564 DAYS) OR ONE YEAR!

THE SEMIMAJOR AXIS OF THE EARTH'S ORBIT IS THE SAME AS THE MEAN DISTANCE FROM THE EARTH TO THE SUN WHICH IN TURN IS APPROXIMATELY THE RADIUS OF THE ORBIT.

OK, WHAT IS THE MEAN DISTANCE FROM THE EARTH TO THE SUN??

? 100 MILLION MILES

YOU ARE WITH IT TODAY PETE! THE MEAN DISTANCE (OR THE SEMIMAJOR AXIS) OF THE EARTH TO THE SUN IS 93 MILLION MILES, 150 MILLION KILOMETERS,  $1.5 \times 10^{11}$  METERS,  $1.5 \times 10^{13}$  CENTIMETERS, OR SIMPLY 1 AU (ASTRONOMICAL UNIT)!  
(THE 'E' IN NUMBERS INDICATE A POWER OF TEN.)

IN TERMS OF THE UNITS 'YEARS' AND 'ASTRONOMICAL UNITS', THE VALUE OF 'K' IS ESPECIALLY SIMPLE. WHAT DO YOU SUPPOSE IT IS ?

TITLE: STELLAR MAGNITUDES

DESCRIPTION: This program is a PILOT language program designed for beginning Astronomy students to give tutorial instruction on the magnitude system and the relation of distance apparent magnitude, and absolute magnitude.

INSTRUCTIONS: 2000E: The program is stored on three files: P-MAG1, P-MAG2, and P-MAG3. The scratch file should be at least 4 records in length.

2000 Series System: The program is stored on the file: PMAG. The scratch file should be at least 3 records in length.

SPECIAL  
CONSIDERATIONS:

This PILOT program takes files of length:

2000E: P-MAG1,48; P-MAG2,48; P-MAG3,48

2000 Series System: PMAG,70

FOR INSTRUCTIONAL PURPOSES

Suitable courses: Introductory Astronomy

Student Background required: None

This program is suitable either as a supplement to a formal lecture or as a "stand-alone" activity. It is designed so that the knowledgeable student who makes the correct responses very quickly progresses through the program. If a question is missed, more discussion and questions are generated.

Toward the end is a "miniprogram" which allows the student to try any values he wishes. The computer does the calculations. In an auxiliary report sheet he might be asked to fill in certain values.

AND BEHOLD THE HEIGHT OF THE STARS, HOW HIGH THEY ARE!

AS THE SUN SETS SOME EVENING AND THE STARS BEGIN TO APPEAR AGAINST THE DARKENING SKY, YOU CAN SEE THAT THERE ARE DIFFERENCES IN THE STARS. WHAT IS THE OBVIOUS DIFFERENCE ?BRIGHTNESS  
EXCELLENT! SOME STARS ARE BRIGHT AND OTHERS ARE DIM. NOW, THAT WASN'T HARD WAS IT?? THIS PROGRAM IS WRITTEN TO HELP YOU UNDERSTAND SOMETHING ABOUT THE DISTANCES TO THE STARS AND THEIR BRIGHTNESS.

THE ANCIENTS SAW MAJESTIC FIGURES IN THE PATTERNS PRODUCED BY THE STARS. TO THEM THE STARS WERE FAMILIAR OBJECTS AS THEY PASSED OVERHEAD EACH NIGHT. THEY NAMED THE BRIGHTER MORE CONSPICUOUS ONES. I WOULD LIKE TO KNOW YOUR NAME. WHAT IS IT ?VALERIE

VALERIE, AH VALERIE! THANK YOU. WHAT A LOVELY NAME. DID YOU KNOW THAT YOU ARE A BIT OF STARDUST!

WHAT DO YOU THINK CAUSES THE STARS TO APPEAR WITH DIFFERENT BRIGHTNESSES??  
?DISTANCE FROM THE EARTH

THERE ARE TWO POSSIBLE REASONS WHY SOME STARS APPEAR BRIGHTER TO US THAN OTHERS. YOU DID GET THE ONE ABOUT THE EFFECT DUE TO DISTANCE. THE TWO REASONS ARE:

1. DIFFERENT STARS MAY HAVE DIFFERENT INTRINSIC BRIGHTNESSES OR LUMINOSITIES.
2. THE STARS MAY BE AT DIFFERENT DISTANCES FROM THE EARTH.

LET US CONSIDER THE INTRINSIC BRIGHTNESS OF THE STARS FURTHER. THIS IS A MEASURE OF HOW MUCH LIGHT ENERGY THE STAR ACTUALLY PRODUCES. WHAT FACTORS ABOUT A STAR MIGHT AFFECT THIS??  
?SIZE

THERE ARE TWO SPECIFIC QUANTITIES. YOU DID SUGGEST ONE OF THEM. THE LUMINOSITY OF A STAR (OR INTRINSIC BRIGHTNESS) DIRECTLY DEPENDS UPON THE RADIUS AND THE SURFACE TEMPERATURE OF THE STAR. THESE IN TURN ARE DETERMINED BY THE MASS OF THE STAR. THE MORE MASSIVE A STAR IS, THE GREATER IS ITS LUMINOSITY. TYPICAL LUMINOSITIES MAY RANGE FROM 1/10,000 OF OUR SUN'S LUMINOSITY TO OVER 100,000 TIMES THAT OF THE GOOD OL' SUN!

TELL ME VALERIE, WHAT IS YOUR MAJOR ?EDUCATION  
WELL, I DO NOT RECOGNIZE THAT AS A SCIENCE MAJOR, BUT I AM GLAD YOU ARE INTERESTED IN LEARNING SOMETHING ABOUT STARS.

ASTRONOMERS TODAY ARE PERHAPS NOT QUITE SO ROMANTIC AS THE ANCIENTS. INSTEAD OF BEING CONTENT TO MERELY DESCRIBE THE MAGICAL QUALITIES OF THE STARS, THEY LIKE TO WRITE DOWN NUMBERS.  
OK VALERIE, WHAT IS A CATEGORY OF STELLAR BRIGHTNESS CALLED??  
?LUMENS

HMMM, IT IS THE MAGNITUDE SYSTEM. ACTUALLY THIS WAS DEVELOPED NOT BY A MODERN ASTRONOMER BUT BY HIPPARCHUS IN THE SECOND CENTURY B.C.! HE GROUPED THE STARS INTO SIX CATEGORIES. WHAT DO YOU THINK IS THE MAGNITUDE OF THE BRIGHTEST STARS ?DONT KNOW THE BRIGHTEST STARS ARE ABOUT FIRST MAGNITUDE. WHAT ABOUT THE DIMMEST STARS VISIBLE WITH THE UNAIDED EYE ?TENTH ON A CLEAR NIGHT SIXTH MAGNITUDE IS ABOUT THE DIMMEST THAT YOU CAN SEE WITH YOUR NAKED EYE.

THE MAGNITUDE SYSTEM IS RATHER STRANGE IN ONE RESPECT IN THAT IT IS BACKWARDS! THE BRIGHTER THE STAR, THE SMALLER THE MAGNITUDE. IT IS ALSO STRANGE IN ANOTHER RESPECT. WHAT DO YOU THINK THIS IS?? ?GIVE UP THIS IS A HARD QUESTION, AND YOU SHOULD NOT FEEL BADLY FOR NOT GETTING IT RIGHT. THE MAGNITUDE SCALE IS A MULTIPLICATIVE OR LOGARITHMIC SCALE. (NOW DON'T LET THE BIG WORDS SCARE YOU!) THAT IS, A STAR BRIGHTER THAN ANOTHER BY ONE MAGNITUDE IS REALLY ABOUT 2.5 TIMES AS BRIGHT. TWO MAGNITUDES DIFFERENCE CORRESPONDS TO  $2.5 \times 2.5 = 6.25$  TIMES IN BRIGHTNESS.

ACTUALLY, 5 MAGNITUDES DIFFERENCE IS EXACTLY A FACTOR OF 100. SO THE RATIO FOR 1 MAGNITUDE IS THE FIFTH ROOT OF 100, WHICH IS APPROXIMATELY:

1 MAGNITUDE DIFFERENCE IS 2.51188 6431 TIMES IN BRIGHTNESS

IF YOU MULTIPLY THIS NUMBER BY ITSELF 5 TIMES, YOU OBTAIN 100. TRY IT!!

WELL VALERIE, HOW MANY TIMES BRIGHTER IS THE BRIGHTEST STAR THAT YOU CAN SEE WITH YOUR NAKED EYE TO THE DIMMEST ONE ?100 EXCELLENT VALERIE!

LET ME DISPLAY THIS IN A TABLE FORM:

DIFFERENCE IN MAGNITUDE	RATIO OF BRIGHTNESS
0.0	1 : 1
0.5	1.6 : 1
0.75	2 : 1
1.0	2.5 : 1
1.5	4 : 1
2.0	6.3 : 1
2.5	10 : 1
3.0	16 : 1
4.0	40 : 1
5.0	100 : 1
6.0	251 : 1
10.0	10,000 : 1

WHICH IS BRIGHTER, A 4 MAGNITUDE STAR OR A 1.5 MAGNITUDE STAR ?1.5 BY WHAT FACTOR IS IT BRIGHTER ?10 VERY GOOD VALERIE!

WITH TELESCOPES THE RANGE OF OBSERVED MAGNITUDES IS INCREASED. MUCH DIMMER STARS MAY BE SEEN. DO THESE STARS HAVE A SMALLER OR LARGER MAGNITUDE ?LARGER OF COURSE! THE TELESCOPES CAN SEE STARS WITH MUCH LARGER MAGNITUDES. WITH THE 200 INCH HALE TELESCOPE ON MT. PALOMAR ASTRONOMERS CAN DETECT PHOTOGRAPHICALLY STARS WITH A MAGNITUDE OF ABOUT +23. HOW MANY TIMES DIMMER IS A STAR OF THIS MAGNITUDE THAN A TYPICAL VISUAL STAR OF MAGNITUDE, SAY, +3 ?DONT KNOW THIS IS A BIT DIFFICULT. SO LET'S CONSIDER IT IN STEPS. FIRST, WHAT IS THE DIFFERENCE IN MAGNITUDES ?20 FINE. HOW MANY MULTIPLES OF 5 IS THIS ?4 EXACTLY! NOW, EACH MAGNITUDE DIFFERENCE OF 5 CORRESPONDS TO WHAT FACTOR IN BRIGHTNESS ?100 GOOD! EACH 5 MAGNITUDES MEANS EXACTLY A FACTOR OF 100 IN BRIGHTNESS. SO WHAT IS THE BRIGHTNESS FACTOR FOR 20 MAGNITUDES (OR 4 OF THE 'FIVES')?? ?20--400 WELL, IT IS NOT SIMPLY  $4 \times 100!$  BUT I SUPPOSE THAT IS NOT TOO ILLOGICAL. THE CORRECT ANSWER IS 100 MILLION OR 100,000,000 WHICH COMES FROM MULTIPLYING 100 BY ITSELF 4 TIMES, THAT IS,  $100 \times 100 \times 100 \times 100 = 100,000,000$ .

LET'S CONTINUE OUR TABLE.

MAGNITUDE DIFFERENCE	BRIGHTNESS RATIO
15.0	1,000,000 : 1
20.0	100,000,000 : 1
25.0	10,000,000,000 : 1

NOTE THE MULTIPLICATIVE EFFECT IN THE BRIGHTNESS RATIO.

MAGNITUDES ADD                      BRIGHTNESSES MULTIPLY

SO FAR WE HAVE BEEN DISCUSSING STARS AS THEY APPEAR TO US AND THEIR MAGNITUDES. THIS MAGNITUDE IS KNOWN AS THE APPARENT MAGNITUDE OF THE STAR.

IF A STAR WERE 100 TIMES BRIGHTER THAN A FIRST MAGNITUDE STAR, THEN WHAT WOULD BE ITS MAGNITUDE ? I DON'T GET THAT ANSWER. THE BRIGHTER STARS HAVE SMALLER MAGNITUDES, EVEN POSSIBLY NEGATIVE. THUS SUCH A STAR WOULD HAVE AN APPARENT MAGNITUDE OF  $1 - 5 = -4$ .

THE SUN IS THE BRIGHTEST OF ALL! IT HAS AN APPARENT MAGNITUDE OF  $-26.5$ ! WHY DOES THE SUN APPEAR SO BRIGHT ? BECUASE IT IS CLOSE OF COURSE, YOU'RE NOBODY'S FOOL VALERIE! IT IS ONLY BECAUSE WE ARE SO CLOSE TO THE SUN THAT ITS APPARENT MAGNITUDE IS SO NEGATIVE. CONSIDER A DISPLAY OF APPARENT MAGNITUDE AND COMMON OBJECTS:

	+	200'' PHOTOGRAPHIC LIMIT
+20	+	200'' VISUAL LIMIT
	+	
+15	+	
	+	6'' TELESCOPE LIMIT
+10	+	BINOCULAR LIMIT
	+	
M	+	
A	+	NAKED-EYE LIMIT
G	+	
N	+	BRIGHTEST STAR
I	+	JUPITER (AT BRIGHTEST)
T	+	VENUS (AT BRIGHTEST)
U	+	
D	+	
E	+	FULL MOON
	+	
-15	+	
	+	
-20	+	
	+	
-25	+	
	+	SUN

WHY IS THE PHOTOGRAPHIC LIMIT GREATER THAN THE VISUAL LIMIT??

?DONT KNOW

PHOTOGRAPHIC PLATES CAN COLLECT LIGHT FOR MANY MINUTES OR EVEN HOURS LONGER THAN THE EYE, HENCE ONE CAN DETECT PHOTOGRAPHICALLY MUCH DIMMER STARS.

THE DISTANCE AN OBJECT IS FROM THE EARTH HAS A LARGE EFFECT ON THE APPARENT MAGNITUDE.

OK VALERIE, THEN LET US CONSIDER DISTANCES FOR A TIME.

WHAT UNIT DO YOU THINK WOULD BE USEFUL IN MEASURING AND EXPRESSING STELLAR DISTANCES ? LIGHTYEARS

THAT IS A GOOD UNIT, BUT THE ONE ASTRONOMERS USE MOST OFTEN IS THE PARSEC, WHICH IS ABOUT 3.26 LIGHT YEARS. THE TERM COMES FROM 'PARALLAX SECOND' WHICH IS USED IN DETERMINING DISTANCES TO STARS BY TRIGONOMETRIC PARALLAX. (BUT THAT IS ANOTHER STORY!)

WHAT IS THE DISTANCE (IN PARSECS) TO THE NEAREST STAR TO OUR OWN GOOD OL' SUN ?

•  
•

**TITLE:**

PHOSYN: Photosynthesis Experiment

**DESCRIPTION:**

This program investigates changes in the rate of photosynthesis when carbon dioxide concentration and light intensity are varied.

**OBJECTIVES:**

- A. To permit the student to see the effects of varying two of the factors of the photosynthetic reaction.
- B. To reinforce the concept of the fundamental importance of the process of photosynthesis.
- C. To lead the student to develop ideas for increasing a plant's food output by manipulating factors involved in photosynthesis.
- D. To learn or practice graphing.
- E. To learn the concept of controlled experimentation.
- F. Analysis and interpretation of data.

**INSTRUCTIONS:****PRELIMINARY PREPARATION:**

- A. Student - An understanding of the photosynthetic process.
- B. Materials - graph paper

**DISCUSSION:**

- A. Operational Suggestions
  1. Student level - average
  2. Pitfalls to avoid -
    - a. If the student is not familiar with decimals, allow him to use integers for graphing
    - b. The computer levels off at a light intensity of 12. If a student selects all of his light intensity values above 11, a straight line of asterisks will appear on the graph.
    - c. Remind students that the computer plotted graph is to be viewed sideways. (see run)
  3. Students work in groups of 5 or less. Allow one group at a time at the computer while the remaining groups are engaged in a related activity.

Continued on following page.

**ACKNOWLEDGEMENTS:**

Huntington Project  
Polytechnic Institute of Brooklyn

DISCUSSION continued

B. Suggested Follow-up

The students, after running the program, are expected to graph the results obtained from varying the carbon dioxide concentration.

Elicit from the student:

1. What happens to the rate of photosynthesis as:
  - a. The carbon dioxide concentration increases?
  - b. The intensity of the light increases?
2. How might you increase the size of tomatoes grown in a greenhouse? What, if any, limitations are there to this type of increase?
3. What is apt to happen to the world's food supply if the amount of carbon dioxide or the light intensity was reduced by one-half?
4. Compare your graph with the graph made on the computer. Point out similarities and differences. Explain them.

RUN

RUN  
PHOSYN

HELLO. BY NOW YOU SHOULD KNOW FROM YOUR LECTURES WHAT PHOTOSYNTHESIS IS. THIS LABORATORY WILL ENABLE YOU TO CONDUCT EXPERIMENTS ON THE COMPUTER WHICH WOULD NOT BE PRACTICAL DURING CLASS TIME.

SINCE ALL OF OUR FOOD COMES FROM PLANTS, LET'S FIND OUT HOW CHANGING THE AMOUNT OF CARBON DIOXIDE OR THE INTENSITY OF LIGHT WILL AFFECT THE PLANT'S RATE OF PHOTOSYNTHESIS, MEASURED IN MICROGRAMS OF GLUCOSE PRODUCED PER DAY.

LET'S BEGIN WITH CHANGING THE LIGHT INTENSITY. YOU WILL VARY THIS BY SELECTING INTEGER VALUES IN THE RANGE OF 0 TO 30 (THE UNITS FOR LIGHT INTENSITY ARE IN ERGS/SEC/SQ.CM) BY VARYING ONLY ONE FACTOR AT A TIME, WE ARE CONDUCTING A CONTROLLED EXPERIMENT. WE WILL ASSUME THAT OUR PLANT HAS ALL OF THE CARBON DIOXIDE, WATER AND CHLOROPHYLL THAT IT NEEDS.

YOU SHOULD CHOOSE BETWEEN FIVE AND TEN LIGHT INTENSITY VALUES. TYPE IN ONLY ONE VALUE AFTER EACH QUESTION MARK. BY TYPING IN 100, NO MORE QUESTION MARKS WILL APPEAR AND THE PROGRAM WILL CONTINUE.

(NOTE: 'RP' MEANS RATE OF PHOTOSYNTHESIS)

LIGHT INTENSITY(LI)?2

DO YOU KNOW WHAT IS HAPPENING IN BOTH THESE INSTANCES?

DONE

**TITLE:**

PHOTEL: Photoelectric Effect

PHOTEL  
36317**DESCRIPTION:**

An experiment involving the photoelectric effect is simulated by the computer, to enable students to develop a qualitative understanding of the phenomenon.

OBJECTIVES:

To demonstrate a "critical wavelength" for photo-electronic emission.

**INSTRUCTIONS:**PRELIMINARY PREPARATION:

## A. Student

1. Prior discussion of the phenomenon as an introduction to modern physics
2. Students must be previously aware of such properties of light as wave-length and intensity.

## B. Materials - none

DISCUSSION:

The student is permitted to select any one of five metals, which is subsequently subjected to ultraviolet radiation. The electrons are "counted" by an ammeter incorporated in the simulated experimental set-up.

The data collected is tabulated for three trials, indicating the current measured for various wavelengths. The data will indicate that:

1. The photoelectric emission is a function of wavelength;
2. For light of wavelength less than the critical value, the number of electrons emitted is dependent upon the incident light intensity; and
3. For wavelengths greater than the critical value, light intensity has no effect on the emission of electrons.

The program is designed for individual qualitative investigation of the phenomena, but may also be utilized by small groups.

It should be noted that this program is advantageous where limited or non-existent lab equipment hinders actual experimentation.

**ACKNOWLEDGEMENTS:**

Huntington Project  
Polytechnic Institute of Brooklyn

RUN

RUN  
PHOTEL

THE PHOTOELECTRIC EFFECT

WHEN LIGHT OF SHORT WAVELENGTH FALLS ON A METAL SURFACE, ELECTRONS ARE EJECTED FROM THE METAL. ACCORDING TO THE DESCRIPTION OF THIS PHENOMENA BY EINSTEIN, THERE IS A MAXIMUM WAVELENGTH FOR EACH METAL ABOVE WHICH NO ELECTRONS ARE EMITTED. IN THIS EXPERIMENT WE WILL DETERMINE THE CRITICAL WAVELENGTH AT WHICH THIS OCCURS.

THE METAL SELECTED WILL BE PLACED IN A VACUUM WHERE IT WILL BE BOMBARDED BY SOFT X-RAYS. THE NUMBER OF ELECTRONS EJECTED WILL BE COLLECTED AND COUNTED WITH AN AMMETER. (NOTE: THE CURRENT IS RELATED TO THE NUMBER OF ELECTRONS EMITTED BY THE METAL).

SELECT ONE OF THE METALS LISTED BY TYPING ITS NUMBER.

DO YOU WISH TO TRY ANOTHER METAL (1=YES, 0=NO) : ?0

NOW BY PLOTTING THE WAVELENGTH VS. THE MEASURED CURRENT,  
(AVERAGE OF THREE TRIALS), THE PHOTOELECTRIC EFFECT AS  
DESCRIBED BY EINSTEIN WILL BECOME APPARENT.

THANK YOU.

DONE

**TITLE:**

PHOTON: Energy Level Problem

**DESCRIPTION:**

The student fires 15 shots, from a photon gun, at a mythical gaseous element with 4 randomly-selected energy levels. After each shot, the computer prints out the energies of photons, if any, emitted by the gas. The student is to construct an energy level diagram for the element from a knowledge of the energies of the photons emitted.

OBJECTIVES:

To promote a better understanding of how energy levels are determined from a knowledge of the emissions of excited atoms.

**INSTRUCTIONS:**PRELIMINARY PREPARATION:

A. Student - It is desirable that he have run BOHR, A833-36313, in Volume IV but it is not a necessity.

B. Materials - none

DISCUSSION:

The computer randomly selects 4 energy levels for the element. The energies range between  $1 \times 10^{-19}$  and  $15 \times 10^{-19}$  joules.

The energies of the students' 15 shots are picked at random, but cover the range from 1 to 15. Whenever one of the photons shot by the student is capable of exciting the atom all of the possible photon emissions from that excited state are printed.

By examining the photons emitted as a result of the 15 shots the student can construct an energy-level diagram of the element and account for each photon.

**ACKNOWLEDGEMENTS:**

**TITLE:**

PH,POH,PCT, DISSOCIATION

**DESCRIPTION:**

A class presentation designed to calculate pH, pOH, and percent dissociation of weak monoprotic acids, using the quadratic equations for rigorous solutions.

**OBJECTIVES:**

- A. To illustrate the relationships between the magnitude of the  $K_a$  value, and the strength of the acid.
- B. To show the relationship between pOH and pH.

**INSTRUCTIONS:****PRELIMINARY PREPARATION:**

- A. Student - The distinction between weak and strong acids should have been covered. The student should also be aware of the role hydrogen ion concentration plays in acid-base calculations, and the effect it has on hydroxide ion concentration.

**DISCUSSION:**

This program can be used in different ways, depending upon the ability level of the group.

1. With groups of average abilities, it is used primarily as a calculator, to solve large numbers of problems in a minimum amount of time.
2. In above average groups, the program listing was used as a device to illustrate theory. The entire lesson consists of an extensive step-wise explanation of the program list. In these classes all students were familiar with the Basic programming language. Some calculations built into the program (lines 41-43) are not part of the normal curriculum, but are necessary to solve the problem as the product of the  $K_a$  value and the concentration approaches  $1 \times 10^{-14}$ .

TITLE:

INTERACTIVE METHODS FOR SELECTED TOPICS IN PHYSICS  
AND MATHEMATICS

DESCRIPTION:

A series of programs developed as part of the Colorado Schools Computing Science Curriculum Development Project (supported by NSF grants GW-6517 and GW-7091). The programs are described in the text: Interactive Methods For Selected Topics in Physics and Mathematics Using Computer Programs.

The programs are:

1. PLOT1  
(Named "PLOT" in  
Textbook) Enables user to correlate an equation to the shape of its graph.
2. GRAPH  
(Named "GRAPHS" in  
Textbook) Helps users determine a mathematical equation from data using experimental plotting.
3. MODEQ Program which assists in developing the mathematical relationship of data collected in an experiment.
4. ZOOMIE Pilot a transport machine or design and pilot such a machine.
5. BLINKY Experiment determining straight light motion of a flying object.
6. BPLOT Graphs BLINKY data. Accessed through BLINKY.
7. MECHAN Six part problem involving a space ship passing by a space station. The ship ejects a capsule to dock with the station.
8. NTRCPT Simulates investigation of a foreign body with a space probe.
9. CENTRI Investigates the effect of applying a force on a mass.
10. FORCE Demonstrates the effect of a uniform force on the motion of a mass.
11. FIELDS Gives magnitude of gravitational potential energy at a point for plotting.
12. FIELDT Generates a temperature field
13. FIELDV Simulates an isolated gravitational field and an experiment to map it.
14. FIELDF Practice in mapping vector fields
15. FIELDE Simulation of an electric field and procedure for exploring it.
16. SAMPLE Sample space experiments.

DESCRIPTION continued on following page

ACKNOWLEDGEMENTS:

COLORADO SCHOOLS COMPUTING SCIENCE CURRICULUM  
DEVELOPMENT PROJECT

DESCRIPTION continued

17. PRINC More sample space experiments.
18. PROBAB Probability experiments.
19. UNION Investigate formulas useful in solving probability problems.
20. CONDI Explores definition for conditional probability.
21. PASCL Investigates PASCAL's triangles.
22. BINOM Investigates Binomial Experiments and binomial probability distribution.
23. QUIZ Post-test on the probability programs.
24. UNIVRS Simulates a satellite orbiting about a central mass.
25. KEP1 Plots orbits with different eccentricities.
26. ORBECC Plots an orbit for which the eccentricity can be calculated.
27. MASGO Assists in finding a mathematical relationship between the orbital speed and the radius of a circular orbit for a unit mass orbiting a central mass.
28. CIRMO Investigates circular motion.
29. BLOWS A series of activities which demonstrate the effect of a central force acting on a mass moving with uniform speed.
30. KEP2 Simulates a mass moving in an elliptical orbit.

Price is \$3.95 per copy (\$3.00 per book for 10 or more).

**TITLE:**

PLANK: A Photoelectric Simulation

**DESCRIPTION:**

This program simulates an experiment to determine Plank's constant, threshold frequency, and work function of a metal.

OBJECTIVES:

- A. To enable the student to do an experiment on the computer that he is not likely to be able to do in a high-school laboratory.
- B. A better understanding of the photoelectric effect.

**INSTRUCTIONS:**PRELIMINARY PREPARATION:

- A. Student
  1. He should have read and studied about threshold frequency, cut-off potential, and know (schematically) how the experimental apparatus used in such an experiment works.
  2. It is desirable that he have run PHOTEL A833-36317 in Volume IV - though not a necessity.
- B. Materials - Graph paper

DISCUSSION:

The student may choose one of the five metals in the program, the intensity of the x-rays used, and the number of different x-ray frequencies he would like to use. The computer then randomly chooses an x-ray frequency, and prints it for the student to see. The student enters voltages to be used as retarding potentials in the simulated tube and the computer prints a current for each potential entered until the current is zero when the cut-off potential is reached. A new frequency x-ray is then used and the student again tries to find the correct potential for cut-off.

Finally, a table of frequencies and cut-off potentials are printed and an assignment given (plot a graph and answer questions).

The student may then run the program again with a different intensity and the same metal, or he may change the metal and intensity.

**ACKNOWLEDGEMENTS:**

Huntington Project  
Polytechnic Institute of Brooklyn

RUN

RUN  
PLANK

IN THIS EXPERIMENT YOU WILL BE GIVEN THE FREQUENCY OF THE X-RAYS BEING USED AND YOU ARE TO DETERMINE THE VOLTAGE SETTING (RETARDING POTENTIAL) NECESSARY TO CAUSE THE COLLECTOR CURRENT TO DECREASE TO ZERO.

FIRST CHOOSE THE METAL YOU WISH TO USE FOR YOUR PHOTOSENSITIVE SURFACE.

1 SILVER, 2 BISMUTH, 3 CADMIUM, 4 LEAD, 5 PLATINUM

WHICH METAL DO YOU CHOOSE?4

WHAT INTENSITY OF X-RAYS WILL YOU USE (FROM 1 TO 5)?3

HOW MANY DIFFERENT X-RAY FREQUENCIES WOULD YOU LIKE TO USE TO RADIATE YOUR SAMPLE (FROM 5 TO 8)?7

THE X-RAY FREQUENCY IS 9.45 E15

VOLTAGES HIGHER THAN CUT OFF WILL GIVE CURRENT READINGS OF ZERO SO TRY LOWER ONES. I'LL NOTIFY YOU OF CUT OFF.

FIND THE CUT OFF (STOPPING) VOLTAGE.

PLOT A GRAPH OF CUT OFF VOLTAGES (Y AXIS) VS. FREQUENCY

WHAT IS THE MEANING OF THE POINT AT WHICH THE EXTRAPOLATED GRAPH INTERCEPTS THE VOLTAGE AXIS?

WHAT IS THE LOWEST FREQUENCY THAT WILL CAUSE EMISSION OF PHOTOELECTRONS FROM THIS METAL?

REMEMBER THAT THE RETARDING POTENTIAL APPLIED BETWEEN THE EMITTER AND THE COLLECTOR AT CUT OFF, EXPRESSED IN ELECTRON VOLTS, IS EQUAL TO THE KINETIC ENERGY OF THE FASTEST ELECTRONS ESCAPING FROM THE EMITTER. FIND THE SLOPE OF THE GRAPH BUT EXPRESS THE STOPPING POTENTIAL IN JOULES.

WHAT IS THE VALUE OF THE SLOPE OF THE GRAPH AND WHAT SPECIAL NAME IS GIVEN TO THIS CONSTANT?

THE SAME METAL WITH A DIFFERENT INTENSITY IS WORTH INVESTIGATING. WHEN YOU DO THIS EXPLAIN THE MEANING OF ITS GRAPH WHEN COMPARED TO THE PREVIOUS ONE.

YOU MAY ALSO WISH TO TRY A DIFFERENT METAL AND EXPLAIN THE MEANING OF ITS GRAPH WHEN COMPARED TO YOUR OTHER ONES, OR COMPARED WITH THOSE OF ANOTHER STUDENT.

DO YOU WISH TO TRY A DIFFERENT INTENSITY OR A DIFFERENT METAL (1=YES, 0=NO) : ?0

**TITLE:**

WATER POLLUTION SIMULATION

**DESCRIPTION:**

POLUT is a simulation designed to expand understanding of the problems associated with the management of our water resources. The effects of several variables on the quality of a water resource can be studied.

POLUT was developed by the Huntington II Project at the Polytechnic Institute of Brooklyn under the direction of L. Braun. This work was partially supported by the National Science Foundation, Grant GW-5883.

**INSTRUCTIONS:**

The user is asked to specify the following characteristics:

- A. The kind of body of water.
- B. The water temperature in degrees fahrenheit.
- C. The kind of waste dumped into the water.
- D. The rate of dumping of waste, in parts per million (PPM) per day.
- E. The type of treatment of the waste.

The simulation takes place and the user may specify output in either: a graph, a table, or both.

**SPECIAL  
CONSIDERATIONS:**

The Huntington II Project recommends that for use of this program in the classroom it is necessary to obtain the following publications from Program Library, Digital Equipment Corporation, Maynard, Massachusetts 01754.

Student Workbook	\$ .30
Teachers Guide	.30
Resource Handbook	.50

**TITLE:**

POPULATION GROWTH

POP  
36844**DESCRIPTION:**

The POP SERIES programs are designed to allow a student with little mathematical background to explore various simple mathematical models of population growth. Student exercises revolve about studies of the growth of a gypsy-moth population. The gypsy moth was chosen as the primary animal for investigation because of its current ecological interest as an important species with few natural enemies and because its population meets the assumptions of the models presented in the POP SERIES.

The following models are explored in the POP SERIES.

POP1 - simple exponential growth  
(population explosion)

POP2 - logistic model  
(environmental limiting factor)

POP3 - logistic model with a low-density modification

Each of these programs is general enough so that it can be used to model other plant and animal populations.

**INSTRUCTIONS:**

See Special Considerations

**TITLE:**

PRCNT: Percent Composition

**DESCRIPTION:**

This program is designed to calculate the percent composition (by weight) of a compound that may contain up to 5 elements. The program also contains a detailed sample calculation which is optional.

OBJECTIVES:

- A. For the students who are familiar with percentage, this program may be used as a self-teaching device to show how this concept applies to a chemical situation.
- B. The program may be used as a calculator to:
  - 1) Illustrate the Law of Multiple Proportions
  - 2) Illustrate the Law of Definite Proportions
  - 3) Work out percent water of hydration, percent sulfate, nitrate, etc. (see discussion)
  - 4) Check homework problems, class problems, lab problems, etc.
- C. The program may be used as a tutorial device for students having difficulty.

**INSTRUCTIONS:**PRELIMINARY PREPARATION:

- A. Student - The student should at least have an understanding of the concept of percentage. The teacher may also wish to discuss how this concept applies to chemical compounds.
- B. Materials - none.

DISCUSSION:

This program makes it possible for the teacher to spend very little time in class on percent composition and still have the student receive ample instruction and drill on the topic. This is possible since the program may be used in a number of situations such as teaching, self-teaching, and tutorial.

It should be brought to the students' attention that % water of hydration, % sulfate, % nitrate, etc., may be calculated by treating the groups of atoms as a single element when entering data.

**ACKNOWLEDGEMENTS:**

Huntington Project  
Polytechnic Institute of Brooklyn

RUN

RUN  
PRCNT

THIS PROGRAM IS DESIGNED TO CALCULATE THE PERCENT COMPOSITION BY WEIGHT OF A COMPOUND THAT MAY CONTAIN FROM 2 TO 5 ELEMENTS.

DO YOU WANT TO SEE A SAMPLE CALCULATION?  
ANSWER 1 FOR YES OR 0 (ZERO) FOR NO?1

EXAMPLE : THE PERCENT COMPOSITION OF SULFURIC ACID

LET W1 = ATOMIC WEIGHT OF HYDROGEN  
LET A1 = THE NO. OF HYDROGEN ATOMS IN THE FORMULA  
LET W2 = THE ATOMIC WEIGHT OF SULFUR  
LET A2 = THE NO. OF SULFUR ATOMS IN THE FORMULA  
LET W3 = THE ATOMIC WEIGHT OF OXYGEN  
LET A3 = THE NO. OF OXYGEN ATOMS IN THE FORMULA

Y= FORMULA WEIGHT OF SULFURIC ACID  
Y= (W1\*A1) + (W2\*A2) + (W3\*A3)  
Y= (1.008\*2) + (32.064\*1) + (15.999\*4)  
Y= 98.076

PERCENT H = (W1\*A1/Y)\*100  
PERCENT H = (1.008\*2/98.076)\*100  
PERCENT H = 2.005

PERCENT S = (W2\*A2/Y)\*100  
PERCENT S = (32.064\*1/98.076)\*100  
PERCENT S = 32.693

PERCENT O = (W3\*A3/Y)\*100  
PERCENT O = (15.999\*4/98.076)\*100  
PERCENT O = 65.2514

DO YOU WANT TO DO A PROBLEM ?  
ANSWER 1 FOR YES OR 0 (ZERO) FOR NO?1

WHAT IS THE NUMBER OF ELEMENTS IN THE FORMULA?3  
TYPE (THE ATOMIC WEIGHT,NO. OF ATOMS) FOR EACH ELEMENT,  
ONE ELEMENT TO A LINE.

?12.011,12  
?1.008,22  
?15.999,11

PRJTL  
36631**TITLE:**

PROJECTILE MOTION

**DESCRIPTION:**

By entering the firing angle and initial speed, the computer calculates the coordinates, vertical and horizontal velocities, and speed of a projectile for equal time intervals.

OBJECTIVES:

To show the independence of the horizontal and vertical velocities of a projectile, and to facilitate the plotting of its path by eliminating tedious calculations.

**INSTRUCTIONS:**PRELIMINARY PREPARATION:

A. Student - Knowledge of motion at constant velocity and at constant acceleration; and the vector nature of velocity and acceleration.

B. Materials - graph paper

DISCUSSION:

The student enters an angle and an initial speed of a projectile. A table of time, X and Y coordinates, horizontal and vertical velocities, and speed of the projectile is printed.

The student may then plot a graph of the position of the projectile, and draw vectors at each coordinate point to show the vertical and horizontal components of its velocity.

**ACKNOWLEDGEMENTS:**

Huntington Project  
Polytechnic Institute of Brooklyn

RUN

RUN

**TITLE:**

REFLECT: Least Time Principle and Light

**DESCRIPTION:**

An analogy is given for a light-ray reflected from a plane surface to demonstrate the "least-time" principle and its relationship to the reflection laws of light.

OBJECTIVES:

To demonstrate the consequences of the "least-time" principle.

**INSTRUCTIONS:**PRELIMINARY PREPARATION:

- A. Student - Should be familiar with the reflection laws of light.
- B. Materials - graph paper.

DISCUSSION:

Given points  $P_1$  and  $P_2$  and the line  $l$ , the student can vary the point  $P_3$  to note the effects on angles  $P$  and  $Q$  and their relationship to the time required to traverse the path  $P_1P_3P_2$ .

The program is presented as a game in which a horse (lightray) must complete a journey within a specified time. The student is limited to seven choices of  $P_3$  to complete the task. After a successful journey, the student may vary the point  $P_2$  to further establish the principle of least time.

This program has been extremely helpful in developing the least-time concept and its relationship to the laws of reflection.

It is applicable to a classroom situation as well as small study groups.

Polytechnic Institute of Brooklyn

RUN

RUN  
REFLECT

YOU ARE CAMPING OUT WEST IN COORDINATE NATIONAL PARK ON  
ORDINATE MOUNTAIN, LOCATED 10 MILES NORTH OF THE  
DESERTED TOWN OF ORIGIN, WHICH IS CONVENIENTLY LOCATED  
AT (0,0) ON THE LOCAL MAP.

A CALAMITY STRIKES! THE NEAREST HELP IS AT THE  
BAR 30:30 RANCH, LOCATED AT COORDINATES (30,30).  
TO GET THERE, YOU MUST RIDE AN OLD HORSE  
(NAMED LIGHTRAY) WHO :

- A) WILL ONLY WALK 5 MILES PER HOUR
- B) WILL CEASE TO WALK (AND EXIST) AFTER 10 HOURS
- C) MUST HAVE A DRINK OF WATER SOMEWHERE ALONG THE  
ABSCISSA RIVER, WHICH (IF YOU HAVEN'T GUESSED) RUNS  
ALONG THE ABSCISSA IN COORDINATE PARK

HERE IS YOUR PROBLEM: YOU MUST PICK A SPOT  
(FROM 0 TO 30) ALONG THE ABSCISSA RIVER DURING THE  
TRIP TO GIVE LIGHTRAY A DRINK, AND STILL MAKE IT TO  
THE BAR 30:30 WITHIN THE TIME ALLOWED. LIGHTRAY, USING  
HORSE SENSE, KNOWS ALL THE ANGLES, SO WE WILL GIVE  
THEM TO YOU, TOO.

WHERE WILL LIGHTRAY STOP FOR A DRINK?7

ANGLE APPROACHING RIVER IS 55 DEGREES.  
ANGLE LEAVING RIVER IS 53 DEGREES.

WHERE WILL LIGHTRAY STOP FOR A DRINK?25

ANGLE APPROACHING RIVER IS 89 DEGREES.  
ANGLE LEAVING RIVER IS 45 DEGREES.  
HEY - THIS TRIP TAKES LONGER!  
YOU HAVE A DEAD HORSE ON YOUR HANDS. TRY AGAIN.

WHERE WILL LIGHTRAY STOP FOR A DRINK?6

ANGLE APPROACHING RIVER IS 59 DEGREES.  
ANGLE LEAVING RIVER IS 51 DEGREES.  
WELL, YOU ARE CLOSER THAN LAST TIME.  
KEEP AN EYE ON THOSE ANGLES, THOUGH.  
LET'S GO BACK FOR ANOTHER HORSE.

WHERE WILL LIGHTRAY STOP FOR A DRINK?8

ANGLE APPROACHING RIVER IS 51 DEGREES.  
ANGLE LEAVING RIVER IS 54 DEGREES.  
WELL, YOU ARE CLOSER THAN LAST TIME.  
KEEP AN EYE ON THOSE ANGLES, THOUGH.  
LET'S GO BACK FOR ANOTHER HORSE.

WHERE WILL LIGHTRAY STOP FOR A DRINK?7.4

ANGLE APPROACHING RIVER IS 53 DEGREES.  
ANGLE LEAVING RIVER IS 53 DEGREES.  
NICE WORK. YOU MADE IT.  
THE TRIP TOOK ABOUT 10.0001 HOURS.  
YOU CAN SEE THAT USING HORSE SENSE, LIGHTRAY KNOWS THAT  
THE ANGLES HAVE TO BE EQUAL OF REFLECTION FOR A  
MINIMUM TIME TRIP.

IF YOU WANT TO MOVE THE RANCH, TYPE 1  
IF YOU WANT TO SEE SOMETHING ELSE, TYPE 2  
IF YOU WANT TO QUIT, TYPE 3  
?2

TIME FOR AN ACTUAL LIGHTRAY TO COMPLETE THE TRIP IS:  
2.75455E-04 SECONDS.

THANK YOU FOR PLAYING.

**TITLE:**

COMPUTER-AUGMENTED PHYSICS TOPICS (OPTICS)

**DESCRIPTION:**

This program provides practice in using the formulas for images formed by mirrors with circular surfaces, as given in the module, Computer-Augmented Physics Topics (Optics, Part 3) of the Hewlett Packard Curriculum Series. Some algebraic transformation of the given formulas may be necessary for calculating the answers.

This program uses Calculator Mode as a student option in answering questions.

**INSTRUCTIONS:**

Problems are of two general types:

1. Given focal length, object height, and object distance, calculate image distance and image height.
2. Given image distance and object distance, calculate focal length.

In either case, the student is also asked to specify whether the image formed is real or virtual.

To enter Calculator mode (before entering answer), the student types 999999 as the answer.

APPEND - DESCAL before RUNning the program.

See DESCAL (HP 36674) in Volume IV for instructions in using the calculator mode.

**SPECIAL  
CONSIDERATIONS:**

FOR INSTRUCTIONAL PURPOSES

Suitable Courses: Physics (secondary)

Student Background Required: Algebra, formulas for circular mirrors (concurrent)

The curriculum material listed below is available for classroom implementation of this program.

HP 5951-5648 Computer-Augmented Physics Topics (student text)  
 HP 5951-5649 Computer-Augmented Physics Topics (problem solutions)  
 HP 5951-5650 Computer-Augmented Physics Topics (classroom set - 30 student books and 1 problem solutions)

For ordering information of curriculum material, contact:

**TITLE:**

SLITS: Youngs Double Slit Experiment

**DESCRIPTION:**

Young's Double Slit Experiment is simulated by the computer to permit greater exploration of the influence of wavelength and slit-separation on the interference pattern. (This is a plotting program.)

OBJECTIVES:

To determine, qualitatively, the effects of slit-separation, inter-screen spacing distance ( $d$ ) and wavelength ( $w$ ), in altering the location of the maxima and minima of the intensity bands of light.

**INSTRUCTIONS:**PRELIMINARY PREPARATION:

- A. Student - An instruction sheet is helpful in leading the student through a logical approach. It is also recommended that students understand the superposition of waves before executing this program.
- B. Materials - none.

DISCUSSION:A. Operational Suggestions

1. The objectives of this program are best accomplished with small groups (3 to 4 students) to permit discussion and development of ideas concerning the relationships involved.
2. The program has worked well with highly-motivated students and has often led into detailed discussions of related topics. However, it has been found to be relatively ineffectual with poorly-motivated students.

B. Suggested Follow-up

This program permits the exploration of the parameters involved in double-slit interference patterns without the requirement of extensive equipment and/or set-ups. It is recommended that this simulated experiment be employed after the student has familiarized himself with the normal lab experiment.

To enhance the operation of this program, it is further recommended that an instruction sheet (see attachment) be constructed to enable efficient exploration of this phenomenon. By varying the slit-separation ( $d$ ), the student can observe the effects by noting the relative separations between adjacent maxima. In a similar manner, changes effectuated by the various wavelengths can also be noted.

SNELL  
36320**TITLE:**

SNELL: Snell's Law

**DESCRIPTION:**

Snell's law is presented pictorially by plotting the path of a light ray as it crosses a boundary separating two different media.

OBJECTIVES:

To permit students to "see" the refraction of light, including the case when the critical angle is exceeded and reflection occurs.

**INSTRUCTIONS:**PRELIMINARY PREPARATION:

- A. Student - The terms associated with Snell's law, such as refraction, media, normals, etc., must be presented prior to the running of this program.
- B. Materials - No additional supplies or materials are necessary.

DISCUSSION:

Snell's law can be investigated independently by students by altering the angle of incidence, and/or the indices of refraction. The pictorial presentation is especially beneficial to students with reading problems, since the concepts implied by the mathematical relationships are presented heuristically.

In addition, the critical angle may be approached and exceeded, in the special case where  $n_2$  (second medium) is less than  $n_1$  (initial medium).

Queries are included as part of the program to reinforce the concepts.

The program is well suited for small groups or individuals, but may be utilized for large group presentation without program modification.

**ACKNOWLEDGEMENTS:**

<b>TITLE:</b>	OPTICAL ABSORPTION SPECTRA SIMULATION, 2-SPECIES EQUILIBRIUM MIXTURES
<b>DESCRIPTION:</b>	<p>This program computes and plots simulated optical absorption spectra for up to five equilibrium mixtures of a system of two interconvertible chemical species. The output resembles the recorder output of an infrared, visible, or ultraviolet spectrophotometer.</p> <p>The program simply assigns a Gaussian curve to each of the two species. The two curves have their maxima separated by an arbitrary amount (variable D1 in the program) and are assigned arbitrary relative amplitudes (variable C1 in the program). The composite spectrum is taken to be the sum of the two curves, with each weighted by the mole fraction of the respective species. The mole fractions of one species (species 'A') are input by the student at execution time.</p> <p>The program can produce as many as five superimposed spectra, in which case the "isosbestic point" is quite evident. Each spectrum is plotted using an identifying digit as the plotting character.</p>
<b>INSTRUCTIONS:</b>	<p>At execution time, the student inputs:</p> <ol style="list-style-type: none"> <li>1. The number of spectra to be run (1-5)</li> <li>2. The mole fraction (concentration) of species 'A' for each spectrum.</li> </ol>
<b>SPECIAL CONSIDERATIONS:</b>	<p>The relative spacing (<math>\lambda_{max}</math>) and relative amplitudes (extinction coefficients) of the two absorption peaks can be changed by changing the respective data in line 210. This might necessitate a change in the plot scaling data in lines 102 and 112.</p> <p><b>FOR INSTRUCTIONAL PURPOSES</b>  Suitable Courses: Analytical Chemistry, Physical Chemistry  Student Background Required: Students should be acquainted with theory and operation of an optical spectrometer, as well as with the concept of chemical equilibrium.</p> <p>This program is used to supplement laboratory experiments involving spectra of equilibrium mixtures in solution, such as the determination of the pK of an acid-base indicator. The program can be used before or after the actual experiment to give students a better feel for the idealized spectra of such systems. Program parameters (D1 and C1) can be adjusted by the instructor to make the simulated spectra more closely resemble those of the system being studied.</p> <p>The phenomenon of the isosbestic point (the common intersection of all the spectra generated when the total concentration of the chemical species is kept constant) is very easily discussed in terms of this program. Examination of the simple model used (line 280) shows that this special point arises because one curve is weighted by M while the other is weighted by 1-M. Such weighting leads to the common intersection which is the isosbestic point. The M, 1-M coefficients exactly correspond, of course, to the mole fraction relationship which exists in an equilibrium mixture of two interconvertible species.</p>

**TITLE:** FLY POPULATION CONTROL

**DESCRIPTION:** This program is a simulation designed to make possible any investigation of the effectiveness of two very different methods of pest control:  
1) the use of pesticides, and 2) the release of sterile males.

STERL was developed by the Huntington II Project at the Polytechnic Institute of Brooklyn under the direction of L. Braun. This work was partially supported by the National Science Foundation, Grant GW-5383.

**INSTRUCTIONS:** The user's goal is to destroy the fly population in a given area by choosing the methods of control. The program prompts appropriate response to indicate the type of control desired, and the simulation takes place.

**SPECIAL CONSIDERATIONS:** The Huntington II Project recommends that for use of this program in the classroom it is necessary to obtain the following publications from Program Library, Digital Equipment Corporation, Maynard, Massachusetts 01754.

Student Workbook	\$ .30
Teachers Guide	.30
Resource Handbook	.50

YOUR GOAL WILL BE TO ELIMINATE THE ONE MILLION MALE  
FLIES NOW IN YOUR 10000 SQUARE MILE AREA, THUS DESTROYING  
THE TOTAL FLY POPULATION. YOU MAY USE A PESTICIDE,  
RELEASE STERILE MALE FLIES, OR BOTH. INDICATE THE TYPE  
OF CONTROL PROGRAM YOU WANT BY TYPING IN THE APPROPRIATE  
RESPONSES TO THE FOLLOWING QUESTIONS:

'PESTICIDE?'

0= NO PESTICIDES.

1= PESTICIDES ON SPECIFIED DAYS. INDICATE  
THESE DAYS BY TYPING A DAY NUMBER (BETWEEN 1 AND 75)  
NEXT TO EACH '?' THAT APPEARS; TYPE 0 WHEN FINISHED.

'STERILE FLIES?'

0= NO STERILE FLIES.

1= STERILE FLIES WILL BE RELEASED. COMPUTER WILL  
ASK 'HOW OFTEN?' TYPE 1=DAILY OR 2=CERTAIN DAYS  
IF 1, SPECIFY NUMBER OF FLIES EACH DAY (UP TO 1000000),  
THE FIRST DAY OF THE PERIOD, AND THE LAST DAY  
(BETWEEN 1 AND 75 DAYS).  
IF 2, FOR EACH DAY SELECTED, SPECIFY THE DAY NUMBER  
(BETWEEN 1 AND 75) AND THE NUMBER OF STERILE FLIES  
(UP TO 1000000). USE A NEW LINE FOR EACH DAY.  
TYPE 0,0 WHEN FINISHED.

**TITLE:**

MASS VOLUME

**DESCRIPTION:**

This program solves mass-mass, mass-volume, and volume-volume problems. The input may be in grams and/or moles and the output will be in grams, moles and/or liters.

OBJECTIVES:

To provide the teacher and the student with a stoichiometry calculator to be used where either finds it applicable.

**INSTRUCTIONS:**

PRELIMINARY PREPARATION:

- A. Student - The student must have an introduction to stoichiometry.
- B. Materials - None

DISCUSSION:

Some of the situations where this program is useful:

- A. In Class
  - 1. Enables teacher to cover a large number of problems without using time to do calculations.
  - 2. Can be used in conjunction with a problem exercise in class so teacher can go around and give individual help.
- B. Outside of Class
  - 1. Tutorial Work.
  - 2. Students can check homework problems during study periods or after school.

**ACKNOWLEDGEMENTS:**

Huntington Project  
Polytechnic Institute of Brooklyn

<b>TITLE:</b>	SIMULATES TITRATION OF A BASE BY AN ACID	TITER 36888-18006
<b>DESCRIPTION:</b>	This program simulates a titration with clues to neutralization progress by color and hints on addition amounts. Has facility for proper end point, small overrun, and gross overshooting of endpoint.	
<b>INSTRUCTIONS:</b>	Program is interactive and self-explanatory. Just GET and RUN.	
<b>SPECIAL CONSIDERATIONS:</b>	<u>For instructional purposes:</u> Suitable Courses: First year chemistry  Student background required: Algebra, Descriptive Chemistry.	
<b>ACKNOWLEDGEMENTS:</b>	Richard C. Adams Pleasant Hill High School Pleasant Hill, Oregon 97401	

RUN

RUN  
TITER

WELL, HERE YOU ARE - THE ONE WHO DIDN'T GET TO TITRATE THE BASE WITH THE ACID. YOU MISSED OUT ON ALL THE FUN OF SPILLING ACID ON YOURSELF AND BREAKING A BURETTE (\$12.95) OR MAYBE JUST A PIPETTE (\$4.95). ANYWAY, YOU'RE GOING TO GET TO HAVE SOME OF THAT FUN AND DO AN ELECTRONIC TITRATION. YOU JUST HAVE TO TELL ME WHAT STRENGTH ACID YOU WANT TO USE (SOMEWHERE LESS THAN 1 MOLAR IS NICE) AND HOW MUCH BASE YOU WANT TO TITRATE. WE'LL BE USING A RED INDICATOR, PHENOLPHTHALEIN (FEE NO THAY LEE IN) WHICH IS A PRETTY REDDISH-MAGENTA COLOR IN BASE, SO YOU'LL BE SHOOTING FOR A CLEAR SOLUTION AT NEUTRALITY. LET'S GET STARTED!

WHAT MOLARITY OF ACID DO YOU WANT TO USE?? .2  
FINE. NOW, HOW MANY MILLILITERS OF BASE DO YOU WANT TO USE? 5  
O.K. START OFF WITH A VOLUME OF ACID (IN MILLILITERS) AND I'LL TRY TO TELL YOU HOW THE COLOR'S COMING ALONG.

ML? 1

YOU'VE HARDLY ADDED ANY AT ALL! DO MORE NEXT TIME.

YOU'VE ADDED 1 ML OF ACID SO FAR.

ML? 3

BOY! THAT'S NOT VERY MUCH EVEN YET. I DIDN'T SEE ANY COLOR CHANGE. TRY MORE NEXT TIME. REALLY!

YOU'VE ADDED 4 ML OF ACID SO FAR.

ML? 3

THAT'S STILL NOT VERY GOOD.

YOU'VE ADDED 7 ML OF ACID SO FAR.

ML? 2

HEY! IT CLEARED IN ONE SPOT JUST FOR A SECOND!

YOU'VE ADDED 9 ML OF ACID SO FAR.

ML? 3

HEY! IT CLEARED IN ONE SPOT JUST FOR A SECOND!

YOU'VE ADDED 12 ML OF ACID SO FAR.

ML? 3

THE CLEARING LASTED A LITTLE LONGER THIS TIME!

YOU'VE ADDED 15 ML OF ACID SO FAR.

ML? 2

THE CLEAR AREA KEEPS GETTING A LITTLE LARGER BEFORE IT TURNS BACK TO ALL RED. KEEP GOING!

YOU'VE ADDED 17 ML OF ACID SO FAR.

ML? 1

YOU'RE GAINING ON IT. YOU'D BETTER NOT ADD TOO MUCH AT A TIME - - YOU'RE 85% THERE NOW!

YOU'VE ADDED 18 ML OF ACID SO FAR.

ML? 1

THE COLOR'S BEGINNING TO FADE NOW!

YOU'VE ADDED 19 ML OF ACID SO FAR.

ML? 1

THAT'S IT IT'S CLEAR!!! CONGRATULATIONS!!!!

O.K., YOU HAD 5 ML OF BASE AND YOU ADDED 20

ML OF YOUR ACID, WHICH WAS .2 MOLAR. SO 20

TIMES; .2 HAS TO EQUAL 5 TIMES THE BASE'S MOLARITY.

I GET .8 FOR THE MOLARITY OF THE BASE.

THANKS FOR TITRATING WITH ME - HE SAID ACIDLY

DONE

## TITLE:

TRIVIAL OR COMMON NAME QUIZ FOR CHEMISTRY STUDENTS

## DESCRIPTION:

This program is a simple drill on the common names of selected familiar substances. It includes the formula and chemical names as well. The student is asked between 10 and 16 questions at a time after which his wrong responses are reviewed and the correct answers are given. There are six types of questions that are asked - each of which is asked once in a random order for the first six questions presented. From the seventh question on they are chosen at random, being slightly biased toward the two types involving the common name and the chemical name (#2 & #5).

The six types of questions are:

1. Give common name ask formula
2. Give common name ask chemical name
3. Give formula ask common name
4. Give formula ask chemical name
5. Give chemical name ask common name
6. Give chemical name ask formula

For any questions that are answered incorrectly, the correct answers are written onto a file and read back as a study list at the end of the session. The option to go through the drill again is then offered (with different questions and order).

## INSTRUCTIONS:

The program requires string inputs depending upon the question asked. If the correct answer is not known to a question the user may type A ? or simply return (or anything else for that matter), and the program will continue with the next question. All responses are timed input.

There is one file used by this program called TRIVIF. It is a one record file, or the first record of a file. The information is written onto it three strings at a time.

SPECIAL  
CONSIDERATIONS:

The Data Base is easily changed. Simply add Data Statements and increase the value of N accordingly (line #900). If it is desired to use two records of the file or to increase the number of questions asked before the review is given, change the test of W0 in line # 1070 to - 1070 if W0>510 then 1170 -. The program was designed to use only the first record of a semipermanent student record file as a scratch pad, and so will not overflow into the second record, thereby protecting the contents of the file beginning with record two. This feature is transparent whether used or not.

## FOR INSTRUCTIONAL PURPOSES

Suitable Courses: Basic Chemistry

## ACKNOWLEDGEMENTS:

RUN  
TRIVIA

INSTRUCTIONS FOR THIS TRIVIAL NAME QUIZ:

ALWAYS PUT PARENTHESIS ( ) AROUND THE FOLLOWING - H2O  
SO4  
OH

THIS IS IMPORTANT IN ORDER FOR ME TO UNDERSTAND YOUR FORMULAS.

IF YOU DON'T KNOW THE ANSWER, TYPE ? OR PRESS RETURN .

1 WHAT IS THE COMMON NAME OF  
CALCIUM CARBONATE?:CA;COT\

YES! ALSO THE FORMULA IS CaCO3.

2 WHAT IS THE COMMON NAME OF  
NA(OH)? :SALT  
NO, IT IS CALLED LYE.

3 WHAT IS THE FORMULA OF  
MAGNESIUM SULFATE HEPTAHYDRATE?:MG(SO4)2(H2O)  
NO, THE CORRECT ANSWER IS MG(SO4)7(H2O).

4 WHAT IS THE CHEMICAL NAME OF  
NAHCO3?:SODIUM BICARBONATE  
YES! ALSO THE COMMON NAME IS BAKING SODA.

5 WHAT IS THE FORMULA OF  
VINEGAR?:HC2H3O2  
NO, THE CORRECT ANSWER IS HC2H3O2.

6 WHAT IS THE CHEMICAL NAME OF  
QUICKSILVER?:MERCURY  
YES! ALSO THE FORMULA IS Hg.

7 WHAT IS THE COMMON NAME OF  
NA2(B4O7)10(H2O)? :BORAX  
YES! ALSO THE CHEMICAL NAME IS SODIUM TETRABORATE DECAHYDRATE.

8 WHAT IS THE CHEMICAL NAME OF  
AL2O3?:ALUMINUM OXIDE  
YES! ALSO THE COMMON NAME IS ALUMINA.

9 WHAT IS THE CHEMICAL NAME OF  
PBO?:LEAD OXIDE  
YES, BUT IT IS MORE CORRECT TO SAY LEAD(II) OXIDE.

10 WHAT IS THE COMMON NAME OF  
POTASSIUM HYDROGEN TARTRATE?:CREAM OF TARTAR  
YES! ALSO THE FORMULA IS KHC4H4O6.

-----  
YOU GOT RIGHT.  
3 WRONG.  
0 TO SLOW.

STUDY LIST:

Lye = Na(OH) = SODIUM HYDROXIDE  
EPSOM SALTS = MG(SO4)7(H2O) = MAGNESIUM SULFATE HEPTAHYDRATE  
VINEGAR = HC2H3O2 = ACETIC ACID

-----  
I WILL WAIT 24 SECONDS FOR YOU TO STUDY THIS LIST...  
PRESS CR IF YOU DON'T WANT TO WAIT.

DO YOU WANT TO CONTINUE THIS DRILL ?NO

**TITLE:**

HUMAN POPULATION PROJECTION

**DESCRIPTION:**

USPOP is a highly flexible human population model. The student can investigate the effects of fertility, age of mother at birth of child, sex ratio of the offspring and age-dependent mortality on population size and structure. Through use of 1970 census data, held in DATA statements, the student need enter only a few of the required inputs.

If the student or teacher wishes to model situations other than that collected in the DATA statements, all or some of the required inputs may have to be changed.

**INSTRUCTIONS:**

USPOP uses simulation techniques as a stimulus to learning in the teaching of many key demographic concepts involving population growth and age distribution. Students play the role of demographers projecting future population trends. The STUDENT MANUAL (See "SPECIAL CONSIDERATIONS") leads the student through a series of five investigations, each involving a single concept. The following concepts are explored:

INVESTIGATION #1: Effect of fertility on population growth. Fertility is seen to have a major impact on population growth.

INVESTIGATION #2: Effect of time of birth of first child on the population-growth rate. Surprisingly, delaying the birth of the first child can slow population growth, even if the total number of offspring remains constant.

INVESTIGATION #3: Effect of reducing infant mortality. Reducing infant mortality to the lowest level realistically possible is seen to have only a minor impact on future population size.

INVESTIGATIONS #4 and #5: Exploration of factors affecting age distribution in a population. Again fertility is seen as the major factor. Mortality is important, but it has only a secondary effect on age distribution in the population.

**SPECIAL  
CONSIDERATIONS:**

The Huntington II Project recommends that for use of this program in the classrooms it is necessary to obtain the following publications from Program Library, Digital Equipment Corporation, Maynard, Massachusetts, 01754.

Student Workbook	\$ .30
Teachers Guide	\$ .30
Resource Handbook	\$ .50

**ACKNOWLEDGEMENTS:**

Huntington II Project

DONE

VFIELD  
36322**TITLE:**

VFIELD: Potential Field Picture

**DESCRIPTION:**

This program plots a picture of the relative potential field strengths of regions surrounding two point charges.

OBJECTIVES:

To give the student a feel for how the electric potential field is altered by changing the positions of two point charges.

**INSTRUCTIONS:**PRELIMINARY PREPARATION:

A. Student - The concept of electric potential for a point charge should be understood, as well as equipotential lines and potential hills or swells.

B. Materials - none needed

DISCUSSION:

One run of this program requires much time, so it is not advised for use with a whole class. Individual students or small groups will derive the greatest benefit, or, alternatively, the teacher may make several runs before class and display the resulting plots during a class discussion.

The coordinate plane occupied by the charges is 30 x 30.

NOTE: The numbers in the plots indicate relative field strengths.

**ACKNOWLEDGEMENTS:**

Polytechnic Institute of Brooklyn

VLOCTY  
36323**TITLE:**

VLOCTY: Instantaneous Velocity

**DESCRIPTION:**

A graph of distance vs. time is plotted for a body accelerating at  $1\text{m/sec/sec}$ . The average velocity is found for a point on the graph several times using  $V_{\text{average}} = (d_2 - d_1)/(T_2 - T_1)$  as  $(T_2 - T_1)$  gets smaller and smaller.

The program prints the instantaneous velocity at the points and allows the student to change some of the parameters involved.

OBJECTIVES:

To aid the student in understanding the meaning of instantaneous velocity and taking a limit.

**INSTRUCTIONS:**PRELIMINARY PREPARATION:

- A. Student - should know the definitions of average and instantaneous velocity
- B. Materials - none

DISCUSSION:

A good tutorial program or teaching aid. Student should realize that the slope of the line drawn between the points  $d_1, T_1$ , and  $d_2, T_2$  is the average velocity. As the second point is made to approach the first, the slope of this line approaches the value of the slope of the tangent line drawn to the first point - which is called the instantaneous velocity.

The student may then change the acceleration, time at which he wants to know the average speed, and the time interval,  $\Delta T$ .

 VLOCTY

AVERAGE AND INSTANTANEOUS VELOCITY

THIS PROGRAM CONSIDERS DISTANCE AS A FUNCTION OF TIME,  $D=F(T)$ . IT WILL CALCULATE THE AVERAGE VELOCITY DURING THE TIME INTERVAL  $T_1, T_2$  BY EVALUATING  $D$  AT THOSE TIMES GIVING  $D_1$  AND  $D_2$ . THE RESULT OF  $(D_2-D_1)/(T_2-T_1)$  YIELDS THE AVERAGE VELOCITY. AS  $T_2$  IS BROUGHT CLOSER AND CLOSER TO  $T_1$  THE RESULTANT AVERAGE VELOCITY WILL APPROACH THE INSTANTANEOUS VELOCITY AT  $T_1$ .

AFTER THE PROGRAM STOPS, TYPE IN THE FOLLOWING:  
 (END EACH LINE, INCLUDING 'RUN', WITH THE 'RETURN' KEY)

```
1 GO TO 300
300 DEF FND(T)=....(YOUR FUNCTION OF TIME)....
RUN
```

FOR EXAMPLE, TO USE THE EQUATION  $D=A*T*T$  WITH  $A=1$  YOU WOULD TYPE AS FOLLOWS:

```
1 GO TO 300
300 DEF FND(T)=1*T*T
RUN
```

YOU MIGHT TRY THAT AS YOUR FIRST RUN.  
 FOR SUBSEQUENT RUNS, YOU NEED ONLY CHANGE LINE 300 FOR A NEW FUNCTION, FOLLOWED BY 'RUN'.

DONE

```
1 GO TO 300
300 DEF FND(T)=1*T*T
RUN
VLOCTY
```

\*\*\*\*\*

WHAT ARE YOUR VALUES OF  $T_1$  AND  $T_2$  (SMALLER FIRST:  $T_1, T_2$ )?5,50

THE DISTANCE TRAVELED DURING THE INTERVAL IS 2475  
 THE AVERAGE VELOCITY IS 55

WOULD YOU LIKE TO CHANGE  $T_2$  (1-YES, 0-NO)?1

WHAT IS YOUR NEW VALUE FOR  $T_2$  ( $T_2$  MUST BE GREATER THAN  $T_1$ )?105

THE DISTANCE TRAVELED DURING THE INTERVAL IS 11000  
 THE AVERAGE VELOCITY IS 110

WOULD YOU LIKE TO CHANGE  $T_2$  (1-YES, 0-NO)?0

NOW WATCH THE AVERAGE VELOCITY AS  $T_2$  APPROACHES  $T_1$ .

$T_1 = 5$	$T_2$	$T_2-T_1$	$D_1 = 25$	$D_2$	$D_2-D_1$	$(D_2-D_1)/(T_2-T_1)$

WATER1  
36326**TITLE:**

WATER1: Water Budget Problem Check

**DESCRIPTION:**

This is a tutorial program which takes a student through the step-by-step calculations of a water budget, checks the correctness of his responses, and indicates the location of his errors. In difficult parts of the budget instructions, clues are given before the student is asked to re-calculate his work.

OBJECTIVES:

This program is designed to:

- A. Enable students to "visualize" an areas' climate in terms of its moisture patterns of usage, storage, recharge, and deficit.
- B. Illustrate the relationship of deficit and surplus in light of growing seasons for crops, watering of lawns, the need for irrigation, and the occurrence of floods.
- C. Develop the skills necessary for the successful completion of a water budget.

**INSTRUCTIONS:**PRELIMINARY PREPARATION:

- A. Student - Students should understand the following terms: potential evapotranspiration, actual evapotranspiration, deficit, and surplus. The concept of a change in value of a number (  $-ST$  or ' $\delta$ - $ST$  ) should also have been covered.
- B. Materials - Ditto sheets containing water budget tables should be available for each class member. A sample table follows:

Continued on following page.

Δ ST													
AE													
D													
S													

A set of water budget graphs should also be available if the teacher wishes to have his classes complete the graph in addition to the water budget. See: Investigating the Earth, Teacher's Guide, Part I. P. 402 of the Earth Science Curriculum Project.

DISCUSSION:

This program is applicable to individual or small group (5 or less) instruction, and is designed for average students.

The progress code number assigned to the student indicates to the program the extent to which the student has progressed through the program. These numbers should be chosen according to the following table:

<u>Progress Code #</u>	<u>Stage of Calculation of Water Budget</u>
0-10	Introductory information
11-20	Student is ready for "P-PE" section of program
21-30	ready for "ST" section of program
31-40	ready for "-ST" section of program
41-50	ready for "A.E." section of program
51-60	ready for "D" section of program
61-70	ready for "S" section of program

Each student may work on a different water budget by entering a unique set of data in lines 43 and 44. Line 42 also may be changed to indicate the region whose water budget is under study.

This program should be used in conjunction with program WATER2 A833-36327.

**TITLE:**

WATER2: Water Budget

**DESCRIPTION:**

This program prints out a completed water budget. It may be used by a teacher to quickly calculate a series of water budgets he plans to use or it may be employed with more advanced students to check out an entire budget in one run.

OBJECTIVES:

- A. To free teachers from the time-consuming task of calculating a number of practice water budgets.
- B. To allow students a rapid means of verifying budgets they have been assigned for practice and drill.

**INSTRUCTIONS:**

PRELIMINARY PREPARATION:

- A. Student - Students should be completely familiar with the concepts of evapotranspiration, water surplus, water storage, and water deficit.
- B. Materials - A ditto of water budget tables as shown below:

WATER BUDGET  
FOR: \_\_\_\_\_

	J	F	M	A	M	J	J	A	S	O	N	D

Continued on following page.

**ACKNOWLEDGEMENTS:**

Huntington Project  
Polytechnic Institute of Brooklyn

DISCUSSION:

To place a particular water budget in the program:

1. Call up the program by name.
2. Type the precipitation data on line 120, the P.E. data on line 130 and the title of the budget on line 110.

example:

```
110 PRINT "Water Budget for N.Y., N.Y.:"
120 DATA 89, 86, 98, 86, 84, 85, 113, 38, 88, 82, 85
130 DATA 12, 40, 86, 125, 149, 132, 94, 55, 22, 2
```

3. Type "RUN"

The complete water budget will print out. (Check the value for P and PE to make sure you have typed them in correctly.)

To add other budgets repeat steps 2 and 3 until all budgets have been completed.

Additional P and PE data for other regions can be found in Investigating the Earth, Teacher's Guide, Part I, pages 392-397.

This program may be used in conjunction with WATER1 A833-36326.

RUN

```
110 PRINT "WATER BUDGET FOR ANCHORAGE,ALASKA:"

**TITLE:**

WAVES: Sum of Two Waves

**DESCRIPTION:**

This program finds the sum of two waves: one predetermined by the program, and the other determined by the student. There are options of either displaying both waves and their sum, or just their sum.

OBJECTIVES:

To enable the student to study, independently, the effect of changes in wavelength, amplitude, and phase on the superposition pattern formed by two waves.

**INSTRUCTIONS:**PRELIMINARY PREPARATION:

A. Student - Some experience with "SLINKY" wave superposition: knowledge of phase, amplitude, and wave length.

B. Materials - none

DISCUSSION:

The student controlled wave ("B") may have wavelengths ranging from 2 to 8, though only a wave length of 4 may be fully displayed. Its amplitude can be varied between 5 and 11, and its phase can be any decimal part of a wavelength.

The fixed wave ("A") has a wavelength of 4, and an amplitude of 10.

The display consists of both waves, side by side, and their superposition, or just their superposition.

**ACKNOWLEDGEMENTS:**

Huntington Project  
Polytechnic Institute of Brooklyn

RUN  
WAVES

WAVES AND THEIR SUPERPOSITION  
DO YOU NEED INSTRUCTIONS (1=YES, 0=NO) : ?1

IN THIS PROGRAM YOU MAY OBSERVE THE EFFECTS OF  
CHANGING WAVELENGTH, AMPLITUDE, AND PHASE ON TWO  
WAVES AND ON THEIR SUM (OR SUPERPOSITION).

WAVE 'A' IS FIXED. ITS WAVELENGTH IS 4, ITS AMPLITUDE  
IS 10, AND ITS PHASE IS 0.

WAVE 'B' MAY BE CHANGED BY YOU. FOR BEST RESULTS :  
WAVELENGTH (L) BETWEEN 2 AND 4  
AMPLITUDE (A) BETWEEN 5 AND 10  
PHASE (P) BETWEEN 0 AND 1  
(FOR EXAMPLE, .5 PHASE = 1/2 WAVELENGTH

IT IS EASIEST TO SEE THE EFFECTS OF CHANGES IN EACH  
PARAMETER IF YOU HOLD TWO CONSTANT AND VARY THE OTHER,  
ALTHOUGH ALL THREE MAY BE VARIED AT ONCE.

WHAT IS YOUR CHOICE OF WAVELENGTH, AMPLITUDE, AND PHASE?2,10,0

NOTATION: A = 'A' WAVE  
B = 'B' WAVE  
S = SUPERPOSITION WAVE

## TITLE:

CARDIOVASCULAR SIMULATION

## DESCRIPTION:

MCMAN is an interactive model used in teaching basic principles of hemodynamics. It was developed by the Department of Clinical Epidemiology and Biostatistics of McMaster University, Hamilton, Ontario, Canada and is employed in the instruction of first year medical students in the problem-oriented curriculum of that instruction. MCMAN is a 2000 Series BASIC language version of the HP 3000 FORTRAN program MCMAN.

The model is a synthetic person who has a heart inside a chest, systemic arteries and arterioles, a capillary bed, and veins collecting blood from the capillary bed and returning it to the heart. "MCMAN" thus has a complete systemic circulatory system, and when the heart is working it will circulate blood. To speed up computation, the heart is treated as a single chamber filling the right atrium and pumping blood out into the aorta. The pulmonary circulation is regarded as simply a parallel path, and not (as in life) in series with the systemic circulation. However, this makes the model unrealistic only when one side of the heart is able to pump much less than the other (e.g. because of valve disease). "MCMAN" cannot therefore simulate the effects of valve lesions but it can simulate most types of generalized heart disease. "MCMAN" also possesses synthetic baroreceptors similar in operation to those which are normally situated at the bifurcation of the common carotid artery and at the aortic arch. These act in such a way as to stabilize blood pressure.

The performance of the heart can be described by a starling curve relating effective cardiac input pressure to cardiac output. The pressure drop between the systemic arteries and the systemic capillary bed can be derived from the cardiac output and the mean value of arterial resistance; and the right atrial pressure (input pressure of the heart) can be derived from the capillary pressure, the mean venous resistance, and the cardiac output. About 80% of the blood is contained on the low-pressure side of the circulation, and the mean systemic pressure at which it is contained depends on the blood volume and on the capacitance of the low pressure circulation.

All these relationships can be expressed as a series of simultaneous equations, and for a given blood volume, systemic arterial resistance, venous resistance, circulatory capacitance, and cardiac performance characteristics, there is only one solution which satisfies all the equations. The computer is programmed to find this solution in an interactive manner. In addition, the performance of the simulated circulation in the course of time can be determined by solving the appropriate equations at suitably short simulated time intervals, and then allowing a simulated arterial baroreceptor feed-back loop to operate with a realistic time constant, appropriately modifying the values of arterial resistance, circulatory capacitance, and cardiac function.

This mathematical model is presented in the form of a teaching display which puts out on a teleprinter or CRT a 1 min record of systemic arterial pressure and pulse rate appropriate to a normal human subject. At the end of each simulated minute of recording, the current values for cardiac output, mean capillary pressure, and right atrial pressure, together with other values, are put out in numerical form. Operation of the model then ceases and the terminal user is invited to make changes in fixed arterial and/or venous resistance (simulating the effects of vasoconstrictor or vasodilator drugs), in cardiac contractility

Continued on following page.

## ACKNOWLEDGEMENTS:

Dept. of Clinical Epidemiology and Biostatistics  
McMaster University Medical School

## DESCRIPTION continued

(simulating the effects of myocardial infarction, or digitalis), in intrathoracic pressure (which can be raised to simulate positive pressure ventilation), in pericardial restriction of cardiac filling (to simulate pericardial tamponade) or in blood volume (to simulate haemorrhage or transfusion). In addition, the setting of the arterial baroreceptor feed-back loop can be altered to that appropriate to a hypertensive subject, or the baroreceptor loop can be permanently interrupted to simulate the effect of cutting the buffer nerves. Combinations of any of these changes can be made and studied, and graphs of blood pressure and other variables made over successive simulated minutes of observation.

The example shown is of an actual run. After the preamble the program produces a vertical graph of arterial blood pressure from its simulated subject (in the span of X's the right-most X represents systolic and the left-most X represents diastolic pressure, approximately). At the end of the initialization period the operating values for BP, right atrial pressure, mean capillary pressure, cardiac output, stroke volume, heart rate, arterial resistance, venous resistance (in each case the total resistance in the systemic circuit), and finally cardiac contractility (the slope of the Starling function curve relating cardiac output to filling pressure) are given. Note, incidentally, that the vertical line of dots on the graph represent heart rate approximately, but the heart rate at the end of each run is accurately given as a number.

Then follows a list of the working values of variable which you can change: the basic mean values of arterial and venous resistance as percentages of normal (you could simulate a pressor drug by increasing 1 and a depressor drug by decreasing 1, and an arterial and venous vasodilator drug, e.g. nitroglycerine, by decreasing both 1 and 2 in proportion); the basic contractile function of the heart (remember that this is modified continuously by vagal and sympathetic influences and circulating adrenaline, so even if you reduced this to, say, a nominal 30% of normal, to simulate a patient with a very bad heart, the actual contractility would be kept partly restored by sympathetic action); the intra-thoracic pressure (normally averaged at -2 mm Hg, but you can change this and see how very sensitive the circulation is to small changes, which greatly influence venous return); 'limiting cardiac input pressure' (factor 5) - this is the effective filling pressure above which no further increase in output can be obtained: pericardial tamponade may be simulated by making this some small figure, e.g. 3 mm Hg, indicating that up to 3 mm filling pressure the heart will pump normally, but at filling pressures above this no further output can be obtained); blood volume, in ml (you can simulate a 1000 cc haemorrhage by making this 4000). In the example shown factors 1 and 2 were greatly reduced, simulating the effects of nitroglycerine.

## INSTRUCTIONS

To interact with the model respond to the questions as follows:

1. When asked "DO YOU WANT TO CONTINUE?",  
type YES if you wish to proceed with another 60 second simulation period; type NO if you wish to discontinue using the model.
2. When asked "DO YOU WANT A PLOT?",  
type YES if you want a graphical display of heart rate and blood pressure over time;  
type NO if you wish to proceed directly to the calculated values of the simulation.
3. When asked "DO YOU WANT TO CHANGE ANY OF THESE FACTORS?"  
you are being given the opportunity to alter the 6 basic variables of the systemic circulation; type YES if you wish to make changes before the next simulation, type NO if you wish to proceed "as is" or move to altering the blood pressure stabilizing system.
4. When asked "CHANGE FACTOR (1...6 OR 0 TO QUIT)?"  
type any of the digits 0, 1, 2, 3, 4, 5, 6, where 0 means "no more changes to be made", 2 means "a change is to be made to venous resistance", etc.
5. When asked: "FACTOR X?", (where X is any digit 1 thru 6),  
type the new value for that factor. For example, each of factors 1, 2, and 3 are stated in percent of normal; your response of 50 would mean "reset the variable to behave at 50% of normal functioning." Likewise, 150 would mean "50% greater than normal", etc. Do not use the character "%"; do not enter whole percents as decimal fractions. Factors 4 and 5 are pressures stated in millimeters of mercury (HG). Factor 6 is volume stated in milliliters. Do not input these units of measure (i.e. the letters "MM HG" or "ML") as part of the numeric value you give the model.

Continued on following page.

INSTRUCTIONS continued

5. When asked "DO YOU WANT TO CUT THE BUFFER NERVES.....?"

type YES if you wish to put the blood pressure stabilizing system completely out of action; type NO if you wish to reset baroreceptor sensitivity.

7. When asked "DO YOU WANT TO RESET BAROCEPTER SENSITIVITY.....?",

type YES if you wish to simulate the baroreceptor sensitivity of a hypertensive patient, type NO if you do not.

CONTRIBUTED PROGRAM **BASIC**KEYSIG  
36258**TITLE:**

GIVES MAJOR SCALES

**DESCRIPTION:**

This program prints out the major scale of any musical key that is requested or all of them at once. They are printed on a staff with keysignature, and at the bottom of each measure abbreviation of the key is printed.

**INSTRUCTIONS:**

To get all of the major scales printed, just type "ALL" at the question mark. To get one or more of the scales just type the letter of that scale (A through G). Then type an "N" if it is natural, an "S" if it is sharp, or an "F" if it is flat. You may continue this procedure on the same line for up to 36 keys. There is no need to separate the keys by any type of character.

**SPECIAL  
CONSIDERATIONS:**

The Aardvark and Company Writing Team has designed programs to take up an absolute minimum of computer storage and perform a maximum purpose. The team encourages people to send good programs to Aardvark. As a slight encouragement, the team will give anyone who sends a program which is accepted a free "subscription" to the program handbook, and include the contributor as a member of the writing team.

CONTRIBUTED PROGRAM **BASIC**

**TITLE:** TWELVE TONE COMPOSITION PROGRAM MUSIC  
36888-18028

**DESCRIPTION:** The program produces simple 12 tone compositions. Values given to various elements of the composition (pitch, time value, etc.) are determined by random processes. The user interacts with the program by assigning probabilities to the random elements. MUSIC is designed primarily to illustrate how random elements and probabilities may be used in composition and how a computer may be used to aid in the selection of random elements.

**INSTRUCTIONS:** Order 36888-90028, \$5.00 for complete documentation.

**SPECIAL CONSIDERATIONS:** The program uses four data files, each 4 records long, to store intermediate results. These files are named V1, V2, V3, V4 in statement 320 of the program. This statement may have to be changed under certain circumstances. See section "Data Files" p. 15 of the manual for more details. In any case the four files must exit on a read-write basis in order for the program to run.

CRE-V1,4  
CRE-V2,4  
CRE-V3,4  
CRE-V4,4

The program is used as part of a third year course in electronic music for composition majors. It presupposes some knowledge of twelve tone composition technique.

BALANC  
36328

**TITLE:**

BALANC: Trade and Payment Balances

**DESCRIPTION:**

This program demonstrates the distinction between "balance of trade" and "balance of payments." Also shown are the components that make up the "balance of payments" account, and their individual impacts.

OBJECTIVES:

- A. To emphasize the important distinction between "Balance of Trade", and "Balance of Payments".
- B. To demonstrate the impact of any specific foreign expenditure on our "Balance of Payments".

**INSTRUCTIONS:**

PRELIMINARY PREPARATION:

- A. Student must obtain data for components of balance of payments for a given year and country.
- B. Discussion of the concepts "balance of trade" and "balance of payments", would be helpful but are not necessary.

DISCUSSION:

- A. Student level - average
- B. Curriculum location - advanced economics: Unit on U. S. Economy in the world.
- C. This program may be used either as a group exercise, or for individual study.

**ACKNOWLEDGEMENTS:**

Huntington Project  
Polytechnic Institute of Brooklyn

RUN

RUN  
BALANC

THERE'S A DISTINCTION BETWEEN TRADE BALANCE AND  
BALANCE OF PAYMENTS.

TRADE BALANCE = EXPORTS-IMPORTS.

BALANCE OF PAYMENTS= ALL OVERSEAS EXCHANGES+  
ALL OVERSEAS EXPENDITURES.

WHEN INFORMATION IS REQUESTED, INPUT VALUES IN  
MILLIONS OF DOLLARS (E.G. 6 = 6 MILLION DOLLARS)

A.  
INPUT A FIGURE FIRST FOR ALL MILITARY AID, THEN  
FOR ALL OTHER AID TO OTHER NATIONS.  
?12,13

B.  
INPUT A FIGURE FIRST FOR EXPORTS, THEN FOR IMPORTS.  
?256,23

C.  
INPUT A FIGURE FIRST FOR FOREIGNERS TRAVELING IN  
YOUR COUNTRY, THEN FOR YOUR COUNTRYMEN TRAVELING  
ABROAD.  
?254,56

D.  
INPUT A FIGURE FIRST FOR INCOME FROM FOREIGN INVEST-  
MENTS, THEN FOR FOREIGN INVESTMENT ITSELF.  
?259,21

A. FOREIGN AID =	25
B. BALANCE OF TRADE =	233
C. TRAVEL BALANCE =	198
D. INVESTMENT BALANCE =	238

-----  
BALANCE OF PAYMENTS = 644

(REMEMBER, IF A MINUS FIGURE APPEARS ABOVE, YOUR  
COUNTRY HAS A DEFICIT IN ITS BALANCE OF PAYMENTS)

HOPE YOU UNDERSTAND THE DISTINCTION BETWEEN THE  
BALANCE OF TRADE AND THE BALANCE OF PAYMENTS  
BETTER NOW.

DONE

**TITLE:**

BANK: Solves Financial Problems

**DESCRIPTION:**

This program solves financial problems concerning installment buying, long-term loans, and savings accounts. The program gives you a choice of these three types of problems, and asks for the information needed to do said problems.

OBJECTIVES:

- A. This program aids students in learning the terms used in certain financial problems.
- B. Student will hopefully be motivated to learn the mathematical logic behind the solution of these problems.

**INSTRUCTIONS:**PRELIMINARY PREPARATION:

- A. Student - A review of decimals and fractions would be helpful.
- B. Materials - A terminal, and a means by which to display the output to an entire class (e.g. overhead projector, closed circuit TV, etc.)

DISCUSSION:

A type of problem may be demonstrated through the use of the computer, then the mathematical logic behind the solution of the problem may be developed through the use of a flow chart similar to the one that follows.

Terminology may be taught when the computer asks for input (see sample run).

Since the execution time of one run is extremely short, many more problems may be demonstrated. Depending upon the ability of the class or student, a variety of relationships may be discovered.

**ACKNOWLEDGEMENTS:**

CHARGE  
36604

**TITLE:**

CHARGE ACCOUNT SIMULATION

**DESCRIPTION:**

CHARGE is a simulation game based on the external reality of using charge accounts.

With built-in roles stating set financial conditions, CHARGE provides opportunity to purchase goods and services during a simulated twelve-month period and to add to or begin a Savings Account. The computer assigns positive and negative unexpected events. The program gives experience in fitting income to life style by requiring wise use of credit, adjustments between savings and expenditures, figuring monthly finance charges, and absorbing penalties for unwise use of money.

**INSTRUCTIONS:**

Before beginning the game each student should be provided with:

1. Set of rules
2. Role Sheet
3. Item Selection Sheets (4)

The game can be played most effectively with groups of ten or fewer. After the instructional session a group of ten students will be able to complete a one-year run in less than two hours.

Copyright to the instructional materials is held by Paul S. Amidon & Associates, Inc. Complete documentation, including Teacher Guide and Student Worksheets may be obtained for \$15.00 from: Paul S. Amidon & Associates, Inc., 5408 Chicago Avenue South, Minneapolis, Minnesota.

**SPECIAL  
CONSIDERATIONS:**

**FOR INSTRUCTIONAL PURPOSES**

Because of the various skills and judgments inherent in the game, it easily fits into such disciplines from Grades 9 through 12 as Business Mathematics, General Mathematics, General Business, Home and Family Living, and Social Studies sections dealing with management of personal income.

**ACKNOWLEDGEMENTS:**

Paul S. Amidon and Associates  
Minneapolis, Minnesota

**TITLE:**

CONSMP: Depression/Equilibrium

**DESCRIPTION:**

This program simulates economic depression and equilibrium as effects of consumption.

OBJECTIVES:

- A. Depression or recession results when consumption drops below the capacity to produce.
- B. Equilibrium results when consumption equals the capacity to produce.
- C. One cause for "over-production" is a time lag in discovering a drop in consumption.

**INSTRUCTIONS:**PRELIMINARY PREPARATION:

## A. Student - terms to define and explain:

- |                      |                        |
|----------------------|------------------------|
| 1. Depression        | 6. Investment          |
| 2. Recession         | 7. Savings             |
| 3. Equilibrium       | 8. GNP                 |
| 4. Under-consumption | 9. Productive Services |
| 5. Overproduction    |                        |

- B. Materials - Introduce this program with the Circular Flow model of goods, services and money.

DISCUSSION:A. Operational Suggestions

1. Student level - above average
2. Curriculum location - advanced economics unit on economic growth and stability.

B. Suggested Follow-up

## Discussion topics:

1. Consider possible causes for a drop in consumption.
2. With advanced students, discuss the (Keynesian) concept of "equilibrium at less than full employment."

**ACKNOWLEDGEMENTS:**

Huntington Project  
Polytechnic Institute of Brooklyn

CONTRIBUTED PROGRAM **BASIC**

<b>TITLE:</b>	CAMPAIGN STRATEGY AND ELECTIONS	ELECT 36798								
<b>DESCRIPTION:</b>	<p>The ELECT package contains three separate simulation programs, focusing on campaign decision making and electoral politics. ELECT1 and ELECT2 focus on the study of campaign strategy in 14 American presidential elections of the past. ELECT3 is a role-playing game which can be used in the classroom to simulate a campaign and election. In the case of all simulations, the computer simulates the behavior of the electorate as it decides which candidate to support.</p>									
<b>INSTRUCTIONS:</b>	<p><u>ELECT1 and ELECT2</u></p> <p>The computer programs ELECT1 and ELECT2 contain simulated voter attitudes for each of 14 past presidential elections. (The elections of 1828, 1840, 1844, 1868, 1876, 1884, 1896, 1920, 1928, 1932, 1948, 1952, 1960, and 1968 have been included.) Information about voter attitudes toward the candidates, the parties, and the issues is stored for each of these elections. The basic question facing the students using ELECT1-2 is how each candidate should allocate his political resources among the three areas of voter attitudes. In other words, how much emphasis should the candidate place on his image, on the party, and on the issues. Once these strategies have been determined, they are entered and the computer then indicates how the election would have turned out if these student-developed strategies had, in fact, been adopted by the candidates. It then gives the actual election results so that students can compare the two and attempt to explain the differences. For each election, a brief description of the political climate of the country prior to the election has been included to help students make their strategy decision. Also included is a brief explanation of how the election actually turned out and why.</p> <p><u>ELECT3</u></p> <p>ELECT3 is based on the same model as is ELECT1 and ELECT2. That is, the program simulates voter-attitudes toward candidates, parties and issues. ELECT3 has been designed as a role-playing game which can be used in the classroom to simulate a campaign and election. Students playing the roles of campaign managers, media specialists, candidates, speechwriters, etc. make decisions which change the attitudes of the electorate. The class may be divided into two camps, each representing a candidate and his campaign staff. The basic objective of the campaign is to use resources in such a way as to increase the candidate's chances of winning on election day. The campaign is conceived of as a series of actions taking place along a time continuum that begins several months before the election and culminates in the aggregate decision of the voters on the day of the election. Each group is given periodic poll results and information regarding the success of their campaign strategies to aid them in planning future campaign strategy.</p> <p>Continued on the next page.</p>									
<b>SPECIAL CONSIDERATIONS:</b>	<p>The Huntington II Project recommends that for use of this program in the classroom it is necessary to obtain the following publications from Program Library, Digital Equipment Corporation, Maynard, Massachusetts 01754.</p> <table border="0" style="margin-left: auto; margin-right: auto;"> <tr> <td style="padding-right: 20px;">Student Workbook</td> <td style="padding-right: 20px;">\$.30</td> <td style="padding-right: 20px;">Resource Handbook</td> <td>\$.50</td> </tr> <tr> <td>Teachers Guide</td> <td>\$.30</td> <td></td> <td></td> </tr> </table>		Student Workbook	\$.30	Resource Handbook	\$.50	Teachers Guide	\$.30		
Student Workbook	\$.30	Resource Handbook	\$.50							
Teachers Guide	\$.30									
<b>ACKNOWLEDGEMENTS:</b>	<p>Huntington II Project State University of New York</p>									

INSTRUCTIONS: Continued.

Attempts to reach and change the attitudes of voters within the electorate is hampered by message and media distortion. Finally, a turnout rate, which can be influenced by the candidates, helps to determine the final outcome of the election.

ELECT1

ELECT1

HISTORICAL ELECTIONS - 19TH CENTURY

NEED INSTRUCTIONS?YES

YOUR GOAL WILL BE TO CHOOSE THE OPTIMUM STRATEGY FOR CANDIDATES IN AN HISTORICAL ELECTION. EACH CANDIDATE'S STRATEGY VECTOR CONSISTS OF 3 NUMBERS. THE FIRST REPRESENTS THE AMOUNT OF EMPHASIS TO BE PLACED ON THE CANDIDATE'S IMAGE, THE SECOND REPRESENTS THE AMOUNT OF EMPHASIS ON PARTY AFFILIATION, AND THE THIRD IS THE AMOUNT OF EMPHASIS ON CAMPAIGN ISSUES. EACH OF THESE NUMBERS IS BETWEEN 10 AND 80, WITH A HIGHER NUMBER REPRESENTING MORE EMPHASIS. THE TOTAL OF EACH STRATEGY VECTOR MUST EQUAL 100!

THE COMPUTER WILL FIRST ASK 'ELECTION YEAR?'  
CHOOSE THE YEAR FROM THE FOLLOWING LIST:

1828 1840 1844 1868 1876 1884 1896

ELECTION YEAR?1868

ELECTION OF 1868

CANDIDATE	PARTY
SEYMOUR	DEMOCRAT
GRANT	REPUBLICAN

SEYMOUR - STRATEGY (3 NUMBERS, 10 <= I <= 80, TOTAL = 100)?50,20,30  
GRANT - STRATEGY (3 NUMBERS, 10 <= I <= 80, TOTAL = 100)?20,50,30

THE RESULT OF YOUR STRATEGY IS:

SEYMOUR	47.5	X
GRANT	52.5	X

THE VOTE FOR THE TWO MAJOR CANDIDATES IN THE ACTUAL ELECTION WAS:

SEYMOUR	47.3	X
GRANT	52.7	X

SOCIAL SCIENCE (EDUCATION) (860)

CONTRIBUTED PROGRAM **BASIC**

**TITLE:** SOCIAL SCIENCE INQUIRY PACKAGE INQUIR  
36888-18001

**DESCRIPTION:** There are 2 programs in this package: INQUIR and INQUIRH. INQUIR is a social science data analysis package which allows the user to create and modify data files and perform a number of statistics on that data including frequencies, both means and standard deviations, crosstabs with chi square, degrees of freedom and gamma. Data can be recoded and statistics done on subpopulations as well.

**INSTRUCTIONS:** Order HP 5951-7389 INQUIR Reference Manual.  
This package is the software package for the following curriculum packages to be published by Hewlett-Packard's Computer Curriculum Project.

Title

Political Awareness - HP 5951-7382 by Jim Hessler  
Analyzing Crime - HP 5951-7380 by Justin Green  
INQUIR Reference Manual - HP 5951-7389, by Don Holznel

Palo Alto, Calif. 94303

**ACKNOWLEDGEMENTS:** Don Holznel  
Dan Klassen

**TITLE:** STUDENTS FORMULATE NATIONAL POLICY POLICY  
36649

**DESCRIPTION:** POLICY is a simulation of the interest group process. Specifically, it focuses attention on the impact these interest groups have on the kind of public policy the government enacts.

**INSTRUCTIONS:** Players of this simulation become members of one of six interest groups: Business, Labor, Civil Rights, Military, Internationalists and Nationalists. Each group has a set of goals which reflects the interests of similar groups in real life. The object of the game for each group is to maximize its own set of goals. This is accomplished by organizing support for policies so as to secure their adoption, and by opposing the adoption of policies which are unfavorable to their group. Each interest group has a certain number of "influence points" which it can use to support or oppose proposals. Policies are considered "adopted by government" when they have accumulated a predetermined number of positive influence points and "rejected by the government" when they have accumulated a predetermined number of negative influence points.

**SPECIAL CONSIDERATIONS:** The Huntington II Project recommends that for use of this program in the classroom it is necessary to obtain the following publications from Program Library, Digital Equipment Corporation, Maynard, Massachusetts 01754.

Student Workbook	\$ .30
Teachers Guide	.30
Resource Handbook	.50

SOCIAL SCIENCE (EDUCATION) (860)  
CONTRIBUTED PROGRAM **BASIC**

POLSYS  
36640

**TITLE:**

SIMULATION OF CITY COUNCIL

**DESCRIPTION:**

This program is a simulation attempting to duplicate the processes which individuals and groups undergo when they attempt to influence "City Hall".

POLSYS was developed by the Huntington II Project at the Polytechnic Institute of Brooklyn under the direction of L. Braun. This work was partially supported by the National Science Foundation, Grant GW-5883.

**INSTRUCTIONS:**

The users assume the role of citizens engaged in political activity. An issue is presented, and the teams enter values for publicity (PBU), knowledge (KU), and support (SU) according to the roles played. The strategy used by the teams is evaluated and decisions made.

**SPECIAL  
CONSIDERATIONS:**

The Huntington II Project recommends that for use of this program in the classroom it is necessary to obtain the following publications from Program Library, Digital Equipment Corporation, Maynard, Massachusetts 01754.

Student Workbook	\$ .30
Teachers Guide	.30
Resource Handbook	.50

PYRMID  
36888-18013

**TITLE:**

BUILD A PYRAMID

**DESCRIPTION:**

The purpose of this game is to build as high a pyramid as possible with the available amount of money. The pyramid should be completed in 8 years.

**INSTRUCTIONS:**

The following conventions should be observed:

- The height of a pyramid should neither be smaller than 15 metres nor exceed 200 metres
- The number of slaves should not be smaller than 1000
- The work time of slaves shouldn't exceed 20 hours/day
- The maximum of 9 pyramids can be built within one run

**TITLE:** SURVEY ANALYSIS PROGRAM**DESCRIPTION:**

The sample survey is one of the most valuable tools used by the social scientist to learn more about the world around him. Americans are constantly being exposed to the results of survey research. The Gallup and Harris polls continually report the popularity of public figures, and advertising bombards individuals with the results of one survey or another. In order to be able to critically evaluate the results of such surveys, or in order to undertake similar studies of one's own, it is necessary for a person to understand the elements of survey design, sampling procedures, and statistical analysis of results. It is also important to have a sense of the nature and limitations of generalizations that are based on sample survey data. One effective means by which students can achieve such an understanding is actual participation in a survey research project from start to finish. This unit is designed to facilitate such an experience, both for the teacher and the student.

**INSTRUCTIONS:**What the Program Will Do

After you have entered your data, you can have the computer do several things with it. The computer will:

1. Compute the mean and standard deviation for any variable. (With OPTIONS 1 through 5 you have a Recode Option.)
2. Construct a table of observed frequencies for any two variables, compute chi square, degrees of freedom (df), and allow the user to calculate the correlation coefficient gamma if desired.
3. Construct a table of observed frequencies by row percentages for any two variables.
4. Construct a table of observed frequencies by column percentages for any two variables.
5. Construct a table of expected frequencies for any two variables.
6. Stop the program.

**SPECIAL  
CONSIDERATIONS:**

The Huntington II Project recommends that for use of this program in the classroom it is necessary to obtain the following publications from Program Library, Digital Equipment Corporation, Maynard, Massachusetts 01754.

**TITLE:**

STOCK: Stock Market Simulation

STOCK  
36331**DESCRIPTION:**

This program simulates the stock market. Each student is given \$10,000 with which he may buy and/or sell shares in five fictitious issues.

OBJECTIVES:

- A. To give the student a simple understanding of the operations of the stock market.
- B. To motivate the student to reinforce his basic arithmetic skills.
- C. To give an example of the use of everyday mathematics and economics in everyday life.

**INSTRUCTIONS:**PRELIMINARY PREPARATION:

- A. Student - no special preparation
- B. Materials - possibly graph paper

DISCUSSION:

This program can be used as a good motivation device in the teaching of basic stock-market concepts, and the basic mathematical skills involved. The computer starts each student with \$10,000, and allows him to buy and/or sell shares. Precautionary tests are included for the student who tries to purchase more shares than he has money for, or to sell more shares than he actually owns. The program continues for as many trading days as the student desires.

The stock values rise and fall on a semi-random basis. On each trading day all stocks undergo a small random price change, a trend change (based on a random trend), and the possibility--on a random basis--of a large price change. The structure of the formula is:

$$\text{new price} = \text{old price} + (\text{trend} \times \text{old price}) + (\text{small random price change}) + (\text{possible large price change})$$

The trend is a random number between -.1 and +.1. It remains constant for a random number of days, at which time the trend is changed randomly. The trend affects all stocks equally, and attempts to simulate general market trends. The small random change ranges between -3 and +3 points. It occurs every day to every stock. The possible large price change is either +10 or -10 points. The + and - changes each occur at random day intervals, and to random stocks. That is, there may be no large change on some trading days, only a +10 change on others, a -10 change on still others, and both large and small changes on others. In all large-change cases, the change affects only one random stock when it occurs.

Because of the random generation of stock values and their fluctuations, the program does not exactly simulate the real market. It does, however, provide a simplified view of what does happen, and familiarizes the student with the basic functions involved. This should be explained to the students, along with some real causes of stock-market fluctuations.

Graph paper might be used to plot the daily stock values and the exchange average. In this way, the trend will become evident.

RUN  
STOCK

THE STOCK MARKET  
DO YOU WANT THE INSTRUCTIONS (YES-TYPE 1, NO-TYPE 0)?1

THIS PROGRAM PLAYS THE STOCK MARKET. YOU WILL BE GIVEN \$10,000 AND MAY BUY OR SELL STOCKS. THE STOCK PRICES WILL BE GENERATED RANDOMLY AND THEREFORE THIS MODEL DOES NOT REPRESENT EXACTLY WHAT HAPPENS ON THE EXCHANGE. A TABLE OF AVAILABLE STOCKS, THEIR PRICES, AND THE NUMBER OF SHARES IN YOUR PORTFOLIO WILL BE PRINTED. FOLLOWING THIS, THE INITIALS OF EACH STOCK WILL BE PRINTED WITH A QUESTION MARK. HERE YOU INDICATE A TRANSACTION. TO BUY A STOCK TYPE +NNN, TO SELL A STOCK TYPE -NNN, WHERE NNN IS THE NUMBER OF SHARES. A BROKERAGE FEE OF 1% WILL BE CHARGED ON ALL TRANSACTIONS. NOTE THAT IF A STOCK'S VALUE DROPS TO ZERO IT MAY REBOUND TO A POSITIVE VALUE AGAIN. YOU HAVE \$10,000 TO INVEST. USE INTEGERS FOR ALL YOUR INPUTS. (NOTE: TO GET A 'FEEL' FOR THE MARKET RUN FOR AT LEAST 10 DAYS)

DONE

SOCIAL SCIENCE (EDUCATION) (860)  
CONTRIBUTED PROGRAM **BASIC**

**TITLE:**

AUTO PURCHASE AND MAINTENANCE SIMULATION

WHEELS  
36187

**DESCRIPTION:**

WHEELS simulation model is designed to provide students with a simulated experience in purchasing and maintaining a car successfully for one year. It may be used with an entire class, as an individual student assignment, or an out-of-class activity. Experiences include the purchase of a car, the selection of a method of financing, the choice of insurance, and a provision for tracking expenses. The computer randomly assigns accidents, major repairs, unexpected events and calculates expenses.

**INSTRUCTIONS:**

Hewlett-Packard does not have documentation for this package but users instructions are contained in literature distributed by Paul S. Amidon & Associates, Inc., 5408 Chicago Avenue South, Minneapolis, Minnesota.

It is distributed in two packages:

- 1 teacher's manual
- 3 sets of student roles
- 35 participant manuals
- Activity sheet tablet

Sample Set . . . . .

- 1 teacher's manual
- 1 set of student roles
- 1 participant manual
- Activity sheet tablet

**SPECIAL  
CONSIDERATIONS:**

Copyright to the instructional materials are held by Paul S. Amidon & Associates, Inc.

**INSTRUCTIONAL PURPOSES**

The program is useful in High school business courses, economics classes, or individual assignment.

No student background required.

The program is very effective for teaching private budgeting, installment purchasing or monetary responsibility.

A teacher would utilize the materials and programs as a class unit or as an activity for individual students to do in conjunction with class activity.

**ACKNOWLEDGEMENTS:**

Paul S. Amidon & Associates, Inc.

WELCOME TO THE QUICKIE COMPUTER CAR CHOOSING PARLOR  
\*\*\*\*\*

SO YOU WANT TO BUY A CAR. WELL, MAYBE I CAN HELP YOU TO  
MAKE A GOOD CHOICE.  
DO YOU NEED INSTRUCTIONS? TYPE 1 FOR YES, 0 FOR NO.?1  
YOU SHOULD HAVE BEEN GIVEN A ROLE NUMBER  
FROM 1 TO 15 AND ALSO A CAR DESCRIPTION  
SHEET. WHEN I ASK YOU, ENTER YOUR ROLE  
NUMBER FOLLOWED BY A COMMA AND THEN THE  
CAR NUMBER OF YOUR CHOICE.  
ENTER ROLE NUMBER, COMMA AND CAR CHOICE NOW. ?8,21

ROLE NUMBER 8 CAR NUMBER 21  
REPORT FOR MONTH NUMBER 1

YOU DROVE 997 MILES THIS MONTH.  
RUNNING EXPENSES (GAS, OIL, WEAR, ETC.) AMOUNT TO \$ 72

MAJOR REPAIRS REPORT  
\*\*\*\*\*  
NO MAJOR REPAIRS THIS MONTH.

ACCIDENT REPORT  
\*\*\*\*\*  
NO ACCIDENTS.THANK GOODNESS.

UNEXPECTED EVENTS  
\*\*\*\*\*  
YOU HAVE ENCOUNTERED EVENT NUMBER..... 29  
CHECK TO SEE WHAT HAPPENED.

TRY HARDER NEXT MONTH. GOOD-BYE FOR NOW.

TYPE MONTH NUMBER 1-12?2  
ENTER ROLE NUMBER, COMMA AND CAR CHOICE NOW. ?8,21

ROLE NUMBER 8 CAR NUMBER 21  
REPORT FOR MONTH NUMBER 2

YOU DROVE 970 MILES THIS MONTH.  
RUNNING EXPENSES (GAS, OIL, WEAR, ETC.) AMOUNT TO \$ 70

MAJOR REPAIRS REPORT  
\*\*\*\*\*  
NOTHING NEEDS FIXING. THINGS O.K. THIS MONTH.

ACCIDENT REPORT  
\*\*\*\*\*  
NO ACCIDENTS.THANK GOODNESS.

UNEXPECTED EVENTS  
\*\*\*\*\*

CONTRIBUTED PROGRAM **BASIC**

**TITLE:** TIME SERIES ANALYSIS GROWTH & DEVELOPMENT OF U.S. 1790-1860 36888-18033  
TSAP

**DESCRIPTION:** There are 4 programs and 1 file in this package: TSAP, TSAP1, TSAP2, TSAP3 and TSAPF.

These programs, all accessed through TSAP, allow students to do time series analysis of a data base (TSAPF) which contains information on all the states of the U.S.

**INSTRUCTIONS:** The program was written to support the publication, The Growth and Development of the United States, 1790-1860 by John G. Kolp published by the Hewlett-Packard Computer Curriculum Project, (HP 5951-7381)

For further information contact:

Hewlett-Packard Computer-Based Educational Materials  
Scientific Press  
1629 Channing Avenue  
Palo Alto, Calif. 94303

The publication is needed for complete user instruction.

**SPECIAL CONSIDERATIONS:** FOR INSTRUCTIONAL PURPOSES  
Suitable Courses: High School and College American History Courses.

**ACKNOWLEDGEMENTS:** John G. Kolp  
University of Iowa

RUN

RUN  
TSAP

TIME SERIES ANALYSIS PACKAGE

DO YOU NEED INSTRUCTIONS?YES  
THIS PROGRAM ALLOWS YOU TO RETRIEVE AND/OR  
ANALYZE DATA CONCERNING THE U.S. FOR THE PERIOD  
1790 THRU 1860. THE DATA IS STORED INTERNALLY IN THE  
COMPUTER.  
LET'S IMAGINE THE FILE LOOKS LIKE THE FOLLOWING OUTLINE:

- I. US DATA
  - A. STATE (STATE)
    - 1. GEORGIA
  - B. YEARS (YEARS)
    - 1. 1790
  - C. TOTAL POPULATION (TOTPOP)
    - 1. 55 (IN 100 THOUSANDS)
  - D. NUMBER OF SLAVES (SLAVES)
    - 1. 550 (IN 10 THOUSANDS)
  - E. NUMBER OF FREE BLACKS (BLACKS)
    - 1. 66 (IN THOUSANDS)
  - F. PERCENTAGE OF POPULATION FOREIGN BORN (FORBOR)
    - 1. 0 (1850-1860 ONLY)
  - G. PERCENTAGE POPULATION LIVING IN URBAN AREAS (URBAN)
    - 1. 10
  - H. AVERAGE ACRES PER FARM (FARMS)
    - 1. 0 (1850-1860 ONLY)
  - I. LAND SALES-PREVIOUS DECADE (LAND)
    - 1. 0 (1820-1860 ONLY)
  - J. MILES OF RAILROAD (RAILS)
    - 1. 0 (1850-1860 ONLY)
  - K. VALUE OF MANUFACTURING (MANFT)
    - 1. 0 (1810,1840,1850,1860)
  - L. VALUE OF IMPORTS (IMPORT)
  - M. VALUE OF EXPORTS (EXPORT)
  - N. PERCENT OF US TOBACCO PRODUCTION (TOBAC)
  - O. PERCENT OF US COTTON PRODUCTION (COTTON)
  - P. PERCENT OF US CORN PRODUCTION (CORN)
  - Q. SECTION OF COUNTRY (SECTN)
    - 1. NORTH
    - 2. SOUTH

THIS PARTICULAR OUTLINE REPRESENTS ONE RECORD - GEORGIA  
IN THE YEAR 1790. THERE ARE RECORDS FOR GEORGIA FOR THE  
YEARS 1790 THRU 1860, AS WELL AS RECORDS ON OTHER STATES  
FOR THE SAME YEARS. THIS COLLECTION OF RECORDS MAKES UP  
A FILE.

STATE, YEAR, SLAVES ARE WHAT IS KNOWN AS VARIABLES.  
INSTEAD OF ALWAYS HAVING TO SPELL THEM OUT SUCH AS  
'TOTAL POPULATION', I'LL MAKE IT EASY FOR YOU. YOU  
CAN REFERENCE A VARIABLE BY USING 'TOTPOP' OR 'MANFT'.  
THESE VARIABLE NAMES ARE INCLUDED IN THE PARENTHESES IN THE  
ABOVE LIST. SO, WHENEVER YOU ARE ASKED FOR THE NAME  
OF A VARIABLE, BE SURE TO RESPOND WITH ONE OF THOSE  
LISTED ABOVE.

'DATA SELECTION CRITERION' ALLOWS YOU TO 'PINPOINT' THE  
DATA YOU WISH TO ANALYZE. YOU HAVE THE CHOICE OF  
SELECTING A PARTICULAR STATE, YEAR, OR SECTION OF THE  
COUNTRY.  
STATE=NEWJERSEY, YEARS=1820, SECTN=1ARE EXAMPLES OF HOW TO  
ENTER YOUR DATA SELECTIONS. IF YOU WISH TO ANALYZE THE  
ENTIRE FILE, SIMPLY TYPE IN NONE AS THE DATA SELECTION  
CRITERION..

RETRIEVE  
PLOT  
CORRELATE  
MEAN  
AND QUIT TO STOP

WE CAN ALSO PERFORM ONE 'MULTIPLE CRITERION' SELECTION.  
YOU CAN SELECT ON SECTN AND YEARS IN ONE STATEMENT.  
BUT IT MUST READ SECTN=? AND YEARS=???? IN PRECISELY  
THAT ORDER AND FORMAT.  
NOW I'LL LIST THE AVAILABLE COMMANDS.  
THEY ARE:

COMMAND? QUIT  
DONE

CONTRIBUTED PROGRAM **BASIC**

**TITLE:** CAI IN WORD USAGE VOCAB  
36880

**DESCRIPTION:** This package contains 4 CAI programs in English word usage. FLASH assists in word recollection and spelling; GROOT is a drill in the use of greek roots; PREFIX is a drill in the use of prefixes; and VOCAB assists in the learning of synonyms.

**INSTRUCTIONS:**

FLASH

A word is read from the DATA list, is printed and is blacked out immediately after which the user must type in that word. The program is ready to run with 19 words. Present DATA statements run from statement 500 through to statement 540 in steps of 10. More words may be added between statements 540 and 9000. Each word consists of one string in a DATA statement consisting of that word.

GROOT

A list of greek roots is given after which a word or phrase is printed. The user is called upon to enter the greek root which is defined by that word or phrase. The program is ready to run with 20 greek roots. Present DATA statements run from statement 460 through to 510 in steps of 10. More greek roots may be added between statements 510 and 9000. Each prefix consists of two strings in DATA statements. The first string is the greek root and the second is the word or phrase which corresponds to or defines that greek root. For example,

460 DATA"ASTRON","STAR"

PREFIX

A list of prefixes is given after which a word or phrase is printed. The user is called upon to enter the prefix which is defined by that word or phrase.

Continued on next page.

**SPECIAL CONSIDERATIONS:**

New data for each of the 4 programs may be added or existing data modified. There are two things to note: as long as the words (or prefixes or sentences) are added or deleted in the correct manner the program will automatically compute the number of words (or prefixes or sentences) and hence the user can use as many as he wishes; also a randomness feature has been incorporated so that the order in which the words are printed out will vary from run to run.

**ACKNOWLEDGEMENTS:** University of Lethbridge  
Alberta, Canada

INSTRUCTIONS: Continued.

The program is ready to run with 18 prefixes. Present DATA statements run from statement 480 through to 550 in steps of 10. More prefixes may be added between statements 550 and 9000. Each prefix consists of two strings in DATA statements. The first string is the prefix and the second is the word or phrase which corresponds to or defines that prefix. For example,

480 DATA"PRE-","BEFORE"

VOCAB

The sentence is given with one word marked. Then a list of words follows from which the user is required to pick a synonym to the marked word. The program is ready to run with 15 sentences. Present DATA statements run from statement 350 through to statement 790 in steps of 10. More sentences may be added between statements 790 and 9000. Each question consists of 3 strings and a number in DATA statements. The first two strings are the sentence (there must be two), the third string is the list of answers and the number is the number of the correct answer. For example,

350 DATA"WHEN THE NEWS CAME/RADIANT/"  
360 DATA"FACES REPLACED GLOOMY ONES"  
370 DATA"1 FROWNING 2 OVERHEATED 3 LONG 4 SHINING", 4

CONTRIBUTED PROGRAM **BASIC**

**TITLE:** COMPUTER-ASSISTED REVIEW LESSONS ON SYNTAX FOR SPANISH II CARLOS  
36175

**DESCRIPTION:** CARLOS (Computer-Assisted Review Lessons On Syntax) was conceived and developed at Dartmouth College by Dr. Robert C. Turner under an NSF grant during the school year 1967-1968, and was updated during the spring of 1970 at Dartmouth College. The data base was implemented on the HP 2000C in March 1971. These are written grammar drill lessons for Spanish II. Ideally a student may use CARLOS any time in the school year for the preparation of an assignment, for extra curricular review, for final examination, or for review during higher-level Spanish Courses where he is expected to have already mastered the material. The student may repeatedly write the same drills until he has mastered the materials without needing to feel that he is bothering his instructor with "stupid mistakes", which may occur because of a shallow or too distant background. Any mistakes the student makes are entirely private and, of course, are instantly corrected for him.

**INSTRUCTIONS:**

1. GET-\$CARLOS
2. RUN
3. The user will answer the questions which are presented to him on the terminal.

**SPECIAL CONSIDERATIONS:** Turner, Ronald C., CARLOS: CAI in Spanish at Dartmouth College, Dartmouth College, Hanover, N.H., 1968

The data base is contained in the file, CAR1, on the system library. It contains a directory and 15 lessons.

**ACKNOWLEDGEMENTS:** Richard E. McIntire  
Hewlett-Packard/Data Systems

CONTRIBUTED PROGRAM **BASIC**

**TITLE:** COMPUTER ORIENTED ACCOUNTING - INTERACTIVE VERSION ATG  
36888-18032

**DESCRIPTION:** To be used in high school accounting I or bookkeeping courses.

Topics: Complete Accounting Cycle  
Payroll  
Bank Reconciliation  
Declining Balance

There are 6 programs in this package: ATG, ATGE, ATGIB, ATGM, ATGM1, ATGW.

**INSTRUCTIONS:** Programs are self prompting so that the user can be helped by answering the questions presented to him.

To be used in conjunction with COMPUTER ORIENTED ACCOUNTING by Wilbur Pillsbury, a workbook published by South-Western Publishing Co. Available from South-Western Publishing Co.

5101 Madison Road  
Cincinnati, Ohio 45227

Student Book \$5  
Teacher's Book \$3.75 for 5 or more.

Teacher's books are free to instructors who adopt the text for use in their classes.

Originally, the programs were written for a FORTRAN IV speaking computer which uses punched cards as the input medium. To bring the benefits of Computer Oriented Accounting to as many people as possible on the secondary level, the BASIC language, interactive version was written. It is identical to the original in its purpose, problems and the book used. The student would use the workbook by Dr. Pillsbury just as before, but all transactions are entered via the terminal keyboard directly into the computer's memory, instead of keypunching cards.

To be truly interactive, the transaction data must be checked for errors as it is entered. Totals must be compared for errors in balancing as they are created, and appropriate correction capability available if and when they are needed. Moreover, should the student desire to use the same data in more than one exercise (as is the case in Chapters 7, 9 and 13), it should be available to him without his having to re-enter it. Each of these capabilities has been made readily and easily available to the student in this interactive version.

In a typical program, the student responds to questions which the computer asks him, giving his name, the chapter number, problem number and date. Transaction entries are made by giving an account number (odd-debit, even-credit) and the amount of the transaction. The student is asked to check the data after each transaction. If he sees a mistake he can correct it immediately. Once the data entry is complete, the computer relists it

Description continued on following page.

**ACKNOWLEDGEMENTS:** Lawrence G. Page  
Central Technical High School

INSTRUCTIONS continued

in journal form. If there are adjusting or closing entries, the student is asked to enter them and they, in turn, are checked and listed. Totals of the debit and credit sides of the journal are checked for balance, and in problems 1-3 of Chapters 4-9 and all problems in Chapter 13, the exact values required are checked. Since problem 4 in each of Chapters 4-9 uses student designed data, a check is only made to see if the totals balance.

Usually the computer then asks if the student is ready for the T accounts to be listed. The student types 'GO'. Finally, the same "GO" response is requested for either a worksheet, balance sheet, trial balance, income statement, or post closing trial balance, depending upon the problem and chapter. As before, the totals are checked for balance and exactness. Should they not balance, or the totals not agree with those listed in the computer's memory for that problem, the computer asks the student if he would like to correct them. This is a painless procedure because the computer simply relists the original transaction data, one entry at a time, and asks if it is correct. When all necessary corrections have been made, the computer re-runs the data.

When the problem is complete, the student can either stop, reuse his data in another problem, or do a completely new problem.

Problems in Chapter 3 are checked for balance only. Chapters 10-12 have extensive error checking for problems 1 and 2 and only limited checking for problem 3.

BNKSIM  
36713**TITLE:**SIMULATES ONE YEAR'S DEPOSIT AND WITHDRAWAL ACTIVITIES  
OF A SMALL BANK**DESCRIPTION:**

This program simulates one year's deposit and withdrawal activities of a small bank. It is assumed that the probability for deposits and withdrawals are normally distributed.

**INSTRUCTIONS:**

In this program you have a choice of the type of simulation to be run. By entering a 1 all balances will be started at \$100. In this manner the user can easily see the effects on the account balances from month to month. By entering a 2 larger random numbers are set for beginning balances.

In addition, the user must also select values for the following:

- the number of customers used in the simulation
- the yearly interest rate (in decimal form)
- the probability of a customer entering the bank during one month. The bank is open 20 days per month, thus 2 days of of 20 would be a probability of .10.
- the standard deviation of the transactions in dollars
- the probability that a withdrawal is made when a customer enters the bank.

These questions are all asked at the beginning of the program's execution.

A maximum of 50 customers may be used in the simulation.

**ACKNOWLEDGEMENTS:**

**TITLE:**CASES IN COMPUTER AND MODEL ASSISTED MARKETING:  
PLANNINGCASE1  
36790**DESCRIPTION:**

There are five programs in this package: ADBUDG, NIK1, NIK2, PLAN and MAXIMA.

ADBUDG presents Castle Coffee Company cases. Castle's share of market had slipped badly during the past decade, although brand share had recently stabilized. A major concern of the advertising manager was the fact that the increased advertising budget he had obtained the previous year had been cut back in mid year because of management's dissatisfaction with the results. In addition, it seemed vital to begin to increase Castle's share so as not to lose distribution.

The Advertising Manager of Castle Coffee is now faced with the problem of preparing and justifying an advertising budget for the coming fiscal year.

After the painful experience of the previous year's advertising budget cutback, the Advertising Manager is contemplating the use of an abridged version of J.D.C. Little, "Models and Managers: The Concept of a Decision Calculus," Management Science: Applications, (April 1970.) The case provides some baseline judgements from Castle's Advertising Manager and presents the ADBUDG II model and Little's concept of a "decision calculus".

DESCRIPTION continued

NIK1 Nikoll Electronics, a multi-divisional producer of electronic equipment, has developed a relatively simple competitive bidding model which provides their management with a tool to examine the likelihood of winning and the expected payoffs from alternative bids in bidding situations. The model allows for intangibles as well as competitive advantage (disadvantage).

An opportunity to use the model in a concrete bidding situation occurs when Nikoll has the opportunity to bid on several options on a large oscillator contract. The contract is quite important to Nikoll since it represents a substantial amount of business and the opportunity to gain and hold leadership for this type of product.

NIK2 In this case the Nikoll Electronics Company modifies its bidding model to better reflect the oscillator bidding situation. The revised model considers the fact that competitor's bids on various options might be related. The model also considers the impact of winning various options on overhead billing arrangements on government contracts.

PLAN The case presents a situation in which a computer based macro planning model was proposed as a way of doing strategic planning for two lines of grocery products. From a product point of view the case can be considered a life cycle problem where one product has matured while the other still has growth potential. The implications of this become clear as the model is used to "optimize" sales and profits. From a technical point of view the case raises issues concerning appropriate factors to consider in the planning process and how to represent these in a quantitative way. The model uses "response coefficients" to deal with the "best" strategy question. This raises the issue of sources of information (i.e., experiments, use of historical data, marketing information systems, etc.).

MAXIMA Maxim Case

General Foods must develop a marketing plan for a new product - freeze dried coffee. Based on an extensive set of data on consumer and product research, decisions on product positioning, advertising, price, promotion, etc. must be made. Alternatively, General Foods can decide to stop development of the project if it does not appear to be sufficiently profitable.

MAXIMA is a computer program designed to help the marketing decision maker analyze the profit potential of a number of alternative new product marketing programs. It is a decision-making aid that compares alternatives based on net present value. The program is in two parts. The first section uses a simple 3-equation model (the Ayer model, discussed in H.J. Claycamp and L.E. Liddy, "Prediction of New Product Performance: An Analytical Approach", Journal of Marketing Research, November 1969) to predict the first year market share as a function of the marketing mix. The second section uses this, plus cost data, to prepare profit-and-loss and cash-flow statements. Sub models help to perform sensitivity analysis on the marketing programs.

CONTRIBUTED PROGRAM **BASIC****TITLE:**CASES IN COMPUTER AND MODEL ASSISTED MARKETING:  
DATA ANALYSISCASE2  
36841**DESCRIPTION:**

There are 8 programs and 1 file in this package: FALLON, FALFIL (file), NEWA, NEWB, NEWC1, NEWC2, NEWD, HINB1 and HINB2.

**FALLON** The Fallon Company programs present 2 cases. The (A) case presents sales and advertising expenditure data for thirty-eight geographic areas. The problem is how to extract from this data information on the responsiveness of the market to advertising expenditures. The (B) case presents a special purpose regression program for analyzing this problem. (Note: An instructor could use any canned regression program for this assignment.) This is an excellent case to use to introduce regression. The authors would recommend that it be used prior to the Newfood (B) assignment in order to prepare the students to make a better analysis of that case. The (B) case includes a brief technical appendix on regression analysis.

**NEWFOOD.** The Newfood series covers an integrated series of problems encountered in the early planning, test marketing, and the final planning prior to national introduction of a new specialty product. The (A) case considers the issue of whether or not to test market at all. The (B) and (C) cases present some actual test market results that require analysis and interpretation. In (B) outcomes of a controlled experiment (involving price, location and advertising level) are presented. In (C) summaries of consumer panel data are presented that should aid in forecasting eventual sales levels. The (D) case is an integrative exercise requiring use of the research information (from the (B) and (C) cases) and prior knowledge (from the (A) case). This information should be exploited to develop a final plan for the national introduction of the product.

Continued on following page.

## DESCRIPTION continued

- NEWA Part I is a problem statement and Part II gives a solution and related computer program. The situation involves a new product pre test market situation in which a GO-NOGO decision is required or alternatively a decision to test market can be made. This raises the value of information question. Part I provides material to set up a formal decision analysis model. Many issues arise from the process including:
- whose priors to use
  - appropriateness of the expected value criteria
  - length of planning process and discounting
  - can the problem be "completely" modeled
- In the Part II case the actual solution used is presented. It involves many simplifying assumptions and is only a partial solution. This leads to discussion of the role of simplifying assumptions and partial solution and the usefulness of complex models. With the computer program many of the key assumptions can be tested for sensitivity.
- NEWB Outcomes of a controlled store audit experiment involving a factorial arrangement of price (3 levels), advertising (2 levels) and location within store (2 levels) are given and a number of regression runs on the data is provided to aid in interpretation. A computer program to perform further regression analysis is provided.
- The case provides an opportunity to use correlation and regression to help understand data as opposed to the more usual forecasting use. Using these techniques it is possible to see to what extent the experiment is out of control, ways of adjusting for this and the magnitude of various experimental effects.
- The case raises many other issues such as:
- appropriate measures of advertising inputs
  - treatment of experimental effects over time
  - role of interactions
  - the use of dummy variables
  - specification errors in regression models.
- NEWC1 Part I presents various summary measures that come out of consumer panel data and sets up the problem of forecasting new product sales for products that may have a short life cycle.
- NEWC2 Part II presents several forecasting techniques, resulting forecasts, and computer programs for this purpose. One model is a simulation model to assess uncertainty in a sales forecast based on component uncertainty in variables such as Trial and Repeat. The second model is a dynamic micro forecasting model based on time between purchase and repurchase rate data.
- NEWD Here a translation must be made from the various test situations to a national introduction. All previously developed knowledge about the product must be integrated into a general plan. A planning model is presented and the student is encouraged to reuse previously introduced programs to reevaluate the situation based on new environmental information.
- HINB1 The (A) case describes a situation in which a cake manufacturer who has just introduced a new product some 6 months ago is faced with new competitive entries that are similar but not the same as his product. The firm must decide if it should compete directly by introducing a product like the competitive one and/or dropping its previous entry which is doing only moderately well. These decisions must be made before share data are available on the market performance of the competitive products. The only available market research data involve protocols obtained from group interviews covering consumer needs in the cake mix area.
- HINB2 The case provides an opportunity for students to construct flow charts of probable consumer behaviour as a first step in understanding need segments in this market. The (B) case discusses the forecasting technique used to estimate the size of these segments. It involves the use of a micro behavioral simulation model. A flow chart, trace runs, computer program, forecasts and some validation data are included.

GSPMG  
36502

**TITLE:** STANFORD PORTFOLIO MANAGEMENT GAME

**DESCRIPTION:** The Stanford Portfolio Management System is made up of a set of programs and files for use on the Graduate School of Business' Hewlett-Packard 2000C computer. It allows students in the second-year MBA course on Investments to make transactions with an "automated broker" and manage portfolios. The system is an outgrowth of earlier work reported in Technical Report No. 4, "Stanford Portfolio Management Game," by John G. McDonald and Donald C. Baron. The present version differs somewhat from the one described in that report, but the basic philosophy is the same.

GSPMG consists of 7 programs: GBRKR, GQUOTE, GPMS1, GPMS2, GPMS3, GPMS4, GPMS5.

**INSTRUCTIONS:** The use of this program is described in GSB #13, "The Stanford Portfolio Management System" by William F. Sharpe, which comprises this documentation.

Accounts Utilized

Three accounts are normally utilized for the system. All programs are maintained in the public library (account A000) and referenced by preceding the program name with a dollar sign. Some of the programs contain a mask for encoding and decoding information written on file ACCTS (see below). These programs are protected -- they may be used but not listed. This makes it impossible for a user to alter the contents of file ACCTS directly; he must use the authorized programs.

The prices and dividends for securities covered in the system are maintained on file SPRDIV. This is usually maintained in account C100 (the course library account). The instructor's assistant typically updates the file once each day during the quarter. The file may be read (but not written) from any account between C101 and C199 by preceding the name with an asterisk.

Instructions continued on next page.

**SPECIAL CONSIDERATIONS:** The specific documentation listed here which references account numbers etc., has been left intact to provide a model for other users. Attempts to generalize this material would lose the integrity of the contributor's scheme.

**ACKNOWLEDGEMENTS:** Graduate School of Business  
Stanford University

Students in the course generally enter transactions, get reports, etc., using the instructor's course account. This will be an account with a number between C101 and C199 assigned to the instructor for such use. Students are expected to use the account only for this purpose. The composition of each team's portfolio is maintained on a file named ACCTS in this account. Students access this file and alter it with program \$GBRKR. The instructor's assistant may also access the file using programs of his own or those maintained in the public library to prepare summary reports, etc.

FILE ACCTS

The composition of each team's portfolio is maintained on this file. Team 1's portfolio is on records 1 and 2, team 2's portfolio on records 3 and 4, etc. For each team, the following information is stored (in the order shown):

- password
- time of last update
  - year
  - day
  - hour
  - minute
- amount of cash
- for each security covered
  - number of shares held (positive if long, negative if short)

Before students may use the system, the instructor's assistant must OPEN this file, then initialize the information with program \$GPMS2. The initialization process includes the assignment of a password for each team. Subsequently, no student can access or alter a team's portfolio unless he gives the precise password entered earlier by the instructor's assistant.

File ACCTS is read and written through a mask, so every piece of information must be encoded and decoded. The mask is entered via the initialization of variable M\$ in programs \$GBRKR and \$GPMS2, both of which are protected and hence cannot be listed by the user. The mask must also be entered by the user of program \$GPMS5.

FILE SPRDIV

This file, usually maintained on account C100, includes current data on all securities considered "eligible" for the portfolio management system. For each eligible security, the file contains:

- the ticker symbol (in a coded format)
- the price per share
- the most recent dividend paid per share
- the time at which the most recent dividend was posted to the file

In addition, the file includes:

- the number of eligible securities
- the time the information on the file was last updated

Each security's ticker symbol is coded into a numeric equivalent. The symbol is first converted to a four-character symbol (with trailing blanks to the right, as needed). Each character is converted to a numeric equivalent with "A" = 1, "B" = 2 ... "Z" = 26, and blank = 27. Let S<sub>1</sub> represent the numeric equivalent of the first (left-most) character, S<sub>2</sub> the equivalent of the second, etc. Then the code for the entire ticker symbol is:

$$S_1 * 30^3 + S_2 * 30^2 + S_3 * 30 + S_4$$

This coding procedure (and/or an inverse decoding procedure) is used in other programs in the Portfolio Management System.

The time at which a dividend was posted to the file is also entered in coded form. Letting T<sub>3</sub> = the year (71 = 1971), T<sub>2</sub> = the day of the year, T<sub>1</sub> = the hour of the day, and T<sub>0</sub> = the minute of the hour, the code is:

$$[(T_3 - 71) * 365] + [T_1 / 24] + [T_0 / (24 * 60)]$$

This expresses time as the number of days since the beginning of 1971. A similar procedure is used in other programs in the system.

The format of the file is as follows:

- year of last update
- day of last update
- hour of last update
- minute of last update
- number of securities on eligible list

For each security:

- code for ticker symbol
- price per share
- most recent dividend per share
- code for time when last dividend posted

Before any other programs are used, this file must be CREATED, then initialized using program GPMS1.

#### PROGRAM GBRKR

This program is used to enter transactions for a team's account and to obtain reports on its status. The account is maintained in file ACCTS in the instructor's course account. Security prices and dividends are obtained by the program from file SPRDIV in the course library (account.C100). Program \$GBRKR is protected so the user is unable to alter the contents of file ACCTS except via this program.

The program begins by asking:

TEAM NUMBER?

The user responds with the appropriate number.

The program then asks:

PASSWORD?

The user must give the exact password entered previously by the instructor for his team. If there is any discrepancy, the program terminates. Otherwise, the program continues by asking:

DO YOU WANT TO ENTER A TRANSACTION, GET A REPORT, OR QUIT?

The user responds with:

T (or TRANSACTION)

R (or REPORT)

Q (or QUIT)

The REPORT option provides a portfolio status report as of the moment of inquiry. After a summary of the cash position, etc., the program asks:

HOLDINGS?

If a list of holdings is desired, the user responds YES (or simply Y). If not, he responds NO (or simply N).

If the TRANSACTION option is selected, the program asks:

STOCK?

The user responds with the ticker symbol of the security in question. The program next asks:

BUY OR SELL?

The user responds with B (or BUY) or S (or SELL), depending on the desired action. The program then asks:

NUMBER OF SHARES?

And the user responds with the number desired.

If the transaction is allowed, the program will indicate the brokerage fee in dollars, then ask:

O.K.?

If the transaction is acceptable, the user responds Y (or YES), the the program will indicate:

CONFIRMED

If the transaction is not acceptable, the user responds N (or NO), and the program will indicate:

REQUEST CANCELLED

If the QUIT option is selected, the program will terminate after updating the ACCTS file.

#### PROCEDURES

The program maintains an up-to-the-minute valuation of the user's account. All long positions (positive holdings) are valued at the current market prices on file SPRDIV; the total is reported as LONG POSITION AT MARKET. Similarly, all short positions (negative holdings) are valued at current market prices and the total reported as SHORT POSITION AT MARKET. The figure reported for CASH ON HAND indicates liquid interest-earning assets if the value is positive; if the value is negative, it indicates debt owed to the broker. NET WORTH is calculated as follows:

$$\text{NET WORTH} = \text{CASH ON HAND} + \text{LONG POSITION AT MARKET} - \text{SHORT POSITION AT MARKET}$$

The status of the account depends on its current margin, calculated as follows:

$$\text{CURRENT MARGIN} = \frac{\text{NET WORTH}}{\text{LONG POSITION AT MARKET} + \text{SHORT POSITION AT MARKET}}$$

Whenever the current margin for the account exceeds .70, any type of transaction is allowed unless it will reduce the current margin to a value below .70. In the latter case, a message will be printed and the transaction request will be denied by the program.

Whenever the current margin for the account falls below .70, the account is restricted. Only transactions that will increase the current margin are allowed. Any transaction not meeting this requirement is rejected by the program.

The program adds interest to the amount of cash on hand at an annual rate of 6%, compounded continuously. If the cash on hand is positive, it will be increased. If the cash on hand is negative, its absolute value will be increased (i.e., the amount of debt will be increased). For purpose of interest calculations, the cash on hand is reduced by the value of the short positions (e.g., no interest is paid on the proceeds from a short sale). The program automatically adds interest any time the user requests a report -- (i.e., the appropriate amount to cover the time period since the last report is added).

Dividends are also added to or subtracted from the account. When the user requests the first report since a dividend was posted to the SPRDIV file, the program automatically (1) adds dividends to his cash position for long positions and (2) subtracts them for short positions.

Brokerage charges are those charged by the New York Stock Exchange in April, 1972. A sample run follows.

DONE

PROGRAM GQUOTE

This program may be used to obtain a quotation from the list of security prices maintained on file SPRDIV on account C100.

The user may type the ticker symbol for the stock in which he is interested. The program then prints its current price as listed on file SPRDIV. If the symbol is not on the eligible list, an appropriate message is printed. In either event, the user is then asked for another symbol.

At any time, the user may respond to the request SYMBOL? with DONE. This will cause termination of the program.

At any time, the user may respond to the request SYMBOL? with ALL. The program will list the ticker symbol and current price of every security on the eligible list, then terminate.

A sample run follows.

RUN  
GQUOTE

WHEN ASKED, TYPE TICKER SYMBOL, 'ALL' OR 'DONE'.

HWP	77.000
IBM	345.000
WFG	45.750

DONE

PROGRAM \$GPMS1

This program is used to set up file SPRDIV in account C100 for use in the Stanford Portfolio Management System. The user first indicates the number of securities on the "eligible" list, then their ticker symbols (preferably, but not necessarily, in alphabetic order). After each symbol is input, the program reprints the information and then asks "OK?". If the reply is Y, the program will continue. If the reply is N, the program will ask for the symbol again.

When all symbols have been input and verified, the program will set up file SPRDIV in the format described above. For each security, price, dividend and time of entry of the last dividend will be set to zero. Any previous contents of the file will be lost.

Before this program is run, file SPRDIV must be opened. The number of records must be at least:

$$\frac{5 + 4N}{128}$$

where N = the number of eligible securities, and the formula is assumed to be rounded up to the nearest integer.

Limitations imposed by file ACCTS require:

$$N < 251 + \frac{P}{4}$$

Where P = length of the longest team password.

A sample run follows.

```

```

PROGRAM GPMS2

This program is used by the instructor's assistant to open the accounts of the teams. Before the program is run, a file named ACCTS should be opened with twice as many records as there are teams. The program will request the password for each team, terminating when the user responds YES to the inquiry "DONE?". This program cannot be run before GPMS1.

A sample run follows.

```

GET-GPMS2
RUN
GPMS2

DONE?N
TEAM 1      -- PASSWORD?BUY LOW, SELL HIGH

DONE?N
TEAM 2      -- PASSWORD?EFFICIENT MARKET

DONE?Y

DONE

```

PROGRAM GPMS3

This program is used to update the dividends in file SPRDIV. It can only be used in the account in which file SPRDIV is maintained (usually account C100). Dividends are normally posted within a day of the time at which the stock goes ex-dividend. In general, the dividend should be entered at the same time as the last price prior to the ex-dividend price is entered.

The program asks for the ticker symbol(s) of securities for which dividends are to be entered. The Portfolio Management System does not provide for stock dividends or splits. The recommended procedure is to assume that any stock dividend or split is converted into cash. In other words, the market value is simply entered as a cash dividend.

When all changes have been entered, the data are entered into file SPRDIV. Both the dividend and the time at which it was entered into the file are recorded. This latter information is used when portfolios are updated to be certain that dividends are credited only once to an account.

```

GET-GPMS3
RUN
GPMS3

SYMBOL OR 'DONE'?IBM
DIVIDEND?1.45
SYMBOL OR 'DONE'?DONE

DONE

```

PROGRAM GPMS4

This program, used to update file SPRDIV, must be used on the account on which SPRDIV is stored (usually account C100). The file is normally updated daily, using closing prices posted as soon as possible after the market has closed.

The user may enter prices for selected securities by indicating the ticker symbol of each. If this option is chosen, the program prints the old price and requests the new one. At any time, the user may respond to the request for a ticker symbol with ALL. The program will then proceed through the eligible list in order, giving each ticker symbol and the old price, and requesting the new one.

When the user is finished, he should respond DONE when the program requests a ticker symbol. The revised information will then be entered on file SPRDIV and the program will terminate.

A sample run follows.

PROGRAM GPMS5

This program is used by the instructor to obtain a summary of the teams' current holdings. The program must be run in the account containing file ACCTS (usually the instructor's course account).

The program begins by asking:

CODE FOR FILE?

The user must respond with the code used to read and write file ACCTS. This is the code used in protected programs \$GBRKR and \$GPMS1. If the correct code is not given, the program will not operate correctly.

The program will then ask for the number of teams for which accounts exist on file ACCTS. It will then summarize and print the number of shares long and short for each stock. Only those stocks with non-zero positions will be shown.

A sample run follows.

CONTRIBUTED PROGRAM **BASIC**LABOR  
36233**TITLE:**

LABOR/MANAGEMENT BARGAINING

**DESCRIPTION:**

This interactive collective bargaining simulation can be played by one or more groups for several periods. Each group of students will consist of two teams; one team will play the role of management and the other the role of labor. Each team will make decisions on a set of issues and will try to reach an agreement. If no agreement is reached, new decisions are inputted the following week. The computer has the following roles:

- create an economic environment
- play the role of arbitrator, if arbitration is requested by any one team

**INSTRUCTIONS:**

The data statement in line 30 contains 4 values

30 DATA W5, C3, A, B

where: W5 tells the computer if the simulation is to work continuously (W5=0) or if it is to stop and a subsequent period be played later(W5=5).

C3 is the number of copies of the printout desired.

A, B must be between 0 and 9. Low values will generate a poor profit and high inflation environment; higher values will generate a better environment.

Currently the simulation is set up such that:

W5=5: the run stops at the end of each period and data are saved.

C3=1: 1 copy is required

A=5:

B=7:

See following pages for a detailed discussion of the theory and additional user procedures.

**SPECIAL  
CONSIDERATIONS:**

The only restriction to the number of firms that can play the game is the size of the file STRIKE. 2 sectors are needed per firm. This file must be opened by the user prior to the running of the simulation.

**ACKNOWLEDGEMENTS:**

Francois P. Carlhian  
Babson College

DESCRIPTION OF THE ENVIRONMENT

In a hypothetical firm, the labor-management contract is expiring. Labor is dissatisfied with its terms and all efforts made towards Management to improve it have failed. Management claims that the contract is fair and does not want to modify it. Because of the stubborn position of Management, Labor has decided to go on strike.

Management and Labor are provided information concerning:

- the firm
- the last Labor-Management contract
- the economic environment

I. Information Concerning the Firm:

- profit increase: This is the percentage representing profit increase in the firm since the establishment of the last contract. Profit means net profit after taxes.
- productivity increase: Expressed in percent, this figure represents the increase of output per manhour. This productivity is mainly due to new equipment and machinery.
- last wage increase: Amount of hourly wage increase when the last contract was established.
- employment level: The firm's employment when the strike starts. A certain proportion of workers will quit during the strike.
- inventory level: Expressed in dollars, it is the amount of finished goods inventory ready for shipment and stored in warehouses which are not affected by the strike.
- strike fund: Labor has cash reserves which will be utilized to help the workers. It has been decided that every worker on strike will receive \$8 a week.
- last year's sales: Value of last year's gross sales expressed in millions of dollars.
- last year's profit: Net profit made after taxes in previous year.
- profit per worker: Dollar value of the net profit divided by the number of workers.

II. Information Concerning the Last Contract:

The Labor-Management contract consists of 9 issues:

- duration: in months
- wage rate: hourly wage rate in dollars
- guaranteed overtime: number of hours a week that a worker can work with an overtime wage rate
- vacation days per year: number of paid vacation days a year
- regular hours a week: number of hours a week worked at regular pay. It is used to compute the week's pay.
- days of sick leave: number of days that a worker is allowed to take (with pay) for sick leave
- bonus and insurance: the firm is paying \$250 per year for medical insurance for each worker, and gives a cash bonus every year at Christmas
- number of paid holidays: number of legal holidays: Christmas, Labor Day, Thanksgiving, etc. which are paid
- overtime wage rate: hourly wage rate for overtime

### III. General Information on the Economic Environment

- Consumer Price Index Increase (in percent)
- Average Wage Increase in Industry (in percent)
- Rate of Unemployment in Industry (in percent)
- Productivity Increase in Industry (in percent)

In addition to creating an environment, the computer will compute and print out the dollar amount representing the fringe benefits. The two teams are also informed that in view of the coming strike, it has been decided at the last meeting of the board of directors that the company would support an increase of the workers' payroll. The dollar amount indicated is the maximum amount of gross payroll and fringe benefits increase that Management will accept without bargaining at any point of time during the strike. This decision has been made at the top echelon by the board of directors and Management has to enforce it.

### DECISIONS AND RESULTS

Once the environment has been described, Management and Labor must reach decisions on the 9 issues involved in the contract. Then the two teams' decisions are typed in and the result of the contract proposal is printed out.

First provided is the cost of the proposed contract due to Labor's conditions and the cost of the proposed contract due to Management's offer. This cost is stated per worker. Therefore, the computer prints out the gross payroll increase, the fringe benefits' increase, and the total increase.

With the help of these figures, the two teams can see how far apart they are, and in which area they should concentrate their efforts in order to reach an agreement.

Then the two teams are given information on the current situation:

- current union membership: Some union members are sometimes not willing to go along with the strike or are not willing to take a loss of income, and quit both their job and the union. Therefore, there is a slow erosion of the union membership that the union leaders must be aware of. If the erosion is too high the Labor will be obliged to give up the strike.
- current strike fund: Labor's strike fund is utilized to distribute \$8 a week to each striking worker. This is not a great deal of money, but it helps and has an important psychological effect.
- inventory level: The per worker dollar figure of the current level of inventory is provided. This gives an indication of how long Management can go without any losses in sales.
- unfilled orders: Per dollar figures of losses in sales due to unfilled orders. This dollar figure can go quite high very quickly.
- Management expected cost of one more week of strike: This is the per worker basic cost of the strike for Management. This figure includes all fixed costs, expected cost of rehiring, wasted material, etc.

The overall goal for Labor and Management is to obtain the best deal at the least cost. This is difficult and competition between different groups or "firms" can show large differences. Starting at the second week, the computer will ask if one of the two teams desires arbitration. If this is the case, the computer will act as arbitrator and will decide the final contract. The use of an arbitrator will allow the negotiators to get out of a deadlock or to stop simulation. It is important to note that most of the parameters provided will influence the results of a set of decisions and they should be weighted carefully before a new contract is proposed.

The simulation is designed in such a way that the role of the computer is minimized. Its main function, besides providing an economic environment, is to compute the dollar value of the cost of proposed new contracts. Hence, the user can visualize the dollar impact of his decisions.

If no agreement is reached in a short period of time, pressure to end the strike is put on both Management and Labor. Losses due to unfilled orders and direct cost of the strike will force management to seek a settlement after a few weeks. On the other hand, union membership losses and an empty strike fund will force Labor to a settlement. Of course, the best way to end the strike is through a direct agreement between the two parties involved. The two teams are given the maximum opportunity to settle the strike without the computer's interference. But, if a deadlock develops during the negotiations, or if the strike goes on for too long, the computer will take over and play the role of outside pressure: Board of Directors, strike fund, treasurer, etc. In addition, starting in week 2, there will be an option for either of the two teams to call for arbitration. The rule is that if either Labor or Management wants arbitration, the other party has to submit and accept arbitration. If this is the case the computer

will play the role of arbitrator and will issue the final contract. Because the arbitrator's decision is final, both parties have to accept it, and the simulation is ended.

#### INSTRUCTIONS FOR USING LABOR

##### Teacher's Instructions:

Prior to running the simulation, the instructor has to choose a few parameters.

There are two options on how to use the simulation. The first one is to have the simulation go on continuously up to the time an agreement is reached. The second option allows users to play 1 period at a time. The computer retains the necessary data and players can input their decisions for the current period at a later time.

The second parameter to be decided is the number of printout copies desired. There is no limit on that number.

The last thing is to choose the economic environment. It is based on two numbers between 0 and 9. If the values of those numbers are high (e.g., 8 and 9) there will be a good economic environment. On the other hand, if those values are low, they will generate a bad environment -- high inflation, poor profit, low wages, etc.

Those values are to be inserted in line 30 of the program by typing:

```
30 DATA 5,1,5,7
```

Then type:

```
RUN
```

to start the simulation.

5 means that the option chosen is to have the computer stop at the end of each period, saving the data. The user will come back later to play a subsequent period. In order to get the other option of having the simulation go on continuously, the value should be a zero.

1, the second piece of data, indicates that the user wants only 1 copy of the printout.

5 and 7, the third and fourth pieces of data, are the two values that will generate the economic environment.

##### Student's Instructions:

During the course of the simulation, the computer will ask:

```
ENTER FIRM NUMBER?
```

The firm number identifying the team must be entered.

Then the computer will require the entering of Labor's 9 decisions and Management's 9 decisions on the contract's 9 issues. The first 9 pieces of data (concerning Labor) should be entered separated by commas (see example). The second set of 9 pieces of data must also be entered separated by commas.

If the operator types the wrong information, and if the error is caught before the computer is through typing the results for the period, the simulation can be stopped by pressing the BREAK key. By typing RUN again, the simulation will start at the current period and will give the operator a chance to enter the right data.

##### HOW TO SET UP THE GAME

The LABOR simulation, written in BASIC consists of one paper tape 4700 words long. After the tape is loaded on the computer a file called STRIKE must be opened by typing:

```
OPEN-STRIKE,20
```

20 is the number of sectors in the file. Each firm needs 2 sectors; therefore, in the above example, up to 10 teams can use the simulation simultaneously.

MARKET  
36619**TITLE:**

TWO COMPANIES IN ONE-PRODUCT COMPETITION

**DESCRIPTION:**

This computer game allows two people or two groups to play the roles of two companies who are competing for the market for a particular product: for example, racing bicycles. At the start of the game, the computer informs the players of the fixed and the variable production costs involved in marketing the product and the number of items that will be sold, with no advertising, at a specific price. The computer then assigns to each company initial values for inventory (stock on hand), cash on hand, and total assets.

**INSTRUCTIONS:**

Each player is allowed to make marketing decisions quarterly and can specify the production level, the advertising budget, and the unit price of the product for his company. After these decisions have been made for a given quarter, the computer reports the results of these decisions by way of a marketing summary. For each company the report lists:

- a) profit
- b) percentage share of the market
- c) cash on hand
- d) number of units sold
- e) number of units in stock (inventory)
- f) total assets

Players make their decisions for the following quarter on the basis of these reports.

If the demand for one company's product turns out to be larger than the total of the production level and inventory (as of the start of a quarter), the company will sell out its stock. Any additional sales that could have been made will not be given to the other company by the computer.

The companies are penalized for overproduction. An inventory charge at the rate of 5% per quarter will be made for stock on hand at the end of a quarter. That is, 5% of the total value of the inventory (based on variable production cost) will be deducted from the company's cash on hand.

continued on following page

**SPECIAL  
CONSIDERATIONS:**

The Huntington II Project recommends that for use of this program in the classroom it is necessary to obtain the following publications from Program Library, Digital Equipment Corporation, Maynard, Massachusetts 01754.

Student Workbook	\$ .30
Teachers Guide	.30
Resource Handbook	.50

**ACKNOWLEDGEMENTS:**

Huntington II Project  
State University of New York

INSTRUCTIONS continued

It is possible for a company to have a negative value for cash on hand. This means that the company must go into debt for this amount, and an additional 5% charge will be made on the debt.

From time to time throughout the game, events will occur which will necessitate a change in strategy. In such cases, try to consider all consequences of the occurrence before deciding on a new strategy.

The game ends when one company goes bankrupt or accumulates 12 million dollars in total assets.

**TITLE:**

MARKETING SIMULATION

**DESCRIPTION:**

Multi-teams, multiperiod marketing simulation, MRKSIM is a package consisting of the following programs:

MARK : (inputs data)  
BARKSI : (performs computations)  
BARKPI : (prints out results)  
ANNUAL : (prints annual reports)  
MASK : (prints English headings)

and two parameter files PARAM and HISTRY

MARKSIM has been adapted in BASIC to fit the original MARKSIM, A Marketing Decision Simulation, by Greenlaw and Kniffin, International Textbook.

**INSTRUCTIONS:**

The following files have to be opened on the user's catalog.

MPRINT : 8 sectors  
DECIS : 10 sectors  
INDY#1 : 4 sectors  
INDY#2 : 4 sectors  
INDY#3 : 4 sectors  
USER : 1 sector

Two additional files, PARAM and HISTRY are provided as part of the program package.

The game can be run by two classes at the same time. Each one is identified by a user number which is either 1 or 2. Each class consists of a maximum of 3 industries and 3 firms. Each industry is independent from the others and is an independent unit.

The program MARK is provided so that the printing time of the game is minimized.

**ACKNOWLEDGEMENTS:**

Francois P. Carlhian  
Babson College

The following are excerpts from the book, MARKSIM, A Marketing Decision Simulation by Greenlaw and Kniffin, International Textbook.

An exciting new educational technique designed to provide business students with greater insight into and skills in dealing with managerial problems is business simulation, or business gaming, as it is often called. A business simulation is a sequential decision-making problem structured around a model of a business operation in which participants assume the role of managing a simulated firm. One purpose of this text is to prepare the reader for assuming such a managerial role in MARKSIM--a computerized marketing management simulation.

#### THE MARKSIM LEARNING EXPERIENCE

MARKSIM was created to provide the student with a planned learning experience in dealing with marketing management problems. Aiding him in gaining such experience are:

1. His instructor, who will be available for guidance when necessary,
2. This text, which will focus attention on numerous concepts, ideas, and analytical tools relative to marketing management, and their application to the simulation.
3. The MARKSIM model which is programmed on an electronic computer. This computer program provides a dynamic simulated marketing decision-making environment, from which operating data are fed back to participants periodically.

More specifically, the procedure followed in assuming the role of marketing manager in the simulation is as follows:

1. Participants familiarize themselves with the simulated environment in which they are to manage by studying the materials presented later in this text and perhaps also by discussing these materials in class.
2. They are next given an opportunity to analyze available data on their past operations and to make a set of decisions for the first period in which they will manage their firms.
3. When firm decisions are due for this period, they are handed in to the instructor or someone designated by him as a simulation administrator.
4. Then each firm's operating results for the period are calculated and printed out by the computer system, and this information is returned to its management.
5. This cycle of decision making, calculation, and feedback of results is repeated for a number of periods of play.

**TITLE:**

MANAGEMENT SIMULATION GAME (For 2000C)

**DESCRIPTION:**

This program allows three teams to act as business executives making periodic high level decisions for their firms.

A realistic business practice operating over a period of several years can be simulated in one day. Each team alternately makes decisions about their company and allows the computer to carry out interactions among the teams and to produce quarterly reports based on the strategies of all three teams.

The product is not specifically defined, therefore, the decisions made by the management teams must be based on general business principles and not on knowledge concerning a particular product. Naturally, some simplifications have been made to reduce a real-life business situation to one which is workable on a time-share system with young students. One of these is the requirement that each quarterly operation be financed from cash on hand.

Each team of participants may assume that it has been called in to take over the management of a company which has strong possibilities but which is not in very good financial position at the present time. As play progresses the participants should acquire a feel for the market and an understanding of their competitors which should further aid in their decision making. Each team may want to keep brief notes of the reasoning behind their decisions so these different strategies may be discussed later.

**INSTRUCTIONS:**

See Page 2

**SPECIAL  
CONSIDERATIONS:**

There are two tapes to this package -- SETUPC, and MANAGC.

## MANAGEMENT SIMULATION GAME FOR THE HP 2000C

### INTRODUCTION

Management Simulation allows a group to be divided into three subgroups acting as teams of business executives making periodic high level decisions for their firms.

A realistic business practice operating over a period of several years can be simulated in one day. Each team alternately makes decisions about their company and allows the computer to carry out interactions among the teams and to produce quarterly reports based on the strategies of all three teams.

The product is not specifically defined, therefore, the decisions made by the management teams must be based on general business principles and not on knowledge concerning a particular product. Naturally, some simplifications have been made to reduce a real-life business situation to one which is workable on a time-share system with young students. One of these is the requirement that each quarterly operation be financed from cash on hand.

Each team of participants may assume that it has been called in to take over the management of a company which has strong possibilities but which is not in very good financial position at the present time. As play progresses, the participants should acquire a feel for the market and an understanding of their competitors which should further aid in their decision making. Each team may want to keep brief notes of the reasoning behind their decisions so these different strategies may be discussed later.

### GEOGRAPHICAL BREAKDOWN OF THE MARKET

The market is divided geographically into four areas. Any firm may sell its product in any area. Area 1 is the home area of firm 1, area 2 is the home area of firm 2, and area 3 is the home area of firm 3. Area 4 is an open market. Each firm has an advantage in its own area, in that there is no transportation charge applied to the units it sells there. Transportation charges are applied to units sold in competitors' areas, but a smaller transportation charge is applied to units sold in area 4. These charges are included in the unit delivered cost shown on each firm's confidential report.

### INITIAL REPORT

At the start of play each team will be given a report showing the economic condition of their company.

### AREA DECISIONS

After studying the initial report, each team makes a set of decisions. For each marketing area, it must decide the unit selling price and the amount of money to be spent on advertising. These have a direct and immediate effect on the amount of business each firm will get in each area.

The potential market in each area will vary as a function of selling price, amount spent on research, and the total marketing expenditure. There are no seasonal cycles built into this model.

### PLANT DECISIONS

In addition to the area decisions, a set of plant decisions must be made. Each management team must decide how much money to spend on production, research, and plant improvement.

Plant manufacturing capacity may be increased at a cost of \$20,000 for each 1,000 units. The new unit capacity can be calculated by dividing the plant value by \$20. If a plant is operated at less than full capacity, a penalty of higher unit cost is automatically assessed.

Research and development funds are applied over many periods. In this model they will yield a return greater than their cost in the long run. This is true of these funds only up to a reasonable percentage of sales income. R & D will help increase the potential market and decrease production costs.

CONFIDENTIAL REPORTSales Analysis

Orders -	The total number of orders received by your firm in the areas indicated during the period covered by the report.
Shipments -	The total number of units sold by your firm in the areas indicated for the period covered. If this figure is less than orders, your firm may be underproducing.
Marketing -	The total amount your firm decided to spend on marketing in each area during the previous period.
Revenue -	The total amount of money your firm received for the shipments it had in each of the areas.
Delivered Unit Cost -	The unit cost of production plus the cost of delivering the units to the area.

PRODUCTION REPORTProfit and Loss

Current Income -	The total amount of cash received from the sale of units.
Cost of Goods Sold -	The production cost of the units sold. The cost of unsold units appears as inventory in the Cash Flow-Financial Analysis section.
Transportation -	The cost of transporting units sold. This charge is \$1.00 per unit in area 4, and \$2.00 per unit in a competitors area.
Marketing -	The amount your firm decided to spend on marketing and advertising during the report period.
Research -	The amount your firm decided to spend on research.
Depreciation -	Computed at the rate of 2% during each period.
Net Profit -	The difference between sales income and total expense.
Taxes -	Computed at the rate of 50% of profit before taxes.
Profit after Taxes -	Net profit less taxes.

Cash Flow-Financial Analysis

Receipts -	The total amount of cash taken in from the sale of units during the report period.
Disbursements -	The total amount of cash spent by your firm during the report period.
Net Flow -	Receipts less disbursements.
New Balance -	The amount of cash your firm now has with which to conduct business during the next period.
Cash -	The new cash balance.
Inventory -	The production costs of the units remaining unsold from the previous periods.
Plant Value -	The current value of your plant. To determine plant capacity for the coming period, divide this value by \$20.00.
Total Assets -	The total value of all your assets.

Disbursement Allocation (\$ Value)

- Transportation - See production report
- Marketing - See production report
- Research - See production report
- Plant Improvement - The amount your firm decided to spend this period.
- Production Cost - The amount your firm allocated for production this period.
- Taxes - See production report

Inventory Allocation (No. of Items)

- Beginning - Inventory from previous periods.
- Produced - Number of items produced this period.
- Shipped - Number of items shipped this period.
- Balance - Number of items to be carried to next period as inventory.
- Unit Cost - Inventory value divided by balance.

COMPANY STATUS

All companies begin with the same production capacities, assets, and cash balance. These amounts are:

CASH	\$7,602
INVENTORY VALUE	\$2,509 71 @ \$34.34
PLANT VALUE	\$5,200
TOTAL ASSETS	\$15,311
PRODUCTION CAPACITY	260 units

GENERAL OPERATING INSTRUCTIONS FOR THE MANAG GAME ON HP 2000C

The MANAG simulation is divided into two routines which are described below:

- SETUPC - This routine is called and executed at the beginning of the game to initialize the program values for all the groups running the simulation.
- MANAGC - This routine allows the three teams of a group to input their values for the unit selling price and advertising in each area and the amounts for production allocation, research and development and plant improvement. After these values are inputted, MANAG will perform the simulation, print out the confidential quarterly report and save the results.

SPECIFIC INSTRUCTIONS FOR RUNNING THE MANAGC GAME

Commands printed below entirely in uppercase are entered by the system user on the remote terminal. Lowercase statements are responses by the computer.

A. To initialize the program values for each group of three teams playing the simulation, it is necessary to use the system command OPEN-GAMEi,1 where i is the game number, an integer 1-10. There must be one such OPEN command for each group of three teams playing the simulation (limit 10).

1. GET-SETUPC
2. OPEN-GAMEi,1 i=1,2,3,...10

(If you get the message DUPLICATE ENTRY, use the next sequential integer unless you are starting the game over and want to reinitialize that game. In that case, proceed to STEP 3 below.)

3. RUN
4. setupc
5. game number?

(You should enter the integer used for i in the OPEN command given in STEP 2.)

6. done

Repeat Steps 1-6 for each game (set of three teams) to be initialized.

B. To run MANAGC for the first and all succeeding quarters:

1. GET-MANAGC
2. RUN
3. managc
4. game number? (Enter the game number for the group of three teams.)
5. for firm 1 enter area selling prices.?60,60,60,60
6. enter area advertising expenditures.?150,100,100,100
7. enter production, r and d, and plant improvement.?5000,500,500
8. enter firm 2 data using three lines as above.
9. ?60,60,60,60
10. ?100,150,100,100
11. ?5100,400,600
12. enter firm 3 data using three lines as above.
13. ?60,60,60,60
14. ?100,100,150,100
15. ?5200,500,300
16. do you want quarterly report printed?

If yes, the computer then prints the Confidential Report for all three firms.

(4-16 The question mark is a response from the computer. The data typed following the question mark is entered from WORK SHEETS.)

17. done

STAT  
36344**TITLE:**

STAT: Statistical Analysis of Lab Data

**DESCRIPTION:**

This program treats class sets of laboratory data statistically. Aside from a table of experimental values with errors and percent errors, the teacher has a choice of experimental value distribution with bar graph, ranking by percent error, ranking by experimental value, mean deviation, and standard deviation.

OBJECTIVES:

- A. To make percent error in experiments more meaningful.
- B. To increase competitive spirit in the laboratory due to ranking portion of statistical analysis.
- C. To provide a basis for further discussion of laboratory data and techniques.

**INSTRUCTIONS:**PRELIMINARY PREPARATION:

This program is not generally for student use.

DISCUSSION:

Often a teacher is forced to work with some arbitrary percent error scale for marking purposes. With a statistical analysis of the laboratory results, a realistic scale can easily be developed.

Also, it is often desirable to discuss the class results but without a statistical analysis this usually turns out to be rather shallow. The analysis can now be obtained in the few minutes it takes the students to clean their equipment and put it away.

It may be helpful to discuss a few of the ways in which the teacher can input data. First, the teacher may simply call up the program and then either he or his students can input the data as the experiments are finished. Next, with the teletype unit on local, a tape can be made and the analysis can be made at any convenient time. With tapes a teacher can do a statistical analysis of his classes separately or as a group as long as each student gets a different student number. The program conversationally requests input.

**ACKNOWLEDGEMENTS:**

Huntington Project  
Polytechnic Institute of Brooklyn

RUN  
 RUN  
 STAT

THIS PROGRAM WILL DO THE FOLLOWING:

1. PRINT OUT A TABLE OF EXPERIMENTAL VALUES, ERRORS, AND PERCENT ERRORS INCLUDING AVERAGES FOR ALL.
2. GIVE YOU A CHOICE OF ALL OF THE FOLLOWING:
  - CHOICE 1 - EXPERIMENTAL VALUE DISTRIBUTION INCLUDING A BAR GRAPH
  - CHOICE 2 - RANKING BY PERCENT ERROR
  - CHOICE 3 - RANKING BY EXPERIMENTAL VALUE
  - CHOICE 4 - OTHER INFORMATION
  - CHOICE 5 - ALL OF THE ABOVE CHOICES
  - CHOICE 6 - ENDS PROGRAM

INSTRUCTIONS

1. LINES 100 TO 159 HAVE BEEN RESERVED FOR DATA.
2. NOTE: THE FIRST DATA LINE MUST ALWAYS BE NO. 100 AND LINE 101 MUST ALWAYS BE USED.
3. THERE IS ROOM FOR DATA FOR A MAXIMUM OF 50 STUDENTS.
4. INPUT SHOULD BE IN THE FORM:  
 100 DATA STUDENT NO., VALUE, STUDENT NO., VALUE, ETC.,
5. STUDENT NUMBERS MUST RANGE FROM 1-50.
6. OLD DATA IS ERASED BY INPUTING NEW DATA WITH THE SAME LINE NUMBERS DURING SUBSEQUENT RUNS.
7. IF THE FIRST RUN REQUIRES DATA LINES 100-110 AND THE SECOND RUN REQUIRES LINES 100-109, LINE 110 IS TYPED IN TO ERASE OLD DATA IN THAT LINE.
8. NEVER TYPE SAVE DURING THE RUN OF ANY PART OF THIS PROGRAM.

THIS CONCLUDES THE RUN.

DONE

CONTRIBUTED PROGRAM **BASIC**ATTEND  
36202**TITLE:**

ABSENTEE LISTINGS

**DESCRIPTION:**

This program provides a listing of absentees in alphabetical order, according to the first three letters of the last name (most efficient method). The list is divided into three groups, according to each student's class (10, 11, or 12). Calculations are also made to determine total absentees and percent attendance. The completed output is then suitable for use as a daily bulletin of high school attendance. Asterisks designate change of alphabetical character in last name.

**INSTRUCTIONS:**

See page 2.

**SPECIAL  
CONSIDERATIONS:**

Care must be exercised to insure sufficient storage for each record, as a file overflow will result in program termination. In all cases, the specific file in which the deficiency has occurred will be indicated by the program. That file should be killed and opened again.

**ACKNOWLEDGEMENTS:**

William R. Hudson  
Butler Senior High School/Butler, Pennsylvania

INSTRUCTIONS

Files "ATTEN1," "ATTEN2," "ATTEN3," and "ATTEN4," must be opened before each run and killed afterwards. "ATTEN1" - "ATTEN3" accomodates the number of absentees in classes 10, 11 and 12, respectively (5 names per record). For example, if there are 90 absentees in a class, there must be at least 19 records for that corresponding file  $[1+\text{INT}(N/5)]$ .

Since the files will be killed immediately after the run of the program, the number of records opened is of no consequence as far as cost is concerned. Therefore, files should always be opened larger than necessary.

File "ATTEN4" is used as a buffer file. It must be opened (1 record per entry) to the number of students in the largest class.

Absentees should be entered on paper tape (to conserve terminal time) and should be punched as follows:

LAST NAME, FIRST NAME, GRADE [x-off, return, linefeed]

where:

the name of the student is entered as indicated and may occupy 20 positions,  
grade is the class of the student being entered. If omitted, an appropriate error message will be issued.

Name and grade need not be separated; however, any character other than a blank will be accepted as part of the name. If data is not entered on tape, a return is the only needed character to end each line.

Example:

SMITH, JOHN 12 [return]

After the last absentee has been entered, type "END" at the next input (to signify end of data). Each class will then be alphabetized and recorded. Respond with "YES" or "NO" upon request of "CORRECTIONS?". If "YES" the entry numbers of absentees to be omitted will be requested (entry numbers are assigned sequentially during input). If "NO" is typed, the program will continue.

At the input for "TOTAL ATTENDANCE?", enter the number of students in attendance (the number of students present when there are no absentees). At the next input ("NUMBER OF LINES PER PAGE?"), enter the number of lines to be printed on a single page (57 for a standard sheet).

Execution of the program will not continue until the return key is depressed (allowing time for the placement of a stencil or other duplicating forms, in the teletype).

The return key must again be depressed after the printing of the given number of lines. If the printing form is not changed, printing will be continued at the point at which it was previously halted. For additional executions, RUN-930.

CONTRIBUTED PROGRAM **BASIC**

<b>TITLE:</b>	AVERG1: Averages and Curves Grades	AVERG1 36340
<b>DESCRIPTION:</b>	This program will average any number of grades. A passing grade must be inputted by the teacher, and the computer will list the numerical value of the curve and the respected adjusted grades based on the computed averages and the passing grade.	
<b>INSTRUCTIONS:</b>	Enter grades as DATA in lines 600-700.	
<b>SPECIAL CONSIDERATIONS:</b>	Curving is valid only if the original grade distribution showed a Bell Curve.	
<b>ACKNOWLEDGEMENTS:</b>	Huntington Project Polytechnic Institute of Brooklyn

CONTRIBUTED PROGRAM **BASIC**

BASKET  
36605

**TITLE:** BASKETBALL STATISTICS

**DESCRIPTION:** This program maintains individual and team statistics for varsity and junior varsity basketball teams. Data items input are offensive rebounds, defensive rebounds, losses (losses of the ball by bad passes, fumbles, allowing the ball to be stolen or being tied up and losing the jump), violations (rule violations other than fouls which result in the loss of the ball), gains (individually forcing losses or violations on opponents), assists, fouls, field goals attempted, field goals made, free throws attempted and free throws made. Output consists of a chart divided into Floor Play and Shooting categories which contains individual totals, games played and shooting and scoring averages. Team information consists of totals and averages on all items input.

**INSTRUCTIONS:** Open files VARS and JRVAR with one record each and file NAMES with two records. Enter a zero matrix (21 x 6) in VARS and JRVAR. A program named PROG is provided to enter the zero matrix. Just GET-PROG and RUN to initialize the files. Enter the names of up to 21 varsity players in numerical order in the first record of NAMES and the same information for the junior varsity in the second record. Maximum name length is nine characters.

Two statements must be altered as follows: 80 R = number of varsity players and 110 R = number of junior varsity players.

The argument of the TAB function and the school name in statement 890 should be changed. The formula for the argument is:

If the number of characters in the name string is odd, then the argument is  $- 36 \frac{\text{number of characters} + 1}{2}$

If the number of characters in the name string is even, then the argument is  $- 36 \frac{\text{number of characters}}{2}$

continued on following page

**SPECIAL CONSIDERATIONS:** In order that all data for one team may be stored in a file of one record, the data which is output from a matrix as large as 21 x 13 is compressed into a 21 x 6 matrix. Of the thirteen items for each player, the rebounding and shooting may each total up to 999 (three digits) and other items up to 99 for a total of 32 digits. These are stored in five six-digit numbers and one two-digit number.

**ACKNOWLEDGEMENTS:** Richard Bach  
North Eugene High School

## INSTRUCTIONS continued

On execution, first input required is the number of players for whom data is to be entered, number of games played to date and team identification (varsity or junior varsity).

Next input is player data consisting of the uniform number followed by the eleven items listed above (in the description of the program) in the order given. Players are entered separately and in order of uniform number.

On the season's first execution, enter data for all players, including those who have not yet played. For them, enter the negative of the uniform number (to avoid counting a game played) and eleven zeroes. The question GAMES? will be typed when a negative uniform number is entered. Enter a zero on first execution.

Errors in data can be corrected after the error appears in a complete printout. To correct for any number or players, execute the program, indicating the number of players for whom corrections are needed. Then enter the negative of the player number followed by zeroes or positive or negative numbers as needed to correct. When GAMES? is typed enter the number required to correct the number of games played.

To get a printout without entering player data, enter zero for the number of players.

CONTRIBUTED PROGRAM **BASIC**

**TITLE:**

COLLEGE REGISTRATION DEMO

COLREG  
36282

**DESCRIPTION:**

COLREG is a comprehensive demo package that illustrates the feasibility of an on-line, multi-terminal college registration. The package consists of 10 programs: CLEAR, FILE, PREREG, REPS, AVAIL, REG, SOFAR, GRAD, CLASS, and COPY.

**INSTRUCTIONS:**

It is estimated that 1 million characters are needed for each 1,000 students. This estimate is for student and course information only and does not account for program storage.

The operation here assumes that the college registrar will manually plan a list of available courses and associated instructors. This list is entered into the system as well as sent to all students. The students then plan their individual programs at home and then at registration day they enter their programs into the system on one of 32 terminals. This system then checks for validity, class conflict, etc. as students enter their courses. Upon successful completion, the student is given an on-the-spot report of his program. In addition, class reports for the instructors can be obtained at the end of registration.

During the year the individual instructors may enter grades for his students and provide reports for all student grades.

The time per student at registration seems to be about 5 minutes, so a 32 terminal system could handle 384 students/hour.

Continued on following page.

**SPECIAL  
CONSIDERATIONS:**

1. Maximum number of students - 32
2. Maximum number of courses one student can take - 9
3. Maximum number of credits a student may take - 17
4. Maximum number of courses available - 9
5. Maximum number of sections within a course - 6
6. Maximum number of hours per week a section may have - 5
7. Sections must be scheduled at same start time and length on each available day.
8. Two programs that write on files may not run simultaneously.
9. No deletes are provided for students, courses, or sections.
10. May not change the original quota for any section.

**ACKNOWLEDGEMENTS:**

George Tibaldi/Dave Denman  
HP, Eastern Sales Region

INSTRUCTIONS: continued

<u>NAME OF PROGRAM</u>	<u>FUNCTION</u>
CLEAR	Clears student and course files
FILE	To enter available courses and sections
PREREG	To enter student names and addresses. Prior to registration (if required)
REPS	Lists students' name and addresses
AVAIL	Lists courses and sections available
REG	To register students (can be used to list any students programs)
SOFAR	To list courses, sections and students registered SOFAR
GRAD	To enter midterm or final grades
CLASS	To provide a class report for each instructor
COPY	Restores (copies) two back-up files to student and course

1. OPEN-STUDNT, 128  
OPEN-COURSE, 128  
OPEN-WORK, 3  
OPEN-WORK1, 10  
OPEN-WORK2, 10
2. RUN "CLEAR" to clean student and course file
3. RUN "FILE" to enter an available curriculum
4. RUN "AVAIL" to get a report of all courses and sections entered with "FILE"
5. May RUN "PREREG" to enter names and addresses of students. This saves time at actual registration ("REG") in that names, etc. are already entered.
6. RUN "REG" to enter courses for students. This student should use this program with a copy of the report from "AVAIL" in his hand.
7. May RUN "SOFAR" at any time to see the number of students enrolled SOFAR
8. May RUN "CLASS" at any time to see the actual students enrolled in each class. This program thus provides class reports for all courses to be given to each instructor
9. At midterm and final time, each instructor would run "GRAD" to enter the grades for his students
10. After all midterm or final grades are entered, run "CLASS" again to see entered grades
11. RUN "REPS" at any time to see students in file

The following list of programs may be run at any time with out altering any files since they read only:

REPS, AVAIL, SOFAR, CLASS or REG (with just typing "END" in response to "COURSE-SEC")

For demo purposes, the following procedures are useful:

- A. RUN "CLEAR"
- B. RUN "FILE" for 7 courses and 3 to 4 sections per course
- C. RUN "PREREG" for about 10 students
- D. Using a file copy program, ("COPY") save both student and course files. In this way this state can easily be recreated from back-up files (CSAVE and SSAVE).

The file copy program, COPY, included in this program package has been set up to perform these steps. user may just RUN COPY to restore the state. The sample RUNs which follow illustrate the building of the files rather than using COPY which has already set up the files.

CONTRIBUTED PROGRAM **BASIC**

GMARKS

36518

**TITLE:**

GSB GRADING AND EDITING PROGRAM

**DESCRIPTION:**

GMARKS is a grading program which allows the user to enter up to 20 grades per student for a quarter, weight these grades, and compute the final quarter grade. The program conforms to the H+,P+,P,P- and U grading system adopted by the faculty of Stanford University in the Spring of 1971. At the completion of the program a table of the frequencies for each grade is printed and the user is given the option of scaling his grades by one of two methods. The program can be used iteratively until the distribution of grades is satisfactory, and the final grades and distribution can be printed.

Because it is possible that typing errors will occur while grades are entered into the grading program GMARKS, the companion program GMEDIT can be used to edit the file containing all of the grades for a class.

**INSTRUCTIONS:**

In order to use this program, each user must open a file called GRADES. The format should be as follows:

OPEN-GRADES,n      where n is the size of the file.

To determine the file size use the following formula:

$$\text{Integer } \frac{(\text{number of grades} \times \text{number of students}) + 1}{128}$$

The program first requests the user to enter the number of grades per student. This number must be less than or equal to 20. Next, the user is asked to enter the raw weights for each grade. For example, if there are four grades and the user enters weights of 2, 4, 1 and 1, the program will calculate percentage weights of .25, .50, .125 and .125 respectively as the factor to be multiplied by each grade to arrive at a weighted average for each student.

(continued on Page 2)

**ACKNOWLEDGEMENTS:**

Graduate School of Business  
Stanford University

INSTRUCTIONS: (continued)

The user is offered the option to read a set of grades stored on the disk during an earlier session with the program. This allows grades to be saved, modified and recalculated if desired. (Even though the program offers the option to enter either letter or numeric grades, letter grades are converted to their numeric equivalents and only numeric grades are stored on the disk.)

Next the user is asked whether he is entering letter grades or numeric equivalents. If letter grades are entered the various grades correspond to points as follows:

H	1.0
P+	.5
P	0
P-	-.3
U	-1.0

The user is offered the option to see each calculated average as it is computed. This should probably be done for the original entry of the grades. If the user is computing grades which have already been entered on the disk, the program will proceed with execution. If the user is entering the grades for the first time, then he will be requested to enter each student number followed by a carriage return. A student number 999 indicates that all grades have been entered. After the student number has been checked and accepted by the program, the grades are entered on the next line separated by commas. The student numbers must be in sequence beginning with 1. To have a missing grade dropped from the computation and the weights rescaled, a 9 should be entered for numeric grades or a Z for letter grades.

There are several possible errors which may occur during the entry of grades. If an error is noted while the line is being typed, the use of the escape key will enable the user to reenter that line. If errors in grades are noted after all of the grades have been entered, another program, GMEDIT, can be used to update or correct the grades which have been saved on the disk. If the program detects an error in student numbers it will not continue until the correct student number has been entered. It is also possible, particularly with letter grades, that an incorrect grade will be entered. This will most likely result from an error in typing or from the omission of a comma. If such a condition is detected the program will ask for the line to be reentered. The same is true if an insufficient number of grades is entered.

At the completion of computing all of the grades the program will print out a table showing for each grade the absolute number in the class who received it, the percentage who received it, the cumulative percentage receiving that high a grade or higher and the percentage of students receiving each letter grade H, P and U.

At this point the user is given the option to scale the grades using two methods. First, he may add a positive or negative constant to each grade. Second, he may enter new break points from which the averages are calculated. The original break points are shown in the following table.

	<u>Average Between</u>	<u>Grade</u>
	.75	H
.749	.25	P+
.249	-.15	P
-.151	-.65	P-
-.651	-1.0	U

The numbers in the second column of the table above are used as the original break points for grades. For example, if a student has an average of .75 or above he receives an H. If he has a .25 or above, but less than .75 he receives a P+ and so on. Thus, by manipulating the break points it is possible to radically change the distribution of grades.

An easy method to experimentally alter the distribution is to enter new break points and run the program again without exercising the option to list each student. This will result in all of the grades being calculated and only a new table of grade distributions being printed. This new table can be examined and the process continued iteratively. When the user is satisfied with the distribution, he should enter a scaling factor of 0 and have each student's grade listed. On this final grading run all students and their grades, the frequency table and the break points are printed.

Finally to terminate the program a scaling factor of 99 is entered.

INSTRUCTIONS: (continued)

If errors in grades have been entered, GMEDIT may be used to update or correct the grades as follows.

The program first asks the user to enter the number of grades for each student. This number should be the same as that originally used to place the grades on the file. Next, the student numbers to be modified should be entered in sequence from low to high. That is, if student numbers 2, 4 and 8 require changes in their grades, they should be entered in that order. To complete this stage of the program a student number of 999 should be entered.

After each student number is entered, his old grades will be printed and the user will be requested to enter a grade number and a change. For example, if a student had grades of -.2, 1.0, .3 and -.5 and it was desired to change the 1 to a .5 the user should type

2,.5

When all of the modifications for this student have been completed, the user should enter a 99,0 to signify the completion of the changes.

It is possible in this process that a student number will be entered in the wrong order. The program will indicate the offending student number and print the present place in the file. If a correction is inadvertently omitted, the editing run should continue and a separate run can be made later to correct the omission.

At the end of correcting existing grades, that is, when a student number of 999 has been entered, new students may be added. At the completion of entering grades for each new student, the user is asked if another student is to be added to the file. If the answer is yes, the program prints the student number which has been assigned to the new student and requests that the grades be entered. All of the grades are entered on one line. If no further students are to be added, then the program is finished.

In order to run the program, type the following:

CRE-SCRTCH,n where n is the same number used in creating the file GRADES  
(or larger to compensate for new students)

At the end of the program

PIIR-SCRTCH

CONTRIBUTED PROGRAM **BASIC**

GPAC  
36636

**TITLE:**

GRADE PACKAGE

**DESCRIPTION:**

GPAC is a system of 12 programs written for an HP 2000E system to store and handle accumulative records of points given throughout a normal term's work. In addition, several options are available to combine, manipulate, and display the data in one of several convenient formats. To the user GPAC appears to be one large program with two entry points, one for initialization and the other for subsequent use of the package.

**INSTRUCTIONS:**

The user has the option of selecting the number of bins to be used, their headings, the method by which the raw totals are combined to produce a "score" for the student, and the various weights to be used in combining the raw totals. These parameters may be modified at will by the user.

The possible options that are available to the user, besides the modification options, are those that allow: entering new information into the accumulative arrays, listing by class student number, sorting on any bin or the combined score and listing in descending order, producing a teletype histogram of any bin or the combined score, computing the z-score or t-score of any bin or the score, or producing a short summary for each student so that each can know his precise standing in the class at any time.

**GENERAL CONSIDERATIONS**

GPAC is adaptable for a class with up to 140 students. These may be assigned any arbitrary positive integers as class student numbers. A further constraint is that there is a maximum range of 140 in the student numbers. If a student drops, his student number may be deleted and thereafter that student number is ignored. Thus it is possible to generate a range greater than the maximum even with a class of considerably less. It is suggested that this range be chosen in the interval 1 to 999.

continued on following page.

**SPECIAL  
CONSIDERATIONS:**

The following general constraints hold for GPAC: up to six separate "bins" for storing the accumulative raw totals and a maximum of 140 students in the class. GPAC has been used to help grading procedures for several different classes in at least five different departments at Pacific Union College. Not only is the teacher's time reduced at the end of the term, but the students are able to see their progress on a regular basis throughout the term. While it is possible for a teacher to prepare listings and histograms at regular intervals, the process is time consuming. GPAC was written to make it possible for such displays to be prepared without increasing the teacher's time.

In addition to regular class grades, GPAC has also been used to accumulate the user's time usage of the terminals. This information is accumulated at the end of each month, listed, sorted, and histograms made.

**ACKNOWLEDGEMENTS:**

Lawrence E. Turner, Jr.  
Pacific Union College

INSTRUCTIONS continued

It should be noted that for listings and sorts, close to the entire line of 72 characters is printed. This takes about seven seconds to print on a teletype terminal, hence a class of 100 would take about twelve minutes to produce a listing on the teletype.

Up to six bins are allowed to accumulated separate totals. These may be entitled by any heading of less than six characters. The user is cautioned that these may be any combination except: HELP, SCORE, RETURN, DUMP. These four are used for special system keys.

Once the user has decided upon what quantities are to be accumulated, the next consideration is how these are to be combined to produce the student's "score". There are two possible methods. In both methods the score is essentially a weighted percentage of the total possible.

The first method (mode = 1) is called constant weights and  $S_n$ , the score for the  $n$ th student, is given by:

$$S_n = \left[ \frac{T_{1n}W_1 + T_{2n}W_2 + \dots}{T_{1N}W_1 + T_{2N}W_2 + \dots} \right] \times 100$$

$$= F \sum_{k=1}^b T_{kn}W_k$$

where  $T_{kn}$  is the accumulated raw score of the  $k$ th bin for student number  $n$ ,  $T_{kn}$  is the total possible for  $k$ th bin,  $W_k$  is a constant weight set by the user,  $b$  is the number of bins, and  $F$  is a normalizing factor which is the same for all students and is such that if a student did perfectly, that is, earned the maximum possible points, his score  $S_n$  would be 100.0.

The second method (mode = 2) is termed constant proportionality factors. Here  $S_n$  is given by:

$$S_n = \left[ \frac{T_{1n}}{T_{1N}} P_1 + \frac{T_{2n}}{T_{2N}} P_2 + \dots \right] \times \frac{100}{P_1 + P_2 + \dots}$$

$$= F \sum_{k=1}^b T_{kn} P_k T_{kN}^{-1}; \quad \text{all } k, T_{kN} \neq 0$$

where  $P_k$  is the constant proportionality factor set by the user. The sum is only over those bins with a non-zero  $T_{kN}$ . Note that  $F$  has same function as used for constant weights but in general will have a different numerical value. In both cases

$$0.0 \leq S_n \leq 100.00$$

The choice of these two modes of operation depends on how the user usually computes grades.

The first method, constant weights, is useful when the user has decided previously on the total possible points available for each item. Consider the example of two exams where the first is to count equally with the second. This can easily be achieved by making the same total possible on each test and the weights equal, or alternately by deciding beforehand what the total possible will be and then adjusting the weights so that the product  $T_{kn}W_k$  is the same for both.

The second method, constant proportionality factors, may be used if the total possible is unknown a priori. Here each bin is weighted relative to the total possible for that bin. Thus, in the example above, merely by selecting the  $P_k$ 's to be equal, each test would count equally regardless of the total possible on the individual tests.

The constant proportionality factors will give the same result at the end of the term as does the constants weights in the case where the user has previously determined the total possible. They may differ at intermediate times since points are not accumulated continuously at the same rate but in rather large discreet amounts.

## INSTRUCTIONS continued

Thus in the case where the user has carefully planned the course and knows the total possible for each category at the beginning, he has the option of either method. At the end of the term the results will be identical. However, for the teacher who does not know just how many points will be possible, it is best to use the second method of constant proportionality factors.

For both these cases the actual values of  $W_k$  or  $P_k$  are unimportant. Only the relative values are involved. It should be possible to find a set of integers that have the proper relative values. Thus, these are to be selected from the set of positive integers.

For simplification the accumulative points are also carried as integers. If the user is accustomed to using fractional points, it is quite easy to multiply each point by a simple factor, and correspondingly reduce the weight or proportionality factor by the same amount.

## INITIALIZATION

The user must have access to a terminal and a user ID and password. He must also have disc storage of 14 sectors. For each different class there must be a different user library, that is, a different ID and password. Alternately the user must declare auxiliary files and transfer information from them before using GPAC and transfer the information back at the end of a session.

GPAC should be made available from the system library. Assuming the user has previously determined what raw points to store, how he wants to combine them assigned student numbers, and has completed other advanced planning, the procedure to initialize GPAC is as follows.

1. Open the disc storage file.

```
OPEN-CLSI IL,14
```

2. GET and RUN GPAC I

GPAC I, initialization portion of GPAC, will execute and will ask for various items:

CLASS TITLE: This can be any alphanumeric string up to 30 characters long, and will be used as a label for all subsequent output.

NUMBER OF BINS: Up to six bins are allowed.

HEADING: One for each bin, up to 6 characters each. These will be used to identify the bins from this point on. Embedded blanks are significant, trailing blanks are not. The headings must obviously be unique, and they must not be one of the following: HELP, SCORE, RETURN, or DUMP.

MODE: M = 1, constant weights.  
M = 2, constant proportionality factors.

FACTORS: One for each bin, either constant weights or constant proportionality factors depending on mode selected previously. They must be integers.

MINIMUM S.N.: This is an integer greater than zero, and allows numbering the students in a class consecutively from a number other than 1; as an example, numbering a class with integers 101 thru 190.

LARGEST S.N.: Again this is an integer which corresponds to the largest S.N. used. Note that it is possible to add students with higher S.N. than this. This may be done later in the MODIFICATION section. For all student numbers within this range from minimum to largest and all useable bins, a zero will be placed. If there are gaps in the student number range, i.e., students which have dropped, these can be deleted in the MODIFICATION section.

A GPAC STATUS CHECK follows, giving the class parameters. The program automatically chains to the COMMAND section. It is at this point that any further modifications may be made.

## GPAC MAIN PROGRAM

The initialization sequence is to be used only once. Thereafter, the user accesses and RUNS the main program, GPAC, which will retrieve the necessary data from the disc and chain to the COMMAND section.

## COMMAND SECTION

All branches are determined here and eventually return to this section.

Upon printing COMMAND ? the computer requests an alphanumeric response, to determine what action to take. Typing HELP will obtain a listing and a brief explanation of the possible choices available. STOP results in a controlled exit from GPAC. For any COMMAND, typing the first three characters will result in the correct branch.

INSTRUCTIONS continued

The list of possible commands is:

CHEck  
HELp  
HISto  
LISt  
MODify  
OUT  
SORt  
STAt  
STOp  
UPDate

STATUS CHECK SECTION

Entry command: CHEck

This section gives a display of the class parameters. It is accessed automatically after INITIALIZATION or upon return from the MODIFICATION section. It may be directly accessed from COMMAND by the above response. After execution it returns automatically to the COMMAND section.

HISTOGRAM SECTION

Entry command: HISto

This section produces a teletype histogram of any of the used bins or the SCORE. The request KEY ? selects the appropriate bin or the score. The entire heading must be used. The response of HELP will produce a listing of acceptable keys. The response RETURN causes the program to return to the COMMAND section.

The limits of the histogram are entered as three numbers separated by commas for the lower limit, the upper limit, and the interval size respectively.

The histogram produced gives the class title, the date that the disc file was last changed, and the heading of the bin being produced. The TOTAL number is the actual number plotted in the histogram. Hyphens are printed at the top and bottom for those histograms less than one page in length. These are located 11 inches apart for convenient separation into page size.

If a particular datum is equal to the limit of an interval, it is included in the lower interval, that is the interval contains all those points that are described by:

$$L \leq T_{kn} \leq U$$

where L and U are the lower and upper limits of the interval respectively.

LIST SECTION

Entry command: LISt

This section produces a teletype listing of the accumulated raw points and the SCORE for each student. The listing is in order of increasing student numbers. Any inactive student numbers, that is, student numbers that have been previously deleted in the MODIFICATION section, are ignored.

The total possible for each bin is given, along with the mean and the standard deviation for each bin and the SCORE.

Hyphens separate the output into page size sheets. The class title and the date the files were last changed are also given.

The program automatically returns to the COMMAND section.

MODIFICATION SECTION

Entry command: MODify

There are times when one wishes to change certain class parameters or add or delete a student. This is done in the MODIFICATION section.

The process is controlled by the MOD OPTION. A response of HELP produces a listing of the options. The possible options are:

ADD  
DELeTe  
HELp  
PARAm  
RETurn

## INSTRUCTIONS continued

ADD and DELETE add and drop a student respectively. In the case of a drop, that student number is ignored in all subsequent output. Checks are made to insure that only allowed drops and adds are processed.

The PARAM option allows modification of the class parameters originally entered in the INITIALIZATION program. The choice of which class parameter to be modified is selected by the ITEM ? request. The ITEMS that may be modified are:

FACTOR  
HELp  
KILL  
MODE  
NAME  
NEW  
RETurn  
SWItch  
TITLe

HELP obtains a listing of items. RETURN, both for the MOD OPTION and the ITEM requests, produces a branch to the COMMAND section.

FACTOR, MODE, NAME, and TITLE provide changing the proportionality or weights (depending on the mode), the mode, the headings of the bins, or the class title respectively.

NEW allows adding a bin, if less than 6 are presently in use. SWITCH allows two bins to be interchanged so that the left to right order as printed in lists or sorts is altered. The contents of the bins are left unchanged.

KILL provides for removal of unwanted bins. If the bin is empty, that is, if the total possible for that bin is zero, the bin is removed without further consideration. If the total possible is non-zero, the disposition of the contents is requested. This may be any other bin. In this case, the contents of the bin to be removed is simply added to the other bin directly, then the first bin is removed. Or if the contents are unwanted a disposition of DUMP results in the bin immediately being deleted. A disposition to the same bin will result in no action and return to the ITEM request.

Note that to obtain histograms, z-scores, etc., for a given set of points in the case that normally they are carried as a total, for example, if all exams are added together in one bin, but it is desired to obtain a histogram separately for the one just entered, a possible procedure is to add a temporary bin, enter the information into it, display it at will, then KILL that bin with a destination of the bin holding the totals.

The disc is automatically updated upon exit from this section.

## OUT SECTION

Entry command: OUT

In order to allow the individual student to know his total points and class standing, a short summary may be provided by the OUT section. These are printed with hyphens between so that they may be separated conveniently and given to the students.

The program requests the minimum and maximum student numbers for which a summary is desired. Inactive student numbers are ignored, and return to COMMAND is automatic.

The user should note that it takes of the order of 45 seconds to produce each student's summary, hence for a class of 100 it would take approximately 1 hour.

In combination with a posted histogram of the SCORE, the student could very nicely determine his class standing. This way a student would only know what his particular totals and SCORE was.

Another method would be to post a listing of the totals and the SCORE. Here, of course, a student could know how another specific student was doing by knowing his student number.

## SORT SECTION

Entry command: SORT

This section produces a listing of the accumulated points and the SCORE for each student. The listing is in order of descending values for any KEY. These are any bin or the SCORE. The response HELP produces a listing of possible keys. The response RETURN causes the program to return to COMMAND.

The bin that is being sorted on is underlined. The total possible, the mean, and the standard deviation for each bin and the score are also printed. Inactivated student numbers are ignored.

Hyphens separate the output into page size sheets.

INSTRUCTIONS continued

STAT SORT SECTION

Entry command: STAT

This section sorts and produces a sorted listing of any bin or the SCORE. The possible options are:

HELp  
RETurn  
SCAlE  
STAndard

HELP and RETURN produce a listing of the options, and return to the COMMAND section respectively.

The response of STANDARD prints an ordinary z-score. For t-scores one may use the option: SCALE. The base (i.e., the value which the mean will take) and the scaling factor are requested. The program also requests if letter grades are desired. If so, the t-score criteria for grade assignments are also requested.

Note that the z-scores numerically are t-scores with a base of zero and a scaling factor of one.

The total possible, mean, and standard deviation for the bin are also printed. Inactivated student numbers are ignored.

Hyphens separate the output into page size sheets.

UPDATE SECTION

Entry command: UPDate

The UPDATE section allows the user to enter new information. Control within this section is determined by OPTIONS. A list is as follows:

HELp  
INCRe  
RETurn  
SINGle

As previously used, HELP produces a listing of options and RETURN chains back to the COMMAND section. Only the first three characters of the options need to be entered.

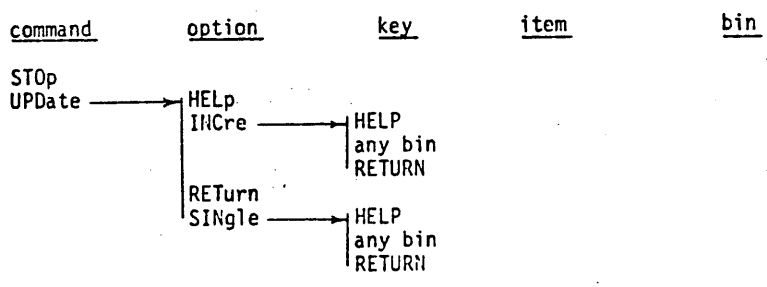

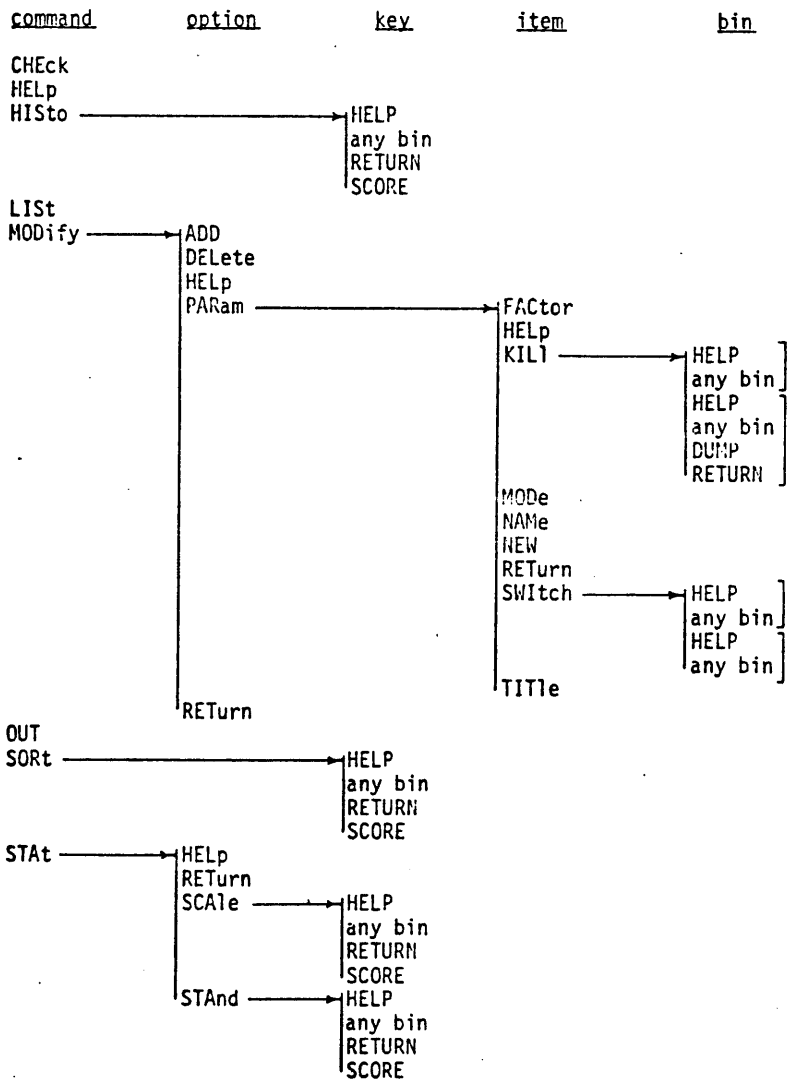

The INCREMENT option allows automatic incrementing through the range of active student numbers, hence the user need only enter the individual item after each request. The TOTAL is the total possible and is entered as the last datum. The bin is selected by the KEY request. Both keys of SCORE and RETURN result in branching to the OPTION request.

The SINGLE option allows entering a certain datum into a given student array. A student number of -1 will return to the OPTION request. The total possible,  $T_{KN}$ , is defined to be student number zero. Note that the entry is added directly to the student's raw total. Hence, if points need to be subtracted, enter a negative number. The bin is selected by the KEY request and the raw totals are printed before and after the datum is entered. Thus the SINGLE option may be used to correct an error made in previous updates.

It is important to note that during execution of the UPDATE section the new information is only entered into the arrays in core. It is not until the return to the COMMAND section that the disc is updated. Hence stopping the program during execution of this section before a RETURN, may result in the loss of the new information. It may be possible to recover just by typing RUN (return) but any other teletype entry may destroy the information in the arrays. If in doubt, restart the package from GPAC MAIN PROGRAM and reenter the new data.

GRADE: Test Grade for Number of Questions Missed

GRADE  
36342

**DESCRIPTION:**

This program is useful in determining the grade of an examination consisting of any number of questions. The user inputs the number of questions on the test and the output consists of a general table giving the number of questions missed with the corresponding percentage grade based on 100% and the number of questions correct.

**INSTRUCTIONS:**

User is requested to input the number of questions on the test.

**ACKNOWLEDGEMENTS:**

CONTRIBUTED PROGRAM **BASIC**

TITLE:

ITEM: SCORES MULTIPLE CHOICE TESTS

ITEM  
 36888-18007

DESCRIPTION:

This program scores multiple choice tests with a maximum of 50 items in the test. Simultaneously an analysis of each item takes place and in the ITEM ANALYSIS section the response frequencies for responses A,B,C,D,E and O (omit) are printed for each item, together with an analysis of the candidates who answered correctly into four groups (upper, middle upper, middle lower and lower) depending on scores for the test as a whole. For example, from item No. 1, of the 18 candidates answering correctly, 6 were in the upper 27% of candidates, 4 lay between the 50th and 72nd percentile inclusive, 5 lay between the 28th and 50th percentiles and 3 were in the lower 27%. The groups are of unequal size so as to conform to the demands of the Kuder-Richardson formula 20 which is used to give a measure of the reliability of the list as a whole.

The facility of each item is printed together with the INDEX of discrimination. The analysis for each item is sufficient for an experienced user to establish the validity of each item, the effectiveness of distractions, etc.

The user is given the opportunity to have the scores standardized onto any mean and standard deviation of his choice. The mean, variance and standard deviation of the number of items correct is printed before the user is given the chance to standardize marks. Standardized scores are printed in ascending order. The identification of students is numerical on order of entry of raw responses.

Specification of statistical techniques used:

- N = Number of candidates
- K = Number of items in the test
- $N_H$  = Number of candidates from upper group who answered the item correctly
- $N_L$  = Number of candidates from lower group who answered the item correctly.
- J = Number of candidates in the upper 27% group.

Reliability for whole test

$$R = \frac{K}{K-1} \left\{ 1 - \frac{2J \sum (N_H + N_L) - \sum (N_H + N_L)^2}{0.667 \left[ \sum (N_H - N_L) \right]^2} \right\}$$

Facility for an item  $F = \frac{\text{No of correct responses}}{N}$

Discrimination  $D = \frac{N_H - N_L}{J}$

INSTRUCTIONS:

See following page.

SPECIAL  
 CONSIDERATIONS:

See following page.

ACKNOWLEDGEMENTS:

John R. Tilbury  
 Arnold & Carlton College

INSTRUCTIONS:

Prepare data statements or data tape.

This should contain strings of candidate responses. Each string must contain the number of letter characters - (A,B,C,D,E or O). The first string must be the string of correct responses.

If using DATA statements, each candidate's responses string may utilize an individual DATA statement, or may be packed several response strings to a single data statement. No sentinel string or indicator is necessary.

Data statements should be numbered starting with a sequence number greater than 1580.

If using DATA statements, this must be terminated with an END statement.

CRE-STDT,48: STDT may be opened to more than 48 records if more than 48 students  
CRE-STDT (candidates) are involved.

RUN

Program requests number of candidates and number of items.

The rest of the running procedure is straightforward.

If analysis of individual items is not required at some times but is required at others, the user may care to insert the following statements:

```
1001 PRINT "IS ITEM ANALYSIS REQUIRED";
1002 INPUT C$
1003 IF C$ = "NO" THEN 1580
```

Storing the program in a user's private library will thus give the user the choice of using the program to mark lists and standardize scores but not to have items analyzed for validity. This is, however, not the way the program is intended to be used.

SPECIAL CONSIDERATIONS:

This program is only of use to persons experienced in the construction and validation of objective tests. The analysis provided by this program must be interpreted in the context of the uses to which the test is being put and should not be taken as absolute evidence that the test is valid & reliable under all conditions, etc.

CONTRIBUTED PROGRAM **BASIC**SALSIM  
A720-36072A**TITLE:** SALARY SCHEDULE COST SIMULATOR**DESCRIPTION:** This program computes the total cost, average salary per teacher, cost of training and experience increments, and various other related costs for a proposed salary schedule. Output also includes optional reproduction of personnel matrix with marginal totals and average number of years teaching experience.**INSTRUCTIONS:** This program requires two files to be opened (ML0005 and ML0017). In preparing the data tapes type all figures for step 1 in the first data statement, type all figures for step 2 in the next data statement, etc. (Steps and lanes are defined as follows:)

	LANE		
STEP	7000=	7200	7400 . . .
	7400		
	7800		
	:		

The question "what number do you want to multiply your schedule by?" allows two options.

Option 1 To multiply the entire schedule by a percentage increase. (Example: Type in 1.03 to multiply the entire schedule by 3%, 1.05 to multiply by 5%, etc.)

Option 2 To use an index instead of a proposed schedule. If you want to use an index in place of the proposed schedule just follow the same format for preparing the data tape substituting indices for actual salaries.

Because two sets of data are appended to the program it is important that they are numbered correctly.

The "PERMAT" tape (personnel matrix) must be numbered from 4000 to 6900.

The "PROSCH" tape (proposed schedule) must be numbered from 7000 to 9900.

Because these two tapes are appended you must also include an "end" statement (9999 end) either on the end of the "PROSCH" tape or by itself after the two tapes have been appended.

Both the proposed schedule and the personnel matrix may not exceed 15 steps and 14 lanes. Both the proposed schedule and the personnel matrix must have the same Number of steps and lanes.

**SPECIAL  
CONSIDERATIONS:**

See attached copy for additional information.

**ACKNOWLEDGEMENTS:**TIES  
St. Paul, Minnesota 55113

SALSIM

(SALary schedule cost SIMulator)

Purpose

To compute the total and related cost for a proposed salary schedule.

Input

1. A copy of the proposed salary schedule.
2. A personnel matrix for your district (number of teachers in each salary category).

Output

1. Optional -- A step-by-lane reproduction of the personnel matrix with marginal totals and the average number of years teaching experience.
2. A cost matrix showing the cost in each category with step and lane marginal totals.
3. The total cost of the proposed schedule.
4. The cost if all teachers were placed on step one.
5. The cost of experience increments.
6. The cost if all teachers were placed in lane one.
7. The cost of training increments.
8. The ratio of cost of experience increments to the cost of training increments. (A number greater than 1 means that more money is being spent on experience than on training. A number equal to 1 means that money being spent on experience is equal to money being spent on training. A number less than 1 means that more money is being spent on training than on experience).
9. The average salary for teachers .

Options

There is now a question within the program that asks WHAT NUMBER DO YOU WANT TO MULTIPLY YOUR SCHEDULE BY? This question gives you two options.

1. To multiply your whole schedule by a percentage increase. (Example: Type in 1.03, when the question is asked, to multiply your whole schedule by 3%, 1.05 to multiply by 5%, etc.)
2. To use an index instead of a proposed schedule. When using an index in place of the proposed schedule follow FORMAT B IN SECTION I UNDER OFF-LINE PROCEDURE. When the above question is asked type in the BA base figure you want to multiply your index by. (Type in 7500 to multiply the entire schedule by \$7500, 8000 to multiply by \$8000, etc.)
3. Type in a 1 if you do not want to multiply your proposed schedule (i.e. if you do not want to take advantage of these options.)

Restrictions

Both the proposed schedule and the personnel matrix may not exceed 15 steps and 14 lanes. Both the proposed schedule and the personnel matrix must have the same number of steps and the same number of lanes.

PRELIMINARY OFF-LINE PROCEDURE FOR RUNNING ALL SALARY PROGRAMS

The following two sections I and II, are instructions for preparing tapes off-line.

To run SALSIM follow sections I and II.

I. Proposed Schedule - PROPS1

You must type a tape of your proposed schedule using the following format.

Type each step of your proposed schedule in one data statement.

NOTE: DATA STATEMENTS FOR THIS FILE MUST BEGIN AT STATEMENT NUMBER 7000 AND CONTINUE AT ANY INTERVAL TO 9000. THE LAST STATEMENT MUST BE A 9999 END.

Format A

7000 DATA 7500, 7700, 7900, 8100, 8400, 8600, 8800  
 7100 DATA 7900, 8100, 8300, 8500, 8900, 9100, 9300  
 7200 DATA 8300, 8500, 8700, 8900, 9400, 9600, 9800  
 . .  
 . .  
 8700 DATA 10900, 11300, 11700, 12100, 13500, 14500, 15800  
 9999 END

If you want to use an index in place of the proposed schedule you must follow the format below.

Format B

7000 DATA 1,1.05, 1.1, 1.15, 1.2, 1.25, 1.3  
 7100 DATA 1.06, 1.12, 1.18, 1.24, 1.3, 1.36, 1.42  
 7200 DATA 1.12, 1.19, 1.26, 1.33, 1.4, 1.47, 1.54  
 . .  
 . .  
 8700 DATA 1.87, 1.98, 2.09, 2.2, 2.31, 2.42, 2.53  
 9999 END

II. Personnel Matrix - PERMAT

You must type a tape of your personnel matrix using the following format.  
 Type each step of your personnel matrix in one data statement.

NOTE: DATA STATEMENTS FOR THIS FILE MUST BEGIN AT STATEMENT NUMBER 5000 AND CONTINUE AT ANY INTERVAL TO 6900.

5000 DATA 10, 4, 2, 0, 3, 0, 0  
 5100 DATA 5, 6, 3, 1, 2, 0, 0  
 5200 DATA 6, 3, 6, 4, 7, 1, 0  
 . .  
 . .  
 6700 DATA 4, 7, 12, 16, 8, 5, 3

PRELIMINARY ON-LINE PROCEDURE FOR RUNNING SALARY PROGRAMS

1. Call the H/P Time Sharing System.
2. When you hear a high-pitched tone, place phone in coupler.
3. Type in any number (0-9) and hit carriage return.
4. When computer asks you to log in, type in your appropriate district user ID, hit carriage return, and wait for READY message.
5. The first time you run SALSIM you must type in the following two statement.  
 OPE-ML0005,5  
 OPE-ML0017,7

You need never type in these statements again. (In fact it would be best if you took a pen and crossed out this step after you have done it.)

6. If you have never run SALSIM, proceed to step 7, otherwise type in KIL-PROPS1 and hit carriage return.
7. Type in TAPE, hit carriage return and begin reading in the proposed schedule tape.
8. When the tape has been read in, type in NAM-PROPS1 and hit carriage return.
9. Type in SAV and hit carriage return.
10. Type in SCR and hit carriage return.
11. If you have never run SALSIM, proceed to step 12, otherwise type in KIL-PERMAT and hit carriage return.
12. Type in TAPE, hit carriage return, and begin reading in personnel matrix tape.
13. When tape has been read in, type in NAM-PERMAT and hit carriage return.
14. Type in SAV and hit carriage return.
15. Type in SCR and hit carriage return.

PROCEDURE FOR RUNNING - SALSIM

1. Type in GET-PERMAT and hit carriage return.
2. Type in APP-PROPS1 and hit carriage return.
3. Type in RUN and hit carriage return.

The computer will ask you to PLEASE TYPE IN THE NUMBER OF STEPS THEN THE NUMBER OF LANES SEPARATED BY A COMMA. When you have responded the computer will print DONE.

4. Type in GET-SALSIM and hit carriage return.
5. Type in RUN and hit carriage return.

The computer will now ask the following questions:

PLEASE TYPE IN THE NUMBER OF STEPS THEN THE NUMBER OF LANES SEPARATED BY A COMMA.

WHAT NUMBER DO YOU WANT TO MULTIPLY YOUR SCHEDULE BY? IF YOU DO NOT WANT TO MULTIPLY YOUR SCHEDULE TYPE IN A 1.

PLEASE ENTER YOUR LANE HEADINGS. MAXIMUM HEADING LENGTH IS 7 CHARACTERS. PLEASE TYPE ONLY ONE LANE HEADING AFTER EACH QUESTION MARK THAT FOLLOWS.

EXAMPLE:

- ? BA
- ? BA + 30
- ? MA
- ? MA + 30
- ? PH.D.

DO YOU WISH TO ADVANCE ALL TEACHERS ONE STEP FOR PROJECTED COST COMPUTATIONS? (TYPE 1 FOR NO, 2 FOR YES).

DO YOU WANT A PRINTOUT OF THE PERSONNEL MATRIX? (TYPE 1 FOR YES, 2 FOR NO).

When the program has finished running it will print DONE. If you want to run the program again type in RUN and hit carriage return. If you want to run one of the other programs go to the respective PROCEDURE FOR RUNNING section for that program. If you are done running programs type in BYE and hit carriage return.

## RUN

SAMPLE OUTPUT - SALSIM

DO YOU WISH TO ADVANCE ALL TEACHERS ONE STEP FOR PROJECTED COST COMPUTATIONS?  
 (TYPE 1 FOR YES, 2 FOR NO)

1

THE TOTAL COST FOR THE PROPOSED SALARY SCHEDULE IS \$ 3852500

THE TOTAL COST FOR THIS SALARY SCHEDULE WOULD BE \$ 2958600  
IF ALL TEACHERS WERE PLACED ON STEP 1

THE COST OF THE EXPERIENCE INCREMENTS FOR THIS SCHEDULE IS \$ 893900

THE TOTAL COST FOR THIS SALARY SCHEDULE WOULD BE \$ 2746000  
IF ALL TEACHERS WERE PLACED IN LANE 1

THE COST OF TRAINING INCREMENTS FOR THIS SCHEDULE IS \$ 1106500

THE RATIO OF THE COST OF EXPERIENCE INCREMENTS TO THE COST OF  
TRAINING INCREMENTS IS .81

THE AVERAGE SALARY PER TEACHER FOR THE PROPOSED SALARY SCHEDULE IS  
\$ 10642.3

CONTRIBUTED PROGRAM **BASIC****TITLE:**

STUDENT GRADE FILE MANAGEMENT SYSTEM

SGFMS  
36832**DESCRIPTION:**

The process of maintaining grade records for large classes can be a complex and time-consuming task for an instructor. If daily grades are given, the amount of record keeping that an instructor must do increases greatly.

The concept of feedback also enters into the process. Once a student is evaluated, the student should be informed of the results as soon as possible. Not only should the numeric results be made available, but the student should be told why he received a particular grade so that the situation becomes a learning experience, thus allowing him to learn from his mistakes, thereby reducing their frequency.

**INSTRUCTIONS:**

This package includes three computer programs:

STUDENT GRADE FILE MANAGEMENT SYSTEM PROGRAM (SGFMS)  
STUDENT STATUS REPORT PROGRAM (SSRP) and  
CRITERIA OCCURRENCE REPORT PROGRAM (CORP)

SETTING UP SGFMS

Two files must be opened: FILEA and FILEB. The size of these files should be calculated as follows:

Size of FILEA - max. # of students to be registered on the system + 1.

Size of FILEB + max. # of criteria to be stored onto the system. (99 Max.)

The files are created using the create command, e.g.,

CRE-FILEA, 100 (Creates FILEA to 100 blocks) (99 Students)  
CRE-FILEB, 20 (Creates FILEB to 20 blocks)

Procedure

1. Create two files: FILEA and FILEB of the proper size.
2. Get and run SGFMS.
3. Invoke the SYS command. Use the reset option.
4. Invoke the CLE command.
5. Invoke the REG command and register students on the system.
6. Invoke the STA command and get a list of the student names and passwords placed on the system using the NAM print.
7. Use the ALT command to correct any misspelled student names.
8. Invoke the STA command again and get a new list of names in a triple spaced format which may be cut up and distributed to the students.

Continued On Next Page.

**ACKNOWLEDGEMENTS:**

The Ohio State University  
College of Pharmacy

INSTRUCTIONS: Continued.

9. Invoke the CRI command and enter the criteria onto the system.

The system is now ready for use.

The objectives of the SGFMS are:

1. Allow an instructor to store and retrieve a student's name and grades on a teletypewriter or CRT.
2. Three grade types are to be accepted:
  - Exam, Quiz and Criteria-based grades (daily grades).
3. The daily grades must be criteria-based. The criteria on which the daily grades are based should be placed within the record.
4. The mode of grade input must be efficient, and contain appropriate checks to insure that input errors are not made.
5. The instructor should have the ability to extract reports of:
  - a. An individual student's record.
  - b. The records of the entire class.
  - c. A report which summarizes a student's work.
  - d. Any particular test or quiz for the entire class.
  - e. A list of names of students currently registered on the system.
6. The system must store a list of criteria on a direct access device on which a student's daily grades must be based.
7. The criteria files should be completely flexible in terms of status reports and input of criteria into the files, and addition of the criteria into a student's record.
8. System security provisions must be established.
9. The system must be easy to set up and maintain.

The SGFMS is designed to allow flexibility in maintaining student records and criteria records. Once the user has accessed and started the SGFMS running, he is prompted for a command. The instructor types a command which directs the system to perform certain operations. The commands presently on the system are:

ALT	(ALTER) Changes a student name or password.
CLE	(CLEAR) Clears the student record file.
CRI	(CRITERION) Initiates the criteria file maintenance commands.
DRO	(DROP) Drops a student record from the system.
END	(END) Terminates a system or subsystem.
HEL	(HELP) Prints a list of system commands and their actions.
INP	(INPUT) Allows user to input grade into student's records.
REG	(REGISTRATION) Registers students on the system.
STA	(STATUS) Prints reports on file contents.
SYS	(SYSTEM) Sets system's parameter previous to registration.
UPD	(UPDATE) Corrects an erroneous student record.

NOTICE that the commands use the first three letters of a base word.

#### Description of SGFMS Commands

ALT

The purpose of the ALTER command is to change the student name or password.

INSTRUCTIONS: Continued.

### CRI

The purpose of the CRI command is to initiate the CRITERIA MAINTENANCE control section.

(The following commands are not to be confused with the main control section commands.)

There are four CRITERIA MAINTENANCE COMMANDS:

```
CLE  (CLEAr)
END  (END)
INP  (INPut)
PRI  (PRInt)
```

CLE - The purpose of the CLE command is to clear the contents of the criterion files.

END - The END command terminates the CRITERION MAINTENANCE MODE.

INP - The purpose of the INP command is to place or update criteria in the criterion files.

PRI - The purpose of PRI is to print selected criteria stored on the system.

### CLE

The purpose of the CLE command is to clear the student record file. The user responds to the TYPE COMMAND prompt with the command "CLE".

The CLE command is protected by a password. The password of the sample RUN program is R U N . The system will then type: TYPE C TO CLEAR OR X TO ABORT.

The user may type the letter "C" to clear the student files, or he may type the letter X to prevent a clear from being performed. Once the file is cleared, the system will type: CLEAR COMPLETED  
TYPE COMMAND?

### DROP

Sometimes it is desirable to eliminate a student record from the system; this task is accomplished through use of the DROP command. Once a student record has been dropped, no more grades may be placed in the record.

### END

This command terminates the SGFMS program.

### HELP

A list of system commands and their actions may be obtained by responding to the TYPE COMMAND? prompt with HELP.

HELP may be used in response to the SELECT REPORT TYPE? of the STATUS command. If HELP is typed, the system will respond with a list of status reports and their contents.

### INP

The purpose of this command is to input student grades. The input routine has three modes: CBG (Criteria Based Grade), Q, E.

The CBG mods allows the instructor to enter criteria-based grades (CBG) on student records, e.g.,

Once the INP command is invoked the user must specify the number of the exercise for which he wishes to place CBG's. Once he specifies the exercise number all of the following inputs will be entered for that particular exercise. Until the user respecifies a new exercise number, the dialogue is as follows:

```
TYPE COMMAND? INP
SELECT INPUT MODS: CBG, Q, OR E? CBG
EXERCISE # 5
ALL INPUTS WILL BE PLACED IN EXERCISE #5
STUDENT NUMBER? 010
JOHN SMITH
GRD,GR1? 9,4
GR2? 0
STUDENT NUMBER? } See Explanation Below
```

INSTRUCTIONS: Continued.

The first system prompt "STUDENT NUMBER?" calls for the student number.

If a valid student number is entered, the system will immediately respond with the student's name and then prompt for the grade and first criterion #, e.g.,

```
STUDENT NUMBER? 10
JOHN SMITH
GRD,CR1? 9,4
```

In the previous example, the user typed in "Student Number 10". The system replied with the name "JOHN SMITH". Then the system prompted for the grade and a first criteria number, separated by a comma. The "9" in the previous example is the grade and "4" is the number of a criterion which will be inserted into JOHN SMITH's record.

The system will then prompt for two more criteria numbers, e.g.,

```
CR2? 5
CR3? 10
```

The system will accept a maximum of three criteria numbers and a minimum of one. If the instructor does not wish to add the 2nd and 3rd criteria to the student record, e.g.,

```
STUDENT NUMBER? 10
JOHN SMITH
GRAD, CR1? 8,4
CR2? 0 - a zero prevents any additional criteria being placed into the record.
```

In the previous example, only one criterion, #4, was added to JOHN SMITH's record.

If the instructor should wish to specify a new exercise number, he should enter a STUDENT NUMBER of zero. This will cause the EXERCISE #? prompt to be printed. (See example below.)

To terminate the INP of CBG's a zero must be entered to the STUDENT NUMBER? and the EXERCISE #? prompt. (See below.)

```
TYPE COMMAND? INP
SELECT INPUT MODE: CBG, Q, OR E? CBG
EXERCISE #? 5
ALL INPUTS WILL BE PLACED IN EXERCISE 5.
```

```
STUDENT NUMBER? 11
JACK HAMILTON
GRD, CR1? 8,2
CR2? 3
CR3? 0
```

```
STUDENT NUMBER? 0
```

```
EXERCISE #? 6
ALL INPUTS WILL BE PLACED IN EXERCISE 6
```

```
STUDENT NUMBER? 27
TONI JAMES
GRD, CR1? 10,1
CR2? 0
```

```
STUDENT NUMBER? 0
EXERCISE #? 0
TYPE COMMAND?
```

The Q or E inputs allow the instructor to enter quiz or exam grades. Both the input modes are identical. The quizzes and exam grades should be entered into the system in the same order that the quizzes or exams are taken. That is, the grades of the third quiz should not be entered into the system before the grades of the fourth quiz.

To terminate the input of quiz or exam grade, a zero should be entered to the STUDENT NUMBER? prompt.

```
STUDENT NUMBER? 10
JOHN SMITH
QUIZ? 90
STUDENT NUMBER? 0
TYPE COMMAND?
```

In the previous example, a quiz grade of 90 was added to JOHN SMITH's record.

INSTRUCTIONS: Continued.

### UPD

The UPD command allows the instructor to correct an erroneous student record, e.g.,

```
STUDENT NUMBER? 10
JOHN SMITH
DISPLAY CBG, Q, E, OR Y? E
EXAM GRADES
G1 - 10 G2 - 0 G3 - 0 G4 - 0
UPDATE: CBG, Q, E, OR X? E
EXAM #,GRD?
? 1, 95
TYPE COMMAND?
```

The previous sequence changed JOHN SMITH's first exam grade from a 10 to a 95. If an "X" is typed for the prompt:

```
DISPLAY; CBG, Q, E, OR X?
```

The "X" will prevent the student's record from being displayed.

```
UPDATE; CBG, Q, E, OR X?
```

The reply of an "X" to this prompt will result in no update being made.

### REG

The REG command places the student's name into the student record file; routine also generates the student password which is used in SSRP, e.g.,

```
TYPE COMMAND? REG

REGISTRATION
TYPE END TO TERMINATE REGISTRATION
TYPE NAME 1
? JOHN SMITH
TYPE NAME 2
? BETTY WILLIS
TYPE NAME 3
? END
TYPE COMMAND?
```

The previous example set up records on the system for John Smith and Betty Willis.

### STA

The STA command permits reports to be obtained from the system. There are five types of records which may be obtained.

GRD - This report summarizes student grades. The following information is printed for each student registered:

```
Student name and # of CBG's stored.
CBG average.
# of quiz grades stored.
Quiz grade average.
# of exam grades stored.
Exam grade average.
```

DMP - This report dumps any quiz or exam onto the printer. The report includes the student name and number.

NAM - NAM reports the student #, student name and password. All students registered on the system are printed. This report may be single or triple-spaced. The triple spaced form may be cut apart and distributed to the respective students at the beginning of the quarter.

RAN - The RAN report dumps the entire contents of the student's records. All the records may be printed over a range of student numbers.

STU - The STU report displays a particular student's record.

INSTRUCTIONS: Continued.

SYS

The SYS command is used to set up the SGFMS system. It is used to inform the SGFMS system of the size of the student record and criteria files.

SGFMS FOR THE PROGRAMMER

Expanding SGFMS Files

A. Student Grade File (FILEA)

The student grade file cannot be enlarged unless the SGFMS program is programmed to do so. One way of avoiding this difficulty is to allow enough blocks of disc storage space to allow for additional records. (Each student record requires one block of space.)

B. Criteria File (FILEB)

The criteria may be expanded if it is found after the initial system setup that additional criteria are needed. Use the following procedure to expand the criteria file:

1. Open a temporary file equal to the size of the old file.
2. GET and RUN the HP utility program \$COPYFL; copy FILEB into the temporary file.
3. KIL-FILEB, reopen it to the appropriate size.
4. Run \$COPYFL copy the temporary file into the new FILEB.
5. GET and RUN the SGFMS.
6. Invoke the SYS command and RESET the space parameters.
7. Invoke the CRI command and INPUT the additional criteria.

System Grade Capacity

VERSION B of SGFMS can store for each student a maximum of:

- 40 criteria-based grades
- 120 criteria numbers, (3 per criteria based grade)
- 10 quiz grades
- 10 exam grades

System Record Capacity

STUDENT RECORD FILE -- within disc space limitations.  
CRITERIA FILE -- 1 to 99 records.

Criteria Number Storage

The INP command allows that user to store up to three criteria numbers to describe each daily grade. These criteria are stored in array C (see SGFMS file structure). To conserve space all three criteria numbers are placed in one numeric word of storage. For example, if the criteria describing a particular grade were 5, 7, and 16 these criteria would be stored as: 160705.

A special program must be written to decode this number so the criteria number can be extracted. (The criteria number is a disc address used to retrieve the criteria from the criteria file.)

SGFMS program statements 7840-8060 will decode the criteria code; read and print the appropriate criteria from the criteria file.

SGFMS File Structure

It is often desirable to read the SGFMS files for the purpose of extracting information not contained in the SGFMS or CORP reports. For example, an instructor may find it desirable to run a statistical analysis on data stored in SGFMS files.

INSTRUCTIONS: Continued.

SGFMS File Structure

BLOCK 1

N4	L8	C9	Y\$(25)	
----	----	----	---------	--

WHERE:

N4 = number of registered students  
 L8 = size of student grade file (FILEA) in blocks  
 C9 = size of criteria file (FILEB) in blocks  
 Y\$ = course name

BLOCK 2 AND ALL SUBSEQUENT BLOCKS

D\$(25)	Z\$(4)	B(40)	C(40)	Q(10)	P(10)	
---------	--------	-------	-------	-------	-------	--

WHERE:

D\$ = student name  
 Z\$ = password  
 B = CBG  
 C = criteria numbers  
 Q = quiz grades  
 P = exam grades

INSTRUCTIONS: Continued.

STUDENT STATUS REPORT PROGRAM (SSRP)

The purpose of SSRP is to provide the student with the ability to recall his own grade record, that has been set up the STUDENT GRADE FILE MANAGEMENT SYSTEM (SGFMS).

When the students are registered using SGFMS, a student number and four-letter password is inserted into the student's record. This number and four-letter password is required for a student to print his grade record using SSRP. (To obtain a list of registered students and passwords, use the NAM print of the STA command.)

Use of SSRP

The user types the underlined commands:

```
GET-SSRP
RUN
SSRP
STUDENT STATUS REPORT PROGRAM
TYPE YOUR NUMBER?1
PASSWORD? ZAKL
ANN ALBERS
SELECT PRINT: RX,PE,TS, ALL OR STOP?
```

COMMAND      RESULTING ACTION

<u>RX</u>	Prescription grades are printed (Criteria based grade).
<u>PE</u>	Practical exam grades are printed (Quiz grades).
<u>TS</u>	Test grades are printed (exam grades).
<u>ALL</u>	All of the above.
<u>STOP</u>	Terminates the SSRP

Once the print command is typed, the system will respond with the appropriate information.

In addition, the SSRP computes the criteria based grade and quiz average for the entire class and for the individual student.

Each individual exam is averaged for the individual student as well as for the class. This capability gives the student a means of judging his standing in relation to the rest of the class.

If the student selects the RX, PE, or TS print, the SSRP program must be terminated manually. This is done by typing the word "STOP"

CRITERIA OCCURRENCE REPORT PROGRAM (CORP)

The purpose of CORP is to provide an analysis of criteria occurrence. CORP analyzes the daily grade criteria that are stored by the STUDENT GRADE FILE MANAGEMENT SYSTEM (SGFMS).

CORP enables the instructor to obtain three types of reports:

1. A report which counts the criteria of each student for a specified exercise.  
(E.g., criteria counts for exercise #5.)
2. A report which summarizes the criteria occurrence within a particular student's record.  
(E.g., criteria counts for John Doe.)
3. A report which counts the criteria in all student's records.  
(E.g., total criteria count for all exercises.)

The benefits of such an analysis are of extreme importance to the instructor. By counting the criteria which have occurred for a particular exercise (Report 1), the instructor can immediately determine which criteria are being missed most frequently. This should allow adjustments to be made in the instructional emphasis of the course.

By counting criteria occurrence within a particular student's record (Report 2), the instructor can determine if a student is not grasping concepts which have resulted in excessive occurrence of a particular criteria within the student's record.

INSTRUCTIONS: Continued.

Use of Corp

The user types the underlined commands:

GET-CORP

RUN

PASSWORD? Gc Oc

CRITERIA OCCURRENCE REPORT PROGRAM

PRINT REPORT BY PUPIL, BY EXERCISE, OR SUMMARY?

If the criteria count is obtained according to EXERCISE, there are 2 options available:

1. The print may be obtained for one individual exercise.
2. The print may be started on a particular exercise and stopped at a particular exercise; that is, a range of individual exercises may be printed.

CONTRIBUTED PROGRAM **BASIC**

TITLE: SRP: STUDENT RESPONSE PRINT SRP  
36888-18008

DESCRIPTION: The Student Response Print (SRP) is a program designed to read response files which are written by the Hewlett-Packard IDF program IDSF (Instructional Dialogue Student Facility), and print the responses in two formats:

- A. Standard Response Print  
The standard response print lists the responses for each student by section number.
- B. Response Frequency Count  
The Response Frequency Count print eliminates all duplicate responses and prints only unique responses and their associated frequency of occurrence by section number.

INSTRUCTIONS: The SRP uses one disc file (SKR2) as a scratch file. The SKR2 file is routinely created as part of the IDF system. If the SKR2 file has not been created it should be opened in the following manner:

CRE-SKR2,32

SRP contains a variety of features which are designed to increase the program's flexibility and usefulness.

- A. "Batch" Processing Feature  
The user often must dump a number of response files. This can be a time consuming task if the number of sections are small, and if there are many files to dump, since the user must "baby sit" the computer terminal, dumping one file, then the next, etc. The SRP allows the user to enter from one to twelve file-names to be dumped, the SRP will dump the files in a continuous fashion.
- B. Remove Blanks Option  
IDSF answer checking is often performed after removal of embedded blanks from student answers, but the student answers are written into the response file without blanks removed. With the REMOVE BLANKS option, the user can print the responses without blanks, thus making the responses appear as they appear to the answer checking section of IDSF. If blanks are removed, the user can readily determine if this answer checking is working properly by comparing the print to the appropriate section.
- C. Frequency Counts of //CALC, //HINT, and //STOP  
Since it is often useful to determine the student use of CAI facilities, such as the calculator, the SRP does frequency counts of the 3 major IDF aids: //CALC, //HINT, and //STOP.

INSTRUCTIONS continued.

D. Selective Section Dumps

If only one response filename is entered into the SRP, the program allows the user to selectively dump responses of any given section or sections.

E. Response File Protection

The user must enter the code R U N before the program will permit a user to dump a response file/s.

DONE

CONTRIBUTED PROGRAM **BASIC**

TESTGD  
36888-18041

**TITLE:**

MULTIPLE-CHOICE TEST GRADER

**DESCRIPTION:**

This program is used to score multiple choice tests of up to 40 questions in length. Output includes an alphabetical list of the students with a listing of the answers they had incorrect. Correct responses are listed as "." except every fifth is a ",", double marked answers are listed as ":" and blanks are " ". On the next line is the number of correct answers, the number of incorrect, and the percentage of the maximum. An item analysis of answers completes the report.

**INSTRUCTIONS:**

Both the students' responses and the answer key must be marked on 40 column mark sense cards. A file TEST must be opened to at least  $(N+4)/3$  records in length where N is the number of students, 140 maximum. The card deck must be made up of alternating "NAME=name-of-student" cards and the corresponding response card. The first card must be "NAME=KEY", followed by the correct answer card, and then the pairs of student cards, not necessarily in alphabetical order. The deck must end with an "END" card.

Upon running TESTGD the computer will ask for the number of questions and then will start reading the cards. If the card reader is not ready at the start, push the READY button. If the card reader drops the ready status, you may have to start over.

If for some reason the program is interrupted after the END card has been read, there are two re-start options: After giving the number of questions, "SORT" will restart the program at the sorting phase and "PRINT" will re-start the program at the printing phase.

Equipment required is: TSB/2000E system, hard-copy terminal, and HP 7260A Optical Mark Reader with the image option.

**SPECIAL  
CONSIDERATIONS:**

Leaving the first column blank will mix up the answers to questions 36-40. Marking rows 12 and 2 or 4 and 8 in the same column will falsify any questions after that one.

**ACKNOWLEDGEMENTS:**
