Mass Storage Make Directory (Remote Command Only)

| | |
|----------------------|---|
| Key path | SCPI Only |
| Remote Command | :MMEMory:MDIRectory <directory_name> |
| Notes | The string must be a valid logical path. Creates a new directory. The <directory_name> parameter specifies the name to be created. This command will generate an “access denied” error if the new directory would be in a restricted folder (e.g., C:\Windows) and the current user does not have Power User or Administrator privileges. |
| Initial S/W Revision | Prior to A.02.00 |

Mass Storage Move (Remote Command Only)

| | |
|----------------|---|
| Key path | SCPI Only |
| Remote Command | :MMEMory:MOVE <string>,<string>[,<string>,<string>] |
| Notes | The string must be a valid logical path. Moves an existing file to a new file or an existing directory to a new directory. Two forms of parameters are allowed. The first form has two parameters. In this form, the first parameter specifies the source, and the second parameter specifies the destination. The second form has four parameters. In this form, the first and third parameters specify the source. |

The second and fourth parameters specify the directories. The first pair of parameters specifies the source. The second pair specifies the destination. An error is generated if the source doesn't exist or the destination file already exists.

This command will generate an "access denied" error if the destination is a restricted folder (e.g., C:\Windows) and the current user does not have Power User or Administrator privileges.

| | |
|----------------------|------------------|
| Initial S/W Revision | Prior to A.02.00 |
|----------------------|------------------|

Mass Storage Remove Directory (Remote Command Only)

| | |
|----------|------------------|
| Key path | SCPI Only |
|----------|------------------|

| | |
|-----------------------|--------------------------------------|
| Remote Command | :MMEMory:RDIRectory <directory_name> |
|-----------------------|--------------------------------------|

| | |
|-------|--|
| Notes | <p>The string must be a valid logical path.</p> <p>Removes a directory. The <directory_name> parameter specifies the directory name to be removed. All files and directories under the specified directory shall also be removed.</p> <p>This command will generate an "access denied" error if the folder is a restricted folder (e.g., C:\Windows) or is in a restricted folder and the current user does not have Power User or Administrator privileges.</p> |
|-------|--|

| | |
|----------------------|------------------|
| Initial S/W Revision | Prior to A.02.00 |
|----------------------|------------------|

Sequences

These keys allow you to save a Tab separated or CSV file of the setup parameters required to build a Sequence.

In order to save you must select the Save As button and choose a destination folder.

| | |
|----------|------------------------|
| Key Path | Save, Sequences |
|----------|------------------------|

| | |
|------|-----|
| Mode | All |
|------|-----|

| | |
|-----------------------|---|
| Remote Command | :MMEM:STOR:SEquences: SLISt ALISt SAALISt SSTep "MySequence.txt" |
|-----------------------|---|

| | |
|----------------|---------------------------------------|
| Example | :MMEM:STOR:SEQ:SLISt "MySequence.txt" |
|----------------|---------------------------------------|

| | |
|-------|--|
| Notes | <p>Available file types are:</p> <ul style="list-style-type: none"> -CSV (Comma delimited) (*.csv) -Text (Tab delimited) (*.txt) |
|-------|--|

| | |
|----------------------|---------|
| Initial S/W Revision | A.05.00 |
|----------------------|---------|

Source Sequence

The list of parameters, that configure steps, that makes up a sequence for the Source.

The Source sequence is a sequence of flexible configurable steps that can be set anywhere in the instruments frequency range.

| | |
|-----------------------------|--------------------------------------|
| Key Path | Save, Sequences |
| Example | :MMEM:STOR:SEQ:SLIS "MySequence.txt" |
| Dependencies | Only available in XOBT |
| Initial S/W Revision | A.05.00 |

Save As . . .

This menu lets you select the location where you can save the Sequence. This menu is a standard Windows® dialog with Save As menu keys. The "File Name" field in the Save As dialog is initially loaded with an automatically generated filename specific to the appropriate Save Type. The automatically generated filename is guaranteed not to conflict with any filename currently in the directory. You may replace or modify this filename using the File Name softkey. See the Quick Save key documentation for more on the automatic file naming algorithm.

The default path for all Sequence Files is:

My Documents\Sequences

| | |
|-----------------------------|--|
| Key Path | Save, Sequences |
| Mode | All |
| Notes | Brings up Save As dialog for saving a Sequence Save Type |
| Initial S/W Revision | A.05.00 |

Data (Export)

Exporting a data file stores data from the current measurement to mass storage files. The Export Menu only contains data types that are supported by the current measurement.

Since the commonly exported data files are in .csv format, the data can be edited by you prior to importing. This allows you to export a data file, manipulate the data in Excel (the most common PC Application for manipulating .csv files) and then import it.

Selecting an Export Data menu key will not actually cause the exporting to occur, since the analyzer still needs to know where you wish to save the data. Pressing the Save As key in this menu brings up the Save As dialog and Save As menu that allows you to specify the destination file and directory. Once a filename has been selected or entered in the Open menu, the export will occur as soon as the Save key is pressed.

| | |
|-----------------|--|
| Key Path | Save |
| Mode | All |
| Notes | The menu is built from whatever data types are available for the mode. So the key locations in the sub menu will vary. No SCPI command directly controls the Data Type that this key controls. The Data Type is included in |

| | |
|----------------------|---|
| | the MMEM:STOR commands. |
| Dependencies | If a file type is not used by a certain measurement, that type is grayed out for that measurement. The key for a file type will not show at all if there are no measurements in the Mode that support it. |
| Preset | Is not affected by a Preset or shutdown, but is reset during Restore Mode Defaults |
| Readback | The data type that is currently selected |
| Initial S/W Revision | Prior to A.02.00 |

Meas Results

| | |
|--------------------------|---|
| parameter_table_23.52557 | 52.93253 |
| Key Path | Save, Data |
| Mode | WLAN |
| Example | MMEM:STOR:RES "MyResultsFile.csv" This stores the measurement results data in the file MyResultsFile.xml in the default directory. |
| Initial S/W Revision | A.11.00 |
| Help Map ID | 45561 |

Capture Buffer

Capture buffer functionality is only available when measurement is Mod Accuracy and radio standard is not 802.11ac 80+80MHz. The captured data is raw data which is not processed.

| | |
|--------------------------|--|
| parameter_table_23.52557 | 52.93253 |
| Key Path | Save, Data |
| Mode | WLAN |
| Example | MMEM:STOR:CAPT "MyCaptureData.bin" This stores the capture data in the file MyCaptureData.bin in the default directory. |
| Dependencies | Capture buffer data is only available when measurement is Mod Accuracy and radio standard is not 802.11ac 80+80MHz. In other measurements, this key is grayed out. |
| Initial S/W Revision | A.11.00 |
| Help Map ID | 45562 |

Save As . . .

When you press "Save As", the analyzer brings up a Windows dialog and a menu entitled "**Save As.**" This menu allows you to navigate to the various fields in the Windows dialog without using a keyboard or mouse. The **Tab** and **Arrow** keys can also be used for dialog navigation.

See "[To File . . .](#)" on page 2484 in **Save, State** for a full description of this dialog and menu.

The default path for saving files is:

For all of the Trace Data Files:

My Documents\<<mode name>\data\traces

For all of the Limit Data Files:

My Documents\<<mode name>\data\limits

For all of the Measurement Results Data Files:

My Documents\<<mode name>\data\<<measurement name>\results

For all of the Capture Buffer Data Files:

My Documents\<<mode name>\data\captureBuffer

| Key Path | Save, Data |
|----------------------|--|
| Mode | All |
| Notes | The key location is mode-dependent and will vary. Brings up the Save As dialog for saving a <mode specific> Save Type. The save is performed immediately and does not wait until the measurement is complete. |
| Initial S/W Revision | Prior to A.02.00 |

Screen Image

Pressing Screen Image accesses a menu of functions that enable you to specify a format and location for the saved screen image. It brings up a menu that allows you to specify the color scheme of the Screen Image (Themes) or navigate to the Save As dialog to perform the actual save.

Screen Image files contain an exact representation of the analyzer display. They cannot be loaded back onto the analyzer, but they can be loaded into your PC for use in many popular applications.

The image to be saved is actually captured when the **Save** front panel key is pressed, and kept in temporary storage to be used if you ask for a Screen Image save. When the Screen Image key is pressed, a "thumbnail" of the captured image is displayed, as shown below:

When you continue on into the **Save As** menu and complete the Screen Image save, the image depicted in the thumbnail is the one that gets saved, showing the menus that were on the screen before going into the **Save** menus. The save is performed immediately and does not wait until the measurement is complete.

After you have completed the save, the **Quick Save** front-panel key lets you quickly repeat the last save performed, using an auto-named file, with the current screen data.

NOTE

For versions previous to A.01.55, if you initiate a screen image save by navigating through the Save menus, the image that is saved will contain the Save menu softkeys, not the menus and the active function that were on the screen when you first pressed the Save front panel key.

| | |
|----------------------|--|
| Key Path | Save |
| Mode | All |
| Remote Command | :MMEMory:STORe:SCReen <filename> |
| Example | :MMEM:STOR:SCR "myScreen.png" This stores the current screen image in the file MyScreenFile.png in the default directory. |
| Initial S/W Revision | Prior to A.02.00 |

Themes

Accesses a menu of functions that enable you to choose the theme to be used when saving the screen image.

The **Themes** option is the same as the **Themes** option under the **Display** and **Page Setup** dialogs. It allows you to choose between themes to be used when saving the screen image.

| | |
|--------------------------------------|---|
| Key Path | Save, Screen Image |
| Remote Command | :MMEMory:STORe:SCReem:THEMe TDColor TDMonochrome FCOLor FMONochrome :MMEMory:STORe:SCReem:THEMe? |
| Example | :MMEM:STOR:SCR:THEM TDM |
| Preset | 3D Color; Is not part of Preset, but is reset by Restore Misc Defaults or Restore System Defaults All and survives subsequent running of the modes. |
| Readback | 3D Color 3D Mono Flat Color Flat Mono |
| Backwards Compatibility Notes | In ESA and PSA we offer the choice of "Reverse Bitmap" or "Reverse Metafile" when saving screen images. This is much like the "Flat Color" theme available in X-Series. Also, if you selected Reverse Bitmap AND a black & white screen image, that would be much like "Flat Monochrome". In other words, each of the X-Series themes has a similar screen image type in ESA/PSA. But they are not identical. |
| Initial S/W Revision | Prior to A.02.00 |

3D Color

Selects a standard color theme with each object filled, shaded and colored as designed.

| | |
|-----------------------------|-----------------------------------|
| Key Path | Save, Screen Image, Themes |
| Example | MMEM:STOR:SCR:THEM TDC |
| Readback | 3D Color |
| Initial S/W Revision | Prior to A.02.00 |

3D Monochrome

Selects a format that is like 3D color but shades of gray are used instead of colors.

| | |
|-----------------------------|-----------------------------------|
| Key Path | Save, Screen Image, Themes |
| Example | MMEM:STOR:SCR:THEM TDM |
| Readback | 3D Mono |
| Initial S/W Revision | Prior to A.02.00 |

Flat Color

Selects a format that is best when the screen is to be printed on an ink printer.

| | |
|-----------------|-----------------------------------|
| Key Path | Save, Screen Image, Themes |
|-----------------|-----------------------------------|

| | |
|----------------------|-------------------------|
| Example | MMEM:STOR:SCR:THEM FCOL |
| Readback | Flat Color |
| Initial S/W Revision | Prior to A.02.00 |

Flat Monochrome

Selects a format that is like Flat Color. But only black is used (no colors, not even gray), and no fill.

| | |
|----------------------|-----------------------------------|
| Key Path | Save, Screen Image, Themes |
| Example | MMEM:STOR:SCR:THEM FMON |
| Readback | Flat Mono |
| Initial S/W Revision | Prior to A.02.00 |

Save As...

When you press "Save As", the analyzer brings up a Windows dialog and a menu entitled "**Save As.**" This menu allows you to navigate to the various fields in the Windows dialog without using a keyboard or mouse. The **Tab** and **Arrow** keys can also be used for dialog navigation.

See "[To File . . .](#)" on page 2484 in **Save, State** for a full description of this dialog and menu.

The default path for Screen Images is

My Documents\`<mode name>`\screen.

where `<mode name>` is the parameter used to select the mode with the INST:SEL command (for example, SA for the Spectrum Analyzer).

| | |
|----------------------|--|
| Key Path | Save, Screen Image |
| Notes | Brings up Save As dialog for saving a Screen Image Save Type |
| Initial S/W Revision | Prior to A.02.00 |

Single (Single Measurement/Sweep)

Sets the analyzer for Single measurement operation. The single/continuous state is Meas Global, so the setting will affect all the measurements. If you are Paused, pressing **Single** does a Resume.

See "[More Information](#)" on page 1106

| | |
|-------------------------------|--|
| Key Path | Front-panel key |
| Example | :INIT:CONT OFF |
| Notes | See Cont key description. |
| Backwards Compatibility Notes | <p>For Spectrum Analysis mode in ESA and PSA, the Single hardkey and the INITiate:IMM switched from continuous measurement to single measurement and restarted sweeps and averages (displayed average count reset to 1), but did not restart Max Hold and Min Hold. In the X-Series, the Single hardkey and the INITiate:IMM command initiate a sweep/ measurement/ average sequence/hold sequence including MaxHold and MinHold.</p> <p>For Spectrum Analysis mode in ESA and PSA, the Single hardkey restarted the sweep regardless of whether or not you were in an active sweep or sweep sequence. In the X-Series, Restart does this but Single only restarts the sweep or sweep sequence if you are in the idle state.</p> <p>INIT[:IMM] in ESA & PSA Spectrum Analysis Mode does an implied ABORT. In some other PSA Modes, INIT[:IMM] is ignored if not in the idle state. . The X-Series follows the ESA/PSA SA Mode model, which may cause some Modes to have compatibility problems.</p> |
| Initial S/W Revision | Prior to A.02.00 |

More Information

See "[Restart](#)" on page 2481 for details on the INIT:IMMEDIATE (Restart) function.

If you are already in single sweep, the INIT:CONT OFF command has no effect.

If you are already in Single Sweep, then pressing the **Single** key in the middle of a sweep does not restart the sweep or sequence. Similarly, pressing the **Single** key does not restart the sweep or sequence if the sweep is not in the idle state (for example, if you are taking a very slow sweep, or the analyzer is waiting for a trigger). Instead, it results in a message. "Already in Single, press Restart to initiate a new sweep or sequence". Even though pressing the **Single** key in the middle of a sweep does not restart the sweep, sending INIT:IMMEDIATE does reset it.

To take one more sweep without resetting the average count, increment the average count by 1, by pressing the step up key while **Average/Hold Number** is the active function, or sending the remote command CALC:AVER:TCON UP.

Source

Opens a menu of keys that access various source configuration menus and settings. In the test set, pressing this key also causes the central view area to change and display the Source Control Main view.

| Key Path | Front-panel key |
|----------|-----------------|
|----------|-----------------|

RF Output

This parameter sets the source RF power output state.

| Key Path | Source |
|-----------------------|---|
| Remote Command | :OUTPut[:EXTernal][:STATe] ON OFF 1 0 :OUTPut[:EXTernal][:STATe]? |
| Example | OUTP OFF OUTP? |
| Notes | <p>The EXTERNAL node is shown in RD text so the SCPI remains the same between internal and external source control. However, for EXT we do not wish to document this node to the customer since we are controlling the internal source rather than the external source.</p> <p>This setting is for the independent mode and has no effect on the "List Sequencer" on page 2585. If the "Sequencer" on page 2586 is set to ON, the list sequencer controls the source output and this key will be grayed-out. And this setting will be none-forceful grey out on front panel to indicate out-of-scope. Non-forceful means user still can change this setting by SCPI but cannot change on front panel. When set to OFF will make source leave list sequencer and this setting will be black out and take effect immediately.</p> <p>When the RF Output is ON, an "RF" annunciator is displayed in the system settings panel. When the RF Output is turned Off, the RF annunciator is cleared. If the "Sequencer" on page 2586 is set to ON, the "RF" annunciator will be replaced by "SEQ" in the system settings panel, indicating that the output is controlled by the list sequencer.</p> |
| Preset | Off |
| Range | On Off |
| Initial S/W Revision | A.05.00 |

Amplitude

Allows you to access the Amplitude sub-menu.

| Key Path | Source |
|----------------------|--|
| Notes | <p>The sub-menu under this button is for independent mode and has no effect on "List Sequencer" on page 2585. If the "Sequencer" on page 2586 is set to ON, the list sequencer controls the source output and this key will be grayed-out on front panel to indicate out-of-scope. When you set "Sequencer" on page 2586 to Off will make source leave list sequencer and this button will be black out.</p> |
| Initial S/W Revision | A.05.00 |

RF Power

Allows you to adjust the power level of the source using the numeric keypad, step keys, or RPG. Pressing any digit, 0 through 9, on the numeric keypad brings up the unit terminator.

Please refer to the ["RF Power Range " on page 1109](#) table below for the valid ranges.

| Key Path | Source, Amplitude |
|-----------------------|--|
| Remote Command | :SOURce:POWer[:LEVel][:IMMediate][:AMPLitude] <ampl> :SOURce:POWer[:LEVel][:IMMediate][:AMPLitude]? |
| Example | :SOUR:POW -100 dBm |
| Notes | <p>Amplitude corrections can be specified for use with the source. In the event of amplitude corrections being applied, the valid ranges for the RF power do not change dependant on the current amplitude correction setting. If the combination of RF power + amplitude correction is higher or lower than the source output range, the Source Unleveled bit is set and the "Source Unleveled" indicator will appear on status panel to indicate that the source cannot maintain the output power that has been requested.</p> <p>When signal generator is unable to maintain the requested output level, the "Source Unleveled" indicator will appear on status panel. When the source output setting is restored to the normal range, the "Source Unleveled" is removed from status panel.</p> <p>Internal source has list sequence mode, which comprises of several steps which contain separate output power, frequency and waveform etc. When the source list sequence playing is complete, the last step keeps playing, and user can use this command to change the list sequence last step's output power.</p> <p>The multiport adapter RFIO TX ports and GPS ports cannot ensure power accuracy when power setting is lower than -130dBm, this power setting value is defined by the sum of RF Power setting and related amplitude correction value. But user settable value could be lower than this limit. When application detected there exists power setting lower than -130dBm on MPA RFIO TX ports, then popup warning message . When application detected there exists power setting lower than -130dBm on MPA GPS ports, then popup warning message . This is only warning message, and check is performed when RF is ON.</p> |
| Notes | The Min and Max value here defined UI settable amplitude range. This range is larger than actual amplitude range with level accuracy defined in spec. |
| Dependencies | The RF power is dependent on the RF output port and frequency, such that the current frequency and selected output port determine the valid range of power values. |
| Couplings | If "Real-Time AWGN" on page 2546 AWGN State is On and "ARB" on page 2535 ARB State is On, this setting will be adjusted to the value to maintain the AWGN power relationship defined by "Power Control Mode" on page 2547 Power Control Mode and other noise settings |
| Preset | -100 dBm |
| Min | The range of values depends on the current frequency and selected RF output port. Please refer to the "RF Power Range " on page 1109 table below for the valid ranges. |
| Max | The range of values depends on the current frequency and selected RF output port. Please refer to the "RF Power Range " on page 1109 table below for the valid ranges. |

| | |
|--------------------------|---|
| Initial S/W Revision | A.05.00 |
| Modified at S/W Revision | A.16.00 (Add couplings with AWGN state) |

RF Power Range

| RF Output Port | Frequency Range | Min Output Power | Max Output Power |
|-------------------|--------------------|------------------|------------------|
| High Power RF Out | 10 MHz ≤ f ≤ 6 GHz | -150 dBm | 20 dBm |
| RFIO 1 & RFIO 2 | 10 MHz ≤ f ≤ 6 GHz | -150 dBm | 0 dBm |
| GPS (Note2) | 10 MHz ≤ f ≤ 6 GHz | -150 dBm | 0 dBm |

Note: This is the UI power range, it's larger than actual spec.

Note2: GPS port is on the multiport adapter, or E6607C which has embedded MPA.

Set Reference Power

This key allows you to set the power reference. Pressing this key turns the power reference state to ON, sets the reference power value to the current RF output power, maintains this power at the RF output, and sets the displayed power to 0.00 dB. All subsequent RF power values entered under Source>Amplitude>RF Power are interpreted as being relative to this reference power.

When you use a power reference, the signal generator outputs an RF power that is set relative to the reference power by the value entered under Source>Amplitude>RF Power as follows:

Output power = reference power – entered power

Where:

reference power equals the original RF Power entered under Source>Amplitude>RF Power and set as the reference power

entered power equals a new value entered under Source>Amplitude>Amptd Offset

In addition, the displayed power value is the same as a new value entered under Source>Amplitude>RF Power.

NOTE

If Power Ref is set to ON with a reference value set, entering a value under Source>Amplitude>RF Power and pressing Set Reference Power will add that value to the existing Power Ref value.

If you wish to change the reference power value to a new value entered under Source>Amplitude>RF Power, first you must set Power Ref to OFF and then press Set Reference Power.

| Key Path | Source, Amplitude |
|----------------------|---|
| Dependencies | This key is unavailable, and is grayed out when the " List Sequencer " on page 2585 is turned ON. |
| Initial S/W Revision | A.05.00 |

Power Ref

This key allows you to toggle the state of the power reference.

When you use a power reference, the signal generator outputs an RF power that is set relative to the reference power by the value entered under Source>Amplitude>RF Power as follows:

Output power = reference power + entered power

Where:

reference power equals the original RF Power entered under Source>Amplitude>RF Power and set as the reference power

entered power equals a new value entered under Source>Amplitude>Amptd Offset

For more information on Reference Frequency refer to ["Set Reference Power " on page 2501](#)

| Key Path | Source, Amplitude |
|-----------------------|--|
| Remote Command | :SOURce:POWer:REFerence <ampl> :SOURce:POWer:REFerence? :SOURce:POWer:REFerence:STATe OFF ON 0 1 :SOURce:POWer:REFerence:STATe? |
| Example | :SOUR:POW:REF 0.00 dBm :SOUR:POW:REF:STATe ON |
| Dependencies | This setting is unavailable and is grayed out when the "List Sequencer" on page 2585 is turned ON. |
| Couplings | This value is coupled to the "Set Reference Power " on page 2501 key such that pressing the Set Reference Power key updates the reference power with the current output power. |
| Preset | 0.00 dBm OFF |
| Min | -125.00 dBm |
| Max | 10.00 dBm |
| Initial S/W Revision | A.05.00 |

Amptd Offset

Allows you to specify the RF output power offset value.

When the amplitude offset is set to zero (0) and you set a new offset value (positive or negative), the displayed amplitude value will change as follows and the RF output power will not change:

Displayed value = output power + offset value

Where:

output power equals the original RF Power entered under Source>Amplitude>RF Power

offset value equals the value entered under Source>Amplitude>Amptd Offset

When the amplitude offset is set to a value other than zero (0) and you enter a new RF power value under Source>Amplitude>RF Power, the displayed power will be the same as the value entered and the RF output power will be equal to the value entered minus the offset value as follows:

Output power = entered power – offset power

Displayed Power = output power + offset power

Displayed power = entered power

Where:

entered power equals the amplitude entered under Source>Amplitude>RF Power

offset power equals the value previously entered and set under Source>Amplitude>Amptd Offset

| Key Path | Source, Amplitude |
|-----------------------|--|
| Remote Command | :SOURce:POWer[:LEVel][:IMMediate]:OFFSet <rel_ampl> :SOURce:POWer[:LEVel][:IMMediate]:OFFSet? |
| Example | :SOUR:POW:OFFS 0.00 dB |
| Dependencies | This setting is unavailable, and is grayed out when the List Sequencer is turned ON. |
| Preset | 0.00 dB |
| Min | -200.00 dB |
| Max | 200.00 dB |
| Initial S/W Revision | A.05.00 |

Modulation

Allows you to toggle the state of the modulation.

| Key Path | Source |
|-----------------------|--|
| Remote Command | :OUTPut:MODulation[:STATe] ON OFF 1 0 :OUTPut:MODulation[:STATe]? |
| Example | :OUTP:MOD OFF |
| Notes | This setting is for independent mode and has no effect on " List Sequencer " on page 2585. If the " Sequencer " on page 2586 is set to ON, the list sequencer controls the source output and this key will be grayed-out. And this setting will be none-forceful grey out on front panel to indicate out-of-scope. Non-forceful means user still can change this setting by SCPI but cannot change manually on front panel. When set to Off will make source leave list sequencer and this setting will be black out and take effect immediately When the Modulation is ON, the "MOD" annunciator is displayed in the system settings panel. When the Modulation is turned Off, the "MOD" annunciator is cleared. If the " Sequencer " on page 2586 is set to ON, the "MOD" annunciator will be replaced by "SEQ" in the system settings panel indicating that the output is controlled by list sequencer. |
| Preset | Off |
| Range | On Off |
| Initial S/W Revision | A.05.00 |

Frequency

Allows you to access the Frequency sub-menu.

| Key Path | Source |
|----------------------|---|
| Notes | The sub-menu under this button is for independent mode and has no effect on "List Sequencer" on page 2585 . If the "Sequencer" on page 2586 is set to ON, the list sequencer controls the source output and this key will be grayed-out. And this button will be grey out on front panel to indicate out-of-scope. When set to Off will make source leave list sequencer and this button will be black out. |
| Initial S/W Revision | A.05.00 |

Frequency

Allows you to set the RF Output Frequency. You can adjust the frequency of the source using the numeric keypad, step keys, or RPG. Pressing any digit, 0 through 9, on the numeric keypad brings up the unit terminator.

| Key Path | Source, Frequency |
|-----------------------|---|
| Remote Command | :SOURce:FREQuency[:CW] <freq> :SOURce:FREQuency[:CW]? |
| Example | :SOUR:FREQ 1.00 GHz |
| Notes | Internal source has list sequence mode, which comprises of several steps which contain separate output power, frequency and waveform etc. When the source list sequence playing is complete, the last step keeps playing, and user can use this command to change the list sequence last step's output frequency. |
| Couplings | The frequency value is coupled to the current channel band and number, such that updates to the band and number will update the frequency value to the corresponding absolute frequency. |
| Preset | 1.00 GHz |
| Min | 10.00 MHz |
| Max | Hardware Dependant: Option 503 = 3.6 GHz Option 504 = 3.8 GHz Option 506 = 6.00 GHz |
| Initial S/W Revision | A.05.00 |

Channel

The frequency of the source can be specified by a channel number of a given frequency band. This key allows you to specify the current channel number. For the appropriate range of channel numbers for a given frequency band, refer to the following tables: ["GSM/EDGE Channel Number Ranges" on page 1113](#),

"W-CDMA Channel Number Ranges" on page 1114, "CDMA 2000 / 1xEVDO Channel Number Ranges" on page 1115, and "LTE FDD Channel Number Ranges" on page 1117.

| Key Path | Source, Frequency |
|-----------------------|---|
| Remote Command | :SOURce:FREQuency:CHANnels:NUMBer <int> :SOURce:FREQuency:CHANnels:NUMBer? |
| Example | :SOUR:FREQ:CHAN:NUMB 1 |
| Notes | This key is grayed out when the "Radio Standard" on page 2513 is set to NONE. This key is grayed out on E6630A. |
| Dependencies | This key is grayed out when the "Radio Standard" on page 2513 is set to NONE. This key is grayed out on E6630A. |
| Couplings | The channel number is coupled to the frequency value when the "Radio Standard" on page 2513 is not set to NONE. When the frequency value is changed, the channel number will increase or decrease to match the new frequency. If the frequency is not at an exact match for a channel number, the nearest channel number is displayed along with a greater than or less than sign to indicate the frequency is above or below the channel number. |
| Preset | 1 |
| Min | Please refer to the tables below for the valid ranges. |
| Max | Please refer to the tables below for the valid ranges. |
| Initial S/W Revision | A.05.00 |

GSM/EDGE Channel Number Ranges

| Band | Link (Device) | Range | Frequency (MHz) |
|----------|---------------|------------------------|---------------------------|
| P-GSM | Uplink (MS) | $1 \leq n \leq 124$ | $890.0 + 0.2*n$ |
| | Downlink (BS) | $1 \leq n \leq 124$ | $935.0 + 0.2*n$ |
| E-GSM | Uplink (MS) | $0 \leq n \leq 124$ | $890.0 + 0.2*n$ |
| | | $975 \leq n \leq 1023$ | $890.0 + 0.2*(n-1024)$ |
| | Downlink (BS) | $0 \leq n \leq 124$ | $935.0 + 0.2*n$ |
| | | $975 \leq n \leq 1023$ | $935.0 + 0.2*(n-1024)$ |
| DCS 1800 | Uplink (MS) | $512 \leq n \leq 885$ | $1710.200 + 0.20*(n-512)$ |
| | Downlink (BS) | $512 \leq n \leq 885$ | $1805.200 + 0.20*(n-512)$ |
| PCS 1900 | Uplink (MS) | $512 \leq n \leq 810$ | $1850.200 + 0.2*(n-512)$ |
| | Downlink (BS) | $512 \leq n \leq 810$ | $1930.200 + 0.2*(n-512)$ |
| R-GSM | Uplink (MS) | $0 \leq n \leq 124$ | $890.0 + 0.2*n$ |
| | | $955 \leq n \leq 1023$ | $890.0 + 0.2*(n-1024)$ |
| | Downlink (BS) | $0 \leq n \leq 124$ | $935.0 + 0.2*n$ |
| | | $955 \leq n \leq 1023$ | $935.0 + 0.2*(n-1024)$ |
| GSM 450 | Uplink (MS) | $256 \leq n \leq 293$ | $450.6 + 0.2*(n-259)$ |
| | Downlink (BS) | $256 \leq n \leq 293$ | $460.6 + 0.2*(n-259)$ |

| Band | Link (Device) | Range | Frequency (MHz) |
|----------|---------------|-----------------------|--------------------------|
| GSM 480 | Uplink (MS) | $306 \leq n \leq 340$ | $479.000 + 0.20*(n-306)$ |
| | Downlink (BS) | $306 \leq n \leq 340$ | $489.000 + 0.20*(n-306)$ |
| GSM 850 | Uplink (MS) | $128 \leq n \leq 251$ | $824.200 + 0.20*(n-128)$ |
| | Downlink (BS) | $128 \leq n \leq 251$ | $869.200 + 0.20*(n-128)$ |
| GSM 700 | Uplink (MS) | $438 \leq n \leq 516$ | $777.200 + 0.20*(n-438)$ |
| | Downlink (BS) | $438 \leq n \leq 516$ | $747.200 + 0.20*(n-438)$ |
| T-GSM810 | Uplink (MS) | $350 \leq n \leq 425$ | $806.0 + 0.20*(n-350)$ |
| | Downlink (BS) | $350 \leq n \leq 425$ | $851.0 + 0.20*(n-350)$ |

W-CDMA Channel Number Ranges

| Band | Link (Device) | Range | Frequency (MHz) |
|-----------|---------------|--|--|
| Band I | Downlink | $10562 \leq n \leq 10838$ | $n \div 5$ |
| | Uplink | $9612 \leq n \leq 9888$ | $n \div 5$ |
| Band II | Downlink | $412 \leq n \leq 687$ | $n \div 5 + 1850.1$ |
| | | $9662 \leq n \leq 9938$ | $n \div 5$ |
| | Uplink | $12 \leq n \leq 287$ $350 \leq n \leq 425$ | $n \div 5 + 1850.1$ $n \div 5$ |
| Band III | Downlink | $1162 \leq n \leq 1513$ | $n \div 5 + 1575$ |
| | Uplink | $937 \leq n \leq 1288$ | $n \div 5 + 1525$ |
| Band IV | Downlink | $537 \leq n \leq 1738$ | $n \div 5 + 1805$ |
| | | $1887 \leq n \leq 2087$ | $n \div 5 + 1735.1$ |
| | Uplink | $1312 \leq n \leq 1513$ $1662 \leq n \leq 1862$ | $n \div 5 + 1450$ $n \div 5 + 1380.1$ |
| Band V | Downlink | $1007 \leq n \leq 1087$ | $n \div 5 + 670.1$ |
| | | $4357 \leq n \leq 4458$ | $n \div 5$ |
| | Uplink | $782 \leq n \leq 862$ $4132 \leq n \leq 4233$ | $n \div 5 + 670.1$ $n \div 5$ |
| Band VI | Downlink | $1037 \leq n \leq 1062$ | $n \div 5 + 670.1$ |
| | | $4387 \leq n \leq 4413$ | $n \div 5$ |
| | Uplink | $812 \leq n \leq 837$ $4162 \leq n \leq 4188$ | $n \div 5 + 670.1$ $n \div 5$ |
| Band VII | Downlink | $2237 \leq n \leq 2563$ | $n \div 5 + 2175$ |
| | | $2587 \leq n \leq 2912$ | $n \div 5 + 2105.1$ |
| | Uplink | $2012 \leq n \leq 2338$ | $n \div 5 + 2100$ |
| | | $2362 \leq n \leq 2687$ | $n \div 5 + 2030.1$ |
| Band VIII | Downlink | $2937 \leq n \leq 3088$ | $n \div 5 + 340$ |

| Band | Link (Device) | Range | Frequency (MHz) |
|-----------|---------------|-------------------------|---------------------|
| | Uplink | $2712 \leq n \leq 2863$ | $n \div 5 + 340$ |
| Band IX | Downlink | $9237 \leq n \leq 9387$ | $n \div 5$ |
| | Uplink | $8762 \leq n \leq 8912$ | $n \div 5$ |
| Band X | Downlink | $3112 \leq n \leq 3388$ | $n \div 5 + 1490$ |
| | | $3412 \leq n \leq 3687$ | $n \div 5 + 1430.1$ |
| | Uplink | $2887 \leq n \leq 3163$ | $n \div 5 + 1135$ |
| | | $3187 \leq n \leq 3462$ | $n \div 5 + 1075.1$ |
| Band XI | Downlink | $3712 \leq n \leq 3812$ | $n \div 5 + 736$ |
| | Uplink | $3487 \leq n \leq 3587$ | $n \div 5 + 733$ |
| Band XII | Downlink | $3837 \leq n \leq 3903$ | $n \div 5 - 37$ |
| | | $3927 \leq n \leq 3992$ | $n \div 5 - 54.9$ |
| | Uplink | $3612 \leq n \leq 3678$ | $n \div 5 - 22$ |
| | | $3702 \leq n \leq 3767$ | $n \div 5 - 39.9$ |
| Band XIII | Downlink | $4017 \leq n \leq 4043$ | $n \div 5 - 55$ |
| | | $4067 \leq n \leq 4092$ | $n \div 5 - 64.9$ |
| | Uplink | $3792 \leq n \leq 3818$ | $n \div 5 + 21$ |
| | | $3702 \leq n \leq 3767$ | $n \div 5 - 39.9$ |
| Band XIV | Downlink | $4117 \leq n \leq 4143$ | $n \div 5 - 63$ |
| | | $4167 \leq n \leq 4192$ | $n \div 5 - 72.9$ |
| | Uplink | $3892 \leq n \leq 3918$ | $n \div 5 + 12$ |
| | | $3942 \leq n \leq 3967$ | $n \div 5 + 2.1$ |
| Band XIX | Downlink | $712 \leq n \leq 763$ | $n \div 5 + 735$ |
| | | $787 \leq n \leq 837$ | $n \div 5 + 720.1$ |
| | Uplink | $312 \leq n \leq 363$ | $n \div 5 + 770$ |
| | | $387 \leq n \leq 437$ | $n \div 5 + 755.1$ |

CDMA 2000 / 1xEVDO Channel Number Ranges

| Band | Link (Device) | Range | Frequency (MHz) |
|-------------|-----------------------------|-------------------------|-------------------------------------|
| US Cellular | Uplink (MS, reverse link) | $1 \leq N \leq 799$ | $0.030 \times N + 825.000$ |
| | | $991 \leq N \leq 1023$ | $0.030 \times (N - 1023) + 825.000$ |
| | | $1024 \leq N \leq 1323$ | $0.030 \times (N - 1024) + 815.040$ |
| | Downlink (BS, forward link) | $1 \leq N \leq 799$ | $0.030 \times N + 870.000$ |
| | | $991 \leq N \leq 1023$ | $0.030 \times (N - 1023) + 870.000$ |
| | | $1024 \leq N \leq 1323$ | $0.030 \times (N - 1024) + 860.040$ |
| US PCS | Uplink (MS, reverse link) | $0 \leq N \leq 1199$ | $1850.000 + 0.050 \times N$ |

| Band | Link (Device) | Range | Frequency (MHz) |
|---------------------------|--------------------------------|-------------------------|--------------------------------------|

LTE FDD Channel Number Ranges

The carrier frequency in the uplink and downlink is designated by the E-UTRA Absolute Radio Frequency Channel Number (EARFCN) in the range 0 – 65535. The relation between EARFCN and the carrier

frequency in MHz for the downlink is given by the following equation, where FDL_low and NOffs-DL are given in table 5.4.4-1 and NDL is the downlink EARFCN.

$$FDL = FDL_low + 0.1(NDL - NOffs-DL)$$

The relation between EARFCN and the carrier frequency in MHz for the uplink is given by the following equation where FUL_low and NOffs-UL are given in table 5.4.4-1 and NUL is the uplink EARFCN.

$$FUL = FUL_low + 0.1(NUL - NOffs-UL)$$

| Band | Downlink | | Uplink | | | |
|------|---------------|----------|--------------|---------------|----------|---------------|
| | FDL_low (MHz) | NOffs-DL | Range of NDL | FUL_low (MHz) | NOffs-UL | Range of NUL |
| 1 | 2110 | | 0 | 0 - 599 | 1920 | 18000 - 18599 |
| 2 | 1930 | | 600 | 600 - 1199 | 1850 | 18600 - 19199 |
| 3 | 1805 | | 1200 | 1200 - 1949 | 1710 | 19200 - 19949 |
| 4 | 2110 | | 1950 | 1950 - 2399 | 1710 | 19950 - 20399 |
| 5 | 869 | | 2400 | 2400 - 2649 | 824 | 20400 - 20649 |
| 6 | 875 | | 2650 | 2650 - 2749 | 830 | 20650 - 20749 |
| 7 | 2620 | | 2750 | 2750 - 3449 | 2500 | 20750 - 20449 |
| 8 | 925 | | 3450 | 3450 - 3799 | 880 | 21450 - 21799 |
| 9 | 1844.9 | | 3800 | 3800 - 4149 | 1749.9 | 21800 - 22149 |
| 10 | 2110 | | 4150 | 4150 - 4749 | 1710 | 22150 - 22749 |

| 26 | 859 | 8690 | 8690 - 9039 | 814 | 26690 | 26690 - 27039 |
| ... | | | | | | |

Note: The channel numbers that designate carrier frequencies so close to the operating band edges that the carrier extends beyond the operating band edge shall not be used. This implies that the first 7, 15, 25, 50, 75 and 100 channel numbers at the lower operating band edge and the last 6, 14, 24, 49, 74 and 99 channel numbers at the upper operating band edge shall not be used for channel bandwidths of 1.4, 3, 5, 10, 15 and 20 MHz respectively.

LTE TDD Channel Number Ranges

The carrier frequency in the uplink and downlink is designated by the E-UTRA Absolute Radio Frequency Channel Number (EARFCN) in the range 0 – 65535. The relation between EARFCN and the carrier frequency in MHz for the downlink is given by the following equation, where FDL_low and NOffs-DL are given in table 5.4.4-1 and NDL is the downlink EARFCN.

$$FDL = FDL_low + 0.1(NDL - NOffs-DL)$$

The relation between EARFCN and the carrier frequency in MHz for the uplink is given by the following equation where FUL_low and NOffs-UL are given in table 5.4.4-1 and NUL is the uplink EARFCN.

$$FUL = FUL_low + 0.1(NUL - NOffs-UL)$$

| Band | Downlink | Uplink | | | | |

| 42 | 3400 | 41590 | 41590 - 43589 | 3400 | 41590 | 41590 - 43589 |
| 43 | 3600 | 43590 | 43590 - 45589 | 3600 | 43590 | 43590 - 45589 |

Note: The channel numbers that designate carrier frequencies so close to the operating band edges that the carrier extends beyond the operating band edge shall not be used. This implies that the first 7, 15, 25, 50, 75 and 100 channel numbers at the lower operating band edge and the last 6, 14, 24, 49, 74 and 99 channel numbers at the upper operating band edge shall not be used for channel bandwidths of 1.4, 3, 5, 10, 15 and 20 MHz respectively.

TDSCDMA Channel Number Ranges

1.28 Mcps TDD Option

No TX-RX frequency separation is required as Time Division Duplex (TDD) is employed. Each subframe consists of 7 main timeslots where all main timeslots (at least the first one) before the single switching point are allocated DL and all main timeslots (at least the last one) after the single switching point are allocated UL.

The nominal channel spacing is 1.6 MHz, but this can be adjusted to optimise performance in a particular deployment scenario.

The carrier frequency is designated by the UTRA absolute radio frequency channel number (UARFCN). The value of the UARFCN in the IMT2000 band is defined in the general case as follows:

$$N_t = 5 * F \quad 0.0 \text{ MHz} \leq F \leq 3276.6 \text{ MHz}$$

where F is the carrier frequency in MHz

Additional channels applicable to operation in the frequency band defined in sub-clause 5.2(d) are defined via the following UARFCN definition:

$$N_t = 5 * (F - 2150.1 \text{ MHz}) \quad 2572.5 \text{ MHz} \leq F \leq 2617.5 \text{ MHz}$$

UARFCN

1.28 Mcps TDD Option

The following UARFCN range shall be supported for each band:

Table: UTRA Absolute Radio Frequency Channel Number 1.28 Mcps TDD Option

| Frequency Band | Frequency Range | UARFCN Uplink and Downlink transmission |
|---|-----------------|---|
| For operation in frequency band as defined in subclause 5.2 (a) | 1900–1920 MHz | 9504 to 9596 |
| | 2010–2025 MHz | 10054 to 10121 |
| For operation in frequency band as defined in subclause 5.2 (b) | 1850–1910 MHz | 9254 to 9546 |
| | 1930–1990 MHz | 9654 to 9946 |
| For operation in frequency band as defined in subclause 5.2 (c) | 1910–1930 MHz | 9554 to 9646 |
| For operation in frequency band as defined in subclause 5.2 (d) | 2570–2620 MHz | 12854 to 13096 |
| For operation in frequency band as defined in subclause 5.2 (e) | 2300–2400 MHz | 11504 to 11996 |
| For operation in frequency band as defined in subclause 5.2 (f) | 1880–1920 MHz | 9404 to 9596 |

Radio Setup

Allows access to the sub-menus for selecting the radio standard and associated radio band. You can also set a frequency reference and offset.

This menu is greyed out when on E6630A. Radio band settings for GSM, cdma2000, and so on -- most of which are not actually supported in E6630A, which has three narrow frequency bands. So band settings are grayed out.

| Key Path | Source, Frequency |
|----------------------|-------------------|
| Initial S/W Revision | A.05.00 |

Radio Standard

Allows access to the channel band sub-menus to select the desired radio standard. When you have selected the radio standard, you can then set an active channel band. The radio standard and the active channel band allow you to use channel numbers to set frequency automatically.

| Key Path | Source, Frequency, Radio Setup |

| Example | :SOUR:FREQ:CHAN:BAND PGSM |
| Notes | Set this setting to "NONE" will grey out "Channel" on page 2504 Channel |
| Initial S/W Revision | A.05.00 |

None

Selects no radio standard for use. When you have selected the radio standard to NONE, you cannot use channel numbers to set frequency automatically. You will need to set the frequency manually.

| | |
|-----------------------------|---|
| Key Path | Source, Frequency, Radio Setup, Radio Standard |
| Initial S/W Revision | A.05.00 |

GSM/EDGE

Sets GSM/EDGE as the radio standard for use and accesses the GSM/EDGE specific channel band sub-menus.

| | |
|-----------------------------|---|
| Key Path | Source, Frequency, Radio Setup, Radio Standard |
| Initial S/W Revision | A.05.00 |

P-GSM

Selects P-GSM as the active channel band.

| | |
|-----------------------------|---|
| Key Path | Source, Frequency, Radio Setup, Radio Standard, GSM/EDGE |
| Example | :SOUR:FREQ:CHAN:BAND PGSM |
| Initial S/W Revision | A.05.00 |

E-GSM

Selects E-GSM as the active channel band.

| | |
|-----------------------------|---|
| Key Path | Source, Frequency, Radio Setup, Radio Standard, GSM/EDGE |
| Example | :SOUR:FREQ:CHAN:BAND EGSM |
| Initial S/W Revision | A.05.00 |

R-GSM

Selects R-GSM as the active channel band.

| | |
|----------------------|---|
| Key Path | Source, Frequency, Radio Setup, Radio Standard, GSM/EDGE |
| Example | :SOUR:FREQ:CHAN:BAND RGSM |
| Initial S/W Revision | A.05.00 |

DCS 1800

Selects DCS 1800 as the active channel band.

| | |
|----------------------|---|
| Key Path | Source, Frequency, Radio Setup, Radio Standard, GSM/EDGE |
| Example | :SOUR:FREQ:CHAN:BAND DCS1800 |
| Initial S/W Revision | A.05.00 |

PCS 1900

Selects PCS 1900 as the active channel band.

| | |
|----------------------|---|
| Key Path | Source, Frequency, Radio Setup, Radio Standard, GSM/EDGE |
| Example | :SOUR:FREQ:CHAN:BAND PCS1900 |
| Initial S/W Revision | A.05.00 |

GSM 450

Selects GSM 450 as the active channel band.

| | |
|----------------------|---|
| Key Path | Source, Frequency, Radio Setup, Radio Standard, GSM/EDGE |
| Example | :SOUR:FREQ:CHAN:BAND GSM450 |
| Initial S/W Revision | A.05.00 |

GSM 480

Selects GSM 480 as the active channel band.

| | |
|----------------------|---|
| Key Path | Source, Frequency, Radio Setup, Radio Standard, GSM/EDGE |
| Example | :SOUR:FREQ:CHAN:BAND GSM480 |
| Initial S/W Revision | A.05.00 |

GSM 850

Selects GSM 850 as the active channel band.

| | |
|----------------------|---|
| Key Path | Source, Frequency, Radio Setup, Radio Standard, GSM/EDGE |
| Example | :SOUR:FREQ:CHAN:BAND GSM850 |
| Initial S/W Revision | A.05.00 |

GSM 700

Selects GSM 700 as the active channel band.

| | |
|----------------------|---|
| Key Path | Source, Frequency, Radio Setup, Radio Standard, GSM/EDGE |
| Example | :SOUR:FREQ:CHAN:BAND GSM700 |
| Initial S/W Revision | A.05.00 |

T-GSM 810

Selects T-GSM 810 as the active channel band.

| | |
|----------------------|---|
| Key Path | Source, Frequency, Radio Setup, Radio Standard, GSM/EDGE |
| Example | :SOUR:FREQ:CHAN:BAND T-GSM810 |
| Initial S/W Revision | A.05.00 |

WCDMA

Sets WCDMA as the radio standard for use and accesses the W-CDMA specific channel band sub-menus.

| | |
|----------------------|---|
| Key Path | Source, Frequency, Radio Setup, Radio Standard |
| Initial S/W Revision | A.05.00 |

Band I

Selects Band I as the active channel band.

| | |
|----------------------|--|
| Key Path | Source, Frequency, Radio Setup, Radio Standard, WCDMA |
| Example | :SOUR:FREQ:CHAN:BAND BANDI |
| Initial S/W Revision | A.05.00 |

Band II

Selects Band II as the active channel band.

| | |
|----------------------|--|
| Key Path | Source, Frequency, Radio Setup, Radio Standard, WCDMA |
| Example | :SOUR:FREQ:CHAN:BAND BANDII |
| Initial S/W Revision | A.05.00 |

Band III

Selects Band III as the active channel band.

| | |
|----------------------|--|
| Key Path | Source, Frequency, Radio Setup, Radio Standard, WCDMA |
| Example | :SOUR:FREQ:CHAN:BAND BANDIII |
| Initial S/W Revision | A.05.00 |

Band IV

Selects Band IV as the active channel band.

| | |
|----------------------|--|
| Key Path | Source, Frequency, Radio Setup, Radio Standard, WCDMA |
| Example | :SOUR:FREQ:CHAN:BAND BANDIV |
| Initial S/W Revision | A.05.00 |

Band V

Selects Band V as the active channel band.

| | |
|----------------------|--|
| Key Path | Source, Frequency, Radio Setup, Radio Standard, WCDMA |
| Example | :SOUR:FREQ:CHAN:BAND BANDV |
| Initial S/W Revision | A.05.00 |

Band VI

Selects Band VI as the active channel band.

| | |
|----------------------|--|
| Key Path | Source, Frequency, Radio Setup, Radio Standard, WCDMA |
| Example | :SOUR:FREQ:CHAN:BAND BANDVI |
| Initial S/W Revision | A.05.00 |

Band VII

Selects Band VII as the active channel band.

| | |
|----------------------|--|
| Key Path | Source, Frequency, Radio Setup, Radio Standard, WCDMA |
| Example | :SOUR:FREQ:CHAN:BAND BANDVII |
| Initial S/W Revision | A.05.00 |

Band VIII

Selects Band VIII as the active channel band.

| | |
|----------------------|--|
| Key Path | Source, Frequency, Radio Setup, Radio Standard, WCDMA |
| Example | :SOUR:FREQ:CHAN:BAND BANDVIII |
| Initial S/W Revision | A.05.00 |

Band IX

Selects Band IX as the active channel band.

| | |
|----------------------|--|
| Key Path | Source, Frequency, Radio Setup, Radio Standard, WCDMA |
| Example | :SOUR:FREQ:CHAN:BAND BANDIX |
| Initial S/W Revision | A.05.00 |

Band X

Selects Band X as the active channel band.

| | |
|----------------------|--|
| Key Path | Source, Frequency, Radio Setup, Radio Standard, WCDMA |
| Example | :SOUR:FREQ:CHAN:BAND BANDX |
| Initial S/W Revision | A.05.00 |

Band XI

Selects Band XI as the active channel band.

| | |
|----------------------|--|
| Key Path | Source, Frequency, Radio Setup, Radio Standard, WCDMA |
| Example | :SOUR:FREQ:CHAN:BAND BANDXI |
| Initial S/W Revision | A.05.00 |

Band XII

Selects Band XII as the active channel band.

| | |
|----------------------|--|
| Key Path | Source, Frequency, Radio Setup, Radio Standard, WCDMA |
| Example | :SOUR:FREQ:CHAN:BAND BANDXII |
| Initial S/W Revision | A.05.00 |

Band XIII

Selects band XIII as the active channel band.

| | |
|----------------------|--|
| Key Path | Source, Frequency, Radio Setup, Radio Standard, WCDMA |
| Example | :SOUR:FREQ:CHAN:BAND BANDXIII |
| Initial S/W Revision | A.05.00 |

Band XIV

Selects Band XIV as the active channel band.

| | |
|----------------------|--|
| Key Path | Source, Frequency, Radio Setup, Radio Standard, WCDMA |
| Example | :SOUR:FREQ:CHAN:BAND BANDXIV |
| Initial S/W Revision | A.05.00 |

CDMA 2000 / 1xEVDO

Sets CDMA 2000 / 1XEVDO as the radio standard for use and accesses the CDMA 2000/1xEVDO specific channel band sub-menus.

| | |
|----------------------|---|
| Key Path | Source, Frequency, Radio Setup, Radio Standard |
| Initial S/W Revision | A.05.00 |

US CELL

Selects US Cell as the active channel band.

| | |
|----------------------|---|
| Key Path | Source, Frequency, Radio Setup, Radio Standard, CDMA 2000 / 1xEVDO |
| Example | :SOUR:FREQ:CHAN:BAND USCELL |
| Initial S/W Revision | A.05.00 |

US PCS

Selects US PCS as the active channel band.

| | |
|----------------------|---|
| Key Path | Source, Frequency, Radio Setup, Radio Standard, CDMA 2000 / 1xEVDO |
| Example | :SOUR:FREQ:CHAN:BAND PCS |
| Initial S/W Revision | A.05.00 |

Japan Cell

Selects Japan Cell as the active channel band.

| | |
|----------------------|---|
| Key Path | Source, Frequency, Radio Setup, Radio Standard, CDMA 2000 / 1xEVDO |
| Example | :SOUR:FREQ:CHAN:BAND JAPAN |
| Initial S/W Revision | A.05.00 |

Korean PCS

Selects Korean PCS as the active channel band.

| | |
|----------------------|---|
| Key Path | Source, Frequency, Radio Setup, Radio Standard, CDMA 2000 / 1xEVDO |
| Example | :SOUR:FREQ:CHAN:BAND KOREAN |
| Initial S/W Revision | A.05.00 |

NMT 450

Selects NMT 450 as the active channel band.

| | |
|----------------------|---|
| Key Path | Source, Frequency, Radio Setup, Radio Standard, CDMA 2000 / 1xEVDO |
| Example | :SOUR:FREQ:CHAN:BAND NMT |
| Initial S/W Revision | A.05.00 |

IMT 2000

Selects IMT 2000 as the active channel band.

| | |
|----------------------|---|
| Key Path | Source, Frequency, Radio Setup, Radio Standard, CDMA 2000 / 1xEVDO |
| Example | :SOUR:FREQ:CHAN:BAND IMT2K |
| Initial S/W Revision | A.05.00 |

Upper 700

Selects Upper 700 as the active channel band.

| | |
|----------------------|---|
| Key Path | Source, Frequency, Radio Setup, Radio Standard, CDMA 2000 / 1xEVDO |
| Example | :SOUR:FREQ:CHAN:BAND UPPER |
| Initial S/W Revision | A.05.00 |

Secondary 800

Selects Secondary 800 as the active channel band.

| | |
|----------------------|---|
| Key Path | Source, Frequency, Radio Setup, Radio Standard, CDMA 2000 / 1xEVDO |
| Example | :SOUR:FREQ:CHAN:BAND SECOND |
| Initial S/W Revision | A.05.00 |

400 Euro PAMR

Selects 400 Euro PAMR as the active channel band.

| | |
|----------------------|---|
| Key Path | Source, Frequency, Radio Setup, Radio Standard, CDMA 2000 / 1xEVDO |
| Example | :SOUR:FREQ:CHAN:BAND PAMR400 |
| Initial S/W Revision | A.05.00 |

800 PAMR

Selects 800 PAMR as the active channel band.

| | |
|----------------------|---|
| Key Path | Source, Frequency, Radio Setup, Radio Standard, CDMA 2000 / 1xEVDO |
| Example | :SOUR:FREQ:CHAN:BAND PAMR800 |
| Initial S/W Revision | A.05.00 |

2.5GHz IMT EXT

Selects 2.5 GHz IMT EXT as the active channel band.

| | |
|----------------------|---|
| Key Path | Source, Frequency, Radio Setup, Radio Standard, CDMA 2000 / 1xEVDO |
| Example | :SOUR:FREQ:CHAN:BAND IMTEXT |
| Initial S/W Revision | A.05.00 |

US PCS 1.9GHz

Selects US PCS 1.9 GHz as the active channel band.

| | |
|----------------------|---|
| Key Path | Source, Frequency, Radio Setup, Radio Standard, CDMA 2000 / 1xEVDO |
| Example | :SOUR:FREQ:CHAN:BAND PCS1DOT9G |
| Initial S/W Revision | A.05.00 |

AWS

Selects AWS as the active channel band.

| | |
|----------------------|---|
| Key Path | Source, Frequency, Radio Setup, Radio Standard, CDMA 2000 / 1xEVDO |
| Example | :SOUR:FREQ:CHAN:BAND AWS |
| Initial S/W Revision | A.05.00 |

US 2.5GHz

Selects US 2.5 GHz as the active channel band.

| | |
|----------------------|---|
| Key Path | Source, Frequency, Radio Setup, Radio Standard, CDMA 2000 / 1xEVDO |
| Example | :SOUR:FREQ:CHAN:BAND US2DOT5G |
| Initial S/W Revision | A.05.00 |

700 Public Safety

Selects 700 Public Safety as the active channel band.

| | |
|----------------------|---|
| Key Path | Source, Frequency, Radio Setup, Radio Standard, CDMA 2000 / 1xEVDO |
| Example | :SOUR:FREQ:CHAN:BAND PUBLIC |
| Initial S/W Revision | A.05.00 |

C2K Lower 700

Selects C2K Lower 700 as the active channel band.

| | |
|----------------------|---|
| Key Path | Source, Frequency, Radio Setup, Radio Standard, CDMA 2000 / 1xEVDO |
| Example | :SOUR:FREQ:CHAN:BAND LOWER |
| Initial S/W Revision | A.05.00 |

LTE

Sets LTE FDD as the radio standard for use and accesses the LTE FDD specific channel band sub-menus..

| | |
|----------------------|---|
| Key Path | Source, Frequency, Radio Setup, Radio Standard |
| Initial S/W Revision | A.09.50 |

BAND 1

Selects BAND 1 as the band for the current step.

| | |
|----------------------|--|
| Key Path | Source, Frequency, Radio Setup, Radio Standard, LTE |
| Example | :SOUR:FREQ:CHAN:BAND BAND1 |
| Initial S/W Revision | A.09.50 |

BAND 2

Selects BAND 2 as the band for the current step.

| | |
|----------------------|--|
| Key Path | Source, Frequency, Radio Setup, Radio Standard, LTE |
| Example | :SOUR:FREQ:CHAN:BAND BAND2 |
| Initial S/W Revision | A.09.50 |

BAND 3

Selects BAND 3 as the band for the current step.

| | |
|----------------------|--|
| Key Path | Source, Frequency, Radio Setup, Radio Standard, LTE |
| Example | :SOUR:FREQ:CHAN:BAND BAND3 |
| Initial S/W Revision | A.09.50 |

BAND 4

Selects BAND 4 as the band for the current step.

| | |
|----------------------|--|
| Key Path | Source, Frequency, Radio Setup, Radio Standard, LTE |
| Example | :SOUR:FREQ:CHAN:BAND BAND4 |
| Initial S/W Revision | A.09.50 |

BAND 5

Selects BAND 5 as the band for the current step.

| | |
|----------|--|
| Key Path | Source, Frequency, Radio Setup, Radio Standard, LTE |
|----------|--|

| | |
|----------------------|----------------------------|
| Example | :SOUR:FREQ:CHAN:BAND BAND5 |
| Initial S/W Revision | A.09.50 |

BAND 6

Selects BAND 6 as the band for the current step.

| | |
|----------------------|--|
| Key Path | Source, Frequency, Radio Setup, Radio Standard, LTE |
| Example | :SOUR:FREQ:CHAN:BAND BAND6 |
| Initial S/W Revision | A.09.50 |

BAND 7

Selects BAND 7 as the band for the current step.

| | |
|----------------------|--|
| Key Path | Source, Frequency, Radio Setup, Radio Standard, LTE |
| Example | :SOUR:FREQ:CHAN:BAND BAND7 |
| Initial S/W Revision | A.09.50 |

BAND 8

Selects BAND 8 as the band for the current step.

| | |
|----------------------|--|
| Key Path | Source, Frequency, Radio Setup, Radio Standard, LTE |
| Example | :SOUR:FREQ:CHAN:BAND BAND8 |
| Initial S/W Revision | A.09.50 |

BAND 9

Selects BAND 9 as the band for the current step.

| | |
|----------------------|--|
| Key Path | Source, Frequency, Radio Setup, Radio Standard, LTE |
| Example | :SOUR:FREQ:CHAN:BAND BAND9 |
| Initial S/W Revision | A.09.50 |

BAND 10

Selects BAND 10 as the band for the current step.

| | |
|----------|--|
| Key Path | Source, Frequency, Radio Setup, Radio Standard, LTE |
|----------|--|

| | |
|----------------------|-----------------------------|
| Example | :SOUR:FREQ:CHAN:BAND BAND10 |
| Initial S/W Revision | A.09.50 |

BAND 11

Selects BAND 11 as the band for the current step.

| | |
|----------------------|--|
| Key Path | Source, Frequency, Radio Setup, Radio Standard, LTE |
| Example | :SOUR:FREQ:CHAN:BAND BAND11 |
| Initial S/W Revision | A.09.50 |

BAND 12

Selects BAND 12 as the band for the current step.

| | |
|----------------------|--|
| Key Path | Source, Frequency, Radio Setup, Radio Standard, LTE |
| Example | :SOUR:FREQ:CHAN:BAND BAND12 |
| Initial S/W Revision | A.09.50 |

BAND 13

Selects BAND 13 as the band for the current step.

| | |
|----------------------|--|
| Key Path | Source, Frequency, Radio Setup, Radio Standard, LTE |
| Example | :SOUR:FREQ:CHAN:BAND BAND13 |
| Initial S/W Revision | A.09.50 |

BAND 14

Selects BAND 14 as the band for the current step.

| | |
|----------------------|--|
| Key Path | Source, Frequency, Radio Setup, Radio Standard, LTE |
| Example | :SOUR:FREQ:CHAN:BAND BAND14 |
| Initial S/W Revision | A.09.50 |

BAND 17

Selects BAND 17 as the band for the current step.

| | |
|----------|--|
| Key Path | Source, Frequency, Radio Setup, Radio Standard, LTE |
|----------|--|

| | |
|----------------------|-----------------------------|
| Example | :SOUR:FREQ:CHAN:BAND BAND17 |
| Initial S/W Revision | A.09.50 |

BAND 18

Selects BAND 18 as the band for the current step.

| | |
|----------------------|--|
| Key Path | Source, Frequency, Radio Setup, Radio Standard, LTE |
| Example | :SOUR:FREQ:CHAN:BAND BAND18 |
| Initial S/W Revision | A.09.50 |

BAND 19

Selects BAND 19 as the band for the current step.

| | |
|----------------------|--|
| Key Path | Source, Frequency, Radio Setup, Radio Standard, LTE |
| Example | :SOUR:FREQ:CHAN:BAND BAND19 |
| Initial S/W Revision | A.09.50 |

BAND 20

Selects BAND 20 as the band for the current step.

| | |
|----------------------|--|
| Key Path | Source, Frequency, Radio Setup, Radio Standard, LTE |
| Example | :SOUR:FREQ:CHAN:BAND BAND20 |
| Initial S/W Revision | A.09.50 |

BAND 21

Selects BAND 21 as the band for the current step.

| | |
|----------------------|--|
| Key Path | Source, Frequency, Radio Setup, Radio Standard, LTE |
| Example | :SOUR:FREQ:CHAN:BAND BAND21 |
| Initial S/W Revision | A.09.50 |

BAND 24

Selects BAND 24 as the band for the current step.

| | |
|----------|--|
| Key Path | Source, Frequency, Radio Setup, Radio Standard, LTE |
|----------|--|

| | |
|----------------------|-----------------------------|
| Example | :SOUR:FREQ:CHAN:BAND BAND24 |
| Initial S/W Revision | A.09.50 |

BAND 25

Selects BAND 25 as the band for the current step.

| | |
|----------------------|--|
| Key Path | Source, Frequency, Radio Setup, Radio Standard, LTE |
| Example | :SOUR:FREQ:CHAN:BAND BAND25 |
| Initial S/W Revision | A.09.50 |

BAND 26

Selects BAND 26 as the band for the current step.

| | |
|----------------------|--|
| Key Path | Source, Frequency, Radio Setup, Radio Standard, LTE |
| Example | :SOUR:FREQ:CHAN:BAND BAND26 |
| Initial S/W Revision | A.12.53 |

BAND 27

Selects BAND 27 as the band for the current step.

| | |
|----------------------|--|
| Key Path | Source, Frequency, Radio Setup, Radio Standard, LTE |
| Example | :SOUR:FREQ:CHAN:BAND BAND27 |
| Initial S/W Revision | A.14.00 |

BAND 28

Selects BAND 28 as the band for the current step.

| | |
|----------------------|--|
| Key Path | Source, Frequency, Radio Setup, Radio Standard, LTE |
| Example | :SOUR:FREQ:CHAN:BAND BAND28 |
| Initial S/W Revision | A.14.00 |

BAND 31

Selects BAND 31 as the band for the current step.

| | |
|----------|--|
| Key Path | Source, Frequency, Radio Setup, Radio Standard, LTE |
|----------|--|

| | |
|----------------------|-----------------------------|
| Example | :SOUR:FREQ:CHAN:BAND BAND31 |
| Initial S/W Revision | A.14.00 |

LTE TDD

Sets LTE TDD as the radio standard for use and accesses the LTE TDD specific channel band sub-menus..

| | |
|----------------------|---|
| Key Path | Source, Frequency, Radio Setup, Radio Standard |
| Initial S/W Revision | A.11.50 |

BAND 33

Selects BAND 33 as the band for the current step.

| | |
|----------------------|--|
| Key Path | Source, Frequency, Radio Setup, Radio Standard, LTE TDD |
| Example | :SOUR:FREQ:CHAN:BAND BAND33 |
| Initial S/W Revision | A.11.50 |

BAND 34

Selects BAND 34 as the band for the current step.

| | |
|----------------------|--|
| Key Path | Source, Frequency, Radio Setup, Radio Standard, LTE TDD |
| Example | :SOUR:FREQ:CHAN:BAND BAND34 |
| Initial S/W Revision | A.11.50 |

BAND 35

Selects BAND 35 as the band for the current step.

| | |
|----------------------|--|
| Key Path | Source, Frequency, Radio Setup, Radio Standard, LTE TDD |
| Example | :SOUR:FREQ:CHAN:BAND BAND35 |
| Initial S/W Revision | A.11.50 |

BAND 36

Selects BAND 36 as the band for the current step.

| | |
|----------------------|--|
| Key Path | Source, Frequency, Radio Setup, Radio Standard, LTE TDD |
| Example | :SOUR:FREQ:CHAN:BAND BAND36 |
| Initial S/W Revision | A.11.50 |

BAND 37

Selects BAND 37 as the band for the current step.

| | |
|----------------------|--|
| Key Path | Source, Frequency, Radio Setup, Radio Standard, LTE TDD |
| Example | :SOUR:FREQ:CHAN:BAND BAND37 |
| Initial S/W Revision | A.11.50 |

BAND 38

Selects BAND 38 as the band for the current step.

| | |
|----------------------|--|
| Key Path | Source, Frequency, Radio Setup, Radio Standard, LTE TDD |
| Example | :SOUR:FREQ:CHAN:BAND BAND38 |
| Initial S/W Revision | A.11.50 |

BAND 39

Selects BAND 39 as the band for the current step.

| | |
|----------------------|--|
| Key Path | Source, Frequency, Radio Setup, Radio Standard, LTE TDD |
| Example | :SOUR:FREQ:CHAN:BAND BAND39 |
| Initial S/W Revision | A.11.50 |

BAND 40

Selects BAND 40 as the band for the current step.

| | |
|----------------------|--|
| Key Path | Source, Frequency, Radio Setup, Radio Standard, LTE TDD |
| Example | :SOUR:FREQ:CHAN:BAND BAND40 |
| Initial S/W Revision | A.11.50 |

BAND 41

Selects BAND 41 as the band for the current step.

| | |
|----------------------|--|
| Key Path | Source, Frequency, Radio Setup, Radio Standard, LTE TDD |
| Example | :SOUR:FREQ:CHAN:BAND BAND41 |
| Initial S/W Revision | A.11.50 |

BAND 42

Selects BAND 42 as the band for the current step.

| | |
|----------------------|--|
| Key Path | Source, Frequency, Radio Setup, Radio Standard, LTE TDD |
| Example | :SOUR:FREQ:CHAN:BAND BAND42 |
| Initial S/W Revision | A.11.50 |

BAND 43

Selects BAND 43 as the band for the current step.

| | |
|----------------------|--|
| Key Path | Source, Frequency, Radio Setup, Radio Standard, LTE TDD |
| Example | :SOUR:FREQ:CHAN:BAND BAND43 |
| Initial S/W Revision | A.11.50 |

BAND 44

Selects BAND 44 as the band for the current step.

| | |
|----------------------|--|
| Key Path | Source, Frequency, Radio Setup, Radio Standard, LTE TDD |
| Example | :SOUR:FREQ:CHAN:BAND BAND44 |
| Initial S/W Revision | A.14.00 |

TDSCDMA

Sets TDSCDMA as the radio standard for use and accesses the TDSCDMA specific channel band sub-menus..

| | |
|----------------------|---|
| Key Path | Source, Frequency, Radio Setup, Radio Standard |
| Initial S/W Revision | A.11.50 |

BAND A

Selects BAND A as the band for the current step.

| | |
|----------------------|--|
| Key Path | Source, Frequency, Radio Setup, Radio Standard, TDSCDMA |
| Example | :SOUR:FREQ:CHAN:BAND BANDA |
| Initial S/W Revision | A.11.50 |

BAND B

Selects BAND B as the band for the current step.

| | |
|----------------------|--|
| Key Path | Source, Frequency, Radio Setup, Radio Standard, TDSCDMA |
| Example | :SOUR:FREQ:CHAN:BAND BANDB |
| Initial S/W Revision | A.11.50 |

BAND C

Selects BAND C as the band for the current step.

| | |
|----------------------|--|
| Key Path | Source, Frequency, Radio Setup, Radio Standard, TDSCDMA |
| Example | :SOUR:FREQ:CHAN:BAND BANDC |
| Initial S/W Revision | A.11.50 |

BAND D

Selects BAND D as the band for the current step.

| | |
|----------------------|--|
| Key Path | Source, Frequency, Radio Setup, Radio Standard, TDSCDMA |
| Example | :SOUR:FREQ:CHAN:BAND BANDD |
| Initial S/W Revision | A.11.50 |

BAND E

Selects BAND E as the band for the current step.

| | |
|----------------------|--|
| Key Path | Source, Frequency, Radio Setup, Radio Standard, TDSCDMA |
| Example | :SOUR:FREQ:CHAN:BAND BANDE |
| Initial S/W Revision | A.11.50 |

BAND F

Selects BAND F as the band for the current step.

| | |
|----------------------|--|
| Key Path | Source, Frequency, Radio Setup, Radio Standard, TDSCDMA |
| Example | :SOUR:FREQ:CHAN:BAND BANDF |
| Initial S/W Revision | A.11.50 |

Radio Band Link

Allows you to specify the channel band type as either uplink or downlink link direction. This value is used in conjunction with the channel band and channel number to determine the absolute frequency output by the

source. When set to “Uplink”, the source will calculate the uplink frequency using an uplink formula together with the selected channel band and channel number . When set to “Downlink”, the source will calculate the downlink frequency using a downlink formula together with the selected channel band and channel number.

| | |
|--------------------------------------|---|
| Key Path | Source, Frequency, Radio Setup |
| Remote Command | :SOURce:RADio:BAND:LINK DOWN UP :SOURce:RADio:BAND:LINK? |
| Example | :SOUR:RAD:BAND:LINK UP |
| Preset | DOWN |
| Range | DOWN UP |
| Backwards Compatibility SCPI | :SOURce:RADio:DEVIce BTS MS :SOURce:RADio:DEVIce? |
| Backwards Compatibility Notes | BTS maps to the Downlink frequency MS maps to the Uplink frequency |
| Initial S/W Revision | A.05.00 |

Set Reference Frequency

This key allows you to set the frequency reference. Pressing this key turns the frequency reference state to ON, sets the reference frequency value to the current frequency, maintains this frequency at the RF output, and sets the displayed frequency to 0.00 Hz. All subsequent frequencies entered under Source>Frequency>Frequency are interpreted as being relative to this reference frequency.

When you use a frequency reference, the signal generator outputs a frequency that is set relative to the reference frequency by the value entered under Source>Frequency>Frequency as follows:

$$\text{Output frequency} = \text{reference frequency} - \text{entered frequency}$$

Where:

reference frequency equals the original RF frequency entered under Source>Frequency>Frequency and set as the reference frequency

entered frequency equals a new value entered under Source>Frequency>Frequency

In addition, the displayed frequency value will be the same as the value entered under Source>Frequency>Frequency.

NOTE

If Freq Reference is set to ON with a reference value set, entering a value under Source>Frequency>Frequency and pressing Set Frequency Reference will add that value to the existing Freq Reference value.

If you wish to change the reference frequency value to the new value entered under Source>Frequency>Frequency, first you must set Freq Reference to OFF and then press Set Frequency Reference.

| | |
|-----------------|--------------------------|
| Key Path | Source, Frequency |
|-----------------|--------------------------|

| | |
|-----------------------------|--|
| Remote Command | :SOURce:FREQuency:REFeRence:SET |
| Example | :SOUR:FREQ:REF:SET |
| Dependencies | This setting is unavailable, and is grayed out when the List Sequencer is turned ON. |
| Initial S/W Revision | A.05.00 |

Freq Reference

This key allows you to toggle the state of the frequency reference. When the frequency reference state is ON, an annunciator is displayed on the main source view to indicate this state to the user.

When you use a frequency reference, the signal generator outputs a frequency that is set relative to the reference frequency by the value entered under Source>Frequency>Frequency as follows:

Output frequency = reference frequency + entered frequency

Where:

reference frequency equals the original RF frequency entered under Source>Frequency>Frequency and set as the reference frequency

entered frequency equals a new value entered under Source>Frequency>Frequency

For more information on Reference Frequency refer to ["Set Reference Frequency" on page 2532](#)

| Key Path | Source, Frequency |
|-----------------------------|--|
| Remote Command | :SOURce:FREQuency:REFeRence <freq> :SOURce:FREQuency:REFeRence? :SOURce:FREQuency:REFeRence:STATe OFF ON 0 1 :SOURce:FREQuency:REFeRence:STATe? |
| Example | :SOUR:FREQ:REF 0.00 Hz :SOUR:FREQ:REF:STATe ON |
| Dependencies | This setting is unavailable, and is grayed out when the List Sequencer is turned ON. |
| Couplings | The frequency reference state is coupled to the frequency reference set immediate action. When the reference set immediate action key is pressed, or the SCPI command issued, it turns the frequency reference state ON. |
| Preset | 0.00 Hz OFF |
| Min | 0.00 Hz |
| Max | Hardware Dependant: Option 503 = 3.6 GHz Option 504 = 3.8 GHz Option 506 = 6.00 GHz |
| Initial S/W Revision | A.05.00 |

Freq Offset

Allows you to specify the frequency offset value. When the frequency offset state is ON, an annunciator is displayed on the main source view to indicate this state to the user.

When the frequency offset is set to zero (0) and you set a new offset value, the displayed frequency value will change as follows and the RF output frequency will not change:

Displayed value = output frequency + offset value

Where:

output frequency equals the original frequency entered under Source > Frequency > Frequency

offset value equals the value entered under Source > Frequency > Freq Offset

When the frequency offset is set to a value other than zero (0) and you enter a new frequency value under Source > Frequency > Frequency, the displayed frequency will be the same as the value entered and the RF output frequency will be equal to the value entered minus the offset value as follows:

Output frequency = entered frequency – offset frequency

Displayed frequency = output frequency + offset frequency

Displayed frequency = entered frequency

Where:

entered frequency equals the frequency entered under Source > Frequency > Frequency

offset frequency equals the value previously entered and set under Source > Frequency > Freq Offset

| Key Path | Source, Frequency |
|-----------------------|--|
| Remote Command | :SOURce:FREQuency:OFFSet <freq> :SOURce:FREQuency:OFFSet? |
| Example | :SOUR:FREQ:OFFS 0 Hz |
| Dependencies | This setting is unavailable, and is grayed out when the List Sequencer is turned ON. |
| Preset | 0 Hz |
| Min | -100.00 GHz |
| Max | 100.00 GHz |
| Initial S/W Revision | A.05.00 |

Modulation Setup

Allows access to the menus for setting up the available modulation types: "ARB" on page 2535, "AM" on page 2581, "FM" on page 2583, and "PM" on page 2584.

| Key Path | Source |
|----------------------|---------|
| Initial S/W Revision | A.05.00 |

ARB

Allows you access to the ARB sub-menus.

| | |
|----------------------|---------------------------------|
| Key Path | Source, Modulation Setup |
| Initial S/W Revision | A.05.00 |

ARB

Allows you to toggle the state of the ARB function. When the ARB is On, a “MOD” annunciator is displayed in the system settings panel. When the ARB is turned Off, the MOD annunciator is cleared

| | |
|--------------------------|---|
| Key Path | Source, Modulation Setup, ARB |
| Remote Command | :SOURce:RADio:ARB[:STATe] ON OFF 1 0 :SOURce:RADio:ARB[:STATe]? |
| Example | :SOUR:RAD:ARB OFF :SOUR:RAD:ARB? |
| Notes | If the ARB is ON, a user then loads or deletes another file to ARB memory, the playing waveform segment may not keep phase continuity during the ARB memory operation. The waveform will be replayed after the ARB operation is finished. |
| Dependencies | This setting is for independent mode and has no effect on 3.3.8 list sequencer mode. Setting "Sequencer" on page 2586 Sequencer to On will put source enter list sequencer mode, and even if ARB state is On, the ARB file will not be played. Setting "Sequencer" on page 2586 Sequencer to Off will make source leave list sequencer mode, and this setting will take effect immediately. The ARB can only be turned on when there is a waveform file selected for playback. On the GUI If no waveform is selected, this key is grayed out. If you send the SCPI command to turn the ARB on with no waveform selected for playback, the ARB state remains OFF and an error is generated. "- When you try to recall a certain set of states in which the selected waveform is not in ARB memory and the ARB state is On, errors are reported |
| Couplings | If "Real-Time AWGN" on page 2546 AWGN State is On and this setting is On, "RF Power" on page 2500 RF Power will be adjusted to the value to maintain the AWGN power relationship defined by "Power Control Mode" on page 2547 Power Control Mode and other noise settings |
| Preset | Off |
| Range | On Off |
| Initial S/W Revision | A.05.00 |
| Modified at S/W Revision | A.16.00 (Add couplings with AWGN state) |

Select Waveform

Allows you to access to the waveform selection sub-menus.

Pressing this key changes the central view area to show the Waveform File Selection view.

| | |
|----------------------|--------------------------------------|
| Key Path | Source, Modulation Setup, ARB |
| Initial S/W Revision | A.05.00 |

Select Waveform

Allows you to select a waveform sequence or segment for the dual ARB to play.

| | |
|----------------------|---|
| Key Path | Source, Modulation Setup, ARB, Select Waveform |
| Remote Command | :SOURce:RADio:ARB:WAVeform <string> :SOURce:RADio:ARB:WAVeform? |
| Example | :SOUR:RAD:ARB:WAV "test_waveform.bin" |
| Notes | <p>If intended waveform is not in the memory yet, then issuing this command by SCPI will invoke ARB loading operation first, which involves a delay of unpredictable length. So this command should be followed by the query *OPC?, which holds off subsequent commands until the loading operating is complete.</p> <p><string> - specifies the name of the waveform segment or waveform sequence to be played by the ARB.</p> <p>When in Sequence Analyzer mode, and Include Source is Yes, if the you attempt to play a waveform sequence but not all the required waveform segments are in the ARB playback memory, the application will reject the loading operation with an error is generated .</p> <p>When Include Source is No, if you attempt to play a waveform sequence but not all the required waveform segments are contained in the ARB playback memory, the application will attempt to load the required segments from either the default directory of the current directory. If the ARB memory does not have enough space for all the waveform segments to be loaded, an error is generated and none of the waveform segments is loaded.</p> <p>If the ARB is ON, and you attampt to play a waveform sequence but not all the waveform segments within the sequence could be found to be loaded into ARB memory, an error is generated. The selected waveform keeps the previous value and ARB state remains On.</p> <p>If you specify a waveform segment over SCPI but the waveform segment is not present within ARB playback memory and cannot be found for auto loading within the current directory or the default directory, an error is generatedand the file selection remains unchanged.</p> <p>If you select a waveform for playback and the waveform requires a license that is not installed on the instrument, an error is generated.error is generated.</p> <p>If the ARB is ON and you load a file to ARB memory or delete a file from ARB memory, the playing waveform segment may not keep phase continuity during the ARB memory operation. The waveform will be replayed after the ARB operation is finished.</p> |
| Initial S/W Revision | A.05.00 |

Segments on Hard Disk

Allows you access to the sub-menus for loading waveform segments from the hard disk into ARB memory. The default directory is: D: varb.

Pressing this key changes the current view to the Waveform Management View.

| | |
|----------------------|---|
| Key Path | Source, Modulation Setup, ARB, Select Waveform |
| Initial S/W Revision | A.05.00 |

Load Segment To ARB Memory

Allows you to load the selected file into ARB memory. On the front panel you select the file for loading to the ARB memory by highlighting the desired file in the list. Using the SCPI command, you specify the file name on the HDD.

“NVWFM” (none-volatile storage) MSUS (Mass Storage Unit Specifier) is supported in the memory subsystem because the ARB memory cannot be accessed directly. Therefore, files must be downloaded to the instrument hard disk and then loaded into the ARB memory. “NVWFM” MSUS will be mapped to the default directory D: VARB. The SCPI command supports using either “NVWFM” MSUS or specifying a full path. For more information, see [Memory Subsystem \(Remote Command Only\)](#).

If a file of the same name already exists within ARB memory, it is overwritten. If you wish to load two segments of the same name, you must rename one of the segments before loading it into ARB memory. To rename a segment, you can either use Windows File Explorer, or the :MMEMory:COPI command.

| | |
|-----------------------|--|
| Key Path | Source, Modulation Setup, ARB, Select Waveform, Segments on Hard Disk |
| Remote Command | :SOURce:RADio:ARB:LOAD <string> |
| Example | :SOUR:RAD:ARB:LOAD "D: VARB\testwaveform.bin" or :SOUR:RAD:ARB:LOAD "NVWFM:testwaveform.bin" |
| Notes | <p>Because loading the file involves a delay of unpredictable length, this command should be followed by the query *OPC?, which holds off subsequent commands until the loading operating is complete.</p> <p><string> – specifies the path name of the file to load from the HDD into ARB memory. It could be a <full path + filename>, or <“NVWFM” MSUS + colon + filename>.</p> <p>When in Sequence Analyzer mode, and Include Source is Yes, an attempt to load a file to ARB memory will be rejected with an error.</p> <p>When Include Source is No and if there is insufficient free ARB memory to load the selected waveform, an error is generated. .</p> <p>If you specify a file over SCPI, but the file is not at the specified location, an error is generated.</p> <p>If you try to load a waveform file but the file contains less than 500 IQ samps, an error is generated.</p> <p>If you try to load a Signal Studio waveform “*.wfm” which contains invalid waveform header, an error is generated.</p> <p>If the ARB is ON when you load afile to ARB memory or delete a file from ARB memory, the playing waveform segment may not keep phase continuity during the ARB memory operation. The waveform will be replayed after the ARB operation is finished.</p> <p>ARB can be loaded into ARB memory even required licenses do not present on the instrument. In this</p> |

case, a GUI only warning message -800, "Operation complete; Loaded <filename> successfully, but no license <required licenses> installed". User can install required licenses according to <required licenses> string to license it, or multi-pack license it.

Initial S/W Revision A.05.00

Load All To ARB Memory

Allows you to load all the segment files within the currently selected directory into ARB memory. If a file of the same name already exists within ARB memory, it is overwritten. If you wish to load two segments of the same name, you must rename one of the segments before loading it into ARB memory. To rename a segment, you can either use Windows File Explorer, or the :MEMory:COPY command.

Key Path **Source, Modulation Setup, ARB, Select Waveform, Segments on Hard Disk**

Remote Command :SOURce:RADio:ARB:LOAD:ALL <string>

Example :SOUR:RAD:ARB:LOAD:ALL "D: varb"

Notes <string> - specifies the directory on the HDD to load the files into ARB memory from.
 When in Sequence Analyzer mode, and Include Source is Yes, an attempt to load all files from a directory to ARB memory is rejected with an error.
 When Include Source is No and there is insufficient free ARB memory to load all the waveforms, when the ARB memory is full, the copy ceases, and an error is generated.
 If you specify a directory over SCPI, but the directory does not exist, an error is generated.
 If the ARB is ON, a user then loads or deletes file to ARB memory, the playing waveform segment may not keep phase continuity during the ARB memory operation. The waveform will be replayed after the ARB operation is finished.

Initial S/W Revision A.05.00

Change Directory...

Allows you to change the currently selected directory on the hard disk. Pressing this key opens a standard windows change directory dialog allowing you to select the new directory of interest.

The current directory is used for manually loading waveform segments into ARB memory for playback, and as a search location for waveform segments that are required to be loaded into ARB memory for playback of a waveform sequence or a list sequence.

Key Path **Source, Modulation Setup, ARB, Select Waveform, Segments on Hard Disk**

Notes No remote command, SCPIfront panel only.

Initial S/W Revision A.05.00

Default Directory...

Allows you to change the default directory. It is used as a search location for waveform segments that are required to be loaded into ARB memory for playback of a waveform sequence, and as a search location for

selecting waveforms using SCPI.

| | |
|----------------------|---|
| Key Path | Source, Modulation Setup, ARB, Select Waveform, Segments on Hard Disk |
| Remote Command | :SOURce:RADio:ARB:DEFault:DIRectory <string> :SOURce:RADio:ARB: DEFault:DIRectory? |
| Example | :SOUR:RAD:ARB:DEF:DIR "D:\ArbFiles" :SOUR:RAD:ARB:DEF:DIR? |
| State Saved | Persistent, survives a power cycle and a preset but not saved in the instrument state |
| Initial S/W Revision | A.05.00 |

Segments in ARB Memory

Allows you access to the sub-menus for managing the files within ARB memory.

| | |
|----------------------|---|
| Key Path | Source, Modulation Setup, ARB, Select Waveform |
| Initial S/W Revision | A.05.00 |

Delete Segment From ARB Mem

Allows you to remove a segment from ARB playback memory.

| | |
|----------------------|---|
| Key Path | Source, Modulation Setup, ARB, Select Waveform, Segments in ARB Memory |
| Remote Command | :SOURce:RADio:ARB:DELete <string> |
| Example | :SOUR:RAD:ARB:DEL "testwaveform.bin" |
| Notes | <p><string> - specifies the waveform to be deleted from the ARB playback memory.</p> <p>When in Sequence Analyzer mode and Include Source is Yes, an attempt to delete a file from ARB memory is rejected with an error.</p> <p>When Include Source is No and you specify a file that does not exist within ARB memory, an error is generated.</p> <p>It is possible to delete files from within the ARB memory when the ARB is ON. However, if you attempt to delete the file that is currently playing an error is generated.</p> <p>It is possible to delete a file from within the ARB memory when the sequencer state is ON and the file is not being used by the List Sequencer. If you attempt to delete a file which is being used by the list sequencer, an error is generated.</p> <p>When sequencer state is On, even if ARB state is On, the selected waveform will not be played. In this case, if the selected waveform is not used in List Sequence, it can be deleted and the ARB state is turned Off.</p> <p>If the ARB is ON and you load a file to ARB memory or delete a file from ARB memory, the playing waveform segment may not keep phase continuity during the ARB memory operation. The waveform will be replayed after the ARB operation is finished.</p> |
| Initial S/W Revision | A.05.00 |

Delete All From ARB Memory

Allows you to remove all segments from ARB playback memory.

| | |
|----------------------|--|
| Key Path | Source, Modulation Setup, ARB, Select Waveform, Segments in ARB Memory |
| Remote Command | :SOURCE:RADio:ARB:DELeTe:ALL |
| Example | :SOUR:RAD:ARB:DELeTe:ALL |
| Notes | <p>When in Sequence Analyzer mode and Include Source is Yes, an attempt to delete all files from ARB memory is rejected with an error.</p> <p>When Include Source is No and you attempt to delete all files from ARB memory when the ARB is currently playing a file, all files except the one playing are deleted and an error is generated.</p> <p>If you attempt to delete all files from ARB memory when there are waveform files used in "List Sequencer" on page 2585 and "Sequencer" on page 2586 state is ON, all files except the files currently being used in list sequencer are deleted, and an error is generated.</p> <p>If the ARB is ON and you load a file to ARB memory or delete a file from ARB memory, the playing waveform segment may not keep phase continuity during the ARB memory operation. The waveform will be replayed after the ARB operation is finished.</p> |
| Initial S/W Revision | A.05.00 |

Query ARB Memory File List (Remote Command Only)

Queries the test set for the list of waveform segments in the ARB memory.

NOTE

This command returns a string for waveform segment names in ARB memory. If you want a string list of waveform segments in the ARB memory, use "Query ARB Memory Full File List (Remote Command Only)" on page 2540.

| | |
|----------------------|--|
| Remote Command | :SOURCE:RADio:ARB:CATalog? |
| Example | :SOUR:RAD:ARB:CATalog? |
| Notes | <p>The return data is in the following format:</p> <p><integer> - memory used</p> <p><integer> - memory free</p> <p><string> ... - comma separated list of waveform segments within ARB memory</p> |
| Initial S/W Revision | A.05.00 |

Query ARB Memory Full File List (Remote Command Only)

Queries the test set for the string list of waveform segments in the ARB memory. It returns a string list for waveform segment names in the ARB memory.

| | |
|----------------|---|
| Remote Command | :SOURCE:RADio:ARB:FCATalog? |
| Example | :SOUR:RAD:ARB:FCATalog? |
| Notes | <p>The return data is in the following format:</p> <p><integer> - memory used</p> |

| | |
|----------------------|--|
| | <p><integer> - memory free <integer> - file count in ARB memory <string>, <string>, ... <string> - comma separated string list of waveform segments within ARB memory Example: SOUR:RAD:ARB:FCAT? EXT returns: 27499,2069653,3,"c2k.wfm","gsm.wfm","wcdma.wfm"</p> |
| Initial S/W Revision | A.09.00 |

ARB Setup

Allows access to the ARB setup sub-menus.

| | |
|----------------------|--------------------------------------|
| Key Path | Source, Modulation Setup, ARB |
| Initial S/W Revision | A.05.00 |

Sample Rate

Allows you to set the ARB waveform playback sample rate.

| | |
|-----------------------|---|
| Key Path | Source, Modulation Setup, ARB, ARB Setup |
| Remote Command | :SOURce:RADio:ARB:SCLock:RATE <freq> :SOURce:RADio:ARB:SCLock:RATE? |
| Example | :SOUR:RAD:ARB:SCL:RATE 48.00 MHz |
| Notes | If there is a sample rate specified in the header of the waveform file, changing that sample rate is not recommended, as it may cause problems with burst timing. |
| Dependencies | When a new waveform is selected for playback the settings contained within the associated waveform header file are applied to the ARB. The sample rate is one of the values stored within the header file. If the newly selected waveform file has an associated header file, the sample rate is updated with the value from the header file. The sample rate will remain unchanged if the newly selected waveform does not have an associated header file. |
| Preset | 125.00 MHz |
| Min | 1.00 kHz |
| Max | 125.00 MHz |
| Initial S/W Revision | A.05.00 |

Run-Time Scaling

Allows you to adjust the run-time scaling value. The run-time scaling value is applied in real-time while the waveform is playing.

| | |
|----------|---|
| Key Path | Source, Modulation Setup, ARB, ARB Setup |
|----------|---|

| | |
|-----------------------------|--|
| Remote Command | :SOURce:RADio:ARB:RSCaling <real> :SOURce:RADio:ARB:RSCaling? |
| Example | :SOUR:RAD:ARB:RSC 100.00 |
| Dependencies | When a new waveform is selected for playback the settings contained within the associated waveform header file are applied to the ARB. The run-time scaling is one of the values stored within the header file. If the newly selected waveform file has an associated header file, the run-time scaling is updated with the value from the header file. The run-time scaling will remain unchanged if the newly selected waveform does not have an associated header file. |
| Preset | 70.00 % |
| Min | 1.00 % |
| Max | 100.00 % |
| Initial S/W Revision | A.05.00 |

Baseband Freq Offset

Allows you to adjust the value by which the baseband frequency is offset relative to the carrier.

| | |
|-----------------------------|---|
| Key Path | Source, Modulation Setup, ARB, ARB Setup |
| Remote Command | :SOURce:RADio:ARB:BASEband:FREQuency:OFFSet <freq> :SOURce:RADio:ARB:BASEband:FREQuency:OFFSet? |
| Example | :SOUR:RAD:ARB:BAS:FREQ:OFFS 0.00 Hz |
| Dependencies | When a new waveform is selected for playback the settings contained within the associated waveform header file are applied to the ARB. The baseband frequency offset is one of the values stored within the header file. If the newly selected waveform file has an associated header file, the baseband frequency offset is updated with the value from the header file. The baseband frequency offset will remain unchanged if the newly selected waveform does not have an associated header file. |
| Preset | 0.00 Hz |
| Min | -50.00 MHz |
| Max | 50.00 MHz |
| Initial S/W Revision | A.05.00 |

Edit RMS

Allows you to edit or calculate current RMS of selected waveform.

| | |
|-----------------------------|---|
| Key Path | Source, Modulation Setup, ARB, ARB Setup |
| Initial S/W Revision | A.14.50 |

Current RMS

Allows you to directly specify current RMS value used to playback currently selected waveform. Please note incorrect RMS value may cause inaccurate power output in E6640A that is sensitive to RMS value.

This setting is also updated by RMS in waveform header or updated when invoking RMS calculation operation.

This setting can be saved to the header of currently selected waveform by invoking ["Save Setup To Header" on page 2580](#) "Save Setup To Header".

| | |
|-----------------------------|---|
| Key Path | Source, Modulation Setup, ARB, ARB Setup, Edit RMS |
| Remote Command | :SOURce:RADio:ARB:RMS <float> :SOURce:RADio:ARB:RMS? |
| Example | :SOUR:RAD:ARB:HEAD:RMS 0.7 :SOUR:RAD:ARB:HEAD:RMS? |
| Notes | Valid range is 0 to 1.414, values outside the range will be clipped to the closest boundary. Note this value does not affect "List Sequencer" on page 2585 Source List Sequencer that always uses RMS value resides in each ARB header. If want this value to take effect in list sequencer, use "Save Setup To Header" on page 2580 "Save Setup to Header" to save current RMS value to header first, then play the ARB in source list sequencer. |
| Dependencies | When a new waveform is selected for playback, this setting is updated by the RMS value defined in associated waveform header file. If selected waveform has no associated header file or header file does not specify RMS value, then instrument will try to calculate out one automatically. Calculating RMS can also update this setting. |
| Preset | 0 |
| Range | 0 ~ 1.414 |
| Initial S/W Revision | A.14.50 |

RMS Calculation Mode

Allows you to specify the mode to calculate the current RMS.

| | |
|-----------------------------|--|
| Key Path | Source, Modulation Setup, ARB, ARB Setup, Edit RMS |
| Remote Command | :SOURce:RADio:ARB:RMS:CALCulation:MODE AUTO M1 M2 M3 M4 :SOURce:RADio:ARB:RMS:CALCulation:MODE? |
| Example | :SOUR:RAD:ARB:RMS:CALC:MODE AUTO |
| Notes | If no waveform is selected, or selected waveform is waveform sequence, the key will grey out. |
| Preset | AUTO |
| Range | AUTO M1 M2 M3 M4 |
| Initial S/W Revision | A.14.50 |

Auto

RMS will be calculated based on the whole sample range of current selected waveform.

| | |
|----------------------|--|
| Key Path | Source, Modulation Setup, ARB, ARB Setup, Edit RMS, Calculate RMS, RMS Calculation Mode |
| Example | :SOUR:RAD:ARB:RMS:CALC:MODE AUTO |
| Initial S/W Revision | A.14.50 |

Marker 1

Selects marker 1 to designate sample range used for RMS calculation.

| | |
|----------------------|---|
| Key Path | Source, Modulation Setup, ARB, ARB Setup, Edit RMS, Calculate RMS, RMS Calculation Mode , Marker |
| Example | :SOUR:RAD:ARB:RMS:CALC:MODE M1 |
| Initial S/W Revision | A.14.50 |

Marker 2

Selects marker 2 to designate sample range used for RMS calculation.

| | |
|----------------------|---|
| Key Path | Source, Modulation Setup, ARB, ARB Setup, Edit RMS, Calculate RMS, RMS Calculation Mode , Marker |
| Example | :SOUR:RAD:ARB:RMS:CALC:MODE M2 |
| Initial S/W Revision | A.14.50 |

Marker 3

Selects marker 3 to designate sample range used for RMS calculation.

| | |
|----------------------|---|
| Key Path | Source, Modulation Setup, ARB, ARB Setup, Edit RMS, Calculate RMS, RMS Calculation Mode , Marker |
| Example | :SOUR:RAD:ARB:RMS:CALC:MODE M3 |
| Initial S/W Revision | A.14.50 |

Marker 4

Selects marker 4 to designate sample range used for RMS calculation.

| | |
|----------------------|---|
| Key Path | Source, Modulation Setup, ARB, ARB Setup, Edit RMS, Calculate RMS, RMS Calculation Mode , Marker |
| Example | :SOUR:RAD:ARB:RMS:CALC:MODE M4 |
| Initial S/W Revision | A.14.50 |

Calculate RMS

Allows you to calculate current RMS based on mode selected. This will update ["Current RMS" on page 2543](#) Current RMS setting.

| | |
|----------------------|--|
| Key Path | Source, Modulation Setup, ARB, ARB Setup, Edit RMS, Calculate RMS |
| Remote Command | :SOURce:RADio:ARB:RMS:CALCulate |
| Example | :SOUR:RAD:ARB:RMS:CALC |
| Notes | <p>If no waveform is selected, invoking this operation will get error “-221 Setting conflict; No waveform is selected for RMS operation”.</p> <p>If no waveform is selected, or selected waveform is waveform sequence, the key will grey out.</p> <p>If selected waveform does not contain marker data, but "RMS Calculation Mode" on page 2543 “RMS Calculation Mode” is set to marker, under this circumstance, invoking calculation operation will get error “-221 Setting conflict; There is no marker for currently selected waveform, auto RMS calculation mode is used instead”, and "RMS Calculation Mode" on page 2543 “RMS Calculation Mode” will be coupled to “Auto” mode automatically.</p> <p>RMS calculation does not suit for waveform sequence. If selected waveform is waveform sequence file, invoking this operation will get error “-221 Setting conflict; RMS calculation does not apply to waveform sequence”. But users can still edit current RMS as play parameter, and can save current RMS to waveform sequence header for later use.</p> |
| Initial S/W Revision | A.14.50 |

Use Header RMS

Allows you to quickly set RMS in ARB header to ["Current RMS" on page 2543](#) Current RMS setting.

| | |
|----------------------|---|
| Key Path | Source, Modulation Setup, ARB, ARB Setup, Edit RMS, |
| Notes | <p>No remote command, front panel only.</p> <p>If no waveform is selected, the key will grey out.</p> <p>If no waveform is selected, invoking this operation will get error “-221 Setting conflict; No waveform is selected for RMS operation”.</p> |
| Initial S/W Revision | A.14.50 |

Real-Time AWGN Setup

The source allows you to apply additive white Gaussian noise (AWGN) to a carrier in real time while the modulating waveform plays in the dual ARB player. Pressing this key allows access to the real time AWGN sub-menus and changes the central display area to show the AWGN Setup view.

This feature is controlled by E6650A-AW1 option

| | |
|----------------------|--|
| Key Path | Source, Modulation Setup, ARB, ARB Setup |
| Notes | This menu only appears and related SCPIs are only available when E6650A-AW1 option presents. |
| Initial S/W Revision | A.16.00 |

Real-Time AWGN

Allows you to enable or disable adding real-time AWGN to the carrier modulated by the waveform currently being played by the dual ARB.

| | |
|-----------------------------|--|
| Key Path | Source, Modulation Setup, ARB, ARB Setup, Real-Time AWGN Setup |
| Remote Command | :SOURce:RADio:ARB:NOISe[:STATe] ON OFF 1 0 :SOURce:RADio:ARB:NOISe[:STATe]? |
| Example | :SOUR:RAD:ARB:NOIS OFF |
| Dependencies | When a new waveform is selected for playback the settings contained within the associated waveform header file are applied to the ARB. The AWGN state is one of the values stored within the header file. If the newly selected waveform file has an associated header file, the AWGN state is updated with the value from the header file. The AWGN state will remain unchanged if the newly selected waveform does not have an associated header file. |
| Couplings | If this setting is On and "ARB" on page 2535 ARB State is On, "RF Power" on page 2500 RF Power will be adjusted to the value to maintain the AWGN power relationship defined by "Power Control Mode" on page 2547 Power Control Mode and other noise settings |
| Preset | Off |
| Range | On Off |
| Initial S/W Revision | A.16.00 |

Carrier To Noise Ratio

Allows you to specify the carrier to noise ratio (C/N) in dB. The carrier power is defined as the total modulated signal power without noise power added. The noise power is applied over the specified bandwidth of the carrier signal.

| | |
|-----------------------------|--|
| Key Path | Source, Modulation Setup, ARB, ARB Setup, Real-Time AWGN Setup |
| Remote Command | :SOURce:RADio:ARB:NOISe:CN <ampl> :SOURce:RADio:ARB:NOISe:CN? |
| Example | :SOUR:RAD:ARB:NOIS:CN 0.00 dB |
| Dependencies | When a new waveform is selected for playback the settings contained within the associated waveform header file are applied to the ARB. The AWGN C/N ratio is one of the values stored within the header file. If the newly selected waveform file has an associated header file, the AWGN C/N ratio is updated with the value from the header file. The AWGN C/N ratio will remain unchanged if the newly selected waveform does not have an associated header file. |
| Preset | 0.00 dB |
| Min | -100.00 dB |
| Max | 100.00 dB |
| Initial S/W Revision | A.16.00 |

Carrier Bandwidth

Allows you to specify the bandwidth over which the AWGN is applied. The carrier RMS power and the noise power are integrated over the selected carrier bandwidth for the purpose of calculating carrier to noise ratio (C/N).

| | |
|-----------------------------|--|
| Key Path | Source, Modulation Setup, ARB, ARB Setup, Real-Time AWGN Setup |
| Remote Command | :SOURCE:RADio:ARB:NOISe:CBWidth <freq> :SOURCE:RADio:ARB:NOISe:CBWidth? |
| Example | :SOUR:RAD:ARB:NOIS:CBW 1.00 Hz |
| Dependencies | When a new waveform is selected for playback the settings contained within the associated waveform header file are applied to the ARB. The AWGN carrier bandwidth is one of the values stored within the header file. If the newly selected waveform file has an associated header file, the AWGN carrier bandwidth is updated with the value from the header file. The AWGN carrier bandwidth will remain unchanged if the newly selected waveform does not have an associated header file. |
| Min | 1.00 Hz |
| Max | 200.00 MHz |
| Initial S/W Revision | A.16.00 |

Noise Bandwidth

Allows you to specify the flat noise bandwidth of the real-time noise for an ARB waveform.

| | |
|-----------------------------|--|
| Key Path | Source, Modulation Setup, ARB, ARB Setup, Real-Time AWGN Setup |
| Remote Command | :SOURCE:RADio:ARB:NOISe:BANDwidth <freq> :SOURCE:RADio:ARB:NOISe:BANDwidth? |
| Example | :SOUR:RAD:ARB:NOIS:BAND 1.00 Hz |
| Notes | Generally, flat noise bandwidth should be set slightly wider than the carrier bandwidth (typically 1.6 times wider) |
| Notes | Max Noise Bandwidth equals $0.8 * \text{Maximum ARB Sample Rate}$ reported in HW capability |
| Dependencies | When a new waveform is selected for playback the settings contained within the associated waveform header file are applied to the ARB. The AWGN carrier bandwidth is one of the values stored within the header file. If the newly selected waveform file has an associated header file, the AWGN carrier bandwidth is updated with the value from the header file. The AWGN carrier bandwidth will remain unchanged if the newly selected waveform does not have an associated header file. |
| Preset | 1.00 Hz |
| Min | 1.00 Hz |
| Max | 160.00 MHz |
| Initial S/W Revision | A.16.00 |

Power Control Mode

This setting offers four ways to control the RF output power when adding AWGN to a signal.

| | |
|----------------------|---|
| Key Path | Source, Modulation Setup, ARB, ARB Setup, Real-Time AWGN Setup |
| Remote Command | :SOURce:RADio:ARB:NOISe:POWer:CONTRol[:MODE] TOTal CARRier NOISe NCHannel :SOURce:RADio:ARB:NOISe: POWer:CONTRol[:MODE]? |
| Example | :SOUR:RAD:ARB:NOIS:POW:CONT NCHannel :SOUR:RAD:ARB:NOIS:POW:CONT? |
| Preset | TOTal |
| Range | Total Power Carrier Power Total Noise Power Noise Power in Channel |
| Initial S/W Revision | A.16.00 |

Total

Set the power control mode as total power.

| | |
|----------------------|---|
| Key Path | Source, Modulation Setup, ARB, ARB Setup, Real-Time AWGN Setup, Power Control Mode |
| Example | :SOUR:RAD:ARB:NOIS:POW:CONT TOTal |
| Couplings | Set to this value will make Carrier Power Carrier Power, Total Noise Power Total Noise Power, and Channel Noise Power Channel Noise Power buttons invisible on menu. Selecting Total as the power control mode makes the total power and C/N independent variables while making the carrier power and total noise power dependent variables. The dependent variables carrier power and total noise power are set by the total power, C/N, and the rest of the Noise settings. The carrier power and total noise power change as any noise parameter is adjusted to keep the total power and the C/N at their last specified values. |
| Initial S/W Revision | A.16.00 |

Carrier

Set the power control mode as carrier power.

| | |
|----------------------|---|
| Key Path | Source, Modulation Setup, ARB, ARB Setup, Real-Time AWGN Setup, Power Control Mode |
| Example | :SOUR:RAD:ARB:NOIS:POW:CONT CARRier |
| Couplings | Set to this value will make Carrier Power Carrier Power button visible, while Total Noise Power Total Noise Power and Channel Noise Power Channel Noise Power buttons invisible from menu. Selecting Carrier as the power control mode makes the carrier power and C/N independent variables while making the total power and total noise power dependent variables. The dependent variables total power and total noise power are set by the carrier power, C/N, and the rest of the Noise settings. The total power and total noise power change as any noise parameter is adjusted to keep the carrier power and the C/N at their last specified values. |
| Initial S/W Revision | A.16.00 |

Total Noise

Set the power control mode as total noise power.

| | |
|----------------------|---|
| Key Path | Source, Modulation Setup, ARB, ARB Setup, Real-Time AWGN Setup, Power Control Mode |
| Example | :SOUR:RAD:ARB:NOIS:POW:CONT NOISe |
| Couplings | Set to this value will make Total Noise Power Total Noise Power button visible, while Carrier Power Carrier Power and Channel Noise Power Channel Noise Power buttons invisible from menu. Selecting Total Noise as the power control mode makes the total noise power and C/N independent variables while making the total power and carrier power dependent variables. The dependent variables total power and carrier power are set by the total noise power, C/N, and the rest of the Noise settings. The total power and carrier power change as any noise parameter is adjusted to keep the total noise power and the C/N at their last specified values. |
| Initial S/W Revision | A.16.00 |

Channel Noise

Set the power control mode as channel noise power.

| | |
|----------------------|--|
| Key Path | Source, Modulation Setup, ARB, ARB Setup, Real-Time AWGN Setup, Power Control Mode |
| Example | :SOUR:RAD:ARB:NOIS:POW:CONT NChannel |
| Couplings | Set to this value will make Channel Noise Power Channel Noise Power button visible, while Total Noise Power Total Noise Power and Carrier Power Carrier Power buttons invisible from menu. Selecting Channel Noise as the power control mode makes the noise power in channel and C/N independent variables while making the carrier power and total noise power dependent variables. The dependent variables carrier power and total noise power are set by the channel noise power, C/N, and the rest of the Noise settings. The carrier power and total noise power change as any noise parameter is adjusted to keep the channel noise power and the C/N at their last specified values. |
| Initial S/W Revision | A.16.00 |

Trigger Type

Allows access to the trigger type sub-menus. The setting for trigger type determines the behavior of the waveform when it plays.

| | |
|-----------------------|--|
| Key Path | Source, Modulation Setup, ARB |
| Remote Command | :SOURce:RADio:ARB:TRIGger:TYPE CONTInuous SINGLE SADVance :SOURce:RADio:ARB:TRIGger:TYPE? |
| Example | :SOUR:RAD:ARB:TRIG:TYPE CONT :SOUR:RAD:ARB:TRIG:TYPE? |
| Notes | Gated trigger type will be implemented at a later release |
| Preset | CONTInuous |
| Range | Continuous Single Seg Adv |
| Initial S/W Revision | A.05.00 |

Continuous

Sets the active trigger type to Continuous. If Continuous is already selected as the active trigger type, pressing this key allows access to the continuous trigger type setup menu. In Continuous trigger mode, the waveform repeats continuously.

| | |
|-----------------------------|--|
| Key Path | Source, Modulation Setup, ARB, Trigger Type |
| Remote Command | :SOURce:RADio:ARB:TRIGger:TYPE:CONTInuous[:TYPE] FREE TRIGger RESet :SOURce:RADio:ARB:TRIGger:TYPE:CONTInuous[:TYPE]? |
| Example | :SOUR:RAD:ARB:TRIG:TYPE:CONT FREE |
| Preset | FREE |
| Range | Free Run Trigger + Run Reset + Run |
| Initial S/W Revision | A.05.00 |

Free Run

Selects Free Run as the trigger response for the continuous trigger type. Free Run sets the waveform generator to play a waveform sequence or segment continuously, without waiting for a trigger. In this mode, the waveform generator does not respond to triggers.

| | |
|-----------------------------|--|
| Key Path | Source, Modulation Setup, ARB, Trigger Type, Continuous |
| Example | :SOUR:RAD:ARB:TRIG:TYPE:CONT FREE |
| Initial S/W Revision | A.05.00 |

Trigger + Run

Sets Trigger and Run as the trigger response for the continuous trigger type. Trigger and Run sets the waveform generator to play a waveform sequence or segment continuously when the first trigger is received, and to ignore any subsequent triggers.

| | |
|-----------------------------|--|
| Key Path | Source, Modulation Setup, ARB, Trigger Type, Continuous |
| Example | :SOUR:RAD:ARB:TRIG:TYPE:CONT TRIG |
| Initial S/W Revision | A.05.00 |

Reset + Run

Sets Reset and Run as the trigger response for the continuous trigger type. Reset and Run sets the waveform generator to play a waveform sequence or segment continuously when the first trigger is received. Subsequent triggers reset the waveform sequence or segment to the start, and then play it continuously.

| | |
|-----------------------------|--|
| Key Path | Source, Modulation Setup, ARB, Trigger Type, Continuous |
| Example | :SOUR:RAD:ARB:TRIG:TYPE:CONT RES |
| Initial S/W Revision | A.05.00 |

Single

Sets the active trigger type to Single. If Single is already selected as the active trigger type, pressing this key allows access to the single trigger type setup menu. In Single trigger mode, the waveform plays once.

| | |
|-----------------------------|--|
| Key Path | Source, Modulation Setup, ARB, Trigger Type |
| Remote Command | :SOURce:RADio:ARB:RETRigger ON OFF IMMediate :SOURce:RADio:ARB:RETRigger? |
| Example | :SOUR:RAD:ARB:RETR OFF |
| Notes | ON: Buffered Trigger OFF: No Retrigger Immediate: Restart on Trigger This is defined as an enumerated SCPI command, with ON OFF being considered as enumerated types rather than Boolean. This means the query will return OFF instead of 0, and ON instead of 1. |
| Preset | ON |
| Range | No Retrigger Buffered Trigger Restart on Trigger |
| Initial S/W Revision | A.05.00 |

No Retrigger

Selects No Retrigger as the trigger response for single trigger type. No Retrigger sets the waveform generator to play a waveform sequence or segment once when a trigger is received. Any triggers then received during playback are ignored.

| | |
|-----------------------------|--|
| Key Path | Source, Modulation Setup, ARB, Trigger Type, Single |
| Example | :SOUR:RAD:ARB:RETR OFF |
| Initial S/W Revision | A.05.00 |

Buffered Trigger

Selects Buffered Trigger as the trigger response for single trigger type. Buffered Trigger sets the waveform generator to play a waveform sequence or segment once when a trigger is received. If a trigger is received during playback, the waveform generator plays the sequence or segment to the end, then plays the sequence or segment once more.

| | |
|-----------------------------|--|
| Key Path | Source, Modulation Setup, ARB, Trigger Type, Single |
| Example | :SOUR:RAD:ARB:RETR ON |
| Initial S/W Revision | A.05.00 |

Restart on Trigger

Selects Restart on Trigger as the trigger response for single trigger type. Restart on Trigger sets the waveform generator to play a waveform sequence or segment once when a trigger is received. If a trigger is received during playback, the waveform generator resets and plays the sequence or segment from the start.

| | |
|-----------------------------|--|
| Key Path | Source, Modulation Setup, ARB, Trigger Type, Single |
| Example | :SOUR:RAD:ARB:RETR IMM |
| Initial S/W Revision | A.05.00 |

Segment Advance

Sets the active trigger type to Segment Advance. If Segment Advance is already selected as the active trigger type, pressing this key allows access to the segment advance trigger type setup menu.

Segment Advance triggering allows you to control the playback of waveform segments within a waveform sequence. When a trigger is received the ARB advances to the next waveform segment within the waveform sequence. This type of triggering ignores the repetition count for the waveform segment within the waveform sequence. For example, if a waveform segment has a repetition count of 10 and you select single segment advance triggering mode, the waveform segment will only play once.

Segment Advance triggering can also be used for waveform segments only. In this situation the same waveform segment is played again when a trigger is received.

| | |
|-----------------------------|---|
| Key Path | Source, Modulation Setup, ARB, Trigger Type |
| Remote Command | :SOURce:RADio:ARB:TRIGger:TYPE:SADVance[:TYPE] SINGLE CONTInuous :SOURce:RADio:ARB:TRIGger:TYPE:SADVance[:TYPE]? |
| Example | :SOUR:RAD:ARB:TRIG:TYPE:SADV SING |
| Preset | CONTInuous |
| Range | Single Continuous |
| Initial S/W Revision | A.05.00 |

Single

Selects Single as the trigger response for Segment Advance trigger type. With single selected, once a trigger is received a segment is played once. If a trigger is received during playback of a segment, the segment plays to completion and the next segment is played once.

| | |
|-----------------------------|---|
| Key Path | Source, Modulation Setup, ARB, Trigger Type, Segment Advance |
| Example | :SOUR:RAD:ARB:TRIG:TYPE:SADV SING |
| Initial S/W Revision | A.05.00 |

Continuous

Selects Continuous as the trigger response for Segment Advance trigger type. With continuous selected, once a trigger is received a segment is played continuously. When subsequent triggers are received, the currently playing segment plays to completion and then the next segment is played continuously.

| | |
|----------------------|---|
| Key Path | Source, Modulation Setup, ARB, Trigger Type, Segment Advance |
| Example | :SOUR:RAD:ARB:TRIG:TYPE:SADV CONT |
| Initial S/W Revision | A.05.00 |

Trigger Source

The trigger source setting determines how the source receives the trigger that starts the waveform playing. Therefore, this key is grayed out if the trigger type is free run, since free run triggers immediately with no trigger source required.

| | |
|-----------------------|---|
| Key Path | Source, Modulation Setup, ARB |
| Remote Command | :SOURce:RADio:ARB:TRIGger[:SOURce] KEY BUS EXTernal2 :SOURce:RADio:ARB:TRIGger[:SOURce]? |
| Example | :SOUR:RAD:ARB:TRIGger KEY |
| Dependencies | This key is grayed out if the current trigger type is Continuous, Free Run. |
| Preset | EXTernal2 |
| Range | Trigger Key Bus External 2 |
| Initial S/W Revision | A.05.00 |

Trigger Key

Sets the current trigger source to the front panel Trigger key. When Trigger Key is selected, the waveform is triggered when you press the front panel Trigger key.

| | |
|----------------------|--|
| Key Path | Source, Modulation Setup, ARB, Trigger Source |
| Example | :SOUR:RAD:ARB:TRIGger KEY |
| Initial S/W Revision | A.05.00 |

Bus

Sets the current trigger source to Bus. Selecting Bus trigger source enables triggering over GPIB, LAN, or USB using the :SOURce:RADio:ARB:TRIGger:INITiate command.

| | |
|----------------------|--|
| Key Path | Source, Modulation Setup, ARB, Trigger Source |
| Example | :SOUR:RAD:ARB:TRIGger BUS |
| Initial S/W Revision | A.05.00 |

External 2

Sets the current trigger source to External 2. Selecting External 2 enables triggering a waveform by an externally applied signal.

| | |
|----------------------|--|
| Key Path | Source, Modulation Setup, ARB, Trigger Source |
| Example | :SOUR:RAD:ARB:TRIGger EXT2 |
| Notes | Note: When on E6640A, trigger 2 is a bi-directional trigger port. So when trigger 2 has been configured as OUTPUT type, choosing External 2 as the input trigger for the current step will generate error. |
| Initial S/W Revision | A.05.00 |

Trigger Initiate

Used to initiate an immediate trigger event if the trigger source is set to Trigger Key.

| | |
|----------------------|---|
| Key Path | Source, Modulation Setup, ARB |
| Notes | No remote command, SCPI front panel only. |
| Initial S/W Revision | A.05.00 |

Waveform Sequences

Allows access to the waveform sequence sub-menus. Pressing this key changes the central view area to display the Waveform Sequence List view.

| | |
|----------------------|---|
| Key Path | Source, Modulation Setup, ARB |
| Notes | No remote command, SCPI front panel only. |
| Initial S/W Revision | A.05.00 |

Build New Sequence

Allows access to the sub-menus for creating a new waveform sequence. Pressing this key changes the central view area to display the Waveform Sequence Creation and Editing view.

| | |
|----------------------|--|
| Key Path | Source, Modulation Setup, ARB, Waveform Sequences |
| Notes | No remote command, SCPI front panel only. |
| Initial S/W Revision | A.05.00 |

Current Segment

Specifies the selected sequence segment that will be affected by the menu functions.

| | |
|----------------------|---|
| Key Path | Source, Modulation Setup , ARB, Waveform Sequences, Build New Sequence |
| Notes | No remote command, SCPI front panel only. This key is grayed out and unavailable if the sequence is currently empty. |
| Initial S/W Revision | A.05.00 |

Insert New Waveform

Allows you access to the sub-menu for inserting a new waveform segment or sequence. Pressing this key also changes the central display to show the Waveform File Selection View.

| | |
|----------------------|---|
| Key Path | Source, Modulation Setup, ARB, Waveform Sequences, Build New Sequence |
| Notes | No remote command, SCPI front panel only. Waveform segment name string length upper limit is 128 chars. Please do NOT insert waveform which name string exceeds 128 chars. |
| Initial S/W Revision | A.05.00 |

Insert Waveform

Inserts the currently highlighted waveform to the end of the waveform sequence. Pressing this key also returns you to the menus for creating or editing a sequence, and returns the central view to the sequence creation view.

| | |
|----------------------|---|
| Key Path | Source, Modulation Setup, ARB, Waveform Sequences, Build New Sequence, Insert New Waveform |
| Notes | No remote command, SCPI front panel only. Waveform segment name string length upper limit is 128 chars. Please do NOT insert waveform which name string exceeds 128 chars. |
| Initial S/W Revision | A.05.00 |

Segments on Hard Disk

Allows you access to the sub-menus for loading waveform segments from the hard disk into ARB memory. The default directory is: D: varb.

Pressing this key changes the current view to the Waveform Management View.

| | |
|----------------------|---|
| Key Path | Source, Modulation Setup, ARB, Select Waveform |
| Initial S/W Revision | A.05.00 |

Load Segment To ARB Memory

Allows you to load the selected file into ARB memory. On the front panel you select the file for loading to the ARB memory by highlighting the desired file in the list. Using the SCPI command, you specify the file name on the HDD.

“NVWFM” (none-volatile storage) MSUS (Mass Storage Unit Specifier) is supported in the memory subsystem because the ARB memory cannot be accessed directly. Therefore, files must be downloaded to the instrument hard disk and then loaded into the ARB memory. “NVWFM” MSUS will be mapped to the default directory D: VARB. The SCPI command supports using either “NVWFM” MSUS or specifying a full path. For more information, see [Memory Subsystem \(Remote Command Only\)](#).

If a file of the same name already exists within ARB memory, it is overwritten. If you wish to load two segments of the same name, you must rename one of the segments before loading it into ARB memory. To rename a segment, you can either use Windows File Explorer, or the :MMEMory:COPY command.

| | |
|-----------------------------|--|
| Key Path | Source, Modulation Setup, ARB, Select Waveform, Segments on Hard Disk |
| Remote Command | :SOURce:RADio:ARB:LOAD <string> |
| Example | :SOUR:RAD:ARB:LOAD "D: VARB\testwaveform.bin" or :SOUR:RAD:ARB:LOAD "NVWFM:testwaveform.bin" |
| Notes | <p>Because loading the file involves a delay of unpredictable length, this command should be followed by the query *OPC?, which holds off subsequent commands until the loading operating is complete.</p> <p><string> – specifies the path name of the file to load from the HDD into ARB memory. It could be a <full path + filename>, or <“NVWFM” MSUS + colon + filename>.</p> <p>When in Sequence Analyzer mode, and Include Source is Yes, an attempt to load a file to ARB memory will be rejected with an error.</p> <p>When Include Source is No and if there is insufficient free ARB memory to load the selected waveform, an error is generated. .</p> <p>If you specify a file over SCPI, but the file is not at the specified location, an error is generated.</p> <p>If you try to load a waveform file but the file contains less than 500 IQ samples, an error is generated.</p> <p>If you try to load a Signal Studio waveform “*.wfm” which contains invalid waveform header, an error is generated.</p> <p>If the ARB is ON when you load a file to ARB memory or delete a file from ARB memory, the playing waveform segment may not keep phase continuity during the ARB memory operation. The waveform will be replayed after the ARB operation is finished.</p> <p>ARB can be loaded into ARB memory even required licenses do not present on the instrument. In this case, a GUI only warning message –800, “Operation complete; Loaded <filename> successfully, but no license <required licenses> installed”. User can install required licenses according to <required licenses> string to license it, or multi-pack license it.</p> |
| Initial S/W Revision | A.05.00 |

Load All To ARB Memory

Allows you to load all the segment files within the currently selected directory into ARB memory. If a file of the same name already exists within ARB memory, it is overwritten. If you wish to load two segments of the

same name, you must rename one of the segments before loading it into ARB memory. To rename a segment, you can either use Windows File Explorer, or the :MEMORY:COPY command.

| | |
|----------------------|---|
| Key Path | Source, Modulation Setup, ARB, Select Waveform, Segments on Hard Disk |
| Remote Command | :SOURce:RADio:ARB:LOAD:ALL <string> |
| Example | :SOUR:RAD:ARB:LOAD:ALL "D: varb" |
| Notes | <p><string> - specifies the directory on the HDD to load the files into ARB memory from.</p> <p>When in Sequence Analyzer mode, and Include Source is Yes, an attempt to load all files from a directory to ARB memory is rejected with an error.</p> <p>When Include Source is No and there is insufficient free ARB memory to load all the waveforms, when the ARB memory is full, the copy ceases, and an error is generated.</p> <p>If you specify a directory over SCPI, but the directory does not exist, an error is generated.</p> <p>If the ARB is ON, a user then loads or deletes file to ARB memory, the playing waveform segment may not keep phase continuity during the ARB memory operation. The waveform will be replayed after the ARB operation is finished.</p> |
| Initial S/W Revision | A.05.00 |

Change Directory...

Allows you to change the currently selected directory on the hard disk. Pressing this key opens a standard windows change directory dialog allowing you to select the new directory of interest.

The current directory is used for manually loading waveform segments into ARB memory for playback, and as a search location for waveform segments that are required to be loaded into ARB memory for playback of a waveform sequence or a list sequence.

| | |
|----------------------|--|
| Key Path | Source, Modulation Setup, ARB, Select Waveform, Segments on Hard Disk |
| Notes | No remote command, SCPIfront panel only. |
| Initial S/W Revision | A.05.00 |

Default Directory...

Allows you to change the default directory. It is used as a search location for waveform segments that are required to be loaded into ARB memory for playback of a waveform sequence, and as a search location for selecting waveforms using SCPI.

| | |
|----------------------|---|
| Key Path | Source, Modulation Setup, ARB, Select Waveform, Segments on Hard Disk |
| Remote Command | :SOURce:RADio:ARB:DEFault:DIRectory <string> :SOURce:RADio:ARB: DEFault:DIRectory? |
| Example | :SOUR:RAD:ARB:DEF:DIR "D:\ArbFiles" :SOUR:RAD:ARB:DEF:DIR? |
| State Saved | Persistent, survives a power cycle and a preset but not saved in the instrument state |
| Initial S/W Revision | A.05.00 |

Segments in ARB Memory

Allows you access to the sub-menus for managing the files within ARB memory.

| | |
|----------------------|---|
| Key Path | Source, Modulation Setup, ARB, Select Waveform |
| Initial S/W Revision | A.05.00 |

Delete Segment From ARB Mem

Allows you to remove a segment from ARB playback memory.

| | |
|----------------------|---|
| Key Path | Source, Modulation Setup, ARB, Select Waveform, Segments in ARB Memory |
| Remote Command | :SOURce:RADio:ARB:DELeTe <string> |
| Example | :SOUR:RAD:ARB:DEL "testwaveform.bin" |
| Notes | <p><string> - specifies the waveform to be deleted from the ARB playback memory.</p> <p>When in Sequence Analyzer mode and Include Source is Yes, an attempt to delete a file from ARB memory is rejected with an error.</p> <p>When Include Source is No and you specify a file that does not exist within ARB memory, an error is generated.</p> <p>It is possible to delete files from within the ARB memory when the ARB is ON. However, if you attempt to delete the file that is currently playing an error is generated.</p> <p>It is possible to delete a file from within the ARB memory when the sequencer state is ON and the file is not being used by the List Sequencer. If you attempt to delete a file which is being used by the list sequencer, an error is generated.</p> <p>When sequencer state is On, even if ARB state is On, the selected waveform will not be played. In this case, if the selected waveform is not used in List Sequence, it can be deleted and the ARB state is turned Off.</p> <p>If the ARB is ON and you load a file to ARB memory or delete a file from ARB memory, the playing waveform segment may not keep phase continuity during the ARB memory operation. The waveform will be replayed after the ARB operation is finished.</p> |
| Initial S/W Revision | A.05.00 |

Delete All From ARB Memory

Allows you to remove all segments from ARB playback memory.

| | |
|----------------|---|
| Key Path | Source, Modulation Setup, ARB, Select Waveform, Segments in ARB Memory |
| Remote Command | :SOURce:RADio:ARB:DELeTe:ALL |
| Example | :SOUR:RAD:ARB:DELeTe:ALL |
| Notes | <p>When in Sequence Analyzer mode and Include Source is Yes, an attempt to delete all files from ARB memory is rejected with an error.</p> <p>When Include Source is No and you attempt to delete all files from ARB memory when the ARB is currently playing a file, all files except the one playing are deleted and an error is generated.</p> <p>If you attempt to delete all files from ARB memory when there are waveform files used in "List</p> |

"Sequencer" on page 2585 and **"Sequencer" on page 2586** state is ON, all files except the files currently being used in list sequencer are deleted, and an error is generated.

If the ARB is ON and you load a file to ARB memory or delete a file from ARB memory, the playing waveform segment may not keep phase continuity during the ARB memory operation. The waveform will be replayed after the ARB operation is finished.

| | |

Query ARB Memory File List (Remote Command Only)

This command functions the same as ["Query ARB Memory File List \(Remote Command Only\)" on page 2540](#).

| | |
|----------------------|------------------|
| Initial S/W Revision | Prior to A.09.00 |
|----------------------|------------------|

Edit Selected Waveform

Allows access to the sub-menus for editing the details of the currently selected waveform segment.

| | |
|----------------------|--|
| Key Path | Source, Modulation Setup, ARB, Waveform Sequences, Build New Sequence |
| Notes | No remote command, front panel only. |
| Initial S/W Revision | A.05.00 |

Repetitions

Allows you to specify the number of times the currently selected waveform is played within the sequence.

| | |
|----------------------|--|
| Key Path | Source, Modulation Setup, ARB, Waveform Sequences, Build New Sequence, Edit Selected Waveform |
| Notes | No remote command, SCPI front panel only. |
| Preset | 1 |
| Min | 1 |
| Max | 65535 |
| Initial S/W Revision | A.05.00 |

Marker 1

Allows you to enable or disable marker 1 for the currently selected waveform. For a waveform sequence, you can enable and disable markers on a per-segment basis, allowing you to output markers from some waveform segments within the sequence, but not for others.

| | |
|----------------------|--|
| Key Path | Source, Modulation Setup, ARB, Waveform Sequences, Build New Sequence, Edit Selected Waveform |
| Notes | No remote command, front panel only. |
| Preset | Enabled |
| Range | Enabled Disabled |
| Initial S/W Revision | A.05.00 |

Marker 2

Allows you to enable or disable marker 2 for the currently selected waveform. For a waveform sequence, you can enable and disable markers on a per-segment basis, allowing you to output markers from some waveform segments within the sequence, but not for others.

| | |
|----------------------|--|
| Key Path | Source, Modulation Setup, ARB, Waveform Sequences, Build New Sequence, Edit Selected Waveform |
| Notes | No remote command, front panel only. |
| Preset | Enabled |
| Range | Enabled Disabled |
| Initial S/W Revision | A.05.00 |

Marker 3

Allows you to enable or disable marker 3 for the currently selected waveform. For a waveform sequence, you can enable and disable markers on a per-segment basis, allowing you to output markers from some waveform segments within the sequence, but not for others.

| | |
|----------------------|--|
| Key Path | Source, Modulation Setup, ARB, Waveform Sequences, Build New Sequence, Edit Selected Waveform |
| Notes | No remote command, front panel only. |
| Preset | Enabled |
| Range | Enabled Disabled |
| Initial S/W Revision | A.05.00 |

Marker 4

Allows you to enable or disable marker 4 for the currently selected waveform. For a waveform sequence, you can enable and disable markers on a per-segment basis, allowing you to output markers from some waveform segments within the sequence, but not for others.

| | |
|----------------------|--|
| Key Path | Source, Modulation Setup, ARB, Waveform Sequences, Build New Sequence, Edit Selected Waveform |
| Notes | No remote command, front panel only. |
| Preset | Enabled |
| Range | Enabled Disabled |
| Initial S/W Revision | A.05.00 |

Delete Segment

Allows you to delete the selected segment from the waveform sequence.

| | |
|----------------------|--|
| Key Path | Source, Modulation Setup, ARB, Waveform Sequences, Build New Sequence |
| Notes | No remote command, front panel only. |
| Initial S/W Revision | A.05.00 |

Save Sequence...

Pressing this key displays the “Save As” dialog. The sequence name is passed to the save as dialog to use as the filename for saving, and the directory the save as dialog will open into is the default waveform directory.

| | |
|----------------------|--|
| Key Path | Source, Modulation Setup, ARB, Waveform Sequences, Build New Sequence |
| Initial S/W Revision | A.05.00 |

Build New Sequence (Remote Command Only)

This command is the SCPI equivalent of the waveform sequence creation features described in ["Build New Sequence" on page 2554](#).

This command writes a waveform sequence file to the hard disk. You must specify the waveform sequence file path and filename which will be saved on the hard disk, and the waveform segment file path and name which will be nested into the waveform sequence file. You can utilize mass storage unit specifier (MSUS) "NVWFM" or use a real full path representation. See the example below. MSUS "NVWFM" is mapped to D:VARB directory on test set hard disk.

Any number of segments, up to a segment count limit of 64, can be used to create a sequence. Repeated segments are included in the count limit.

Each waveform segment name string length upper limit is 128 chars. Please do NOT insert waveform which name string exceeds 128 chars.

The internal source does not support nesting one waveform sequence file into another waveform sequence file.

Remote Command :SOURce:RADio:ARB:SEQuence[:MWAVeform] <filename>, <waveform1>, <reps>, NONE | M1 | M2 | M3 | M4 | M1M2 | M1M3 | M1M4 | M2M3 | M2M4 | M3M4 | M1M2M3 | M1M2M4 | M1M3M4 | M2M3M4 | M1M2M3M4 | ALL, {<waveform2>, <reps>, NONE | M1 | M2 | M3 | M4 | M1M2 | M1M3 | M1M4 | M2M3 | M2M4 | M3M4 | M1M2M3 | M1M2M4 | M1M3M4 | M2M3M4 | M1M2M3M4 | ALL, } ...

(For additional description of each item, see Notes below ["For Setup SCPI" on page 1171](#) "For Setup SCPI".)

:SOURce:RADio:ARB:SEQuence[:MWAVeform]? <filename>

(For additional description of each item, see Notes ["For Query SCPI" on page 1172](#) below.)

Example

For setup:

```
>:SOUR:RAD:ARB:SEQ "NVWFM:testSeq1.seq", "NVWFM:wfmSegment1.wfm", 10, M2M3M4, "NVWFM:wfmSegment2.wfm", 20, M1M3
```

Or

```
>:SOUR:RAD:ARB:SEQ "D: VARB\testSeq1.seq", " D: VARB\wfmSegment1.wfm", 10, M2M3M4, " D: VARB\wfmSegment2.wfm", 20, M1M3
```

For query, must specify which waveform sequence file to query.

```
>:SOUR:RAD:ARB:SEQ? "NVWFM:testSeq1.seq"
```

Or

```
>:SOUR:RAD:ARB:SEQ? "D: VARB\testSeq1.seq",
```

Notes

For Setup SCPI

For the Setup SCPI command, the parameters are:

<filename> - String Type

This variable specifies the path and name for the waveform sequence file. The path supports MSUS (NVWFM) or a real full path representation. See example.

<waveform1> - String Type

This variable specifies the path and name of the first existing waveform segment. The path supports

MSUS (NVWFM) or a real full path representation. See example.

The segment file must reside within ARB playback memory before it can be played by the ARB player.

<reps> - Integer Type

This variable specifies the number of times a segment or sequence plays before moving on to the next segment or sequence.

<marker> - Enum Type

NONE - This choice disables all four markers for the waveform. Disabling markers means that the waveform sequence ignores the segments or sequence marker settings.

M1, M2, M3, M4 - these choices, either individually or a combination of them, enable the markers for the waveform segment or sequence. Markers not specified are ignored for that segment or sequence.

ALL - This choice enables all four markers in the waveform segment or sequence.

<waveform2> - String type.

This variable specifies the name of a second existing waveform segment. The path supports MSUS (NVWFM) and real full path representation both. See example.

The segment file must reside within ARB playback memory before it can be played by the ARB player.

<reps> same as above, for the 2nd waveform segment.

<marker> same as above, for the 2nd waveform segment.

You can insert several waveform segments into a waveform sequence file. Just repeat inserting waveform segments as described above.

Error Checks for Setup SCPI command:

If you do not specify a filename, or you use an unsupported MSUS (that is, not NVWFM), or have an error in the waveform sequence file path, an error is generated.

Notes

Error Checks for Query SCPI command: (Continued)

If the specified waveform sequence file name suffix is not “.seq”, error is generated.

If you use an unsupported MSUS (that is, not NVWFM), or have an error in the waveform segment file path, an error is generated.

If the first specified waveform file cannot be found, an error is generated.

If you nest one waveform sequence file into another waveform sequence file, an error is generated.

If the specified repetition value is larger than 65535 or smaller than 1, an error is generated.

If the specified marker type is unrecognized, an error is generated.

For Query SCPI

For the Query the parameters are:

<filename> - String type.

This variable specifies the path and name of the waveform sequence file being queried. The path supports MSUS (NVWFM) or a real full path representation. See example.

The return value is a <string>, which includes each waveform segment file name, repetitions, and marker type. For example:

>:SOUR:RAD:ARB:SEQ? “NVWFM:testSeq1.seq”,

<“wfmSegment1.wfm, 10, ALL, wfmSegment2.wfm, 20, M1M3”,

Error Checks for Query SCPI command:

If you do not specify a filename, an error is generated.
 If the waveform sequence file name is empty, an error is generated.
 If the specified waveform sequence file cannot be found, an error is generated.

| | |
|----------------------|---------|
| Initial S/W Revision | A.05.00 |
|----------------------|---------|

Edit Selected Sequence

Allows access to the sub-menus for editing the sequence currently selected within the Waveform Sequence List view. Pressing this key changes the central view area to display the Waveform Sequence Creation and Editing view.

| | |
|----------------------|--|
| Key Path | Source, Modulation Setup, ARB, Waveform Sequences |
| Notes | No remote command, front panel only. |
| Initial S/W Revision | A.05.00 |

Current Directory...

Allows you to change the currently selected directory on the hard disk. Pressing this key opens a standard windows change directory dialog and allows you to select the new directory of interest.

| | |
|----------------------|--|
| Key Path | Source, Modulation Setup, ARB, Waveform Sequences |
| Notes | No remote command, front panel only. |
| Initial S/W Revision | A.05.00 |

Waveform Utilities

Allows you access to the waveform utilities sub-menus.

| | |
|----------------------|--------------------------------------|
| Key Path | Source, Modulation Setup, ARB |
| Initial S/W Revision | A.05.00 |

Multi-Pack Licenses

Allows you access to the Multi - Pack License sub-menus. Pressing this key also changes the central view area to display the Multi -Pack License Management view.

On modular instrument like E6630A or E6640A, multi-pack license operations are only allowed on the default module, i.e. “Left” module for E6630A or “TRX1” module for E6640A.

| | |
|----------------------|---|
| Key Path | Source, Modulation Setup, ARB, Waveform Utilities |
| Dependencies | This key is only available if there is at least one Multi-pack license installed on the instrument. |
| Initial S/W Revision | A.05.00 |

Add Waveform

Pressing this key accesses the Add Waveform sub-menu. It also changes the central display area to display the Multi-Pack License Waveform Add view.

| | |
|----------------------|--|
| Key Path | Source, Modulation Setup, ARB, Waveform Utilities, Multi-Pack Licenses |
| Dependencies | This key is only available if there is at least one slot available within at least one multi-pack license. |
| Initial S/W Revision | A.05.00 |

Add Waveform

Allows you to add the currently selected waveform segment to a multi-pack license. The new waveform is added to the next available slot regardless of which slot was selected on the Multi-Pack License Management view.

| | |
|----------------------|---|
| Key Path | Source, Modulation Setup, ARB, Waveform Utilities, Multi-Pack Licenses, Add Waveform |
| Remote Command | :SYSTem:LKEY:WAVeform:ADD <string> or :SYSTem:LICense[:FPACK]:WAVeform:ADD <string> |
| Example | SYST:LKEY:WAV:ADD "mywaveform.wfm" or SYST:LIC:WAV:ADD "mywaveform.wfm" |
| Notes | The second SCPI :SYSTem:LICense[:FPACK]:WAVeform:ADD is provided to be consistent with the style of Keysight signal sources. You can use either one of them. Since adding a waveform segment to a Multi-Pack license causes the license slot to enter the trial period of only 48 hours, pressing this key causes a confirmation dialog to be displayed to ensure you do want to add the waveform segment to the Multi-Pack. If you attempt to license a waveform that is already licensed using another slot an error is generated. . |
| Dependencies | This key is only available if the currently selected file is a secure waveform requiring a license, and there is at least one slot available within at least one multi-pack license. If the waveform highlighted is a secure waveform, but is already licensed, this key will be unavailable. |
| Initial S/W Revision | A.05.00 |

Segments on Hard Disk

Allows you access to the sub-menus for loading waveform segments from the hard disk into ARB memory. The default directory is: D: varb.

Pressing this key changes the current view to the Waveform Management View.

| | |
|----------------------|---|
| Key Path | Source, Modulation Setup, ARB, Select Waveform |
| Initial S/W Revision | A.05.00 |

Load Segment To ARB Memory

Allows you to load the selected file into ARB memory. On the front panel you select the file for loading to the ARB memory by highlighting the desired file in the list. Using the SCPI command, you specify the file name on the HDD.

“NVWFM” (none-volatile storage) MSUS (Mass Storage Unit Specifier) is supported in the memory subsystem because the ARB memory cannot be accessed directly. Therefore, files must be downloaded to the instrument hard disk and then loaded into the ARB memory. “NVWFM” MSUS will be mapped to the default directory D: VARB. The SCPI command supports using either “NVWFM” MSUS or specifying a full path. For more information, see [Memory Subsystem \(Remote Command Only\)](#).

If a file of the same name already exists within ARB memory, it is overwritten. If you wish to load two segments of the same name, you must rename one of the segments before loading it into ARB memory. To rename a segment, you can either use Windows File Explorer, or the :MMEMory:COPI command.

| | |
|-----------------------------|---|
| Key Path | Source, Modulation Setup, ARB, Select Waveform, Segments on Hard Disk |
| Remote Command | :SOURce:RADio:ARB:LOAD <string> |
| Example | :SOUR:RAD:ARB:LOAD "D: VARB\testwaveform.bin" or :SOUR:RAD:ARB:LOAD "NVWFM:testwaveform.bin" |
| Notes | <p>Because loading the file involves a delay of unpredictable length, this command should be followed by the query *OPC?, which holds off subsequent commands until the loading operating is complete.</p> <p><string> – specifies the path name of the file to load from the HDD into ARB memory. It could be a <full path + filename>, or <“NVWFM” MSUS + colon + filename>.</p> <p>When in Sequence Analyzer mode, and Include Source is Yes, an attempt to load a file to ARB memory will be rejected with an error.</p> <p>When Include Source is Noand if there is insufficient free ARB memory to load the selected waveform, an error is generated. .</p> <p>If you specify a file over SCPI, but the file is not at the specified location, an error is generated.</p> <p>If you try to load a waveform file but the file contains less than 500 IQ sampes, an error is generated.</p> <p>If you try to load a Signal Studio waveform “*.wfm” which contains invalid waveform header, an error is generated.</p> <p>If the ARB is ON when you load afile to ARB memory or delete a file from ARB memory, the playing waveform segment may not keep phase continuity during the ARB memory operation. The waveform will be replayed after the ARB operation is finished.</p> <p>ARB can be loaded into ARB memory even required licenses do not present on the instrument. In this case, a GUI only warning message -800, “Operation complete; Loaded <filename> successfully, but no license <required licenses> installed”. User can install required licenses according to <required licenses> string to license it, or multi-pack license it.</p> |
| Initial S/W Revision | A.05.00 |

Load All To ARB Memory

Allows you to load all the segment files within the currently selected directory into ARB memory. If a file of the same name already exists within ARB memory, it is overwritten. If you wish to load two segments of the same name, you must rename one of the segments before loading it into ARB memory. To rename a segment, you can either use Windows File Explorer, or the :MEMory:COpy command.

| | |
|-----------------------------|---|
| Key Path | Source, Modulation Setup, ARB, Select Waveform, Segments on Hard Disk |
| Remote Command | :SOURce:RADio:ARB:LOAD:ALL <string> |
| Example | :SOUR:RAD:ARB:LOAD:ALL "D: varb" |
| Notes | <p><string> - specifies the directory on the HDD to load the files into ARB memory from.</p> <p>When in Sequence Analyzer mode, and Include Source is Yes, an attempt to load all files from a directory to ARB memory is rejected with an error.</p> <p>When Include Source is No and there is insufficient free ARB memory to load all the waveforms, when the ARB memory is full, the copy ceases, and an error is generated.</p> <p>If you specify a directory over SCPI, but the directory does not exist, an error is generated.</p> <p>If the ARB is ON, a user then loads or deletes file to ARB memory, the playing waveform segment may not keep phase continuity during the ARB memory operation. The waveform will be replayed after the ARB operation is finished.</p> |
| Initial S/W Revision | A.05.00 |

Change Directory...

Allows you to change the currently selected directory on the hard disk. Pressing this key opens a standard windows change directory dialog allowing you to select the new directory of interest.

The current directory is used for manually loading waveform segments into ARB memory for playback, and as a search location for waveform segments that are required to be loaded into ARB memory for playback of a waveform sequence or a list sequence.

| | |
|-----------------------------|--|
| Key Path | Source, Modulation Setup, ARB, Select Waveform, Segments on Hard Disk |
| Notes | No remote command, SCPIfront panel only. |
| Initial S/W Revision | A.05.00 |

Default Directory...

Allows you to change the default directory. It is used as a search location for waveform segments that are required to be loaded into ARB memory for playback of a waveform sequence, and as a search location for selecting waveforms using SCPI.

| | |
|-----------------------|---|
| Key Path | Source, Modulation Setup, ARB, Select Waveform, Segments on Hard Disk |
| Remote Command | :SOURce:RADio:ARB:DEFault:DIRectory <string> :SOURce:RADio:ARB: DEFault:DIRectory? |
| Example | :SOUR:RAD:ARB:DEF:DIR "D:\ArbFiles" |

| | |
|----------------------|---|
| | :SOUR:RAD:ARB:DEF:DIR? |
| State Saved | Persistent, survives a power cycle and a preset but not saved in the instrument state |
| Initial S/W Revision | A.05.00 |

Segments on Hard Disk

This key functions the same as ["Segments on Hard Disk" on page 2611](#).

| | |
|----------------------|---|
| Key Path | Source, Modulation Setup, ARB, Waveform Utilities, Multi-Pack Licenses, Add Waveform |
| Initial S/W Revision | Prior to A.09.00 |

Load Segment To ARB Memory

This key functions the same as ["Load Segment To ARB Memory" on page 2611](#).

| | |
|----------------------|--|
| Key Path | Source, Modulation Setup, ARB, Waveform Utilities, Multi-Pack Licenses, Add Waveform, Segment on Hard Drive |
| Initial S/W Revision | Prior to A.09.00 |

Load All To ARB Memory

This key functions the same as ["Load All To ARB Memory" on page 2612](#).

| | |
|----------------------|--|
| Key Path | Source, Modulation Setup, ARB, Waveform Utilities, Multi-Pack Licenses, Add Waveform, Segment on Hard Drive |
| Initial S/W Revision | Prior to A.09.00 |

Change Directory ...

This key functions the same as ["Change Directory..." on page 2613](#).

| | |
|----------------------|--|
| Key Path | Source, Modulation Setup, ARB, Waveform Utilities, Multi-Pack Licenses, Add Waveform, Segment on Hard Drive |
| Initial S/W Revision | Prior to A.09.00 |

Default Directory ...

This key functions the same as ["Default Directory..." on page 2613](#)

| | |
|----------|--|
| Key Path | Source, Modulation Setup, ARB, Waveform Utilities, Multi-Pack Licenses, Add Waveform, Segment on Hard Drive |
|----------|--|

| | |
|----------------------|------------------|
| Initial S/W Revision | Prior to A.09.00 |
|----------------------|------------------|

Replace Waveform

Pressing this key accesses the Replace Waveform submenu. It also changes the central display area to display the Multi-Pack License Waveform Add view.

| | |
|----------------------|--|
| Key Path | Source, Modulation Setup, ARB, Waveform Utilities, Multi-Pack Licenses |
| Dependencies | This key is only available if the currently selected slot is in the trial state. |
| Initial S/W Revision | A.05.00 |

Replace Waveform

Allows you to replace the waveform in the currently selected slot with the waveform currently selected in the Multi-Pack License Waveform Add view.

| | |
|----------------------|--|
| Key Path | Source, Modulation Setup, ARB, Waveform Utilities, Multi-Pack Licenses, Replace Waveform |
| Remote Command | :SYSTem:LKEY:WAVeform:REPLace <int>, <string> or :SYSTem:LiCense[:FPACK]:WAVeform:REPLace <int>, <string> |
| Example | SYST:LKEY:WAV:REPL 1, "myotherwaveform.wfm" or :SYST:LIC:WAV:REPL 1, "myotherwaveform.wfm" |
| Notes | The second SCPI :SYSTem:LiCense[:FPACK]:WAVeform:REPLace is provided to be consistent with the style of Keysight signal sources. You can use either one of them. If you attempt to license a waveform that is already licensed using another slot an error is generated. Waveform slot number <int> is positive. If you attempt to input a slot number less than or equals 0, an error is generated. |
| Initial S/W Revision | A.05.00 |

Segments on Hard Disk

This key functions the same as ["Segments on Hard Disk" on page 2611](#).

| Initial S/W Revision | Prior to A.09.00 |

Default Directory ...

This key functions the same as ["Default Directory..."](#) on page 2613

| | |
|----------------------|--|
| Key Path | Source, Modulation Setup, ARB, Waveform Utilities, Multi-Pack Licenses, Replace Waveform, Segment on Hard Drive |
| Initial S/W Revision | Prior to A.09.00 |

Clear Waveform from Slot

Allows you to clear the waveform from the selected slot.

| | |
|-----------------------|--|
| Key Path | Source, Modulation Setup, ARB, Waveform Utilities, Multi-Pack Licenses |
| Remote Command | :SYSTem:LKEY:WAVeform:CLEar <int> or :SYSTem:LIcense[:FPACK]:WAVeform:CLEar <int> |
| Example | SYST:LKEY:WAV:CLE 1 or :SYST:LIC:WAV:CLE 1 |
| Notes | The second SCPI :SYSTem:LIcense[:FPACK]:WAVeform:CLEar is provided to be consistent with the style of Keysight signal sources. You can use either one of them. |

Waveform slot number <int> is positive. If you attempt to input a slot number less than or equals 0, an error is generated.

Dependencies This key is only available if the currently selected slot is in the trial state.

Initial S/W Revision A.05.00

Lock Waveform in Slot

If the selected slot is in the trial state or the lock required state, the waveform that occupies the slot is locked and permanently licensed.

Key Path **Source, Modulation Setup, ARB, Waveform Utilities, Multi-Pack Licenses**

Remote Command :SYSTem:LKEY:WAVeform:LOCK <int>
or
:SYSTem:LICense[:FPACK]:WAVeform:LOCK <int>

Example SYST:LKEY:WAV:LOCK 1
or
SYST:LIC:WAV:LOCK 1

Notes The second SCPI :SYSTem:LICense[:FPACK]:WAVeform:LOCK is provided to be consistent with the style of Keysight signal sources. You can use either one of them.
Waveform slot number <int> is positive. If you attempt to input a slot number less than or equals 0, an error is generated.

Dependencies This key is only available if the currently selected slot is in the trial state or the lock required state.

Initial S/W Revision A.05.00

Slot Status Query (Remote Command Only)

Returns the status of the specified slot.

Remote Command :SYSTem:LKEY:WAVeform:STATus? <int>
or
:SYSTem:LICense[:FPACK]:WAVeform:STATus? <int>

Example :SYST:LKEY:WAV:STAT? 1
<"Locked"
or
:SYST:LIC:WAV:STAT? 1
<"Locked"

Notes The second SCPI :SYSTem:LICense[:FPACK]:WAVeform:STATus is provided to be consistent with the style of Keysight signal sources. You can use either one of them.
Waveform slot number <int> is positive. If you attempt to input a slot number less than or equals 0, an error is generated.

| | |
|----------------------|--|
| | error is generated. Result type is string. If input slot number exceeds total available slot number, "Nonexistent" is returned. |
| Range | "Locked" "Available" "Trail" "LockRequired" "Nonexistent" |
| Initial S/W Revision | A.05.00 |

Slots Free Query (Remote Command Only)

Returns the number of license slots free.

| | |
|-----------------------|---|
| Remote Command | :SYSTem:LKEY:WAVeform:FREE? or :SYSTem:LIcense[:FPACK]:WAVeform:FREE? |
| Example | :SYST:LKEY:WAV:FREE? or :SYST:LIC:WAV:FREE? |
| Notes | The second SCPI :SYSTem:LIcense[:FPACK]:WAVeform:FREE is provided to be consistent with the style of Keysight signal sources. You can use either one of them. |
| Initial S/W Revision | A.05.00 |

Slot Used Query (Remote Command Only)

Returns the number of license slots used.

| | |
|-----------------------|---|
| Remote Command | :SYSTem:LKEY:WAVeform:USED? or :SYSTem:LIcense[:FPACK]:WAVeform:USED? |
| Example | :SYST:LKEY:WAV:USED? or :SYST:LIC:WAV:USED? |
| Notes | The second SCPI :SYSTem:LIcense[:FPACK]:WAVeform:USED is provided to be consistent with the style of Keysight signal sources. You can use either one of them. |
| Initial S/W Revision | A.05.00 |

Slot Waveform Name Query (Remote Command Only)

Returns the waveform name of the specified slot

| | |
|-----------------------|---|
| Remote Command | :SYSTem:LKEY:WAVeform:NAME? <int> or :SYSTem:LIcense[:FPACK]:WAVeform:NAME? <int> |
|-----------------------|---|

| | |
|-----------------------------|---|
| Example | :SYST:LKEY:WAV:NAME? 1 <"CDMA2K_22.wfm" or :SYST:LIC:WAV:NAME? 1 <"CDMA2K_22.wfm" |
| Notes | Waveform slot number <int> is positive. If you attempt to input a slot number less than or equals 0, an error is generated. Result type is string. If input slot number exceeds total available slot number, "Nonexistent" is returned. If no waveform stored in the specified slot, then empty string is returned. |
| Initial S/W Revision | A.12.00 |

Slot Waveform Unique ID Query (Remote Command Only)

Returns the waveform unique ID of the specified slot

| | |
|-----------------------------|---|
| Remote Command | :SYSTem:LKEY:WAVeform:UID? <int> or :SYSTem:LIcense[:FPACK]:WAVeform:UID? <int> |
| Example | :SYST:LKEY:WAV:UID? 2 <"1346752140" or :SYST:LIC:WAV:UID? 2 <"1346752140" |
| Notes | Waveform slot number <int> is positive. If you attempt to input a slot number less than or equals 0, an error is generated. Result type is string. If input slot number exceeds total available slot number, "Nonexistent" is returned. If no waveform stored in the specified slot, then "0" is returned |
| Initial S/W Revision | A.12.00 |

Locked Waveform Name List Query (Remote Command Only)

Returns the waveform name list of locked.

| | |
|-----------------------------|---|
| Remote Command | :SOURce:RADio:ARB:MPLicensed:NAME:LOCKed? |
| Example | SOUR:RAD:ARB:MPL:NAME:LOCKed? <"CDMA2K_27.wfm", "GSM_MCS1.WFM", "c2kWfm.wfm" |
| Initial S/W Revision | A.11.00 |

Locked Waveform Unique ID List Query (Remote Command Only)

Returns the waveform unique id list of locked.

| | |
|-----------------------------|---|
| Remote Command | :SOURce:RADio:ARB:MPLicensed:UID:LOCKed? |
| Example | SOUR:RAD:ARB:MPL:UID:LOCKed? <"2996927136","3812603511","3710986266" |
| Notes | Each Signal Studio waveform has a unique id recorded in header. So if the unique ids are same, that means they are same one waveform. So besides SCPI to query locked waveform name list, also provide a SCPI to query locked waveform unique id list |
| Initial S/W Revision | A.11.00 |

Marker Utilities

Allows access to the marker utilities sub-menus.

| | |
|-----------------------------|--------------------------------------|
| Key Path | Source, Modulation Setup, ARB |
| Initial S/W Revision | A.05.00 |

Marker Polarity

Allows access to the marker polarity sub-menu, which allows you to specify the polarity for the four markers. For a positive polarity, the marker signal is high during the marker points. For a negative marker polarity, the marker signal is high during the period of no marker points.

| | |
|-----------------------------|--|
| Key Path | Source, Modulation Setup, ARB, Marker Utilities |
| Initial S/W Revision | A.05.00 |

Mkr 1 Polarity

Allows you to set the polarity of marker 1.

| | |
|-----------------------------|---|
| Key Path | Source, Modulation Setup, ARB, Marker Utilities, Marker Polarity |
| Remote Command | :SOURce:RADio:ARB:MPOLarity:MARKer1 POSitive NEGative :SOURce:RADio:ARB:MPOLarity:MARKer1? |
| Example | :SOUR:RAD:ARB:MPOL:MARK1 NEG |
| Dependencies | When a new waveform is selected for playback the settings contained within the associated waveform header file are applied to the ARB. The marker polarity is one of the values stored within the header file. If the newly selected waveform file has an associated header file, the marker polarity is updated with the value from the header file. The marker polarity will remain unchanged if the newly selected waveform does not have an associated header file. |
| Preset | Pos |
| Range | Neg Pos |
| Initial S/W Revision | A.05.00 |

Mkr 2 Polarity

Allows you to set the polarity of marker 2.

| | |
|-----------------------------|---|
| Key Path | Source, Modulation Setup, ARB, Marker Utilities, Marker Polarity |
| Remote Command | :SOURce:RADio:ARB:MPOLarity:MARKer2 POSitive NEGative :SOURce:RADio:ARB:MPOLarity:MARKer2? |
| Example | :SOUR:RAD:ARB:MPOL:MARK2 NEG |
| Dependencies | When a new waveform is selected for playback the settings contained within the associated waveform header file are applied to the ARB. The marker polarity is one of the values stored within the header file. If the newly selected waveform file has an associated header file, the marker polarity is updated with the value from the header file. The marker polarity will remain unchanged if the newly selected waveform does not have an associated header file. |
| Preset | Pos |
| Range | Neg Pos |
| Initial S/W Revision | A.05.00 |

Mkr 3 Polarity

Allows you to set the polarity of marker 3.

| | |
|-----------------------------|---|
| Key Path | Source, Modulation Setup, ARB, Marker Utilities, Marker Polarity |
| Remote Command | :SOURce:RADio:ARB:MPOLarity:MARKer3 POSitive NEGative :SOURce:RADio:ARB:MPOLarity:MARKer3? |
| Example | :SOUR:RAD:ARB:MPOL:MARK3 NEG |
| Dependencies | When a new waveform is selected for playback the settings contained within the associated waveform header file are applied to the ARB. The marker polarity is one of the values stored within the header file. If the newly selected waveform file has an associated header file, the marker polarity is updated with the value from the header file. The marker polarity will remain unchanged if the newly selected waveform does not have an associated header file. |
| Preset | Pos |
| Range | Neg Pos |
| Initial S/W Revision | A.05.00 |

Mkr 4 Polarity

Allows you to set the polarity of marker 4.

| | |
|-----------------------|---|
| Key Path | Source, Modulation Setup, ARB, Marker Utilities, Marker Polarity |
| Remote Command | :SOURce:RADio:ARB:MPOLarity:MARKer4 POSitive NEGative :SOURce:RADio:ARB:MPOLarity:MARKer4? |

| | |
|-----------------------------|---|
| Example | :SOUR:RAD:ARB:MPOL:MARK4 NEG |
| Dependencies | When a new waveform is selected for playback the settings contained within the associated waveform header file are applied to the ARB. The marker polarity is one of the values stored within the header file. If the newly selected waveform file has an associated header file, the marker polarity is updated with the value from the header file. The marker polarity will remain unchanged if the newly selected waveform does not have an associated header file. |
| Preset | Pos |
| Range | Neg Pos |
| Initial S/W Revision | A.05.00 |

Marker Routing

Allows access to the marker routing sub-menus, which allow you to specify where the marker events are routed. It should be noted that the markers can also be routed to Trigger 1 Out and Trigger 2 Out, however this must be set up using the menus accessed by pressing the “Trigger” hard key.

| | |
|-----------------------------|--|
| Key Path | Source, Modulation Setup, ARB, Marker Utilities |
| Initial S/W Revision | A.05.00 |

Pulse/RF Blank

Allows you to select which marker is used for the pulse/RF blanking function. The pulse/RF blanking function blanks the RF when the marker signal goes low. The marker polarity determines when the marker signal is high. For a positive polarity, this is during the marker points. For a negative polarity, this is when there are no marker points.

Marker points should be set before using this function. Enabling this function without setting maker points may create a continuous low or high signal, dependant on the marker polarity. This causes either no RF output, or a continuous RF output.

| | |
|-----------------------------|---|
| Key Path | Source, Modulation Setup, ARB, Marker Utilities, Marker Routing |
| Remote Command | :SOURce:RADio:ARB:MDEStination:PULSe NONE M1 M2 M3 M4 :SOURce:RADio:ARB:MDEStination:PULSe? |
| Example | :SOUR:RAD:ARB:MDES:PULS NONE |
| Dependencies | When a new waveform is selected for playback the settings contained within the associated waveform header file are applied to the ARB. The pulse/RF blanking setting is one of the values stored within the header file. If the newly selected waveform file has an associated header file, the pulse/RF blanking setting is updated with the value from the header file. The pulse/RF blanking setting will remain unchanged if the newly selected waveform does not have an associated header file. |
| Range | None M1 M2 M3 M4 |
| Initial S/W Revision | A.05.00 |

None

Sets no marker to be used for the pulse/RF blanking function, essentially turning the RF blanking function off.

| | |
|----------------------|--|
| Key Path | Source, Modulation Setup, ARB, Marker Utilities, Marker Routing, Pulse/RF Blank |
| Example | :SOUR:RAD:ARB:MDES:PULS NONE |
| Initial S/W Revision | A.05.00 |

Marker 1

Sets marker 1 to be used for the pulse/RF blanking function.

| | |
|----------------------|--|
| Key Path | Source, Modulation Setup, ARB, Marker Utilities, Marker Routing, Pulse/RF Blank |
| Example | :SOUR:RAD:ARB:MDES:PULS M1 |
| Initial S/W Revision | A.05.00 |

Marker 2

Sets marker 2 to be used for the pulse/RF blanking function.

| | |
|----------------------|--|
| Key Path | Source, Modulation Setup, ARB, Marker Utilities, Marker Routing, Pulse/RF Blank |
| Example | :SOUR:RAD:ARB:MDES:PULS M2 |
| Initial S/W Revision | A.05.00 |

Marker 3

Sets marker 3 to be used for the pulse/RF blanking function.

| | |
|----------------------|--|
| Key Path | Source, Modulation Setup, ARB, Marker Utilities, Marker Routing, Pulse/RF Blank |
| Example | :SOUR:RAD:ARB:MDES:PULS M3 |
| Initial S/W Revision | A.05.00 |

Marker 4

Sets marker 4 to be used for the pulse/RF blanking function.

| | |
|----------------------|--|
| Key Path | Source, Modulation Setup, ARB, Marker Utilities, Marker Routing, Pulse/RF Blank |
| Example | :SOUR:RAD:ARB:MDES:PULS M4 |
| Initial S/W Revision | A.05.00 |

ALC Hold

Allows you to specify which marker is routed for use within the ALC hold function. The ALC hold marker function holds the ALC circuitry at the average value of the sample points set by the marker.

The ALC hold function operates during the low periods of the marker signal. The marker polarity determines when the marker signal is high. For positive polarity, this is during the marker points. For a negative polarity, this is when there are no marker points.

| | |
|-----------------------------|--|
| Key Path | Source, Modulation Setup, ARB, Marker Utilities, Marker Routing |
| Remote Command | :SOURce:RADio:ARB:MDEStination:ALCHold NONE M1 M2 M3 M4 :SOURce:RADio:ARB:MDEStination:ALCHold? |
| Example | :SOUR:RAD:ARB:MDES:ALCH NONE |
| Dependencies | When a new waveform is selected for playback the settings contained within the associated waveform header file are applied to the ARB. The ALC hold setting is one of the values stored within the header file. If the newly selected waveform file has an associated header file, the ALC hold setting is updated with the value from the header file. The ALC hold setting will remain unchanged if the newly selected waveform does not have an associated header file. |
| Range | None M1 M2 M3 M4 |
| Initial S/W Revision | A.05.00 |

None

Sets no marker to be used for the ALC hold function, essentially turning the ALC hold function off.

| | |
|-----------------------------|--|
| Key Path | Source, Modulation Setup, ARB, Marker Utilities, Marker Routing, ALC Hold |
| Example | :SOUR:RAD:ARB:MDES:PULS NONE |
| Initial S/W Revision | A.05.00 |

Marker 1

Sets marker 1 to be used for the ALC hold function.

| | |
|-----------------------------|--|
| Key Path | Source, Modulation Setup, ARB, Marker Utilities, Marker Routing, ALC Hold |
| Example | :SOUR:RAD:ARB:MDES:PULS M1 |
| Initial S/W Revision | A.05.00 |

Marker 2

Sets marker 2 to be used for the ALC hold function.

| | |
|-----------------------------|--|
| Key Path | Source, Modulation Setup, ARB, Marker Utilities, Marker Routing, ALC Hold |
| Example | :SOUR:RAD:ARB:MDES:PULS M2 |
| Initial S/W Revision | A.05.00 |

Marker 3

Sets marker 3 to be used for the ALC hold function.

| | |
|-----------------------------|--|
| Key Path | Source, Modulation Setup, ARB, Marker Utilities, Marker Routing, ALC Hold |
| Example | :SOUR:RAD:ARB:MDES:PULS M3 |
| Initial S/W Revision | A.05.00 |

Marker 4

Sets marker 4 to be used for the ALC hold function.

| | |
|-----------------------------|--|
| Key Path | Source, Modulation Setup, ARB, Marker Utilities, Marker Routing, ALC Hold |
| Example | :SOUR:RAD:ARB:MDES:PULS M4 |
| Initial S/W Revision | A.05.00 |

Header Utilities

Allows access to the header utilities sub-menu. Pressing this key also causes the central display area to change to display the File Header Information view.

| | |
|-----------------------------|---|
| Key Path | Source, Modulation Setup, ARB |
| Dependencies | This key is only available if there is currently a waveform selected for playback. If no waveform is selected, the key is grayed out. |
| Initial S/W Revision | A.05.00 |

Clear Header

Allows you to clear the header information from the file header associated with the currently selected waveform.

| | |
|-----------------------------|--|
| Key Path | Source, Modulation Setup, ARB, Header Utilities |
| Remote Command | :SOURce:RADio:ARB:HEADer:CLEar |
| Example | :SOUR:RAD:ARB:HEAD:CLE |
| Notes | Attempting to clear the header details via SCPI when no waveform was selected for playback will generate an error. |
| Initial S/W Revision | A.05.00 |

Save Setup To Header

Allows you to save new file header information details to the file.

| | |
|--------------------------|---|
| Key Path | Source, Modulation Setup, ARB, Header Utilities |
| Remote Command | :SOURce:RADio:ARB:HEADer:SAVE |
| Example | :SOUR:RAD:ARB:HEAD:SAVE |
| Notes | Attempting to save the header details via SCPI when no waveform was selected for playback will generate an error. |
| Initial S/W Revision | A.05.00 |
| Modified at S/W Revision | A.16.00 (AWGN settings will be saved to header as well) |

Query Waveform Unique ID (Remote Command Only)

Each Signal Studio waveform contains a unique waveform ID, which recorded in the header. This command allows you to query the unique waveform ID from the header. This is a SCPI only command. User can also check [Error! Reference source not found.](#) for waveform unique ID display.

| | |
|----------------------|--|
| Remote Command | :MMEMorY:HEADer:ID? "<file name>" |
| Example | :MMEM:HEAD:ID? "test.wfm" (query the waveform already loaded into the ARB memory) :MMEM:HEAD:ID? "D: VARB\test.wfm" (query the waveform on the hard disk by absolute path) :MMEM:HEAD:ID? "NVWFM:test.wfm" (query the waveform on the hard disk by MSUS) |
| Notes | SCPI query only. The queried waveform file can be in ARB memory, or on hard disk. If want to query ARB in ARB memory, then give out the file name directly. If want to query ARB on the hard disk, then absolute file path or MSUS should be given along with the file name. The valid MSUS is "NVWFM" which is mapped to D: VARB on hard disk. If the file cannot be found in ARB memory or on hard disk, an error is generated and value -1 is returned |
| Initial S/W Revision | A.09.00 |

Bus Trigger Command (Remote Command Only)

Used to initiate an immediate trigger event if the trigger source is set to Bus.

| | |
|----------------------|------------------------------------|
| Remote Command | :SOURce:RADio:ARB:TRIGger:INITiate |
| Example | :SOUR:RAD:ARB:TRIG:INIT |
| Initial S/W Revision | A.05.00 |

AM

Allows access to the menu for configuring the Amplitude Modulation.

| | |
|----------------------|---------------------------------|
| Key Path | Source, Modulation Setup |
| Initial S/W Revision | A.05.00 |

AM

Enables or disables the amplitude modulation.

Turning AM on when another modulation format is already on results in the previous modulation format being turned off and the generation of an error.

| | |
|-----------------------|---------------------------------------|
| Key Path | Source, Modulation Setup, AM |
| Remote Command | :SOURce:AM:STATe :SOURce:AM:STATe? |
| Example | :SOUR:AM:STAT OFF |
| Preset | Off |
| Range | On Off |
| Initial S/W Revision | A.05.00 |

AM Depth

Allows you to set the amplitude modulation depth in percent.

| | |
|-----------------------|---|
| Key Path | Source, Modulation Setup, AM |
| Remote Command | :SOURce:AM[:DEPTh] [:LINear] :SOURce:AM[:DEPTh] [:LINear]? |
| Example | :SOUR:AM 0.1 |
| Preset | 0.1 % |
| Min | 0.1 % |
| Max | 95.0 % |
| Initial S/W Revision | A.05.00 |

AM Rate

Allows you to set the internal amplitude modulation rate.

| | |
|-----------------------|---|
| Key Path | Source, Modulation Setup, AM |
| Remote Command | :SOURce:AM:INTernal:FREQuency :SOURce:AM:INTernal:FREQuency? |
| Example | :SOUR:AM:INT:FREQ 40.0 Hz |

| | |
|----------------------|----------|
| Preset | 400.0 Hz |
| Min | 10 Hz |
| Max | 40 kHz |
| Initial S/W Revision | A.05.00 |

FM

Allows access to the menu for configuring the frequency modulation.

| | |
|----------------------|---------------------------------|
| Key Path | Source, Modulation Setup |
| Initial S/W Revision | A.05.00 |

FM

Enables or disables the frequency modulation.

Turning FM on when another modulation format is already on results in the previous modulation format being turned off and the generation of an error.

| | |
|-----------------------|---------------------------------------|
| Key Path | Source, Modulation Setup, FM |
| Remote Command | :SOURce:FM:STATe :SOURce:FM:STATe? |
| Example | :SOUR:FM:STAT OFF |
| Preset | Off |
| Range | On Off |
| Initial S/W Revision | A.05.00 |

FM Deviation

Allows you to set the frequency modulation deviation.

| | |
|-----------------------|---|
| Key Path | Source, Modulation Setup, FM |
| Remote Command | :SOURce:FM[:DEViation] :SOURce:FM[:DEViation]? |
| Example | :SOUR:FM 1.00 kHz |
| Preset | 1.00 Hz |
| Min | 1.00 Hz |
| Max | 100.00 kHz |
| Initial S/W Revision | A.05.00 |

FM Rate

Allows you to set the internal frequency modulation rate.

| | |
|----------------------|---|
| Key Path | Source, Modulation Setup, FM |
| Remote Command | :SOURce:FM:INTernal:FREQuency :SOURce:FM:INTernal:FREQuency? |
| Example | :SOUR:FM:INT:FREQ 40.0 Hz |
| Preset | 400.0 Hz |
| Min | 10 Hz |
| Max | 40 kHz |
| Initial S/W Revision | A.05.00 |

PM

Allows access to the menu for configuring the phase modulation.

| | |
|----------------------|---------------------------------|
| Key Path | Source, Modulation Setup |
| Initial S/W Revision | A.05.00 |

PM

Enables or disables the phase modulation.

Turning PM on when another modulation format is already on results in the previous modulation format being turned off and the generation of an error.

| | |
|----------------------|---------------------------------------|
| Key Path | Source, Modulation Setup, PM |
| Remote Command | :SOURce:PM:STATe :SOURce:PM:STATe? |
| Example | :SOUR:PM:STAT OFF |
| Preset | Off |
| Range | On Off |
| Initial S/W Revision | A.05.00 |

PM Deviation

Allows you to set the phase modulation deviation.

| | |
|----------------|---|
| Key Path | Source, Modulation Setup, PM |
| Remote Command | :SOURce:PM[:DEViation] :SOURce:PM[:DEViation]? |

| | |
|----------------------|-------------------|
| Example | :SOUR:PM 1.00 rad |
| Preset | 0.1 rad |
| Min | 0.1 rad |
| Max | 20.0 rad |
| Initial S/W Revision | A.05.00 |

PM Rate

Allows you to set the internal phase modulation rate.

| | |
|-----------------------|---|
| Key Path | Source, Modulation Setup, PM |
| Remote Command | :SOURce:PM:INTernal:FREQuency :SOURce:PM:INTernal:FREQuency? |
| Example | :SOUR:PM:INT:FREQ 40.0 Hz |
| Preset | 400.0 Hz |
| Min | 10 Hz |
| Max | 40 kHz |
| Initial S/W Revision | A.05.00 |

List Sequencer

Allows you access to the sub-menus for configuring the list sequencer.

List sequences allows you to enter frequencies and amplitudes at unequal intervals in nonlinear ascending, descending or random order. Each step within the list can also include its own waveform file for playback, step duration, trigger event and trigger output.

The complexities involved in configuring the list sequencer do not lend itself to manual configuration; hence the manual configuration for this feature is limited. For easier configuration of the list sequencer, it is recommended that you use either SCPI or load a tab delimited file containing the setup parameters in a tabular form. The details of the SCPI for configuring the list sequencer can be found in ["Step Configuration \(Remote Command Only\)" on page 2619](#).

Once the List Sequencer has been configured using the front panel, SCPI, or loading in a tab delimited file, the sequence must be initiated using the front panel Initiate Sequence key or the corresponding SCPI command.

| | |
|----------------------|---------------|
| Key Path | Source |
| Initial S/W Revision | A.05.00 |

Sequencer

Allows you to set the state of the list sequencer. When the list sequencer is on, the source is outputting the sequence defined by the sequencer. When the list sequencer is off, the source outputs a single waveform segment or sequence (independent mode) at a single frequency and amplitude.

| | |
|-----------------------------|---|
| Key Path | Source, List Sequencer |
| Remote Command | :SOURce:LIST[:STATe] ON OFF 1 0 :SOURce:LIST[:STATe]? |
| Example | :SOUR:LIST OFF |
| Notes | When the sequencer is set to ON, the list sequencer controls the output of the source. |
| Couplings | When in Sequence Analyzer mode and the list sequencer state is Off, Include Source is forced to No, and the Include Source key is grayed out. When in Sequence Analyzer mode and the list sequencer state is On, Include Source is available to set. And, an ARB memory related operation, like load or delete will be rejected. |
| Preset | Off |
| Range | On Off |
| Initial S/W Revision | A.05.00 |

Initiate Sequence

Pressing this key arms the sequence for single execution. Once the sequence is armed the source begins the sequence as soon as the trigger is received. If the trigger is set to Free Run, the sequence starts immediately.

| | |
|-----------------------------|---|
| Key Path | Source, List Sequencer |
| Remote Command | :SOURce:LIST:TRIGger[:IMMediate] |
| Example | :SOUR:LIST:TRIG |
| Notes | When in Sequence Analyzer mode and Include Source is Yes, the Initiate list sequencer operation is rejected, and the key is grayed out, since source list sequence request is sent to physics via Parallel batch by sequence analyzer. If the file needed by the sequencer is not already in ARB memory, the sequence cannot be initiated and an error will be generated. There is a blocking SCPI query which can be used to query if source list sequence being initiated successfully or not. (see " Query List Sequence Initiation Armed Status (Remote Command Only) " on page 2630 Query Source List Sequence Armed Status) |
| Dependencies | Under the Sequence Analyzer Mode, if Meas Setup->Include Source is set to YES, Source->List Sequencer->Initiate Sequence is disabled. |
| Initial S/W Revision | A.05.00 |

List Sequencer Setup

Allows you access to the list sequencer setup menus.

| | |
|----------|-------------------------------|
| Key Path | Source, List Sequencer |
|----------|-------------------------------|

Number of Steps

Allows you to specify the number of steps within the list sequence.

| | |
|-----------------------|--|
| Key Path | Source, List Sequencer, List Sequencer Setup |
| Remote Command | :SOURce:LIST:NUMBer:STEPs <integer> :SOURce:LIST:NUMBer:STEPs? |
| Example | :SOUR:LIST:NUMB:STEP 1 |
| Notes | Increasing the number of steps creates additional steps at the end of the list, with all the settings within the steps set to their default values. Decreasing the number of steps removes steps from the end of the list. The settings within the removed steps are not reset. This means that increasing the number of steps again would allow you to retrieve these steps. |
| Dependencies | The Step Count parameter is increased or decreased when you insert or delete a point from within the GUI interface to the sequencer. |
| Preset | 1 |
| Min | 1 |
| Max | 1000 |
| Initial S/W Revision | A.05.00 |

Current Step

Allows you to select the step number you wish to view or edit.

| | |
|----------------------|---|
| Key Path | Source, List Sequencer, List Sequencer Setup |
| Notes | No remote command, front panel only. |
| Preset | 1 |
| Min | 1 |
| Max | Step Count |
| Initial S/W Revision | A.05.00 |

Insert Step Before

Allows you to insert a new step, containing default values, before the currently selected step. Inserting a step will automatically increase the Step Count parameter by 1. If sequence already reaches upper limit of

1000 steps, then insert more step will be rejected and popup error –221, “Setting Conflict; Cannot insert more steps, maximum number of steps reached”

| | |
|----------------------|---|
| Key Path | Source, List Sequencer, List Sequencer Setup |
| Notes | No remote command, front panel only. If the list already contains the maximum limit of 1000 steps, no operation will be made after pressing this key. |
| Initial S/W Revision | A.05.00 |

Delete Step

Allows you to delete the current step. Deleting a step will automatically decrease the Step Count parameter by 1. If sequence only has one step left, delete step will be rejected and popup error –221, “Setting conflict; Cannot delete current step, minimum number of steps reached”

| | |
|----------------------|---|
| Key Path | Source, List Sequencer, List Sequencer Setup |
| Notes | No remote command, Front Panel key only. If the list already contains the minimum limit of 1 step, no operation will be made after pressing this key |
| Initial S/W Revision | A.05.00 |

Clear List

Allows you to clear the list. Clearing the list sets the number of steps to the default value of 1 and sets the parameters for the only step to their default values.

| | |
|----------------------|---|
| Key Path | Source, List Sequencer, List Sequencer Setup |
| Initial S/W Revision | A.05.00 |

Step Trigger

Allows access to the sub-menu for selecting the trigger input for the current step.

| | |
|-----------------------|--|
| Key Path | Source, List Sequencer, List Sequencer Setup |
| Remote Command | :SOURce:LIST:STEP[1] 2 3...1000:SETup:INPut:TRIGger IMMEDIATE INTERNAL EXTERNAL2 KEY BUS EXTERNAL4 :SOURce:LIST:STEP[1] 2 3...1000:SETup:INPut:TRIGger? |
| Example | :SOUR:LIST:STEP2:SET:INP:TRIG BUS :SOUR:LIST:STEP2:SET:INP:TRIG? |
| Notes | SCPI is supported after A.09.40 |
| Preset | Free Run |
| Range | Free Run Internal Manual (Trigger Key) Bus External 2 EXTERNAL4 |
| Initial S/W Revision | A.05.00 |

Free Run

Sets the trigger input for the current step to Free Run.

| | |
|-----------------------------|---|
| Key Path | Source, List Sequencer, List Sequencer Setup, Step Trigger |
| Example | :SOUR:LIST:STEP2:SET:INP:TRIG IMM |
| Notes | SCPI is supported after A.09.40 |
| Initial S/W Revision | A.05.00 |

Internal

Sets the trigger input for the current step to Internal.

| | |
|-----------------------------|---|
| Key Path | Source, List Sequencer, List Sequencer Setup, Step Trigger |
| Example | :SOUR:LIST:STEP2:SET:INP:TRIG INT |
| Notes | SCPI is supported after A.09.40 |
| Initial S/W Revision | A.05.00 |

Manual (Trigger Key)

Sets the trigger input for the current step to Manual (Trigger Key). Any step in the sequence set to Manual will cause the sequence execution to stop until the manual trigger key is pressed. Sending the Bus Trigger SCPI command will have no effect. At any point in the sequence where the list sequencer is paused waiting for a software trigger, a pop up dialog is displayed until the trigger event occurs.

| | |
|-----------------------------|---|
| Key Path | Source, List Sequencer, List Sequencer Setup, Step Trigger |
| Example | :SOUR:LIST:STEP2:SET:INP:TRIG KEY |
| Notes | SCPI is supported after A.09.40 |
| Initial S/W Revision | A.05.00 |

Bus

Sets the trigger input for the current step to Bus. Any step in the sequence set to Bus will cause the sequence execution to stop until the Bus Trigger SCPI command is sent. Pressing the manual trigger key has no effect. At any point in the sequence where the list sequencer is paused waiting for a software trigger, a pop up dialog is displayed until the trigger event occurs.

| | |
|-----------------------------|---|
| Key Path | Source, List Sequencer, List Sequencer Setup, Step Trigger |
| Example | :SOUR:LIST:STEP2:SET:INP:TRIG BUS |
| Notes | SCPI is supported after A.09.40 |
| Initial S/W Revision | A.05.00 |

External 2

Sets the trigger input for the current step to External 2.

| | |
|-----------------------------|--|
| Key Path | Source, List Sequencer, List Sequencer Setup, Step Trigger |
| Example | :SOUR:LIST:STEP2:SET:INP:TRIG EXT2 |
| Notes | SCPI is supported after A.09.40 |
| Notes | Note: When on E6640A, trigger 2 is a bi-directional trigger port. So when trigger 2 has been configured as OUTPUT type, choosing External 2 as the input trigger for the current step will generate error. |
| Initial S/W Revision | A.05.00 |

Transition Time

Allows you to specify the transition time for the current step.

The transition time is the amount of time allowed for the source to settle at the current frequency or amplitude value.

Transition Time should not be taken as additional time before or inside the Step Duration. You can set a value for the settling time to allow the source output frequency or amplitude to become stable. Make sure that during this period of time, you do not use the source output signal.

The following table lists recommended values for appropriate settling times to allow for changes within the source.

| Value Changed | Recommended Transition Time |
|---------------|---|
| Frequency | 500 μ s |
| Amplitude | 100 μ s to within 0.1 dB 20 μ s to within 1.0 dB |

If the Transition Time value is shorter than the time necessary for the hardware to settle and a List Sequence is initiated, a **warning** is generated.

If the Transition Time value is longer than the Step Duration, an error is generated when initiating a source list sequence. For source list sequence, transition time is included in the step duration length. If the Transition Time value is longer than the Step Duration Time, the real step duration length is extended to equal the transition time and cause a timing shift.

| | |
|-----------------------|--|
| Key Path | Source, List Sequencer, List Sequencer Setup |
| Remote Command | :SOURce:LIST:STEP[1] 2 3...1000:SETup:TRANsition:TIME <time> :SOURce:LIST:STEP[1] 2 3...1000:SETup:TRANsition:TIME? |
| Example | :SOUR:LIST:STEP2:SET:TRAN:TIME 1ms :SOUR:LIST:STEP2:SET:TRAN:TIME? |

| | |
|----------------------|---------------------------------|
| Notes | SCPI is supported after A.09.40 |
| Preset | 1.0 ms |
| Min | 0.0 ms |
| Max | 4.0 ks |
| Initial S/W Revision | A.05.00 |

Radio Setup

Allows you access to the sub-menus for setting up the radio standard, band, and radio band link direction for the current step.

| | |
|----------------------|---|
| Key Path | Source, List Sequencer, List Sequencer Setup |
| Notes | No remote command, front panel only. |
| Initial S/W Revision | A.05.00 |

Radio Standard

Allows access to the sub-menus for selecting the radio standard and the associated radio band for use in the current step.

| | |
|-----------------------|---|
| Key Path | Source, List Sequencer, List Sequencer Setup, Radio Setup |
| Remote Command | :SOURce:LIST:STEP[1] 2 3...1000:SETup:RADio:BAND NONE PGSM EGSM RGSM DCS1800 PCS1900 TGSM810 GSM450 GSM480 GSM700 GSM850 BANDI BANDII BANDIII BANDIV BANDV BANDVI BANDVII BANDVIII BANDIX BANDX BANDXI BANDXII BANDXIII BANDXIV BANDXIX USCELL USPCS JAPAN KOREAN NMT IMT2K UPPER SECOND PAMR400 PAMR800 IMTEXT PCS1DOT9G AWS US2DOT5G PUBLIC LOWER NONE BAND1 BAND2 BAND3 BAND4 BAND5 BAND6 BAND7 BAND8 BAND10 BAND11 BAND12 BAND13 BAND14 BAND17 BAND18 BAND19 BAND20 BAND21 BAND24 BAND25 BAND26 BAND27 BAND28 BAND29 BAND30 BAND31 BAND33 BAND34 BAND35 BAND36 BAND37 BAND38 BAND39 BAND40 BAND41 BAND42 BAND43 BAND44 BANDA BANDB BANDC BANDD BANDE BANDF :SOURce:LIST:STEP[1] 2 3...1000:SETup: RADio:BAND? |
| Example | :SOUR:LIST:STEP2:SET:RAD:BAND PGSM :SOUR:LIST:STEP2:SET:RAD:BAND? |
| Notes | SCPI is supported after A.09.40 |
| Initial S/W Revision | A.05.00 |

None

Selects no radio standard for use on the current step.

| | |
|----------------------|--|
| Key Path | Source, List Sequencer, List Sequencer Setup, Radio Setup, Radio Standard |
| Example | :SOUR:LIST:STEP2:SET:RAD:BAND NONE |
| Notes | SCPI is supported after A.09.40 |
| Initial S/W Revision | A.05.00 |

GSM/EDGE

Pressing this key once selects GSM/EDGE as the radio standard and the current GSM/EDGE band as the active channel band. Pressing this key again allows access to the sub-menus for selecting a different GSM/EDGE band.

| | |
|----------------------|--|
| Key Path | Source, List Sequencer, List Sequencer Setup, Radio Setup, Radio Standard |
| Initial S/W Revision | A.05.00 |

P-GSM

Selects P-GSM as the band for the current step.

| | |
|----------------------|--|
| Key Path | Source, List Sequencer, List Sequencer Setup, Radio Setup, Radio Standard, GSM/EDGE |
| Initial S/W Revision | A.05.00 |

E-GSM

Selects E-GSM as the band for the current step.

| | |
|----------------------|--|
| Key Path | Source, List Sequencer, List Sequencer Setup, Radio Setup, Radio Standard, GSM/EDGE |
| Initial S/W Revision | A.05.00 |

R-GSM

Selects R-GSM as the band for the current step.

| | |
|----------------------|--|
| Key Path | Source, List Sequencer, List Sequencer Setup, Radio Setup, Radio Standard, GSM/EDGE |
| Initial S/W Revision | A.05.00 |

DCS 1800

Selects DCS 1800 as the band for the current step.

| | |
|----------------------|--|
| Key Path | Source, List Sequencer, List Sequencer Setup, Radio Setup, Radio Standard, GSM/EDGE |
| Initial S/W Revision | A.05.00 |

PCS 1900

Selects PCS 1900 as the band for the current step.

| | |
|----------------------|--|
| Key Path | Source, List Sequencer, List Sequencer Setup, Radio Setup, Radio Standard, GSM/EDGE |
| Initial S/W Revision | A.05.00 |

GSM 450

Selects GSM 450 as the band for the current step.

| | |
|----------------------|--|
| Key Path | Source, List Sequencer, List Sequencer Setup, Radio Setup, Radio Standard, GSM/EDGE |
| Initial S/W Revision | A.05.00 |

GSM 480

Selects GSM 480 as the band for the current step.

| | |
|----------------------|--|
| Key Path | Source, List Sequencer, List Sequencer Setup, Radio Setup, Radio Standard, GSM/EDGE |
| Initial S/W Revision | A.05.00 |

GSM 850

Selects GSM 850 as the band for the current step.

| | |
|----------------------|--|
| Key Path | Source, List Sequencer, List Sequencer Setup, Radio Setup, Radio Standard, GSM/EDGE |
| Initial S/W Revision | A.05.00 |

GSM 700

Selects GSM 700 as the band for the current step.

| | |
|----------------------|--|
| Key Path | Source, List Sequencer, List Sequencer Setup, Radio Setup, Radio Standard, GSM/EDGE |
| Initial S/W Revision | A.05.00 |

T-GSM 810

Selects T-GSM 810 as the band for the current step.

| | |
|----------------------|--|
| Key Path | Source, List Sequencer, List Sequencer Setup, Radio Setup, Radio Standard, GSM/EDGE |
| Initial S/W Revision | A.05.00 |

WCDMA

Pressing this key once selects WCDMA as the radio standard and the current WCDMA band as the active channel band. Pressing this key again allows access to the sub-menus for selecting a different WCDMA band.

| | |
|----------------------|--|
| Key Path | Source, List Sequencer, List Sequencer Setup, Radio Setup, Radio Standard |
| Initial S/W Revision | A.05.00 |

Band I

Selects Band I as the band for the current step.

| | |
|----------------------|---|
| Key Path | Source, List Sequencer, List Sequencer Setup, Radio Setup, Radio Standard, WCDMA |
| Initial S/W Revision | A.05.00 |

Band II

Selects Band II as the band for the current step.

| | |
|----------------------|---|
| Key Path | Source, List Sequencer, List Sequencer Setup, Radio Setup, Radio Standard, WCDMA |
| Initial S/W Revision | A.05.00 |

Band III

Selects Band III as the band for the current step.

| | |
|----------------------|---|
| Key Path | Source, List Sequencer, List Sequencer Setup, Radio Setup, Radio Standard, WCDMA |
| Initial S/W Revision | A.05.00 |

Band IV

Selects Band IV as the band for the current step.

| | |
|----------------------|---|
| Key Path | Source, List Sequencer, List Sequencer Setup, Radio Setup, Radio Standard, WCDMA |
| Initial S/W Revision | A.05.00 |

Band V

Selects Band V as the band for the current step.

| | |
|----------------------|---|
| Key Path | Source, List Sequencer, List Sequencer Setup, Radio Setup, Radio Standard, WCDMA |
| Initial S/W Revision | A.05.00 |

Band VI

Selects Band VI as the band for the current step.

| | |
|----------------------|---|
| Key Path | Source, List Sequencer, List Sequencer Setup, Radio Setup, Radio Standard, WCDMA |
| Initial S/W Revision | A.05.00 |

Band VII

Selects Band VII as the band for the current step.

| | |
|----------------------|---|
| Key Path | Source, List Sequencer, List Sequencer Setup, Radio Setup, Radio Standard, WCDMA |
| Initial S/W Revision | A.05.00 |

Band VIII

Selects Band VIII as the band for the current step.

| | |
|----------------------|---|
| Key Path | Source, List Sequencer, List Sequencer Setup, Radio Setup, Radio Standard, WCDMA |
| Initial S/W Revision | A.05.00 |

Band IX

Selects Band IX as the band for the current step.

| | |
|----------------------|---|
| Key Path | Source, List Sequencer, List Sequencer Setup, Radio Setup, Radio Standard, WCDMA |
| Initial S/W Revision | A.05.00 |

Band X

Selects Band X as the band for the current step.

| | |
|----------------------|---|
| Key Path | Source, List Sequencer, List Sequencer Setup, Radio Setup, Radio Standard, WCDMA |
| Initial S/W Revision | A.05.00 |

Band XI

Selects Band XI as the band for the current step.

| | |
|----------------------|---|
| Key Path | Source, List Sequencer, List Sequencer Setup, Radio Setup, Radio Standard, WCDMA |
| Initial S/W Revision | A.05.00 |

Band XII

Selects Band XII as the band for the current step.

| | |
|----------------------|---|
| Key Path | Source, List Sequencer, List Sequencer Setup, Radio Setup, Radio Standard, WCDMA |
| Initial S/W Revision | A.05.00 |

Band XIII

Selects Band XIII as the band for the current step.

| | |
|----------------------|---|
| Key Path | Source, List Sequencer, List Sequencer Setup, Radio Setup, Radio Standard, WCDMA |
| Initial S/W Revision | A.05.00 |

Band XIV

Selects Band XIV as the band for the current step.

| | |
|----------------------|---|
| Key Path | Source, List Sequencer, List Sequencer Setup, Radio Setup, Radio Standard, WCDMA |
| Initial S/W Revision | A.05.00 |

CDMA 2000 / 1xEVDO

Pressing this key once selects CDMA 2000/1xEVDO as the radio standard and the current CDMA 2000/1xEVDO band as the active channel band. Pressing this key again allows access to the sub-menus for selecting a different CDMA 2000/1xEVDO band.

| | |
|----------------------|--|
| Key Path | Source, List Sequencer, List Sequencer Setup, Radio Setup, Radio Standard |
| Initial S/W Revision | A.05.00 |

US CELL

Selects US Cell as the band for the current step.

| | |
|----------------------|--|
| Key Path | Source, List Sequencer, List Sequencer Setup, Radio Setup, Radio Standard, CDMA 2000 / 1xEVDO |
| Initial S/W Revision | A.05.00 |

US PCS

Selects US PCS as the band for the current step.

| | |
|----------------------|--|
| Key Path | Source, List Sequencer, List Sequencer Setup, Radio Setup, Radio Standard, CDMA 2000 / 1xEVDO |
| Initial S/W Revision | A.05.00 |

Japan Cell

Selects Japan Cell as the band for the current step.

| | |
|----------------------|--|
| Key Path | Source, List Sequencer, List Sequencer Setup, Radio Setup, Radio Standard, CDMA 2000 / 1xEVDO |
| Initial S/W Revision | A.05.00 |

Korean PCS

Selects Korean PCS as the band for the current step.

| | |
|----------------------|--|
| Key Path | Source, List Sequencer, List Sequencer Setup, Radio Setup, Radio Standard, CDMA 2000 / 1xEVDO |
| Initial S/W Revision | A.05.00 |

NMT 450

Selects NMT 450 as the band for the current step.

| | |
|----------------------|--|
| Key Path | Source, List Sequencer, List Sequencer Setup, Radio Setup, Radio Standard, CDMA 2000 / 1xEVDO |
| Initial S/W Revision | A.05.00 |

IMT 2000

Selects IMT 2000 as the band for the current step.

| | |
|----------------------|--|
| Key Path | Source, List Sequencer, List Sequencer Setup, Radio Setup, Radio Standard, CDMA 2000 / 1xEVDO |
| Initial S/W Revision | A.05.00 |

Upper 700

Selects Upper 700 as the band for the current step.

| | |
|----------------------|--|
| Key Path | Source, List Sequencer, List Sequencer Setup, Radio Setup, Radio Standard, CDMA 2000 / 1xEVDO |
| Initial S/W Revision | A.05.00 |

Secondary 800

Selects Secondary 800 as the band for the current step.

| | |
|----------------------|--|
| Key Path | Source, List Sequencer, List Sequencer Setup, Radio Setup, Radio Standard, CDMA 2000 / 1xEVDO |
| Initial S/W Revision | A.05.00 |

400 Euro PAMR

Selects 400 Euro PAMR as the band for the current step.

| | |
|----------------------|--|
| Key Path | Source, List Sequencer, List Sequencer Setup, Radio Setup, Radio Standard, CDMA 2000 / 1xEVDO |
| Initial S/W Revision | A.05.00 |

800 PAMR

Selects 800 PAMR as the band for the current step.

| | |
|----------------------|--|
| Key Path | Source, List Sequencer, List Sequencer Setup, Radio Setup, Radio Standard, CDMA 2000 / 1xEVDO |
| Initial S/W Revision | A.05.00 |

2.5GHz IMT EXT

Selects 2.5 GHz IMT EXT as the band for the current step.

| | |
|----------------------|--|
| Key Path | Source, List Sequencer, List Sequencer Setup, Radio Setup, Radio Standard, CDMA 2000 / 1xEVDO |
| Initial S/W Revision | A.05.00 |

US PCS 1.9GHz

Selects US PCS 1.9 GHz as the band for the current step.

| | |
|----------------------|--|
| Key Path | Source, List Sequencer, List Sequencer Setup, Radio Setup, Radio Standard, CDMA 2000 / 1xEVDO |
| Initial S/W Revision | A.05.00 |

AWS

Selects AWS as the band for the current step.

| | |
|----------------------|--|
| Key Path | Source, List Sequencer, List Sequencer Setup, Radio Setup, Radio Standard, CDMA 2000 / 1xEVDO |
| Initial S/W Revision | A.05.00 |

US 2.5GHz

Selects US 2.5 GHz as the band for the current step.

| | |
|----------------------|--|
| Key Path | Source, List Sequencer, List Sequencer Setup, Radio Setup, Radio Standard, CDMA 2000 / 1xEVDO |
| Initial S/W Revision | A.05.00 |

700 Public Safety

Selects 700 Public Safety as the band for the current step.

| | |
|----------------------|--|
| Key Path | Source, List Sequencer, List Sequencer Setup, Radio Setup, Radio Standard, CDMA 2000 / 1xEVDO |
| Initial S/W Revision | A.05.00 |

C2K Lower 700

Selects C2K Lower 700 as the band for the current step.

| | |
|----------------------|--|
| Key Path | Source, List Sequencer, List Sequencer Setup, Radio Setup, Radio Standard, CDMA 2000 / 1xEVDO |
| Initial S/W Revision | A.05.00 |

LTE

Pressing this key once selects LTE FDD as the radio standard and the current LTE FDD band as the active channel band. Pressing this key again allows access to the sub-menus for selecting a different LTE FDD band.

| | |
|----------------------|--|
| Key Path | Source, List Sequencer, List Sequencer Setup, Radio Setup, Radio Standard |
| Initial S/W Revision | A.09.50 |

BAND 1

Selects BAND 1 as the band for the current step.

| | |
|----------------------|---|
| Key Path | Source, List Sequencer, List Sequencer Setup, Radio Setup, Radio Standard, LTE |
| Initial S/W Revision | A.09.50 |

BAND 2

Selects BAND 2 as the band for the current step.

| | |
|----------------------|---|
| Key Path | Source, List Sequencer, List Sequencer Setup, Radio Setup, Radio Standard, LTE |
| Initial S/W Revision | A.09.50 |

BAND 3

Selects BAND 3 as the band for the current step.

| | |
|----------------------|---|
| Key Path | Source, List Sequencer, List Sequencer Setup, Radio Setup, Radio Standard, LTE |
| Initial S/W Revision | A.09.50 |

BAND 4

Selects BAND 4 as the band for the current step.

| | |
|----------------------|---|
| Key Path | Source, List Sequencer, List Sequencer Setup, Radio Setup, Radio Standard, LTE |
| Initial S/W Revision | A.09.50 |

BAND 5

Selects BAND 5 as the band for the current step.

| | |
|----------------------|---|
| Key Path | Source, List Sequencer, List Sequencer Setup, Radio Setup, Radio Standard, LTE |
| Initial S/W Revision | A.09.50 |

BAND 6

Selects BAND 6 as the band for the current step.

| | |
|----------------------|---|
| Key Path | Source, List Sequencer, List Sequencer Setup, Radio Setup, Radio Standard, LTE |
| Initial S/W Revision | A.09.50 |

BAND 7

Selects BAND 7 as the band for the current step.

| | |
|----------------------|---|
| Key Path | Source, List Sequencer, List Sequencer Setup, Radio Setup, Radio Standard, LTE |
| Initial S/W Revision | A.09.50 |

BAND 8

Selects BAND 8 as the band for the current step.

| | |
|----------------------|---|
| Key Path | Source, List Sequencer, List Sequencer Setup, Radio Setup, Radio Standard, LTE |
| Initial S/W Revision | A.09.50 |

BAND 9

Selects BAND 9 as the band for the current step.

| | |
|----------------------|---|
| Key Path | Source, List Sequencer, List Sequencer Setup, Radio Setup, Radio Standard, LTE |
| Initial S/W Revision | A.09.50 |

BAND 10

Selects BAND 10 as the band for the current step.

| | |
|----------------------|---|
| Key Path | Source, List Sequencer, List Sequencer Setup, Radio Setup, Radio Standard, LTE |
| Initial S/W Revision | A.09.50 |

BAND 11

Selects BAND 11 as the band for the current step.

| | |
|----------------------|---|
| Key Path | Source, List Sequencer, List Sequencer Setup, Radio Setup, Radio Standard, LTE |
| Initial S/W Revision | A.09.50 |

BAND 12

Selects BAND 12 as the band for the current step.

| | |
|----------------------|---|
| Key Path | Source, List Sequencer, List Sequencer Setup, Radio Setup, Radio Standard, LTE |
| Initial S/W Revision | A.09.50 |

BAND 13

Selects BAND 13 as the band for the current step.

| | |
|----------------------|---|
| Key Path | Source, List Sequencer, List Sequencer Setup, Radio Setup, Radio Standard, LTE |
| Initial S/W Revision | A.09.50 |

BAND 14

Selects BAND 14 as the band for the current step.

| | |
|----------------------|---|
| Key Path | Source, List Sequencer, List Sequencer Setup, Radio Setup, Radio Standard, LTE |
| Initial S/W Revision | A.09.50 |

BAND 17

Selects BAND 17 as the band for the current step.

| | |
|----------------------|---|
| Key Path | Source, List Sequencer, List Sequencer Setup, Radio Setup, Radio Standard, LTE |
| Initial S/W Revision | A.09.50 |

BAND 18

Selects BAND 18 as the band for the current step.

| | |
|----------------------|---|
| Key Path | Source, List Sequencer, List Sequencer Setup, Radio Setup, Radio Standard, LTE |
| Initial S/W Revision | A.09.50 |

BAND 19

Selects BAND 19 as the band for the current step.

| | |
|----------------------|---|
| Key Path | Source, List Sequencer, List Sequencer Setup, Radio Setup, Radio Standard, LTE |
| Initial S/W Revision | A.09.50 |

BAND 20

Selects BAND 20 as the band for the current step.

| | |
|----------------------|---|
| Key Path | Source, List Sequencer, List Sequencer Setup, Radio Setup, Radio Standard, LTE |
| Initial S/W Revision | A.09.50 |

BAND 21

Selects BAND 21 as the band for the current step.

| | |
|----------------------|---|
| Key Path | Source, List Sequencer, List Sequencer Setup, Radio Setup, Radio Standard, LTE |
| Initial S/W Revision | A.09.50 |

BAND 24

Selects BAND 24 as the band for the current step.

| | |
|----------------------|---|
| Key Path | Source, List Sequencer, List Sequencer Setup, Radio Setup, Radio Standard, LTE |
| Initial S/W Revision | A.09.50 |

BAND 25

Selects BAND 25 as the band for the current step.

| | |
|----------------------|---|
| Key Path | Source, List Sequencer, List Sequencer Setup, Radio Setup, Radio Standard, LTE |
| Initial S/W Revision | A.09.50 |

BAND 26

Selects BAND 26 as the band for the current step.

| | |
|----------------------|---|
| Key Path | Source, List Sequencer, List Sequencer Setup, Radio Setup, Radio Standard, LTE |
| Initial S/W Revision | A.12.53 |

BAND 27

Selects BAND 27 as the band for the current step.

| | |
|----------------------|---|
| Key Path | Source, List Sequencer, List Sequencer Setup, Radio Setup, Radio Standard, LTE |
| Initial S/W Revision | A.14.00 |

BAND 28

Selects BAND 28 as the band for the current step.

| | |
|----------------------|---|
| Key Path | Source, List Sequencer, List Sequencer Setup, Radio Setup, Radio Standard, LTE |
| Initial S/W Revision | A.14.00 |

BAND 31

Selects BAND 31 as the band for the current step.

| | |
|----------------------|---|
| Key Path | Source, List Sequencer, List Sequencer Setup, Radio Setup, Radio Standard, LTE |
| Initial S/W Revision | A.14.00 |

LTE TDD

Sets LTE TDD as the radio standard for use and accesses the LTE TDD specific channel band sub-menus..

| | |
|----------------------|---|
| Key Path | Source, Frequency, Radio Setup, Radio Standard |
| Initial S/W Revision | A.11.50 |

BAND 33

Selects BAND 33 as the band for the current step.

| | |
|----------------------|--|
| Key Path | Source, Frequency, Radio Setup, Radio Standard, LTE TDD |
| Example | :SOUR:FREQ:CHAN:BAND BAND33 |
| Initial S/W Revision | A.11.50 |

BAND 34

Selects BAND 34 as the band for the current step.

| | |
|----------------------|--|
| Key Path | Source, Frequency, Radio Setup, Radio Standard, LTE TDD |
| Example | :SOUR:FREQ:CHAN:BAND BAND34 |
| Initial S/W Revision | A.11.50 |

BAND 35

Selects BAND 35 as the band for the current step.

| | |
|----------------------|--|
| Key Path | Source, Frequency, Radio Setup, Radio Standard, LTE TDD |
| Example | :SOUR:FREQ:CHAN:BAND BAND35 |
| Initial S/W Revision | A.11.50 |

BAND 36

Selects BAND 36 as the band for the current step.

| | |
|----------------------|--|
| Key Path | Source, Frequency, Radio Setup, Radio Standard, LTE TDD |
| Example | :SOUR:FREQ:CHAN:BAND BAND36 |
| Initial S/W Revision | A.11.50 |

BAND 37

Selects BAND 37 as the band for the current step.

| | |
|----------------------|--|
| Key Path | Source, Frequency, Radio Setup, Radio Standard, LTE TDD |
| Example | :SOUR:FREQ:CHAN:BAND BAND37 |
| Initial S/W Revision | A.11.50 |

BAND 38

Selects BAND 38 as the band for the current step.

| | |
|----------------------|--|
| Key Path | Source, Frequency, Radio Setup, Radio Standard, LTE TDD |
| Example | :SOUR:FREQ:CHAN:BAND BAND38 |
| Initial S/W Revision | A.11.50 |

BAND 39

Selects BAND 39 as the band for the current step.

| | |
|----------------------|--|
| Key Path | Source, Frequency, Radio Setup, Radio Standard, LTE TDD |
| Example | :SOUR:FREQ:CHAN:BAND BAND39 |
| Initial S/W Revision | A.11.50 |

BAND 40

Selects BAND 40 as the band for the current step.

| | |
|----------------------|--|
| Key Path | Source, Frequency, Radio Setup, Radio Standard, LTE TDD |
| Example | :SOUR:FREQ:CHAN:BAND BAND40 |
| Initial S/W Revision | A.11.50 |

BAND 41

Selects BAND 41 as the band for the current step.

| | |
|----------------------|--|
| Key Path | Source, Frequency, Radio Setup, Radio Standard, LTE TDD |
| Example | :SOUR:FREQ:CHAN:BAND BAND41 |
| Initial S/W Revision | A.11.50 |

BAND 42

Selects BAND 42 as the band for the current step.

| | |
|----------------------|--|
| Key Path | Source, Frequency, Radio Setup, Radio Standard, LTE TDD |
| Example | :SOUR:FREQ:CHAN:BAND BAND42 |
| Initial S/W Revision | A.11.50 |

BAND 43

Selects BAND 43 as the band for the current step.

| | |
|----------------------|--|
| Key Path | Source, Frequency, Radio Setup, Radio Standard, LTE TDD |
| Example | :SOUR:FREQ:CHAN:BAND BAND43 |
| Initial S/W Revision | A.11.50 |

BAND 44

Selects BAND 44 as the band for the current step.

| | |
|----------------------|---|
| Key Path | Source, List Sequencer, List Sequencer Setup, Radio Setup, Radio Standard, LTE TDD |
| Initial S/W Revision | A.14.00 |

TDSCDMA

Sets TDSCDMA as the radio standard for use and accesses the TDSCDMA specific channel band sub-menus..

| | |
|----------------------|---|
| Key Path | Source, Frequency, Radio Setup, Radio Standard |
| Initial S/W Revision | A.11.50 |

BAND A

Selects BAND A as the band for the current step.

| | |
|----------------------|--|
| Key Path | Source, Frequency, Radio Setup, Radio Standard, TDSCDMA |
| Example | :SOUR:FREQ:CHAN:BAND BANDA |
| Initial S/W Revision | A.11.50 |

BAND B

Selects BAND B as the band for the current step.

| | |
|----------------------|--|
| Key Path | Source, Frequency, Radio Setup, Radio Standard, TDSCDMA |
| Example | :SOUR:FREQ:CHAN:BAND BANDB |
| Initial S/W Revision | A.11.50 |

BAND C

Selects BAND C as the band for the current step.

| | |
|----------------------|--|
| Key Path | Source, Frequency, Radio Setup, Radio Standard, TDSCDMA |
| Example | :SOUR:FREQ:CHAN:BAND BANDC |
| Initial S/W Revision | A.11.50 |

BAND D

Selects BAND D as the band for the current step.

| | |
|----------------------|--|
| Key Path | Source, Frequency, Radio Setup, Radio Standard, TDSCDMA |
| Example | :SOUR:FREQ:CHAN:BAND BANDD |
| Initial S/W Revision | A.11.50 |

BAND E

Selects BAND E as the band for the current step.

| | |
|----------------------|--|
| Key Path | Source, Frequency, Radio Setup, Radio Standard, TDSCDMA |
| Example | :SOUR:FREQ:CHAN:BAND BANDE |
| Initial S/W Revision | A.11.50 |

BAND F

Selects BAND F as the band for the current step.

| | |
|----------------------|--|
| Key Path | Source, Frequency, Radio Setup, Radio Standard, TDSCDMA |
| Example | :SOUR:FREQ:CHAN:BAND BANDF |
| Initial S/W Revision | A.11.50 |

Radio Band Link

Allows you to specify the radio band link direction for the steps within the list sequence. The link is used in conjunction with the channel band and channel number to determine the output frequency.

When set to “Uplink”, the source will calculate the uplink frequency according to an uplink formula together with selected channel band and channel number. When set to “Downlink”, the source will calculate the downlink frequency according to a downlink formula together with selected channel band and channel number.

| | |
|-----------------------|---|
| Key Path | Source, List Sequencer, List Sequencer Setup, Radio Setup |
| Remote Command | :SOURce:LIST:STEP[1] 2 3...1000:SETup:RADio:BAND:LINK DOWN UP :SOURce:LIST:STEP[1] 2 3...1000:SETup:RADio:BAND:LINK? |

| | |
|----------------------|--|
| Example | :SOUR:LIST:STEP2:SET:RAD:BAND:LINK UP :SOUR:LIST:STEP2:SET:RAD:BAND:LINK? |
| Notes | SCPI is supported after A.09.40 |
| Preset | DOWN |
| Range | DOWN UP |
| Initial S/W Revision | A.05.00 |

Channel

Allows you to specify the frequency of the current step via a channel number.

| | |
|-----------------------|---|
| Key Path | Source, List Sequencer, List Sequencer Setup |
| Remote Command | :SOURce:LIST:STEP[1] 2 3...1000:SETup:CNFRrequency <double> :SOURce:LIST:STEP[1] 2 3...1000:SETup:CNFRrequency? |
| Example | :SOUR:LIST:STEP2:SET:CNFR 124 :SOUR:LIST:STEP2:SET:CNFR? |
| Notes | SCPI is supported after A.09.40. This SCPI is used to setup channel number or frequency setting, according to current Radio Band setting. If Radio Band is "NONE", then it's frequency. If Radio Band is not "NONE", then it's channel number. |
| Couplings | The channel number is coupled to the step frequency value. When the step frequency value is changed, the channel number will increase or decrease to match the new step frequency. If the step frequency is not at an exact match for a channel number, the nearest channel number is displayed, along with a greater than, or less than sign to indicate the frequency is above or below the channel number. |
| Preset | 1 |
| Min | 0 (Please refer to for valid ranges.) |
| Max | 10838 (Please refer to for valid ranges.) |
| Initial S/W Revision | A.05.00 |

Frequency

Allows you to specify a frequency value for the current step.

| | |
|-----------------------|--|
| Key Path | Source, List Sequencer, List Sequencer Setup |
| Remote Command | :SOURce:LIST:STEP[1] 2 3...1000:SETup:CNFRFrequency <double> :SOURce:LIST:STEP[1] 2 3...1000:SETup:CNFRFrequency? |
| Example | :SOUR:LIST:STEP2:SET:CNFR 1GHz :SOUR:LIST:STEP2:SET:CNFR? |
| Notes | SCPI is supported after A.09.40. |

| | |
|----------------------|--|
| | This SCPI is used to setup channel number or frequency setting, according to current Radio Band setting. If Radio Band is "NONE", then it's frequency. If Radio Band is not "NONE", then it's channel number. |
| Couplings | The frequency value is coupled to the channel band and number for the step, such that updates to the radio band and channel number will update the frequency value to the corresponding absolute frequency. The reverse is also true, changing the frequency value causes the value of the channel number to be updated. |
| Preset | 1.00 GHz |
| Min | 10.00 MHz |
| Max | Hardware Dependant: Option 503 = 3.6 GHz Option 504 = 3.9 GHz Option 506 = 6.00 GHz |
| Initial S/W Revision | A.05.00 |

Power

Allows you to specify a power value for the current step.

| | |
|----------------|--|
| Key Path | Source, List Sequencer, List Sequencer Setup |
| Remote Command | :SOURce:LIST:STEP[1] 2 3...1000:SETup:AMPLitude <double> :SOURce:LIST:STEP[1] 2 3...1000:SETup:AMPLitude? |
| Example | :SOUR:LIST:STEP2:SET:AMPL -50dBm :SOUR:LIST:STEP2:SET:AMPL? |
| Notes | SCPI is supported after A.09.40 |
| Notes | Amplitude corrections can be specified for use with the source. In the event of amplitude corrections being applied, the valid ranges for the RF power do not change dependant on the current amplitude correction setting. Instead, if the combination of RF power + amplitude correction is higher or lower than the source output range, the Source Unleveled bit is set and the "Source Unleveled" indicator will appear on status panel to indicate that the source cannot maintain the output power that has been requested. The multiport adapter RFIO TX ports and GPS ports cannot ensure power accuracy when power setting is lower than -130dBm, this power setting value is defined by the sum of RF Power setting and related amplitude correction value. But user settable value could be lower than this limit. When application detected there exists power setting lower than -130dBm on MPA RFIO TX ports, then popup warning message . When application detected there exists power setting lower than -130dBm on MPA GPS ports, then popup warning message . These are only warning messages, and check is performed when RF is ON. |
| Notes | The Min and Max value here defined UI settable amplitude range. This range is larger than actual amplitude range with level accuracy defined in spec. |
| Dependencies | The RF power is dependent on the RF output port and frequency, such that the current frequency and selected output port determine the valid range of power values. |
| Preset | -100 dBm |

| | |
|----------------------|--|
| Min | The range of values depends on the current frequency and selected RF output port. Please refer to "RF Power" on page 2500 and the table RF Power Range for the valid ranges. |
| Max | The range of values depends on the current frequency and selected RF output port. Please refer to "RF Power" on page 2500 and the table RF Power Range for the valid ranges. |
| Initial S/W Revision | A.05.00 |

Waveform

Allows you access to the sub-menus for selecting the waveform to be played back during the current step. Pressing this key also changes the central display area to show the Waveform File Selection view.

| | |
|----------------------|--|
| Key Path | Source, List Sequencer, List Sequencer Setup |
| Remote Command | :SOURce:LIST:STEP[1] 2 3...1000:SETup:WAVeform <string> :SOURce:LIST:STEP[1] 2 3...1000:SETup:WAVeform? |
| Example | :SOUR:LIST:STEP2:SET:WAV "CW" :SOUR:LIST:STEP2:SET:WAV? |
| Notes | SCPI is supported after A.09.40 |
| Remote Command Notes | String type, takes "Off" "CW" "Cont" "waveform name" |
| Preset | CW |
| Range | Waveform Continue Previous CW Off |
| Initial S/W Revision | A.05.00 |

CW

Sets the current step to output a CW tone.

| | |
|----------------------|---|
| Key Path | Source, List Sequencer, List Sequencer Setup, Waveform |
| Example | :SOUR:LIST:STEP2:SET:WAV "CW" |
| Notes | SCPI is supported after A.09.40 |
| Initial S/W Revision | A.05.00 |

Selected Waveform

Inserts the currently selected waveform in the waveform selection view as the waveform for playback during the current step.

| | |
|----------|---|
| Key Path | Source, List Sequencer, List Sequencer Setup, Waveform |
| Example | :SOUR:LIST:STEP2:SET:WAV "waveform name" |
| Notes | SCPI is supported after A.09.40 If the selected waveform contains header (which contains ARB play parameters), source list |

sequence will automatically apply header settings of the selected waveform in that step.

| | |
|----------------------|---------|
| Initial S/W Revision | A.05.00 |
|----------------------|---------|

Continue Previous

Sets the current step to continue with playback of the waveform from the previous step. When continuing the previous waveform, the ARB playback will not pause while the source retunes to the new frequency or amplitude that may be defined for the new step.

| | |
|----------|---|
| Key Path | Source, List Sequencer, List Sequencer Setup, Waveform |
|----------|---|

| | |
|----------------|---------------------------------|
| Example | :SOUR:LIST:STEP2:SET:WAV "Cont" |
|----------------|---------------------------------|

| | |
|-------|---------------------------------|
| Notes | SCPI is supported after A.09.40 |
|-------|---------------------------------|

| | |
|----------------------|---------|
| Initial S/W Revision | A.05.00 |
|----------------------|---------|

Off

Disable RF output of the current step.

| | |
|----------|---|
| Key Path | Source, List Sequencer, List Sequencer Setup, Waveform |
|----------|---|

| | |
|----------------|--------------------------------|
| Example | :SOUR:LIST:STEP2:SET:WAV "Off" |
|----------------|--------------------------------|

| | |
|-------|---------------------------------|
| Notes | SCPI is supported after A.09.40 |
|-------|---------------------------------|

| | |
|----------------------|---------|
| Initial S/W Revision | A.05.00 |
|----------------------|---------|

Segments on Hard Disk

Allows you access to the sub-menus for loading waveform segments from the hard disk into ARB memory. The default directory is: D: varb.

Pressing this key changes the current view to the Waveform Management View.

| | |
|----------|---|
| Key Path | Source, Modulation Setup, ARB, Select Waveform |
|----------|---|

| | |
|----------------------|---------|
| Initial S/W Revision | A.05.00 |
|----------------------|---------|

Load Segment To ARB Memory

Allows you to load the selected file into ARB memory. On the front panel you select the file for loading to the ARB memory by highlighting the desired file in the list. Using the SCPI command, you specify the file name on the HDD.

"NVWFM" (none-volatile storage) MSUS (Mass Storage Unit Specifier) is supported in the memory subsystem because the ARB memory cannot be accessed directly. Therefore, files must be downloaded to the instrument hard disk and then loaded into the ARB memory. "NVWFM" MSUS will be mapped to the

default directory D: VARB. The SCPI command supports using either “NVWFM” MSUS or specifying a full path. For more information, see [Memory Subsystem \(Remote Command Only\)](#).

If a file of the same name already exists within ARB memory, it is overwritten. If you wish to load two segments of the same name, you must rename one of the segments before loading it into ARB memory. To rename a segment, you can either use Windows File Explorer, or the :MMEMory:COPI command.

| | |
|-----------------------------|--|
| Key Path | Source, Modulation Setup, ARB, Select Waveform, Segments on Hard Disk |
| Remote Command | :SOURce:RADio:ARB:LOAD <string> |
| Example | :SOUR:RAD:ARB:LOAD “D: VARB\testwaveform.bin” or :SOUR:RAD:ARB:LOAD “NVWFM:testwaveform.bin” |
| Notes | <p>Because loading the file involves a delay of unpredictable length, this command should be followed by the query *OPC?, which holds off subsequent commands until the loading operating is complete.</p> <p><string> – specifies the path name of the file to load from the HDD into ARB memory. It could be a <full path + filename>, or <“NVWFM” MSUS + colon + filename>.</p> <p>When in Sequence Analyzer mode, and Include Source is Yes, an attempt to load a file to ARB memory will be rejected with an error.</p> <p>When Include Source is No and if there is insufficient free ARB memory to load the selected waveform, an error is generated. .</p> <p>If you specify a file over SCPI, but the file is not at the specified location, an error is generated.</p> <p>If you try to load a waveform file but the file contains less than 500 IQ samples, an error is generated.</p> <p>If you try to load a Signal Studio waveform “*.wfm” which contains invalid waveform header, an error is generated.</p> <p>If the ARB is ON when you load a file to ARB memory or delete a file from ARB memory, the playing waveform segment may not keep phase continuity during the ARB memory operation. The waveform will be replayed after the ARB operation is finished.</p> <p>ARB can be loaded into ARB memory even required licenses do not present on the instrument. In this case, a GUI only warning message –800, “Operation complete; Loaded <filename> successfully, but no license <required licenses> installed”. User can install required licenses according to <required licenses> string to license it, or multi-pack license it.</p> |
| Initial S/W Revision | A.05.00 |

Load All To ARB Memory

Allows you to load all the segment files within the currently selected directory into ARB memory. If a file of the same name already exists within ARB memory, it is overwritten. If you wish to load two segments of the same name, you must rename one of the segments before loading it into ARB memory. To rename a segment, you can either use Windows File Explorer, or the :MEMory:COPI command.

| | |
|-----------------------|--|
| Key Path | Source, Modulation Setup, ARB, Select Waveform, Segments on Hard Disk |
| Remote Command | :SOURce:RADio:ARB:LOAD:ALL <string> |
| Example | :SOUR:RAD:ARB:LOAD:ALL “D: varb” |
| Notes | <p><string> - specifies the directory on the HDD to load the files into ARB memory from.</p> <p>When in Sequence Analyzer mode, and Include Source is Yes, an attempt to load all files from a</p> |

directory to ARB memory is rejected with an error.
 When Include Source is No and there is insufficient free ARB memory to load all the waveforms, when the ARB memory is full, the copy ceases, and an error is generated.
 If you specify a directory over SCPI, but the directory does not exist, an error is generated.
 If the ARB is ON, a user then loads or deletes file to ARB memory, the playing waveform segment may not keep phase continuity during the ARB memory operation. The waveform will be replayed after the ARB operation is finished.

| | |
|----------------------|---------|
| Initial S/W Revision | A.05.00 |
|----------------------|---------|

Change Directory...

Allows you to change the currently selected directory on the hard disk. Pressing this key opens a standard windows change directory dialog allowing you to select the new directory of interest.

The current directory is used for manually loading waveform segments into ARB memory for playback, and as a search location for waveform segments that are required to be loaded into ARB memory for playback of a waveform sequence or a list sequence.

| | |
|----------------------|--|
| Key Path | Source, Modulation Setup, ARB, Select Waveform, Segments on Hard Disk |
| Notes | No remote command, SCPI front panel only. |
| Initial S/W Revision | A.05.00 |

Default Directory...

Allows you to change the default directory. It is used as a search location for waveform segments that are required to be loaded into ARB memory for playback of a waveform sequence, and as a search location for selecting waveforms using SCPI.

| | |
|-----------------------|---|
| Key Path | Source, Modulation Setup, ARB, Select Waveform, Segments on Hard Disk |
| Remote Command | :SOURce:RADio:ARB:DEFault:DIRectory <string> :SOURce:RADio:ARB: DEFault:DIRectory? |
| Example | :SOUR:RAD:ARB:DEF:DIR "D:\ArbFiles" :SOUR:RAD:ARB:DEF:DIR? |
| State Saved | Persistent, survives a power cycle and a preset but not saved in the instrument state |
| Initial S/W Revision | A.05.00 |

Segments in ARB Memory

Allows you access to the sub-menus for managing the files within ARB memory.

| | |
|----------------------|---|
| Key Path | Source, Modulation Setup, ARB, Select Waveform |
| Initial S/W Revision | A.05.00 |

Delete Segment From ARB Mem

Allows you to remove a segment from ARB playback memory.

| | |
|-----------------------|---|
| Key Path | Source, Modulation Setup, ARB, Select Waveform, Segments in ARB Memory |
| Remote Command | :SOURce:RADio:ARB:DELeTe <string> |
| Example | :SOUR:RAD:ARB:DEL "testwaveform.bin" |
| Notes | <p><string> - specifies the waveform to be deleted from the ARB playback memory.</p> <p>When in Sequence Analyzer mode and Include Source is Yes, an attempt to delete a file from ARB memory is rejected with an error.</p> <p>When Include Source is No and you specify a file that does not exist within ARB memory, an error is generated.</p> <p>It is possible to delete files from within the ARB memory when the ARB is ON. However, if you attempt to delete the file that is currently playing an error is generated.</p> <p>It is possible to delete a file from within the ARB memory when the sequencer state is ON and the file is not being used by the List Sequencer. If you attempt to delete a file which is being used by the list sequencer, an error is generated.</p> <p>When sequencer state is On, even if ARB state is On, the selected waveform will not be played. In this case, if the selected waveform is not used in List Sequence, it can be deleted and the ARB state is turned Off.</p> <p>If the ARB is ON and you load a file to ARB memory or delete a file from ARB memory, the playing waveform segment may not keep phase continuity during the ARB memory operation. The waveform will be replayed after the ARB operation is finished.</p> |
| Initial S/W Revision | A.05.00 |

Delete All From ARB Memory

Allows you to remove all segments from ARB playback memory.

| | |
|-----------------------|--|
| Key Path | Source, Modulation Setup, ARB, Select Waveform, Segments in ARB Memory |
| Remote Command | :SOURce:RADio:ARB:DELeTe:ALL |
| Example | :SOUR:RAD:ARB:DELeTe:ALL |
| Notes | <p>When in Sequence Analyzer mode and Include Source is Yes, an attempt to delete all files from ARB memory is rejected with an error.</p> <p>When Include Source is No and you attempt to delete all files from ARB memory when the ARB is currently playing a file, all files except the one playing are deleted and an error is generated.</p> <p>If you attempt to delete all files from ARB memory when there are waveform files used in "List Sequencer" on page 2585 and "Sequencer" on page 2586 state is ON, all files except the files currently being used in list sequencer are deleted, and an error is generated.</p> <p>If the ARB is ON and you load a file to ARB memory or delete a file from ARB memory, the playing waveform segment may not keep phase continuity during the ARB memory operation. The waveform will be replayed after the ARB operation is finished.</p> |
| Initial S/W Revision | A.05.00 |

Segments on Hard Disk

| Initial S/W Revision | Prior to A.09.00 |

Step Duration

Allows access to the sub-menus for setting up the duration of play for the current step.

The duration can be set to be either the number of times for the ARB file associated with the sequence to play, or a specific time value, or continuous. If the step is set to play a CW tone, the step duration cannot be set to a play count.

| | |
|----------------------|---|
| Key Path | Source, List Sequencer, List Sequencer Setup |
| Remote Command | :SOURce:LIST:STEP[1] 2 3...1000:SETup:DURation:TYPE TIME COUNT CONTInuous CABort :SOURce:LIST:STEP[1] 2 3...1000:SETup:DURation:TYPE? |
| Example | :SOUR:LIST:STEP2:SET:DUR:TYPE TIME :SOUR:LIST:STEP2:SET:DUR:TYPE? |
| Notes | SCPI is supported after A.09.40 |
| Notes | If "Step Duration" is set to "Time" or "Play Count" for the last step, the last step of ARB keeps playing as if set to "Continuous", until the set "Time" has expired or until the "Play Count" setting is reached. However, you can query Error! Reference source not found. Source Sweeping Condition Message to find out if the current list sequence is complete or not. |
| Range | Time Play Count Continuous Continuous Abort |
| Initial S/W Revision | A.05.00 |

Time

Sets the duration of the current step to be a time value for the length of time the step will play. Pressing this key again opens another menu which allows you to set the time value for the step duration.

| | |
|----------------------|--|
| Key Path | Source, List Sequencer, List Sequencer Setup, Step Duration |
| Example | :SOUR:LIST:STEP2:SET:DUR:TYPE TIME |
| Notes | SCPI is supported after A.09.40 |
| Initial S/W Revision | A.05.00 |

Duration Time

Allows you to specify the length of time the current step will play.

When Step Duration is **Continuous Abort** this parameter specifies the maximum duration that the waveform will continue to play after a step trigger is received before the transition to the next waveform will occur. Duration is limited to a maximum of 20 seconds.

If the Transition Time value is longer than the Step Duration Time, an error is generated when initiating a source list sequence. For source list sequence, transition time is included in the step duration length (not occupy additional time). If the Transition Time value is longer than the Step Duration Time, the real step duration length is extended to equal the transition time and cause a timing shift. This check is also described in section **Error! Reference source not found.** List Sequence Step Validation.

| | |
|-----------------------|--|
| Key Path | Source, List Sequencer, List Sequencer Setup, Step Duration, Time |
| Remote Command | :SOURce:LIST:STEP[1] 2 3...1000:SETup:DURation:TCOUNT <double> :SOURce:LIST:STEP[1] 2 3...1000:SETup:DURation:TCOUNT? |
| Example | :SOUR:LIST:STEP2:SET:DUR:TCO 1s :SOUR:LIST:STEP2:SET:DUR:TCO? |
| Notes | SCPI is supported after A.09.40 This SCPI is reused by "Play Count", "Duration Time" and "Continuous Abort" according to current Duration Type setting is "Play Count" or "Duration Time" or "Continuous Abort". If current "Duration Type" is "Continuous", then popup error -221, "Settings conflict; Cannot accept time or count input when step duration type is Continuous on step #" |
| Notes | If "Duration Time" is set for the last step, the last step of ARB keeps playing as if set to "Continuous" after set time expires. However, you can query Source Sweeping Condition Message (:STAT:OPER:COND?) to find out if the current list sequence is complete or not. |
| Preset | 1.00 ms |
| Min | 100 µs |
| Max | 1800 s |
| Initial S/W Revision | A.05.00 |

Play Count

Sets the duration of the current step to be an integer value for the number of times (play count) the ARB file is selected for playback during this step. For example, a 5 second ARB will be set to play 5 times during the step.

| | |
|----------------------|---|
| Key Path | Source, List Sequencer, List Sequencer Setup, Step Duration |
| Example | :SOUR:LIST:STEP2:SET:DUR:TYPE COUN |
| Notes | SCPI is supported after A.09.40 This key is unavailable and is grayed out if the current step is configured to CW tone rather than an ARB waveform. |
| Initial S/W Revision | A.05.00 |

Header Utilities

Allows access to the header utilities sub-menu. Pressing this key also causes the central display area to change to display the File Header Information view.

| | |
|----------------------|---|
| Key Path | Source, Modulation Setup, ARB |
| Dependencies | This key is only available if there is currently a waveform selected for playback. If no waveform is selected, the key is grayed out. |
| Initial S/W Revision | A.05.00 |

Continuous

Sets the current step to be played continuously until the next step starts. The waveform will always play completely before transitioning to the next step.

| | |
|----------------------|--|
| Key Path | Source, List Sequencer, List Sequencer Setup, Step Duration |
| Example | :SOUR:LIST:STEP2:SET:DUR:TYPE CONT |
| Notes | SCPI is supported after A.09.40 |
| Initial S/W Revision | A.05.00 |

Output Trigger

Allows you to specify the trigger output for the current step. The trigger output signal is sent at the start of the step.

When select "On", trigger event will occur on both Internal and External2 paths. Select "Off" will turn off trigger output.

| | |
|-----------------------|---|
| Key Path | Source, List Sequencer, List Sequencer Setup |
| Remote Command | :SOURce:LIST:STEP[1] 2 3...1000:SETup:OUTPut:TRIGger ON OFF 1 0 :SOURce:LIST:STEP[1] 2 3...1000:SETup:OUTPut:TRIGger |
| Example | :SOUR:LIST:STEP2:SET:OUTP:TRIG ON :SOUR:LIST:STEP2:SET:OUTP:TRIG? |
| Notes | SCPI is supported after A.09.40 |
| Preset | Off |

| | |
|----------------------|---------|
| Range | On Off |
| Initial S/W Revision | A.05.00 |

Step Configuration (Remote Command Only)

This SCPI command is used to configure the List Sequencer and is detailed in the table below. The command is defined such that you send one command per step, with the step number being specified as a subopcode of the SCPI command. Each command includes all the parameter settings for the step. As a step is setup, the values entered are run through several levels of validation.

| | |
|-----------------------|--|
| Remote Command | <pre>:SOURce:LIST:STEP[1] 2 ... 4..1000:SETup IMMEDIATE INTernal KEY BUS EXTernal2, <time>, NONE PGSM EGSM RGSM DCS1800 PCS1900 TGSM810 GSM450 GSM480 GSM700 GSM850 BANDI BANDII BANDIII BANDIV BANDV BANDVI BANDVII BANDVIII BANDIX BANDX BANDXI BANDXII BANDXIII BANDXIV BANDXIX USCELL USPCS JAPAN KOREAN NMT IMT2K UPPER SECOND PAMR400 PAMR800 IMTEXT PCS1DOT9G AWS US2DOT5G PUBLIC LOWER NONE BAND1 BAND2 BAND3 BAND4 BAND5 BAND6 BAND7 BAND8 BAND10 BAND11 BAND12 BAND13 BAND14 BAND17 BAND18 BAND19 BAND20 BAND21 BAND24 BAND25 BAND26 BAND33 BAND34 BAND35 BAND36 BAND37 BAND38 BAND39 BAND40 BAND41 BAND42 BAND43 BANDA BANDB BANDC BANDD BANDE BANDF, DOWN UP, <freq>, <ampl>, <string>, TIME COUNT CONTinuous, <time>, ON OFF 1 0, [<int>], :SOURce:LIST:STEP[1] 2 ... 4..1000:SETup?</pre> |
| Example | :SOUR:LIST:STEP1:SET INT, 1ms, PGSM, DOWN, 10, -25 dBm, "GSM_Test1.bin", TIME, 10ms, OFF, 255 |
| Notes | <p>The parameters are:</p> <p>(There is a total of 11 items in each step, the following is a list of the items in the order they must appear in the remote command.)</p> <ol style="list-style-type: none"> 1. Step Trigger <enum> – specifies the input trigger for the step. For details of the valid types of step trigger see "Step Trigger" on page 2588. 2. Transition Time <time> – specifies the transition time for the step in seconds. For details of the valid ranges for the transition time see "Transition Time" on page 2590. 3. Radio Band <enum> – specifies the radio band for the step. For details of the valid radio bands see "Radio Setup" on page 2591. 4. Radio Band Link <enum> – specifies the radio band link direction for the step. For details of the valid link types, see "Radio Band Link" on page 2607. 5. Frequency/Channel Number <freq>/<chan num> – specifies the frequency in Hz or the channel number for the step. The channel number and frequency are combined as one parameter that represents the frequency or channel number depending on the radio band setting. If the radio band is set to NONE, this value is interpreted as a frequency value in Hz. If the radio band is set to a valid band, this value is interpreted as a channel number. For details of the valid ranges for frequency and channel numbers, see "Channel" on page 2608 and "Frequency" on page 2608. 6. Power <ampl> – specifies the output power for the step in dBm. For details of the valid ranges see "Power" on page 2609. 7. Waveform <string> – specifies the waveform for playback during the step. The step can output either a new ARB waveform, continue playback of the previous waveform, or output a CW tone. The |

options for specifying these are:

<filename> - plays the specified waveform from the start. The filename value is the name of the file within ARB playback memory, it does not include the windows path to the file on the HDD. If you enter a filename for a waveform that does not reside within ARB playback memory, an error is generated.

CONT - continues playback of the ARB file from the previous step

CW - outputs a CW tone

OFF - disable RF output

8. Step Duration <enum> - specifies the duration of the step. The duration can be specified to be either time, or play count of the ARB file associated with the step, or continuous. If Waveform is set to "CW", this value cannot be set to Play Count and an error will be generated. If continuous is selected, the following Time or Count value is ignored. For further details of this setting, see "[Step Duration](#)" on page 2616.

9. Time or Count <time/int> - specifies time duration in seconds or play count of the ARB file associated with the step. For further details of this setting, including the valid ranges for the time or play count setting, "[Time](#)" on page 2616 and "[Play Count](#)" on page 2617.

10. Output Trigger <Boolean> - specifies the output trigger for the step. For details of the ranges for this setting see "[Output Trigger](#)" on page 2618.

| | |
|----------------------|--|
| Dependencies | The range of subopcode values is 1 to 1000 and the value you enter is determined by the number of steps you have configured. For details see " Number of Steps " on page 2587. If you attempt to remotely set or query a subopcode that is out of range, an error is generated. |
| Initial S/W Revision | A.05.00 |

Step Configuration of Step Trigger parameter list (Remote Command Only)

This SCPI command is to configure "Step Trigger" parameter array of the whole List Sequencer at one time. The number of array is same as step number defined in "[Number of Steps](#)" on page 2587 Number of Steps. As a step is setup, the value entered run through several levels of validation.

| | |
|-----------------------------|--|
| Remote Command | :SOURce:LIST:SETup:INPut:TRIGger <enum>, <enum>, <enum>, ... :SOURce:LIST:SETup:INPut:TRIGger? |
| Example | :SOUR:LIST:SET:INP:TRIG IMM,INT,EXT2 :SOUR:LIST:SET:INP:TRIG? |
| Notes | The command is to setup below parameter array of whole list sequence. Step Trigger <enum> - specifies the input trigger for the step. For details of the valid types of step trigger see " Step Trigger " on page 2588. If input parameter number exceeds the step number defined by " Number of Steps " on page 2587 Number of Steps then generate error ", and only those parametes whose index number falls in number of steps will be updated. |
| Remote Command Notes | IMMEDIATE INTERNAL KEY BUS EXTERNAL2 |
| Dependencies | The range is 1 to 1000 which is determined by the number of steps you have configured. For details see " Number of Steps " on page 2587. |
| Initial S/W Revision | A.09.40 |

Step Configuration of Transition Time parameter list (Remote Command Only)

This SCPI command is to configure “Transition Time” parameter array of the whole List Sequencer at one time. The number of array is same as step number defined in ["Number of Steps" on page 2587](#) Number of Steps. As a step is setup, the value entered run through several levels of validation.

| | |
|-----------------------------|---|
| Remote Command | :SOURce:LIST:SETup:TRANsition:TIME <time>, <time>, <time>, ... :SOURce:LIST:SETup:TRANsition:TIME? |
| Example | :SOUR:LIST:SET:TRAN:TIME 1ms,1ms,1ms :SOUR:LIST:SET:TRAN:TIME? |
| Notes | The command is to setup below parameter array of whole list sequence. Transition Time <time> – specifies the transition time for the step in seconds. For details of the valid ranges for the transition time see "Transition Time" on page 2590 If input parameter number exceeds the step number defined by "Number of Steps" on page 2587 Number of Steps then generate error ", and only those parametes whose index number falls in number of steps will be updated. |
| Dependencies | The range is 1 to 1000 which is determined by the number of steps you have configured. For details see "Number of Steps" on page 2587 . |
| Initial S/W Revision | A.09.40 |

Step Configuration of Radio Band parameter list (Remote Command Only)

This SCPI command is to configure “Radio Band” parameter array of the whole List Sequencer at one time. The number of array is same as step number defined in ["Number of Steps" on page 2587](#) Number of Steps. As a step is setup, the value entered run through several levels of validation.

| Initial S/W Revision | A.09.40 |

Step Configuration of Duration Time or Play Count parameter list (Remote Command Only)

This SCPI command is to configure “Duration Time” or “Play Count” parameter array of the whole List Sequencer at one time. The number of array is same as step number defined in ["Number of Steps" on page 2587](#) Number of Steps. As a step is setup, the value entered run through several levels of validation.

| | |
|-----------------------|--|
| Remote Command | :SOURce:LIST:SETup:TOCount <time/int>, <time/int>, <time/int>, ... :SOURce:LIST:SETup:TOCount? |
| Example | :SOUR:LIST:SET:TOC 1s,2s,3s :SOUR:LIST:SET:TOC? :SOUR:LIST:SET:TOC 5,6,7 :SOUR:LIST:SET:TOC? |
| Notes | The command is to setup below parameter array of whole list sequence. Time or Count <time/int> – specifies time duration in seconds or play count of the ARB file associated with the step. For further details of this setting, including the valid ranges for the time or play count setting, "Time" on page 2616 and "Play Count" on page 2617 . If input parameter number exceeds the step number defined by "Number of Steps" on page 2587 Number of Steps then generate error ", and only those parametes whose index number falls in number of steps will be updated. If current "Step Duration" on page 2616 is “Continuous”, then generate error -221, "Settings conflict;Cannot accept time or count input when step duration type is Continuous on step #" |
| Dependencies | The range is 1 to 1000 which is determined by the number of steps you have configured. For details see "Number of Steps" on page 2587 . |
| Initial S/W Revision | A.09.40 |

Step Configuration of Output Trigger parameter list (Remote Command Only)

This SCPI command is to configure “Output Trigger” parameter array of the whole List Sequencer at one time. The number of array is same as step number defined in ["Number of Steps" on page 2587](#) Number of Steps. As a step is setup, the value entered run through several levels of validation.

| | |
|-----------------------|--|
| Remote Command | :SOURce:LIST:SETup:OUTPut:TRIGger <bool>, <bool>, <bool>, ... :SOURce:LIST:SETup:OUTPut:TRIGger ? |
| Example | :SOUR:LIST:SET:OUTP:TRIG ON,OFF,ON :SOUR:LIST:SET:OUTP:TRIG? |
| Notes | The command is to setup below parameter array of whole list sequence. Output Trigger <Boolean> – specifies the output trigger for the step. For details of the ranges for this setting see "Output Trigger" on page 2618 . If input parameter number exceeds the step number defined by "Number of Steps" on page 2587 Number of Steps then generate error ", and only those parametes whose index number falls in |

| | |
|----------------------|--|
| | legal step number will be updated. |
| Remote Command Notes | ON OFF 1 0 |
| Dependencies | The range is 1 to 1000 which is determined by the number of steps you have configured. For details see " Number of Steps " on page 2587. |
| Initial S/W Revision | A.09.40 |

Clear List (Remote Command Only)

This command is the SCPI equivalent of the Clear List UI feature described in.

| | |
|-----------------------|--------------------------|
| Remote Command | :SOURce:LIST:SETup:CLEar |
| Example | :SOUR:LIST:SETup:CLE |
| Initial S/W Revision | A.05.00 |

Trigger Type

Allows access to the sub-menu for selecting the output trigger type for the list sequencer globally. It cannot be changed between different sequence steps.

| | |
|-----------------------|---|
| Key Path | Source, List Sequencer |
| Remote Command | :SOURce:LIST:TRIGgerout:TYPe BEGinningofstep DATamarker |
| Example | :SOUR:LIST:TRIG:TYP BEG :SOUR:LIST:TRIG:TYP? |
| Notes | SCPI is supported after A.14.00 This an alias SCPI of :SOURce:LIST:TRIGger:OUTPut:TYPE STEP MARKer Recommend to use : SOURce:LIST:TRIGger:OUTPut:TYPE STEP MARKer |
| Preset | BEGinningofstep |
| Range | BEGinningofstep DATamarker |
| Initial S/W Revision | A.14.00 |

BeginningOfStep

Sets the output trigger type as BeginningOfStep for the whole source sequence.

| | |
|-----------------|---|
| Key Path | Source, List Sequencer, Trigger Type |
| Example | :SOUR:LIST:TRIG:TYP BEG |
| Notes | SCPI is supported after A.14.00 This an alias SCPI of :SOURce:LIST:TRIGger:OUTPut:TYPE STEP Recommend to use : SOURce:LIST:TRIGger:OUTPut:TYPE STEP |

| | |
|----------------------|---------|
| Initial S/W Revision | A.14.00 |
|----------------------|---------|

DataMarker

Sets the output trigger type as DataMarker for the whole source sequence. When DataMarker is selected, which marker to route is also needed to be set.

| | |
|-----------------|---|
| Key Path | Source, List Sequencer, Trigger Type |
| Example | :SOUR:LIST:TRIG:TYP DAT |
| Notes | SCPI is supported after A.14.00 This an alias SCPI of :SOURce:LIST:TRIGger:OUTPut:TYPE MARKer Recommend to use : SOURce:LIST:TRIGger:OUTPut:TYPE MARKer |

| | |
|----------------------|---------|
| Initial S/W Revision | A.14.00 |
|----------------------|---------|

Marker 1

Sets the output trigger maker routing to Marker 1 for DataMarker in the whole source sequence.

| | |
|-----------------|--|
| Key Path | Source, List Sequencer, Trigger Type, DataMarker |
| Example | :SOUR:LIST:TRIG:TYPE:MARK M1 |
| Notes | SCPI is supported after A.14.00 This an alias SCPI of :SOURce:LIST:TRIGger:OUTPut:TYPE:MARKer M1 Recommend to use :SOURce:LIST:TRIGger:OUTPut:TYPE:MARKer M1 |

| | |
|----------------------|---------|
| Initial S/W Revision | A.14.00 |
|----------------------|---------|

Marker 2

Sets the output trigger maker routing to Marker 2 for DataMarker in the whole source sequence.

| | |
|-----------------|--|
| Key Path | Source, List Sequencer, Trigger Type, DataMarker |
| Example | :SOUR:LIST:TRIG:TYPE:MARK M2 |
| Notes | SCPI is supported after A.14.00 This an alias SCPI of :SOURce:LIST:TRIGger:OUTPut:TYPE:MARKer M2 Recommend to use :SOURce:LIST:TRIGger:OUTPut:TYPE:MARKer M2 |

| | |
|----------------------|---------|
| Initial S/W Revision | A.14.00 |
|----------------------|---------|

Marker 3

Sets the output trigger maker routing to Marker 3 for DataMarker in the whole source sequence.

| | |
|----------------------|--|
| Key Path | Source, List Sequencer, Trigger Type, DataMarker |
| Example | :SOUR:LIST:TRIG:TYPE:MARK M3 |
| Notes | SCPI is supported after A.14.00 This an alias SCPI of :SOURce:LIST:TRIGger:OUTPut:TYPE:MARKer M3 Recommend to use :SOURce:LIST:TRIGger:OUTPut:TYPE:MARKer M3 |
| Initial S/W Revision | A.14.00 |

Marker 4

Sets the output trigger maker routing to Marker 4 for DataMarker in the whole source sequence.

| | |
|----------------------|--|
| Key Path | Source, List Sequencer, Trigger Type, DataMarker |
| Example | :SOUR:LIST:TRIG:TYPE:MARK M4 |
| Notes | SCPI is supported after A.14.00 This an alias SCPI of :SOURce:LIST:TRIGger:OUTPut:TYPE:MARKer M4 Recommend to use :SOURce:LIST:TRIGger:OUTPut:TYPE:MARKer M4 |
| Initial S/W Revision | A.14.00 |

Manual Trigger Now

Pressing this key provides a software trigger event to the list sequencer. During execution of sequence, if the sequencer is halted on any step that has been configured with a “Manual” step trigger, then this key press will cause the sequencer to continue and execute the step.

| | |
|-----------------------|--------------------------------------|
| Key Path | Source, List Sequencer |
| Remote Command | No remote command, front panel only. |
| Initial S/W Revision | A.05.00 |

Remote Software Trigger (Remote command Only)

During execution of a list sequence, the sequence will halt and wait at any step that has Step Trigger set to “Bus”. Sending this command will trigger the step and continue the sequence.

| | |
|-----------------------|---|
| Remote Command | :SOURce:LIST:TRIGger:INITiate[:IMMediate] |
| Example | :SOUR:LIST:TRIG:INIT |
| Initial S/W Revision | A.05.00 |

Query List Sequence Initiation Armed Status (Remote Command Only)

This is a blocking SCPI query to determine if source list sequence being initiated successfully or not.

| | |
|-----------------------------|--|
| Remote Command | :SOURce:LIST:INITiation:ARMed? |
| Example | :SOUR:LIST:INIT:ARMed? |
| Notes | The return data is in the following format: Integer |
| Notes | Query only SCPI. Returning "1" if list sequence has been initiated successfully, returning "0" if not. Once get "0", you can use :SYST:ERR? to query what error happened. Just like "*OPC?", this command can be blocked until event/status "IsSourceSweeping" happens, and then returns. Doing so can help user's script query armed status only once during the time interval of the initiation. As an ancillary SCPI of existing SCPI ":SOUR:LIST:TRIGger[:IMMediate]" (see "Initiate Sequence" on page 2586 Initiate Sequence), the right usage of this command is to use it after ":SOUR:LIST:TRIG". If not, this command will return "1" immediately. |
| Notes | There is an alias SCPI ":SOURce:LIST:TRIGger:INITiation:ARMed?". |
| Initial S/W Revision | A.09.40 |

Source Preset

Allows you to preset the source settings to their default values.

| | |
|-----------------------|----------------|
| Key Path | Source |
| Remote Command | :SOURce:PRESet |
| Example | :SOUR:PRES |

Span X Scale

Accesses a menu of functions that enable you to set the horizontal scale parameters.

| | |
|--------------------------|------------------------|
| parameter_table_24.18745 | 54.42177 |
| Key Path | Front-panel key |
| Initial S/W Revision | A.11.00 |
| Help Map ID | 9055 |

Ref Value

Sets the X reference value.

| | |
|--------------------------|--|
| parameter_table_24.18745 | 54.42177 |
| Key Path | SPAN X Scale |
| Mode | BASIC, PNOISE, WCDMA, C2K, GSM, WIMAXOFDMA, TDSCDMA, 1XEVD0, DVB, DTMB, ISDBT, CMMB, LTE, LTETDD, DCTV, WLAN, MSR, LTEAFDD, LTEATDD |
| Remote Command | :DISPlay:SEMask:VIEW[1]:WINDow[1]:TRACe:X[:SCALe]:RLEVel <freq> :DISPlay:SEMask:VIEW[1]:WINDow[1]:TRACe:X[:SCALe]:RLEVel? |
| Example | DISP:SEM:VIEW:WIND:TRAC:X:RLEV 10 DISP:SEM:VIEW:WIND:TRAC:X:RLEV? |
| Notes | You must be in the mode that includes SEM measurement to use this command. Use :INSTrument:SElect to set the mode. |
| Couplings | If Auto Scaling is set to On, this value is automatically determined by the measurement result. When you set this value manually, Auto Scaling automatically changes to Off. |
| Preset | 1.0 GHz |
| State Saved | Saved in instrument state. |
| Min | -1000 GHz |
| Max | 1000 GHz |
| Default Unit | Hz |
| Initial S/W Revision | A.11.00 |
| Help Map ID | 9085 |

Scale/Div

Sets the horizontal scale.

| | |
|--------------------------|-----------------|
| parameter_table_24.18745 | 54.42177 |
|--------------------------|-----------------|

| | |
|-----------------------------|--|
| Key Path | SPAN X Scale |
| Mode | BASIC, PNOISE, WCDMA, C2K, GSM, WIMAXOFDMA, TDSCDMA, 1XEVD0, DVB, DTMB, ISDBT, CMMB, LTE, LTETDD, DCTV, WLAN, MSR, LTEAFDD, LTEATDD |
| Remote Command | :DISPlay:SEMask:VIEW[1]:WINDow[1]:TRACe:X[:SCALe]:PDIVision <freq> :DISPlay:SEMask:VIEW[1]:WINDow[1]:TRACe:X[:SCALe]:PDIVision ? |
| Example | DISP:SEM:VIEW:WIND:TRAC:X:PDIV 500 DISP:SEM:VIEW:WIND:TRAC:X:PDIV? |
| Notes | You must be in a mode that includes the SEM measurement to use this command. Use INSTRument:SElect to set the mode. |
| Couplings | If Auto Scaling is set to On, this value is automatically determined by the measurement result. When you set this value manually, Auto Scaling automatically changes to Off. |
| Preset | Automatically Calculated |
| State Saved | Yes Saved in instrument state. |
| Min | 1 Hz |
| Max | 10.0 GHz |
| Initial S/W Revision | A.11.00 |
| Help Map ID | 9086 |

Ref Position

Sets the reference position for the X axis to Left, Center or Right.

| | |
|-----------------------------|---|
| parameter_table_24.18745 | 54.42177 |
| Key Path | SPAN X Scale |
| Mode | BASIC, PNOISE, WCDMA, C2K, GSM, WIMAXOFDMA, TDSCDMA, 1XEVD0, DVB, DTMB, ISDBT, CMMB, LTE, LTETDD, DCTV, WLAN, MSR, LTEAFDD, LTEATDD |
| Remote Command | :DISPlay:SEMask:VIEW[1]:WINDow[1]:TRACe:X[:SCALe]:RPOsition LEFT CENTer RIGHT :DISPlay:SEMask:VIEW[1]:WINDow[1]:TRACe:X[:SCALe]:RPOsition? |
| Example | DISP:SEM:VIEW:WIND:TRAC:X:RPOS LEFT DISP:SEM:VIEW:WIND:TRAC:X:RPOS? |
| Notes | You must be in a mode that includes the SEM measurement to use this command. Use INSTRument:SElect to set the mode. |
| Preset | CENTer |
| State Saved | Yes Saved in instrument state. |
| Range | Left Ctr Right |
| Initial S/W Revision | A.11.00 |
| Help Map ID | 9087 |

Auto Scaling

Toggles the scale coupling function between On and Off.

| | |
|----------------------------------|--|
| parameter_ table_ 24.18745 | 54.42177 |
| Key Path | SPAN X Scale |
| Mode | BASIC, PNOISE, WCDMA, C2K, GSM, WIMAXOFDMA, TDSCDMA, 1XEVD0, DVB, DTMB, ISDBT, CMMB, LTE, LTETDD, DCTV, WLAN, MSR, LTEAFDD, LTEATDD |
| Remote Command | :DISPlay:SEMask:VIEW[1]:WINDow[1]:TRACe:X[:SCALe]:COUPle 0 1 OFF ON :DISPlay:SEMask:VIEW[1]:WINDow[1]:TRACe:X[:SCALe]:COUPle? |
| Example | DISP:SEM:VIEW:WIND:TRAC:X:COUP ON DISP:SEM:VIEW:WIND:TRAC:X:COUP? |
| Notes | You must be in a mode that includes the SEM measurement to use this command. Use INSTRument:SElect to set the mode. |
| Couplings | When Auto Scaling is On and the Restart front-panel key is pressed, this function automatically determines the scale per division and reference values based on the measurement results. When you set a value to either Scale/Div or Ref Value manually, Auto Scaling automatically changes to Off. |
| Preset | 1 |
| State Saved | Yes Saved in instrument state. |
| Range | On Off |
| Initial S/W Revision | A.11.00 |
| Help Map ID | 9088 |

Sweep/Control

Displays a menu that enables you to set up and control the time, gate method, and source of the current measurement. See [Sweep/Control@3273](#) for more information.

| | |
|--------------------------|------------------------|
| parameter_table_24.18745 | 54.42177 |
| Key Path | Front-panel key |
| Initial S/W Revision | Prior to A.02.00 |
| Help Map ID | 9068 |

Pause

Pauses a measurement after the current data acquisition is complete. When Paused, the label on the key changes to Resume. Pressing the Resume key resumes the measurement at the point it was at when paused. See [Pause/Resume@3290@i](#) for more details.

| | |
|--------------------------|----------------------|
| parameter_table_24.18745 | 54.42177 |
| Key Path | Sweep/Control |
| Initial S/W Revision | Prior to A.02.00 |
| Help Map ID | 9069 |

Gate

Accesses a menu that enables you to control the gating function. The Gate functionality is used to view signals best viewed by qualifying them with other events.

Gate setup parameters are the same for all measurements – they do not change as you change measurements. Settings like these are called “Meas Global” and are unaffected by Meas Preset.

| | |
|----------------------|---|
| Key Path | Sweep/Control |
| Scope | Meas Global |
| Readback | The state and method of Gate, as [Off, FFT] or [On, FFT]. Note that for measurements that only support gated FFT, the method is nonetheless read back, but always as FFT. |
| Initial S/W Revision | Prior to A.02.00 |

Gate On/Off

Turns the gate function on and off.

When the Gate Function is on, the selected Gate Method is used along with the gate settings and the signal at the gate source to control the sweep system with the gate signal. Not all measurements allow every type of Gate Methods.

When Gate is on, the annunciation in the measurement bar reflects that it is on and what method is used, as seen in the following "Gate: FFT" annunciator graphic.

| | |
|-------------------------------------|--|
| Key Path | Sweep/Control, Gate |
| Remote Command | [:SENSe] :SWEep:EGATe [:STATe] OFF ON 0 1 [:SENSe] :SWEep:EGATe [:STATe] ? |
| Example | SWE:EGAT ON SWE:EGAT? |
| Dependencies | <p>When in the ACP measurement:</p> <ul style="list-style-type: none"> • When Meas Method is RBW or FAST, this function is unavailable and the key is grayed out. • Whenever Gate is on, Meas Method, RBW or FAST is unavailable and keys for those are grayed out. • When Gate is on, Offset Res BW and Offset Video BW are ignored (if you set these values) and the measurement works as if all Offset Res BW and all Offset Video BW are coupled with the Res BW and the Video BW under the BW menu. When Gate is on, the Offset BW key in the Offset/Limit menu is grayed out. |
| Preset | Off LTETDD: On |
| State Saved | Saved in instrument state |
| Range | On Off |
| Backwards Compatibility SCPI | [:SENSe] :SWEep:TIME:GATE [:STATe] ESA compatibility |
| Backwards Compatibility Notes | In ESA, Trig Delay (On) and Gate (On) could not be active at the same time.. This dependency does not exist in PSA or in the X-Series. |
| Initial S/W Revision | Prior to A.02.00 |

Gate View On/Off

Turning on Gate View in the Swept SA measurement provides a single-window gate view display..

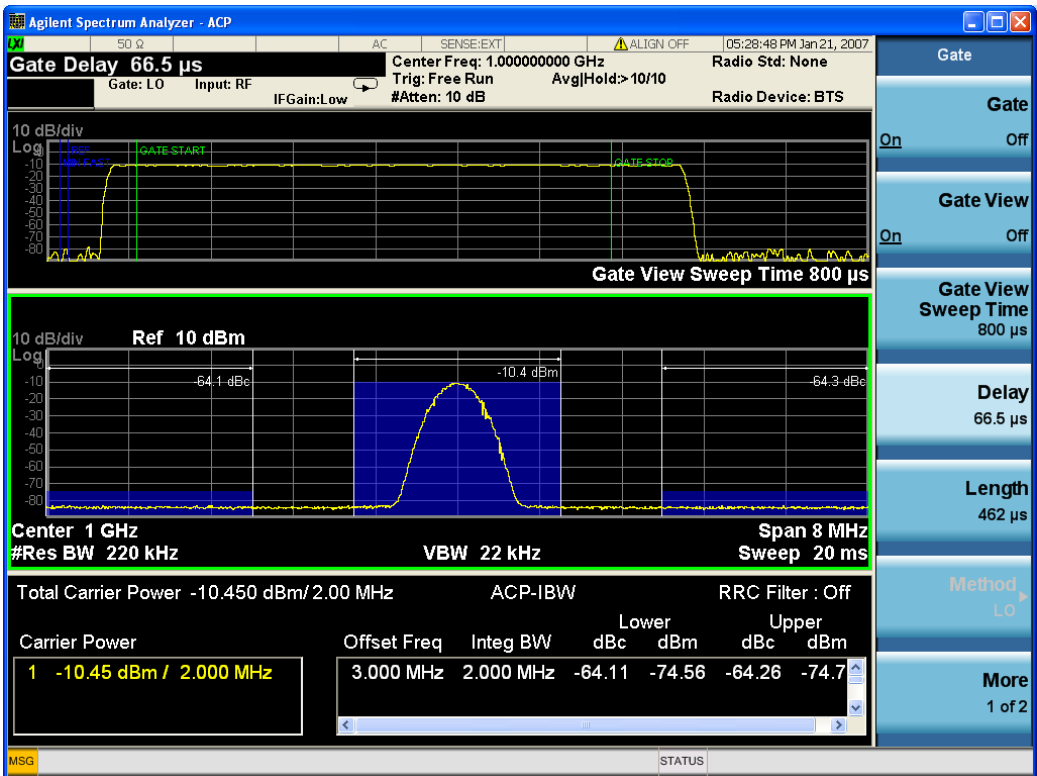

Turning on Gate View in other measurements shows the split-screen Gate View. In these measurements, when the Gate View is on, the regular view of the current measurement traces and results are reduced vertically to about 70% of the regular height. The Zero Span window, showing the positions of the Gate, is shown between the Measurement Bar and the reduced measurement window. By reducing the height of the measurement window, some of the annotation on the Data Display may not fit and is not shown.

| | |
|-----------------------------|---|
| Key Path | Sweep/Control, Gate |
| Remote Command | [:SENSe] :SWEep:EGATe:VIEW ON OFF 1 0 [:SENSe] :SWEep:EGATe:VIEW? |
| Example | SWE:EGAT:VIEW ON turns on the gate view. |
| Dependencies | In the Swept SA measurement: In Gate View, the regular Acq Time key is grayed out . When pressed, the grayed out key puts up the informational message "Use Gate View Sweep Time in the Gate menu." In the other measurements: When you turn Gate View on, the lower window takes on the current state of the instrument. Upon leaving Gate View, the instrument takes on the state of the lower window. When you turn Gate View on, the upper window Acquisition Time is set to the gate view acquisition time. |
| Couplings | These couplings apply to the Swept SA measurement: <ul style="list-style-type: none"> • When Gate View is turned on, the instrument is set to Zero Span. • Gate View automatically turns off whenever a Span other than Zero is selected. • Gate View automatically turns off if you press the Last Span key while in Gate View, and the instrument returns to the Span it was in before entering Gate View (even if that is Zero Span). • When Gate View is turned on, the sweep time used is the gate view sweep time. This is set according to the rules in section "Gate View Setup " on page 1246 • When Gate View is turned off, Sweep Time is set to the normal Swept SA measurement sweep time. • If Gate View is on and Gate is off, then turning on Gate turns off Gate View. |
| Preset | OFF |
| State Saved | Saved in instrument state |
| Range | On Off |
| Initial S/W Revision | Prior to A.02.00 |

A sample of the Gate View screen in the Swept SA measurement is shown in the following graphic :

A sample of the Gate View screen in other measurements is shown in the following graphic . This example is for the ACP measurement:

Turning Gate View off returns the analyzer to the Normal measurement view.

In the Swept SA, the normal measurement view is the single-window Swept SA view. When returning to this view, the Swept SA measurement returns to the Span it was in before entering **Gate View** (even if that is Zero Span).

The **Gate View** window is triggered from the Gate Source, with zero trigger delay. Also, when updating the **Gate View** window, the Gate itself must not operate. So it is internally shut off while the gate view window is being updated. For the Swept SA measurement, this means that the Gate is internally shut off whenever the gate view window is displayed. The measurement bar and softkeys continue to show the Trigger source for the main sweep window and give no indication that the Gate is shut off or that the Gate View window is triggered from the Gate Source.

When in **Gate View**, vertical lines are displayed in the Gate View window as follows:

- Green lines are displayed at the gate edges as follows: in Edge Gate, a line is shown for Delay and one for the end of the Gate period, defined by Length. You can adjust the position of the green lines by adjusting the gate length and the gate delay. These lines update in the Gate View window as the active function changes, even if the window is not being updated. In Gated FFT, their location is relative to the left edge of the screen.
- A blue line is displayed showing the delay reference, that is, the reference point for the Gate Delay within the Zero Span window. The blue line represents where (in time) the effective location of the gate start would be if the gate were programmed to zero delay.
-

Gate View Setup

Accesses a menu that enables you to setup parameters relevant to the Gate View

| | |
|----------------------|----------------------------|
| Key Path | Sweep/Control, Gate |
| Scope | Meas Global |
| Initial S/W Revision | A.10.00 |

Gate View Acquisition Time

Controls the acquisition time in the Gate View window. To provide an optimal view of the gate signal, the analyzer initializes Gate View Acq Time based on the current settings of Gate Delay and Gate Length.

| | |
|-----------------------|---|
| Key Path | Sweep/Control, Gate, Gate View Setup |
| Remote Command | [:SENSe] :SWEep:EGATe:TIME <time> [:SENSe] :SWEep:EGATe:TIME? |
| Example | SWE:EGAT:TIME 500 ms |
| Dependencies | Gate View Acquisition Time is initialized: <ul style="list-style-type: none"> • On Preset (after initializing delay and length). • Every time the Gate Method is set/changed. <ol style="list-style-type: none"> 1. Compute the location of the "gate stop" line, which you know is at time $t = t_{min} + GateDelay +$ |

| GateLength. | |
|----------------------|--|
| Preset | 519.3 μ s WiMAX OFDMA: 5 ms GSM/EDGE: 1 ms |
| State Saved | Saved in instrument state |
| Min | 100 ns |
| Max | 6000 s |
| Initial S/W Revision | Prior to A.02.00 |

Gate View Start Time

Controls the time at the left edge of the Gate View.

| Key Path | Sweep/Control, Gate, Gate View Setup |
|-----------------------|---|
| Remote Command | [:SENSe] :SWEep:EGATe:VIEW:STARt <time> [:SENSe] :SWEep:EGATe:VIEW:STARt? |
| Example | SWE:EGAT:VIEW:STAR 10ms |
| Notes | Units of time are required or no units; otherwise an invalid suffix error message will be generated. See error -131. |
| Preset | 0 ms |
| State Saved | Saved in instrument state |
| Min | 0 |
| Max | 500 ms |
| Initial S/W Revision | A.10.00 |

Gate Delay

Controls the length of time from the time the gate condition goes True until the gate is turned on.

| Key Path | Sweep/Control, Gate |
|-----------------------|--|
| Remote Command | [:SENSe] :SWEep:EGATe:DELay <time> [:SENSe] :SWEep:EGATe:DELay? |
| Example | SWE:EGAT:DELay 500ms SWE:EGAT:DELay? |
| Notes | Units of time are required or no units; otherwise an invalid suffix error message will be generated. |
| Preset | 57.7 μ s WiMAX OFDMA: 71 μ s GSM/EDGE: 600 μ s |

| | |
|-------------------------------------|--|
| | WLAN: 500 us WLAN: 36 us |
| State Saved | Saved in instrument state |
| Min | 0.0 us |
| Max | 100 s |
| Backwards Compatibility SCPI | [:SENSe]:SWEep:TIME:GATE:DELay ESA compatibility |
| Initial S/W Revision | Prior to A.02.00 |

Gate Length

Controls the length of time that the gate is on after it opens.

| Key Path | Sweep/Control, Gate |
|-------------------------------------|--|
| Remote Command | [:SENSe]:SWEep:EGATe:LENGth <time> [:SENSe]:SWEep:EGATe:LENGth? |
| Example | SWE:EGAT:LENG 1 SWE:EGAT:LENG? |
| Notes | Units of time are required or no units; otherwise an invalid suffix error message will be generated. |
| Preset | 461.6 us WiMAX OFDMA: 50 us GSM/EDGE: 200 us WLAN: 1.54 ms WLAN: 32 us |
| State Saved | Saved in instrument state |
| Min | 100 ns |
| Max | 5 s |
| Backwards Compatibility SCPI | [:SENSe]:SWEep:TIME:GATE:LENGth ESA compatibility |
| Initial S/W Revision | Prior to A.02.00 |

Gate Source

The menus under the **Gate Source** key are the same as those under the **Trigger key**, with the exception that neither **Free Run** nor **Video** are available as Gate Source selections. However, a different SCPI command is used to select the Gate Source (see table below) because you may independently set the Gate Source and the Trigger Source.

Any changes to the settings in the setup menus under each Gate Source selection key (for example: Trigger Level, Trigger Delay, etc.) also affect the corresponding settings under the Trigger menu keys. The SCPI commands used for these are the same for Trigger and Gate, since there is only one setting which affects both Gate and Trigger. Example: to set the Trigger Level for External 1 you use the command :TRIG:EXT1:LEV regardless of whether you are using External 1 as a Trigger Source or a Gate Source.

| Key Path | Sweep/Control, Gate |
|---------------------------------|--|
| Remote Command | [:SENSe] :SWEep:EGATe:SOURce EXTernal1 EXTernal2 LINE FRAME RFBurst [:SENSe] :SWEep:EGATe:SOURce? |
| Dependencies | In some models, there is no second External input. In these models, the External 2 key is blanked and the EXTernal2 parameter will generate a "Hardware missing; Not available for this model number" error. |
| Preset | EXTernal 1 GSM/EDGE, MSR: FRAME LTETDD: EXTernal 1When Direction is Downlink, FRAME when Direction is Uplink. |
| Initial S/W Revision | Prior to A.02.00 |
| Modified at S/W Revision | A.03.00, A.14.00 |

Video (IF Envelope)

Pressing this key, when it is not selected, selects the video signal as the trigger. The Video trigger condition is met when the video signal (the filtered and detected version of the input signal, including both RBW and VBW filtering) crosses the video trigger level.

NOTE

When the detector selected for all active traces is the average detector, the video signal for triggering does not include any VBW filtering.

The video trigger level is shown as a labeled line on the display. The line is displayed as long as video is the selected trigger source.

Pressing this key, when it is already selected, accesses the video trigger setup functions.

| Key Path | Trigger |
|-------------------------------------|--|
| Example | TRIG:SOUR VID Swept SA measurement TRIG:<meas>:SOUR VID Measurements other than Swept SA |
| Notes | Log Plot and Spot Frequency measurements do not support Video Trigger |
| Dependencies | Video trigger is allowed in average detector mode. |
| State Saved | Saved in instrument state |
| Status Bits/OPC dependencies | The Status Operation Register bit 5 "Waiting for Trigger" is set at the same time as the Sweeping or Measuring bit is set. It is cleared when the trigger actually occurs (that is, after the trigger event occurs and all the applicable trigger criteria have been met). A corresponding pop-up message ("Waiting for trigger") is generated if no trigger signal appears after approximately 2 sec. This message goes away when a trigger signal appears. |

| | |
|-------------------------------|---|
| Backwards Compatibility Notes | In the past, the Average detector was not available when Video triggering was on, and consequently, functions that set the detector to average (such as Marker Noise or Band/Intvl Power) were not available when the video trigger was on. Similarly, Video triggering was not available when the detector was Average. In the X-Series, these restrictions are removed. |
| Initial S/W Revision | Prior to A.02.00 |

Trigger Level

Sets a level for the video signal trigger. When the video signal crosses this level, with the chosen slope, the trigger occurs. This level is displayed with a horizontal line only if **Video** is the selected trigger source.

| | |
|-------------------------------|---|
| Key Path | Trigger, Video |
| Remote Command | :TRIGger[:SEquence]:VIDeo:LEVel <ampl> :TRIGger[:SEquence]:VIDeo:LEVel? |
| Example | TRIG:VID:LEV -40 dBm |
| Notes | When sweep type = FFT, the video trigger uses the amplitude envelope in a bandwidth wider than the FFT width as a trigger source. This might often be useful, but does not have the same relationship between the displayed trace and the trigger level as in swept triggering. Amplitude Corrections are not taken into account by the Video Trig Level. For example, if you have given yourself effective gain with an amplitude correction factor, the Video Trigger will not fire until you have dropped the trigger line that far below the displayed signal level, rather than simply dropping it down to the displayed signal level. Note that other corrections, specifically External Gain and Ref Level Offset, modify the actual trace data as it is taken and therefore ARE taken into account by Trig Level. |
| Couplings | This same level is used for the Video trigger source in the Trigger menu and for the Video selection in the Gate Source menu. |
| Preset | Set the Video Trigger Level -25 dBm on Preset. When the Video Trigger Level becomes the active function, if the value is off screen, set it to either the top or bottom of screen, depending on which direction off screen it was. |
| State Saved | Saved in instrument state |
| Min | -170 dBm |
| Max | +30 dBm |
| Default Unit | Depends on the current selected Y axis unit |
| Backwards Compatibility SCPI | :TRIGger[:SEquence]:IF:LEVel :TRIGger[:SEquence]:IF:LEVel? |
| Backwards Compatibility Notes | This alias is provided for backward compatibility with VSA/PSA comms apps. |
| Initial S/W Revision | Prior to A.02.00 |

Trig Slope

Controls the trigger polarity. It is set positive to trigger on a rising edge and negative to trigger on a falling edge.

| | |
|-------------------------------------|---|
| Key Path | Trigger, Video |
| Remote Command | :TRIGger[:SEquence]:VIDeo:SLOPe POSitive NEGative :TRIGger[:SEquence]:VIDeo:SLOPe? |
| Example | TRIG:VID:SLOP NEG |
| Preset | POSitive |
| State Saved | Saved in instrument state |
| Backwards Compatibility SCPI | :TRIGger[:SEquence]:IF:SLOPe NEGative POSitive :TRIGger[:SEquence]:IF:SLOPe? For backward compatibility with VSA/PSA comms apps |
| Backwards Compatibility Notes | The legacy :TRIGger[:SEquence]:SLOPe command affects the slopes for the VID, LINE, EXT1, EXT2, and RFB triggers. |
| Initial S/W Revision | Prior to A.02.00 |

| | |
|-------------------------------|---|
| Remote Command | :TRIGger[:SEquence]:SLOPe POSitive NEGative :TRIGger[:SEquence]:SLOPe? |
| Example | TRIG:SLOP NEG |
| Preset | POSitive |
| State Saved | Saved in instrument state |
| Backwards Compatibility Notes | In ESA/PSA, the Trigger Slope was global to all triggers. In the X-Series, the slope can be set individually for each Trigger Source. For backward compatibility, the global SLOPe command updates all instances of trigger slope (VID, LINE, EXT1, EXT2, TV, RFB). The query returns the trigger slope setting of the currently selected trigger source. |
| Initial S/W Revision | Prior to A.02.00 |

External 1

Pressing this key, when it is not selected, selects an external input signal as the trigger. A new sweep/measurement will start when the external trigger condition is met using the external 1 input connector on the rear panel.

Pressing this key, when it is already selected, accesses the external 1 trigger setup menu.

| | |
|----------------|---|
| Key Path | Trigger |
| Example | TRIG:SOUR EXT1 Swept SA measurement TRIG:<meas>:SOUR EXT1 Measurements other than Swept SA |
| Dependencies | Grayed out if in use by Point Trigger in the Source Setup menu. Forced to Free Run if already selected and Point Trigger is set to External 1. |

| | |
|------------------------------|--|
| State Saved | Saved in instrument state |
| Status Bits/OPC dependencies | The Status Operation Register bit 5 "Waiting for Trigger" is set at the same time as the Sweeping or Measuring bit is set. It is cleared when the trigger actually occurs (that is, after the trigger event occurs and all the applicable trigger criteria have been met). A corresponding pop-up message ("Waiting for trigger") is generated if no trigger signal appears after approximately 2 sec. This message goes away when a trigger signal appears. |
| Initial S/W Revision | Prior to A.02.00 |

Trigger Level

Sets the value where the external 1 trigger input will trigger a new sweep/measurement.

| | |
|------------------------------|---|
| Key Path | Trigger, External 1 |
| Remote Command | :TRIGger[:SEquence]:EXTernal:LEVel <level> :TRIGger[:SEquence]:EXTernal:LEVel? |
| Example | TRIG:EXT1:LEV 0.4 V |
| Couplings | This same level is used for the Ext1 trigger source in the Trigger menu, for the Ext1 selection in the Periodic Timer sync source (in the Trigger menu and in the Gate Source menu), and also for the Ext1 selection in the Gate Source menu. |
| Preset | 1.2 V |
| State Saved | Saved in instrument state |
| Min | -5 V |
| Max | 5 V |
| Default Unit | V |
| Backwards Compatibility SCPI | :TRIGger[:SEquence]:EXTernal:LEVel For backward compatibility, the parameter EXTernal is mapped to EXTernal1 |
| Backwards Compatibility SCPI | :TRIGger[:SEquence]:FRAMe:EXTernal1:LEVel |
| Initial S/W Revision | Prior to A.02.00 |

Trig Slope

Controls the trigger polarity. It is set positive to trigger on a rising edge and negative to trigger on a falling edge.

| | |
|----------------|--|
| Key Path | Trigger, External 1 |
| Remote Command | :TRIGger[:SEquence]:EXTernal:SLOPe POSitive NEGative :TRIGger[:SEquence]:EXTernal:SLOPe? |
| Example | TRIG:EXT1:SLOP NEG |
| Couplings | This same slope is used in the Ext1 selection for the trigger source in the Trigger menu and for the |

| | |
|-------------------------------------|--|
| | period timer sync source (in the Trigger menu and in the Gate Source menu). |
| Preset | POSitive |
| State Saved | Saved in instrument state |
| Backwards Compatibility SCPI | :TRIGger[:SEquence]:EXTernal:SLOPe For backward compatibility, the parameter EXTernal is mapped to EXTernal1 |
| Backwards Compatibility SCPI | :TRIGger[:SEquence]:FRAMe:EXTernal1:SLOPe |
| Backwards Compatibility Notes | The legacy :TRIGger[:SEquence]:SLOPe command affects the slopes for the VID, LINE, EXT1, EXT2, and RFB triggers. |
| Initial S/W Revision | Prior to A.02.00 |

Zero Span Delay Comp On/Off

In zero span, there is a natural delay in the signal path, which comes from the RBW filter. This is usually desirable, as it allows you to trigger on events and also see those events, because the signal is delayed from the trigger event. However, in some cases it is desirable to eliminate this delay, so that trigger events line up exactly with the zero time point in zero span. You can use the **Zero Span Delay Comp On/Off** feature to enable or disable zero span delay compensation.

| | |
|-----------------------|---|
| Key Path | Trigger, External 1 |
| Remote Command | :TRIGger[:SEquence]:EXTernal1:DELAy:COMPensation OFF ON 0 1 :TRIGger[:SEquence]:EXTernal1:DELAy:COMPensation? |
| Example | TRIG:EXT1:DEL:COMP ON |
| Dependencies | No effect except in zero-span, but not locked out in nonzero spans. Blanked in modes that do not support zero-span measurements. If the SCPI command is sent when the key is blanked, an error is returned: -221, "Settings conflict; Feature not supported for this measurement" In analyzers shipping N9060A, this feature requires N9060A-7FP. |
| Preset | OFF |
| State Saved | Saved in instrument state |
| Initial S/W Revision | A.11.00 |

External 2

Pressing this key, when it is not selected, selects an external input signal as the trigger. A new sweep/measurement will start when the external trigger condition is met using the external 2 input connector. The external trigger 2 input connector is on the rear panel.

Pressing this key, when it is already selected, accesses the external 2 trigger setup menu.

| | |
|-----------------|-------------------------------------|
| Key Path | Trigger |
| Example | TRIG:SOUR EXT2 Swept SA measurement |

| | |
|------------------------------|--|
| | TRIG:<meas>:SOUR EXT2 Measurements other than Swept SA |
| Dependencies | In some models, there is no second External input. In these models, the External 2 key is blanked and the EXTernal2 parameter will generate a "Hardware missing; Not available for this model number" message. Grayed out if in use by Point Trigger in the Source Setup menu. Forced to Free Run if already selected and Point Trigger is set to External 2. |
| State Saved | Saved in instrument state |
| Status Bits/OPC dependencies | The Status Operation Register bit 5 "Waiting for Trigger" is set at the same time as the Sweeping or Measuring bit is set. It is cleared when the trigger actually occurs (that is, after the trigger event occurs and all the applicable trigger criteria have been met). A corresponding pop-up message ("Waiting for trigger") is generated if no trigger signal appears after approximately 2 sec. This message goes away when a trigger signal appears. |
| Initial S/W Revision | Prior to A.02.00 |
| Modified at S/W Revision | A.03.00 |

Trigger Level

Sets the value where the external 2 trigger input will trigger a new sweep/measurement.

| | |
|------------------------------|---|
| Key Path | Trigger, External 2 |
| Remote Command | :TRIGger[:SEquence]:EXTernal2:LEVel :TRIGger[:SEquence]:EXTernal2:LEVel? |
| Example | TRIG:EXT2:LEV 1.1 V |
| Couplings | This same level is used for the Ext2 trigger source in the Trigger menu, for the Ext2 selection in the Periodic Timer sync source (in the Trigger menu and in the Gate Source menu), and also for the Ext2 selection in the Gate Source menu. |
| Preset | 1.2 V |
| State Saved | Saved in instrument state |
| Min | -5 V |
| Max | 5 V |
| Default Unit | V |
| Backwards Compatibility SCPI | :TRIGger[:SEquence]:FRAMe:EXTernal2:LEVel |
| Initial S/W Revision | Prior to A.02.00 |

Trig Slope

Controls the trigger polarity. It is set positive to trigger on a rising edge and negative to trigger on a falling edge.

| | |
|-------------------------------|--|
| Key Path | Trigger, External 2 |
| Remote Command | :TRIGger[:SEquence]:EXTernal2:SLOPe POSitive NEGative :TRIGger[:SEquence]:EXTernal2:SLOPe? |
| Example | TRIG:EXT2:SLOP NEG |
| Couplings | This same slope is used in the Ext2 selection for the trigger source in the Trigger menu and for the period timer sync source (in the Trigger menu and in the Gate Source menu). |
| Preset | POSitive |
| State Saved | Saved in instrument state |
| Backwards Compatibility SCPI | :TRIGger[:SEquence]:FRAMe:EXTernal2:SLOPe |
| Backwards Compatibility Notes | The legacy :TRIGger[:SEquence]:SLOPe command affects the slopes for the VID, LINE, EXT1, EXT2, and RFB triggers. |
| Initial S/W Revision | Prior to A.02.00 |

Zero Span Delay Comp On/Off

In zero span, there is a natural delay in the signal path, which comes from the RBW filter. This is usually desirable, as it allows you to trigger on events and also see those events, because the signal is delayed from the trigger event. However, in some cases it is desirable to eliminate this delay, so that trigger events line up exactly with the zero time point in zero span. You can use the **Zero Span Delay Comp On/Off** feature to enable or disable zero span delay compensation.

| | |
|----------------------|---|
| Key Path | Trigger, External 2 |
| Remote Command | :TRIGger[:SEquence]:EXTernal2:DElay:COMPensation OFF ON 0 1 :TRIGger[:SEquence]:EXTernal2:DElay:COMPensation? |
| Example | TRIG:EXT2:DEL:COMP ON |
| Dependencies | No effect except in zero-span, but not locked out in nonzero spans. Blanked in modes that do not support zero-span measurements. If the SCPI command is sent when the key is blanked, an error is returned: -221, "Settings conflict; Feature not supported for this measurement" In analyzers shipping N9060A, this feature requires N9060A-7FP. |
| Preset | OFF |
| State Saved | Saved in instrument state |
| Initial S/W Revision | A.11.00 |

RF Burst

Pressing this key, when it is not selected, selects the RF Burst as the trigger. A new sweep/measurement will start when an RF burst envelope signal is identified from the signal at the RF Input connector. Pressing this key, when it is already selected, accesses the RF Burst trigger setup menu.

In some models, a variety of burst trigger circuitry is available, resulting in various available burst trigger bandwidths. The analyzer automatically chooses the appropriate trigger path based on the hardware configuration and other settings of the analyzer.

| Key Path | Trigger |
|-------------------------------|--|
| Example | TRIG:SOUR RFB Swept SA measurement TRIG:<meas>:SOUR RFB Measurements other than Swept SA |
| State Saved | Saved in instrument state |
| Status Bits/OPC dependencies | The Status Operation Register bit 5 "Waiting for Trigger" is set at the same time as the Sweeping or Measuring bit is set. It is cleared when the trigger actually occurs (that is, after the trigger event occurs and all the applicable trigger criteria have been met). A corresponding pop-up message ("Waiting for trigger") is generated if no trigger signal appears after approximately 2 sec. This message goes away when a trigger signal appears. |
| Backwards Compatibility Notes | The legacy command: :TRIGger[:SEquence]:RFBurst:FSElectivity[:STATe] OFF ON 0 1 is not supported in the X-Series, as the hardware to do Frequency Selective burst triggers does not exist in X-Series. |
| Initial S/W Revision | Prior to A.02.00 |
| Modified at S/W Revision | A.04.00 |

Absolute Trigger Level

Sets the absolute trigger level for the RF burst envelope.

When using the External Mixing path, the Absolute Trigger Level is uncalibrated because the factory default was set to accommodate the expected IF levels for the RF path.

| Key Path | Trigger, RF Burst |
|-----------------------|---|
| Scope | Meas Global |
| Remote Command | :TRIGger[:SEquence]:RFBurst:LEVel:ABSolute <ampl> :TRIGger[:SEquence]:RFBurst:LEVel:ABSolute? |
| Example | TRIG:RFB:LEV:ABS 10 dBm sets the trigger level of the RF burst envelope signal to the absolute level of 10 dBm |
| Notes | Sending this command does not switch the setting from relative to absolute; to switch it you need to send the :TRIGger[:SEquence]:RFBurst:LEVel:TYPE command, below. Amplitude Corrections are not taken into account by the Absolute Trigger Level. For example, if you have given yourself effective gain with an amplitude correction factor, the Absolute Trigger will not fire until you have set the trigger level that far below the displayed signal level, rather than simply to the displayed signal level. This is only true for Amplitude Corrections, not External Gain or Ref Level Offset functions. If mode is Bluetooth, the default value is -50 dBm. |
| Couplings | This same level is used for the RF Burst trigger source in the Trigger menu, for the RF Burst selection in the Periodic Timer sync source (in the Trigger menu and in the Gate Source menu), and also for the |

| | |
|-------------------------------------|--|
| | RF Burst selection in the Gate Source menu |
| Preset | -20 dBm |
| State Saved | Saved in instrument state |
| Min | -200 dBm |
| Max | 100 dBm |
| Default Unit | depends on the current selected Y-Axis unit |
| Backwards Compatibility SCPI | :TRIGger[:SEquence]:FRAME:RFBurst:LEVel:ABSolute |
| Initial S/W Revision | Prior to A.02.00 |
| Modified at S/W Revision | A.04.00 |

| | |
|--------------------------|---|
| Key Path | Trigger, RF Burst |
| Remote Command | :TRIGger[:SEquence]:RFBurst:LEVel:TYPE ABSolute RELative :TRIGger[:SEquence]:RFBurst:LEVel:TYPE? |
| Example | TRIG:RFB:LEV:TYPE REL sets the trigger level type of the RF burst trigger to Relative. |
| Preset | ABSolute |
| State Saved | Saved in instrument state |
| Initial S/W Revision | Prior to A.02.00 |
| Modified at S/W Revision | A.04.00 |

Relative Trigger Level

Sets the relative trigger level for the RF burst envelope.

In some models, the relative burst trigger function is implemented in hardware. In other models, without the advanced triggering hardware required, the relative burst trigger function is implemented in software in some measurements, and is unavailable in other measurements.

When implemented in software, the relative RF Burst trigger function is implemented as follows:

1. The measurement starts with the absolute RF Burst trigger setting. If it cannot get a trigger with that level, auto trigger fires and the acquisition starts anyway. After the acquisition, the measurement searches for the peak in the acquired waveform and saves it.
2. Now, in the next cycle of the measurement, the measurement determines a new absolute RF Burst level based on the peak value from the first measurement and the Relative RF Burst Trigger Level (always 0 or negative dB) set by the user. The following formula is used:
3. absolute RF Burst level = peak level of the previous acquisition + relative RF Burst level
4. If the new absolute RF Burst level differs from the previous by more than 0.5 dB, the new level is sent to the hardware; otherwise it is not updated (to avoid slowing down the acquisition)

Steps 2 and 3 repeat for subsequent measurements.

| Key Path | Trigger, RF Burst |
|-------------------------------------|---|
| Scope | Meas Global |
| Remote Command | :TRIGger[:SEquence]:RFBurst:LEVel:RELative <rel_ampl> :TRIGger[:SEquence]:RFBurst:LEVel:RELative? |
| Example | TRIG:RFB:LEV:REL -10 dB sets the trigger level of the RF burst envelope signal to the relative level of -10 dB |
| Notes | Sending this command does not switch the setting from absolute to relative; to switch it you need to send the :TRIGger[:SEquence]:RFBurst:LEVel:TYPE command, above. The relative trigger level is not available in some measurements. In those measurements the RELative parameter, and the :TRIGger[:SEquence]:RFBurst:LEVel:TYPE command (above), will generate an error if sent. |
| Dependencies | This key is grayed out and Absolute Trigger Level selected if the required hardware is not present in your analyzer and the current measurement does not support Relative triggering. |
| Preset | -6 dB GSM: -25 dB |
| State Saved | Saved in instrument state |
| Min | -45 dB |
| Max | 0 dB |
| Default Unit | dB or dBc |
| Backwards Compatibility SCPI | :TRIGger[:SEquence]:RFBurst:LEVel This legacy command is aliased to :TRIGger[:SEquence]:RFBurst:LEVel:RELative because the PSA had ONLY relative burst triggering |
| Initial S/W Revision | Prior to A.02.00 |
| Modified at S/W Revision | A.04.00 |

Trigger Slope

It is set positive to trigger on a rising edge and negative to trigger on a falling edge.

| Key Path | Trigger, RF Burst |
|-------------------------------------|--|
| Remote Command | :TRIGger[:SEquence]:RFBurst:SLOPe POSitive NEGative :TRIGger[:SEquence]:RFBurst:SLOPe? |
| Example | TRIG:RFB:SLOP NEG |
| Couplings | This same slope is used in the RF Burst selection for the trigger source in the Trigger menu and for the period timer sync source (in the Trigger menu and in the Gate Source menu). |
| Preset | POSitive |
| State Saved | Saved in instrument state |
| Backwards Compatibility SCPI | :TRIGger[:SEquence]:FRAME:RFBurst:SLOPe |

| | |
|-------------------------------|--|
| Backwards Compatibility Notes | The legacy :TRIGger[:SEQuence]:SLOPe command affects the slopes for the VID, LINE, EXT1, EXT2, and RFB triggers. |
| Initial S/W Revision | Prior to A.02.00 |

Periodic Timer (Frame Trigger)

Pressing this key, when it is not selected, selects the internal periodic timer signal as the trigger. Triggering occurrences are set by the **Period** parameter, which is modified by the **Sync Source** and **Offset**. Pressing this key, when it is already selected, accesses the periodic timer trigger setup functions.

If you do not have a sync source selected (it is Off), then the internal timer will not be synchronized with any external timing events.

| Key Path | Trigger |
|------------------------------|--|
| Example | TRIG:SOUR FRAM Swept SA measurement TRIG:<meas>:SOUR FRAM Measurements other than Swept SA |
| State Saved | Saved in instrument state |
| Readback | [Sync: <value of Sync Source>], for example, [Sync: External 1] |
| Status Bits/OPC dependencies | The Status Operation Register bit 5 "Waiting for Trigger" is set at the same time as the Sweeping or Measuring bit is set. It is cleared when the trigger actually occurs (that is, after the trigger event occurs and all the applicable trigger criteria have been met). A corresponding pop-up message ("Waiting for trigger") is generated if no trigger signal appears after approximately 2 sec. This message goes away when a trigger signal appears. |
| Initial S/W Revision | Prior to A.02.00 |

Periodic Timer Triggering:

This feature selects the internal periodic timer signal as the trigger. Trigger occurrences are set by the **Periodic Timer** parameter, which is modified by the **Sync Source** and **Offset**.

The figure below shows the action of the periodic timer trigger. Before reviewing the figure, we'll explain some uses for the periodic trigger.

A common application is measuring periodic burst RF signals for which a trigger signal is not easily available. For example, we might be measuring a TDMA radio which bursts every 20 ms. Let's assume that the 20 ms period is very consistent. Let's also assume that we do not have an external trigger source available that is synchronized with the period, and that the signal-to-noise ratio of the signal is not high enough to provide a clean RF burst trigger at all of the analysis frequencies. For example, we might want to measure spurious transmissions at an offset from the carrier that is larger than the bandwidth of the RF burst trigger. In this application, we can set the Periodic Timer to a 20.00 ms period and adjust the offset from that timer to position our trigger just where we want it. If we find that the 20.00 ms is not exactly right, we can adjust the period slightly to minimize the drift between the period timer and the signal to be measured.

A second way to use this feature would be to use **Sync Source** temporarily, instead of **Offset**. In this case, we might tune to the signal in a narrow span and use the RF Burst trigger to synchronize the periodic timer. Then we would turn the sync source off so that it would not miss-trigger. Miss-triggering can occur when we are tuned so far away from the RF burst trigger that it is no longer reliable.

A third example would be to synchronize to a signal that has a reference time element of much longer period than the period of interest. In some CDMA applications, it is useful to look at signals with a short periodicity, by synchronizing that periodicity to the "even-second clock" edge that happens every two seconds. Thus, we could connect the even-second clock trigger to Ext1 and use then Ext1 as the sync source for the periodic timer.

The figure below illustrates this third example. The top trace represents the even-second clock. It causes the periodic timer to synchronize with the leading edge shown. The analyzer trigger occurs at a time delayed by the accumulated offset from the period trigger event. The periodic timer continues to run, and triggers continue to occur, with a periodicity determined by the analyzer time base. The timer output (labeled "late event") will drift away from its ideal time due to imperfect matching between the time base of the signal being measured and the time base of the analyzer, and also because of imperfect setting of the period parameter. But the synchronization is restored on the next even-second clock event. ("Accumulated offset" is described in the in the **Offset** function section.)

Period

Sets the period of the internal periodic timer clock. For digital communications signals, this is usually set to the frame period of your current input signal. In the case that sync source is not set to OFF, and the external sync source rate is changed for some reason, the periodic timer is synchronized at the every external synchronization pulse by resetting the internal state of the timer circuit.

| | |
|----------------|---|
| Key Path | Trigger, Periodic Timer |
| Remote Command | :TRIGger[:SEquence]:FRAMe:PERiod <time> :TRIGger[:SEquence]:FRAMe:PERiod? |
| Example | TRIG:FRAM:PER 100 ms |
| Dependencies | The invalid data indicator turns on when the period is changed, until the next sweep/measurement completes. |
| Couplings | The same period is used in the Gate Source selection of the period timer. |
| Preset | 20 ms |

| | |
|----------------------|---------------------------|
| | GSM: 4.615383 |
| State Saved | Saved in instrument state |
| Min | 100.000 ns |
| Max | 559.0000 ms |
| Default Unit | S |
| Initial S/W Revision | Prior to A.02.00 |

Offset

Adjusts the accumulated offset between the periodic timer events and the trigger event. Adjusting the accumulated offset is different than setting an offset, and requires explanation.

The periodic timer is usually not synchronized with any external events, so the timing of its output events has no absolute meaning. Since the timing relative to external events (RF signals) is important, you need to be able to adjust (offset) it. However, you have no direct way to see when the periodic timer events occur. All that you can see is the trigger timing. When you want to adjust the trigger timing, you will be changing the internal offset between the periodic timer events and the trigger event. Because the absolute value of that internal offset is unknown, we will just call that the accumulated offset. Whenever the Offset parameter is changed, you are changing that accumulated offset. You can reset the displayed offset using Reset Offset Display. Changing the display does not change the value of the accumulated offset, and you can still make additional changes to accumulated offset.

To avoid ambiguity, we define that an increase in the "offset" parameter, either from the knob or the SCPI adjust command, serves to delay the timing of the trigger event.

| | |
|-----------------------|--|
| Key Path | Trigger, Periodic Timer |
| Remote Command | :TRIGger[:SEquence]:FRAMe:OFFSet <time> :TRIGger[:SEquence]:FRAMe:OFFSet? |
| Example | TRIG:FRAM:OFFS 1.2 ms |
| Notes | <p>The front panel interface (for example, the knob), and this command, adjust the accumulated offset, which is shown on the active function display. However, the actual amount sent to the hardware each time the offset is updated is the delta value, that is, the current accumulated offset value minus the previous accumulated offset value. Note that the accumulated offset value is essentially arbitrary; it represents the accumulated offset from the last time the offset was zeroed (with the Reset Offset Display key).</p> <p>Note that this command does not change the period of the trigger waveform. Note also that Offset is used only when the sync source is set to OFF, otherwise delay is used, see section "Trig Delay" on page 365.</p> <p>An increase in the "offset" parameter, either from the knob or the SCPI adjust command, serves to delay the timing of the trigger event.</p> |
| Notes | <p>When the SCPI command is sent the value shown on the key (and the Active Function, if this happens to be the active function) is updated with the new value. However, the actual amount sent to the hardware is the delta value, that is, the current accumulated offset value minus the previous accumulated offset value.</p> <p>The SCPI query simply returns the value currently showing on the key.</p> |

| | |
|----------------------|---|
| Dependencies | The invalid data indicator turns on when the offset is changed, until the next sweep/measurement completes. |
| Couplings | The same offset is used in the Gate Source selection of the period timer. |
| Preset | 0 s |
| State Saved | Saved in instrument state |
| Min | -10.000 s |
| Max | 10.000 s |
| Default Unit | S |
| Initial S/W Revision | Prior to A.02.00 |

Offset Adjust (Remote Command Only)

This remote command does not work at all like the related front panel keys. This command lets you advance the phase of the frame trigger by the amount you specify.

It does not change the period of the trigger waveform. If the command is sent multiple times, it advances the phase of the frame trigger an additional amount each time it is sent. Negative numbers are permitted.

| | |
|-----------------------|--|
| Remote Command | :TRIGger[:SEquence]:FRAMe:ADJust <time> |
| Example | TRIG:FRAM:ADJ 1.2 ms |
| Notes | Note also that Offset is used only when the sync source is set to OFF, otherwise delay is used, see section "Trig Delay" on page 365 An increase in the "offset" parameter, either from the knob or the SCPI adjust command, serves to delay the timing of the trigger event. |
| Notes | The front panel interface (for example, the knob) and the :TRIG:FRAM:OFFS command adjust the accumulated offset, which is shown on the active function display. However, the actual amount sent to the hardware is the delta value, that is, the current offset value minus the previous offset value. When the SCPI command is sent the value shown on the key (and the Active Function, if this happens to be the active function) is updated by increasing it (or decreasing it if the value sent is negative) by the amount specified in the SCPI command. This is a "command only" SCPI command, with no query. |
| Dependencies | The invalid data indicator turns on when the offset is changed, until the next sweep/measurement completes. |
| Couplings | The same offset is used in the Gate Source selection of the period timer. |
| Preset | 0 s |
| State Saved | Saved in instrument state |
| Min | -10.000 s |
| Max | 10.000 s |
| Default Unit | S |
| Initial S/W Revision | Prior to A.02.00 |

Reset Offset Display

Resets the value of the periodic trigger offset display setting to 0.0 seconds. The current displayed trigger location may include an offset value defined with the **Offset** key. Pressing this key redefines the currently displayed trigger location as the new trigger point that is 0.0 s offset. The **Offset** key can then be used to add offset relative to this new timing.

| | |
|-----------------------------|--|
| Key Path | Trigger, Periodic Timer |
| Remote Command | :TRIGger[:SEquence]:FRAMe:OFFSet:DISPlay:RESet |
| Example | TRIG:FRAM:OFFS:DISP:RES |
| Initial S/W Revision | Prior to A.02.00 |

Sync Source

Selects a signal source for you to synchronize your periodic timer trigger to, otherwise you are triggering at some arbitrary location in the frame. Synchronization reduces the precision requirements on the setting of the period.

For convenience you may adjust the level and slope of the selected sync source in a conditional branch setup menu accessed from the Sync Source menu. Note that these settings match those in the **Trigger** and **Gate Source** menus; that is, each trigger source has only one value of level and slope, regardless of which menu it is accessed from.

| | |
|-------------------------------------|--|
| Key Path | Trigger, Periodic Timer |
| Remote Command | :TRIGger[:SEquence]:FRAMe:SYNC EXTernal1 EXTernal2 RFBurst OFF :TRIGger[:SEquence]:FRAMe:SYNC? |
| Example | TRIG:FRAM:SYNC EXT2 |
| Dependencies | In some models, there is no second External input. In these models, the External 2 key is blanked and the EXTernal2 parameter will generate a "Hardware missing; Not available for this model number" message. |
| Preset | Off GSM/EDGE, MSR,LTE,LTETDD: RFBurst |
| State Saved | Saved in instrument state |
| Readback | The current setting is read back to this key and it is also Readback to the previous Periodic Timer trigger key. |
| Backwards Compatibility SCPI | :TRIGger[:SEquence]:FRAMe:SYNC EXTernal For backward compatibility, the parameter EXTernal is mapped to EXTernal1 |
| Initial S/W Revision | Prior to A.02.00 |
| Modified at S/W Revision | A.03.00, A.14.00 |

Off

Turns off the sync source for your periodic trigger. With the sync source off, the timing will drift unless the signal source frequency is locked to the analyzer frequency reference.

| | |
|----------------------|---|
| Key Path | Trigger, Periodic Timer, Sync Source |
| Example | TRIG:FRAM:SYNC OFF |
| Readback | Off |
| Initial S/W Revision | Prior to A.02.00 |

External 1

Pressing this key, when it is not selected, selects an external input signal as the trigger. A new sweep/measurement will start when the external trigger condition is met using the external 1 input connector on the rear panel.

Pressing this key, when it is already selected, accesses the external 1 trigger setup menu.

| | |
|------------------------------|--|
| Key Path | Trigger |
| Example | TRIG:SOUR EXT1 Swept SA measurement TRIG:<meas>:SOUR EXT1 Measurements other than Swept SA |
| Dependencies | Grayed out if in use by Point Trigger in the Source Setup menu. Forced to Free Run if already selected and Point Trigger is set to External 1. |
| State Saved | Saved in instrument state |
| Status Bits/OPC dependencies | The Status Operation Register bit 5 "Waiting for Trigger" is set at the same time as the Sweeping or Measuring bit is set. It is cleared when the trigger actually occurs (that is, after the trigger event occurs and all the applicable trigger criteria have been met). A corresponding pop-up message ("Waiting for trigger") is generated if no trigger signal appears after approximately 2 sec. This message goes away when a trigger signal appears. |
| Initial S/W Revision | Prior to A.02.00 |

Trigger Level

Sets the value where the external 1 trigger input will trigger a new sweep/measurement.

| | |
|-----------------------|---|
| Key Path | Trigger, External 1 |
| Remote Command | :TRIGger[:SEquence]:EXTernal1:LEVel <level> :TRIGger[:SEquence]:EXTernal1:LEVel? |
| Example | TRIG:EXT1:LEV 0.4 V |
| Couplings | This same level is used for the Ext1 trigger source in the Trigger menu, for the Ext1 selection in the Periodic Timer sync source (in the Trigger menu and in the Gate Source menu), and also for the Ext1 selection in the Gate Source menu. |

| | |
|-------------------------------------|---|
| Preset | 1.2 V |
| State Saved | Saved in instrument state |
| Min | -5 V |
| Max | 5 V |
| Default Unit | V |
| Backwards Compatibility SCPI | :TRIGger[:SEquence]:EXTernal:LEVel |
| Backwards Compatibility SCPI | For backward compatibility, the parameter EXTernal is mapped to EXTernal1 |
| Backwards Compatibility SCPI | :TRIGger[:SEquence]:FRAMe:EXTernal1:LEVel |
| Initial S/W Revision | Prior to A.02.00 |

Trig Slope

Controls the trigger polarity. It is set positive to trigger on a rising edge and negative to trigger on a falling edge.

| | |
|--------------------------------------|--|
| Key Path | Trigger, External 1 |
| Remote Command | :TRIGger[:SEquence]:EXTernal1:SLOPe POSitive NEGative :TRIGger[:SEquence]:EXTernal1:SLOPe? |
| Example | TRIG:EXT1:SLOP NEG |
| Couplings | This same slope is used in the Ext1 selection for the trigger source in the Trigger menu and for the period timer sync source (in the Trigger menu and in the Gate Source menu). |
| Preset | POSitive |
| State Saved | Saved in instrument state |
| Backwards Compatibility SCPI | :TRIGger[:SEquence]:EXTernal:SLOPe |
| Backwards Compatibility SCPI | For backward compatibility, the parameter EXTernal is mapped to EXTernal1 |
| Backwards Compatibility SCPI | :TRIGger[:SEquence]:FRAMe:EXTernal1:SLOPe |
| Backwards Compatibility Notes | The legacy :TRIGger[:SEquence]:SLOPe command affects the slopes for the VID, LINE, EXT1, EXT2, and RFB triggers. |
| Initial S/W Revision | Prior to A.02.00 |

External 2

Pressing this key, when it is not selected, selects an external input signal as the trigger. A new sweep/measurement will start when the external trigger condition is met using the external 2 input connector. The external trigger 2 input connector is on the rear panel.

Pressing this key, when it is already selected, accesses the external 2 trigger setup menu.

| | |
|-------------------------------------|--|
| Key Path | Trigger |
| Example | TRIG:SOUR EXT2 Swept SA measurement TRIG:< meas>:SOUR EXT2 Measurements other than Swept SA |
| Dependencies | In some models, there is no second External input. In these models, the External 2 key is blanked and the EXTernal2 parameter will generate a "Hardware missing; Not available for this model number" message. Grayed out if in use by Point Trigger in the Source Setup menu. Forced to Free Run if already selected and Point Trigger is set to External 2. |
| State Saved | Saved in instrument state |
| Status Bits/OPC dependencies | The Status Operation Register bit 5 "Waiting for Trigger" is set at the same time as the Sweeping or Measuring bit is set. It is cleared when the trigger actually occurs (that is, after the trigger event occurs and all the applicable trigger criteria have been met). A corresponding pop-up message ("Waiting for trigger") is generated if no trigger signal appears after approximately 2 sec. This message goes away when a trigger signal appears. |
| Initial S/W Revision | Prior to A.02.00 |
| Modified at S/W Revision | A.03.00 |

Trigger Level

Sets the value where the external 2 trigger input will trigger a new sweep/measurement.

| | |
|-------------------------------------|---|
| Key Path | Trigger, External 2 |
| Remote Command | :TRIGger[:SEquence]:EXTernal2:LEVel :TRIGger[:SEquence]:EXTernal2:LEVel? |
| Example | TRIG:EXT2:LEV 1.1 V |
| Couplings | This same level is used for the Ext2 trigger source in the Trigger menu, for the Ext2 selection in the Periodic Timer sync source (in the Trigger menu and in the Gate Source menu), and also for the Ext2 selection in the Gate Source menu. |
| Preset | 1.2 V |
| State Saved | Saved in instrument state |
| Min | -5 V |
| Max | 5 V |
| Default Unit | V |
| Backwards Compatibility SCPI | :TRIGger[:SEquence]:FRAMe:EXTernal2:LEVel |
| Initial S/W Revision | Prior to A.02.00 |

Trig Slope

Controls the trigger polarity. It is set positive to trigger on a rising edge and negative to trigger on a falling edge.

| | |
|-------------------------------|--|
| Key Path | Trigger, External 2 |
| Remote Command | :TRIGger[:SEquence]:EXTernal2:SLOPe POSitive NEGative :TRIGger[:SEquence]:EXTernal2:SLOPe? |
| Example | TRIG:EXT2:SLOP NEG |
| Couplings | This same slope is used in the Ext2 selection for the trigger source in the Trigger menu and for the period timer sync source (in the Trigger menu and in the Gate Source menu). |
| Preset | POSitive |
| State Saved | Saved in instrument state |
| Backwards Compatibility SCPI | :TRIGger[:SEquence]:FRAMe:EXTernal2:SLOPe |
| Backwards Compatibility Notes | The legacy :TRIGger[:SEquence]:SLOPe command affects the slopes for the VID, LINE, EXT1, EXT2, and RFB triggers. |
| Initial S/W Revision | Prior to A.02.00 |

RF Burst

Pressing this key, when it is not selected, selects the RF Burst as the trigger. A new sweep/measurement will start when an RF burst envelope signal is identified from the signal at the RF Input connector. Pressing this key, when it is already selected, accesses the RF Burst trigger setup menu.

In some models, a variety of burst trigger circuitry is available, resulting in various available burst trigger bandwidths. The analyzer automatically chooses the appropriate trigger path based on the hardware configuration and other settings of the analyzer.

| | |
|-------------------------------|--|
| Key Path | Trigger |
| Example | TRIG:SOUR RFB Swept SA measurement TRIG:<meas>:SOUR RFB Measurements other than Swept SA |
| State Saved | Saved in instrument state |
| Status Bits/OPC dependencies | The Status Operation Register bit 5 "Waiting for Trigger" is set at the same time as the Sweeping or Measuring bit is set. It is cleared when the trigger actually occurs (that is, after the trigger event occurs and all the applicable trigger criteria have been met). A corresponding pop-up message ("Waiting for trigger") is generated if no trigger signal appears after approximately 2 sec. This message goes away when a trigger signal appears. |
| Backwards Compatibility Notes | The legacy command: :TRIGger[:SEquence]:RFBurst:FSElectivity[:STATe] OFF ON 0 1 is not supported in the X-Series, as the hardware to do Frequency Selective burst triggers does not exist in X-Series. |
| Initial S/W Revision | Prior to A.02.00 |
| Modified at S/W Revision | A.04.00 |

Absolute Trigger Level

Sets the absolute trigger level for the RF burst envelope.

When using the External Mixing path, the Absolute Trigger Level is uncalibrated because the factory default was set to accommodate the expected IF levels for the RF path.

| | |
|-------------------------------------|---|
| Key Path | Trigger, RF Burst |
| Scope | Meas Global |
| Remote Command | :TRIGger[:SEquence]:RFBurst:LEVel:ABSolute <ampl> :TRIGger[:SEquence]:RFBurst:LEVel:ABSolute? |
| Example | TRIG:RFB:LEV:ABS 10 dBm sets the trigger level of the RF burst envelope signal to the absolute level of 10 dBm |
| Notes | Sending this command does not switch the setting from relative to absolute; to switch it you need to send the :TRIGger[:SEquence]:RFBurst:LEVel:TYPE command, below. Amplitude Corrections are not taken into account by the Absolute Trigger Level. For example, if you have given yourself effective gain with an amplitude correction factor, the Absolute Trigger will not fire until you have set the trigger level that far below the displayed signal level, rather than simply to the displayed signal level. This is only true for Amplitude Corrections, not External Gain or Ref Level Offset functions. If mode is Bluetooth, the default value is -50 dBm. |
| Couplings | This same level is used for the RF Burst trigger source in the Trigger menu, for the RF Burst selection in the Periodic Timer sync source (in the Trigger menu and in the Gate Source menu), and also for the RF Burst selection in the Gate Source menu |
| Preset | -20 dBm |
| State Saved | Saved in instrument state |
| Min | -200 dBm |
| Max | 100 dBm |
| Default Unit | depends on the current selected Y-Axis unit |
| Backwards Compatibility SCPI | :TRIGger[:SEquence]:FRAME:RFBurst:LEVel:ABSolute |
| Initial S/W Revision | Prior to A.02.00 |
| Modified at S/W Revision | A.04.00 |

| | |
|-----------------------|---|
| Key Path | Trigger, RF Burst |
| Remote Command | :TRIGger[:SEquence]:RFBurst:LEVel:TYPE ABSolute RELative :TRIGger[:SEquence]:RFBurst:LEVel:TYPE? |
| Example | TRIG:RFB:LEV:TYPE REL sets the trigger level type of the RF burst trigger to Relative. |
| Preset | ABSolute |

| | |
|--------------------------|---------------------------|
| State Saved | Saved in instrument state |
| Initial S/W Revision | Prior to A.02.00 |
| Modified at S/W Revision | A.04.00 |

Trigger Slope

It is set positive to trigger on a rising edge and negative to trigger on a falling edge.

| | |
|-------------------------------------|--|
| Key Path | Trigger, RF Burst |
| Remote Command | :TRIGger[:SEQuence]:RFBurst:SLOPe POSitive NEGative :TRIGger[:SEQuence]:RFBurst:SLOPe? |
| Example | TRIG:RFB:SLOP NEG |
| Couplings | This same slope is used in the RF Burst selection for the trigger source in the Trigger menu and for the period timer sync source (in the Trigger menu and in the Gate Source menu). |
| Preset | POSitive |
| State Saved | Saved in instrument state |
| Backwards Compatibility SCPI | :TRIGger[:SEQuence]:FRAMe:RFBurst:SLOPe |
| Backwards Compatibility Notes | The legacy :TRIGger[:SEQuence]:SLOPe command affects the slopes for the VID, LINE, EXT1, EXT2, and RFB triggers. |
| Initial S/W Revision | Prior to A.02.00 |

Sync Holdoff

Sync Holdoff specifies the duration that the sync source signal must be kept false before the transition to true to be recognized as the sync timing. The periodic timer phase is aligned when the sync source signal becomes true, after the Holdoff time is satisfied.

A holdoff of 2 ms will work with most WiMAX signals, but there may be cases where the burst off duration is less than 1 ms and this value will need to be changed.

| | |
|-----------------------|--|
| Key Path | Trigger, Periodic Timer |
| Remote Command | :TRIGger[:SEQuence]:FRAMe:SYNC:HOLDoff <time> :TRIGger[:SEQuence]:FRAMe:SYNC:HOLDoff? :TRIGger[:SEQuence]:FRAMe:SYNC:HOLDoff:STATe OFF ON 0 1 :TRIGger[:SEQuence]:FRAMe:SYNC:HOLDoff:STATe? |
| Preset | On, 1.000 ms |
| State Saved | Saved in instrument state |
| Min | 0 ms |
| Max | +500 ms |

| | |
|----------------------|------------------|
| Default Unit | s |
| Initial S/W Revision | Prior to A.02.00 |

Auto/Holdoff

Opens up a menu that lets you adjust Auto Trigger and Trigger Holdoff parameters

| Key Path | Trigger |
|----------------------|---|
| Readback line | <p>Displays a summary of the Auto Trig and Holdoff settings, in square brackets</p> <p>First line: Auto Off or Auto On</p> <p>Second Line: "Hldf" followed by:</p> <ul style="list-style-type: none"> • If Holdoff is Off, readback Off • If Holdoff On and Type = Normal, readback value • If Holdoff On and Type = Above, readback value followed by AL • If Holdoff On and Type = Below, readback value followed by BL • If Holdoff Type selection is not supported by the current measurement, Holdoff Type is always Normal |
| Initial S/W Revision | A.02.00 |

Auto Trig

Sets the time that the analyzer will wait for the trigger conditions to be met. If they are not met after that much time, then the analyzer is triggered anyway.

| Key Path | Trigger, Auto/Holdoff |
|-----------------------|---|
| Remote Command | <pre>:TRIGger[:SEquence]:ATRigger <time> :TRIGger[:SEquence]:ATRigger? :TRIGger[:SEquence]:ATRigger:STATe OFF ON 0 1 :TRIGger[:SEquence]:ATRigger:STATe?</pre> |
| Example | <pre>TRIG:ATR:STAT ON TRIG:ATR 100 ms</pre> |
| Notes | The "time that the analyzer will wait" starts when the analyzer is ready for a trigger, which may be hundreds of ms after the data acquisition for a sweep is done. The "time" ends when the trigger condition is satisfied, not when the delay ends. |
| Preset | Off, 100 ms |
| State Saved | Saved in instrument state |
| Min | 1 ms |
| Max | 100 s |
| Default Unit | s |
| Initial S/W Revision | Prior to A.02.00 |

Trig Holdoff

Sets the holdoff time between triggers. When the trigger condition is satisfied, the trigger occurs, the delay begins, and the holdoff time begins. New trigger conditions will be ignored until the holdoff time expires. For a free-running trigger, the holdoff value is the minimum time between triggers.

| Key Path | Trigger, Auto/Holdoff |
|-----------------------|--|
| Remote Command | :TRIGger[:SEquence]:HOLDoff <time> :TRIGger[:SEquence]:HOLDoff? :TRIGger[:SEquence]:HOLDoff:STATE OFF ON 0 1 :TRIGger[:SEquence]:HOLDoff:STATE? |
| Example | TRIG:HOLD:STAT ON TRIG:HOLD 100 ms |
| Dependencies | Unavailable if the selected Input is BBIQ. If this is the case, the key is grayed out if it is pressed the informational message "Feature not supported for this Input" is displayed. If the SCPI command is sent, the error "Settings conflict; Feature not supported for this Input" is generated. |
| Preset | Off, 100 ms |
| State Saved | Saved in instrument state |
| Min | 0 s |
| Max | 0.5 s |
| Default Unit | s |
| Initial S/W Revision | Prior to A.02.00 |

Gate Preset (Remote Command Only)

Presets the time-gated spectrum analysis capability.

This command sets gate parameter values to the ESA preset values, as follows:

Gate trigger type = edge

Gate polarity = positive

Gate delay = 1 us

Gate length = 1 us

| | |
|-----------------------|---|
| Remote Command | [:SENSe]:SWEep:TIME:GATE:PRESet ESA Compatibility |
| Initial S/W Revision | Prior to A.02.00 |

Gate Level (Remote Command Only)

Sets the gate input transition point level for the external TRIGGER inputs on the front and rear panel. This is a legacy command for PSA compatibility. It is simply an alias to the equivalent trigger level command.

| | |
|-----------------------------|--|
| Remote Command | <code>[:SENSe] :SWEep:EGATe:EXTeRnal [1] 2 :LEVel <voltage></code> <code>[:SENSe] :SWEep:EGATe:EXTeRnal [1] 2 :LEVel ?</code> |
| Notes | This command is simply an alias to <code>:TRIGger[:SEQuence]:EXTeRnal[1] 2:LEVel</code> For details refer |
| Initial S/W Revision | Prior to A.02.00 |

Gate Polarity (Remote Command Only)

Sets the polarity for the gate signal. This setup is now done using the gate trigger's slope setting.

When Positive (Pos) is selected, a positive-going edge (Edge) or a high voltage (Level) will satisfy the gate condition, after the delay set with the Gate Delay key. When Negative (Neg) is selected, a negative-going edge (Edge) or a low voltage (Level) will satisfy the gate condition after the delay.

| | |
|-------------------------------------|--|
| Remote Command | <code>[:SENSe] :SWEep:EGATe:POLarity NEGative POSitive</code> <code>[:SENSe] :SWEep:EGATe:POLarity ?</code> |
| Example | <code>SWE:EGAT:POL NEG</code> <code>SWE:EGAT:POL ?</code> |
| Preset | POSitive |
| State Saved | Saved in instrument state |
| Backwards Compatibility SCPI | <code>[:SENSe] :SWEep:TIME:GATE:POLarity</code> ESA compatibility |
| Initial S/W Revision | Prior to A.02.00 |

| | |
|-----------------------------|--|
| Remote Command | <code>[:SENSe] :SWEep:TIME:GATE:LEVel HIGH LOW</code> <code>[:SENSe] :SWEep:TIME:GATE:LEVel ?</code> ESA compatibility |
| Preset | HIGH |
| Initial S/W Revision | Prior to A.02.00 |

System

See "System" on page 278

Trace/Detector

Accesses a menu of functions that enable you to control trace and detector for the current measurement.

| | |
|--------------------------|------------------------|
| parameter_table_24.18745 | 54.42177 |
| Key Path | Front-panel key |
| Initial S/W Revision | Prior to A.02.00 |
| Help Map ID | 9060 |

Trace Type

Allows you to select the type of trace for the current measurement. The menu contains a 1-of-N selection of the trace type (Clear Write, Average, Max Hold, Min Hold).

| | |
|--------------------------|---|
| parameter_table_24.18745 | 54.42177 |
| Key Path | Trace/Detector |
| Mode | SA, WCDMA, C2K, WIMAX OFDMA, TD-SCDMA, 1xEVDO, DTMB (CTTB), DVB-T/H, ISDB-T, CMMB, LTE, LTETDD, Digital Cable TV, WLAN, MSR, LTEAFDD, LTEATDD |
| Remote Command | :TRACe:SEMask:TYPE WRITe AVERAge MAXHold MINHold :TRACe:SEMask:TYPE? |
| Example | TRAC:SEM:TYPE MINH TRAC:SEM:TYPE? |
| Notes | WRITe = Clear Write AVERAge = Average MAXHold = Maximum Hold MINHold = Minimum Hold |
| Couplings | When Detector setting is "Auto" ([:SENSe]:SEMask:DETEctor:AUTO?), Detector ([:SENSe]:SEMask:DETEctor[:FUNCTION]?) switches aligning with the switch of this parameter: "NORMal" with WRITe (Clear Write), "AVERAge" with AVERAge, "POSitive (peak)" with MAXHold, and "NEGative (peak)" with MINHold. |
| Preset | AVERAge |
| State Saved | Saved in instrument state. |
| Range | WRITe AVERAge MAXHold MINHold |
| Initial S/W Revision | Prior to A.02.00 |
| Modified at S/W Revision | A.02.00, A.03.00 |
| Help Map ID | 9039 |

Chan Detector

Accesses a menu of functions that enable you to control the detectors for reference channel. The following choices are available:

- Auto—the detector selected depends on marker functions, trace functions, average type, and the trace averaging function.
- Normal—the detector determines the peak of the CW-like signals, and it yields alternating maximums and minimums of noise-like signals. This is also referred to as Rosenfell detection.
- Average—the detector determines the average of the signal within the sweep points. The averaging method depends upon the Average Type selection (voltage, power or log scales).
- Peak—the detector determines the maximum of the signal within the sweep points.
- Sample—the detector indicates the instantaneous level of the signal at the center of the sweep points represented by each display point.
- Negative Peak—the detector determines the minimum of the signal within the sweep points.

| | |
|--------------------------|-----------------------|
| parameter_table_24.18745 | 54.42177 |
| Key Path | Trace/Detector |
| Initial S/W Revision | Prior to A.02.00 |
| Help Map ID | 9042 |

Chan Detector Auto

Sets the detector to the default detection mode for the reference channel. This mode is dependent upon the current reference channel conditions.

| | |
|--------------------------|--|
| parameter_table_24.18745 | 54.42177 |
| Key Path | Trace/Detector |
| Mode | SA, WCDMA, C2K, WIMAX OFDMA, TD-SCDMA, 1xEVDO, DTMB (CTTB), DVB-T/H, ISDB-T, CMMB, LTE, LTETDD, Digital Cable TV, WLAN, MSR, LTEAFDD, LTEATDD |
| Remote Command | [:SENSe] :SEMAsk:DETEctor:CARRier:AUTO ON OFF 1 0 [:SENSe] :SEMAsk:DETEctor:CARRier:AUTO? |
| Example | SEM:DET:CARR:AUTO OFF SEM:DET:CARR:AUTO? |
| Notes | See Couplings in the Trace Type section. You must be in the mode that includes SEM measurement to use this command. Use :INSTRument:SElect to set the mode. |
| Preset | ON |
| State Saved | Saved in instrument state |
| Range | On Off |

| | |
|--------------------------|------------------|
| Initial S/W Revision | Prior to A.02.00 |
| Modified at S/W Revision | A.02.00, A.03.00 |
| Help Map ID | 9076 |

Chan Detector Selection

Selects the detector mode for the reference channel.

| | |
|--------------------------|--|
| parameter_table_24.18745 | 54.42177 |
| Key Path | Trace/Detector |
| Mode | SA, WCDMA, C2K, WIMAX OFDMA, TD-SCDMA, 1xEVDO, DTMB (CTTB), DVB-T/H, ISDB-T, CMMB, LTE, LTETDD, Digital Cable TV, WLAN, MSR, LTEAFDD, LTEATDD |
| Remote Command | [:SENSe] :SEMAsk:DETEctor:CARRier[:FUNction] AVERAge NEGative NORMAl POSitive SAMPlE [:SENSe] :SEMAsk:DETEctor:CARRier[:FUNction] ? |
| Example | SEM:DET:CARR NEG SEM:DET:CARR? |
| Notes | When you manually select a detector (instead of selecting Auto), that detector is used regardless of other analyzer settings. Note: This detector setting affects the reference channel. There is not a per trace detector. You must be in the mode that includes SEM measurement to use this command. Use :INSTRument:SELEct to set the mode. |
| Couplings | See Couplings in the Trace Type section. |
| Preset | AVERAge |
| State Saved | Saved in instrument state. |
| Range | Normal Average Peak Sample Negative Peak |
| Initial S/W Revision | Prior to A.02.00 |
| Modified at S/W Revision | A.02.00, A.03.00 |
| Help Map ID | 9008 |

Offset Detector

Accesses a menu of functions that enable you to control the detector for offsets. The following choices are available.

- Auto– the detector selected depends on marker functions, trace functions, average type, and the trace averaging function.

- Normal—the detector determines the peak of the CW-like signals, and it yields alternating maximums and minimums of noise-like signals. This is also referred to as Rosenfell detection.
- Average—the detector determines the average of the signal within the sweep points. The averaging method depends upon the Average Type selection (voltage, power or log scales).
- Peak—the detector determines the maximum of the signal within the sweep points.
- Sample—the detector indicates the instantaneous level of the signal at the center of the sweep points represented by each display point.
- Negative Peak—the detector determines the minimum of the signal within the sweep points.

| Key Path | Trace/Detector |
| Initial S/W Revision | Prior to A.02.00 |
| Help Map ID | 9041 |

Offset Detector Auto

Sets the detector to the default detection mode for the offsets. This mode is dependent upon the current signal conditions of the offsets.

| | |
|--------------------------|--|
| parameter_table_24.18745 | 54.42177 |
| Key Path | Trace/Detector |
| Mode | SA, WCDMA, C2K, WIMAX OFDMA, TD-SCDMA, 1xEVDO, DTMB (CTTB), DVB-T/H, ISDB-T, CMMB, LTE, LTETDD, Digital Cable TV, WLAN, MSR, LTEAFDD, LTEATDD |
| Remote Command | [:SENSe] :SEMAsk:DETEctor:OFFSet:AUTO ON OFF 1 0 [:SENSe] :SEMAsk:DETEctor:OFFSet:AUTO? |
| Example | SEM:DET:OFFS:AUTO OFF SEM:DET:OFFS:AUTO? |
| Notes | See Couplings in the Trace Type section. You must be in the mode that includes SEM measurement to use this command. Use :INSTRument:SElect to set the mode. |
| Preset | ON |
| State Saved | Saved in instrument state. |
| Range | On Off |
| Initial S/W Revision | Prior to A.02.00 |
| Modified at S/W Revision | A.02.00, A.03.00 |
| Help Map ID | 9077 |

Offset Detector Selection

Selects the detector mode for the offsets.

| | |
|------------------------------|--|
| parameter_ table_24.18745 | 54.42177 |
| Key Path | Trace/Detector |
| Mode | SA, WCDMA, C2K, WIMAX OFDMA, TD-SCDMA, 1xEVDO, DTMB (CTTB), DVB-T/H, ISDB-T, CMMB, LTE, LTETDD, Digital Cable TV, WLAN, MSR, LTEAFDD, LTEATDD |
| Remote Command | [:SENSe] :SEMAsk:DETEctor:OFFSet [:FUNctIon] AVERAge NEGative NORMal POSitive SAMPlE [:SENSe] :SEMAsk:DETEctor:OFFSet [:FUNctIon] ? |
| Example | SEM:DET:OFFS AVER SEM:DET:OFFS? |
| Notes | When you manually select a detector (instead of selecting Auto), that detector is used regardless of other analyzer settings. Note: This detector setting has effects all offsets. There is not a per trace detector. You must be in the mode that includes SEM measurement to use this command. Use :INSTRument:SELEct to set the mode. |
| Couplings | See Couplings in the Trace Type section. |
| Preset | POSitive |
| State Saved | Saved in instrument state. |
| Range | Normal Average Peak Sample Negative Peak |
| Initial S/W Revision | Prior to A.02.00 |
| Modified at S/W Revision | A.02.00, A.03.00 |

User Preset

Accesses a menu that gives you the following three choices:

- **User Preset** – recalls a state previously saved using the Save User Preset function.
- **User Preset All Modes** – presets all of the modes in the analyzer
- **Save User Preset**– saves the current state for the current mode

| Key Path | Front-panel key |
|-------------------------------|--|
| Backwards Compatibility Notes | <p>User Preset is actually loading a state, and in legacy analyzers, it was possible to load a state without affecting the trace data, limit lines or correction data. Similarly it was possible to do a User Preset without affecting the trace data, limit lines or correction data.</p> <p>In the X-Series, “state” always includes all of this data; so whenever state is loaded, or User Preset is executed, all of the traces, limit lines and corrections are affected. Although this differs from previous behavior, it is desirable behavior, and should not cause adverse issues for users.</p> <p>On ESA and PSA, User Preset affected the entire instrument’s state. In the X-Series, User Preset only recalls the state for the active mode. There is a User Preset file for each mode. User Preset can never cause a mode switch as it can in legacy analyzers. If you want to recall all modes to their user preset file state, you will need to do a User Preset after mode switching into each mode.</p> <p>User Preset recalls mode state which can now include data like traces; whereas on ESA and PSA, User Preset did not affect data.</p> |
| Initial S/W Revision | Prior to A.02.00 |

User Preset

User Preset sets the state of the currently active mode back to the state that was previously saved for this mode using the Save User Preset menu key or the SCPI command, `SYST:PRES:USER:SAV`. It not only recalls the Mode Preset settings, but it also recalls all of the mode persistent settings, and the Input/Output system setting that existed at the time Save User Preset was executed.

If a Save User Preset has not been done at any time, User Preset recalls the default user preset file for the currently active mode. The default user preset files are created if, at power-on, a mode detects there is no user preset file. There will never be a scenario when there is no user preset file to restore. For each mode, the default user preset state is the same state that would be saved if a Save User Preset is performed in each mode right after doing a Restore Mode Default and after a Restore Input/Output Defaults.

The User Preset function does the following:

- Aborts the currently running measurement.
- Sets the mode State to the values defined by Save User Preset.
- Makes the saved measurement for the currently running mode the active measurement.
- Brings up the saved menu for the power-on mode.
- Clears the input and output buffers.
- Sets the Status Byte to 0.

| | |
|----------------------|--|
| Key Path | User Preset |
| Remote Command | :SYSTem:PRESet:USER |
| Example | :SYST:PRES:USER:SAVE:SYST:PRES:USER |
| Notes | :SYST:PRES:USER:SAVE is used to save the current state as the user preset state. Clears all pending OPC bits. The Status Byte is set to 0. Pressing the User Preset front-panel key while already in the User Preset menu will cause the User Preset to get executed |
| Couplings | A user preset will cause the currently running measurement to be aborted and cause the saved measurement to be active. Recalling a User Preset file has the same issues that recalling a Save State file has. Some settings may need to be limited and therefore re-coupled, since the capabilities of the mode may have changes when the User Preset file was last saved. |
| Initial S/W Revision | Prior to A.02.00 |

User Preset All Modes

Recalls all of the User Preset files for each mode, switches to the power-on mode, and activates the saved measurement from the power-on mode User Preset file.

NOTE

When the instrument is secured, all of the user preset files are converted back to their default user preset files.

The User Preset function does the following:

- Aborts the currently running measurement.
- Switches the Mode to the power-on mode.
- Restores the User Preset files for each mode.
- Makes the saved measurement for the power-on mode the active measurement.
- Brings up the saved menu for the power-on mode.
- Clears the input and output buffers.
- Sets the Status Byte to 0.

| | |
|----------------|--|
| Key Path | User Preset |
| Remote Command | :SYSTem:PRESet:USER:ALL |
| Example | :SYST:PRES:USER:SAVE:SYST:PRES:USER:ALL |
| Notes | Clears all pending OPC bits. The Status Byte is set to 0. :SYST:PRES:USER:SAVE is used to save the current state as the user preset state. |
| Couplings | A user preset will cause the currently running measurement to be aborted, cause a mode switch to the power-on mode, and cause the saved measurement to be active in the power-on mode. Recalling a User Preset file has the same issues that recalling a Save State file has. Some settings may need to be limited and therefore re-coupled, since the capabilities of the mode may have changes when the User Preset file was last saved. |

| | |
|----------------------|------------------|
| Initial S/W Revision | Prior to A.02.00 |
|----------------------|------------------|

Save User Preset

Saves the currently active mode and its State. You can recall this User Preset file by pressing the User Preset menu key or sending the SYST:PRES:USER remote command. This same state is also saved by the Save State function.

| | |
|-----------------------|---|
| Key Path | User Preset |
| Remote Command | :SYSTem:PRESet:USER:SAVE |
| Example | :SYST:PRES:USER:SAVE |
| Notes | :SYST:PRES:SAVE creates the same file as if the user requested a *SAV or a MMEM:STOR:STAT, except User Preset Save does not allow the user to specify the filename or the location of the file. |
| Initial S/W Revision | Prior to A.02.00 |

View/Display

Accesses a menu of functions that enable you to control the instrument display.

The following keys select how the results are displayed:

- **Abs Pwr Freq**—displays the absolute power levels in dBm and the corresponding frequencies in the text window.
- **Rel Pwr Freq**—displays the relative power levels in dBc and the corresponding frequencies in the text window.
- **Integrated Power**—displays the absolute and relative power levels integrated throughout the bandwidths between the start and stop frequencies in the text window.

"View Selection by Name (Remote Command Only)" on page 1285

"Views Selection by Number (Remote Command only)" on page 1285

Views Selection by Number (Remote Command only)

The following numerical selections determine how the results are displayed:

1. displays the absolute power levels in dBm and the corresponding frequencies in the text window.
2. displays the relative power levels in dBc and the corresponding frequencies in the text window.
3. displays the absolute and relative power levels integrated throughout the bandwidths between the start and stop frequencies in the text window.
- 4.

Display

The Display menu is common to most measurements, and is used for configuring items on the display. Some Display menu settings apply to all the measurements in a mode, and some only to the current measurement. Those under the **System Display Settings** key apply to all measurements in all modes.

| | |
|----------------------|---------------------|
| Key Path | Display |
| Key Path | View/Display |
| Initial S/W Revision | Prior to A.02.00 |

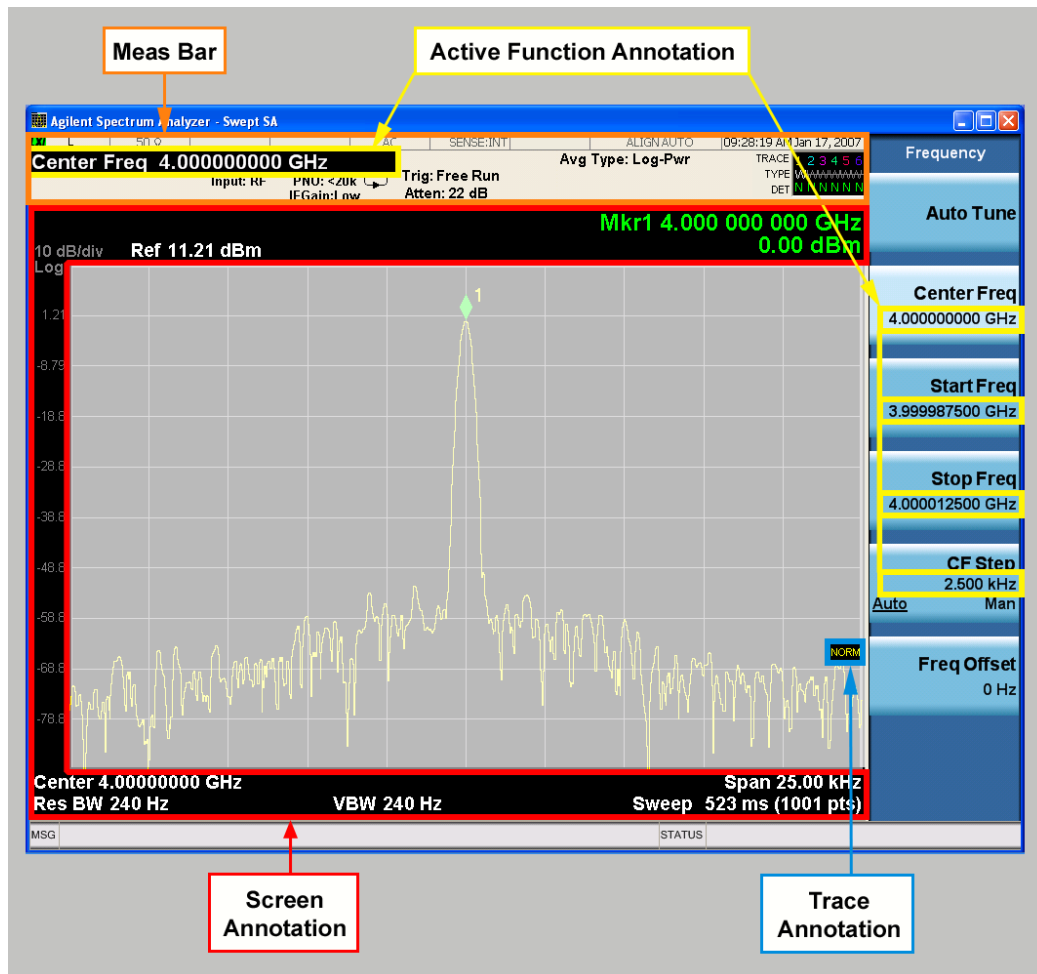

Annotation

Turns on and off various parts of the display annotation. The annotation is divided up into four categories:

1. Meas Bar: This is the measurement bar at the top of the screen. It does not include the settings panel or the Active Function. Turning off the Meas Bar turns off the settings panel and the Active Function. When the Meas Bar is off, the graticule area expands to fill the area formerly occupied by the Meas Bar.
2. Screen Annotation: this is the annotation and annunciation around the graticule, including any annotation on lines (such as the display line, the threshold line, etc.) This does NOT include the marker number or the N dB result. When off, the graticule expands to fill the entire graticule area.
3. Trace annotation: these are the labels on the traces, showing their detector (or their math mode).
4. Active Function annotation: this is the active function display in the meas bar, and all of the active function values displayed on softkeys.

See the figure below. Each type of annotation can be turned on and off individually.

10 Spectrum Emission Mask Measurement
View/Display

| | |
|----------------------|-----------------------|
| Key Path | View/Display, Display |
| Initial S/W Revision | Prior to A.02.00 |

Meas Bar On/Off

This function turns the Measurement Bar on and off, including the settings panel. When off, the graticule area expands to fill the area formerly occupied by the Measurement Bar.

| | |
|----------------|---|
| Key Path | View/Display, Display, Annotation |
| Remote Command | :DISPlay:ANNOtation:MBAR[:STATe] OFF ON 0 1 :DISPlay:ANNOtation:MBAR[:STATe]? |
| Example | DISP:ANN:MBAR OFF |
| Dependencies | Grayed out and forced to OFF when System Display Settings, Annotation is set to Off. |
| Preset | On This should remain Off through a Preset when System DisplaySettings, Annotation is set to Off. |

| | |
|----------------------|----------------------------|
| State Saved | Saved in instrument state. |
| Initial S/W Revision | Prior to A.02.00 |

Screen

This controls the display of the annunciation and annotation around the graticule, including any annotation on lines (such as the display line, the threshold line, etc.) and the y-axis annotation. This does NOT include marker annotation (or the N dB result). When off, the graticule expands to fill the entire graticule area, leaving only the 1.5% gap above the graticule as described in the Trace/Detector chapter.

| | |
|-----------------------|--|
| Key Path | View/Display, Display, Annotation |
| Remote Command | :DISPlay:ANNotation:SCReen[:STATe] OFF ON 0 1 :DISPlay:ANNotation:SCReen[:STATe]? |
| Example | DISP:ANN:SCR OFF |
| Dependencies | Grayed-out and forced to OFF when System Display Settings, Annotation is set to Off. |
| Preset | On This should remain Off through a Preset when System DisplaySettings, Annotation is set to Off |
| State Saved | Saved in instrument state. |
| Initial S/W Revision | Prior to A.02.00 |

Active Function Values On/Off

Turns on and off the active function display in the Meas Bar, and all of the active function values displayed on the softkeys.

Note that all of the softkeys that have active functions have these numeric values blanked when this function is on. This is a security feature..

10 Spectrum Emission Mask Measurement
View/Display

| | |
|----------------------|--|
| Key Path | View/Display, Display, Annotation |
| Remote Command | :DISPlay:ACTivefunc[:STATE] ON OFF 1 0 :DISPlay:ACTivefunc[:STATE] ? |
| Example | DISP:ACT OFF |
| Dependencies | Grayed out and forced to OFF when System Display Settings, Annotation is set to Off. |
| Preset | On This should remain Off through a Preset when System DisplaySettings, Annotation is set to Off |
| State Saved | Saved in instrument state. |
| Initial S/W Revision | Prior to A.02.00 |

Title

Displays menu keys that enable you to change or clear a title on your display.

| | |
|----------------------|-----------------------|
| Key Path | View/Display, Display |
| Initial S/W Revision | Prior to A.02.00 |

Change Title

Writes a title into the "measurement name" field in the banner, for example, "Swept SA".

Press Change Title to enter a new title through the alpha editor. Press Enter or Return to complete the entry. Press ESC to cancel the entry and preserve your existing title.

The display title will replace the measurement name. It remains for this measurement until you press **Change Title** again, or you recall a state, or a Preset is performed. A title can also be cleared by pressing **Title, Clear Title**.

NOTE

Notice the inclusion of the <measurement> parameter in the command below. Because each measurement remembers the Display Title, the command must be qualified with the measurement name. For the Swept SA measurement this is not the case; no <measurement> parameter is used when changing the Display Title for the Swept SA measurement.

| | |
|-----------------------------|---|
| Key Path | View/Display, Display, Title |
| Mode | All |
| Remote Command | :DISPlay:<measurement>:ANNotation:TITLe:DATA <string> :DISPlay:<measurement>:ANNotation:TITLe:DATA? |
| Example | DISP:ANN:TITL:DATA "This Is My Title" This example is for the Swept SA measurement in the Spectrum Analyzer mode. The SANalyzer <measurement> name is not used. DISP:ACP:ANN:TITL:DATA "This Is My Title" This example is for Measurements other than Swept SA. Both set the title to: This Is My Title |
| Notes | Pressing this key cancels any active function. When a title is edited the previous title remains intact (it is not cleared) and the cursor goes at the end so that characters can be added or BKSP can be used to go back over previous characters. |
| Preset | No title (measurement name instead) |
| State Saved | Saved in instrument state. |
| Initial S/W Revision | Prior to A.02.00 |

Clear Title

Clears a title from the front-panel display. Once cleared, the title cannot be retrieved. After the title is cleared, the current Measurement Name replaces it in the title bar.

| | |
|-----------------|---|
| Key Path | View/Display, Display, Title |
| Example | The following commands clear the title and restore the measurement's original title: DISP:ANN:TITL:DATA "" This example is for the Swept SA measurement in the Spectrum Analyzer mode. The SANalyzer <measurement> name is not used. DISP:ACP:ANN:TITL:DATA "" This example is for ACP; in measurements other than Swept SA the measurement name is required. |
| Notes | Uses the :DISPlay:<measurement>:ANNotation:TITLe:DATA <string> command with an empty string (in the Swept SA, the <measurement> is omitted). |

| | |
|----------------------|----------------------|
| Preset | Performed on Preset. |
| Initial S/W Revision | Prior to A.02.00 |

Graticule

Pressing Graticule turns the display graticule On or Off. It also turns the graticule y-axis annotation on and off.

| | |
|----------------------|--|
| Key Path | View/Display, Display |
| Remote Command | :DISPlay:WINDow[1]:TRACe:GRATicule:GRID[:STATe] OFF ON 0 1 :DISPlay:WINDow[1]:TRACe:GRATicule:GRID[:STATe]? |
| Example | DISP:WIND:TRAC:GRAT:GRID OFF |
| Notes | The graticule is the set of horizontal and vertical lines that make up the grid/divisions for the x-axis and y-axis. |
| Preset | On |
| State Saved | Saved in instrument state |
| Initial S/W Revision | Prior to A.02.00 |

System Display Settings

These settings are "Mode Global" – they affect all modes and measurements and are reset only by **Restore Misc Defaults** or **Restore System Defaults** under System.

| | |
|----------------------|------------------------------|
| Key Path | View/Display, Display |
| Initial S/W Revision | Prior to A.02.00 |

Annotation Local Settings

This is a Mode Global override of the meas local annotation settings. When it is **All Off**, it forces **ScreenAnnotation, Meas Bar, Trace, and Active Function Values** settings to be **OFF** for all measurements in all modes. This provides the security based "annotation off" function of previous analyzers; hence it uses the legacy SCPI command.

When it is **All Off**, the **Screen, Meas Bar, Trace, and Active Function Values** keys under the **Display, Annotation** menu are grayed out and forced to **Off**. When **Local Settings** is selected, you are able to set the local annotation settings on a measurement by measurement basis.

| | |
|----------------|--|
| Key Path | View/Display, Display, System Display Settings |
| Remote Command | :DISPlay:WINDow[1]:ANNotation[:ALL] OFF ON 0 1 :DISPlay:WINDow[1]:ANNotation[:ALL]? |
| Example | :DISP:WIND:ANN OFF |

| | |
|-------------------------------|---|
| Preset | On (Set by Restore Misc Defaults) |
| State Saved | Not saved in instrument state. |
| Backwards Compatibility Notes | The WINDow parameter and optional subopcode is included for backwards compatibility but ignored – all windows are equally affected. |
| Initial S/W Revision | Prior to A.02.00 |

Themes

Accesses a menu of functions that enable you to choose the theme to be used when saving the screen image.

The **Themes** option is the same as the **Themes** option under the **Display** and **Page Setup** dialogs. It allows you to choose between themes to be used when saving the screen image.

| | |
|-------------------------------|---|
| Key Path | Save, Screen Image |
| Remote Command | :MMEMoRY:STORe:SCReen:THEMe TDCoLoR TDMoNoChroMe FCOLoR FMONoChroMe :MMEMoRY:STORe:SCReen:THEMe? |
| Example | :MMEM:STOR:SCR:THEM TDM |
| Preset | 3D Color; Is not part of Preset, but is reset by Restore Misc Defaults or Restore System Defaults All and survives subsequent running of the modes. |
| Readback | 3D Color 3D Mono Flat Color Flat Mono |
| Backwards Compatibility Notes | In ESA and PSA we offer the choice of "Reverse Bitmap" or "Reverse Metafile" when saving screen images. This is much like the "Flat Color" theme available in X-Series. Also, if you selected Reverse Bitmap AND a black & white screen image, that would be much like "Flat Monochrome". In other words, each of the X-Series themes has a similar screen image type in ESA/PSA. But they are not identical. |
| Initial S/W Revision | Prior to A.02.00 |

3D Color

Selects a standard color theme with each object filled, shaded and colored as designed.

| | |
|----------------------|-----------------------------------|
| Key Path | Save, Screen Image, Themes |
| Example | MMEM:STOR:SCR:THEM TDC |
| Readback | 3D Color |
| Initial S/W Revision | Prior to A.02.00 |

3D Monochrome

Selects a format that is like 3D color but shades of gray are used instead of colors.

| | |
|----------------------|-----------------------------------|
| Key Path | Save, Screen Image, Themes |
| Example | MMEM:STOR:SCR:THEM TDM |
| Readback | 3D Mono |
| Initial S/W Revision | Prior to A.02.00 |

Flat Color

Selects a format that is best when the screen is to be printed on an ink printer.

| | |
|----------------------|-----------------------------------|
| Key Path | Save, Screen Image, Themes |
| Example | MMEM:STOR:SCR:THEM FCOL |
| Readback | Flat Color |
| Initial S/W Revision | Prior to A.02.00 |

Flat Monochrome

Selects a format that is like Flat Color. But only black is used (no colors, not even gray), and no fill.

| | |
|----------------------|-----------------------------------|
| Key Path | Save, Screen Image, Themes |
| Example | MMEM:STOR:SCR:THEM FMON |
| Readback | Flat Mono |
| Initial S/W Revision | Prior to A.02.00 |

Abs Pwr Freq

Sets the display to the Absolute Peak Power and Frequency view. The views differ depending on the setting of the measurement type (Meas Type) under the Measurement Setup menu.

["Abs Peak Pwr & Freq \(Total Pwr Ref\)" on page 1294](#)

["Abs Peak Pwr & Freq \(PSD Ref\)" on page 1296](#)

11 Power vs. Time Measurement

This measurement is designed for testing 802.11b signal. It measures power vs. time in the time domain. From envelop of power vs. time trace, transient periods (power-on ramp period or power-down ramp period) can be detected, then the transient periods can be compared with limits specified in specification for pass/fail judgment. Use INSTRument:SElect to set the mode. For measurement results and views, see the following sections:

["Measurement Commands for Power vs. Time Measurement" on page 1314](#)

["Remote Command Results for Power vs Time Measurement" on page 1315](#)

Measurement Commands for Power vs. Time Measurement

The following commands are used to retrieve the measurement results:

:CONFigure:PVTime

:CONFigure:PVTime:NDEFault

:INITiate:PVTime

:FETCh:PVTime[n]?

:READ:PVTime[n]?

:MEASure:PVTime[n]?

For more measurement related commands, see the SENSE subsystem, and the section "[Remote Measurement Functions](#)" on page 2430.

Remote Command Results for Power vs Time Measurement

| N | Results Returned |
|---------------------------|--|
| 0 | Returns unprocessed I/Q trace data, as a series of comma-separated trace points, in volts. The I values are listed first in each pair, using the 0 through even-indexed values. The Q values are the odd-indexed values. |
| not specified or n = 1 | Returns comma-separated scalar results, in the following order: Return -999.0 (BWCC to PSA WLAN) Return Power-on Ramp Time (us) Return Power-down Ramp Time (us) Return overall PASS/FAIL (0:Pass, 1: Fail) Return Power-on Ramp PASS/FAIL (0:Pass, 1: Fail) Return Power-down Ramp PASS/FAIL (0:Pass, 1: Fail) Return Start Level (dBm) for ramp up Return Start Level (dBm) for ramp down Return Stop Level (dBm) for ramp up Return Stop Level (dBm) for ramp down Return Max Ramp Up Time (us) (limit value) Return Max Ramp Down Time (us) (limit value) |
| 2 | Return waveform of Power-on Ramp, the length is determined by Ramp Time Length |
| 3 | Return waveform of Power-down Ramp, the length is determined by Ramp Time Length |
| 4 | Return waveform of full burst, the length is actual burst length |

| Key Path | Meas |
|----------------------|---------|
| Initial S/W Revision | A.10.01 |

AMPTD Y Scale

Accesses the AMPTD Y Scale menu that allows you to set desired vertical scale settings.

| | |
|----------------------|--------------------|
| Key Path | Front Panel |
| Initial S/W Revision | A.10.01 |

Ref Value (Burst View)

Sets the absolute power reference.

| | |
|----------------------|--|
| Key Path | AMPTD Y Scale |
| Mode | WLAN |
| Remote Command | :DISPlay:PVTime:VIEW[1]:WINDow[1]:TRACe:Y[:SCALe]:RLEVel <real> :DISPlay:PVTime:VIEW[1]:WINDow[1]:TRACe:Y[:SCALe]:RLEVel? |
| Example | DISP:PVT:VIEW:WIND:TRAC:Y:SCAL:RLEV 5dbm DISP:PVT:VIEW:WIND:TRAC:Y:SCAL:RLEV? |
| Couplings | When Y Auto Scale is set to On, this value is automatically determined by the measurement result. When you set this value manually, Y Auto Scale is automatically set to Off. |
| Preset | 10.00 |
| State Saved | Saved in instrument state. |
| Min | -250.0 |
| Max | 250.0 |
| Initial S/W Revision | A.10.01 |

Range

The Range menu allows setting amplitude controls of the instrument.

| | |
|----------------------|----------------------|
| Key Path | AMPTD Y Scale |
| Scope | Meas Global |
| Initial S/W Revision | A.12.50 |

Range

Represents the amplitude of the largest sinusoidal signal that could be present within the IF without being clipped by the ADC. For signals with high peak-to-average ratios, the range may need to exceed the rms signal power by a fair amount to avoid clipping.

| | |
|----------|--------------|
| Key Path | Range |
|----------|--------------|

| | |
|-----------------------|---|
| Mode | BASIC |
| Remote Command | <code>[:SENSe] :POWer [:RF] :RANGe <real></code> <code>[:SENSe] :POWer [:RF] :RANGe?</code> |
| Example | <code>:POW:RANG 10.0</code> <code>:POW:RANG?</code> |
| Notes | The MIN and MAX values are affected by the External Gain parameters, and by the Center Frequency. (The hardware compensates for frequency response and alters the Range setting.) |
| Preset | 0 |
| State Saved | Saved in instrument state. |
| Min | -100 |
| Max | 100 |
| Initial S/W Revision | A.12.50 |

Adjust Range For Min Clip

Sets the combination of attenuation and gain based on the current measured signal level so that clipping will be at a minimum.

This is an "immediate action" function, that is, it executes once, when the key is pressed.

This key is grayed out in measurements that do not support this functionality.

| | |
|--------------------------|--|
| Key Path | AMPTD Y Scale, Attenuation |
| Remote Command | <code>[:SENSe] :POWer [:RF] :RANGe:OPTimize IMMEDIATE</code> |
| Initial S/W Revision | Prior to A.02.00 |
| Modified at S/W Revision | A.03.00 |

Pre-Adjust for Min Clip

If this function is on, it does the adjustment described under Adjust Range For Min Clip each time a measurement restarts. Therefore, in Continuous measurement mode, it only executes before the first measurement.

| | |
|-----------------------|---|
| Key Path | AMPTD Y Scale, Attenuation |
| Remote Command | <code>[:SENSe] :POWer [:RF] :RANGe:OPTimize:ATTenuation OFF ON ELEctrical COMBined</code> <code>[:SENSe] :POWer [:RF] :RANGe:OPTimize:ATTenuation?</code> |
| Notes | This parameter is shared with old XA platform which uses AutoAtten. To keep the backward compatibility, ELEctrical and COMBined still can be used. Then, upon receiving ELEctrical and COMBined, these enums will be interpreted as aliases of ON. Then, when queried, ON will be returned. |

| | |
|--------------------------|---|
| Preset | OFF for Swept SA measurement; ON for all other measurements that support Pre-Adjust for Min Clip |
| State Saved | Saved in instrument state |
| Initial S/W Revision | Prior to A.02.00 |
| Modified at S/W Revision | A.03.00 |

Peak to Average

The Peak to Average Ratio is used with the Range setting to optimize the level control in the instrument. The value is the ratio, in dB, of the peak power to the average power of the signal to be measured. A ratio of 0 should be used for sinusoidal signals; for 802.11g OFDM signals use 9 dB.

All Applications (Modes) will show the current value of Peak to Average ratio on the softkey. However, some applications will not permit changing the value. In these situations the softkey will be grayed-out.

| | |
|----------------------|--|
| Key Path | AMPTD Y Scale, Range |
| Remote Command | <code>[:SENSe] :POWeR [:RF] :RANGe :PARatio <real></code> <code>[:SENSe] :POWeR [:RF] :RANGe :PARatio?</code> |
| Example | POW:RANG:PAR 12 dB |
| Notes | In some Applications (Modes) this parameter will be read-only; meaning the value will appear on the softkey and query via SCPI, but not changeable. In such applications the softkey will be grayed-out. Attempting to change the value via SCPI will be ignored and no error message will be generated. |
| Preset | 10 dB |
| State Saved | Saved in instrument state |
| Min | 0 dB |
| Max | 20 dB |
| Initial S/W Revision | A.13.00 |

Mixer Level Offset

Mixer level offset is an advanced setting to adjust target Range at the input mixer which in turn affects the signal level in the instrument's IF. This setting can be used when additional optimization is needed after setting Peak to Average ratio. Positive values of offset optimize noise performance over distortion, negative values optimize distortion performance over noise.

| | |
|----------------|--|
| Key Path | AMPTD Y Scale, Range |
| Remote Command | <code>[:SENSe] :POWeR [:RF] :RANGe :MIXer :OFFSet <real></code> <code>[:SENSe] :POWeR [:RF] :RANGe :MIXer :OFFSet?</code> |
| Example | POW:RANG:MIX:OFFS -5 dB |
| Preset | 0 dB |
| State Saved | Saved in instrument state |

| | |
|----------------------|---------|
| Min | -35 dB |
| Max | 30 dB |
| Initial S/W Revision | A.13.00 |

Scale/Div(Burst View)

Allows you to enter a numeric value to change the vertical display sensitivity.

| | |
|-----------------------|---|
| Key Path | AMPTD Y Scale |
| Mode | WLAN |
| Remote Command | :DISPlay:PVTime:VIEW[1]:WINDow[1]:TRACe:Y[:SCALe]:PDIVision <rel_ampl> :DISPlay:PVTime:VIEW[1]:WINDow[1]:TRACe:Y[:SCALe]:PDIVision? |
| Example | DISP:PVT:VIEW:WIND:TRAC:Y:PDIV 5 dB DISP:PVT:VIEW:WIND:TRAC:Y:PDIV? |
| Couplings | When the Auto Scale is On, this value is automatically determined by the measurement result. When you set a value manually, Auto Scale automatically changes to Off. |
| Preset | 10.00 dB |
| State Saved | Saved in instrument state. |
| Min | 0.10 dB |
| Max | 20.00 dB |
| Initial S/W Revision | A.10.01 |

Ref Position(Burst View)

Allows you to set the display reference position to the top, center, or bottom of the display.

| | |
|-----------------------|--|
| Key Path | AMPTD Y Scale |
| Mode | WLAN |
| Remote Command | :DISPlay:PVTime:VIEW[1]:WINDow[1]:TRACe:Y[:SCALe]:RPOSition TOP CENTer BOTTom :DISPlay:PVTime:VIEW[1]:WINDow[1]:TRACe:Y[:SCALe]:RPOSition? |
| Example | :DISP:PVT:VIEW:WIND:TRAC:Y:SCAL:RPOS CENT :DISP:PVT:VIEW:WIND:TRAC:Y:SCAL:RPOS? |
| Preset | TOP |
| State Saved | Saved in instrument state. |
| Range | Top Ctr Bot |
| Initial S/W Revision | A.10.01 |

Auto Scaling(Burst View)

Allows you to toggle the Y axis Auto Scaling function between On and Off.

| | |
|-----------------------------|--|
| Key Path | AMPTD Y Scale |
| Mode | WLAN |
| Remote Command | :DISPlay:PVTime:VIEW[1]:WINDow[1]:TRACe:Y[:SCALe]:COUPle 0 1 OFF ON :DISPlay:PVTime:VIEW[1]:WINDow[1]:TRACe:Y[:SCALe]:COUPle? |
| Example | :DISP:PVT:VIEW:WIND:TRAC:Y:COUP ON :DISP:PVT:VIEW:WIND:TRAC:Y:COUP? |
| Couplings | When Auto Scaling is On, and you press the Restart front-panel key, this function automatically determines the scale per division and reference values based on the measurement results. When you manually set a value for the Y Rel Value or Y Scale/Div, this parameter is automatically set to Off. |
| Preset | ON |
| State Saved | Saved in instrument state. |
| Range | On Off |
| Initial S/W Revision | A.10.01 |

Attenuation

This menu controls both the electrical and mechanical attenuators and their interactions. The value read back on the key in square brackets is the current Total (Elec + Mech) attenuation. When in Pre-Adjust for Min Clip mode, this value can change at the start of every measurement.

Operation of this key is identical across several measurements. For details about this key, see Attenuation@3003 in the "Common Measurement Functions".

Auto Couple

The Auto Couple feature provides a quick and convenient way to automatically couple multiple instrument settings. This helps ensure accurate measurements and optimum dynamic range. When the Auto Couple feature is activated, either from the front panel or remotely, all parameters of the current measurement that have an Auto/Manual mode are set to Auto mode and all measurement settings dependent on (or coupled to) the Auto/Man parameters are automatically adjusted for optimal performance.

However, the Auto Couple key actions are confined to the current measurement only. It does not affect other measurements in the mode, and it does not affect markers, marker functions, or trace or display attributes.

See ["More Information" on page 1321](#)

| | |
|-----------------------------|--|
| Key Path | Front-panel key |
| Remote Command | :COUPle ALL NONE |
| Example | :COUP ALL |
| Notes | :COUPle ALL puts all Auto/Man parameters in Auto mode (equivalent to pressing the Auto Couple key). :COUPLE NONE puts all Auto/Man parameters in manual mode. It decouples all the coupled instrument parameters and is not recommended for making measurements. |
| Initial S/W Revision | Prior to A.02.00 |

More Information

There are two types of functions that have Auto/Manual modes.

Auto/Man Active Function keys

An Auto/Man toggle key controls the binary state associated with an instrument parameter by toggling between **Auto** (where the parameter is automatically coupled to the other parameters it is dependent upon) and **Man** (where the parameter is controlled independent of the other parameters), as well as making the parameter the active function. The current mode is indicated on the softkey with either **Auto** or **Man** underlined as illustrated below.

vsd07

Auto/Man 1-of-N keys

An Auto/Man 1-of-N key allows you to manually pick from a list of parameter values, or place the function in Auto, in which case the value is automatically selected (and indicated) as shown below. If in Auto, Auto is underlined on the calling key. If in manual operation, manual is indicated on the calling key. But the calling key does not actually toggle the function, it simply opens the menu.

BW

Accesses a menu that allows you to control bandwidth settings.

| | |
|----------------------|-----------|
| Key Path | BW |
| Initial S/W Revision | A.10.01 |

Info BW

Sets the information bandwidth. This is the bandwidth used for the power measurement. The optimal setting occurs when the bandwidth is wide enough to pass all the power of the bursted signal, while not being so wide that it passes noise, which reduces dynamic range and diminishes the accuracy of low level measurements.

| | |
|------------------------------|--|
| Key Path | BW |
| Mode | WLAN |
| Remote Command | [:SENSe] :PVTime: BANDwidth [:RESolution] <bandwidth> [:SENSe] :PVTime: BANDwidth [:RESolution] ? |
| Example | PVT: BAND 1 kHz PVT: BAND? |
| Preset | Hardware Dependent: B25 = 25 MHz WB (40 MHz or wider): if Radio Std is 802.11a/b/g = 25MHz if Radio Std is 802.11n-20M = 25MHz if Radio Std is 802.11n-40M = 40MHz if Radio Std is 802.11ac-20M = 25MHz if Radio Std is 802.11ac-40M = 40MHz if Radio Std is 802.11ac-80M / 80M+ 80M = 80MHz if Radio Std is 802.11ac-160M = 160MHz |
| State Saved | Saved in instrument state. |
| Min | 1 kHz |
| Max | Hardware Dependent: RF Input: Option B25 = 25 MHz Option B40 = 40 MHz Option B1X = 140 MHz |
| Backwards Compatibility SCPI | [:SENSe] :PVTime: IFBW |
| Initial S/W Revision | A.10.01 |

Filter Type

Allows you to select a Gaussian or a Flattop filter. A Gaussian is typically preferred but a Flattop is desirable under certain conditions.

| | |
|-----------------------------|--|
| Key Path | BW |
| Mode | WLAN |
| Remote Command | [:SENSe] :PVTTime :BANDwidth :TYPE GAUSSian FLATtop [:SENSe] :PVTTime :BANDwidth :TYPE? |
| Example | PVT:BAND:TYPE GAUS PVT:BAND:TYPE? |
| Notes | This selects either a Gaussian or Flat (Flattop) filter. Gaussian is the better choice when looking at the overall burst, or rising and falling edges, because it has excellent pulse response. For most Time vs. Power measurements, the user is not mainly interested in trading off time domain accuracy vs. noise, but is more interested in total power accuracy vs. noise. If you want to want to examine just the useful part of the burst, choose Flat. This is an advanced control that normally does not need to be changed. Setting this to a value other than the factory default, may cause invalid measurement results. –FLATtop – a filter with a flat amplitude response, that provides the best amplitude accuracy. –GAUSSian – a filter with Gaussian characteristics, that provides the best pulse response. |
| Preset | GAUSSian |
| State Saved | Saved in instrument state. |
| Range | Gaussian Flattop |
| Initial S/W Revision | A.10.01 |

Cont (Continuous Measurement/Sweep)

Sets the analyzer for Continuous measurement operation. The single/continuous state is Meas Global so the setting will affect all measurements. If you are Paused, pressing **Cont** does a Resume.

| | |
|-------------------------------|--|
| Key Path | Front-panel key |
| Remote Command | :INITiate:CONTinuous OFF ON 0 1 :INITiate:CONTinuous? |
| Example | :INIT:CONT 0 puts analyzer in Single measurement operation. :INIT:CONT 1 puts analyzer in Continuous measurement operation |
| Preset | ON (Note that SYST:PRESet sets INIT:CONT to ON but *RST sets INIT:CONT to OFF) |
| State Saved | Saved in instrument state |
| Backwards Compatibility Notes | For Spectrum Analysis mode in ESA and PSA, there is no Cont hardkey, instead there is a Sweep Single/Cont key. In these analyzers, switching the Sweep Single/Cont key from Single to Cont restarts averages (displayed average count reset to 1), but does not restart Max Hold and Min Hold . The X-Series has Single and Cont keys in place of the SweepSingleCont key. In the X-Series, if in single measurement, the Cont key (and INIT:CONT ON) switches to continuous measurement, but never restarts a measurement and never resets a sweep. |
| Initial S/W Revision | Prior to A.02.00 |

In Swept SA Measurement (Spectrum Analysis Mode):

The analyzer takes repetitive sweeps, averages, measurements, etc., when in Continuous mode. When the average count reaches the Average/Hold Number the count stops incrementing, but the analyzer keeps sweeping. See the Trace/Detector section for the averaging formula used both before and after the Average/Hold Number is reached. The trigger condition must be met prior to each sweep. The type of trace processing for multiple sweeps, is set under the Trace/Detector key, with choices of **Trace Average**, **Max Hold**, or **Min Hold**.

In Other Measurements/Modes:

With **Avg/Hold Num** (in the **Meas Setup** menu) set to **Off** or set to **On** with a value of 1, a sweep is taken after the trigger condition is met; and the analyzer continues to take new sweeps after the current sweep has completed and the trigger condition is again met. However, with **Avg/Hold Num** set to On with a value >1, multiple sweeps (data acquisitions) are taken for the measurement. The trigger condition must be met prior to each sweep. The sweep is not stopped when the average count k equals the number N set for Avg/Hold Num is reached, but the number k stops incrementing. A measurement average usually applies to all traces, marker results, and numeric results. But sometimes it only applies to the numeric results.

If the analyzer is in Single measurement, pressing the **Cont** key does not change k and does not cause the sweep to be reset; the only action is to put the analyzer into Continuous measurement operation.

If it is already in continuous sweep:

the INIT:CONT 1 command has no effect

11 Power vs. Time Measurement
Cont (Continuous Measurement/Sweep)

the INIT:CONT 0 command will place the analyzer in Single Sweep but will have no effect on the current sequence until $k = N$, at which point the current sequence will stop and the instrument will go to the idle state.

File

See "File" on page 272

FREQ Channel

Accesses a menu of keys that allow you to control the Frequency and Channel parameters of the instrument.

Some features in the Frequency menu are the same for all measurements – they do not change as you change measurements. Settings like these are called “Meas Global” and are unaffected by Meas Preset. For example, the Center Freq setting is the same for all measurements - it does not change as you change measurements.

| Key Path | Front-panel key |
|----------------------|------------------|
| Initial S/W Revision | Prior to A.02.00 |

CF Step

Changes the step size for the center frequency and start and stop frequency functions. Once a step size has been selected and the center frequency function is active, the step keys (and the UP|DOWN parameters for Center Frequency from remote commands) change the center frequency by the step-size value. The step size function is useful for finding harmonics and sidebands beyond the current frequency span of the analyzer.

Note that the start and stop frequencies also step by the CF Step value.

| Key Path | FREQ Channel |
|-----------------------|---|
| Remote Command | <pre>[:SENSe] :FREQuency:CENTer:STEP[:INCRement] <freq> [:SENSe] :FREQuency:CENTer:STEP[:INCRement] ? [:SENSe] :FREQuency:CENTer:STEP:AUTO OFF ON 0 1 [:SENSe] :FREQuency:CENTer:STEP:AUTO?</pre> |
| Example | <pre>FREQ:CENT:STEP:AUTO ON FREQ:CENT:STEP 500 MHz FREQ:CENT UP increases the current center frequency value by 500 MHz FREQ:CENT:STEP? FREQ:CENT:STEP:AUTO?</pre> |
| Notes | Preset and Max values are depending on Hardware Options (503, 507, 508, 513, 526) |
| Notes | Preset and Max values are dependent on Hardware Options (5xx) |
| Dependencies | Freq Offset is not available in External Mixing. In this case the Freq Offset key is grayed out and shows a value of zero. It will once again be available, and show the previously set value, when you return to the RF Input. |
| Dependencies | Span, RBW, Center frequency If the electronic/soft attenuator is enabled, any attempt to change the value of the center frequency >3.6 GHz by pressing the Up-arrow key, fails and results in an advisory message. If the equivalent SCPI command is sent, this same message is generated as part of a “-221, Settings conflict” |

| | |
|------------------------------|--|
| | warning. |
| Couplings | When auto-coupled in a non-zero span, the center frequency step size is set to 10% of the span. When auto-coupled in zero span, the center frequency step size is set to the equivalent -3 dB RBW value. |
| Preset | Auto ADEMOD: 1 MHz ON |
| State Saved | Saved in instrument state |
| Min | - (the maximum frequency of the instrument). That is, 27 GHz max freq instrument has a CF step range of +/- 27 GHz. Note that this is the maximum frequency given the current settings of the instrument, so in External Mixing, for example, it is the maximum frequency of the current mixer band. |
| Max | The maximum frequency of the instrument. That is, 27 GHz max freq instrument has a CF step range of +/- 27 GHz. Note that this is the maximum frequency given the current settings of the instrument, so in External Mixing, for example, it is the maximum frequency of the current mixer band. |
| Default Unit | Hz |
| Status Bits/OPC dependencies | non-overlapped |

11 Power vs. Time Measurement
Input/Output

Input/Output

See "[Input/Output](#)" on page 162

Marker

Accesses the menu that allows you to select, set up, and control the markers for the current measurement. Sets the marker control mode as described under **Normal**, **Delta**, and **Off**, below. All interactions and dependencies detailed under the softkey description are enforced when the remote command is sent.

See Marker in the "Common Measurement Functions" for more information.

| Key Path | Front-panel key |
|----------------------|-----------------|
| Initial S/W Revision | A.03.00 |

Select Marker

Accesses a menu that allows you to activate one or more markers

See Marker in the "Marker Functions" section for more information.

| Key Path | Marker |
|----------------------|---------|
| Initial S/W Revision | A.03.00 |

Marker Type

Sets the marker control mode. If the selected marker is Off, pressing Marker sets it to Normal and places it at the center of the screen on the trace determined by the **Marker Trace** rules. At the same time, the reference value of the selected marker appears on the Active Function area.

Active Function Display: Marker X-axis value

Default Active Function: the active function for the selected marker's current control mode. If the current control mode is Off, there is no active function and the active function is turned off.

The marker X axis value entered in the active function area will display the marker value to its full entered precision.

| Key Path | Marker |
|----------------|---|
| Mode | LTETDD, LTE, LTEATDD, LTEAFDD |
| Remote Command | :CALCulate:PVTime:MARKer[1] 2 ... 12:MODE POSition DELTA OFF :CALCulate:PVTime:MARKer[1] 2 ... 12:MODE? |
| Example | :CALC:PVT:MARK:MODE OFF :CALC:PVT:MARK:MODE? |
| Notes | If the selected marker is Off, pressing Marker sets it to Normal and places it at the center of the screen on the trace determined by the Marker Trace rules. At the same time, Marker X Axis Value appears in the Active Function area. Default Active Function: the active function for the selected marker's current control mode. Note that if the current control mode is Off, there is no active function and the active function is turned off. |

| | |

| Range | RF Envelope Max Hold RF Envelope Min Hold RF Envelope 70us RMS trace |
| Initial S/W Revision | A.03.00 |
| Modified at S/W Revision | A.16.00 |

Couple Marker

When this function is invoked, moving any marker causes an “equal X Axis movement” of every other marker which is active. By “equal X Axis movement” we mean that the difference between each marker’s X Axis value (in the fundamental x-axis units of the trace that marker is on) is preserved, as is the X Axis value of the marker being moved (in the same fundamental X-axis units).

NOTE This may result in markers going off screen.

| | |
|-----------------------|--|
| Key Path | Marker, More |

Meas

The information in this section is common to all measurements. For key and remote command information for a specific measurement, refer to the section that describes the measurement of interest.

Measurements available under the Meas key are specific to the current Mode.

When viewing Help for measurements, note the following:

NOTE

Operation for some keys differs between measurements. The information displayed in Help pertains to the current measurement. To see how a key operates in a different measurement, exit Help (press the Cancel Esc key), select the measurement, then reenter Help (press the Help key) and press that key.

| Key Path | Front-panel key |
|----------------------|------------------|
| Initial S/W Revision | Prior to A.02.00 |

Measurement Group of Commands

Measure Commands:

:MEASure:<measurement>[n]?

This is a fast single-command way to make a measurement using the factory default instrument settings. These are the settings and units that conform to the Mode Setup settings (e.g. radio standard) that you have currently selected.

- Stops the current measurement (if any) and sets up the instrument for the specified measurement using the factory defaults
- Initiates the data acquisition for the measurement
- Blocks other SCPI communication, waiting until the measurement is complete before returning results.
- If the function does averaging, it is turned on and the number of averages is set to 10.
- After the data is valid it returns the scalar results, or the trace data, for the specified measurement. The type of data returned may be defined by an [n] value that is sent with the command.
- The scalar measurement results will be returned if the optional [n] value is not included, or is set to 1. If the [n] value is set to a value other than 1, the selected trace data results will be returned. See each command for details of what types of scalar results or trace data results are available.
- ASCII is the default format for the data output. (Older versions of Spectrum Analysis and Phase Noise mode measurements only use ASCII.) The binary data formats should be used for handling large blocks of data since they are smaller and faster than the ASCII format. Refer to the FORMat:DATA command for more information.

If you need to change some of the measurement parameters from the factory default settings you can set up the measurement with the CONFigure command. Use the commands in the SENSe:<measurement> and CALCulate:<measurement> subsystems to change the settings. Then you can use the READ? command to initiate the measurement and query the results.

If you need to repeatedly make a given measurement with settings other than the factory defaults, you can use the commands in the SENSe:<measurement> and CALCulate:<measurement> subsystems to set up the measurement. Then use the READ? command to initiate the measurement and query results.

Measurement settings persist if you initiate a different measurement and then return to a previous one. Use READ:<measurement>? if you want to use those persistent settings. If you want to go back to the default settings, use MEASure:<measurement>?.

Configure Commands:

:CONFigure:<measurement>

This command stops the current measurement (if any) and sets up the instrument for the specified measurement using

the factory default instrument settings. It does not initiate the taking of measurement data unless INIT:CONTinuous is ON. If you change any measurement settings after using the CONFigure command, the READ command can be used to initiate a measurement without changing the settings back to their defaults.

In the Swept SA measurement in Spectrum Analyzer mode the CONFigure command also turns the averaging function on and sets the number of averages to 10 for all measurements.

:CONFigure: <measurement>: NDEFault stops the current measurement and changes to the specified measurement. It does not change the settings to the defaults. It does not initiate the taking of measurement data unless INIT:CONTinuous is ON.

The CONFigure? query returns the current measurement name.

The CONFigure:CATalog? query returns a quoted string of all licensed measurement names in the current mode. For example, "SAN, CHP, OBW, ACP, PST, TXP, SPUR, SEM, LIST".

Fetch Commands:

:FETCh:<measurement>[n]?

This command puts selected data from the most recent measurement into the output buffer. Use FETCh if you have already made a good measurement and you want to return several types of data (different [n] values, for example, both scalars and trace data) from a single measurement. FETCh saves you the time of re-making the measurement. You can only FETCh results from the measurement that is currently active, it will not change to a different measurement. An error message is reported if a measurement other than the current one is specified.

If you need to get new measurement data, use the READ command, which is equivalent to an INITiate followed by a FETCh.

The scalar measurement results will be returned if the optional [n] value is not included, or is set to 1. If the [n] value is set to a value other than 1, the selected trace data results will be returned. See each command for details of what types of scalar results or trace data results are available. The binary data formats should be used for handling large blocks of data since they are smaller and transfer faster than the ASCII format. (FORMat:DATA)

FETCh may be used to return results other than those specified with the original READ or MEASure command that you sent.

INITiate Commands:

:INITiate:<measurement>

This command is not available for measurements in all the instrument modes:

- Initiates a trigger cycle for the specified measurement, but does not output any data. You must then use the FETCh<meas> command to return data. If a measurement other than the current one is specified, the instrument will switch to that measurement and then initiate it.
 - For example, suppose you have previously initiated the ACP measurement, but now you are running the channel power measurement. If you send INIT:ACP? it will change from channel power to ACP and will initiate an ACP measurement.
 - Does not change any of the measurement settings. For example, if you have previously started the ACP measurement and you send INIT:ACP? it will initiate a new ACP measurement using the same instrument settings as the last time ACP was run.
 - If your selected measurement is currently active (in the idle state) it triggers the measurement, assuming the trigger conditions are met. Then it completes one trigger cycle. Depending upon the measurement and the number of averages, there may be multiple data acquisitions, with multiple trigger events, for one full trigger cycle. It also holds off additional commands on GPIB until the acquisition is complete.
-

READ Commands:

:READ:<measurement>[n]?

- Does not preset the measurement to the factory default settings. For example, if you have previously initiated the ACP
-

measurement and you send READ:ACP? it will initiate a new measurement using the same instrument settings.

- Initiates the measurement and puts valid data into the output buffer. If a measurement other than the current one is specified, the instrument will switch to that measurement before it initiates the measurement and returns results.
 - For example, suppose you have previously initiated the ACP measurement, but now you are running the channel power measurement. Then you send READ:ACP? It will change from channel power back to ACP and, using the previous ACP settings, will initiate the measurement and return results.
 - Blocks other SCPI communication, waiting until the measurement is complete before returning the results
 - If the optional [n] value is not included, or is set to 1, the scalar measurement results will be returned. If the [n] value is set to a value other than 1, the selected trace data results will be returned. See each command for details of what types of scalar results or trace data results are available. The binary data formats should be used when handling large blocks of data since they are smaller and faster than the ASCII format. (FORMat:DATA)
-

| | |
|----------------------|------------------|
| Initial S/W Revision | Prior to A.02.00 |
|----------------------|------------------|

Current Measurement Query (Remote Command Only)

This command returns the name of the measurement that is currently running.

| | |
|-----------------------|-------------|
| Remote Command | :CONFigure? |
|-----------------------|-------------|

| | |
|----------------|-------|
| Example | CONF? |
|----------------|-------|

| | |
|----------------------|------------------|
| Initial S/W Revision | Prior to A.02.00 |
|----------------------|------------------|

Limit Test Current Results (Remote Command Only)

Queries the status of the current measurement limit testing. It returns a 0 if the measured results pass when compared with the current limits. It returns a 1 if the measured results fail any limit tests.

| | |
|-----------------------|--------------------------|
| Remote Command | :CALCulate:CLIMits:FAIL? |
|-----------------------|--------------------------|

| | |
|----------------|--|
| Example | CALC:CLIM:FAIL? queries the current measurement to see if it fails the defined limits. Returns a 0 or 1: 0 it passes, 1 it fails. |
|----------------|--|

| | |
|----------------------|------------------|
| Initial S/W Revision | Prior to A.02.00 |
|----------------------|------------------|

Data Query (Remote Command Only)

Returns the designated measurement data for the currently selected measurement and subopcode.

n = any valid subopcode for the current measurement. See the measurement command results table for your current measurement, for information about what data is returned for the subopcodes.

This command uses the data setting specified by the FORMat:BORDER and FORMat:DATA commands and can return real or ASCII data. (See the format command descriptions under Input/Output in the Analyzer Setup section.)

| | |
|-----------------------------|---|
| Remote Command | :CALCulate:DATA[n]? |
| Notes | The return trace depends on the measurement. In CALCulate:<meas>:DATA[n], n is any valid subopcode for the current measurement. It returns the same data as the FETCH:<measurement>? query where <measurement> is the current measurement. |
| Initial S/W Revision | Prior to A.02.00 |

Calculate/Compress Trace Data Query (Remote Command Only)

Returns compressed data for the currently selected measurement and sub-opcode [n].

n = any valid sub-opcode for that measurement. See the MEASure:<measurement>? command description of your specific measurement for information on the data that can be returned.

The data is returned in the current Y Axis Unit of the analyzer. The command is used with a sub-opcode <n> (default=1) to specify the trace. With trace queries, it is best if the analyzer is not sweeping during the query. Therefore, it is generally advisable to be in Single Sweep, or Update=Off.

This command is used to compress or decimate a long trace to extract and return only the desired data. A typical example would be to acquire N frames of GSM data and return the mean power of the first burst in each frame. The command can also be used to identify the best curve fit for the data.

| | |
|-----------------------------|---|
| Remote Command | :CALCulate:DATA<n>:COMPRESS? BLOCK CFIT MAXimum MINimum MEAN DMEan RMS RMSCubed SAMPLE SDEViation PPHase [,<soffset> [,<length>[,<roffset>[,<rlimit>]]]] |
| Example | To query the mean power of a set of GSM bursts: Supply a signal that is a set of GSM bursts. Select the IQ Waveform measurement (in IQ Analyzer Mode). Set the sweep time to acquire at least one burst. Set the triggers such that acquisition happens at a known position relative to a burst. Then query the mean burst levels using, CALC:DATA2:COMP? MEAN, 24e-6, 526e-6 (These parameter values correspond to GSM signals, where 526e-6 is the length of the burst in the slot and you just want 1 burst.) |
| Notes | The command supports 5 parameters. Note that the last 4 (<soffset>, <length>, <roffset>, <rlimit>) are optional. But these optional parameters must be entered in the specified order. For example, if you want to specify <length>, then you must also specify <soffset>. See details below for a definition of each of these parameters. This command uses the data in the format specified by FORMat:DATA, returning either binary or ASCII data. |
| Initial S/W Revision | Prior to A.02.00 |

- BLOCK or block data - returns all the data points from the region of the trace data that you specify. For example, it could be used to return the data points of an input signal over several timeslots, excluding the portions of the trace data that you do not want. (This is x,y pairs for trace data and I,Q pairs for complex data.)

- CFIT or curve fit - applies curve fitting routines to the data. <soffset> and <length> are required to define the data that you want. <roffset> is an optional parameter for the desired order of the curve equation. The query will return the following values: the x-offset (in seconds) and the curve coefficients ((order + 1) values).

MIN, MAX, MEAN, DME, RMS, RMSC, SAMP, SDEV and PPH return one data value for each specified region (or <length>) of trace data, for as many regions as possible until you run out of trace data (using <roffset> to specify regions). Or they return the number of regions you specify (using <rlimit>) ignoring any data beyond that.

- MINimum - returns the minimum data point (y value) for the specified region(s) of trace data. For I/Q trace data, the minimum magnitude of the I/Q pairs is returned.
- MAXimum - returns the maximum data point (y value) for the specified region(s) of trace data. For I/Q trace data, the maximum magnitude of the I/Q pairs is returned.
- MEAN - returns a single value that is the arithmetic mean of the data point values (in dB/ dBm) for the specified region(s) of trace data. For I/Q trace data, the mean of the magnitudes of the I/Q pairs is returned. See the following equations.

-

NOTE

If the original trace data is in dB, this function returns the arithmetic mean of those log values, not log of the mean power which is a more useful value. The mean of the log is the better measurement technique when measuring CW signals in the presence of noise. The mean of the power, expressed in dB, is useful in power measurements such as Channel Power. To achieve the mean of the power, use the RMS option.

Equation 1

Mean Value of Data Points for Specified Region(s)

$$\text{MEAN} = \frac{1}{n} \sum_{X_i \in \text{region}(s)} X_i$$

where X_i is a data point value, and n is the number of data points in the specified region(s).

Equation 2

Mean Value of I/Q Data Pairs for Specified Region(s)

$$\text{MEAN} = \frac{1}{n} \sum_{X_i \in \text{region}(s)} |X_i|$$

where $|X_i|$ is the magnitude of an I/Q pair, and n is the number of I/Q pairs in the specified region(s).

- DMEan - returns a single value that is the mean power (in dB/ dBm) of the data point values for the specified region(s) of trace data. See the following equation:

Equation 3

DMEan Value of Data Points for Specified Region(s)

$$\text{DME} = 10 \times \log_{10} \left(\frac{1}{n} \sum_{X_i \in \text{region}(s)} 10^{\frac{X_i}{10}} \right)$$

- RMS - returns a single value that is the average power on a root-mean-squared voltage scale (arithmetic rms) of the data point values for the specified region(s) of trace data. See the following equation.

NOTE For I/Q trace data, the rms of the magnitudes of the I/Q pairs is returned. See the following equation. This function is very useful for I/Q trace data. However, if the original trace data is in dB, this function returns the rms of the log values which is not usually needed.

Equation 4

RMS Value of Data Points for Specified Region(s)

$$\text{RMS} = \sqrt{\frac{1}{n} \sum_{X_i \in \text{region}(s)} X_i^2}$$

where X_i is a data point value, and n is the number of data points in the specified region(s).

Equation 5

RMS Value of I/Q Data Pairs for Specified Region(s)

$$\text{RMS} = \sqrt{\frac{1}{n} \sum_{X_i \in \text{region}(s)} X_i X_i^*}$$

where X_i is the complex value representation of an I/Q pair, X_i^* its conjugate complex number, and n is the number of I/Q pairs in the specified region(s).

Once you have the rms value for a region of trace data (linear or I/Q), you may want to calculate the mean power. You must convert this rms value (peak volts) to power in dBm:

$$10 \times \log[10 \times (\text{rms value})^2]$$

- SAMPlE - returns the first data value (x,y pair) for the specified region(s) of trace data. For I/Q trace data, the first I/Q pair is returned.
- SDEViation - returns a single value that is the arithmetic standard deviation for the data point values for the specified region(s) of trace data. See the following equation.
- For I/Q trace data, the standard deviation of the magnitudes of the I/Q pairs is returned. See the following equation.

Equation 6

Standard Deviation of Data Point Values for Specified Region(s)

$$\text{SDEV} = \sqrt{\frac{1}{n} \sum_{X_i \in \text{region}(s)} (X_i - \bar{X})^2}$$

where X_i is a data point value, \bar{X} is the arithmetic mean of the data point values for the specified region (s), and n is the number of data points in the specified region(s).

$$\text{SDEV} = \sqrt{\frac{1}{n} \sum_{X_i \in \text{region}(s)} (|X_i| - \bar{X})^2}$$

where $|X_i|$ is the magnitude of an I/Q pair, \bar{X} is the mean of the magnitudes for the specified region(s), and n is the number of data points in the specified region(s).

- PPHase - returns the x,y pairs of both rms power (dBm) and arithmetic mean phase (radian) for every specified region and frequency offset (Hz). The number of pairs is defined by the specified number of regions. This parameter can be used for I/Q vector (n=0) in Waveform (time domain) measurement and all parameters are specified by data point in PPHase.

The rms power of the specified region may be expressed as:

$$\text{Power} = 10 \times \log [10 \times (\text{RMS I/Q value})] + 10.$$

The RMS I/Q value (peak volts) is:

$$\sqrt{\frac{1}{n} \sum_{X_i \in \text{region}} X_i X_i^*}$$

where X_i is the complex value representation of an I/Q pair, X_i^* its conjugate complex number, and n is the number of I/Q pairs in the specified region.

The arithmetic mean phase of the specified region may be expressed as:

$$\frac{1}{n} \sum_{Y_i \in \text{region}} Y_i$$

where Y_i is the unwrapped phase of I/Q pair with applying frequency correction and n is the number of I/Q pairs in the specified region.

The frequency correction is made by the frequency offset calculated by the arithmetic mean of every specified region's frequency offset. Each frequency offset is calculated by the least square method against the unwrapped phase of I/Q pair.

Sample Trace Data - Constant Envelope

(See below for explanation of variables.)

Sample Trace Data - Not Constant Envelope

(See below for explanation of variables.)

<soffset> - start offset is an optional real number. (It is in seconds for time-domain traces, and is a dimensionless index 0 to Npoints - 1, for frequency-domain traces). It specifies the amount of data at the beginning of the trace that will be ignored before the decimation process starts. It is the time or frequency change from the start of the trace to the point where you want to start using the data. The default value is zero.

<length> - is an optional real number. (It is in seconds for time-domain traces, and is a dimensionless index 0 to Npoints - 1, for frequency-domain traces). It defines how much data will be compressed into one value. This parameter has a default value equal to the current trace length.

<roffset> - repeat offset is an optional real number. (It is in seconds for time-domain traces, and is a dimensionless index 0 to Npoints - 1, for frequency-domain traces). It defines the beginning of the next field of trace elements to be compressed. This is relative to the beginning of the previous field. This parameter has a default value equal to the <length> variable. Note that this parameter is used for a completely different purpose when curve fitting (see CFIT above).

<rlimit> - repeat limit is an optional integer. It specifies the number of data items that you want returned. It will ignore any additional items beyond that number. You can use the Start offset and the Repeat limit to pick out exactly what part of the data you want to use. The default value is all the data.

Calculate Peaks of Trace Data (Remote Command Only)

Returns a list of all the peaks for the currently selected measurement and sub-opcode [n]. The peaks must meet the requirements of the peak threshold and excursion values.

n = any valid sub-opcode for the current measurement. See the MEASure:<measurement> command description of your specific measurement for information on the data that can be returned.

The command can only be used with specific sub-opcodes with measurement results that are trace data. Both real and complex traces can be searched, but complex traces are converted to magnitude in dBm. In many measurements the sub-opcode n=0, is the raw trace data which cannot be searched for peaks. And Sub-opcode n=1, is often calculated results values which also cannot be searched for peaks.

This command uses the data setting specified by the FORMat:BORDER and FORMat:DATA commands and can return real or ASCII data. If the format is set to INT,32, it returns REAL,32 data.

The command has four types of parameters:

- Threshold (in dBm)
- Excursion (in dB)
- Sorting order (amplitude, frequency, time)
- Optional in some measurements: Display line use (all, > display line, < display line)

| | |
|-----------------------|---|
| Remote Command | <p>For Swept SA measurement:</p> <pre>:CALCulate:DATA[1] 2 ... 6:PEAKs? <threshold>,<excursion>[,AMPLitude FREQuency TIME[,ALL GTDLine LTDLine]]</pre> <p>For most other measurements:</p> <pre>:CALCulate:DATA[1] 2 ... 6:PEAKs? <threshold>,<excursion>[,AMPLitude FREQuency TIME]</pre> |
| Example | <p>Example for Swept SA measurement in Spectrum Analyzer Mode:</p> <p>CALC:DATA4:PEAK? -40, 10, FREQ, GTDL This will identify the peaks of trace 4 that are above -40 dBm, with excursions of at least 10 dB. The peaks are returned in order of increasing frequency, starting with the lowest frequency. Only the peaks that are above the display line are returned.</p> <p>Query Results 1:</p> <p>With FORMat:DATA REAL, 32 selected, it returns a list of floating-point numbers. The first value in the list is the number of peak points that are in the following list. A peak point consists of two values: a peak amplitude followed by its corresponding frequency (or time).</p> <p>If no peaks are found the peak list will consist of only the number of peaks, (0).</p> |
| Notes | <p><n> - is the trace that will be used</p> <p><threshold> - is the level below which trace data peaks are ignored. Note that the threshold value is required and is always used as a peak criterion. To effectively disable the threshold criterion for this command, provide a substantially low threshold value such as -200 dBm. Also note that the threshold value used in this command is independent of and has no effect on the threshold value stored under the Peak Criteria menu.</p> <p><excursion> - is the minimum amplitude variation (rise and fall) required for a signal to be identified as peak. Note that the excursion value is required and is always used as a peak criterion. To effectively disable the excursion criterion for this command, provide the minimum value of 0.0 dB. Also note that the excursion value used in this command is independent of and has no effect on the</p> |

excursion value stored under the Peak Criteria menu.

Values must be provided for threshold and excursion. The sorting and display line parameters are optional (defaults are AMPLitude and ALL).

Note that there is always a Y-axis value for the display line, regardless of whether the display line state is on or off. It is the current Y-axis value of the display line which is used by this command to determine whether a peak should be reported
Sorting order:

AMPLitude - lists the peaks in order of descending amplitude, with the highest peak first (default if optional parameter not sent)

FREQuency - lists the peaks in order of occurrence, left to right across the x-axis.

TIME - lists the peaks in order of occurrence, left to right across the x-axis.

Peaks vs. Display Line:

ALL - lists all of the peaks found (default if optional parameter not sent).

GTDLine (greater than display line) - lists all of the peaks found above the display line.

LTDLine (less than display line) - lists all of the peaks found below the display line.

| | |
|----------------------|------------------|
| Initial S/W Revision | Prior to A.02.00 |
|----------------------|------------------|

Hardware-Accelerated Fast Power Measurement (Remote Command Only)

The Fast Power option (FP2) enables very fast channel power measurements for instruments with the prerequisite hardware (DP2 and/or B40). It accomplishes this by performing real-time overlapped FFTs at the hardware layer, using software for basic post-processing before returning the result to the user. The upshot of this approach is improved throughput for user applications that require many sequential power measurements.

The analysis bandwidth of FP2 is limited by the licenses in the instrument, but its maximum overall analysis bandwidth per acquisition is 40 MHz.

FP2 is remote-only, which means the instrument does not switch to any particular mode or measurement. FP2 commands can be sent while another application is in use on the front panel.

Each Fast Power measurement can be predefined using an array index, and up to 1,000 measurements can be stored. In the following documentation, instances of [1,2,...,999] can be substituted with a particular measurement index, e.g. CALC:FPOW:POW1?, CALC:FPOW:POW2?, CALC:FPOW:POW134?. In this way, power measurements can be defined one time in a batch, and then executed multiple times without having to redefine them, similar to “list mode” on other measurements.

In addition to basic channel power measurements, there are a number of other measurement “functions” for each channel, including peak power, peak frequency, and power spectral density. See the Function parameter for more information.

Reset Fast Power Measurement (Remote Command Only)

Resets the measurement configuration to the defaults.

| | |
|-----------------------|--|
| Mode | All |
| Remote Command | :CALCulate:FPOWer:POWer[1,2,...,999]:RESet |
| Example | :CALC:FPOW:POW1:RES |

| | |
|----------------------|-------------------------|
| Notes | Option FP2 is required. |
| Initial S/W Revision | A.14.00 |

Define Fast Power Measurement (Remote Command Only)

Fast Power acquisitions are configured using the DEFine command. This command accepts a comma-delimited string of configuration parameters and their appropriate values, which are all specified in the subsection below.

| | |
|-----------------------|--|
| Mode | All |
| Remote Command | :CALCulate:FPOWer:POWer[1,2,...,999]:DEFine "configuration string" |
| Example | :CALC:FPOW:POW1:DEF "CenterFrequency=2e9, AcquisitionTime=0.005" |
| Notes | See below for a list of measurement variables that can be defined in the configuration string. |
| Initial S/W Revision | A.14.00 |

Acquisition Time

| | |
|----------------------|--|
| Example | CALC:FPOW:POW1:DEF "AcquisitionTime=0.002" |
| Notes | The acquisition time parameter sets the time in which the entire spectrum is measured. An increase in the acquisition time yields an improvement in measurement repeatability. |
| Preset | 0.001 s |
| Range | 0 s to 1 s |
| Default Unit | Time (s) |
| Initial S/W Revision | A.14.00 |

Center Frequency

| | |
|----------------------|--|
| Example | CALC:FPOW:POW1:DEF "CenterFrequency=2e9" |
| Notes | The center frequency parameter sets the frequency in which the measurement is centered around. The OffsetFrequency parameter is calculated relative to the center frequency. |
| Preset | 1 GHz |
| Range | 0 Hz to maximum instrument frequency |
| Default Unit | Frequency (Hz) |
| Initial S/W Revision | A.14.00 |

DC Coupled

| | |
|----------------------|---|
| Example | CALC:FPOW:POW1:DEF "DCCoupled=True" |
| Notes | The DC coupled parameter allows the user to specify whether the DC blocking capacitor is utilized. Set parameter to true when measuring frequencies below 10 MHz. |
| Preset | False |
| Range | True (DC Coupled) or False (AC Coupled) |
| Default Unit | Boolean |
| Initial S/W Revision | A.14.00 |

DetectorType

| | |
|----------------------|--|
| Example | CALC:FPOW:POW1:DEF "DetectorType=Peak" |
| Notes | Option FP2 is required. The detector type parameter allows the user to choose whether a RMS average or peak value is used during the measurement. |
| Preset | RmsAverage |
| Range | RmsAverage, Peak |
| Initial S/W Revision | A.14.00 |

Do Noise Correction

| | |
|----------------------|--|
| Example | CALC:FPOW:POW1:DEF "DoNoiseCorrection=True" |
| Notes | When noise correction is enabled, the linear noise power contributed by the analyzer is subtracted from all measurements. This effectively lowers the noise floor of the analyzer. When noise correction is enabled, the first measurement for a given set of input parameters will take extra time. This is because the analyzer takes an extra acquisition with the RF input disconnected from the analyzer's front end to measure the noise of just the analyzer. The measured noise floor is stored in a cache so the noise acquisition will occur only once for the same state settings. In other words, if noise correction was turned on and the analyzer made an acquisition at frequency A, then frequency B, and back again to frequency A, the hidden initial noise floor acquisition would only occur for the first acquisition at frequency A and the cached noise floor would be used the second time frequency A was measured. |
| Preset | False |
| Range | True (enable noise correction) or False (disable noise correction) |
| Default Unit | Boolean |
| Initial S/W Revision | A.14.00 |

Do Spur Suppression

| | |
|----------------------|---|
| Example | CALC:FPOW:POW1:DEF "DoSpurSuppression=True" |
| Notes | <p>When measuring very low level signals, or when large out-of-band inputs are input into the analyzer, sometimes unwanted spurs and residuals can appear in the measured spectrum. Spur suppression is a method to help minimize the levels of these internally generated spurs and residuals.</p> <p>When spur suppression is enabled, the analyzer will automatically take two acquisitions using two different internal analog LO frequencies. The FFT spectrums from both acquisitions are combined by taking the minimum power between both traces on a per FFT bin basis. External signals will have the same amplitude for both traces and therefore will return the expected amplitudes. However, low level spurs and residuals generated internally to the analyzer tend to move to different FFT bins depending on the internal analog LO frequency used, and therefore tend to be suppressed using this spur suppression method.</p> <p>Because two acquisitions, rather than a single acquisition, are made when spur suppression is enabled, the measurement time will always be slower when spur suppression is enabled.</p> |
| Preset | False |
| Range | True (enable spur suppression) or False (disable spur suppression) |
| Default Unit | Boolean |
| Initial S/W Revision | A.14.00 |

Electronic Attenuator Bypass

| | |
|----------------------|--|
| Example | CALC:FPOW:POW1:DEF "ElecAttBypass =False" |
| Notes | The electronic attenuation bypass parameter allows the user to either utilize or bypass the electronic attenuator. The electronic attenuator is only available for frequencies up to 3.6 GHz. Set parameter to true when using frequencies above 3.6 GHz and set the parameter to false when using the preamp. |
| Preset | True |
| Range | True (bypass electronic attenuator) or False (use electronic attenuator) |
| Default Unit | Boolean |
| Initial S/W Revision | A.14.00 |

Electronic Attenuation

| | |
|---------|---|
| Example | CALC:FPOW:POW1:DEF "ElecAttenuation=10" |
| Notes | <p>Option EA3 is required.</p> <p>The electronic attenuation value parameter sets the amount of electrical attenuation from 0 to 24 dB (1 dB steps).</p> <p>Set "ElecAttBypass=False" to make sure the electronic attenuator path is enabled.</p> |
| Preset | 0 dB |
| Range | 0 - 24 dB (1 dB steps) |

| | |
|----------------------|---------|
| Default Unit | dB |
| Initial S/W Revision | A.14.00 |

IF Gain

| | |
|----------------------|--|
| Example | CALC:FPOW:POW1:DEF "IFGain=10" |
| Notes | The IF gain parameter allows the user to specify the gain at the IF stage anywhere from -6 to 16 dB (1 dB steps). This is an advanced feature, and for most cases this should remain at its default value of 0 dB. |
| Preset | 0 dB |
| Range | -6 - 16 dB (1 dB steps) |
| Default Unit | dB |
| Initial S/W Revision | A.14.00 |

IF Type

| | |
|----------------------|---|
| Example | CALC:FPOW:POW1:DEF "IFType=B25M" |
| Notes | The IF type parameter allows the user to select between different IF paths. For example, if the signal is less than 25 MHz wide, then the user can select the B25M path to take advantage of additional filtering on this analog IF path. |
| Preset | B40M |
| Range | B10M, B25M, B40M |
| Initial S/W Revision | A.14.00 |

Include Power Spectrum

| | |
|----------------------|---|
| Example | CALC:FPOW:POW1:DEF "IncludePowerSpectrum=True" |
| Notes | The power spectrum parameter allows the user to read data on the entire spectrum for diagnostic purposes. It is not recommended for production use. See CALC:FPOW:POW[n]:READ2? for details on the binary format of the response. |
| Preset | False |
| Range | True (return both channel power and full power spectrum) or False (returns only channel power) |
| Default Unit | Boolean |
| Initial S/W Revision | A.14.00 |

Mechanical Attenuation

| | |
|----------------------|---|
| Example | CALC:FPOW:POW1:DEF "MechAttenuation=10" |
| Notes | The mechanical attenuation value parameter sets the amount of mechanical attenuation anywhere from 0 to 70 dB (2 dB steps). |
| Preset | 0 dB |
| Range | 0 – 70 dB (2 dB steps) |
| Default Unit | dB |
| Initial S/W Revision | A.14.00 |

Preamp Mode

| | |
|----------------------|--|
| Example | CALC:FPOW:POW1:DEF "PreAmpMode=Low" |
| Notes | The license for the appropriate preamp is required. The preamp mode parameter specifies whether the preamps are being utilized. Low allows any preamps up to 3.6 GHz, and Full allows all licensed preamps. Set "ElecAttBypass=True" in order to utilize any preamps. |
| Preset | Off |
| Range | Off, Low, Full |
| Initial S/W Revision | A.14.00 |

Resolution Bandwidth Mode

| | |
|----------------------|--|
| Example | CALC:FPOW:POW1:DEF "PreAmpMode=Low" |
| Notes | The resolution bandwidth mode parameter allows the user to choose whether the RBW filter is automatically or manually set. The BestSpeed value minimizes measurement time, while the Narrowest value minimizes RBW size (minimum of two FFT bins per RBW). To manually specify an RBW, set this parameter to Explicit, and set the ResolutionBW parameter to the desired value. |
| Preset | BestSpeed |
| Range | BestSpeed, Narrowest, Explicit |
| Initial S/W Revision | A.14.00 |

Resolution Bandwidth

| | |
|---------|--|
| Example | CALC:FPOW:POW1:DEF "ResolutionBW=25e3" |
| Notes | The resolution bandwidth parameter sets the 3-dB bandwidth of the RBW filter. The ResolutionBWMode parameter must be set to Explicit in order to manually set the RBW. |

| | |
|----------------------|---------|
| Preset | 0 Hz |
| Default Unit | Hz |
| Initial S/W Revision | A.14.00 |

Trigger Delay

| | |
|----------------------|---|
| Example | CALC:FPOW:POW1:DEF "TriggerDelay=0.025" |
| Notes | The trigger delay parameter sets the time after an external trigger is detected until the measurement is performed. |
| Preset | 0 s |
| Range | 0 - 1 s |
| Default Unit | Seconds |
| Initial S/W Revision | A.14.00 |

Trigger Level

| | |
|----------------------|--|
| Example | CALC:FPOW:POW1:DEF "TriggerLevel=2" |
| Notes | The trigger level parameter sets the voltage value at which an external trigger is detected. |
| Preset | 1.2 V |
| Range | -5 to 5 V |
| Default Unit | Volts |
| Initial S/W Revision | A.14.00 |

Trigger Slope

| | |
|----------------------|--|
| Example | CALC:FPOW:POW1:DEF "TriggerSlope=Negative" |
| Notes | The trigger slope parameter indicates the direction of the edge trigger voltage for detection. |
| Preset | Positive |
| Range | Positive, Negative |
| Initial S/W Revision | A.14.00 |

Trigger Source

| | |
|-------------------------|---|
| Example | CALC:FPOW:POW1:DEF "TriggerSource=Ext1" |
| Notes | The trigger source parameter allows the user to choose between measurement's triggering freely or controlled by an external input. Ext1 and Ext2 correspond to Trigger 1 In and Trigger 2 In, respectively. |
| Preset | Free |
| Range | Free, Ext1, Ext2 |
| Initial S/W Revision | A.14.00 |

Trigger Timeout

| | |
|-------------------------|--|
| Example | CALC:FPOW:POW1:DEF "TriggerTimeout=0.1" |
| Notes | The trigger timeout parameter sets the time in which the analyzer will wait for a trigger before automatically performing the measurement. |
| Preset | 1 s |
| Range | 0 - 1 s |
| Default Unit | Seconds |
| Initial S/W Revision | A.14.00 |

Signal Input

| | |
|-------------------------|--|
| Example | CALC:FPOW:POW1:DEF "SignalInput=Fp50MHzCW" |
| Notes | The signal input parameter allows the user to select between using the main RF input or the internal analyzer reference CW signal of 50 MHz. |
| Preset | FpMainRf |
| Range | FpMainRf, Fp50MHzCW |
| Initial S/W Revision | A.14.00 |

Use Preselector

| | |
|---------|--|
| Example | CALC:FPOW:POW1:DEF "UsePreSelector=True" |
| Notes | The preselector parameter allows the user to either utilize or bypass the front end tunable filter at frequencies above 3.6 GHz. For frequencies below 3.6 GHz, the preselector is automatically bypassed, so you do not need to set this parameter to False in those cases. |
| Preset | False |
| Range | True (use preselector above 3.6 GHz), or False (preselector bypassed) |

| | |
|----------------------|---------|
| Default Unit | Boolean |
| Initial S/W Revision | A.14.00 |

Channel Bandwidth Array

| | |
|----------------------|---|
| Example | CALC:FPOW:POW1:DEF "Bandwidth=[3.84e6, 5e6, 3.84e6]" |
| Notes | The bandwidth parameter array defines the bandwidth of each channel that will be measured. All array parameters should have the same number of elements. Alternatively, if all the elements are the same value, a single number with no square brackets can be used to define the parameter. |
| Preset | [1e6] |
| Range | 0 to 40 MHz |
| Default Unit | Hz |
| Initial S/W Revision | A.14.00 |

Channel Filter Type Array

| | |
|----------------------|--|
| Example | CALC:FPOW:POW1:DEF "FilterType=[RRC, IBW, RRC]" |
| Notes | The filter type parameter allows the user to choose between an integration bandwidth (IBW) filter or a root-raised-cosine (RRC) filter. The integration bandwidth filter weighs all frequencies within the bandwidth equally. The root-raised-cosine filter has an associated shape parameter, defined by the FilterAlpha parameter. All array parameters should have the same number of elements. Alternatively, if all the elements are the same value, a single value with no square brackets can be used to define the parameter. |
| Preset | [IBW] |
| Range | IBW, RRC |
| Initial S/W Revision | A.14.00 |

Channel Filter Alpha Array

| | |
|---------|---|
| Example | CALC:FPOW:POW1:DEF "FilterAlpha=[0.5, 0.0, 0.5]" |
| Notes | The filter alpha parameter allows the user to adjust the alpha value associated with the root-raised-cosine (RRC) filter type. Set FilterType to RRC in order to utilize this parameter. All array parameters should have the same number of elements. Alternatively, if all the elements are the same value, a single number with no square brackets can be used to define the parameter. |
| Preset | [0.22] |
| Range | 0.0 - 1.0 |

| | |
|-------------------------|---------|
| Initial S/W Revision | A.14.00 |
|-------------------------|---------|

Channel Measurement Function Array

| | |
|-------------------------|---|
| Example | CALC:FPOW:POW1:DEF "Function=[BandPower, PeakPower, BandPower]" |
| Notes | <p>This parameter array defines what measurement is being made for each individually-specified channel:</p> <p>BandPower: Total power within the specified bandwidth of the channel (dBm)</p> <p>BandDensity: Total power density within the specified bandwidth of the channel (dBm/Hz)</p> <p>PeakPower: The peak power value within the specified bandwidth of the channel (dBm)</p> <p>PeakFrequency: The frequency which corresponds to the peak power value within the specified bandwidth of the channel. This frequency is relative to the center frequency (Hz)</p> <p>XdBBandwidth: The half power (-3.01 dB) bandwidth of the highest amplitude signal that resides within the channel (Hz), dB is configurable using XdBBandwidth parameter</p> <p>OccupiedBandwidth: The bandwidth at which 99% of the total power resides within the channel (Hz), percentage configurable using OccupiedBandwidthPercent parameter</p> <p>All array parameters should have the same number of elements. Alternatively, if all the elements are the same value, a single value with no square brackets can be used to define the parameter.</p> |
| Preset | [BandPower] |
| Range | BandPower, BandDensity, PeakPower, PeakFrequency, XdBBandwidth, OccupiedBandwidth |
| Initial S/W Revision | A.14.00 |

Channel Offset Frequency Array

| | |
|-------------------------|---|
| Example | CALC:FPOW:POW1:DEF "OffsetFrequency=[-5e6, 0, 5e6]" |
| Notes | <p>The offset frequency parameter array defines the difference between the center frequency to the center frequency of each channel.</p> <p>All array parameters should have the same number of elements.</p> |
| Preset | [0] |
| Range | 0 to 20 MHz |
| Default Unit | Hz |
| Initial S/W Revision | A.14.00 |

Channel Occupied Bandwidth Percent Array

| | |
|---------|---|
| Example | CALC:FPOW:POW1:DEF "OccupiedBandwidthPercent =[0.95, 0.95, 0.95]" |
| Notes | This parameter only applies for channels whose Function is set to OccupiedBandwidth. The occupied |

| | |
|-------------------------|--|
| | bandwidth percent parameter specifies the percent of total power in these channels. The valid range for this parameter is 0.0 to 1.0, where 1.0 represents 100%. The default for this parameter is 0.99, which will return the bandwidth that contains 99% of the total channel power. |
| Preset | [0.99] |
| Range | 0 - 1.0 |
| Initial S/W Revision | A.14.00 |

Channel x-dB Bandwidth Array

| | |
|-------------------------|---|
| Example | CALC:FPOW:POW1:DEF " XdBBandwidth =[-6.02, -3.01, -1.0]" |
| Notes | This parameter only applies for channels whose Function is set to XdBBandwidth. The X dB bandwidth parameter is used to specify the power relative to the peak channel power over which the bandwidth is calculated. The parameter value must be a negative number. |
| Preset | [-3.01] |
| Range | -200 to 0 dB |
| Default Unit | dB |
| Initial S/W Revision | A.14.00 |

Define Fast Power Measurement Query (Remote Command Only)

The DEFine? command is used to retrieve a list of all defined parameters in an ASCII string format

```

M All

Configure Fast Power Measurement (Remote Command Only)

The configure command begins hardware setup and returns immediately, with no acquisition made. This can be used in parallel with other hardware operations to effectively hide the hardware setup time.

| | |
|-----------------------|--|
| Mode | All |
| Remote Command | :CALCulate:FPOWER:POWER[1,2,...,999]:CONFigure |
| Example | :CALC:FPOW:POW1:CONF |
| Notes | Option FP2 is required. |
| Initial S/W Revision | A.14.00 |

Initiate Fast Power Measurement (Remote Command Only)

The INITiate command begins an acquisition and returns immediately. The results of the measurement can be retrieved using FETCh.

| | |
|-----------------------|---|
| Mode | All |
| Remote Command | :CALCulate:FPOWER:POWER[1,2,...,999]:INITiate |
| Example | :CALC:FPOW:POW1:INIT |
| Notes | Option FP2 is required. |
| Initial S/W Revision | A.14.00 |

Fetch Fast Power Measurement (Remote Command Only)

The FETCh command query is used to retrieve the results of an acquisition initiated by the INIT command. The returned results are in ASCII string format. The string begins and ends with quotation marks.

| | |
|-----------------------|--|
| Mode | All |
| Remote Command | :CALCulate:FPOWER:POWER[1,2,...,999]:FETCh? |
| Example | :CALC:FPOW:POW1:FETC? |
| Notes | Option FP2 is required. Returns m comma-separated ASCII values, where m corresponds to the number of bandwidths defined. 1. Declared function return in the 1st specified channel 2. Declared function return in the 2nd specified channel ... m. Declared function return in the last specified channel The INIT and FETC? command sequence performs the same functionality of a single CALC:FPOW:POW[n]? query. Units of the returned values are dependent on the Function parameter for each channel. |
| Initial S/W Revision | A.14.00 |

Execute Fast Power Measurement (Remote Command Only)

This command query is used as shorthand for an INIT command immediately followed by a FETC? command. The returned results are in ASCII string format. The string begins and ends with quotation marks.

| | |
|-----------------------|---------------------------------------|
| Mode | All |
| Remote Command | :CALCulate:FPOWER:POWER[1,2,...,999]? |
| Example | :CALC:FPOW:POW1? |

| | |
|----------------------|--|
| Notes | Option FP2 is required. See notes for Fast Power Fetch for return format. |
| Initial S/W Revision | A.14.00 |

Binary Read Fast Power Measurement (Remote Command Only)

This command query is used as shorthand for an INIT command immediately followed by a FETC? command. The returned results are in a binary format.

| | |
|-----------------------|--|
| Mode | All |
| Remote Command | :CALCulate:FPOWER:POWER[1,2,...,999]:READ? :CALCulate:FPOWER:POWER[1,2,...,999]:READ1? |
| Example | :CALC:FPOW:POW1:READ? :CALC:FPOW:POW1:READ1? |
| Notes | Option FP2 is required. Returns m 4 byte floating point binary values (Little-Endian), where m corresponds to the number of bandwidths defined. |
| Initial S/W Revision | A.14.00 |

Diagnostic Binary Read Fast Power Measurement (Remote Command Only)

This command query is used as shorthand for an INIT command immediately followed by a FETC? command. The returned results are in a binary format. This command is used primarily for diagnostic purposes to test for ADC overloads and to visibly inspect the spectrum.

| | |
|-----------------------|---|
| Mode | All |
| Remote Command | :CALCulate:FPOWER:POWER[1,2,...,999]:READ2? |
| Example | :CALC:FPOW:POW1:READ2? |
| Notes | Option FP2 is required. Note: Spectrum data is only returned if the IncludePowerSpectrum parameter is set to True. If IncludePowerSpectrum is False, the number of spectrum points will be zero (0). Units of the returned values are dependent on the Function parameter per channel (e.g. dBm for BandPower, Hz for PeakFrequency). Returns binary data (Little-Endian) that contains information on m amount of channels, along with ADC over range and full spectrum data. The following is the binary format of the response. Bandwidth Return Value 1. Number of channels specified, m [4 byte int] 2. Declared function result for the 1st specified channel [4 byte float] |

| | |
|--|---|
| | 3. Declared function result for the 2nd specified channel [4 byte float] |
| | ... |
| | (m + 1). Declared function result for the last (mth) specified channel [4 byte float] |
| | ADC Over Range |
| | 1. ADC over-range occurred (1: true, 0: false) [2 byte short] |
| | Spectrum Data |
| | 1. Number of points in the spectrum data, k [4 byte int] |
| | 2. Start frequency of spectrum data (Hz) [8 byte double] |
| | 3. Step frequency of spectrum data (Hz) [8 byte double] |
| | 4. FFT bin at 1st point (dBm) [4 byte float] |
| | 5. FFT bin at 2nd point (dBm) [4 byte float] |
| | ... |
| | (k + 3). FFT bin at last (kth) point (dBm) [4 byte float] |

| | |
|-------------------------|---------|
| Initial S/W Revision | A.14.00 |
|-------------------------|---------|

Format Data: Numeric Data (Remote Command Only)

This command specifies the format of the trace data input and output. It specifies the formats used for trace data during data transfer across any remote port. It affects only the data format for setting and querying trace data for the :TRACe[:DATA], TRACe[:DATA]?, :CALCulate:DATA[n]? and FETCh:SANalyzer [n]? commands and queries.

| | |
|--------------------------------|---|
| Remote Command | :FORMat [:TRACe] [:DATA] ASCii INTeger, 32 REAL, 32 REAL, 64 :FORMat [:TRACe] [:DATA] ? |
| Notes | The query response is: ASCii: ASC,8 REAL,32: REAL,32 REAL,64: REAL,64 INTeger,32: INT,32 When the numeric data format is REAL or ASCii, data is output in the current Y Axis unit. When the data format is INTeger, data is output in units of m dBm (.001 dBm). The INT,32 format returns binary 32-bit integer values in internal units (m dBm), in a definite length block. |
| Dependencies | Sending a data format spec with an invalid number (for example, INT,48) generates no error. The analyzer simply uses the default (8 for ASCii, 32 for INTeger, 32 for REAL). Sending data to the analyzer which does not conform to the current FORMat specified, results in an error. Sending ASCII data when a definite block is expected generates message -161 "Invalid Block Data" and sending a definite block when ASCII data is expected generates message -121 "Invalid Character in Number". |
| Preset | ASCii |
| Backwards Compatibility | Note that the INT,32 format is only applicable to the command, TRACe:DATA. This preserves |

| | |
|----------------------|--|
| Notes | backwards compatibility for the Swept SA measurement. For all other commands/queries which honor FORMat:DATA, if INT,32 is sent the analyzer will behave as though it were set to REAL,32. |
| Initial S/W Revision | Prior to A.02.00 |

The specs for each output type follow:

ASCIi - Amplitude values are in ASCII, in the current Y Axis Unit, one ASCII character per digit, values separated by commas, each value in the form:

SX.YYYYYEsZZ

Where:

S = sign (+ or -)

X = one digit to left of decimal point

Y = 5 digits to right of decimal point

E = E, exponent header

s = sign of exponent (+ or -)

ZZ = two digit exponent

REAL,32 - Binary 32-bit real values in the current Y Axis Unit, in a definite length block.

REAL,64 - Binary 64-bit real values in the current Y Axis Unit, in a definite length block.

Format Data: Byte Order (Remote Command Only)

This command selects the binary data byte order for data transfer and other queries. It controls whether binary data is transferred in normal or swapped mode. This command affects only the byte order for setting and querying trace data for the :TRACe[:DATA], TRACe[:DATA]? , :CALCulate:DATA[n]? and FETCh:SANalyzer[n]? commands and queries.

By definition any command that says it uses FORMat:DATA uses any format supported by FORMat:DATA.

The NORMal order is a byte sequence that begins with the most significant byte (MSB) first, and ends with the least significant byte (LSB) last in the sequence: 1|2|3|4. SWAPped order is when the byte sequence begins with the LSB first, and ends with the MSB last in the sequence: 4|3|2|1.

| | |
|-----------------------|--|
| Remote Command | :FORMat:BORDER NORMal SWAPped :FORMat:BORDER? |
| Preset | NORMal |
| Initial S/W Revision | Prior to A.02.00 |

Meas Setup

Accesses the measurement setup menu for the current measurement.

| Key Path | Meas Setup |
|----------------------|------------|
| Initial S/W Revision | A.10.01 |

Avg Number

Used to specify the number of data acquisitions that are averaged. After the specified number of average counts, the averaging mode (termination control) setting determines the averaging action.

- On - Sets measurement averaging on.
- Off - Sets measurement averaging off.

| Key Path | Meas Setup |
|-----------------------|---|
| Mode | WLAN |
| Remote Command | [:SENSe]:PVTime:AVERage:COUNT <integer> [:SENSe]:PVTime:AVERage:COUNT? [:SENSe]:PVTime:AVERage[:STATe] OFF ON 0 1 [:SENSe]:PVTime:AVERage[:STATe]? |
| Example | PVT:AVER:COUN 1 PVT:AVER:COUN? PVT:AVER OFF PVT:AVER? |
| Preset | 10 OFF |
| State Saved | Saved in instrument state. |
| Min | 1 |
| Max | 10000 |
| Initial S/W Revision | A.10.01 |

Avg Mode

Selects the type of termination control used for the averaging function. This selection only affects the averaging after the number of N averages is reached (set using the Averages, Avg Bursts, or Avg Number key).

| | |
|---|---|
| Exponential averaging SCPI:EXponential | When Measure is set at Cont, data acquisitions continue indefinitely. After N averages, exponential averaging is used with a weighting factor of N (the displayed average count stops at N). Exponential averaging weights new data more than old data, which allows tracking of slow-changing signals. The weighting factor N is set |
|---|---|

| | |
|---------------------------------|---|
| | using the Averages, Avg Bursts key. |
| Repeat averaging SCPI:REPeat | When Measure is set at Cont, data acquisitions continue indefinitely. After N averages is reached, all previous result data is cleared and the average count is set back to 1. This is equivalent to being in Measure Single and pressing the Restart key when the Single measurement finishes. |

| Key Path | Meas Setup |
|----------------------|--|
| Mode | WLAN |
| Remote Command | [:SENSe] :PVTime:AVERage:TCONtrol EXPonential REPeat [:SENSe] :PVTime:AVERage:TCONtrol? |
| Example | PVT:AVER:TCON REP PVT:AVER:TCON? |
| Preset | EXPonential |
| State Saved | Saved in instrument state. |
| Range | Exp Repeat |
| Initial S/W Revision | A.10.01 |

Avg Type

Specifies the type of trace and result averaging to use.

This parameter is valid only for Measure Trace.

| | |
|--|--|
| KEY:Pwr Avg (RMS) SCPI:RMS POWer | True power averaging that is equivalent to taking the RMS value of the voltage. It is the most accurate type of averaging. |
| KEY:Log-Pwr Avg (Video) SCPI:LOG LPOWer | Simulates the traditional spectrum analyzer type of averaging by averaging the log of the power. |

| Key Path | Meas Setup |
|----------------------|---|
| Mode | WLAN |
| Remote Command | [:SENSe] :PVTime:AVERage:TYPE LOG RMS [:SENSe] :PVTime:AVERage:TYPE? |
| Example | PVT:AVER:TYPE LOG PVT:AVER:TYPE? |
| Preset | RMS |
| State Saved | Saved in instrument state. |
| Range | Pwr Avg (RMS) Log-Pwr Avg(Video) |
| Initial S/W Revision | A.10.01 |

Burst Time

This parameter specifies the accurate burst length for RF burst to be measured. It is needed to be set as accurate as possible, or the ramp down time may be lost.

| | |
|-------------------------------------|--|
| Key Path | Meas Setup |
| Mode | WLAN |
| Remote Command | [:SENSe] :PVTime:BURSt:TIME <time> [:SENSe] :PVTime:BURSt:TIME? |
| Example | PVT:BURS:TIME 1.0 PVT:BURS:TIME? |
| Preset | 965.455 us (1024bytes, 11M CCK modulation, long preamble) |
| State Saved | Saved in instrument state. |
| Min | 1.0 us |
| Max | 20.0 ms |
| Backwards Compatibility SCPI | [:SENSe] :PVTime:BURSt |
| Initial S/W Revision | A.10.01 |

Ramp Time Length

This parameter indicates the searching window length from which the ramp on and down is searched. If it is set shorter than actual ramp time, the ramp may be lost.

| | |
|-------------------------------------|--|
| Key Path | Meas Setup |
| Mode | WLAN |
| Remote Command | [:SENSe] :PVTime:RSLength <time> [:SENSe] :PVTime:RSLength? |
| Example | PVT:RSL 1.0 PVT:RSL? |
| Preset | 15.0 us |
| State Saved | Saved in instrument state. |
| Min | 1.0 us |
| Max | 50.0 us |
| Backwards Compatibility SCPI | [:SENSe] :PVTime:RTIME |
| Initial S/W Revision | A.10.01 |

Limits

Accesses the Limits menu allows you to set up the test limit length for the specified time period. You can define ramp up and ramp down segments. The Fail menu will allow you to set the fail/pass criteria of the limit check

| Key Path | Meas Setup |
|----------------------|------------|
| Initial S/W Revision | A.10.01 |

Max Ramp Down Time

It used as threshold which can judge whether the real measured ramp down time can be passed or not. If real measured ramp down time exceeds Max Ramp Down Time, then ramp down time measurement fails, otherwise, it passes.

| Key Path | Meas Setup, Limits |
|-------------------------------------|--|
| Mode | WLAN |
| Remote Command | :CALCulate:PVTime:LIMit:RDTime <time> :CALCulate:PVTime:LIMit:RDTime? |
| Example | CALC:PVT:LIM:RDT 2us CALC:PVT:LIM:RDT? |
| Preset | 2.0us |
| State Saved | Saved in instrument state. |
| Min | 0.1 us |
| Max | 10.0 us |
| Backwards Compatibility SCPI | :CALCulate:PVTime:LIMit:DRTime |
| Initial S/W Revision | A.10.01 |

Max Ramp Up Time

It used as threshold which can judge whether the real measured ramp up time can be passed or not. If real measured ramp up time exceeds Max Ramp Up Time, then ramp up time measurement fails, otherwise, it passes.

| Key Path | Meas Setup, Limits |
|-----------------------|--|
| Mode | WLAN |
| Remote Command | :CALCulate:PVTime:LIMit:RUTime <time> :CALCulate:PVTime:LIMit:RUTime? |
| Example | CALC:PVT:LIM:RUT 2us CALC:PVT:LIM:RUT? |
| Preset | 2.0us |

| | |
|-------------------------------------|--------------------------------|
| State Saved | Saved in instrument state. |
| Min | 0.1 us |
| Max | 10.0 us |
| Backwards Compatibility SCPI | :CALCulate:PVTime:LIMit:URTime |
| Initial S/W Revision | A.10.01 |

Fail

Specifies the fail condition of the limit for the ramp time.

| | |
|----------------------------------|--|
| KEY:PowerUp Ramp SCPI:UP | The measurement reports "FAIL" if the ramp up time exceeds the max ramp up time limit. |
| KEY:Power Down Ramp SCPI:DOWN | The measurement reports "FAIL" if the ramp down time exceeds the max ramp down time limit. |
| KEY:Both SCPI:BOTH | The measurement reports "FAIL" if both Up and Down fail |

| | |
|-------------------------------------|--|
| Key Path | Meas Setup, Limits |
| Mode | WLAN |
| Remote Command | :CALCulate:PVTime:FAIL UP DOWN BOTH :CALCulate:PVTime:FAIL? |
| Example | CALC:PVT:FAIL UP CALC:PVT:FAIL? |
| Preset | BOTH |
| State Saved | Saved in instrument state. |
| Range | PowerUp Ramp Power Down Ramp Both |
| Backwards Compatibility SCPI | [:SENSe] :PVTime:LIST:FAIL |
| Initial S/W Revision | A.10.01 |

Threshold

Accesses the setup menu to set the thresholds used to find ramp up and ramp down part in burst signal.

| | |
|----------------------|-------------------|
| Key Path | Meas Setup |
| Initial S/W Revision | A.10.01 |

Ramp Up Start Level

It specifies the relative value between ramp up start level and max power level measured in ramp time length.

| Key Path | Meas Setup, Threshold |
|-------------------------------------|--|
| Mode | WLAN |
| Remote Command | <code>[:SENSe] :PVTime:THReshold:UP:STARt <rel_ampl></code> <code>[:SENSe] :PVTime:THReshold:UP:STARt?</code> |
| Example | PVT:THR:UP:STAR -50.0 PVT:THR:UP:STAR? |
| Notes | This BWCC command will set the start level of both power-up and power-down at one time. Please note, the unit of the level is percent and they will be converted to dB by 20log. |
| Preset | -20.000 dB |
| State Saved | Saved in instrument state. |
| Min | -120.000 dB |
| Max | 0.000 dB |
| Backwards Compatibility SCPI | <code>[:SENSe] :PVTime:LIST:LEVel:STARt</code> |
| Initial S/W Revision | A.10.01 |

Ramp Up End Level

It specifies the relative value between ramp up end level and max power level measured in ramp time length.

| Key Path | Meas Setup, Threshold |
|-------------------------------------|--|
| Mode | WLAN |
| Remote Command | <code>[:SENSe] :PVTime:THReshold:UP:STOP <rel_ampl></code> <code>[:SENSe] :PVTime:THReshold:UP:STOP?</code> |
| Example | PVT:THR:UP:STOP -50.0 PVT:THR:UP:STOP? |
| Notes | This BWCC command will set the start level of both power-up and power-down at one time. Please note, the unit of the level is percent and they will be converted to dB by 20log. |
| Preset | -0.915 dB |
| State Saved | Saved in instrument state. |
| Min | -120.000 dB |
| Max | 0.000 dB |
| Backwards Compatibility SCPI | <code>[:SENSe] :PVTime:LIST:LEVel:STARt</code> |
| Initial S/W Revision | A.10.01 |

Ramp Down Start Level

It specifies the relative value between ramp down start level and max power level measured in ramp time length

| | |
|-------------------------------------|---|
| Key Path | Meas Setup, Threshold |
| Mode | WLAN |
| Remote Command | [:SENSe] :PVTime:THReshold:DOWN:STARt <rel_ampl> [:SENSe] :PVTime:THReshold:DOWN:STARt? |
| Example | PVT:THR:DOWN:STAR -50.0 PVT:THR:DOWN:STAR? |
| Notes | This BWCC command will set the stop level of both power-up and power-down at one time. Please note, the unit of the level is percent and they will be converted to dB by 20log. |
| Preset | -0.915 dB |
| State Saved | Saved in instrument state. |
| Min | -120.000 dB |
| Max | 0.000 dB |
| Backwards Compatibility SCPI | [:SENSe] :PVTime:LIST:LEVel:END |
| Initial S/W Revision | A.10.01 |

Ramp Down End Level

It specifies the relative value between ramp down end level and max power level measured in ramp time length.

| | |
|-------------------------------------|---|
| Key Path | Meas Setup, Threshold |
| Mode | WLAN |
| Remote Command | [:SENSe] :PVTime:THReshold:DOWN:STOP <rel_ampl> [:SENSe] :PVTime:THReshold:DOWN:STOP? |
| Example | PVT:THR:DOWN:STOP -50.0 PVT:THR:DOWN:STOP? |
| Notes | This BWCC command will set the stop level of both power-up and power-down at one time. Please note, the unit of the level is percent and they will be converted to dB by 20log. |
| Preset | -20.000 dB |
| State Saved | Saved in instrument state. |
| Min | -120.000 Db |
| Max | 0.000 dB |
| Backwards Compatibility SCPI | [:SENSe] :PVTime:LIST:LEVel:END |

| | |
|----------------------|---------|
| Initial S/W Revision | A.10.01 |
|----------------------|---------|

Meas Preset

Returns parameters for the current measurement to those set by the factory.

| | |
|-----------------------|-------------------------|
| Key Path | Meas Setup, More |
| Mode | WLAN |
| Remote Command | :CONFigure:PVTime |
| Example | CONF:PVT |
| Initial S/W Revision | A.10.01 |

11 Power vs. Time Measurement
Mode

Mode

See "[Mode](#)" on page 204

Mode Preset

Returns the active mode to a known state.

Mode Preset does the following for the currently active mode:

- Aborts the currently running measurement.
- Brings up the default menu for the mode, with no active function.
- Sets measurement Global settings to their preset values for the active mode only.
- Activates the default measurement.
- Brings up the default menu for the mode.
- Clears the input and output buffers.
- Sets Status Byte to 0.

Mode Preset does not:

- Cause a mode switch
- Affect mode persistent settings
- Affect system settings
- See "[How-To Preset](#)" on page 1372 for more information.

| | |
|--------------------------------------|---|
| Key Path | Front-panel key |
| Remote Command | :SYSTem:PRESet |
| Example | :SYST:PRES |
| Notes | *RST is preferred over :SYST:PRES for remote operation. *RST does a Mode Preset, as done by the :SYST:PRES command, and it sets the measurement mode to Single measurement rather than Continuous for optimal remote control throughput. Clears all pending OPC bits. The Status Byte is set to 0. |
| Couplings | A Mode Preset aborts the currently running measurement, activates the default measurement, and gets the mode to a consistent state with all of the default couplings set. |
| Backwards Compatibility Notes | In the X-Series, the legacy "Factory Preset" has been replaced with Mode Preset, which only presets the currently active mode, not the entire instrument. In the X-Series, the way to preset the entire instrument is by using System, Restore System Defaults All, which behaves essentially the same way as restore System Defaults does on ESA and PSA. There is also no "Preset Type" as there is on the PSA. There is a green Mode Preset front-panel key that does a Mode Preset and a white-with-green-letters User Preset front-panel key that does a User Preset. The old PRESet:TYPE command is ignored (without generating an error), and SYST:PRES without a parameter does a Mode Preset, which should cover most backward code compatibility issues. The settings and correction data under the Input/Output front-panel key (examples: Input Z Corr, Ext Amp Gain, etc.) are no longer part of any Mode, so they will not be preset by a Mode Preset. They are preset using Restore Input/Output Defaults, Restore System Defaults All. Note that because User Preset does a Recall State, and all of these settings are saved in State, they ARE recalled when using |

| | |
|----------------------|------------------|
| | User Preset. |
| Initial S/W Revision | Prior to A.02.00 |

How-To Preset

The table below shows all possible presets, their corresponding SCPI commands and front-panel access (key paths). Instrument settings depend on the current measurement context. Some settings are local to the current measurement, some are global (common) across all the measurements in the current mode, and some are global to all the available modes. In a similar way, restoring the settings to their preset state can be done within the different contexts.

Auto Couple - is a measurement local key. It sets all Auto/Man parameter couplings in the measurement to Auto. Any Auto/Man selection that is local to other measurements in the mode will not be affected.

Meas Preset - is a measurement local key. Meas Preset resets all the variables local to the current measurement except the persistent ones.

Mode Preset - resets all the current mode's measurement local and measurement global variables except the persistent ones.

Restore Mode Defaults - resets ALL the Mode variables (and all the Meas global and Meas local variables), including the persistent ones.

| Type Of Preset | SCPI Command | Front Panel Access |
|--------------------------------|--|--|
| Auto Couple | :COUPle ALL | Auto Couple front-panel key |
| Meas Preset | :CONFigure:<Measurement> | Meas Setup Menu |
| Mode Preset | :SYSTem:PRESet | Mode Preset (green key) |
| Restore Mode Defaults | :INSTrument:DEFault | Mode Setup Menu |
| Restore All Mode Defaults | :SYSTem:DEFault MODes | System Menu; Restore System Default Menu |
| *RST | *RST | not possible (Mode Preset with Single) |
| Restore Input/Output Defaults | :SYSTem:DEFault INPUt | System Menu; Restore System Default Menu |
| Restore Power On Defaults | :SYSTem:DEFault PON | System Menu; Restore System Default Menu |
| Restore Alignment Defaults | :SYSTem:DEFault ALIGN | System Menu; Restore System Default Menu |
| Restore Miscellaneous Defaults | :SYSTem:DEFault MISC | System Menu; Restore System Default Menu |
| Restore All System Defaults | :SYSTem:DEFault [ALL] :SYSTem:PRESet:PERsistent | System Menu; Restore System Default Menu |
| User Preset | :SYSTem:PRESet:USER | User Preset Menu |
| User Preset All Modes | :SYSTem:PRESet:USER:ALL | User Preset Menu |

| | | |
|----------------------|-----------------------|-------------|
| Power On Mode Preset | :SYSTem:PON:TYPE MODE | System Menu |
| Power On User Preset | :SYSTem:PON:TYPE USER | System Menu |
| Power On Last State | :SYSTem:PON:TYPE LAST | System Menu |

Mode Setup

See "[Mode Setup](#)" on page 221

Peak Search

Places the selected marker on the trace point with the maximum y-axis value for that marker's trace. Pressing Peak Search with the selected marker off causes the selected marker to be set to Normal, then a peak search is immediately performed.

| | |
|-----------------------------|--|
| Key Path | Front-panel key |
| Mode | LTETDD, LTE,, LTEATDD, LTEAFDD |
| Remote Command | :CALCulate:PVTime:MARKer[1] 2 ... 12:MAXimum |
| Example | CALC:PVT:MARK2:MAX |
| Initial S/W Revision | A.03.00 |

11 Power vs. Time Measurement
Print

Print

See "[Print](#) " on page 277

Properties

Accesses a menu that allows you to set marker properties and to access the marker trace menu.

| | |
|----------------------|---------------|
| Key Path | Marker |
| Initial S/W Revision | A.03.00 |

Quick Save

The Quick Save front-panel key repeats the most recent save that was performed from the Save menu, with the following exceptions:

- Register saves are not remembered as Saves for the purpose of the Quick Save function
- If the current measurement does not support the last non-register save that was performed, an informational message is generated, “File type not supported for this measurement”

Quick Save repeats the last type of qualified save (that is, a save qualified by the above criteria) in the last save directory by creating a unique filename using the Auto File Naming algorithm described below.

If Quick Save is pressed after startup and before any qualified Save has been performed, the Quick Save function performs a Screen Image save using the current settings for Screen Image saves (current theme, current directory), which then becomes the “last save” for the purpose of subsequent Quick Saves.

The Auto File Naming feature automatically generates a file name for use when saving a file. The filename consists of a prefix and suffix separated by a dot, as is standard for the Windows® file system. A default prefix exists for each of the available file types:

| Type | Default Prefix | Menu |
|-----------------------|----------------|-----------------|
| State | State_ | (Save/Recall) |
| Trace + State | State_ | (Save/Recall) |
| Screen | Screen_ | (Save/Recall) |
| Amplitude Corrections | Ampcor_ | (Import/Export) |
| Traces | Trace_ | (Import/Export) |
| Limit Lines | LLine_ | (Import/Export) |
| Measurement Result | MeasR_ | (Import/Export) |
| Capture Buffer | CapBuf_ | (Import/Export) |

A four digit number is appended to the prefix to create a unique file name. The numbering sequence starts at 0000 within each Mode for each file type and updates incrementally to 9999, then wraps to 0000 again. It remembers where it was through a Mode Preset and when leaving and returning to the Mode. It is reset by Restore Misc Defaults and Restore System Defaults and subsequent running of the instrument application. So, for example, the first auto file name generated for State files is State_0000.state. The next is State_0001, and so forth.

One of the key features of Auto File Name is that we guarantee that the Auto File Name will never conflict with an existing file. The algorithm looks for the next available number. If it gets to 9999, then it looks for holes. If it find no holes, that is no more numbers are available, it gives an error.

For example, if when we get to State_0010.state there is already a State_0010.state file in the current directory, it advances the counter to State_0011.state to ensure that no conflict will exist (and then it verifies that State_0011.state also does not exist in the current directory and advances again if it does, and so forth).

If you enter a file name for a given file type, then the prefix becomes the filename you entered instead of the default prefix, followed by an underscore. The last four letters (the suffix) are the 4-digit number.

For example, if you save a measurement results file as “fred.csv”, then the next auto file name chosen for a measurement results save will be fred_0000.csv.

NOTE Although 0000 is used in the example above, the number that is used is actually the current number in the Meas Results sequence, that is, the number that would have been used if you had not entered your own file name.

NOTE If the filename you entered ends with _dddd, where d=any number, making it look just like an auto file name, then the next auto file name picks up where you left off with the suffix being dddd + 1.

| | |
|----------------------|--|
| Key Path | Front-panel key |
| Notes | No remote command for this key specifically. |
| Initial S/W Revision | Prior to A.02.00 |

Recall

The **Recall** menu lets you choose what you want to recall, and where you want to recall it from. Among the types of files you can recall are **States and Traces**. In addition, an **Import (Data)** option lets you recall a number of data types stored in CSV files (as used by Excel and other spreadsheet programs).

The default paths for Recall are data type dependent and are the same as for the Save key.

| Key Path | Front-panel key |
|-------------------------------|--|
| Notes | <p>No remote command for this key specifically, but the :MMEM:LOAD command is available for specific file types. An example is :MMEM:LOAD:STATe <filename>.</p> <p>If you try to recall a State file for a mode that is not licensed or not available in the instrument, an error message will occur and the state will not change.</p> |
| Backwards Compatibility Notes | <p>In legacy analyzers, it was possible to load a state without affecting the trace data, limit lines or correction data. Similarly (since User Preset is actually loading a state), it was possible to do a User Preset without affecting the trace data, limit lines or correction data.</p> <p>In the X-Series, “state” always includes all of this data; so whenever state is loaded, all of the traces, limit lines and corrections are affected. Although this differs from previous behavior, it is desirable behavior, and should not cause adverse issues for users.</p> |
| Backwards Compatibility Notes | <p>Recall for the X-Series supports backward compatibility in the sense that you can recall a state file from any X-Series model number and any version of X-Series software. This is only possible if part of the recalling process goes through a limiting step after recalling the mode settings, at least for settings that may vary with version number, model number, option and license differences. If you try to recall a state file onto an instrument with less capability than what was available on the instrument during the save, the recall will ignore the state it doesn't support and it will limit the recalled setting to what it allows.</p> <p>Example: if the saved state includes preamp ON, but the recalling instrument does not have a preamp; the preamp is limited to OFF. Conversely, if you save a state without a preamp, the preamp is OFF in the state file. When this saved file is recalled on an instrument with a licensed preamp, the preamp is changed to OFF. Another example is if the saved state has center frequency set to 20 GHz, but the instrument recalling the saved state is a different model and only supports 13.5 GHz. In this case, the center frequency is limited along with any other frequency based settings. Since the center frequency can't be preserved in this case, the recall limiting tries to at least preserve span to keep the measurement setup as intact as possible.</p> <p>It may be appropriate to issue a warning if the state is limited on the recall; warnings do not go out to SCPI so this would only affect the manual user.</p> <p>Note that there is no state file compatibility outside of the X-Series. For example, you cannot recall a state file from ESA or PSA.</p> |
| Initial S/W Revision | Prior to A.02.00 |

State

The **Recall State** menu lets you choose a register or file from which to recall the state.

The content of a state file includes all of the settings and data required to return the analyzer as closely as possible to the Mode it was in, with the exact settings that were in place, when the save occurred. The Mode settings in each state file include the settings that are affected by Mode Preset, as well as the

additional settings affected by Restore Mode Defaults; all of the Mode’s settings. In addition, all of the settings of the **Input/Output** system are included, even though they are outside of the Mode’s state, because they are needed to restore the complete setup. Persistent System settings (for example, GPIB address) are not affected by either a Mode Preset or Restore Mode Defaults, nor are they included in a saved State file.

Since each state file is only for one Mode, the settings for other Modes are unaffected when it is loaded. **Recall State** will cause a mode switch if the state being recalled is not from the current active mode.

After the recall completes, the message "File <filename> recalled" or “Recalled State Register <register number>” is displayed.

For rapid recalls, the State menu lists 16 registers that you can choose from to recall. Pressing a Register key initiates the recall. You can also select a file from which to recall.

The default path for all State Files is:

My Documents\<<mode name>\state

where <mode name> is the parameter used to select the mode with the INST:SEL command (for example, SA for the Spectrum Analyzer).

See "[More Information](#)" on page 1382.

| Key Path | Recall |
|-----------------------|--|
| Mode | All |
| Remote Command | :MMEMory:LOAD:STATe <filename> |
| Example | :MMEM:LOAD:STAT "myState.state" This recalls the file myState.state on the default path |
| Example | MMEM:LOAD:STAT "MyStateFile.state" This loads the state file data (on the default file directory path) into the instrument state. |
| Notes | <p>When you pick a file to recall, the analyzer first verifies that the file is recallable in the current instrument by checking the software version and model number of the instrument. If everything matches, a full recall proceeds by aborting the currently running measurement, clearing any pending operations, and then loading the State from the saved state file. You can open state files from any mode, so recalling a State file switches to the mode that was active when the save occurred. After switching to the mode of the saved state file, mode settings and data (if any for the mode) are loaded with values from the saved file. The saved measurement of the mode becomes the newly active measurement and the data relevant to the measurement (if there is any) is recalled.</p> <ul style="list-style-type: none"> • If there is a mismatch between file version or model number or instrument version or model number, the recall function tries to recall as much as possible and returns a warning message. It may limit settings that differ based on model number, licensing or version number. <p>After recalling the state, the Recall State function does the following:</p> <ul style="list-style-type: none"> • Makes the saved measurement for the mode the active measurement. • Clears the input and output buffers. • Status Byte is set to 0. • Executes a *CLS <p>If the file specified is empty an error is generated. If the specified file does not exist, another error is generated. If there is a mismatch between the file and the proper file type, an error is generated. If</p> |

| | |
|-------------------------------------|---|
| | there is a mismatch between file version or model number or instrument version or model number, a warning is displayed. Then it returns to the State menu and File Open dialog goes away. After the Recall, the analyzer exits the Recall menu and returns to the previous menu. |
| Backwards Compatibility SCPI | :MEMORY:LOAD:STATE 1,<filename> For backwards compatibility, the above syntax is supported. The "1" is simply ignored. |
| Initial S/W Revision | Prior to A.02.00 |

More Information

In measurements that support saving Traces, for example, Swept SA, the Trace data is saved along with the State in the State file. When recalling the State, the Trace data is recalled as well. Traces are recalled exactly as they were stored, including the writing mode and update and display modes. If a Trace was updating and visible when the State was saved, it will come back updating and visible, and its data will be rewritten right away. When you use State to save and recall traces, any trace whose data must be preserved should be placed in View or Blank mode before saving.

The following table describes the Trace Save and Recall possibilities:

| | | |
|---|--|--|
| You want to recall state and one trace's data, leaving other traces unaffected. | Save Trace+State from 1 trace. Make sure that no other traces are updating (they should all be in View or Blank mode) when the save is performed. | On Recall, specify the trace you want to load the one trace's data into. This trace will load in View. All other traces' data will be unaffected, although their trace mode will be as it was when the state save was performed. |
| You want to recall all traces | Save Trace+State from ALL traces. | On Recall, all traces will come back in View (or Blank if they were in Blank or Background when saved) |
| You want all traces to load exactly as they were when saved. | Save State | On recall, all traces' mode and data will be exactly as they were when saved. Any traces that were updating will have their data immediately overwritten. |

From File...

When you press "From File", the analyzer brings up a Windows dialog and a menu entitled "File Open." This menu allows you to navigate to the various fields in the Windows dialog without using a keyboard or mouse. The **Tab** and **Arrow** keys can also be used for dialog navigation.

Listed below are the functions of the various fields in the dialog, and the corresponding softkeys:

Open

Performs the recall of the specified file. While the recall is being performed, the floppy icon appears briefly in the Meas bar.

File/Folder List

Enables you to navigate to the center of the dialog that contains the list of files and folders. Once here you can get information about the file and use the tab keys to navigate to the other fields in the dialog, such as Look In.

Look In

The **Look In** field shows the path from which the file will be recalled and allows you to change the path using the up and down arrow keys to navigate to other paths; the Enter key to open a directory; and the Backspace key to go back one directory. The **Look In field** first uses the last path from the Save As dialog **Save In:** path for that same file type. There is no softkey for directly navigating to the Look In field, but you can use the left tab to get here from the File/Folder List.

User specified paths are remembered when you leave and return to a Mode and are reset back to the default using **Restore Mode Defaults**.

Sort

Accesses a menu that enables you to sort the files within the File Open dialog. Only one sorting type can be selected at a time and the sorting happens immediately. The sorting types are **By Date**, **By Name**, **By extension**, and **By Size**.

Files of Type

This field shows the file suffix for the type of file you have selected to recall. For example, if you navigated here while recalling State, "Mode state (*.state)" is in the field. If you navigated here while recalling Trace, ""Mode state (*.trace)" is in the field. If you navigated here while importing a trace data file, "Trace Data (*.csv)" is in the field. For some file types, there is more than one choice in the dropdown menu, which you can select by using the up and down arrow keys and Enter.

Up One Level

This key corresponds to the icon of a folder with the up arrow that is in the tool bar of the dialog. When pressed, it causes the file and folder list to navigate up one level in the directory structure. The Backspace key does the same thing.

Cancel

This key corresponds to the **Cancel** selection in the dialog. It causes the current **Open** request to be cancelled. The ESC key does the same thing.

| Key Path | Recall, State |
|----------------------|---|
| Notes | Brings up the Open dialog for recalling a State Save Type |
| Initial S/W Revision | Prior to A.02.00 |

Edit Register Names

You may enter a custom name on any of the Register keys, to help you remember what you are using that state to save. To do this, press the **Edit Register Names** key, choose the register whose name you wish to edit, and then enter the desired label using the Alpha Editor or an external PC keyboard.

The maximum number of characters that can be added is 30. In most cases, 30 characters will fit on two lines of the key.

For more information and the SCPI command, see Edit Register Names under the **Save, State** function.

| Key Path | Recall, State |
|----------------------|---|
| Mode | All |
| Dependencies | N9060A-7FP or N9060B-2FP license required to edit the register names. When the feature is not licensed, sending the SCPI command generates an error, -221, "Settings conflict;Option not available" |
| Initial S/W Revision | A.11.00 |

Register 1 thru Register 16

Selecting any one of these register keys causes the State of the mode from the specified Register to be recalled. Each of the register keys annotates whether it is empty or at what date and time it was last

modified. In addition, you can use the **Edit Register Names** key under **Save, State** to enter custom names for each register.

Registers are shared by all modes, so recalling from any one of the registers will cause a mode switch to the mode that was active when the save to the Register occurred.

Although these 16 registers are the only registers available from the front panel, there are 128 state registers available in the instrument. Registers 17–128 are only available from the SCPI interface, using the *RCL command.

After the recall completes, the message "Register <register number> recalled" appears in the message bar. If you are in the Spectrum Analyzer Mode, and you are recalling a register that was saved in the Spectrum Analyzer Mode, then after the recall, you will still be in the Recall Register menu. If the Recall causes you to switch modes, then after the Recall, you will be in the Frequency menu.

If a requested register is empty an error is generated.

| Key Path | Recall, State |
|--------------------------|--|
| Example | *RCL 1 |
| Range | 1–16 from front panel, 1–128 from SCPI |
| Readback | Date and time with seconds resolution are displayed on the key OR A custom name of up to 30 characters entered using the Save, State,Edit Register Names key OR “(empty)” if no prior save operation has been performed to this register. |
| Initial S/W Revision | Prior to A.02.00 |
| Modified at S/W Revision | Prior to A.11.00 |

Register 1 thru Register 16

Selecting any one of these register keys causes the State of the mode from the specified Register to be recalled. Each of the register keys annotates whether it is empty or at what date and time it was last modified. In addition, you can use the **Edit Register Names** key under **Save, State** to enter custom names for each register.

Registers are shared by all modes, so recalling from any one of the registers will cause a mode switch to the mode that was active when the save to the Register occurred.

Although these 16 registers are the only registers available from the front panel, there are 128 state registers available in the instrument. Registers 17–128 are only available from the SCPI interface, using the *RCL command.

After the recall completes, the message "Register <register number> recalled" appears in the message bar. If you are in the Spectrum Analyzer Mode, and you are recalling a register that was saved in the Spectrum Analyzer Mode, then after the recall, you will still be in the Recall Register menu. If the Recall causes you to switch modes, then after the Recall, you will be in the Frequency menu.

If a requested register is empty an error is generated.

| | |
|--------------------------|--|
| Key Path | Recall, State |
| Example | *RCL 1 |
| Range | 1–16 from front panel, 1–128 from SCPI |
| Readback | Date and time with seconds resolution are displayed on the key OR A custom name of up to 30 characters entered using the Save, State,Edit Register Names key OR “(empty)” if no prior save operation has been performed to this register. |
| Initial S/W Revision | Prior to A.02.00 |
| Modified at S/W Revision | Prior to A.11.00 |

Sequences

These keys allow you to import a Tab separated or .txt file that will automatically setup all the parameters required for building a Sequence. The parameters will automatically be loaded into the Stated Sequencer.

Once selected, in order to import the selected Sequence Type you must select the Open key in the Source Sequence menu.

| | |
|-----------------------|--|
| Key Path | Recall, Sequences |
| Mode | All |
| Remote Command | :MMEMory:LOAD:SEquences: SLIS ALIS SAALIS "MySequence.txt" |
| Example | :MMEM:LOAD:SEQ:SLIS "MySequence.txt" |
| Notes | Available file types are: –CSV (Comma delimited) (*.csv) –Text (Tab delimited) (*.txt) |
| Initial S/W Revision | A.05.00 |

Source Sequence

The list of parameters, that configure steps, that makes up a sequence for the Source.

The Source sequence is a sequence of flexible configurable steps that can be set anywhere in the instruments frequency range.

| | |
|----------------------|--------------------------------------|
| Key Path | Recall, Sequences |
| Example | :MMEM:LOAD:SEQ:SLIS "MySequence.txt" |
| Dependencies | Only available in XOBT |
| Initial S/W Revision | A.05.00 |

Open...

When you press “Open”, the analyzer brings up a Windows dialog and a menu entitled “**File Open.**” This menu allows you to navigate to the various fields in the Windows dialog without using a keyboard or mouse. The **Tab** and **Arrow** keys can also be used for dialog navigation.

See "[From File...](#)" on page 2473 in **Recall, State**, for a full description of this dialog and menu.

| | |
|-----------------------------|--|
| Key Path | Recall, Data |
| Notes | The key location is mode-dependent and will vary. Brings up Open dialog for recalling a <mode specific> Save Type |
| Initial S/W Revision | Prior to A.02.00 |

Data (Import)

Importing a data file loads data that was previously saved from the current measurement or from other measurements and/or modes that produce compatible data files. The Import Menu only contains Data Types that are supported by the current measurement.

Since the commonly exported data files are in .csv format, the data can be edited by the user prior to importing. This allows you to export a data file, manipulate the data in Excel (the most common PC Application for manipulating .csv files) and then import it.

Importing Data loads measurement data from the specified file into the specified or default destination, depending on the data type selected. Selecting an Import Data menu key will not actually cause the importing to occur, since the analyzer still needs to know from where to get the data. Pressing the Open key in this menu brings up the Open dialog and Open menu that provides you with the options from where to recall the data. Once a filename has been selected or entered in the Open menu, the recall occurs as soon as the Open button is pressed.

| | |
|-----------------------------|--|
| Key Path | Recall |
| Mode | All |
| Notes | The menu is built from whatever data types are available for the mode. Some keys will be missing completely, so the key locations in the sub-menu will vary. No SCPI command directly controls the Data Type that this key controls. The Data Type is included in the MMEM:LOAD commands. |
| Dependencies | If a file type is not used by a certain measurement, it is grayed out for that measurement. The key for a file type will not show at all if there are no measurements in the Mode that support it. |
| Preset | Is not affected by Preset or shutdown, but is reset during Restore Mode Defaults |
| Readback | The data type that is currently selected |
| Initial S/W Revision | Prior to A.02.00 |

Masks

This key enables you to recall a preset mask file from the list. It is only available in SEM measurement under the Data menu: Limit Mask. Limit Mask enables setting a preset limit mask for 802.11p 5MHz and 10MHz system.

You cannot change or create the preset mask file since it is a binary file. This key is valid for the Spectrum Emission Mask measurement.

File location: "My Documents\WLAN\data.masks"

Note that "**My Documents**" is an alias to a directory and its location depends on which user is logged in. At XSA start up, all of the limit mask files in the current user's "My Documents\WLAN\data.masks" directory are overwritten.

File type: Binary

Filename:

11p_5MHz_A.mask

11p_5MHz_B.mask

11p_5MHz_C.mask

11p_5MHz_D.mask

11p_10MHz_A.mask

11p_10MHz_B.mask

11p_10MHz_C.mask

11p_10MHz_D.mask

File extension: .mask

Selecting OPEN under the Import Data menu, opens the above directory enabling you to select a mask file.

Example:

File Location: My Documents/WLAN/data/masks

File Name: 11p_5MHz_A.mask

| | |
|--------------------------|----------------------------------|
| parameter_table_23.52557 | 52.93253 |
| Key Path | Recall, Data |
| Mode | WLAN |
| Remote Command | MMEMoRY:LOAD:MASK <string> |
| Example | MMEM:LOAD:MASK "11p_5MHz_A.mask" |
| Initial S/W Revision | A.11.00 |
| Help Map ID | 45559 |

Capture Buffer

Capture buffer functionality is only available when measurement is Mod Accuracy and radio standard is not 802.11ac 80+80MHz. The captured data is raw data which is not processed.

| | |
|--------------------------|---|
| parameter_table_23.52557 | 52.93253 |
| Key Path | Recall, Data |
| Mode | WLAN |
| Example | MMEM:LOAD:CAPT "MyCaptureData.bin" This loads the file of capture data (on the default file directory path) into the instrument. |
| Dependencies | Capture buffer data is only available when measurement is Mod Accuracy and radio standard is not 802.11ac 80+80MHz. In other situation, this key is grayed out. |
| Initial S/W Revision | A.11.00 |
| Help Map ID | 45560 |

Open...

When you press "Open", the analyzer brings up a Windows dialog and a menu entitled "**File Open.**" This menu allows you to navigate to the various fields in the Windows dialog without using a keyboard or mouse. The **Tab** and **Arrow** keys can also be used for dialog navigation.

See "[From File...](#)" on page 2473 in **Recall, State**, for a full description of this dialog and menu.

| | |
|----------------------|--|
| Key Path | Recall, Data |
| Notes | The key location is mode-dependent and will vary. Brings up Open dialog for recalling a <mode specific> Save Type |
| Initial S/W Revision | Prior to A.02.00 |

Restart

The Restart function restarts the current sweep, or measurement, or set of averaged/held sweeps or measurements. If you are Paused, pressing Restart does a Resume.

The Restart function is accessed in several ways:

- Pressing the Restart key
- Sending the remote command INIT:IMMEDIATE
- Sending the remote command INIT:RESTART

See "[More Information](#)" on page 1390

| Key Path | Front-panel key |
|--------------------------------------|--|
| Remote Command | :INITiate[:IMMEDIATE] :INITiate:RESTART |
| Example | :INIT:IMM :INIT:REST |
| Notes | :INITiate:RESTART and :INITiate:IMMEDIATE perform exactly the same function. |
| Couplings | Resets average/hold count k. For the first sweep overwrites all active (update=on) traces with new current data. For application modes, it resets other parameters as required by the measurement. |
| Status Bits/OPC dependencies | This is an Overlapped command. The STATus:OPERation register bits 0 through 8 are cleared. The STATus:QUESTionable register bit 9 (INTEgrity sum) is cleared. The SWEEPING bit is set. The MEASURING bit is set. |
| Backwards Compatibility Notes | For Spectrum Analysis mode in ESA and PSA, the Restart hardkey and the INITiate:RESTART command restart trace averages (displayed average count reset to 1) for a trace in Clear Write , but did not restart Max Hold and Min Hold . In the X-Series, the Restart hardkey and the INITiate:RESTART command restart not only Trace Average , but MaxHold and MinHold traces as well. For wireless comms modes in ESA and PSA, the Restart hardkey and the INITiate:RESTART command restart every measurement, which includes all traces and numeric results. There is no change to this operation. |
| Initial S/W Revision | Prior to A.02.00 |

More Information

The **Restart** function first aborts the current sweep/measurement as quickly as possible. It then resets the sweep and trigger systems, sets up the measurement and initiates a new data measurement sequence with a new data acquisition (sweep) taken once the trigger condition is met.

If the analyzer is in the process of aligning when **Restart** is executed, the alignment finishes before the restart function is performed.

Even when set for Single operation, multiple sweeps may be taken when Restart is pressed (for example, when averaging/holding is on). Thus when we say that **Restart** "restarts a measurement," we may mean:

- It restarts the current sweep
- It restarts the current measurement
- It restarts the current set of sweeps if any trace is in Trace Average, Max Hold or Min Hold
- It restarts the current set of measurements if Averaging, or Max Hold, or Min Hold is on for the measurement
- depending on the current settings.

With **Average/Hold Number** (in **Meas Setup** menu) set to 1, or Averaging off, or no trace in Trace Average or Hold, a single sweep is equivalent to a single measurement. A single sweep is taken after the trigger condition is met; and the analyzer stops sweeping once that sweep has completed. However, with **Average/Hold Number** >1 and at least one trace set to **Trace Average, Max Hold, or Min Hold (SA Measurement)** or **Averaging on (most other measurements)**, multiple sweeps/data acquisitions are taken for a single measurement. The trigger condition must be met prior to each sweep. The sweep is stopped when the average count k equals the number N set for **Average/Hold Number**. A measurement average usually applies to all traces, marker results, and numeric results; but sometimes it only applies to the numeric results.

Once the full set of sweeps has been taken, the analyzer will go to idle state. To take one more sweep without resetting the average count, increment the average count by 1, by pressing the step up key while **Average/Hold Number** is the active function, or sending the remote command `CALC:AVER:TCON UP`.

Save

The **Save** menu lets you choose what you want to save and where you want to save it. Among the types of files you can save are **States**, **Traces**, and **Screen Images**. In addition, an **Export (Data)** option lets you save a number of data types as CSV files for easy import into Excel and other spreadsheet programs.

| | |
|-----------------------------|---|
| Key Path | Front-panel key |
| Mode | All |
| Notes | No remote command for this key specifically, but the :MMEM:STORe command is available for specific file types. An example is :MMEM:STOR:STATe <filename>. |
| Initial S/W Revision | Prior to A.02.00 |

State

The Save State menu lets you choose a register or file for saving the state.

The content of a state file includes all of the settings and data required to return the analyzer as closely as possible to the Mode it was in, with the exact settings which were in place, when the save occurred. The Mode settings in each state file include the settings that are affected by Mode Preset, as well as the additional settings affected by Restore Mode Defaults; all of the Mode's settings. In addition, all of the settings of the **Input/Output** system are included, even though they are outside of the Mode's state, because they are needed to restore the complete setup. Persistent **System** settings (for example, Verbose SCPI) are not affected by either Mode Preset or Restore Mode Defaults, nor are they included in a saved State file.

After the save completes, the message "File <filename> saved" or "State Register <register number> saved" is displayed.

For rapid saving, the State menu lists 16 registers to save to. Pressing a Register key initiates the save. You can also select a file to save to.

The default path for all State Files is:

My Documents\<mode name>\state

where <mode name> is the parameter used to select the mode with the INST:SEL command (for example, SA for the Spectrum Analyzer).

| | |
|-----------------------|---|
| Key Path | Save |
| Mode | All |
| Remote Command | :MMEMory:STORe:STATe <filename> |
| Example | MMEM:STOR:STATe "MyStateFile.state" This stores the current instrument state data in the file MyStateFile.state in the default directory. |
| Notes | Both single and double quotes are supported for any filename parameter over remote. After saving to a register, that register's menu key is updated with the date the time, unless a custom label has been entered for that key. After saving to a register, you remain in the Save State menu, so that you can see the Register key |

update. After saving to a file, the analyzer automatically returns to the previous menu and any Save As dialog goes away.

| | |
|-------------------------------------|-----------------------------------|
| Backwards Compatibility SCPI | :MMEMoRY:STORe:STATe 1,<filename> |
| Initial S/W Revision | Prior to A.02.00 |

To File . . .

When you press “To File”, the analyzer brings up a Windows dialog and a menu entitled “**Save As.**” This menu allows you to navigate to the various fields in the Windows dialog without using a keyboard or mouse. The **Tab** and **Arrow** keys can also be used for dialog navigation.

The Listed below

are the functions of the various fields in the dialog, and the corresponding softkeys:

Save

Performs the save to the specified file of the selected type. If the file already exists, a dialog will appear that allows you to replace the existing file by selecting **OK**, or you can **Cancel** the request. If you select **OK**, the file will be overwritten. Using the C: drive is strongly discouraged, since it runs the risk of being overwritten during an instrument software upgrade.

While the save is being performed, the floppy icon appears briefly in the Meas bar.

File/Folder List

Enables you to navigate to the center of the dialog that contains the list of files and folders. Once here you can get information about the file and use the tab keys to navigate to the other fields in the dialog, such as Save In.

Save In

The Save In field shows the path to which the file will be saved and allows you to change the path using the up and down arrow keys to navigate to other paths; the Enter key to open a directory; and the Backspace key to go back one directory. The **Save In field** defaults to the default path for this type of file and remembers the last path you used to save this type of file. There is no softkey for directly navigating to the Save In field but you can use left tab to get here from the File/Folder List.

User specified paths are remembered when you leave and return to a Mode and are reset back to the default using **Restore Mode Defaults**.

File Name

The **File Name** field is initially loaded with an automatically generated filename specific to the appropriate Save Type. The automatically generated filename is guaranteed not to conflict with any filename currently in the directory. You may replace or modify this filename using the File Name key. See the ["Quick Save " on page 2469](#) documentation for more on the automatic file naming algorithm.

When you press the **File Name** key the analyzer displays the Alpha Editor. Use the knob to choose the letter to add and the front-panel Enter key to add the letter to the file name. The BK character moves you back and the FW character moves you forward in the filename. The Select key on the front panel generates a space character. When you are done entering the filename press the **Done** softkey. This returns back to the **File Open** dialog and menu, but does not cause the save to occur.

Save As Type

This field shows the file suffix for the type of file you have selected to save. For example, if you navigated here while saving State, "Mode state (*.state)" is in the field. If you navigated here from saving Trace, ""Mode state (*.trace)" is in the field. If you navigated here while exporting a trace data file, "Trace Data (*.csv)" is in the field. For some file types, there is more than one choice in the dropdown, which you can select by using the up and down arrow keys and Enter.

Up One Level

This key corresponds to the icon of a folder with the up arrow that is in the tool bar of the dialog. When pressed, it causes the file and folder list to navigate up one level in the directory structure. The Backspace key does the same thing.

Create New Folder

This key corresponds to the icon of a folder with the "*" that is in the tool bar of the dialog. When pressed, a new folder is created in the current directory with the name **New Folder** and you can enter a new folder name using the Alpha Editor.

Cancel

This key corresponds to the **Cancel** selection in the dialog. It causes the current **Save As** request to be cancelled. The ESC key does the same thing.

| | |
|----------------------|---|
| Key Path | Save, State |
| Mode | All |
| Notes | Brings up Save As dialog for saving a State Save Type |
| Initial S/W Revision | Prior to A.02.00 |

Edit Register Names

You may enter a custom name on any of the Register keys, to help you remember what you are using that state to save. To do this, press the **Edit Register Names** key, choose the register whose name you wish to edit, and then enter the desired label using the Alpha Editor or an external PC keyboard.

The maximum number of characters that can be added is 30. In most cases, 30 characters will fit on two lines of the key.

See "[More Information](#)" on page 1395

| | |
|-----------------------|--|
| Key Path | Save, State |
| Mode | All |
| Remote Command | :MMEMory:REGister:STATe:LABel <reg number>,"label" :MMEMory:REGister:STATe:LABel? <reg number> |
| Example | :MMEM:REG:STAT:LAB 1,"my label" |
| Notes | <reg number> is an integer from 1 to 16. If the SCPI specifies an invalid register number an error message is generated, -222,"Data out of range;Invalid register label number" "label" is a string from 0 to 30 characters in length. If a label exceeds 30 characters, an error message is generated, -150,"String data error;Label clipped to 30 characters" "label" of length 0 erases the custom label and restores the default (time and date) label. E.g.: :MMEM:REG:STAT:LAB 1,"" |
| Dependencies | N9060A-7FP or N9060B-2FP license required to edit the register names. When the feature is not licensed, sending this command generates an error, -221,"Settings conflict;Option not available" |
| Preset | The names are unaffected by Preset or power cycle but are set to the default label (time and date) on a "Restore System Defaults->Misc" |
| Initial S/W Revision | A.11.00 |

More Information

When you edit one of the register names, the time and date field will be replaced by the custom name.

If you delete all the characters in the custom name, it restores the default (time and date).

The register names are stored within the state files, but they are not part of the instrument state; that is, once you have edited a register name, loading a new state will not change that register name. Another consequence of this is that the names will be persistent through a power cycle. Also, if a named state file is transferred to another analyzer, it will bring its custom name along with it.

If you try to edit the name of an empty register, the analyzer will first save the state to have a file to put the name in. If you load a named state file into an analyzer with older firmware it will ignore the metadata.

The *SAV and *RCL commands will not be affected by the custom register names, nor will the MMEM commands.

Register 1 thru Register 16

Selecting any one of these register menu keys causes the State of the currently active mode to be saved to the specified Register. The registers are provided for rapid saving and recalling, since you do not need to specify a filename or navigate to a file. Each of the register menu keys annotates whether it is empty or at what date and time it was last modified. In addition, you can use the **Edit Register Names** key to enter custom names for each register.

Although these 16 registers are the only registers available from the front panel, there are 128 state registers available in the instrument. Registers 17–128 are only available from the SCPI interface, using the *SAV command.

There is one set of 128 state registers in the instrument, not one set for each Mode. When a state is saved, the Mode it was saved from is saved with it; then when it is recalled, the instrument switches to that Mode.

After the save completes, the corresponding register menu key annotation is updated with the date and time and the message "Register <register number> saved" is displayed.

| | |
|--------------------------|--|
| Key Path | Save, State |
| Mode | All |
| Example | *SAV 1 |
| Range | 1–16 from front panel, 1–128 from SCPI |
| Readback | Date and time with seconds resolution are displayed on the key OR A custom name of up to 30 characters entered using the Edit Register Names key OR "(empty)" if no prior save operation has been performed to this register. |
| Initial S/W Revision | Prior to A.02.00 |
| Modified at S/W Revision | A.11.00 |

Register 1 thru Register 16

Selecting any one of these register menu keys causes the State of the currently active mode to be saved to the specified Register. The registers are provided for rapid saving and recalling, since you do not need to specify a filename or navigate to a file. Each of the register menu keys annotates whether it is empty or at what date and time it was last modified. In addition, you can use the **Edit Register Names** key to enter custom names for each register.

Although these 16 registers are the only registers available from the front panel, there are 128 state registers available in the instrument. Registers 17–128 are only available from the SCPI interface, using the *SAV command.

There is one set of 128 state registers in the instrument, not one set for each Mode. When a state is saved, the Mode it was saved from is saved with it; then when it is recalled, the instrument switches to that Mode.

After the save completes, the corresponding register menu key annotation is updated with the date and time and the message "Register <register number> saved" is displayed.

| | |
|--------------------------|--|
| Key Path | Save, State |
| Mode | All |
| Example | *SAV 1 |
| Range | 1–16 from front panel, 1–128 from SCPI |
| Readback | Date and time with seconds resolution are displayed on the key OR A custom name of up to 30 characters entered using the Edit Register Names key OR “(empty)” if no prior save operation has been performed to this register. |
| Initial S/W Revision | Prior to A.02.00 |
| Modified at S/W Revision | A.11.00 |

Mass Storage Catalog (Remote Command Only)

| | |
|-----------------------|---|
| Key path | SCPI Only |
| Remote Command | :MMEMory:CATalog? [<directory_name>] |
| Notes | The string must be a valid logical path. Queries disk usage information (drive capacity, free space available) and obtains a list of files and directories in a specified directory in the following format: <numeric_value>,<numeric_value>,{<file_entry>} It returns two numeric parameters and as many strings as there are files and directories. The first parameter indicates the total amount of storage currently used in bytes. The second parameter indicates the total amount of storage available, also in bytes. The <file_entry> is a string. Each <file_entry> indicates the name, type, and size of one file in the directory list: <file_name>,<file_type>,<file_size> As the windows file system has an extension that indicates file type, <file_type> is always empty. <file_size> provides the size of the file in bytes. For directories, <file_entry> is surrounded by square brackets and both <file_type> and <file_size> are empty |
| Initial S/W Revision | Prior to A.02.00 |

Mass Storage Change Directory (Remote Command Only)

| | |
|-----------------------|--|
| Key path | SCPI Only |
| Remote Command | :MMEMory:CDIRectory [<directory_name>] :MMEMory:CDIRectory? |

| | |
|----------------------|---|
| Notes | <p>The string must be a valid logical path.</p> <p>Changes the default directory for a mass memory file system. The <directory_name> parameter is a string. If no parameter is specified, the directory is set to the *RST value.</p> <p>At *RST, this value is set to the default user data storage area, that is defined as System.Environment.SpecialFolder.Personal.</p> <p>Query returns full path of the default directory.</p> |
| Initial S/W Revision | Prior to A.02.00 |

Mass Storage Copy (Remote Command Only)

| | |
|-----------------------|--|
| Key path | SCPI Only |
| Remote Command | :MMEMory:COpy <string>,<string>[,<string>,<string>] |
| Notes | <p>The string must be a valid logical path.</p> <p>Copies an existing file to a new file or an existing directory to a new directory.</p> <p>Two forms of parameters are allowed. The first form has two parameters. In this form, the first parameter specifies the source, and the second parameter specifies the destination.</p> <p>The second form has four parameters. In this form, the first and third parameters specify the source. The second and fourth parameters specify the directories. The first pair of parameters specifies the source. The second pair specifies the destination. An error is generated if the source doesn't exist or the destination file already exists.</p> <p>This command will generate an "access denied" error if the destination is a restricted folder (e.g., C:\Windows) and the current user does not have Power User or Administrator privileges.</p> |

Mass Storage Device Copy (Remote Command Only)

This command transfers data to/from a file and a peripheral device.

| | |
|-----------------------|---|
| Key path | SCPI Only |
| Remote Command | :MMEMory:COpy:DEvice <source_string>,<dest_string> |
| Notes | <p>The strings must be a valid logical path or a valid device keyword. If the dest_string is a device keyword, the data is copied from the source file to the device. If the source_string is a device keyword, the data is copied to the source file from the device.</p> <p>Valid device keywords are:</p> <p>SNS (smart noise source)</p> <p>An error is generated if the file or device is not found.</p> |

Mass Storage Delete (Remote Command Only)

| | |
|-----------------------|--|
| Key path | SCPI Only |
| Remote Command | :MMEMory:DElete <file_name>[,<directory_name>] |

| | |
|----------------------|---|
| Notes | The string must be a valid logical path. Removes a file from the specified directory. The <file_name> parameter specifies the file name to be removed. This command will generate an “access denied” error if the file is in a restricted folder (e.g., C:\Windows) and the current user does not have Power User or Administrator privileges. |
| Initial S/W Revision | Prior to A.02.00 |

Mass Storage Data (Remote Command Only)

Creates a file containing the specified data OR queries the data from an existing file.

| | |
|-----------------------|--|
| Key path | SCPI Only |
| Remote Command | :MMEMory:DATA <file_name>, <data> :MMEMory:DATA? <file_name> |
| Notes | The string must be a valid logical path. The command form is MMEMory:DATA <file_name>,<data>. It loads <data> into the file <file_name>. <data> is in 488.2 block format. <file_name> is string data. The query form is MMEMory:DATA? <file_name> with the response being the associated <data> in block format. |
| Initial S/W Revision | Prior to A.02.00 |

Mass Storage Make Directory (Remote Command Only)

| | |
|-----------------------|---|
| Key path | SCPI Only |
| Remote Command | :MMEMory:MDIRectory <directory_name> |
| Notes | The string must be a valid logical path. Creates a new directory. The <directory_name> parameter specifies the name to be created. This command will generate an “access denied” error if the new directory would be in a restricted folder (e.g., C:\Windows) and the current user does not have Power User or Administrator privileges. |
| Initial S/W Revision | Prior to A.02.00 |

Mass Storage Move (Remote Command Only)

| | |
|-----------------------|---|
| Key path | SCPI Only |
| Remote Command | :MMEMory:MOVE <string>,<string>[,<string>,<string>] |
| Notes | The string must be a valid logical path. Moves an existing file to a new file or an existing directory to a new directory. Two forms of parameters are allowed. The first form has two parameters. In this form, the first parameter specifies the source, and the second parameter specifies the destination. The second form has four parameters. In this form, the first and third parameters specify the source. |

The second and fourth parameters specify the directories. The first pair of parameters specifies the source. The second pair specifies the destination. An error is generated if the source doesn't exist or the destination file already exists.

This command will generate an "access denied" error if the destination is a restricted folder (e.g., C:\Windows) and the current user does not have Power User or Administrator privileges.

Initial S/W Revision Prior to A.02.00

Mass Storage Remove Directory (Remote Command Only)

| | |
|-----------------------|--|
| Key path | SCPI Only |
| Remote Command | :MMEMory:RDIRECTory <directory_name> |
| Notes | <p>The string must be a valid logical path.</p> <p>Removes a directory. The <directory_name> parameter specifies the directory name to be removed. All files and directories under the specified directory shall also be removed.</p> <p>This command will generate an "access denied" error if the folder is a restricted folder (e.g., C:\Windows) or is in a restricted folder and the current user does not have Power User or Administrator privileges.</p> |
| Initial S/W Revision | Prior to A.02.00 |

Sequences

These keys allow you to save a Tab separated or CSV file of the setup parameters required to build a Sequence.

In order to save you must select the Save As button and choose a destination folder.

| | |
|-----------------------|--|
| Key Path | Save, Sequences |
| Mode | All |
| Remote Command | :MMEM:STOR:SEQUences: SLIST ALIST SAAList SSTep "MySequence.txt" |
| Example | :MMEM:STOR:SEQ:SLIST "MySequence.txt" |
| Notes | <p>Available file types are:</p> <ul style="list-style-type: none"> -CSV (Comma delimited) (*.csv) -Text (Tab delimited) (*.txt) |
| Initial S/W Revision | A.05.00 |

Source Sequence

The list of parameters, that configure steps, that makes up a sequence for the Source.

The Source sequence is a sequence of flexible configurable steps that can be set anywhere in the instruments frequency range.

| | |
|----------------------|--------------------------------------|
| Key Path | Save, Sequences |
| Example | :MMEM:STOR:SEQ:SLIS "MySequence.txt" |
| Dependencies | Only available in XOBT |
| Initial S/W Revision | A.05.00 |

Save As . . .

This menu lets you select the location where you can save the Sequence. This menu is a standard Windows® dialog with Save As menu keys. The "File Name" field in the Save As dialog is initially loaded with an automatically generated filename specific to the appropriate Save Type. The automatically generated filename is guaranteed not to conflict with any filename currently in the directory. You may replace or modify this filename using the File Name softkey. See the Quick Save key documentation for more on the automatic file naming algorithm.

The default path for all Sequence Files is:

My Documents\Sequences

| | |
|----------------------|--|
| Key Path | Save, Sequences |
| Mode | All |
| Notes | Brings up Save As dialog for saving a Sequence Save Type |
| Initial S/W Revision | A.05.00 |

Data (Export)

Exporting a data file stores data from the current measurement to mass storage files. The Export Menu only contains data types that are supported by the current measurement.

Since the commonly exported data files are in .csv format, the data can be edited by you prior to importing. This allows you to export a data file, manipulate the data in Excel (the most common PC Application for manipulating .csv files) and then import it.

Selecting an Export Data menu key will not actually cause the exporting to occur, since the analyzer still needs to know where you wish to save the data. Pressing the Save As key in this menu brings up the Save As dialog and Save As menu that allows you to specify the destination file and directory. Once a filename has been selected or entered in the Open menu, the export will occur as soon as the Save key is pressed.

| | |
|----------|--|
| Key Path | Save |
| Mode | All |
| Notes | The menu is built from whatever data types are available for the mode. So the key locations in the sub menu will vary. No SCPI command directly controls the Data Type that this key controls. The Data Type is included in |

| | |
|----------------------|---|
| | the MMEM:STOR commands. |
| Dependencies | If a file type is not used by a certain measurement, that type is grayed out for that measurement. The key for a file type will not show at all if there are no measurements in the Mode that support it. |
| Preset | Is not affected by a Preset or shutdown, but is reset during Restore Mode Defaults |
| Readback | The data type that is currently selected |
| Initial S/W Revision | Prior to A.02.00 |

Meas Results

| | |
|--------------------------|---|
| parameter_table_23.52557 | 52.93253 |
| Key Path | Save, Data |
| Mode | WLAN |
| Example | MMEM:STOR:RES "MyResultsFile.csv" This stores the measurement results data in the file MyResultsFile.xml in the default directory. |
| Initial S/W Revision | A.11.00 |
| Help Map ID | 45561 |

Capture Buffer

Capture buffer functionality is only available when measurement is Mod Accuracy and radio standard is not 802.11ac 80+80MHz. The captured data is raw data which is not processed.

| | |
|--------------------------|--|
| parameter_table_23.52557 | 52.93253 |
| Key Path | Save, Data |
| Mode | WLAN |
| Example | MMEM:STOR:CAPT "MyCaptureData.bin" This stores the capture data in the file MyCaptureData.bin in the default directory. |
| Dependencies | Capture buffer data is only available when measurement is Mod Accuracy and radio standard is not 802.11ac 80+80MHz. In other measurements, this key is grayed out. |
| Initial S/W Revision | A.11.00 |
| Help Map ID | 45562 |

Save As . . .

When you press "Save As", the analyzer brings up a Windows dialog and a menu entitled "**Save As.**" This menu allows you to navigate to the various fields in the Windows dialog without using a keyboard or mouse. The **Tab** and **Arrow** keys can also be used for dialog navigation.

See "To File . . ." on page 2484 in **Save, State** for a full description of this dialog and menu.

The default path for saving files is:

For all of the Trace Data Files:

My Documents\<<mode name>\data\traces

For all of the Limit Data Files:

My Documents\<<mode name>\data\limits

For all of the Measurement Results Data Files:

My Documents\<<mode name>\data\<<measurement name>\results

For all of the Capture Buffer Data Files:

My Documents\<<mode name>\data\captureBuffer

| Key Path | Save, Data |
|----------------------|--|
| Mode | All |
| Notes | The key location is mode-dependent and will vary. Brings up the Save As dialog for saving a <mode specific> Save Type. The save is performed immediately and does not wait until the measurement is complete. |
| Initial S/W Revision | Prior to A.02.00 |

Screen Image

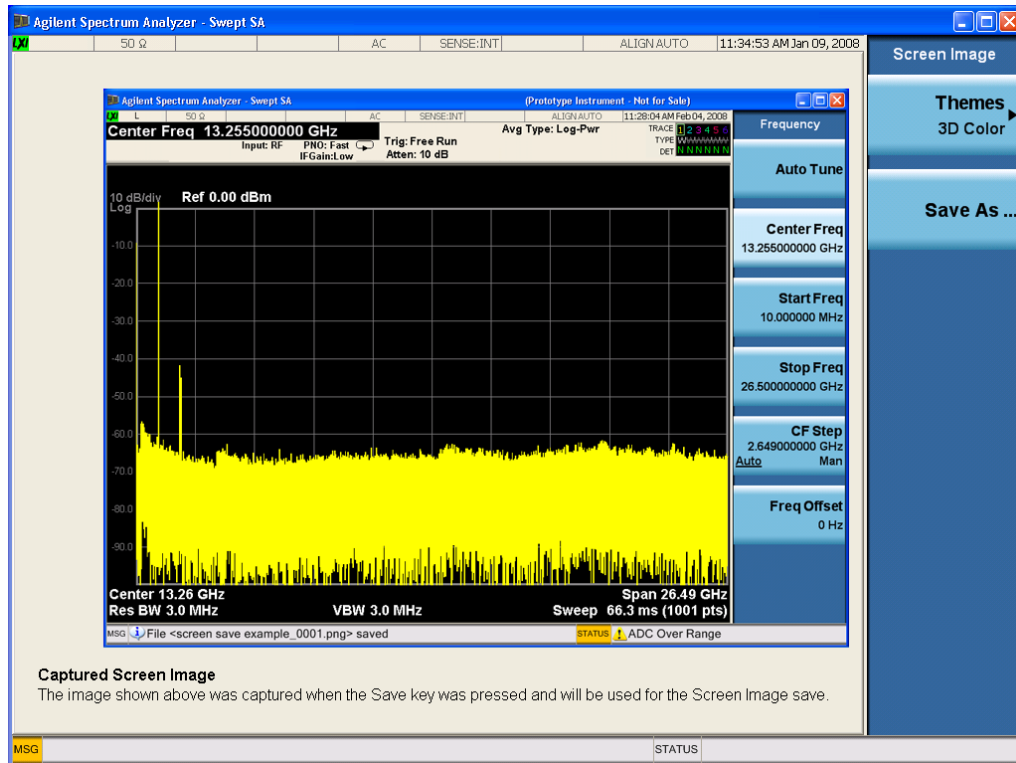

Pressing Screen Image accesses a menu of functions that enable you to specify a format and location for the saved screen image. It brings up a menu that allows you to specify the color scheme of the Screen Image (Themes) or navigate to the Save As dialog to perform the actual save.

Screen Image files contain an exact representation of the analyzer display. They cannot be loaded back onto the analyzer, but they can be loaded into your PC for use in many popular applications.

The image to be saved is actually captured when the **Save** front panel key is pressed, and kept in temporary storage to be used if you ask for a Screen Image save. When the Screen Image key is pressed, a "thumbnail" of the captured image is displayed, as shown below:

11 Power vs. Time Measurement

Save

When you continue on into the **Save As** menu and complete the Screen Image save, the image depicted in the thumbnail is the one that gets saved, showing the menus that were on the screen before going into the **Save** menus. The save is performed immediately and does not wait until the measurement is complete.

After you have completed the save, the **Quick Save** front-panel key lets you quickly repeat the last save performed, using an auto-named file, with the current screen data.

NOTE

For versions previous to A.01.55, if you initiate a screen image save by navigating through the Save menus, the image that is saved will contain the Save menu softkeys, not the menus and the active function that were on the screen when you first pressed the Save front panel key.

| | |
|----------------------|--|
| Key Path | Save |
| Mode | All |
| Remote Command | :MMEMory:STORe:SCReem <filename> |
| Example | :MMEM:STOR:SCR "myScreen.png" This stores the current screen image in the file MyScreenFile.png in the default directory. |
| Initial S/W Revision | Prior to A.02.00 |

Themes

Accesses a menu of functions that enable you to choose the theme to be used when saving the screen image.

The **Themes** option is the same as the **Themes** option under the **Display** and **Page Setup** dialogs. It allows you to choose between themes to be used when saving the screen image.

| | |
|--------------------------------------|---|
| Key Path | Save, Screen Image |
| Remote Command | :MMEMory:STORe:SCReen:THEMe TDColor TDMonochrome FCOLOR FMONochrome :MMEMory:STORe:SCReen:THEMe? |
| Example | :MMEM:STOR:SCR:THEM TDM |
| Preset | 3D Color; Is not part of Preset, but is reset by Restore Misc Defaults or Restore System Defaults All and survives subsequent running of the modes. |
| Readback | 3D Color 3D Mono Flat Color Flat Mono |
| Backwards Compatibility Notes | In ESA and PSA we offer the choice of "Reverse Bitmap" or "Reverse Metafile" when saving screen images. This is much like the "Flat Color" theme available in X-Series. Also, if you selected Reverse Bitmap AND a black & white screen image, that would be much like "Flat Monochrome". In other words, each of the X-Series themes has a similar screen image type in ESA/PSA. But they are not identical. |
| Initial S/W Revision | Prior to A.02.00 |

3D Color

Selects a standard color theme with each object filled, shaded and colored as designed.

| | |
|-----------------------------|-----------------------------------|
| Key Path | Save, Screen Image, Themes |
| Example | MMEM:STOR:SCR:THEM TDC |
| Readback | 3D Color |
| Initial S/W Revision | Prior to A.02.00 |

3D Monochrome

Selects a format that is like 3D color but shades of gray are used instead of colors.

| | |
|-----------------------------|-----------------------------------|
| Key Path | Save, Screen Image, Themes |
| Example | MMEM:STOR:SCR:THEM TDM |
| Readback | 3D Mono |
| Initial S/W Revision | Prior to A.02.00 |

Flat Color

Selects a format that is best when the screen is to be printed on an ink printer.

| | |
|-----------------|-----------------------------------|
| Key Path | Save, Screen Image, Themes |
|-----------------|-----------------------------------|

| | |
|----------------------|-------------------------|
| Example | MMEM:STOR:SCR:THEM FCOL |
| Readback | Flat Color |
| Initial S/W Revision | Prior to A.02.00 |

Flat Monochrome

Selects a format that is like Flat Color. But only black is used (no colors, not even gray), and no fill.

| | |
|----------------------|-----------------------------------|
| Key Path | Save, Screen Image, Themes |
| Example | MMEM:STOR:SCR:THEM FMON |
| Readback | Flat Mono |
| Initial S/W Revision | Prior to A.02.00 |

Save As...

When you press "Save As", the analyzer brings up a Windows dialog and a menu entitled "**Save As.**" This menu allows you to navigate to the various fields in the Windows dialog without using a keyboard or mouse. The **Tab** and **Arrow** keys can also be used for dialog navigation.

See "[To File . . .](#)" on page 2484 in **Save, State** for a full description of this dialog and menu.

The default path for Screen Images is

My Documents\`<mode name>`\screen.

where `<mode name>` is the parameter used to select the mode with the INST:SEL command (for example, SA for the Spectrum Analyzer).

| | |
|----------------------|--|
| Key Path | Save, Screen Image |
| Notes | Brings up Save As dialog for saving a Screen Image Save Type |
| Initial S/W Revision | Prior to A.02.00 |

Single (Single Measurement/Sweep)

Sets the analyzer for Single measurement operation. The single/continuous state is Meas Global, so the setting will affect all the measurements. If you are Paused, pressing **Single** does a Resume.

See "[More Information](#)" on page 1407

| | |
|-------------------------------|--|
| Key Path | Front-panel key |
| Example | :INIT:CONT OFF |
| Notes | See Cont key description. |
| Backwards Compatibility Notes | <p>For Spectrum Analysis mode in ESA and PSA, the Single hardkey and the INITiate:IMM switched from continuous measurement to single measurement and restarted sweeps and averages (displayed average count reset to 1), but did not restart Max Hold and Min Hold. In the X-Series, the Single hardkey and the INITiate:IMM command initiate a sweep/ measurement/ average sequence/hold sequence including MaxHold and MinHold.</p> <p>For Spectrum Analysis mode in ESA and PSA, the Single hardkey restarted the sweep regardless of whether or not you were in an active sweep or sweep sequence. In the X-Series, Restart does this but Single only restarts the sweep or sweep sequence if you are in the idle state.</p> <p>INIT[:IMM] in ESA & PSA Spectrum Analysis Mode does an implied ABORt. In some other PSA Modes, INIT[:IMM] is ignored if not in the idle state. . The X-Series follows the ESA/PSA SA Mode model, which may cause some Modes to have compatibility problems.</p> |
| Initial S/W Revision | Prior to A.02.00 |

More Information

See "[Restart](#)" on page 2481 for details on the INIT:IMMEDIATE (Restart) function.

If you are already in single sweep, the INIT:CONT OFF command has no effect.

If you are already in Single Sweep, then pressing the **Single** key in the middle of a sweep does not restart the sweep or sequence. Similarly, pressing the **Single** key does not restart the sweep or sequence if the sweep is not in the idle state (for example, if you are taking a very slow sweep, or the analyzer is waiting for a trigger). Instead, it results in a message. "Already in Single, press Restart to initiate a new sweep or sequence". Even though pressing the **Single** key in the middle of a sweep does not restart the sweep, sending INIT:IMMEDIATE does reset it.

To take one more sweep without resetting the average count, increment the average count by 1, by pressing the step up key while **Average/Hold Number** is the active function, or sending the remote command CALC:AVER:TCON UP.

Source

Opens a menu of keys that access various source configuration menus and settings. In the test set, pressing this key also causes the central view area to change and display the Source Control Main view.

| Key Path | Front-panel key |
|----------|-----------------|
|----------|-----------------|

RF Output

This parameter sets the source RF power output state.

| Key Path | Source |
|-----------------------------|---|
| Remote Command | :OUTPut[:EXTeRnal][:STATe] ON OFF 1 0 :OUTPut[:EXTeRnal][:STATe]? |
| Example | OUTP OFF OUTP? |
| Notes | <p>The EXTeRnal node is shown in RD text so the SCPI remains the same between internal and external source control. However, for EXT we do not wish to document this node to the customer since we are controlling the internal source rather than the external source.</p> <p>This setting is for the independent mode and has no effect on the "List Sequencer" on page 2585. If the "Sequencer" on page 2586 is set to ON, the list sequencer controls the source output and this key will be grayed-out. And this setting will be none-forceful grey out on front panel to indicate out-of-scope. Non-forceful means user still can change this setting by SCPI but cannot change on front panel. When set to OFF will make source leave list sequencer and this setting will be black out and take effect immediately.</p> <p>When the RF Output is ON, an "RF" annunciator is displayed in the system settings panel. When the RF Output is turned Off, the RF annunciator is cleared. If the "Sequencer" on page 2586 is set to ON, the "RF" annunciator will be replaced by "SEQ" in the system settings panel, indicating that the output is controlled by the list sequencer.</p> |
| Preset | Off |
| Range | On Off |
| Initial S/W Revision | A.05.00 |

Amplitude

Allows you to access the Amplitude sub-menu.

| Key Path | Source |
|-----------------------------|--|
| Notes | <p>The sub-menu under this button is for independent mode and has no effect on "List Sequencer" on page 2585. If the "Sequencer" on page 2586 is set to ON, the list sequencer controls the source output and this key will be grayed-out on front panel to indicate out-of-scope. When you set "Sequencer" on page 2586 to Off will make source leave list sequencer and this button will be black out.</p> |
| Initial S/W Revision | A.05.00 |

RF Power

Allows you to adjust the power level of the source using the numeric keypad, step keys, or RPG. Pressing any digit, 0 through 9, on the numeric keypad brings up the unit terminator.

Please refer to the ["RF Power Range " on page 1410](#) table below for the valid ranges.

| Key Path | Source, Amplitude |
|-----------------------|--|
| Remote Command | :SOURce:POWer[:LEVel][:IMMediate][:AMPLitude] <ampl> :SOURce:POWer[:LEVel][:IMMediate][:AMPLitude]? |
| Example | :SOUR:POW -100 dBm |
| Notes | <p>Amplitude corrections can be specified for use with the source. In the event of amplitude corrections being applied, the valid ranges for the RF power do not change dependant on the current amplitude correction setting. If the combination of RF power + amplitude correction is higher or lower than the source output range, the Source Unleveled bit is set and the "Source Unleveled" indicator will appear on status panel to indicate that the source cannot maintain the output power that has been requested.</p> <p>When signal generator is unable to maintain the requested output level, the "Source Unleveled" indicator will appear on status panel. When the source output setting is restored to the normal range, the "Source Unleveled" is removed from status panel.</p> <p>Internal source has list sequence mode, which comprises of several steps which contain separate output power, frequency and waveform etc. When the source list sequence playing is complete, the last step keeps playing, and user can use this command to change the list sequence last step's output power.</p> <p>The multiport adapter RFIO TX ports and GPS ports cannot ensure power accuracy when power setting is lower than -130dBm, this power setting value is defined by the sum of RF Power setting and related amplitude correction value. But user settable value could be lower than this limit. When application detected there exists power setting lower than -130dBm on MPA RFIO TX ports, then popup warning message . When application detected there exists power setting lower than -130dBm on MPA GPS ports, then popup warning message . This is only warning message, and check is performed when RF is ON.</p> |
| Notes | The Min and Max value here defined UI settable amplitude range. This range is larger than actual amplitude range with level accuracy defined in spec. |
| Dependencies | The RF power is dependent on the RF output port and frequency, such that the current frequency and selected output port determine the valid range of power values. |
| Couplings | If "Real-Time AWGN" on page 2546 AWGN State is On and "ARB" on page 2535 ARB State is On, this setting will be adjusted to the value to maintain the AWGN power relationship defined by "Power Control Mode" on page 2547 Power Control Mode and other noise settings |
| Preset | -100 dBm |
| Min | The range of values depends on the current frequency and selected RF output port. Please refer to the "RF Power Range " on page 1410 table below for the valid ranges. |
| Max | The range of values depends on the current frequency and selected RF output port. Please refer to the "RF Power Range " on page 1410 table below for the valid ranges. |

| | |
|--------------------------|---|
| Initial S/W Revision | A.05.00 |
| Modified at S/W Revision | A.16.00 (Add couplings with AWGN state) |

RF Power Range

| RF Output Port | Frequency Range | Min Output Power | Max Output Power |
|-------------------|--------------------|------------------|------------------|
| High Power RF Out | 10 MHz ≤ f ≤ 6 GHz | -150 dBm | 20 dBm |
| RFIO 1 & RFIO 2 | 10 MHz ≤ f ≤ 6 GHz | -150 dBm | 0 dBm |
| GPS (Note2) | 10 MHz ≤ f ≤ 6 GHz | -150 dBm | 0 dBm |

Note: This is the UI power range, it's larger than actual spec.

Note2: GPS port is on the multiport adapter, or E6607C which has embedded MPA.

Set Reference Power

This key allows you to set the power reference. Pressing this key turns the power reference state to ON, sets the reference power value to the current RF output power, maintains this power at the RF output, and sets the displayed power to 0.00 dB. All subsequent RF power values entered under Source>Amplitude>RF Power are interpreted as being relative to this reference power.

When you use a power reference, the signal generator outputs an RF power that is set relative to the reference power by the value entered under Source>Amplitude>RF Power as follows:

Output power = reference power – entered power

Where:

reference power equals the original RF Power entered under Source>Amplitude>RF Power and set as the reference power

entered power equals a new value entered under Source>Amplitude>Amptd Offset

In addition, the displayed power value is the same as a new value entered under Source>Amplitude>RF Power.

NOTE

If Power Ref is set to ON with a reference value set, entering a value under Source>Amplitude>RF Power and pressing Set Reference Power will add that value to the existing Power Ref value.

If you wish to change the reference power value to a new value entered under Source>Amplitude>RF Power, first you must set Power Ref to OFF and then press Set Reference Power.

| | |
|----------------------|---|
| Key Path | Source, Amplitude |
| Dependencies | This key is unavailable, and is grayed out when the "List Sequencer" on page 2585 is turned ON. |
| Initial S/W Revision | A.05.00 |

Power Ref

This key allows you to toggle the state of the power reference.

When you use a power reference, the signal generator outputs an RF power that is set relative to the reference power by the value entered under Source>Amplitude>RF Power as follows:

Output power = reference power + entered power

Where:

reference power equals the original RF Power entered under Source>Amplitude>RF Power and set as the reference power

entered power equals a new value entered under Source>Amplitude>Amptd Offset

For more information on Reference Frequency refer to ["Set Reference Power " on page 2501](#)

| Key Path | Source, Amplitude |
|-----------------------|--|
| Remote Command | :SOURce:POWer:REFeRence <ampl> :SOURce:POWer:REFeRence? :SOURce:POWer:REFeRence:STATe OFF ON 0 1 :SOURce:POWer:REFeRence:STATe? |
| Example | :SOUR:POW:REF 0.00 dBm :SOUR:POW:REF:STATe ON |
| Dependencies | This setting is unavailable and is grayed out when the "List Sequencer" on page 2585 is turned ON. |
| Couplings | This value is coupled to the "Set Reference Power " on page 2501 key such that pressing the Set Reference Power key updates the reference power with the current output power. |
| Preset | 0.00 dBm OFF |
| Min | -125.00 dBm |
| Max | 10.00 dBm |
| Initial S/W Revision | A.05.00 |

Amptd Offset

Allows you to specify the RF output power offset value.

When the amplitude offset is set to zero (0) and you set a new offset value (positive or negative), the displayed amplitude value will change as follows and the RF output power will not change:

Displayed value = output power + offset value

Where:

output power equals the original RF Power entered under Source>Amplitude>RF Power

offset value equals the value entered under Source>Amplitude>Amptd Offset

When the amplitude offset is set to a value other than zero (0) and you enter a new RF power value under Source>Amplitude>RF Power, the displayed power will be the same as the value entered and the RF output power will be equal to the value entered minus the offset value as follows:

Output power = entered power – offset power

Displayed Power = output power + offset power

Displayed power = entered power

Where:

entered power equals the amplitude entered under Source>Amplitude>RF Power

offset power equals the value previously entered and set under Source>Amplitude>Amptd Offset

| Key Path | Source, Amplitude |
|-----------------------------|--|
| Remote Command | :SOURce:POWer[:LEVel][:IMMediate]:OFFSet <rel_amp1> :SOURce:POWer[:LEVel][:IMMediate]:OFFSet? |
| Example | :SOUR:POW:OFFS 0.00 dB |
| Dependencies | This setting is unavailable, and is grayed out when the List Sequencer is turned ON. |
| Preset | 0.00 dB |
| Min | -200.00 dB |
| Max | 200.00 dB |
| Initial S/W Revision | A.05.00 |

Modulation

Allows you to toggle the state of the modulation.

| Key Path | Source |
|-----------------------------|--|
| Remote Command | :OUTPut:MODulation[:STATe] ON OFF 1 0 :OUTPut:MODulation[:STATe]? |
| Example | :OUTP:MOD OFF |
| Notes | This setting is for independent mode and has no effect on "List Sequencer" on page 2585 . If the "Sequencer" on page 2586 is set to ON, the list sequencer controls the source output and this key will be grayed-out. And this setting will be none-forceful grey out on front panel to indicate out-of-scope. Non-forceful means user still can change this setting by SCPI but cannot change manually on front panel. When set to Off will make source leave list sequencer and this setting will be black out and take effect immediately. When the Modulation is ON, the "MOD" annunciator is displayed in the system settings panel. When the Modulation is turned Off, the "MOD" annunciator is cleared. If the "Sequencer" on page 2586 is set to ON, the "MOD" annunciator will be replaced by "SEQ" in the system settings panel indicating that the output is controlled by list sequencer. |
| Preset | Off |
| Range | On Off |
| Initial S/W Revision | A.05.00 |

Frequency

Allows you to access the Frequency sub-menu.

| Key Path | Source |
|----------------------|---|
| Notes | The sub-menu under this button is for independent mode and has no effect on "List Sequencer" on page 2585 . If the "Sequencer" on page 2586 is set to ON, the list sequencer controls the source output and this key will be grayed-out. And this button will be grey out on front panel to indicate out-of-scope. When set to Off will make source leave list sequencer and this button will be black out. |
| Initial S/W Revision | A.05.00 |

Frequency

Allows you to set the RF Output Frequency. You can adjust the frequency of the source using the numeric keypad, step keys, or RPG. Pressing any digit, 0 through 9, on the numeric keypad brings up the unit terminator.

| Key Path | Source, Frequency |
|-----------------------|---|
| Remote Command | :SOURce:FREQuency[:CW] <freq> :SOURce:FREQuency[:CW]? |
| Example | :SOUR:FREQ 1.00 GHz |
| Notes | Internal source has list sequence mode, which comprises of several steps which contain separate output power, frequency and waveform etc. When the source list sequence playing is complete, the last step keeps playing, and user can use this command to change the list sequence last step's output frequency. |
| Couplings | The frequency value is coupled to the current channel band and number, such that updates to the band and number will update the frequency value to the corresponding absolute frequency. |
| Preset | 1.00 GHz |
| Min | 10.00 MHz |
| Max | Hardware Dependant: Option 503 = 3.6 GHz Option 504 = 3.8 GHz Option 506 = 6.00 GHz |
| Initial S/W Revision | A.05.00 |

Channel

The frequency of the source can be specified by a channel number of a given frequency band. This key allows you to specify the current channel number. For the appropriate range of channel numbers for a given frequency band, refer to the following tables: ["GSM/EDGE Channel Number Ranges" on page 1414](#),

"W-CDMA Channel Number Ranges" on page 1415, "CDMA 2000 / 1xEVDO Channel Number Ranges" on page 1416, and "LTE FDD Channel Number Ranges" on page 1418.

| | |
|-----------------------------|---|
| Key Path | Source, Frequency |
| Remote Command | :SOURce:FREQuency:CHANnels:NUMBer <int> :SOURce:FREQuency:CHANnels:NUMBer? |
| Example | :SOUR:FREQ:CHAN:NUMB 1 |
| Notes | This key is grayed out when the "Radio Standard" on page 2513 is set to NONE. This key is grayed out on E6630A. |
| Dependencies | This key is grayed out when the "Radio Standard" on page 2513 is set to NONE. This key is grayed out on E6630A. |
| Couplings | The channel number is coupled to the frequency value when the "Radio Standard" on page 2513 is not set to NONE. When the frequency value is changed, the channel number will increase or decrease to match the new frequency. If the frequency is not at an exact match for a channel number, the nearest channel number is displayed along with a greater than or less than sign to indicate the frequency is above or below the channel number. |
| Preset | 1 |
| Min | Please refer to the tables below for the valid ranges. |
| Max | Please refer to the tables below for the valid ranges. |
| Initial S/W Revision | A.05.00 |

GSM/EDGE Channel Number Ranges

| Band | Link (Device) | Range | Frequency (MHz) |
|-------------|----------------------|------------------------|---------------------------|
| P-GSM | Uplink (MS) | $1 \leq n \leq 124$ | $890.0 + 0.2*n$ |
| | Downlink (BS) | $1 \leq n \leq 124$ | $935.0 + 0.2*n$ |
| E-GSM | Uplink (MS) | $0 \leq n \leq 124$ | $890.0 + 0.2*n$ |
| | | $975 \leq n \leq 1023$ | $890.0 + 0.2*(n-1024)$ |
| | Downlink (BS) | $0 \leq n \leq 124$ | $935.0 + 0.2*n$ |
| | | $975 \leq n \leq 1023$ | $935.0 + 0.2*(n-1024)$ |
| DCS 1800 | Uplink (MS) | $512 \leq n \leq 885$ | $1710.200 + 0.20*(n-512)$ |
| | Downlink (BS) | $512 \leq n \leq 885$ | $1805.200 + 0.20*(n-512)$ |
| PCS 1900 | Uplink (MS) | $512 \leq n \leq 810$ | $1850.200 + 0.2*(n-512)$ |

| 800 PAMR | Uplink (MS, reverse link) | $0 \leq N \leq 239$ | $870.0125 + 0.025 \times N$ |
| | Downlink (BS, forward link) | $0 \leq N \leq 239$ | $915.0125 + 0.025 \times N$ |

LTE FDD Channel Number Ranges

The carrier frequency in the uplink and downlink is designated by the E-UTRA Absolute Radio Frequency Channel Number (EARFCN) in the range 0 – 65535. The relation between EARFCN and the carrier

frequency in MHz for the downlink is given by the following equation, where FDL_low and NOffs-DL are given in table 5.4.4-1 and NDL is the downlink EARFCN.

$$FDL = FDL_low + 0.1(NDL - NOffs-DL)$$

The relation between EARFCN and the carrier frequency in MHz for the uplink is given by the following equation where FUL_low and NOffs-UL are given in table 5.4.4-1 and NUL is the uplink EARFCN.

$$FUL = FUL_low + 0.1(NUL - NOffs-UL)$$

| Band | Downlink | | Uplink | | | |
|------|---------------|----------|--------------|---------------|----------|---------------|
| | FDL_low (MHz) | NOffs-DL | Range of NDL | FUL_low (MHz) | NOffs-UL | Range of NUL |
| 1 | | 2110 | 0 | 0 - 599 | 1920 | 18000 - 18599 |
| 2 | | 1930 | 600 | 600 - 1199 | 1850 | 18600 - 19199 |
| 3 | | 1805 | 1200 | 1200 - 1949 | 1710 | 19200 - 19949 |
| 4 | | 2110 | 1950 | 1950 - 2399 | 1710 | 19950 - 20399 |

| ... | | | | | | |

Note: The channel numbers that designate carrier frequencies so close to the operating band edges that the carrier extends beyond the operating band edge shall not be used. This implies that the first 7, 15, 25, 50, 75 and 100 channel numbers at the lower operating band edge and the last 6, 14, 24, 49, 74 and 99 channel numbers at the upper operating band edge shall not be used for channel bandwidths of 1.4, 3, 5, 10, 15 and 20 MHz respectively.

LTE TDD Channel Number Ranges

The carrier frequency in the uplink and downlink is designated by the E-UTRA Absolute Radio Frequency Channel Number (EARFCN) in the range 0 – 65535. The relation between EARFCN and the carrier frequency in MHz for the downlink is given by the following equation, where FDL_low and NOffs-DL are given in table 5.4.4–1 and NDL is the downlink EARFCN.

$$FDL = FDL_low + 0.1(NDL - NOffs-DL)$$

The relation between EARFCN and the carrier frequency in MHz for the uplink is given by the following equation where FUL_low and NOffs-UL are given in table 5.4.4–1 and NUL is the uplink EARFCN.

$$FUL = FUL_low + 0.1(NUL - NOffs-UL)$$

| Band | Downlink | Uplink | | | | |
|---------------|----------|--------------|---------------|----------|--------------|---------------|
| FDL_low (MHz) | NOffs-DL | Range of NDL | FUL_low (MHz) | NOffs-UL | Range of NUL | |
| 33 | 1900 | 36000 | 36000 – 36199 | 1900 | 36000 | 36000 – 36199 |
| 34 | 2010 | 36200 | 36200 – 36349 | 2010 | 36200 | 36200 – 36349 |
| 35 | 1850 | 36350 | 36350 – 36949 | 1850 | 36350 | 36350 – 36949 |
| 36 | 1930 | 36950 | 36950 – 37549 | 1930 | 36950 | 36950 – 37549 |

| Band | Downlink | Uplink | | | | |
|------|----------|--------|---------------|------|-------|---------------|
| 37 | 1910 | 37550 | 37550 - 37749 | 1910 | 37550 | 37550 - 37749 |
| 38 | 2570 | 37750 | 37750 - 38249 | 2570 | 37750 | 37750 - 38249 |
| 39 | 1880 | 38250 | 38250 - 38649 | 1880 | 38250 | 38250 - 38649 |
| 40 | 2300 | 38650 | 38650 - 39649 | 2300 | 38650 | 38650 - 39649 |
| 41 | 2496 | 39650 | 39650 - 41589 | 2496 | 39650 | 39650 - 41589 |
| 42 | 3400 | 41590 | 41590 - 43589 | 3400 | 41590 | 41590 - 43589 |
| 43 | 3600 | 43590 | 43590 - 45589 | 3600 | 43590 | 43590 - 45589 |

Note: The channel numbers that designate carrier frequencies so close to the operating band edges that the carrier extends beyond the operating band edge shall not be used. This implies that the first 7, 15, 25, 50, 75 and 100 channel numbers at the lower operating band edge and the last 6, 14, 24, 49, 74 and 99 channel numbers at the upper operating band edge shall not be used for channel bandwidths of 1.4, 3, 5, 10, 15 and 20 MHz respectively.

TDSCDMA Channel Number Ranges

1.28 Mcps TDD Option

No TX-RX frequency separation is required as Time Division Duplex (TDD) is employed. Each subframe consists of 7 main timeslots where all main timeslots (at least the first one) before the single switching point are allocated DL and all main timeslots (at least the last one) after the single switching point are allocated UL.

The nominal channel spacing is 1.6 MHz, but this can be adjusted to optimise performance in a particular deployment scenario.

The carrier frequency is designated by the UTRA absolute radio frequency channel number (UARFCN). The value of the UARFCN in the IMT2000 band is defined in the general case as follows:

$$N_t = 5 * F \quad 0.0 \text{ MHz} \leq F \leq 3276.6 \text{ MHz}$$

where F is the carrier frequency in MHz

Additional channels applicable to operation in the frequency band defined in sub-clause 5.2(d) are defined via the following UARFCN definition:

$$N_t = 5 * (F - 2150.1 \text{ MHz}) \quad 2572.5 \text{ MHz} \leq F \leq 2617.5 \text{ MHz}$$

UARFCN

1.28 Mcps TDD Option

The following UARFCN range shall be supported for each band:

**Table: UTRA Absolute Radio
Frequency Channel Number 1.28
Mcps TDD Option**

| Frequency Band | Frequency Range | UARFCN Uplink and Downlink transmission |
|---|-----------------|---|
| For operation in frequency band as defined in subclause 5.2 (a) | 1900-1920 MHz | 9504 to 9596 |
| | 2010-2025 MHz | 10054 to 10121 |
| For operation in frequency band as defined in subclause 5.2 (b) | 1850-1910 MHz | 9254 to 9546 |
| | 1930-1990 MHz | 9654 to 9946 |
| For operation in frequency band as defined in subclause 5.2 (c) | 1910-1930 MHz | 9554 to 9646 |
| For operation in frequency band as defined in subclause 5.2 (d) | 2570-2620 MHz | 12854 to 13096 |
| For operation in frequency band as defined in subclause 5.2 (e) | 2300-2400 MHz | 11504 to 11996 |
| For operation in frequency band as defined in subclause 5.2 (f) | 1880-1920 MHz | 9404 to 9596 |

Radio Setup

Allows access to the sub-menus for selecting the radio standard and associated radio band. You can also set a frequency reference and offset.

This menu is greyed out when on E6630A. Radio band settings for GSM, cdma2000, and so on -- most of which are not actually supported in E6630A, which has three narrow frequency bands. So band settings are grayed out.

| Key Path | Source, Frequency |
|----------------------|-------------------|
| Initial S/W Revision | A.05.00 |

Radio Standard

Allows access to the channel band sub-menus to select the desired radio standard. When you have selected the radio standard, you can then set an active channel band. The radio standard and the active channel band allow you to use channel numbers to set frequency automatically.

| Key Path | Source, Frequency, Radio Setup |

| Example | :SOUR:FREQ:CHAN:BAND PGSM |
| Notes | Set this setting to "NONE" will grey out "Channel" on page 2504 Channel |
| Initial S/W Revision | A.05.00 |

None

Selects no radio standard for use. When you have selected the radio standard to NONE, you cannot use channel numbers to set frequency automatically. You will need to set the frequency manually.

| | |
|----------------------|---|
| Key Path | Source, Frequency, Radio Setup, Radio Standard |
| Initial S/W Revision | A.05.00 |

GSM/EDGE

Sets GSM/EDGE as the radio standard for use and accesses the GSM/EDGE specific channel band sub-menus.

| | |
|----------------------|---|
| Key Path | Source, Frequency, Radio Setup, Radio Standard |
| Initial S/W Revision | A.05.00 |

P-GSM

Selects P-GSM as the active channel band.

| | |
|----------------------|---|
| Key Path | Source, Frequency, Radio Setup, Radio Standard, GSM/EDGE |
| Example | :SOUR:FREQ:CHAN:BAND PGSM |
| Initial S/W Revision | A.05.00 |

E-GSM

Selects E-GSM as the active channel band.

| | |
|----------------------|---|
| Key Path | Source, Frequency, Radio Setup, Radio Standard, GSM/EDGE |
| Example | :SOUR:FREQ:CHAN:BAND EGSM |
| Initial S/W Revision | A.05.00 |

R-GSM

Selects R-GSM as the active channel band.

| | |
|----------------------|---|
| Key Path | Source, Frequency, Radio Setup, Radio Standard, GSM/EDGE |
| Example | :SOUR:FREQ:CHAN:BAND RGSM |
| Initial S/W Revision | A.05.00 |

DCS 1800

Selects DCS 1800 as the active channel band.

| | |
|----------------------|---|
| Key Path | Source, Frequency, Radio Setup, Radio Standard, GSM/EDGE |
| Example | :SOUR:FREQ:CHAN:BAND DCS1800 |
| Initial S/W Revision | A.05.00 |

PCS 1900

Selects PCS 1900 as the active channel band.

| | |
|----------------------|---|
| Key Path | Source, Frequency, Radio Setup, Radio Standard, GSM/EDGE |
| Example | :SOUR:FREQ:CHAN:BAND PCS1900 |
| Initial S/W Revision | A.05.00 |

GSM 450

Selects GSM 450 as the active channel band.

| | |
|----------------------|---|
| Key Path | Source, Frequency, Radio Setup, Radio Standard, GSM/EDGE |
| Example | :SOUR:FREQ:CHAN:BAND GSM450 |
| Initial S/W Revision | A.05.00 |

GSM 480

Selects GSM 480 as the active channel band.

| | |
|----------------------|---|
| Key Path | Source, Frequency, Radio Setup, Radio Standard, GSM/EDGE |
| Example | :SOUR:FREQ:CHAN:BAND GSM480 |
| Initial S/W Revision | A.05.00 |

GSM 850

Selects GSM 850 as the active channel band.

| | |
|----------------------|---|
| Key Path | Source, Frequency, Radio Setup, Radio Standard, GSM/EDGE |
| Example | :SOUR:FREQ:CHAN:BAND GSM850 |
| Initial S/W Revision | A.05.00 |

GSM 700

Selects GSM 700 as the active channel band.

| | |
|----------------------|---|
| Key Path | Source, Frequency, Radio Setup, Radio Standard, GSM/EDGE |
| Example | :SOUR:FREQ:CHAN:BAND GSM700 |
| Initial S/W Revision | A.05.00 |

T-GSM 810

Selects T-GSM 810 as the active channel band.

| | |
|----------------------|---|
| Key Path | Source, Frequency, Radio Setup, Radio Standard, GSM/EDGE |
| Example | :SOUR:FREQ:CHAN:BAND T-GSM810 |
| Initial S/W Revision | A.05.00 |

WCDMA

Sets WCDMA as the radio standard for use and accesses the W-CDMA specific channel band sub-menus.

| | |
|----------------------|---|
| Key Path | Source, Frequency, Radio Setup, Radio Standard |
| Initial S/W Revision | A.05.00 |

Band I

Selects Band I as the active channel band.

| | |
|----------------------|--|
| Key Path | Source, Frequency, Radio Setup, Radio Standard, WCDMA |
| Example | :SOUR:FREQ:CHAN:BAND BANDI |
| Initial S/W Revision | A.05.00 |

Band II

Selects Band II as the active channel band.

| | |
|----------------------|--|
| Key Path | Source, Frequency, Radio Setup, Radio Standard, WCDMA |
| Example | :SOUR:FREQ:CHAN:BAND BANDII |
| Initial S/W Revision | A.05.00 |

Band III

Selects Band III as the active channel band.

| | |
|----------------------|--|
| Key Path | Source, Frequency, Radio Setup, Radio Standard, WCDMA |
| Example | :SOUR:FREQ:CHAN:BAND BANDIII |
| Initial S/W Revision | A.05.00 |

Band IV

Selects Band IV as the active channel band.

| | |
|----------------------|--|
| Key Path | Source, Frequency, Radio Setup, Radio Standard, WCDMA |
| Example | :SOUR:FREQ:CHAN:BAND BANDIV |
| Initial S/W Revision | A.05.00 |

Band V

Selects Band V as the active channel band.

| | |
|----------------------|--|
| Key Path | Source, Frequency, Radio Setup, Radio Standard, WCDMA |
| Example | :SOUR:FREQ:CHAN:BAND BANDV |
| Initial S/W Revision | A.05.00 |

Band VI

Selects Band VI as the active channel band.

| | |
|----------------------|--|
| Key Path | Source, Frequency, Radio Setup, Radio Standard, WCDMA |
| Example | :SOUR:FREQ:CHAN:BAND BANDVI |
| Initial S/W Revision | A.05.00 |

Band VII

Selects Band VII as the active channel band.

| | |
|----------------------|--|
| Key Path | Source, Frequency, Radio Setup, Radio Standard, WCDMA |
| Example | :SOUR:FREQ:CHAN:BAND BANDVII |
| Initial S/W Revision | A.05.00 |

Band VIII

Selects Band VIII as the active channel band.

| | |
|----------------------|--|
| Key Path | Source, Frequency, Radio Setup, Radio Standard, WCDMA |
| Example | :SOUR:FREQ:CHAN:BAND BANDVIII |
| Initial S/W Revision | A.05.00 |

Band IX

Selects Band IX as the active channel band.

| | |
|----------------------|--|
| Key Path | Source, Frequency, Radio Setup, Radio Standard, WCDMA |
| Example | :SOUR:FREQ:CHAN:BAND BANDIX |
| Initial S/W Revision | A.05.00 |

Band X

Selects Band X as the active channel band.

| | |
|----------------------|--|
| Key Path | Source, Frequency, Radio Setup, Radio Standard, WCDMA |
| Example | :SOUR:FREQ:CHAN:BAND BANDX |
| Initial S/W Revision | A.05.00 |

Band XI

Selects Band XI as the active channel band.

| | |
|----------------------|--|
| Key Path | Source, Frequency, Radio Setup, Radio Standard, WCDMA |
| Example | :SOUR:FREQ:CHAN:BAND BANDXI |
| Initial S/W Revision | A.05.00 |

Band XII

Selects Band XII as the active channel band.

| | |
|----------------------|--|
| Key Path | Source, Frequency, Radio Setup, Radio Standard, WCDMA |
| Example | :SOUR:FREQ:CHAN:BAND BANDXII |
| Initial S/W Revision | A.05.00 |

Band XIII

Selects band XIII as the active channel band.

| | |
|----------------------|--|
| Key Path | Source, Frequency, Radio Setup, Radio Standard, WCDMA |
| Example | :SOUR:FREQ:CHAN:BAND BANDXIII |
| Initial S/W Revision | A.05.00 |

Band XIV

Selects Band XIV as the active channel band.

| | |
|----------------------|--|
| Key Path | Source, Frequency, Radio Setup, Radio Standard, WCDMA |
| Example | :SOUR:FREQ:CHAN:BAND BANDXIV |
| Initial S/W Revision | A.05.00 |

CDMA 2000 / 1xEVDO

Sets CDMA 2000 / 1XEVDO as the radio standard for use and accesses the CDMA 2000/1xEVDO specific channel band sub-menus.

| | |
|----------------------|---|
| Key Path | Source, Frequency, Radio Setup, Radio Standard |
| Initial S/W Revision | A.05.00 |

US CELL

Selects US Cell as the active channel band.

| | |
|----------------------|---|
| Key Path | Source, Frequency, Radio Setup, Radio Standard, CDMA 2000 / 1xEVDO |
| Example | :SOUR:FREQ:CHAN:BAND USCELL |
| Initial S/W Revision | A.05.00 |

US PCS

Selects US PCS as the active channel band.

| | |
|----------------------|---|
| Key Path | Source, Frequency, Radio Setup, Radio Standard, CDMA 2000 / 1xEVDO |
| Example | :SOUR:FREQ:CHAN:BAND PCS |
| Initial S/W Revision | A.05.00 |

Japan Cell

Selects Japan Cell as the active channel band.

| | |
|----------------------|---|
| Key Path | Source, Frequency, Radio Setup, Radio Standard, CDMA 2000 / 1xEVDO |
| Example | :SOUR:FREQ:CHAN:BAND JAPAN |
| Initial S/W Revision | A.05.00 |

Korean PCS

Selects Korean PCS as the active channel band.

| | |
|----------------------|---|
| Key Path | Source, Frequency, Radio Setup, Radio Standard, CDMA 2000 / 1xEVDO |
| Example | :SOUR:FREQ:CHAN:BAND KOREAN |
| Initial S/W Revision | A.05.00 |

NMT 450

Selects NMT 450 as the active channel band.

| | |
|----------------------|---|
| Key Path | Source, Frequency, Radio Setup, Radio Standard, CDMA 2000 / 1xEVDO |
| Example | :SOUR:FREQ:CHAN:BAND NMT |
| Initial S/W Revision | A.05.00 |

IMT 2000

Selects IMT 2000 as the active channel band.

| | |
|----------------------|---|
| Key Path | Source, Frequency, Radio Setup, Radio Standard, CDMA 2000 / 1xEVDO |
| Example | :SOUR:FREQ:CHAN:BAND IMT2K |
| Initial S/W Revision | A.05.00 |

Upper 700

Selects Upper 700 as the active channel band.

| | |
|----------------------|---|
| Key Path | Source, Frequency, Radio Setup, Radio Standard, CDMA 2000 / 1xEVDO |
| Example | :SOUR:FREQ:CHAN:BAND UPPER |
| Initial S/W Revision | A.05.00 |

Secondary 800

Selects Secondary 800 as the active channel band.

| | |
|----------------------|---|
| Key Path | Source, Frequency, Radio Setup, Radio Standard, CDMA 2000 / 1xEVDO |
| Example | :SOUR:FREQ:CHAN:BAND SECOND |
| Initial S/W Revision | A.05.00 |

400 Euro PAMR

Selects 400 Euro PAMR as the active channel band.

| | |
|----------------------|---|
| Key Path | Source, Frequency, Radio Setup, Radio Standard, CDMA 2000 / 1xEVDO |
| Example | :SOUR:FREQ:CHAN:BAND PAMR400 |
| Initial S/W Revision | A.05.00 |

800 PAMR

Selects 800 PAMR as the active channel band.

| | |
|----------------------|---|
| Key Path | Source, Frequency, Radio Setup, Radio Standard, CDMA 2000 / 1xEVDO |
| Example | :SOUR:FREQ:CHAN:BAND PAMR800 |
| Initial S/W Revision | A.05.00 |

2.5GHz IMT EXT

Selects 2.5 GHz IMT EXT as the active channel band.

| | |
|----------------------|---|
| Key Path | Source, Frequency, Radio Setup, Radio Standard, CDMA 2000 / 1xEVDO |
| Example | :SOUR:FREQ:CHAN:BAND IMTEXT |
| Initial S/W Revision | A.05.00 |

US PCS 1.9GHz

Selects US PCS 1.9 GHz as the active channel band.

| | |
|----------------------|---|
| Key Path | Source, Frequency, Radio Setup, Radio Standard, CDMA 2000 / 1xEVDO |
| Example | :SOUR:FREQ:CHAN:BAND PCS1DOT9G |
| Initial S/W Revision | A.05.00 |

AWS

Selects AWS as the active channel band.

| | |
|----------------------|---|
| Key Path | Source, Frequency, Radio Setup, Radio Standard, CDMA 2000 / 1xEVDO |
| Example | :SOUR:FREQ:CHAN:BAND AWS |
| Initial S/W Revision | A.05.00 |

US 2.5GHz

Selects US 2.5 GHz as the active channel band.

| | |
|----------------------|---|
| Key Path | Source, Frequency, Radio Setup, Radio Standard, CDMA 2000 / 1xEVDO |
| Example | :SOUR:FREQ:CHAN:BAND US2DOT5G |
| Initial S/W Revision | A.05.00 |

700 Public Safety

Selects 700 Public Safety as the active channel band.

| | |
|----------------------|---|
| Key Path | Source, Frequency, Radio Setup, Radio Standard, CDMA 2000 / 1xEVDO |
| Example | :SOUR:FREQ:CHAN:BAND PUBLIC |
| Initial S/W Revision | A.05.00 |

C2K Lower 700

Selects C2K Lower 700 as the active channel band.

| | |
|----------------------|---|
| Key Path | Source, Frequency, Radio Setup, Radio Standard, CDMA 2000 / 1xEVDO |
| Example | :SOUR:FREQ:CHAN:BAND LOWER |
| Initial S/W Revision | A.05.00 |

LTE

Sets LTE FDD as the radio standard for use and accesses the LTE FDD specific channel band sub-menus..

| | |
|----------------------|---|
| Key Path | Source, Frequency, Radio Setup, Radio Standard |
| Initial S/W Revision | A.09.50 |

BAND 1

Selects BAND 1 as the band for the current step.

| | |
|----------------------|--|
| Key Path | Source, Frequency, Radio Setup, Radio Standard, LTE |
| Example | :SOUR:FREQ:CHAN:BAND BAND1 |
| Initial S/W Revision | A.09.50 |

BAND 2

Selects BAND 2 as the band for the current step.

| | |
|----------------------|--|
| Key Path | Source, Frequency, Radio Setup, Radio Standard, LTE |
| Example | :SOUR:FREQ:CHAN:BAND BAND2 |
| Initial S/W Revision | A.09.50 |

BAND 3

Selects BAND 3 as the band for the current step.

| | |
|----------------------|--|
| Key Path | Source, Frequency, Radio Setup, Radio Standard, LTE |
| Example | :SOUR:FREQ:CHAN:BAND BAND3 |
| Initial S/W Revision | A.09.50 |

BAND 4

Selects BAND 4 as the band for the current step.

| | |
|----------------------|--|
| Key Path | Source, Frequency, Radio Setup, Radio Standard, LTE |
| Example | :SOUR:FREQ:CHAN:BAND BAND4 |
| Initial S/W Revision | A.09.50 |

BAND 5

Selects BAND 5 as the band for the current step.

| | |
|----------|--|
| Key Path | Source, Frequency, Radio Setup, Radio Standard, LTE |
|----------|--|

| | |
|----------------------|----------------------------|
| Example | :SOUR:FREQ:CHAN:BAND BAND5 |
| Initial S/W Revision | A.09.50 |

BAND 6

Selects BAND 6 as the band for the current step.

| | |
|----------------------|--|
| Key Path | Source, Frequency, Radio Setup, Radio Standard, LTE |
| Example | :SOUR:FREQ:CHAN:BAND BAND6 |
| Initial S/W Revision | A.09.50 |

BAND 7

Selects BAND 7 as the band for the current step.

| | |
|----------------------|--|
| Key Path | Source, Frequency, Radio Setup, Radio Standard, LTE |
| Example | :SOUR:FREQ:CHAN:BAND BAND7 |
| Initial S/W Revision | A.09.50 |

BAND 8

Selects BAND 8 as the band for the current step.

| | |
|----------------------|--|
| Key Path | Source, Frequency, Radio Setup, Radio Standard, LTE |
| Example | :SOUR:FREQ:CHAN:BAND BAND8 |
| Initial S/W Revision | A.09.50 |

BAND 9

Selects BAND 9 as the band for the current step.

| | |
|----------------------|--|
| Key Path | Source, Frequency, Radio Setup, Radio Standard, LTE |
| Example | :SOUR:FREQ:CHAN:BAND BAND9 |
| Initial S/W Revision | A.09.50 |

BAND 10

Selects BAND 10 as the band for the current step.

| | |
|----------|--|
| Key Path | Source, Frequency, Radio Setup, Radio Standard, LTE |
|----------|--|

| | |
|----------------------|-----------------------------|
| Example | :SOUR:FREQ:CHAN:BAND BAND10 |
| Initial S/W Revision | A.09.50 |

BAND 11

Selects BAND 11 as the band for the current step.

| | |
|----------------------|--|
| Key Path | Source, Frequency, Radio Setup, Radio Standard, LTE |
| Example | :SOUR:FREQ:CHAN:BAND BAND11 |
| Initial S/W Revision | A.09.50 |

BAND 12

Selects BAND 12 as the band for the current step.

| | |
|----------------------|--|
| Key Path | Source, Frequency, Radio Setup, Radio Standard, LTE |
| Example | :SOUR:FREQ:CHAN:BAND BAND12 |
| Initial S/W Revision | A.09.50 |

BAND 13

Selects BAND 13 as the band for the current step.

| | |
|----------------------|--|
| Key Path | Source, Frequency, Radio Setup, Radio Standard, LTE |
| Example | :SOUR:FREQ:CHAN:BAND BAND13 |
| Initial S/W Revision | A.09.50 |

BAND 14

Selects BAND 14 as the band for the current step.

| | |
|----------------------|--|
| Key Path | Source, Frequency, Radio Setup, Radio Standard, LTE |
| Example | :SOUR:FREQ:CHAN:BAND BAND14 |
| Initial S/W Revision | A.09.50 |

BAND 17

Selects BAND 17 as the band for the current step.

| | |
|----------|--|
| Key Path | Source, Frequency, Radio Setup, Radio Standard, LTE |
|----------|--|

| | |
|----------------------|-----------------------------|
| Example | :SOUR:FREQ:CHAN:BAND BAND17 |
| Initial S/W Revision | A.09.50 |

BAND 18

Selects BAND 18 as the band for the current step.

| | |
|----------------------|--|
| Key Path | Source, Frequency, Radio Setup, Radio Standard, LTE |
| Example | :SOUR:FREQ:CHAN:BAND BAND18 |
| Initial S/W Revision | A.09.50 |

BAND 19

Selects BAND 19 as the band for the current step.

| | |
|----------------------|--|
| Key Path | Source, Frequency, Radio Setup, Radio Standard, LTE |
| Example | :SOUR:FREQ:CHAN:BAND BAND19 |
| Initial S/W Revision | A.09.50 |

BAND 20

Selects BAND 20 as the band for the current step.

| | |
|----------------------|--|
| Key Path | Source, Frequency, Radio Setup, Radio Standard, LTE |
| Example | :SOUR:FREQ:CHAN:BAND BAND20 |
| Initial S/W Revision | A.09.50 |

BAND 21

Selects BAND 21 as the band for the current step.

| | |
|----------------------|--|
| Key Path | Source, Frequency, Radio Setup, Radio Standard, LTE |
| Example | :SOUR:FREQ:CHAN:BAND BAND21 |
| Initial S/W Revision | A.09.50 |

BAND 24

Selects BAND 24 as the band for the current step.

| | |
|----------|--|
| Key Path | Source, Frequency, Radio Setup, Radio Standard, LTE |
|----------|--|

| | |
|----------------------|-----------------------------|
| Example | :SOUR:FREQ:CHAN:BAND BAND24 |
| Initial S/W Revision | A.09.50 |

BAND 25

Selects BAND 25 as the band for the current step.

| | |
|----------------------|--|
| Key Path | Source, Frequency, Radio Setup, Radio Standard, LTE |
| Example | :SOUR:FREQ:CHAN:BAND BAND25 |
| Initial S/W Revision | A.09.50 |

BAND 26

Selects BAND 26 as the band for the current step.

| | |
|----------------------|--|
| Key Path | Source, Frequency, Radio Setup, Radio Standard, LTE |
| Example | :SOUR:FREQ:CHAN:BAND BAND26 |
| Initial S/W Revision | A.12.53 |

BAND 27

Selects BAND 27 as the band for the current step.

| | |
|----------------------|--|
| Key Path | Source, Frequency, Radio Setup, Radio Standard, LTE |
| Example | :SOUR:FREQ:CHAN:BAND BAND27 |
| Initial S/W Revision | A.14.00 |

BAND 28

Selects BAND 28 as the band for the current step.

| | |
|----------------------|--|
| Key Path | Source, Frequency, Radio Setup, Radio Standard, LTE |
| Example | :SOUR:FREQ:CHAN:BAND BAND28 |
| Initial S/W Revision | A.14.00 |

BAND 31

Selects BAND 31 as the band for the current step.

| | |
|----------|--|
| Key Path | Source, Frequency, Radio Setup, Radio Standard, LTE |
|----------|--|

| | |
|----------------------|-----------------------------|
| Example | :SOUR:FREQ:CHAN:BAND BAND31 |
| Initial S/W Revision | A.14.00 |

LTE TDD

Sets LTE TDD as the radio standard for use and accesses the LTE TDD specific channel band sub-menus..

| | |
|----------------------|---|
| Key Path | Source, Frequency, Radio Setup, Radio Standard |
| Initial S/W Revision | A.11.50 |

BAND 33

Selects BAND 33 as the band for the current step.

| | |
|----------------------|--|
| Key Path | Source, Frequency, Radio Setup, Radio Standard, LTE TDD |
| Example | :SOUR:FREQ:CHAN:BAND BAND33 |
| Initial S/W Revision | A.11.50 |

BAND 34

Selects BAND 34 as the band for the current step.

| | |
|----------------------|--|
| Key Path | Source, Frequency, Radio Setup, Radio Standard, LTE TDD |
| Example | :SOUR:FREQ:CHAN:BAND BAND34 |
| Initial S/W Revision | A.11.50 |

BAND 35

Selects BAND 35 as the band for the current step.

| | |
|----------------------|--|
| Key Path | Source, Frequency, Radio Setup, Radio Standard, LTE TDD |
| Example | :SOUR:FREQ:CHAN:BAND BAND35 |
| Initial S/W Revision | A.11.50 |

BAND 36

Selects BAND 36 as the band for the current step.

| | |
|----------------------|--|
| Key Path | Source, Frequency, Radio Setup, Radio Standard, LTE TDD |
| Example | :SOUR:FREQ:CHAN:BAND BAND36 |
| Initial S/W Revision | A.11.50 |

BAND 37

Selects BAND 37 as the band for the current step.

| | |
|----------------------|--|
| Key Path | Source, Frequency, Radio Setup, Radio Standard, LTE TDD |
| Example | :SOUR:FREQ:CHAN:BAND BAND37 |
| Initial S/W Revision | A.11.50 |

BAND 38

Selects BAND 38 as the band for the current step.

| | |
|----------------------|--|
| Key Path | Source, Frequency, Radio Setup, Radio Standard, LTE TDD |
| Example | :SOUR:FREQ:CHAN:BAND BAND38 |
| Initial S/W Revision | A.11.50 |

BAND 39

Selects BAND 39 as the band for the current step.

| | |
|----------------------|--|
| Key Path | Source, Frequency, Radio Setup, Radio Standard, LTE TDD |
| Example | :SOUR:FREQ:CHAN:BAND BAND39 |
| Initial S/W Revision | A.11.50 |

BAND 40

Selects BAND 40 as the band for the current step.

| | |
|----------------------|--|
| Key Path | Source, Frequency, Radio Setup, Radio Standard, LTE TDD |
| Example | :SOUR:FREQ:CHAN:BAND BAND40 |
| Initial S/W Revision | A.11.50 |

BAND 41

Selects BAND 41 as the band for the current step.

| | |
|----------------------|--|
| Key Path | Source, Frequency, Radio Setup, Radio Standard, LTE TDD |
| Example | :SOUR:FREQ:CHAN:BAND BAND41 |
| Initial S/W Revision | A.11.50 |

BAND 42

Selects BAND 42 as the band for the current step.

| | |
|----------------------|--|
| Key Path | Source, Frequency, Radio Setup, Radio Standard, LTE TDD |
| Example | :SOUR:FREQ:CHAN:BAND BAND42 |
| Initial S/W Revision | A.11.50 |

BAND 43

Selects BAND 43 as the band for the current step.

| | |
|----------------------|--|
| Key Path | Source, Frequency, Radio Setup, Radio Standard, LTE TDD |
| Example | :SOUR:FREQ:CHAN:BAND BAND43 |
| Initial S/W Revision | A.11.50 |

BAND 44

Selects BAND 44 as the band for the current step.

| | |
|----------------------|--|
| Key Path | Source, Frequency, Radio Setup, Radio Standard, LTE TDD |
| Example | :SOUR:FREQ:CHAN:BAND BAND44 |
| Initial S/W Revision | A.14.00 |

TDSCDMA

Sets TDSCDMA as the radio standard for use and accesses the TDSCDMA specific channel band sub-menus..

| | |
|----------------------|---|
| Key Path | Source, Frequency, Radio Setup, Radio Standard |
| Initial S/W Revision | A.11.50 |

BAND A

Selects BAND A as the band for the current step.

| | |
|----------------------|--|
| Key Path | Source, Frequency, Radio Setup, Radio Standard, TDSCDMA |
| Example | :SOUR:FREQ:CHAN:BAND BANDA |
| Initial S/W Revision | A.11.50 |

BAND B

Selects BAND B as the band for the current step.

| | |
|----------------------|--|
| Key Path | Source, Frequency, Radio Setup, Radio Standard, TDSCDMA |
| Example | :SOUR:FREQ:CHAN:BAND BANDB |
| Initial S/W Revision | A.11.50 |

BAND C

Selects BAND C as the band for the current step.

| | |
|----------------------|--|
| Key Path | Source, Frequency, Radio Setup, Radio Standard, TDSCDMA |
| Example | :SOUR:FREQ:CHAN:BAND BANDC |
| Initial S/W Revision | A.11.50 |

BAND D

Selects BAND D as the band for the current step.

| | |
|----------------------|--|
| Key Path | Source, Frequency, Radio Setup, Radio Standard, TDSCDMA |
| Example | :SOUR:FREQ:CHAN:BAND BANDD |
| Initial S/W Revision | A.11.50 |

BAND E

Selects BAND E as the band for the current step.

| | |
|----------------------|--|
| Key Path | Source, Frequency, Radio Setup, Radio Standard, TDSCDMA |
| Example | :SOUR:FREQ:CHAN:BAND BANDE |
| Initial S/W Revision | A.11.50 |

BAND F

Selects BAND F as the band for the current step.

| | |
|----------------------|--|
| Key Path | Source, Frequency, Radio Setup, Radio Standard, TDSCDMA |
| Example | :SOUR:FREQ:CHAN:BAND BANDF |
| Initial S/W Revision | A.11.50 |

Radio Band Link

Allows you to specify the channel band type as either uplink or downlink link direction. This value is used in conjunction with the channel band and channel number to determine the absolute frequency output by the

source. When set to “Uplink”, the source will calculate the uplink frequency using an uplink formula together with the selected channel band and channel number . When set to “Downlink”, the source will calculate the downlink frequency using a downlink formula together with the selected channel band and channel number.

| | |
|--------------------------------------|---|
| Key Path | Source, Frequency, Radio Setup |
| Remote Command | :SOURce:RADio:BAND:LINK DOWN UP :SOURce:RADio:BAND:LINK? |
| Example | :SOUR:RAD:BAND:LINK UP |
| Preset | DOWN |
| Range | DOWN UP |
| Backwards Compatibility SCPI | :SOURce:RADio:DEvice BTS MS :SOURce:RADio:DEvice? |
| Backwards Compatibility Notes | BTS maps to the Downlink frequency MS maps to the Uplink frequency |
| Initial S/W Revision | A.05.00 |

Set Reference Frequency

This key allows you to set the frequency reference. Pressing this key turns the frequency reference state to ON, sets the reference frequency value to the current frequency, maintains this frequency at the RF output, and sets the displayed frequency to 0.00 Hz. All subsequent frequencies entered under Source>Frequency>Frequency are interpreted as being relative to this reference frequency.

When you use a frequency reference, the signal generator outputs a frequency that is set relative to the reference frequency by the value entered under Source>Frequency>Frequency as follows:

Output frequency = reference frequency - entered frequency

Where:

reference frequency equals the original RF frequency entered under Source>Frequency>Frequency and set as the reference frequency

entered frequency equals a new value entered under Source>Frequency>Frequency

In addition, the displayed frequency value will be the same as the value entered under Source>Frequency>Frequency.

NOTE

If Freq Reference is set to ON with a reference value set, entering a value under Source>Frequency>Frequency and pressing Set Frequency Reference will add that value to the existing Freq Reference value.

If you wish to change the reference frequency value to the new value entered under Source>Frequency>Frequency, first you must set Freq Reference to OFF and then press Set Frequency Reference.

| | |
|-----------------|--------------------------|
| Key Path | Source, Frequency |
|-----------------|--------------------------|

| | |
|-----------------------------|--|
| Remote Command | :SOURce:FREQuency:REFerence:SET |
| Example | :SOUR:FREQ:REF:SET |
| Dependencies | This setting is unavailable, and is grayed out when the List Sequencer is turned ON. |
| Initial S/W Revision | A.05.00 |

Freq Reference

This key allows you to toggle the state of the frequency reference. When the frequency reference state is ON, an annunciator is displayed on the main source view to indicate this state to the user.

When you use a frequency reference, the signal generator outputs a frequency that is set relative to the reference frequency by the value entered under Source>Frequency>Frequency as follows:

Output frequency = reference frequency + entered frequency

Where:

reference frequency equals the original RF frequency entered under Source>Frequency>Frequency and set as the reference frequency

entered frequency equals a new value entered under Source>Frequency>Frequency

For more information on Reference Frequency refer to ["Set Reference Frequency" on page 2532](#)

| Key Path | Source, Frequency |
|-----------------------------|--|
| Remote Command | :SOURce:FREQuency:REFerence <freq> :SOURce:FREQuency:REFerence? :SOURce:FREQuency:REFerence:STATe OFF ON 0 1 :SOURce:FREQuency:REFerence:STATe? |
| Example | :SOUR:FREQ:REF 0.00 Hz :SOUR:FREQ:REF:STATe ON |
| Dependencies | This setting is unavailable, and is grayed out when the List Sequencer is turned ON. |
| Couplings | The frequency reference state is coupled to the frequency reference set immediate action. When the reference set immediate action key is pressed, or the SCPI command issued, it turns the frequency reference state ON. |
| Preset | 0.00 Hz OFF |
| Min | 0.00 Hz |
| Max | Hardware Dependant: Option 503 = 3.6 GHz Option 504 = 3.8 GHz Option 506 = 6.00 GHz |
| Initial S/W Revision | A.05.00 |

Freq Offset

Allows you to specify the frequency offset value. When the frequency offset state is ON, an annunciator is displayed on the main source view to indicate this state to the user.

When the frequency offset is set to zero (0) and you set a new offset value, the displayed frequency value will change as follows and the RF output frequency will not change:

Displayed value = output frequency + offset value

Where:

output frequency equals the original frequency entered under Source>Frequency>Frequency

offset value equals the value entered under Source>Frequency>Freq Offset

When the frequency offset is set to a value other than zero (0) and you enter a new frequency value under Source>Frequency>Frequency, the displayed frequency will be the same as the value entered and the RF output frequency will be equal to the value entered minus the offset value as follows:

Output frequency = entered frequency – offset frequency

Displayed frequency = output frequency + offset frequency

Displayed frequency = entered frequency

Where:

entered frequency equals the frequency entered under Source>Frequency>Frequency

offset frequency equals the value previously entered and set under Source>Frequency>Freq Offset

| Key Path | Source, Frequency |
|-----------------------|--|
| Remote Command | :SOURce:FREQuency:OFFSet <freq> :SOURce:FREQuency:OFFSet? |
| Example | :SOUR:FREQ:OFFS 0 Hz |
| Dependencies | This setting is unavailable, and is grayed out when the List Sequencer is turned ON. |
| Preset | 0 Hz |
| Min | -100.00 GHz |
| Max | 100.00 GHz |
| Initial S/W Revision | A.05.00 |

Modulation Setup

Allows access to the menus for setting up the available modulation types: "ARB" on page 2535, "AM" on page 2581, "FM" on page 2583, and "PM" on page 2584.

| Key Path | Source |
|----------------------|---------|
| Initial S/W Revision | A.05.00 |

ARB

Allows you access to the ARB sub-menus.

| | |
|----------------------|---------------------------------|
| Key Path | Source, Modulation Setup |
| Initial S/W Revision | A.05.00 |

ARB

Allows you to toggle the state of the ARB function. When the ARB is On, a “MOD” annunciator is displayed in the system settings panel. When the ARB is turned Off, the MOD annunciator is cleared

| | |
|--------------------------|---|
| Key Path | Source, Modulation Setup, ARB |
| Remote Command | :SOURce:RADio:ARB[:STATe] ON OFF 1 0 :SOURce:RADio:ARB[:STATe]? |
| Example | :SOUR:RAD:ARB OFF :SOUR:RAD:ARB? |
| Notes | If the ARB is ON, a user then loads or deletes another file to ARB memory, the playing waveform segment may not keep phase continuity during the ARB memory operation. The waveform will be replayed after the ARB operation is finished. |
| Dependencies | This setting is for independent mode and has no effect on 3.3.8 list sequencer mode. Setting "Sequencer" on page 2586 Sequencer to On will put source enter list sequencer mode, and even if ARB state is On, the ARB file will not be played. Setting "Sequencer" on page 2586 Sequencer to Off will make source leave list sequencer mode, and this setting will take effect immediately. The ARB can only be turned on when there is a waveform file selected for playback. On the GUI if no waveform is selected, this key is grayed out. If you send the SCPI command to turn the ARB on with no waveform selected for playback, the ARB state remains OFF and an error is generated. "- When you try to recall a certain set of states in which the selected waveform is not in ARB memory and the ARB state is On, errors are reported |
| Couplings | If "Real-Time AWGN" on page 2546 AWGN State is On and this setting is On, "RF Power" on page 2500 RF Power will be adjusted to the value to maintain the AWGN power relationship defined by "Power Control Mode" on page 2547 Power Control Mode and other noise settings |
| Preset | Off |
| Range | On Off |
| Initial S/W Revision | A.05.00 |
| Modified at S/W Revision | A.16.00 (Add couplings with AWGN state) |

Select Waveform

Allows you to access to the waveform selection sub-menus.

Pressing this key changes the central view area to show the Waveform File Selection view.

| | |
|----------------------|--------------------------------------|
| Key Path | Source, Modulation Setup, ARB |
| Initial S/W Revision | A.05.00 |

Select Waveform

Allows you to select a waveform sequence or segment for the dual ARB to play.

| | |
|----------------------|---|
| Key Path | Source, Modulation Setup, ARB, Select Waveform |
| Remote Command | :SOURce:RADio:ARB:WAVeform <string> :SOURce:RADio:ARB:WAVeform? |
| Example | :SOUR:RAD:ARB:WAV "test_waveform.bin" |
| Notes | <p>If intended waveform is not in the memory yet, then issuing this command by SCPI will invoke ARB loading operation first, which involves a delay of unpredictable length. So this command should be followed by the query *OPC?, which holds off subsequent commands until the loading operating is complete.</p> <p><string> - specifies the name of the waveform segment or waveform sequence to be played by the ARB.</p> <p>When in Sequence Analyzer mode, and Include Source is Yes, if the you attempt to play a waveform sequence but not all the required waveform segments are in the ARB playback memory, the application will reject the loading operation with an error is generated .</p> <p>When Include Source is No, if you attempt to play a waveform sequence but not all the required waveform segments are contained in the ARB playback memory, the application will attempt to load the required segments from either the default directory of the current directory. If the ARB memory does not have enough space for all the waveform segments to be loaded, an error is generated and none of the waveform segments is loaded.</p> <p>If the ARB is ON, and you attampt to play a waveform sequence but not all the waveform segments within the sequence could be found to be loaded into ARB memory, an error is generated. The selected waveform keeps the previous value and ARB state remains On.</p> <p>If you specify a waveform segment over SCPI but the waveform segment is not present within ARB playback memory and cannot be found for auto loading within the current directory or the default directory, an error is generatedand the file selection remains unchanged.</p> <p>If you select a waveform for playback and the waveform requires a license that is not installed on the instrument, an error is generated.error is generated.</p> <p>If the ARB is ON and you load a file to ARB memory or delete a file from ARB memory, the playing waveform segment may not keep phase continuity during the ARB memory operation. The waveform will be replayed after the ARB operation is finished.</p> |
| Initial S/W Revision | A.05.00 |

Segments on Hard Disk

Allows you access to the sub-menus for loading waveform segments from the hard disk into ARB memory. The default directory is: D: varb.

Pressing this key changes the current view to the Waveform Management View.

| | |
|-----------------------------|---|
| Key Path | Source, Modulation Setup, ARB, Select Waveform |
| Initial S/W Revision | A.05.00 |

Load Segment To ARB Memory

Allows you to load the selected file into ARB memory. On the front panel you select the file for loading to the ARB memory by highlighting the desired file in the list. Using the SCPI command, you specify the file name on the HDD.

“NVWFM” (none-volatile storage) MSUS (Mass Storage Unit Specifier) is supported in the memory subsystem because the ARB memory cannot be accessed directly. Therefore, files must be downloaded to the instrument hard disk and then loaded into the ARB memory. “NVWFM” MSUS will be mapped to the default directory D: VARB. The SCPI command supports using either “NVWFM” MSUS or specifying a full path. For more information, see [Memory Subsystem \(Remote Command Only\)](#).

If a file of the same name already exists within ARB memory, it is overwritten. If you wish to load two segments of the same name, you must rename one of the segments before loading it into ARB memory. To rename a segment, you can either use Windows File Explorer, or the :MMEMory:COPI command.

| | |
|-----------------------|---|
| Key Path | Source, Modulation Setup, ARB, Select Waveform, Segments on Hard Disk |
| Remote Command | :SOURce:RADio:ARB:LOAD <string> |
| Example | :SOUR:RAD:ARB:LOAD "D: VARB\testwaveform.bin" or :SOUR:RAD:ARB:LOAD "NVWFM:testwaveform.bin" |
| Notes | <p>Because loading the file involves a delay of unpredictable length, this command should be followed by the query *OPC?, which holds off subsequent commands until the loading operating is complete.</p> <p><string> – specifies the path name of the file to load from the HDD into ARB memory. It could be a <full path + filename>, or <“NVWFM” MSUS + colon + filename>.</p> <p>When in Sequence Analyzer mode, and Include Source is Yes, an attempt to load a file to ARB memory will be rejected with an error.</p> <p>When Include Source is No and if there is insufficient free ARB memory to load the selected waveform, an error is generated. .</p> <p>If you specify a file over SCPI, but the file is not at the specified location, an error is generated.</p> <p>If you try to load a waveform file but the file contains less than 500 IQ samples, an error is generated.</p> <p>If you try to load a Signal Studio waveform “*.wfm” which contains invalid waveform header, an error is generated.</p> <p>If the ARB is ON when you load a file to ARB memory or delete a file from ARB memory, the playing waveform segment may not keep phase continuity during the ARB memory operation. The waveform will be replayed after the ARB operation is finished.</p> <p>ARB can be loaded into ARB memory even required licenses do not present on the instrument. In this</p> |

case, a GUI only warning message -800, "Operation complete; Loaded <filename> successfully, but no license <required licenses> installed". User can install required licenses according to <required licenses> string to license it, or multi-pack license it.

Initial S/W Revision A.05.00

Load All To ARB Memory

Allows you to load all the segment files within the currently selected directory into ARB memory. If a file of the same name already exists within ARB memory, it is overwritten. If you wish to load two segments of the same name, you must rename one of the segments before loading it into ARB memory. To rename a segment, you can either use Windows File Explorer, or the :MEMory:COPY command.

| | |
|-----------------------|---|
| Key Path | Source, Modulation Setup, ARB, Select Waveform, Segments on Hard Disk |
| Remote Command | :SOURce:RADio:ARB:LOAD:ALL <string> |
| Example | :SOUR:RAD:ARB:LOAD:ALL "D: varb" |
| Notes | <p><string> - specifies the directory on the HDD to load the files into ARB memory from.</p> <p>When in Sequence Analyzer mode, and Include Source is Yes, an attempt to load all files from a directory to ARB memory is rejected with an error.</p> <p>When Include Source is No and there is insufficient free ARB memory to load all the waveforms, when the ARB memory is full, the copy ceases, and an error is generated.</p> <p>If you specify a directory over SCPI, but the directory does not exist, an error is generated.</p> <p>If the ARB is ON, a user then loads or deletes file to ARB memory, the playing waveform segment may not keep phase continuity during the ARB memory operation. The waveform will be replayed after the ARB operation is finished.</p> |
| Initial S/W Revision | A.05.00 |

Change Directory...

Allows you to change the currently selected directory on the hard disk. Pressing this key opens a standard windows change directory dialog allowing you to select the new directory of interest.

The current directory is used for manually loading waveform segments into ARB memory for playback, and as a search location for waveform segments that are required to be loaded into ARB memory for playback of a waveform sequence or a list sequence.

| | |
|----------------------|--|
| Key Path | Source, Modulation Setup, ARB, Select Waveform, Segments on Hard Disk |
| Notes | No remote command, SCPIfront panel only. |
| Initial S/W Revision | A.05.00 |

Default Directory...

Allows you to change the default directory. It is used as a search location for waveform segments that are required to be loaded into ARB memory for playback of a waveform sequence, and as a search location for

selecting waveforms using SCPI.

| | |
|-----------------------------|---|
| Key Path | Source, Modulation Setup, ARB, Select Waveform, Segments on Hard Disk |
| Remote Command | :SOURce:RADio:ARB:DEFAult:DIRectory <string> :SOURce:RADio:ARB: DEFAult:DIRectory? |
| Example | :SOUR:RAD:ARB:DEF:DIR "D:\ArbFiles" :SOUR:RAD:ARB:DEF:DIR? |
| State Saved | Persistent, survives a power cycle and a preset but not saved in the instrument state |
| Initial S/W Revision | A.05.00 |

Segments in ARB Memory

Allows you access to the sub-menus for managing the files within ARB memory.

| | |
|-----------------------------|---|
| Key Path | Source, Modulation Setup, ARB, Select Waveform |
| Initial S/W Revision | A.05.00 |

Delete Segment From ARB Mem

Allows you to remove a segment from ARB playback memory.

| | |
|-----------------------------|---|
| Key Path | Source, Modulation Setup, ARB, Select Waveform, Segments in ARB Memory |
| Remote Command | :SOURce:RADio:ARB:DELete <string> |
| Example | :SOUR:RAD:ARB:DEL "testwaveform.bin" |
| Notes | <p><string> - specifies the waveform to be deleted from the ARB playback memory.</p> <p>When in Sequence Analyzer mode and Include Source is Yes, an attempt to delete a file from ARB memory is rejected with an error.</p> <p>When Include Source is No and you specify a file that does not exist within ARB memory, an error is generated.</p> <p>It is possible to delete files from within the ARB memory when the ARB is ON. However, if you attempt to delete the file that is currently playing an error is generated.</p> <p>It is possible to delete a file from within the ARB memory when the sequencer state is ON and the file is not being used by the List Sequencer. If you attempt to delete a file which is being used by the list sequencer, an error is generated.</p> <p>When sequencer state is On, even if ARB state is On, the selected waveform will not be played. In this case, if the selected waveform is not used in List Sequence, it can be deleted and the ARB state is turned Off.</p> <p>If the ARB is ON and you load a file to ARB memory or delete a file from ARB memory, the playing waveform segment may not keep phase continuity during the ARB memory operation. The waveform will be replayed after the ARB operation is finished.</p> |
| Initial S/W Revision | A.05.00 |

Delete All From ARB Memory

Allows you to remove all segments from ARB playback memory.

| | |
|----------------------|--|
| Key Path | Source, Modulation Setup, ARB, Select Waveform, Segments in ARB Memory |
| Remote Command | :SOURce:RADio:ARB:DELeTe:ALL |
| Example | :SOUR:RAD:ARB:DELeTe:ALL |
| Notes | <p>When in Sequence Analyzer mode and Include Source is Yes, an attempt to delete all files from ARB memory is rejected with an error.</p> <p>When Include Source is No and you attempt to delete all files from ARB memory when the ARB is currently playing a file, all files except the one playing are deleted and an error is generated.</p> <p>If you attempt to delete all files from ARB memory when there are waveform files used in "List Sequencer" on page 2585 and "Sequencer" on page 2586 state is ON, all files except the files currently being used in list sequencer are deleted, and an error is generated.</p> <p>If the ARB is ON and you load a file to ARB memory or delete a file from ARB memory, the playing waveform segment may not keep phase continuity during the ARB memory operation. The waveform will be replayed after the ARB operation is finished.</p> |
| Initial S/W Revision | A.05.00 |

Query ARB Memory File List (Remote Command Only)

Queries the test set for the list of waveform segments in the ARB memory.

NOTE

This command returns a string for waveform segment names in ARB memory. If you want a string list of waveform segments in the ARB memory, use "[Query ARB Memory Full File List \(Remote Command Only\)](#)" on page 2540.

| | |
|----------------------|--|
| Remote Command | :SOURce:RADio:ARB:CATalog? |
| Example | :SOUR:RAD:ARB:CATalog? |
| Notes | <p>The return data is in the following format:</p> <p><integer> - memory used</p> <p><integer> - memory free</p> <p><string> ... - comma separated list of waveform segments within ARB memory</p> |
| Initial S/W Revision | A.05.00 |

Query ARB Memory Full File List (Remote Command Only)

Queries the test set for the string list of waveform segments in the ARB memory. It returns a string list for waveform segment names in the ARB memory.

| | |
|----------------|---|
| Remote Command | :SOURce:RADio:ARB:FCATalog? |
| Example | :SOUR:RAD:ARB:FCATalog? |
| Notes | <p>The return data is in the following format:</p> <p><integer> - memory used</p> |

| | |
|----------------------|---|
| | <integer> - memory free <integer> - file count in ARB memory <string>, <string>, ... <string> - comma separated string list of waveform segments within ARB memory Example: SOUR:RAD:ARB:FCAT? EXT returns: 27499,2069653,3,"c2k.wfm","gsm.wfm","wcdma.wfm" |
| Initial S/W Revision | A.09.00 |

ARB Setup

Allows access to the ARB setup sub-menus.

| | |
|----------------------|--------------------------------------|
| Key Path | Source, Modulation Setup, ARB |
| Initial S/W Revision | A.05.00 |

Sample Rate

Allows you to set the ARB waveform playback sample rate.

| | |
|-----------------------|---|
| Key Path | Source, Modulation Setup, ARB, ARB Setup |
| Remote Command | :SOURce:RADio:ARB:SCLock:RATE <freq> :SOURce:RADio:ARB:SCLock:RATE? |
| Example | :SOUR:RAD:ARB:SCL:RATE 48.00 MHz |
| Notes | If there is a sample rate specified in the header of the waveform file, changing that sample rate is not recommended, as it may cause problems with burst timing. |
| Dependencies | When a new waveform is selected for playback the settings contained within the associated waveform header file are applied to the ARB. The sample rate is one of the values stored within the header file. If the newly selected waveform file has an associated header file, the sample rate is updated with the value from the header file. The sample rate will remain unchanged if the newly selected waveform does not have an associated header file. |
| Preset | 125.00 MHz |
| Min | 1.00 kHz |
| Max | 125.00 MHz |
| Initial S/W Revision | A.05.00 |

Run-Time Scaling

Allows you to adjust the run-time scaling value. The run-time scaling value is applied in real-time while the waveform is playing.

| | |
|----------|---|
| Key Path | Source, Modulation Setup, ARB, ARB Setup |
|----------|---|

| | |
|-----------------------------|--|
| Remote Command | :SOURce:RADio:ARB:RSCaling <real> :SOURce:RADio:ARB:RSCaling? |
| Example | :SOUR:RAD:ARB:RSC 100.00 |
| Dependencies | When a new waveform is selected for playback the settings contained within the associated waveform header file are applied to the ARB. The run-time scaling is one of the values stored within the header file. If the newly selected waveform file has an associated header file, the run-time scaling is updated with the value from the header file. The run-time scaling will remain unchanged if the newly selected waveform does not have an associated header file. |
| Preset | 70.00 % |
| Min | 1.00 % |
| Max | 100.00 % |
| Initial S/W Revision | A.05.00 |

Baseband Freq Offset

Allows you to adjust the value by which the baseband frequency is offset relative to the carrier.

| | |
|-----------------------------|---|
| Key Path | Source, Modulation Setup, ARB, ARB Setup |
| Remote Command | :SOURce:RADio:ARB:BASEband:FREQuency:OFFSet <freq> :SOURce:RADio:ARB:BASEband:FREQuency:OFFSet? |
| Example | :SOUR:RAD:ARB:BAS:FREQ:OFFS 0.00 Hz |
| Dependencies | When a new waveform is selected for playback the settings contained within the associated waveform header file are applied to the ARB. The baseband frequency offset is one of the values stored within the header file. If the newly selected waveform file has an associated header file, the baseband frequency offset is updated with the value from the header file. The baseband frequency offset will remain unchanged if the newly selected waveform does not have an associated header file. |
| Preset | 0.00 Hz |
| Min | -50.00 MHz |
| Max | 50.00 MHz |
| Initial S/W Revision | A.05.00 |

Edit RMS

Allows you to edit or calculate current RMS of selected waveform.

| | |
|-----------------------------|---|
| Key Path | Source, Modulation Setup, ARB, ARB Setup |
| Initial S/W Revision | A.14.50 |

Current RMS

Allows you to directly specify current RMS value used to playback currently selected waveform. Please note incorrect RMS value may cause inaccurate power output in E6640A that is sensitive to RMS value.

This setting is also updated by RMS in waveform header or updated when invoking RMS calculation operation.

This setting can be saved to the header of currently selected waveform by invoking ["Save Setup To Header" on page 2580](#) "Save Setup To Header".

| | |
|-----------------------------|---|
| Key Path | Source, Modulation Setup, ARB, ARB Setup, Edit RMS |
| Remote Command | :SOURce:RADio:ARB:RMS <float> :SOURce:RADio:ARB:RMS? |
| Example | :SOUR:RAD:ARB:HEAD:RMS 0.7 :SOUR:RAD:ARB:HEAD:RMS? |
| Notes | Valid range is 0 to 1.414, values outside the range will be clipped to the closest boundary. Note this value does not affect "List Sequencer" on page 2585 Source List Sequencer that always uses RMS value resides in each ARB header. If want this value to take effect in list sequencer, use "Save Setup To Header" on page 2580 "Save Setup to Header" to save current RMS value to header first, then play the ARB in source list sequencer. |
| Dependencies | When a new waveform is selected for playback, this setting is updated by the RMS value defined in associated waveform header file. If selected waveform has no associated header file or header file does not specify RMS value, then instrument will try to calculate out one automatically. Calculating RMS can also update this setting. |
| Preset | 0 |
| Range | 0 ~ 1.414 |
| Initial S/W Revision | A.14.50 |

RMS Calculation Mode

Allows you to specify the mode to calculate the current RMS.

| | |
|-----------------------------|--|
| Key Path | Source, Modulation Setup, ARB, ARB Setup, Edit RMS |
| Remote Command | :SOURce:RADio:ARB:RMS:CALCulation:MODE AUTO M1 M2 M3 M4 :SOURce:RADio:ARB:RMS:CALCulation:MODE? |
| Example | :SOUR:RAD:ARB:RMS:CALC:MODE AUTO |
| Notes | If no waveform is selected, or selected waveform is waveform sequence, the key will grey out. |
| Preset | AUTO |
| Range | AUTO M1 M2 M3 M4 |
| Initial S/W Revision | A.14.50 |

Auto

RMS will be calculated based on the whole sample range of current selected waveform.

| | |
|----------------------|--|
| Key Path | Source, Modulation Setup, ARB, ARB Setup, Edit RMS, Calculate RMS, RMS Calculation Mode |
| Example | :SOUR:RAD:ARB:RMS:CALC:MODE AUTO |
| Initial S/W Revision | A.14.50 |

Marker 1

Selects marker 1 to designate sample range used for RMS calculation.

| | |
|----------------------|---|
| Key Path | Source, Modulation Setup, ARB, ARB Setup, Edit RMS, Calculate RMS, RMS Calculation Mode , Marker |
| Example | :SOUR:RAD:ARB:RMS:CALC:MODE M1 |
| Initial S/W Revision | A.14.50 |

Marker 2

Selects marker 2 to designate sample range used for RMS calculation.

| | |
|----------------------|---|
| Key Path | Source, Modulation Setup, ARB, ARB Setup, Edit RMS, Calculate RMS, RMS Calculation Mode , Marker |
| Example | :SOUR:RAD:ARB:RMS:CALC:MODE M2 |
| Initial S/W Revision | A.14.50 |

Marker 3

Selects marker 3 to designate sample range used for RMS calculation.

| | |
|----------------------|---|
| Key Path | Source, Modulation Setup, ARB, ARB Setup, Edit RMS, Calculate RMS, RMS Calculation Mode , Marker |
| Example | :SOUR:RAD:ARB:RMS:CALC:MODE M3 |
| Initial S/W Revision | A.14.50 |

Marker 4

Selects marker 4 to designate sample range used for RMS calculation.

| | |
|----------------------|---|
| Key Path | Source, Modulation Setup, ARB, ARB Setup, Edit RMS, Calculate RMS, RMS Calculation Mode , Marker |
| Example | :SOUR:RAD:ARB:RMS:CALC:MODE M4 |
| Initial S/W Revision | A.14.50 |

Calculate RMS

Allows you to calculate current RMS based on mode selected. This will update ["Current RMS" on page 2543](#) Current RMS setting.

| | |
|----------------------|--|
| Key Path | Source, Modulation Setup, ARB, ARB Setup, Edit RMS, Calculate RMS |
| Remote Command | :SOURce:RADio:ARB:RMS:CALCulate |
| Example | :SOUR:RAD:ARB:RMS:CALC |
| Notes | <p>If no waveform is selected, invoking this operation will get error “-221 Setting conflict; No waveform is selected for RMS operation”.</p> <p>If no waveform is selected, or selected waveform is waveform sequence, the key will grey out.</p> <p>If selected waveform does not contain marker data, but "RMS Calculation Mode" on page 2543 “RMS Calculation Mode” is set to marker, under this circumstance, invoking calculation operation will get error “-221 Setting conflict; There is no marker for currently selected waveform, auto RMS calculation mode is used instead”, and "RMS Calculation Mode" on page 2543 “RMS Calculation Mode” will be coupled to “Auto” mode automatically.</p> <p>RMS calculation does not suit for waveform sequence. If selected waveform is waveform sequence file, invoking this operation will get error “-221 Setting conflict; RMS calculation does not apply to waveform sequence”. But users can still edit current RMS as play parameter, and can save current RMS to waveform sequence header for later use.</p> |
| Initial S/W Revision | A.14.50 |

Use Header RMS

Allows you to quickly set RMS in ARB header to ["Current RMS" on page 2543](#) Current RMS setting.

| | |
|----------------------|---|
| Key Path | Source, Modulation Setup, ARB, ARB Setup, Edit RMS, |
| Notes | <p>No remote command, front panel only.</p> <p>If no waveform is selected, the key will grey out.</p> <p>If no waveform is selected, invoking this operation will get error “-221 Setting conflict; No waveform is selected for RMS operation”.</p> |
| Initial S/W Revision | A.14.50 |

Real-Time AWGN Setup

The source allows you to apply additive white Gaussian noise (AWGN) to a carrier in real time while the modulating waveform plays in the dual ARB player. Pressing this key allows access to the real time AWGN sub-menus and changes the central display area to show the AWGN Setup view.

This feature is controlled by E6650A-AW1 option

| | |
|----------------------|--|
| Key Path | Source, Modulation Setup, ARB, ARB Setup |
| Notes | This menu only appears and related SCPIs are only available when E6650A-AW1 option presents. |
| Initial S/W Revision | A.16.00 |

Real-Time AWGN

Allows you to enable or disable adding real-time AWGN to the carrier modulated by the waveform currently being played by the dual ARB.

| | |
|-----------------------------|--|
| Key Path | Source, Modulation Setup, ARB, ARB Setup, Real-Time AWGN Setup |
| Remote Command | :SOURce:RADio:ARB:NOISe[:STATe] ON OFF 1 0 :SOURce:RADio:ARB:NOISe[:STATe]? |
| Example | :SOUR:RAD:ARB:NOIS OFF |
| Dependencies | When a new waveform is selected for playback the settings contained within the associated waveform header file are applied to the ARB. The AWGN state is one of the values stored within the header file. If the newly selected waveform file has an associated header file, the AWGN state is updated with the value from the header file. The AWGN state will remain unchanged if the newly selected waveform does not have an associated header file. |
| Couplings | If this setting is On and "ARB" on page 2535 ARB State is On, "RF Power" on page 2500 RF Power will be adjusted to the value to maintain the AWGN power relationship defined by "Power Control Mode" on page 2547 Power Control Mode and other noise settings |
| Preset | Off |
| Range | On Off |
| Initial S/W Revision | A.16.00 |

Carrier To Noise Ratio

Allows you to specify the carrier to noise ratio (C/N) in dB. The carrier power is defined as the total modulated signal power without noise power added. The noise power is applied over the specified bandwidth of the carrier signal.

| | |
|-----------------------------|--|
| Key Path | Source, Modulation Setup, ARB, ARB Setup, Real-Time AWGN Setup |
| Remote Command | :SOURce:RADio:ARB:NOISe:CN <ampl> :SOURce:RADio:ARB:NOISe:CN? |
| Example | :SOUR:RAD:ARB:NOIS:CN 0.00 dB |
| Dependencies | When a new waveform is selected for playback the settings contained within the associated waveform header file are applied to the ARB. The AWGN C/N ratio is one of the values stored within the header file. If the newly selected waveform file has an associated header file, the AWGN C/N ratio is updated with the value from the header file. The AWGN C/N ratio will remain unchanged if the newly selected waveform does not have an associated header file. |
| Preset | 0.00 dB |
| Min | -100.00 dB |
| Max | 100.00 dB |
| Initial S/W Revision | A.16.00 |

Carrier Bandwidth

Allows you to specify the bandwidth over which the AWGN is applied. The carrier RMS power and the noise power are integrated over the selected carrier bandwidth for the purpose of calculating carrier to noise ratio (C/N).

| | |
|-----------------------------|--|
| Key Path | Source, Modulation Setup, ARB, ARB Setup, Real-Time AWGN Setup |
| Remote Command | :SOURce:RADio:ARB:NOISe:CBWidth <freq> :SOURce:RADio:ARB:NOISe:CBWidth? |
| Example | :SOUR:RAD:ARB:NOIS:CBW 1.00 Hz |
| Dependencies | When a new waveform is selected for playback the settings contained within the associated waveform header file are applied to the ARB. The AWGN carrier bandwidth is one of the values stored within the header file. If the newly selected waveform file has an associated header file, the AWGN carrier bandwidth is updated with the value from the header file. The AWGN carrier bandwidth will remain unchanged if the newly selected waveform does not have an associated header file. |
| Min | 1.00 Hz |
| Max | 200.00 MHz |
| Initial S/W Revision | A.16.00 |

Noise Bandwidth

Allows you to specify the flat noise bandwidth of the real-time noise for an ARB waveform.

| | |
|-----------------------------|--|
| Key Path | Source, Modulation Setup, ARB, ARB Setup, Real-Time AWGN Setup |
| Remote Command | :SOURce:RADio:ARB:NOISe:BANDwidth <freq> :SOURce:RADio:ARB:NOISe:BANDwidth? |
| Example | :SOUR:RAD:ARB:NOIS:BAND 1.00 Hz |
| Notes | Generally, flat noise bandwidth should be set slightly wider than the carrier bandwidth (typically 1.6 times wider) |
| Notes | Max Noise Bandwidth equals $0.8 * \text{Maximum ARB Sample Rate}$ reported in HW capability |
| Dependencies | When a new waveform is selected for playback the settings contained within the associated waveform header file are applied to the ARB. The AWGN carrier bandwidth is one of the values stored within the header file. If the newly selected waveform file has an associated header file, the AWGN carrier bandwidth is updated with the value from the header file. The AWGN carrier bandwidth will remain unchanged if the newly selected waveform does not have an associated header file. |
| Preset | 1.00 Hz |
| Min | 1.00 Hz |
| Max | 160.00 MHz |
| Initial S/W Revision | A.16.00 |

Power Control Mode

This setting offers four ways to control the RF output power when adding AWGN to a signal.

| | |
|----------------------|---|
| Key Path | Source, Modulation Setup, ARB, ARB Setup, Real-Time AWGN Setup |
| Remote Command | :SOURce:RADio:ARB:NOISe:POWer:CONTRol[:MODE] TOTal CARRier NOISe NCHannel :SOURce:RADio:ARB:NOISe: POWer:CONTRol[:MODE]? |
| Example | :SOUR:RAD:ARB:NOIS:POW:CONT NCHannel :SOUR:RAD:ARB:NOIS:POW:CONT? |
| Preset | TOTal |
| Range | Total Power Carrier Power Total Noise Power Noise Power in Channel |
| Initial S/W Revision | A.16.00 |

Total

Set the power control mode as total power.

| | |
|----------------------|---|
| Key Path | Source, Modulation Setup, ARB, ARB Setup, Real-Time AWGN Setup, Power Control Mode |
| Example | :SOUR:RAD:ARB:NOIS:POW:CONT TOTal |
| Couplings | Set to this value will make Carrier Power Carrier Power, Total Noise Power Total Noise Power, and Channel Noise Power Channel Noise Power buttons invisible on menu. Selecting Total as the power control mode makes the total power and C/N independent variables while making the carrier power and total noise power dependent variables. The dependent variables carrier power and total noise power are set by the total power, C/N, and the rest of the Noise settings. The carrier power and total noise power change as any noise parameter is adjusted to keep the total power and the C/N at their last specified values. |
| Initial S/W Revision | A.16.00 |

Carrier

Set the power control mode as carrier power.

| | |
|----------------------|---|
| Key Path | Source, Modulation Setup, ARB, ARB Setup, Real-Time AWGN Setup, Power Control Mode |
| Example | :SOUR:RAD:ARB:NOIS:POW:CONT CARRier |
| Couplings | Set to this value will make Carrier Power Carrier Power button visible, while Total Noise Power Total Noise Power and Channel Noise Power Channel Noise Power buttons invisible from menu. Selecting Carrier as the power control mode makes the carrier power and C/N independent variables while making the total power and total noise power dependent variables. The dependent variables total power and total noise power are set by the carrier power, C/N, and the rest of the Noise settings. The total power and total noise power change as any noise parameter is adjusted to keep the carrier power and the C/N at their last specified values. |
| Initial S/W Revision | A.16.00 |

Total Noise

Set the power control mode as total noise power.

| | |
|-----------------------------|---|
| Key Path | Source, Modulation Setup, ARB, ARB Setup, Real-Time AWGN Setup, Power Control Mode |
| Example | :SOUR:RAD:ARB:NOIS:POW:CONT NOISe |
| Couplings | Set to this value will make Total Noise Power Total Noise Power button visible, while Carrier Power Carrier Power and Channel Noise Power Channel Noise Power buttons invisible from menu. Selecting Total Noise as the power control mode makes the total noise power and C/N independent variables while making the total power and carrier power dependent variables. The dependent variables total power and carrier power are set by the total noise power, C/N, and the rest of the Noise settings. The total power and carrier power change as any noise parameter is adjusted to keep the total noise power and the C/N at their last specified values. |
| Initial S/W Revision | A.16.00 |

Channel Noise

Set the power control mode as channel noise power.

| | |
|-----------------------------|--|
| Key Path | Source, Modulation Setup, ARB, ARB Setup, Real-Time AWGN Setup, Power Control Mode |
| Example | :SOUR:RAD:ARB:NOIS:POW:CONT NCHannel |
| Couplings | Set to this value will make Channel Noise Power Channel Noise Power button visible, while Total Noise Power Total Noise Power and Carrier Power Carrier Power buttons invisible from menu. Selecting Channel Noise as the power control mode makes the noise power in channel and C/N independent variables while making the carrier power and total noise power dependent variables. The dependent variables carrier power and total noise power are set by the channel noise power, C/N, and the rest of the Noise settings. The carrier power and total noise power change as any noise parameter is adjusted to keep the channel noise power and the C/N at their last specified values. |
| Initial S/W Revision | A.16.00 |

Trigger Type

Allows access to the trigger type sub-menus. The setting for trigger type determines the behavior of the waveform when it plays.

| | |
|-----------------------------|--|
| Key Path | Source, Modulation Setup, ARB |
| Remote Command | :SOURce:RADio:ARB:TRIGger:TYPE CONTInuous SINGLE SADVance :SOURce:RADio:ARB:TRIGger:TYPE? |
| Example | :SOUR:RAD:ARB:TRIG:TYPE CONT :SOUR:RAD:ARB:TRIG:TYPE? |
| Notes | Gated trigger type will be implemented at a later release |
| Preset | CONTInuous |
| Range | Continuous Single Seg Adv |
| Initial S/W Revision | A.05.00 |

Continuous

Sets the active trigger type to Continuous. If Continuous is already selected as the active trigger type, pressing this key allows access to the continuous trigger type setup menu. In Continuous trigger mode, the waveform repeats continuously.

| | |
|-----------------------------|--|
| Key Path | Source, Modulation Setup, ARB, Trigger Type |
| Remote Command | :SOURce:RADio:ARB:TRIGger:TYPE:CONTinuous[:TYPE] FREE TRIGger RESet :SOURce:RADio:ARB:TRIGger:TYPE:CONTinuous[:TYPE]? |
| Example | :SOUR:RAD:ARB:TRIG:TYPE:CONT FREE |
| Preset | FREE |
| Range | Free Run Trigger + Run Reset + Run |
| Initial S/W Revision | A.05.00 |

Free Run

Selects Free Run as the trigger response for the continuous trigger type. Free Run sets the waveform generator to play a waveform sequence or segment continuously, without waiting for a trigger. In this mode, the waveform generator does not respond to triggers.

| | |
|-----------------------------|--|
| Key Path | Source, Modulation Setup, ARB, Trigger Type, Continuous |
| Example | :SOUR:RAD:ARB:TRIG:TYPE:CONT FREE |
| Initial S/W Revision | A.05.00 |

Trigger + Run

Sets Trigger and Run as the trigger response for the continuous trigger type. Trigger and Run sets the waveform generator to play a waveform sequence or segment continuously when the first trigger is received, and to ignore any subsequent triggers.

| | |
|-----------------------------|--|
| Key Path | Source, Modulation Setup, ARB, Trigger Type, Continuous |
| Example | :SOUR:RAD:ARB:TRIG:TYPE:CONT TRIG |
| Initial S/W Revision | A.05.00 |

Reset + Run

Sets Reset and Run as the trigger response for the continuous trigger type. Reset and Run sets the waveform generator to play a waveform sequence or segment continuously when the first trigger is received. Subsequent triggers reset the waveform sequence or segment to the start, and then play it continuously.

| | |
|-----------------------------|--|
| Key Path | Source, Modulation Setup, ARB, Trigger Type, Continuous |
| Example | :SOUR:RAD:ARB:TRIG:TYPE:CONT RES |
| Initial S/W Revision | A.05.00 |

Single

Sets the active trigger type to Single. If Single is already selected as the active trigger type, pressing this key allows access to the single trigger type setup menu. In Single trigger mode, the waveform plays once.

| | |
|-----------------------------|--|
| Key Path | Source, Modulation Setup, ARB, Trigger Type |
| Remote Command | :SOURce:RADio:ARB:RETRigger ON OFF IMMediate :SOURce:RADio:ARB:RETRigger? |
| Example | :SOUR:RAD:ARB:RETR OFF |
| Notes | ON: Buffered Trigger OFF: No Retrigger Immediate: Restart on Trigger This is defined as an enumerated SCPI command, with ON OFF being considered as enumerated types rather than Boolean. This means the query will return OFF instead of 0, and ON instead of 1. |
| Preset | ON |
| Range | No Retrigger Buffered Trigger Restart on Trigger |
| Initial S/W Revision | A.05.00 |

No Retrigger

Selects No Retrigger as the trigger response for single trigger type. No Retrigger sets the waveform generator to play a waveform sequence or segment once when a trigger is received. Any triggers then received during playback are ignored.

| | |
|-----------------------------|--|
| Key Path | Source, Modulation Setup, ARB, Trigger Type, Single |
| Example | :SOUR:RAD:ARB:RETR OFF |
| Initial S/W Revision | A.05.00 |

Buffered Trigger

Selects Buffered Trigger as the trigger response for single trigger type. Buffered Trigger sets the waveform generator to play a waveform sequence or segment once when a trigger is received. If a trigger is received during playback, the waveform generator plays the sequence or segment to the end, then plays the sequence or segment once more.

| | |
|-----------------------------|--|
| Key Path | Source, Modulation Setup, ARB, Trigger Type, Single |
| Example | :SOUR:RAD:ARB:RETR ON |
| Initial S/W Revision | A.05.00 |

Restart on Trigger

Selects Restart on Trigger as the trigger response for single trigger type. Restart on Trigger sets the waveform generator to play a waveform sequence or segment once when a trigger is received. If a trigger is received during playback, the waveform generator resets and plays the sequence or segment from the start.

| | |
|----------------------|--|
| Key Path | Source, Modulation Setup, ARB, Trigger Type, Single |
| Example | :SOUR:RAD:ARB:RETR IMM |
| Initial S/W Revision | A.05.00 |

Segment Advance

Sets the active trigger type to Segment Advance. If Segment Advance is already selected as the active trigger type, pressing this key allows access to the segment advance trigger type setup menu.

Segment Advance triggering allows you to control the playback of waveform segments within a waveform sequence. When a trigger is received the ARB advances to the next waveform segment within the waveform sequence. This type of triggering ignores the repetition count for the waveform segment within the waveform sequence. For example, if a waveform segment has a repetition count of 10 and you select single segment advance triggering mode, the waveform segment will only play once.

Segment Advance triggering can also be used for waveform segments only. In this situation the same waveform segment is played again when a trigger is received.

| | |
|-----------------------|--|
| Key Path | Source, Modulation Setup, ARB, Trigger Type |
| Remote Command | :SOURce:RADio:ARB:TRIGger:TYPE:SADVance[:TYPE] SINGLE CONTInuous :SOURce:RADio:ARB:TRIGger:TYPE:SADVance[:TYPE] ? |
| Example | :SOUR:RAD:ARB:TRIG:TYPE:SADV SING |
| Preset | CONTInuous |
| Range | Single Continuous |
| Initial S/W Revision | A.05.00 |

Single

Selects Single as the trigger response for Segment Advance trigger type. With single selected, once a trigger is received a segment is played once. If a trigger is received during playback of a segment, the segment plays to completion and the next segment is played once.

| | |
|----------------------|---|
| Key Path | Source, Modulation Setup, ARB, Trigger Type, Segment Advance |
| Example | :SOUR:RAD:ARB:TRIG:TYPE:SADV SING |
| Initial S/W Revision | A.05.00 |

Continuous

Selects Continuous as the trigger response for Segment Advance trigger type. With continuous selected, once a trigger is received a segment is played continuously. When subsequent triggers are received, the currently playing segment plays to completion and then the next segment is played continuously.

| | |
|----------------------|---|
| Key Path | Source, Modulation Setup, ARB, Trigger Type, Segment Advance |
| Example | :SOUR:RAD:ARB:TRIG:TYPE:SADV CONT |
| Initial S/W Revision | A.05.00 |

Trigger Source

The trigger source setting determines how the source receives the trigger that starts the waveform playing. Therefore, this key is grayed out if the trigger type is free run, since free run triggers immediately with no trigger source required.

| | |
|-----------------------|---|
| Key Path | Source, Modulation Setup, ARB |
| Remote Command | :SOURce:RADio:ARB:TRIGger[:SOURce] KEY BUS EXTernal2 :SOURce:RADio:ARB:TRIGger[:SOURce]? |
| Example | :SOUR:RAD:ARB:TRIGger KEY |
| Dependencies | This key is grayed out if the current trigger type is Continuous, Free Run. |
| Preset | EXTernal2 |
| Range | Trigger Key Bus External 2 |
| Initial S/W Revision | A.05.00 |

Trigger Key

Sets the current trigger source to the front panel Trigger key. When Trigger Key is selected, the waveform is triggered when you press the front panel Trigger key.

| | |
|----------------------|--|
| Key Path | Source, Modulation Setup, ARB, Trigger Source |
| Example | :SOUR:RAD:ARB:TRIGger KEY |
| Initial S/W Revision | A.05.00 |

Bus

Sets the current trigger source to Bus. Selecting Bus trigger source enables triggering over GPIB, LAN, or USB using the :SOURce:RADio:ARB:TRIGger:INITiate command.

| | |
|----------------------|--|
| Key Path | Source, Modulation Setup, ARB, Trigger Source |
| Example | :SOUR:RAD:ARB:TRIGger BUS |
| Initial S/W Revision | A.05.00 |

External 2

Sets the current trigger source to External 2. Selecting External 2 enables triggering a waveform by an externally applied signal.

| | |
|----------------------|--|
| Key Path | Source, Modulation Setup, ARB, Trigger Source |
| Example | :SOUR:RAD:ARB:TRIGger EXT2 |
| Notes | Note: When on E6640A, trigger 2 is a bi-directional trigger port. So when trigger 2 has been configured as OUTPUT type, choosing External 2 as the input trigger for the current step will generate error. |
| Initial S/W Revision | A.05.00 |

Trigger Initiate

Used to initiate an immediate trigger event if the trigger source is set to Trigger Key.

| | |
|----------------------|---|
| Key Path | Source, Modulation Setup, ARB |
| Notes | No remote command, SCPI front panel only. |
| Initial S/W Revision | A.05.00 |

Waveform Sequences

Allows access to the waveform sequence sub-menus. Pressing this key changes the central view area to display the Waveform Sequence List view.

| | |
|----------------------|---|
| Key Path | Source, Modulation Setup, ARB |
| Notes | No remote command, SCPI front panel only. |
| Initial S/W Revision | A.05.00 |

Build New Sequence

Allows access to the sub-menus for creating a new waveform sequence. Pressing this key changes the central view area to display the Waveform Sequence Creation and Editing view.

| | |
|----------------------|--|
| Key Path | Source, Modulation Setup, ARB, Waveform Sequences |
| Notes | No remote command, SCPI front panel only. |
| Initial S/W Revision | A.05.00 |

Current Segment

Specifies the selected sequence segment that will be affected by the menu functions.

| | |
|----------------------|---|
| Key Path | Source, Modulation Setup , ARB, Waveform Sequences, Build New Sequence |
| Notes | No remote command, SCPI front panel only. This key is grayed out and unavailable if the sequence is currently empty. |
| Initial S/W Revision | A.05.00 |

Insert New Waveform

Allows you access to the sub-menu for inserting a new waveform segment or sequence. Pressing this key also changes the central display to show the Waveform File Selection View.

| | |
|----------------------|---|
| Key Path | Source, Modulation Setup, ARB, Waveform Sequences, Build New Sequence |
| Notes | No remote command, SCPI front panel only. Waveform segment name string length upper limit is 128 chars. Please do NOT insert waveform which name string exceeds 128 chars. |
| Initial S/W Revision | A.05.00 |

Insert Waveform

Inserts the currently highlighted waveform to the end of the waveform sequence. Pressing this key also returns you to the menus for creating or editing a sequence, and returns the central view to the sequence creation view.

| | |
|----------------------|---|
| Key Path | Source, Modulation Setup, ARB, Waveform Sequences, Build New Sequence, Insert New Waveform |
| Notes | No remote command, SCPI front panel only. Waveform segment name string length upper limit is 128 chars. Please do NOT insert waveform which name string exceeds 128 chars. |
| Initial S/W Revision | A.05.00 |

Segments on Hard Disk

Allows you access to the sub-menus for loading waveform segments from the hard disk into ARB memory. The default directory is: D: varb.

Pressing this key changes the current view to the Waveform Management View.

| | |
|----------------------|---|
| Key Path | Source, Modulation Setup, ARB, Select Waveform |
| Initial S/W Revision | A.05.00 |

Load Segment To ARB Memory

Allows you to load the selected file into ARB memory. On the front panel you select the file for loading to the ARB memory by highlighting the desired file in the list. Using the SCPI command, you specify the file name on the HDD.

“NVWFM” (none-volatile storage) MSUS (Mass Storage Unit Specifier) is supported in the memory subsystem because the ARB memory cannot be accessed directly. Therefore, files must be downloaded to the instrument hard disk and then loaded into the ARB memory. “NVWFM” MSUS will be mapped to the default directory D: VARB. The SCPI command supports using either “NVWFM” MSUS or specifying a full path. For more information, see [Memory Subsystem \(Remote Command Only\)](#).

If a file of the same name already exists within ARB memory, it is overwritten. If you wish to load two segments of the same name, you must rename one of the segments before loading it into ARB memory. To rename a segment, you can either use Windows File Explorer, or the :MMEMory:COPY command.

| | |
|-----------------------------|--|
| Key Path | Source, Modulation Setup, ARB, Select Waveform, Segments on Hard Disk |
| Remote Command | :SOURce:RADio:ARB:LOAD <string> |
| Example | :SOUR:RAD:ARB:LOAD "D: VARB\testwaveform.bin" or :SOUR:RAD:ARB:LOAD "NVWFM:testwaveform.bin" |
| Notes | <p>Because loading the file involves a delay of unpredictable length, this command should be followed by the query *OPC?, which holds off subsequent commands until the loading operating is complete.</p> <p><string> – specifies the path name of the file to load from the HDD into ARB memory. It could be a <full path + filename>, or <“NVWFM” MSUS + colon + filename>.</p> <p>When in Sequence Analyzer mode, and Include Source is Yes, an attempt to load a file to ARB memory will be rejected with an error.</p> <p>When Include Source is No and if there is insufficient free ARB memory to load the selected waveform, an error is generated. .</p> <p>If you specify a file over SCPI, but the file is not at the specified location, an error is generated.</p> <p>If you try to load a waveform file but the file contains less than 500 IQ samples, an error is generated.</p> <p>If you try to load a Signal Studio waveform “*.wfm” which contains invalid waveform header, an error is generated.</p> <p>If the ARB is ON when you load a file to ARB memory or delete a file from ARB memory, the playing waveform segment may not keep phase continuity during the ARB memory operation. The waveform will be replayed after the ARB operation is finished.</p> <p>ARB can be loaded into ARB memory even required licenses do not present on the instrument. In this case, a GUI only warning message -800, “Operation complete; Loaded <filename> successfully, but no license <required licenses> installed”. User can install required licenses according to <required licenses> string to license it, or multi-pack license it.</p> |
| Initial S/W Revision | A.05.00 |

Load All To ARB Memory

Allows you to load all the segment files within the currently selected directory into ARB memory. If a file of the same name already exists within ARB memory, it is overwritten. If you wish to load two segments of the

same name, you must rename one of the segments before loading it into ARB memory. To rename a segment, you can either use Windows File Explorer, or the :MEMory:COpy command.

| | |
|-----------------------------|---|
| Key Path | Source, Modulation Setup, ARB, Select Waveform, Segments on Hard Disk |
| Remote Command | :SOURce:RADio:ARB:LOAD:ALL <string> |
| Example | :SOUR:RAD:ARB:LOAD:ALL "D: varb" |
| Notes | <p><string> - specifies the directory on the HDD to load the files into ARB memory from.</p> <p>When in Sequence Analyzer mode, and Include Source is Yes, an attempt to load all files from a directory to ARB memory is rejected with an error.</p> <p>When Include Source is No and there is insufficient free ARB memory to load all the waveforms, when the ARB memory is full, the copy ceases, and an error is generated.</p> <p>If you specify a directory over SCPI, but the directory does not exist, an error is generated.</p> <p>If the ARB is ON, a user then loads or deletes file to ARB memory, the playing waveform segment may not keep phase continuity during the ARB memory operation. The waveform will be replayed after the ARB operation is finished.</p> |
| Initial S/W Revision | A.05.00 |

Change Directory...

Allows you to change the currently selected directory on the hard disk. Pressing this key opens a standard windows change directory dialog allowing you to select the new directory of interest.

The current directory is used for manually loading waveform segments into ARB memory for playback, and as a search location for waveform segments that are required to be loaded into ARB memory for playback of a waveform sequence or a list sequence.

| | |
|-----------------------------|--|
| Key Path | Source, Modulation Setup, ARB, Select Waveform, Segments on Hard Disk |
| Notes | No remote command, SCPIfront panel only. |
| Initial S/W Revision | A.05.00 |

Default Directory...

Allows you to change the default directory. It is used as a search location for waveform segments that are required to be loaded into ARB memory for playback of a waveform sequence, and as a search location for selecting waveforms using SCPI.

| | |
|-----------------------------|---|
| Key Path | Source, Modulation Setup, ARB, Select Waveform, Segments on Hard Disk |
| Remote Command | :SOURce:RADio:ARB:DEFault:DIRectory <string> :SOURce:RADio:ARB: DEFault:DIRectory? |
| Example | :SOUR:RAD:ARB:DEF:DIR "D:\ArbFiles" :SOUR:RAD:ARB:DEF:DIR? |
| State Saved | Persistent, survives a power cycle and a preset but not saved in the instrument state |
| Initial S/W Revision | A.05.00 |

Segments in ARB Memory

Allows you access to the sub-menus for managing the files within ARB memory.

| | |
|----------------------|---|
| Key Path | Source, Modulation Setup, ARB, Select Waveform |
| Initial S/W Revision | A.05.00 |

Delete Segment From ARB Mem

Allows you to remove a segment from ARB playback memory.

| | |
|-----------------------|---|
| Key Path | Source, Modulation Setup, ARB, Select Waveform, Segments in ARB Memory |
| Remote Command | :SOURce:RADio:ARB:DELeTe <string> |
| Example | :SOUR:RAD:ARB:DEL "testwaveform.bin" |
| Notes | <p><string> - specifies the waveform to be deleted from the ARB playback memory.</p> <p>When in Sequence Analyzer mode and Include Source is Yes, an attempt to delete a file from ARB memory is rejected with an error.</p> <p>When Include Source is No and you specify a file that does not exist within ARB memory, an error is generated.</p> <p>It is possible to delete files from within the ARB memory when the ARB is ON. However, if you attempt to delete the file that is currently playing an error is generated.</p> <p>It is possible to delete a file from within the ARB memory when the sequencer state is ON and the file is not being used by the List Sequencer. If you attempt to delete a file which is being used by the list sequencer, an error is generated.</p> <p>When sequencer state is On, even if ARB state is On, the selected waveform will not be played. In this case, if the selected waveform is not used in List Sequence, it can be deleted and the ARB state is turned Off.</p> <p>If the ARB is ON and you load a file to ARB memory or delete a file from ARB memory, the playing waveform segment may not keep phase continuity during the ARB memory operation. The waveform will be replayed after the ARB operation is finished.</p> |
| Initial S/W Revision | A.05.00 |

Delete All From ARB Memory

Allows you to remove all segments from ARB playback memory.

| | |
|-----------------------|---|
| Key Path | Source, Modulation Setup, ARB, Select Waveform, Segments in ARB Memory |
| Remote Command | :SOURce:RADio:ARB:DELeTe:ALL |
| Example | :SOUR:RAD:ARB:DELeTe:ALL |
| Notes | <p>When in Sequence Analyzer mode and Include Source is Yes, an attempt to delete all files from ARB memory is rejected with an error.</p> <p>When Include Source is No and you attempt to delete all files from ARB memory when the ARB is currently playing a file, all files except the one playing are deleted and an error is generated.</p> <p>If you attempt to delete all files from ARB memory when there are waveform files used in "List</p> |

["Sequencer" on page 2585](#) and ["Sequencer" on page 2586](#) state is ON, all files except the files currently being used in list sequencer are deleted, and an error is generated.

If the ARB is ON and you load a file to ARB memory or delete a file from ARB memory, the playing waveform segment may not keep phase continuity during the ARB memory operation. The waveform will be replayed after the ARB operation is finished.

|----------------------|------------------|

Edit Selected Waveform

Allows access to the sub-menus for editing the details of the currently selected waveform segment.

| | |
|----------------------|--|
| Key Path | Source, Modulation Setup, ARB, Waveform Sequences, Build New Sequence |
| Notes | No remote command, front panel only. |
| Initial S/W Revision | A.05.00 |

Repetitions

Allows you to specify the number of times the currently selected waveform is played within the sequence.

| | |
|----------------------|--|
| Key Path | Source, Modulation Setup, ARB, Waveform Sequences, Build New Sequence, Edit Selected Waveform |
| Notes | No remote command, SCPI front panel only. |
| Preset | 1 |
| Min | 1 |
| Max | 65535 |
| Initial S/W Revision | A.05.00 |

Marker 1

Allows you to enable or disable marker 1 for the currently selected waveform. For a waveform sequence, you can enable and disable markers on a per-segment basis, allowing you to output markers from some waveform segments within the sequence, but not for others.

| | |
|----------------------|--|
| Key Path | Source, Modulation Setup, ARB, Waveform Sequences, Build New Sequence, Edit Selected Waveform |
| Notes | No remote command, front panel only. |
| Preset | Enabled |
| Range | Enabled Disabled |
| Initial S/W Revision | A.05.00 |

Marker 2

Allows you to enable or disable marker 2 for the currently selected waveform. For a waveform sequence, you can enable and disable markers on a per-segment basis, allowing you to output markers from some waveform segments within the sequence, but not for others.

| | |
|----------------------|--|
| Key Path | Source, Modulation Setup, ARB, Waveform Sequences, Build New Sequence, Edit Selected Waveform |
| Notes | No remote command, front panel only. |
| Preset | Enabled |
| Range | Enabled Disabled |
| Initial S/W Revision | A.05.00 |

Marker 3

Allows you to enable or disable marker 3 for the currently selected waveform. For a waveform sequence, you can enable and disable markers on a per-segment basis, allowing you to output markers from some waveform segments within the sequence, but not for others.

| | |
|----------------------|--|
| Key Path | Source, Modulation Setup, ARB, Waveform Sequences, Build New Sequence, Edit Selected Waveform |
| Notes | No remote command, front panel only. |
| Preset | Enabled |
| Range | Enabled Disabled |
| Initial S/W Revision | A.05.00 |

Marker 4

Allows you to enable or disable marker 4 for the currently selected waveform. For a waveform sequence, you can enable and disable markers on a per-segment basis, allowing you to output markers from some waveform segments within the sequence, but not for others.

| | |
|----------------------|--|
| Key Path | Source, Modulation Setup, ARB, Waveform Sequences, Build New Sequence, Edit Selected Waveform |
| Notes | No remote command, front panel only. |
| Preset | Enabled |
| Range | Enabled Disabled |
| Initial S/W Revision | A.05.00 |

Delete Segment

Allows you to delete the selected segment from the waveform sequence.

| | |
|----------------------|--|
| Key Path | Source, Modulation Setup, ARB, Waveform Sequences, Build New Sequence |
| Notes | No remote command, front panel only. |
| Initial S/W Revision | A.05.00 |

Save Sequence...

Pressing this key displays the “Save As” dialog. The sequence name is passed to the save as dialog to use as the filename for saving, and the directory the save as dialog will open into is the default waveform directory.

| | |
|----------------------|--|
| Key Path | Source, Modulation Setup, ARB, Waveform Sequences, Build New Sequence |
| Initial S/W Revision | A.05.00 |

Build New Sequence (Remote Command Only)

This command is the SCPI equivalent of the waveform sequence creation features described in ["Build New Sequence" on page 2554](#).

This command writes a waveform sequence file to the hard disk. You must specify the waveform sequence file path and filename which will be saved on the hard disk, and the waveform segment file path and name which will be nested into the waveform sequence file. You can utilize mass storage unit specifier (MSUS) "NVWFM" or use a real full path representation. See the example below. MSUS "NVWFM" is mapped to D: VARB directory on test set hard disk.

Any number of segments, up to a segment count limit of 64, can be used to create a sequence. Repeated segments are included in the count limit.

Each waveform segment name string length upper limit is 128 chars. Please do NOT insert waveform which name string exceeds 128 chars.

The internal source does not support nesting one waveform sequence file into another waveform sequence file.

Remote Command `:SOURce:RADio:ARB:SEQuence[:MWAveform] <filename>, <waveform1>, <reps>, NONE | M1 | M2 | M3 | M4 | M1M2 | M1M3 | M1M4 | M2M3 | M2M4 | M3M4 | M1M2M3 | M1M2M4 | M1M3M4 | M2M3M4 | M1M2M3M4 | ALL, {<waveform2>, <reps>, NONE | M1 | M2 | M3 | M4 | M1M2 | M1M3 | M1M4 | M2M3 | M2M4 | M3M4 | M1M2M3 | M1M2M4 | M1M3M4 | M2M3M4 | M1M2M3M4 | ALL, } ...`

(For additional description of each item, see Notes below ["For Setup SCPI" on page 1472](#) "For Setup SCPI".)

`:SOURce:RADio:ARB:SEQuence[:MWAveform]? <filename>`

(For additional description of each item, see Notes ["For Query SCPI" on page 1473](#) below.)

Example For setup:

`>:SOUR:RAD:ARB:SEQ "NVWFM:testSeq1.seq", "NVWFM:wfmSegment1.wfm", 10, M2M3M4, "NVWFM:wfmSegment2.wfm", 20, M1 M3`

Or

`>:SOUR:RAD:ARB:SEQ "D: VARB\testSeq1.seq", "D: VARB\wfmSegment1.wfm", 10, M2M3M4, "D: VARB\wfmSegment2.wfm", 20, M1 M3`

For query, must specify which waveform sequence file to query.

`>:SOUR:RAD:ARB:SEQ? "NVWFM:testSeq1.seq"`

Or

`>:SOUR:RAD:ARB:SEQ? "D: VARB\testSeq1.seq",`

Notes For Setup SCPI

For the Setup SCPI command, the parameters are:

`<filename>` - String Type
This variable specifies the path and name for the waveform sequence file. The path supports MSUS (NVWFM) or a real full path representation. See example.

`<waveform1>` - String Type
This variable specifies the path and name of the first existing waveform segment. The path supports

MSUS (NVWFM) or a real full path representation. See example.

The segment file must reside within ARB playback memory before it can be played by the ARB player.

<reps> - Integer Type

This variable specifies the number of times a segment or sequence plays before moving on to the next segment or sequence.

<marker> - Enum Type

NONE – This choice disables all four markers for the waveform. Disabling markers means that the waveform sequence ignores the segments or sequence marker settings.

M1, M2, M3, M4 – these choices, either individually or a combination of them, enable the markers for the waveform segment or sequence. Markers not specified are ignored for that segment or sequence.

ALL – This choice enables all four markers in the waveform segment or sequence.

<waveform2> - String type.

This variable specifies the name of a second existing waveform segment. The path supports MSUS (NVWFM) and real full path representation both. See example.

The segment file must reside within ARB playback memory before it can be played by the ARB player.

<reps> same as above, for the 2nd waveform segment.

<marker> same as above, for the 2nd waveform segment.

You can insert several waveform segments into a waveform sequence file. Just repeat inserting waveform segments as described above.

Error Checks for Setup SCPI command:

If you do not specify a filename, or you use an unsupported MSUS (that is, not NVWFM), or have an error in the waveform sequence file path, an error is generated.

Notes

Error Checks for Query SCPI command: (Continued)

If the specified waveform sequence file name suffix is not “.seq”, error is generated.

If you use an unsupported MSUS (that is, not NVWFM), or have an error in the waveform segment file path, an error is generated.

If the first specified waveform file cannot be found, an error is generated.

If you nest one waveform sequence file into another waveform sequence file, an error is generated.

If the specified repetition value is larger than 65535 or smaller than 1, an error is generated.

If the specified marker type is unrecognized, an error is generated.

For Query SCPI

For the Query the parameters are:

<filename> - String type.

This variable specifies the path and name of the waveform sequence file being queried. The path supports MSUS (NVWFM) or a real full path representation. See example.

The return value is a <string>, which includes each waveform segment file name, repetitions, and marker type. For example:

>:SOUR:RAD:ARB:SEQ? “NVWFM:testSeq1.seq”,

<“wfmSegment1. wfm, 10, ALL, wfmSegment2.wfm, 20, M1M3”,

Error Checks for Query SCPI command:

If you do not specify a filename, an error is generated.
If the waveform sequence file name is empty, an error is generated.
If the specified waveform sequence file cannot be found, an error is generated.

| | |
|----------------------|---------|
| Initial S/W Revision | A.05.00 |
|----------------------|---------|

Edit Selected Sequence

Allows access to the sub-menus for editing the sequence currently selected within the Waveform Sequence List view. Pressing this key changes the central view area to display the Waveform Sequence Creation and Editing view.

| | |
|----------|--|
| Key Path | Source, Modulation Setup, ARB, Waveform Sequences |
|----------|--|

| | |
|-------|--------------------------------------|
| Notes | No remote command, front panel only. |
|-------|--------------------------------------|

| | |
|----------------------|---------|
| Initial S/W Revision | A.05.00 |
|----------------------|---------|

Current Directory...

Allows you to change the currently selected directory on the hard disk. Pressing this key opens a standard windows change directory dialog and allows you to select the new directory of interest.

| | |
|----------|--|
| Key Path | Source, Modulation Setup, ARB, Waveform Sequences |
|----------|--|

| | |
|-------|--------------------------------------|
| Notes | No remote command, front panel only. |
|-------|--------------------------------------|

| | |
|----------------------|---------|
| Initial S/W Revision | A.05.00 |
|----------------------|---------|

Waveform Utilities

Allows you access to the waveform utilities sub-menus.

| | |
|----------|--------------------------------------|
| Key Path | Source, Modulation Setup, ARB |
|----------|--------------------------------------|

| | |
|----------------------|---------|
| Initial S/W Revision | A.05.00 |
|----------------------|---------|

Multi-Pack Licenses

Allows you access to the Multi - Pack License sub-menus. Pressing this key also changes the central view area to display the Multi -Pack License Management view.

On modular instrument like E6630A or E6640A, multi-pack license operations are only allowed on the default module, i.e. "Left" module for E6630A or "TRX1" module for E6640A.

| | |
|----------|--|
| Key Path | Source, Modulation Setup, ARB, Waveform Utilities |
|----------|--|

| | |
|--------------|---|
| Dependencies | This key is only available if there is at least one Multi-pack license installed on the instrument. |
|--------------|---|

| | |
|----------------------|---------|
| Initial S/W Revision | A.05.00 |
|----------------------|---------|

Add Waveform

Pressing this key accesses the Add Waveform sub-menu. It also changes the central display area to display the Multi-Pack License Waveform Add view.

| | |
|----------------------|--|
| Key Path | Source, Modulation Setup, ARB, Waveform Utilities, Multi-Pack Licenses |
| Dependencies | This key is only available if there is at least one slot available within at least one multi-pack license. |
| Initial S/W Revision | A.05.00 |

Add Waveform

Allows you to add the currently selected waveform segment to a multi-pack license. The new waveform is added to the next available slot regardless of which slot was selected on the Multi-Pack License Management view.

| | |
|-----------------------|---|
| Key Path | Source, Modulation Setup, ARB, Waveform Utilities, Multi-Pack Licenses, Add Waveform |
| Remote Command | :SYSTem:LKEY:WAVEform:ADD <string> or :SYSTem:LIcense[:FPACK]:WAVEform:ADD <string> |
| Example | SYST:LKEY:WAV:ADD "mywaveform.wfm" or SYST:LIC:WAV:ADD "mywaveform.wfm" |
| Notes | The second SCPI :SYSTem:LIcense[:FPACK]:WAVEform:ADD is provided to be consistent with the style of Keysight signal sources. You can use either one of them. Since adding a waveform segment to a Multi-Pack license causes the license slot to enter the trial period of only 48 hours, pressing this key causes a confirmation dialog to be displayed to ensure you do want to add the waveform segment to the Multi-Pack. If you attempt to license a waveform that is already licensed using another slot an error is generated. . |
| Dependencies | This key is only available if the currently selected file is a secure waveform requiring a license, and there is at least one slot available within at least one multi-pack license. If the waveform highlighted is a secure waveform, but is already licensed, this key will be unavailable. |
| Initial S/W Revision | A.05.00 |

Segments on Hard Disk

Allows you access to the sub-menus for loading waveform segments from the hard disk into ARB memory. The default directory is: D: varb.

Pressing this key changes the current view to the Waveform Management View.

| | |
|----------------------|---|
| Key Path | Source, Modulation Setup, ARB, Select Waveform |
| Initial S/W Revision | A.05.00 |

Load Segment To ARB Memory

Allows you to load the selected file into ARB memory. On the front panel you select the file for loading to the ARB memory by highlighting the desired file in the list. Using the SCPI command, you specify the file name on the HDD.

“NVWFM” (none-volatile storage) MSUS (Mass Storage Unit Specifier) is supported in the memory subsystem because the ARB memory cannot be accessed directly. Therefore, files must be downloaded to the instrument hard disk and then loaded into the ARB memory. “NVWFM” MSUS will be mapped to the default directory D: VARB. The SCPI command supports using either “NVWFM” MSUS or specifying a full path. For more information, see [Memory Subsystem \(Remote Command Only\)](#).

If a file of the same name already exists within ARB memory, it is overwritten. If you wish to load two segments of the same name, you must rename one of the segments before loading it into ARB memory. To rename a segment, you can either use Windows File Explorer, or the :MMEMory:COPI command.

| Key Path | Source, Modulation Setup, ARB, Select Waveform, Segments on Hard Disk |
|-----------------------------|--|
| Remote Command | :SOURce:RADio:ARB:LOAD <string> |
| Example | :SOUR:RAD:ARB:LOAD "D: VARB\testwaveform.bin" or :SOUR:RAD:ARB:LOAD "NVWFM:testwaveform.bin" |
| Notes | <p>Because loading the file involves a delay of unpredictable length, this command should be followed by the query *OPC?, which holds off subsequent commands until the loading operating is complete.</p> <p><string> – specifies the path name of the file to load from the HDD into ARB memory. It could be a <full path + filename>, or <“NVWFM” MSUS + colon + filename>.</p> <p>When in Sequence Analyzer mode, and Include Source is Yes, an attempt to load a file to ARB memory will be rejected with an error.</p> <p>When Include Source is No and if there is insufficient free ARB memory to load the selected waveform, an error is generated. .</p> <p>If you specify a file over SCPI, but the file is not at the specified location, an error is generated.</p> <p>If you try to load a waveform file but the file contains less than 500 IQ samples, an error is generated.</p> <p>If you try to load a Signal Studio waveform “*.wfm” which contains invalid waveform header, an error is generated.</p> <p>If the ARB is ON when you load a file to ARB memory or delete a file from ARB memory, the playing waveform segment may not keep phase continuity during the ARB memory operation. The waveform will be replayed after the ARB operation is finished.</p> <p>ARB can be loaded into ARB memory even required licenses do not present on the instrument. In this case, a GUI only warning message -800, “Operation complete; Loaded <filename> successfully, but no license <required licenses> installed”. User can install required licenses according to <required licenses> string to license it, or multi-pack license it.</p> |
| Initial S/W Revision | A.05.00 |

Load All To ARB Memory

Allows you to load all the segment files within the currently selected directory into ARB memory. If a file of the same name already exists within ARB memory, it is overwritten. If you wish to load two segments of the same name, you must rename one of the segments before loading it into ARB memory. To rename a segment, you can either use Windows File Explorer, or the :MEMory:COpy command.

| | |
|-----------------------------|---|
| Key Path | Source, Modulation Setup, ARB, Select Waveform, Segments on Hard Disk |
| Remote Command | :SOURce:RADio:ARB:LOAD:ALL <string> |
| Example | :SOUR:RAD:ARB:LOAD:ALL "D: varb" |
| Notes | <p><string> - specifies the directory on the HDD to load the files into ARB memory from.</p> <p>When in Sequence Analyzer mode, and Include Source is Yes, an attempt to load all files from a directory to ARB memory is rejected with an error.</p> <p>When Include Source is No and there is insufficient free ARB memory to load all the waveforms, when the ARB memory is full, the copy ceases, and an error is generated.</p> <p>If you specify a directory over SCPI, but the directory does not exist, an error is generated.</p> <p>If the ARB is ON, a user then loads or deletes file to ARB memory, the playing waveform segment may not keep phase continuity during the ARB memory operation. The waveform will be replayed after the ARB operation is finished.</p> |
| Initial S/W Revision | A.05.00 |

Change Directory...

Allows you to change the currently selected directory on the hard disk. Pressing this key opens a standard windows change directory dialog allowing you to select the new directory of interest.

The current directory is used for manually loading waveform segments into ARB memory for playback, and as a search location for waveform segments that are required to be loaded into ARB memory for playback of a waveform sequence or a list sequence.

| | |
|-----------------------------|--|
| Key Path | Source, Modulation Setup, ARB, Select Waveform, Segments on Hard Disk |
| Notes | No remote command, SCPIfront panel only. |
| Initial S/W Revision | A.05.00 |

Default Directory...

Allows you to change the default directory. It is used as a search location for waveform segments that are required to be loaded into ARB memory for playback of a waveform sequence, and as a search location for selecting waveforms using SCPI.

| | |
|-----------------------|---|
| Key Path | Source, Modulation Setup, ARB, Select Waveform, Segments on Hard Disk |
| Remote Command | :SOURce:RADio:ARB:DEFault:DIRectory <string> :SOURce:RADio:ARB: DEFault:DIRectory? |
| Example | :SOUR:RAD:ARB:DEF:DIR "D:\ArbFiles" |

| | |
|----------------------|---|
| | :SOUR:RAD:ARB:DEF:DIR? |
| State Saved | Persistent, survives a power cycle and a preset but not saved in the instrument state |
| Initial S/W Revision | A.05.00 |

Segments on Hard Disk

This key functions the same as ["Segments on Hard Disk" on page 2611](#).

| | |

Clear Waveform from Slot

Allows you to clear the waveform from the selected slot.

| | |
|----------------|--|
| Key Path | Source, Modulation Setup, ARB, Waveform Utilities, Multi-Pack Licenses |
| Remote Command | :SYSTem:LKEY:WAVeform:CLEar <int> or :SYSTem:LICense[:FPACK]:WAVeform:CLEar <int> |
| Example | SYST:LKEY:WAV:CLE 1 or :SYST:LIC:WAV:CLE 1 |
| Notes | The second SCPI :SYSTem:LICense[:FPACK]:WAVeform:CLEar is provided to be consistent with the style of Keysight signal sources. You can use either one of them. |

Waveform slot number <int> is positive. If you attempt to input a slot number less than or equals 0, an error is generated.

| | |
|----------------------|--|
| Dependencies | This key is only available if the currently selected slot is in the trial state. |
| Initial S/W Revision | A.05.00 |

Lock Waveform in Slot

If the selected slot is in the trial state or the lock required state, the waveform that occupies the slot is locked and permanently licensed.

| | |
|----------------------|--|
| Key Path | Source, Modulation Setup, ARB, Waveform Utilities, Multi-Pack Licenses |
| Remote Command | :SYSTem:LKEY:WAVeform:LOCK <int> or :SYSTem:LICense[:FPACK]:WAVeform:LOCK <int> |
| Example | SYST:LKEY:WAV:LOCK 1 or SYST:LIC:WAV:LOCK 1 |
| Notes | The second SCPI :SYSTem:LICense[:FPACK]:WAVeform:LOCK is provided to be consistent with the style of Keysight signal sources. You can use either one of them. Waveform slot number <int> is positive. If you attempt to input a slot number less than or equals 0, an error is generated. |
| Dependencies | This key is only available if the currently selected slot is in the trial state or the lock required state. |
| Initial S/W Revision | A.05.00 |

Slot Status Query (Remote Command Only)

Returns the status of the specified slot.

| | |
|----------------|--|
| Remote Command | :SYSTem:LKEY:WAVeform:STATus? <int> or :SYSTem:LICense[:FPACK]:WAVeform:STATus? <int> |
| Example | :SYST:LKEY:WAV:STAT? 1 <"Locked" or :SYST:LIC:WAV:STAT? 1 <"Locked" |
| Notes | The second SCPI :SYSTem:LICense[:FPACK]:WAVeform:STATus is provided to be consistent with the style of Keysight signal sources. You can use either one of them. Waveform slot number <int> is positive. If you attempt to input a slot number less than or equals 0, an |

| | |
|----------------------|--|
| | error is generated. Result type is string. If input slot number exceeds total available slot number, "Nonexistent" is returned. |
| Range | "Locked" "Available" "Trail" "LockRequired" "Nonexistent" |
| Initial S/W Revision | A.05.00 |

Slots Free Query (Remote Command Only)

Returns the number of license slots free.

| | |
|-----------------------|---|
| Remote Command | :SYSTem:LKEY:WAVeform:FREE? or :SYSTem:LIcense[:FPACK]:WAVeform:FREE? |
| Example | :SYST:LKEY:WAV:FREE? or :SYST:LIC:WAV:FREE? |
| Notes | The second SCPI :SYSTem:LIcense[:FPACK]:WAVeform:FREE is provided to be consistent with the style of Keysight signal sources. You can use either one of them. |
| Initial S/W Revision | A.05.00 |

Slot Used Query (Remote Command Only)

Returns the number of license slots used.

| | |
|-----------------------|---|
| Remote Command | :SYSTem:LKEY:WAVeform:USED? or :SYSTem:LIcense[:FPACK]:WAVeform:USED? |
| Example | :SYST:LKEY:WAV:USED? or :SYST:LIC:WAV:USED? |
| Notes | The second SCPI :SYSTem:LIcense[:FPACK]:WAVeform:USED is provided to be consistent with the style of Keysight signal sources. You can use either one of them. |
| Initial S/W Revision | A.05.00 |

Slot Waveform Name Query (Remote Command Only)

Returns the waveform name of the specified slot

| | |
|-----------------------|---|
| Remote Command | :SYSTem:LKEY:WAVeform:NAME? <int> or :SYSTem:LIcense[:FPACK]:WAVeform:NAME? <int> |
|-----------------------|---|

| | |
|-----------------------------|---|
| Example | :SYST:LKEY:WAV:NAME? 1 <"CDMA2K_22.wfm" or :SYST:LIC:WAV:NAME? 1 <"CDMA2K_22.wfm" |
| Notes | Waveform slot number <int> is positive. If you attempt to input a slot number less than or equals 0, an error is generated. Result type is string. If input slot number exceeds total available slot number, "Nonexistent" is returned. If no waveform stored in the specified slot, then empty string is returned. |
| Initial S/W Revision | A.12.00 |

Slot Waveform Unique ID Query (Remote Command Only)

Returns the waveform unique ID of the specified slot

| | |
|-----------------------------|---|
| Remote Command | :SYSTem:LKEY:WAVeform:UID? <int> or :SYSTem:LICense[:FPACK]:WAVeform:UID? <int> |
| Example | :SYST:LKEY:WAV:UID? 2 <"1346752140" or :SYST:LIC:WAV:UID? 2 <"1346752140" |
| Notes | Waveform slot number <int> is positive. If you attempt to input a slot number less than or equals 0, an error is generated. Result type is string. If input slot number exceeds total available slot number, "Nonexistent" is returned. If no waveform stored in the specified slot, then "0" is returned |
| Initial S/W Revision | A.12.00 |

Locked Waveform Name List Query (Remote Command Only)

Returns the waveform name list of locked.

| | |
|-----------------------------|---|
| Remote Command | :SOURce:RADio:ARB:MPLicensed:NAME:LOCKed? |
| Example | SOUR:RAD:ARB:MPL:NAME:LOCKed? <"CDMA2K_27.wfm", "GSM_MCS1.WFM", "c2kWfm.wfm" |
| Initial S/W Revision | A.11.00 |

Locked Waveform Unique ID List Query (Remote Command Only)

Returns the waveform unique id list of locked.

| | |
|-----------------------------|---|
| Remote Command | :SOURce:RADio:ARB:MPLicensed:UID:LOCKed? |
| Example | SOUR:RAD:ARB:MPL:UID:LOCKed? <"2996927136","3812603511","3710986266"> |
| Notes | Each Signal Studio waveform has a unique id recorded in header. So if the unique ids are same, that means they are same one waveform. So besides SCPI to query locked waveform name list, also provide a SCPI to query locked waveform unique id list |
| Initial S/W Revision | A.11.00 |

Marker Utilities

Allows access to the marker utilities sub-menus.

| | |
|-----------------------------|--------------------------------------|
| Key Path | Source, Modulation Setup, ARB |
| Initial S/W Revision | A.05.00 |

Marker Polarity

Allows access to the marker polarity sub-menu, which allows you to specify the polarity for the four markers. For a positive polarity, the marker signal is high during the marker points. For a negative marker polarity, the marker signal is high during the period of no marker points.

| | |
|-----------------------------|--|
| Key Path | Source, Modulation Setup, ARB, Marker Utilities |
| Initial S/W Revision | A.05.00 |

Mkr 1 Polarity

Allows you to set the polarity of marker 1.

| | |
|-----------------------------|---|
| Key Path | Source, Modulation Setup, ARB, Marker Utilities, Marker Polarity |
| Remote Command | :SOURce:RADio:ARB:MPOLarity:MARKer1 POSitive NEGative :SOURce:RADio:ARB:MPOLarity:MARKer1? |
| Example | :SOUR:RAD:ARB:MPOL:MARK1 NEG |
| Dependencies | When a new waveform is selected for playback the settings contained within the associated waveform header file are applied to the ARB. The marker polarity is one of the values stored within the header file. If the newly selected waveform file has an associated header file, the marker polarity is updated with the value from the header file. The marker polarity will remain unchanged if the newly selected waveform does not have an associated header file. |
| Preset | Pos |
| Range | Neg Pos |
| Initial S/W Revision | A.05.00 |

Mkr 2 Polarity

Allows you to set the polarity of marker 2.

| | |
|-----------------------------|---|
| Key Path | Source, Modulation Setup, ARB, Marker Utilities, Marker Polarity |
| Remote Command | :SOURce:RADio:ARB:MPOLarity:MARKer2 POSitive NEGative :SOURce:RADio:ARB:MPOLarity:MARKer2? |
| Example | :SOUR:RAD:ARB:MPOL:MARK2 NEG |
| Dependencies | When a new waveform is selected for playback the settings contained within the associated waveform header file are applied to the ARB. The marker polarity is one of the values stored within the header file. If the newly selected waveform file has an associated header file, the marker polarity is updated with the value from the header file. The marker polarity will remain unchanged if the newly selected waveform does not have an associated header file. |
| Preset | Pos |
| Range | Neg Pos |
| Initial S/W Revision | A.05.00 |

Mkr 3 Polarity

Allows you to set the polarity of marker 3.

| | |
|-----------------------------|---|
| Key Path | Source, Modulation Setup, ARB, Marker Utilities, Marker Polarity |
| Remote Command | :SOURce:RADio:ARB:MPOLarity:MARKer3 POSitive NEGative :SOURce:RADio:ARB:MPOLarity:MARKer3? |
| Example | :SOUR:RAD:ARB:MPOL:MARK3 NEG |
| Dependencies | When a new waveform is selected for playback the settings contained within the associated waveform header file are applied to the ARB. The marker polarity is one of the values stored within the header file. If the newly selected waveform file has an associated header file, the marker polarity is updated with the value from the header file. The marker polarity will remain unchanged if the newly selected waveform does not have an associated header file. |
| Preset | Pos |
| Range | Neg Pos |
| Initial S/W Revision | A.05.00 |

Mkr 4 Polarity

Allows you to set the polarity of marker 4.

| | |
|-----------------------|---|
| Key Path | Source, Modulation Setup, ARB, Marker Utilities, Marker Polarity |
| Remote Command | :SOURce:RADio:ARB:MPOLarity:MARKer4 POSitive NEGative :SOURce:RADio:ARB:MPOLarity:MARKer4? |

| | |
|-----------------------------|---|
| Example | :SOUR:RAD:ARB:MPOL:MARK4 NEG |
| Dependencies | When a new waveform is selected for playback the settings contained within the associated waveform header file are applied to the ARB. The marker polarity is one of the values stored within the header file. If the newly selected waveform file has an associated header file, the marker polarity is updated with the value from the header file. The marker polarity will remain unchanged if the newly selected waveform does not have an associated header file. |
| Preset | Pos |
| Range | Neg Pos |
| Initial S/W Revision | A.05.00 |

Marker Routing

Allows access to the marker routing sub-menus, which allow you to specify where the marker events are routed. It should be noted that the markers can also be routed to Trigger 1 Out and Trigger 2 Out, however this must be set up using the menus accessed by pressing the “Trigger” hard key.

| | |
|-----------------------------|--|
| Key Path | Source, Modulation Setup, ARB, Marker Utilities |
| Initial S/W Revision | A.05.00 |

Pulse/RF Blank

Allows you to select which marker is used for the pulse/RF blanking function. The pulse/RF blanking function blanks the RF when the marker signal goes low. The marker polarity determines when the marker signal is high. For a positive polarity, this is during the marker points. For a negative polarity, this is when there are no marker points.

Marker points should be set before using this function. Enabling this function without setting maker points may create a continuous low or high signal, dependant on the marker polarity. This causes either no RF output, or a continuous RF output.

| | |
|-----------------------------|---|
| Key Path | Source, Modulation Setup, ARB, Marker Utilities, Marker Routing |
| Remote Command | :SOURce:RADio:ARB:MDEStination:PULSe NONE M1 M2 M3 M4 :SOURce:RADio:ARB:MDEStination:PULSe? |
| Example | :SOUR:RAD:ARB:MDES:PULS NONE |
| Dependencies | When a new waveform is selected for playback the settings contained within the associated waveform header file are applied to the ARB. The pulse/RF blanking setting is one of the values stored within the header file. If the newly selected waveform file has an associated header file, the pulse/RF blanking setting is updated with the value from the header file. The pulse/RF blanking setting will remain unchanged if the newly selected waveform does not have an associated header file. |
| Range | None M1 M2 M3 M4 |
| Initial S/W Revision | A.05.00 |

None

Sets no marker to be used for the pulse/RF blanking function, essentially turning the RF blanking function off.

| | |
|----------------------|--|
| Key Path | Source, Modulation Setup, ARB, Marker Utilities, Marker Routing, Pulse/RF Blank |
| Example | :SOUR:RAD:ARB:MDES:PULS NONE |
| Initial S/W Revision | A.05.00 |

Marker 1

Sets marker 1 to be used for the pulse/RF blanking function.

| | |
|----------------------|--|
| Key Path | Source, Modulation Setup, ARB, Marker Utilities, Marker Routing, Pulse/RF Blank |
| Example | :SOUR:RAD:ARB:MDES:PULS M1 |
| Initial S/W Revision | A.05.00 |

Marker 2

Sets marker 2 to be used for the pulse/RF blanking function.

| | |
|----------------------|--|
| Key Path | Source, Modulation Setup, ARB, Marker Utilities, Marker Routing, Pulse/RF Blank |
| Example | :SOUR:RAD:ARB:MDES:PULS M2 |
| Initial S/W Revision | A.05.00 |

Marker 3

Sets marker 3 to be used for the pulse/RF blanking function.

| | |
|----------------------|--|
| Key Path | Source, Modulation Setup, ARB, Marker Utilities, Marker Routing, Pulse/RF Blank |
| Example | :SOUR:RAD:ARB:MDES:PULS M3 |
| Initial S/W Revision | A.05.00 |

Marker 4

Sets marker 4 to be used for the pulse/RF blanking function.

| | |
|----------------------|--|
| Key Path | Source, Modulation Setup, ARB, Marker Utilities, Marker Routing, Pulse/RF Blank |
| Example | :SOUR:RAD:ARB:MDES:PULS M4 |
| Initial S/W Revision | A.05.00 |

ALC Hold

Allows you to specify which marker is routed for use within the ALC hold function. The ALC hold marker function holds the ALC circuitry at the average value of the sample points set by the marker.

The ALC hold function operates during the low periods of the marker signal. The marker polarity determines when the marker signal is high. For positive polarity, this is during the marker points. For a negative polarity, this is when there are no marker points.

| | |
|-----------------------------|--|
| Key Path | Source, Modulation Setup, ARB, Marker Utilities, Marker Routing |
| Remote Command | :SOURce:RADio:ARB:MDEStination:ALCHold NONE M1 M2 M3 M4 :SOURce:RADio:ARB:MDEStination:ALCHold? |
| Example | :SOUR:RAD:ARB:MDES:ALCH NONE |
| Dependencies | When a new waveform is selected for playback the settings contained within the associated waveform header file are applied to the ARB. The ALC hold setting is one of the values stored within the header file. If the newly selected waveform file has an associated header file, the ALC hold setting is updated with the value from the header file. The ALC hold setting will remain unchanged if the newly selected waveform does not have an associated header file. |
| Range | None M1 M2 M3 M4 |
| Initial S/W Revision | A.05.00 |

None

Sets no marker to be used for the ALC hold function, essentially turning the ALC hold function off.

| | |
|-----------------------------|--|
| Key Path | Source, Modulation Setup, ARB, Marker Utilities, Marker Routing, ALC Hold |
| Example | :SOUR:RAD:ARB:MDES:PULS NONE |
| Initial S/W Revision | A.05.00 |

Marker 1

Sets marker 1 to be used for the ALC hold function.

| | |
|-----------------------------|--|
| Key Path | Source, Modulation Setup, ARB, Marker Utilities, Marker Routing, ALC Hold |
| Example | :SOUR:RAD:ARB:MDES:PULS M1 |
| Initial S/W Revision | A.05.00 |

Marker 2

Sets marker 2 to be used for the ALC hold function.

| | |
|-----------------------------|--|
| Key Path | Source, Modulation Setup, ARB, Marker Utilities, Marker Routing, ALC Hold |
| Example | :SOUR:RAD:ARB:MDES:PULS M2 |
| Initial S/W Revision | A.05.00 |

Marker 3

Sets marker 3 to be used for the ALC hold function.

| | |
|----------------------|--|
| Key Path | Source, Modulation Setup, ARB, Marker Utilities, Marker Routing, ALC Hold |
| Example | :SOUR:RAD:ARB:MDES:PULS M3 |
| Initial S/W Revision | A.05.00 |

Marker 4

Sets marker 4 to be used for the ALC hold function.

| | |
|----------------------|--|
| Key Path | Source, Modulation Setup, ARB, Marker Utilities, Marker Routing, ALC Hold |
| Example | :SOUR:RAD:ARB:MDES:PULS M4 |
| Initial S/W Revision | A.05.00 |

Header Utilities

Allows access to the header utilities sub-menu. Pressing this key also causes the central display area to change to display the File Header Information view.

| | |
|----------------------|---|
| Key Path | Source, Modulation Setup, ARB |
| Dependencies | This key is only available if there is currently a waveform selected for playback. If no waveform is selected, the key is grayed out. |
| Initial S/W Revision | A.05.00 |

Clear Header

Allows you to clear the header information from the file header associated with the currently selected waveform.

| | |
|-----------------------|--|
| Key Path | Source, Modulation Setup, ARB, Header Utilities |
| Remote Command | :SOURce:RADio:ARB:HEADer:CLEar |
| Example | :SOUR:RAD:ARB:HEAD:CLE |
| Notes | Attempting to clear the header details via SCPI when no waveform was selected for playback will generate an error. |
| Initial S/W Revision | A.05.00 |

Save Setup To Header

Allows you to save new file header information details to the file.

| | |
|--------------------------|---|
| Key Path | Source, Modulation Setup, ARB, Header Utilities |
| Remote Command | :SOURce:RADio:ARB:HEADer:SAVE |
| Example | :SOUR:RAD:ARB:HEAD:SAVE |
| Notes | Attempting to save the header details via SCPI when no waveform was selected for playback will generate an error. |
| Initial S/W Revision | A.05.00 |
| Modified at S/W Revision | A.16.00 (AWGN settings will be saved to header as well) |

Query Waveform Unique ID (Remote Command Only)

Each Signal Studio waveform contains a unique waveform ID, which recorded in the header. This command allows you to query the unique waveform ID from the header. This is a SCPI only command. User can also check [Error! Reference source not found.](#) for waveform unique ID display.

| | |
|----------------------|--|
| Remote Command | :MMEMory:HEADer:ID? "<file name>" |
| Example | :MMEM:HEAD:ID? "test.wfm" (query the waveform already loaded into the ARB memory) :MMEM:HEAD:ID? "D: VARB\test.wfm" (query the waveform on the hard disk by absolute path) :MMEM:HEAD:ID? "NVWFM:test.wfm" (query the waveform on the hard disk by MSUS) |
| Notes | SCPI query only. The queried waveform file can be in ARB memory, or on hard disk. If want to query ARB in ARB memory, then give out the file name directly. If want to query ARB on the hard disk, then absolute file path or MSUS should be given along with the file name. The valid MSUS is "NVWFM" which is mapped to D: VARB on hard disk. If the file cannot be found in ARB memory or on hard disk, an error is generated.and value -1 is returned |
| Initial S/W Revision | A.09.00 |

Bus Trigger Command (Remote Command Only)

Used to initiate an immediate trigger event if the trigger source is set to Bus.

| | |
|----------------------|------------------------------------|
| Remote Command | :SOURce:RADio:ARB:TRIGger:INITiate |
| Example | :SOUR:RAD:ARB:TRIG:INIT |
| Initial S/W Revision | A.05.00 |

AM

Allows access to the menu for configuring the Amplitude Modulation.

| | |
|----------------------|---------------------------------|
| Key Path | Source, Modulation Setup |
| Initial S/W Revision | A.05.00 |

AM

Enables or disables the amplitude modulation.

Turning AM on when another modulation format is already on results in the previous modulation format being turned off and the generation of an error.

| | |
|-----------------------|---------------------------------------|
| Key Path | Source, Modulation Setup, AM |
| Remote Command | :SOURce:AM:STATe :SOURce:AM:STATe? |
| Example | :SOUR:AM:STAT OFF |
| Preset | Off |
| Range | On Off |
| Initial S/W Revision | A.05.00 |

AM Depth

Allows you to set the amplitude modulation depth in percent.

| | |
|-----------------------|---|
| Key Path | Source, Modulation Setup, AM |
| Remote Command | :SOURce:AM[:DEPTh] [:LINear] :SOURce:AM[:DEPTh] [:LINear]? |
| Example | :SOUR:AM 0.1 |
| Preset | 0.1 % |
| Min | 0.1 % |
| Max | 95.0 % |
| Initial S/W Revision | A.05.00 |

AM Rate

Allows you to set the internal amplitude modulation rate.

| | |
|-----------------------|---|
| Key Path | Source, Modulation Setup, AM |
| Remote Command | :SOURce:AM:INTernal:FREQuency :SOURce:AM:INTernal:FREQuency? |
| Example | :SOUR:AM:INT:FREQ 40.0 Hz |

| | |
|----------------------|----------|
| Preset | 400.0 Hz |
| Min | 10 Hz |
| Max | 40 kHz |
| Initial S/W Revision | A.05.00 |

FM

Allows access to the menu for configuring the frequency modulation.

| | |
|----------------------|---------------------------------|
| Key Path | Source, Modulation Setup |
| Initial S/W Revision | A.05.00 |

FM

Enables or disables the frequency modulation.

Turning FM on when another modulation format is already on results in the previous modulation format being turned off and the generation of an error.

| | |
|-----------------------|---------------------------------------|
| Key Path | Source, Modulation Setup, FM |
| Remote Command | :SOURce:FM:STATe :SOURce:FM:STATe? |
| Example | :SOUR:FM:STAT OFF |
| Preset | Off |
| Range | On Off |
| Initial S/W Revision | A.05.00 |

FM Deviation

Allows you to set the frequency modulation deviation.

| | |
|-----------------------|---|
| Key Path | Source, Modulation Setup, FM |
| Remote Command | :SOURce:FM[:DEViation] :SOURce:FM[:DEViation]? |
| Example | :SOUR:FM 1.00 kHz |
| Preset | 1.00 Hz |
| Min | 1.00 Hz |
| Max | 100.00 kHz |
| Initial S/W Revision | A.05.00 |

FM Rate

Allows you to set the internal frequency modulation rate.

| | |
|-----------------------------|---|
| Key Path | Source, Modulation Setup, FM |
| Remote Command | :SOURce:FM:INTernal:FREQuency :SOURce:FM:INTernal:FREQuency? |
| Example | :SOUR:FM:INT:FREQ 40.0 Hz |
| Preset | 400.0 Hz |
| Min | 10 Hz |
| Max | 40 kHz |
| Initial S/W Revision | A.05.00 |

PM

Allows access to the menu for configuring the phase modulation.

| | |
|-----------------------------|---------------------------------|
| Key Path | Source, Modulation Setup |
| Initial S/W Revision | A.05.00 |

PM

Enables or disables the phase modulation.

Turning PM on when another modulation format is already on results in the previous modulation format being turned off and the generation of an error.

| | |
|-----------------------------|---------------------------------------|
| Key Path | Source, Modulation Setup, PM |
| Remote Command | :SOURce:PM:STATe :SOURce:PM:STATe? |
| Example | :SOUR:PM:STAT OFF |
| Preset | Off |
| Range | On Off |
| Initial S/W Revision | A.05.00 |

PM Deviation

Allows you to set the phase modulation deviation.

| | |
|-----------------------|---|
| Key Path | Source, Modulation Setup, PM |
| Remote Command | :SOURce:PM[:DEVIation] :SOURce:PM[:DEVIation]? |

| | |
|----------------------|-------------------|
| Example | :SOUR:PM 1.00 rad |
| Preset | 0.1 rad |
| Min | 0.1 rad |
| Max | 20.0 rad |
| Initial S/W Revision | A.05.00 |

PM Rate

Allows you to set the internal phase modulation rate.

| | |
|-----------------------|---|
| Key Path | Source, Modulation Setup, PM |
| Remote Command | :SOURce:PM:INTernal:FREQuency :SOURce:PM:INTernal:FREQuency? |
| Example | :SOUR:PM:INT:FREQ 40.0 Hz |
| Preset | 400.0 Hz |
| Min | 10 Hz |
| Max | 40 kHz |
| Initial S/W Revision | A.05.00 |

List Sequencer

Allows you access to the sub-menus for configuring the list sequencer.

List sequences allows you to enter frequencies and amplitudes at unequal intervals in nonlinear ascending, descending or random order. Each step within the list can also include its own waveform file for playback, step duration, trigger event and trigger output.

The complexities involved in configuring the list sequencer do not lend itself to manual configuration; hence the manual configuration for this feature is limited. For easier configuration of the list sequencer, it is recommended that you use either SCPI or load a tab delimited file containing the setup parameters in a tabular form. The details of the SCPI for configuring the list sequencer can be found in ["Step Configuration \(Remote Command Only\)" on page 2619](#).

Once the List Sequencer has been configured using the front panel, SCPI, or loading in a tab delimited file, the sequence must be initiated using the front panel Initiate Sequence key or the corresponding SCPI command.

| | |
|----------------------|---------------|
| Key Path | Source |
| Initial S/W Revision | A.05.00 |

Sequencer

Allows you to set the state of the list sequencer. When the list sequencer is on, the source is outputting the sequence defined by the sequencer. When the list sequencer is off, the source outputs a single waveform segment or sequence (independent mode) at a single frequency and amplitude.

| Key Path | Source, List Sequencer |
|-----------------------|---|
| Remote Command | :SOURce:LIST[:STATe] ON OFF 1 0 :SOURce:LIST[:STATe]? |
| Example | :SOUR:LIST OFF |
| Notes | When the sequencer is set to ON, the list sequencer controls the output of the source. |
| Couplings | When in Sequence Analyzer mode and the list sequencer state is Off, Include Source is forced to No, and the Include Source key is grayed out. When in Sequence Analyzer mode and the list sequencer state is On, Include Source is available to set. And, an ARB memory related operation, like load or delete will be rejected. |
| Preset | Off |
| Range | On Off |
| Initial S/W Revision | A.05.00 |

Initiate Sequence

Pressing this key arms the sequence for single execution. Once the sequence is armed the source begins the sequence as soon as the trigger is received. If the trigger is set to Free Run, the sequence starts immediately.

| Key Path | Source, List Sequencer |
|-----------------------|---|
| Remote Command | :SOURce:LIST:TRIGger[:IMMediate] |
| Example | :SOUR:LIST:TRIG |
| Notes | When in Sequence Analyzer mode and Include Source is Yes, the Initiate list sequencer operation is rejected, and the key is grayed out, since source list sequence request is sent to physics via Parallel batch by sequence analyzer. If the file needed by the sequencer is not already in ARB memory, the sequence cannot be initiated and an error will be generated. There is a blocking SCPI query which can be used to query if source list sequence being initiated successfully or not. (see " Query List Sequence Initiation Armed Status (Remote Command Only) " on page 2630 Query Source List Sequence Armed Status) |
| Dependencies | Under the Sequence Analyzer Mode, if Meas Setup->Include Source is set to YES, Source->List Sequencer->Initiate Sequence is disabled. |
| Initial S/W Revision | A.05.00 |

List Sequencer Setup

Allows you access to the list sequencer setup menus.

| | |
|----------|-------------------------------|
| Key Path | Source, List Sequencer |
|----------|-------------------------------|

Number of Steps

Allows you to specify the number of steps within the list sequence.

| | |
|----------------------|--|
| Key Path | Source, List Sequencer, List Sequencer Setup |
| Remote Command | :SOURce:LIST:NUMBer:STEPs <integer> :SOURce:LIST:NUMBer:STEPs? |
| Example | :SOUR:LIST:NUMB:STEP 1 |
| Notes | Increasing the number of steps creates additional steps at the end of the list, with all the settings within the steps set to their default values. Decreasing the number of steps removes steps from the end of the list. The settings within the removed steps are not reset. This means that increasing the number of steps again would allow you to retrieve these steps. |
| Dependencies | The Step Count parameter is increased or decreased when you insert or delete a point from within the GUI interface to the sequencer. |
| Preset | 1 |
| Min | 1 |
| Max | 1000 |
| Initial S/W Revision | A.05.00 |

Current Step

Allows you to select the step number you wish to view or edit.

| | |
|----------------------|---|
| Key Path | Source, List Sequencer, List Sequencer Setup |
| Notes | No remote command, front panel only. |
| Preset | 1 |
| Min | 1 |
| Max | Step Count |
| Initial S/W Revision | A.05.00 |

Insert Step Before

Allows you to insert a new step, containing default values, before the currently selected step. Inserting a step will automatically increase the Step Count parameter by 1. If sequence already reaches upper limit of

1000 steps, then insert more step will be rejected and popup error –221, “Setting Conflict; Cannot insert more steps, maximum number of steps reached”

| Key Path | Source, List Sequencer, List Sequencer Setup |
|----------------------|---|
| Notes | No remote command, front panel only. If the list already contains the maximum limit of 1000 steps, no operation will be made after pressing this key. |
| Initial S/W Revision | A.05.00 |

Delete Step

Allows you to delete the current step. Deleting a step will automatically decrease the Step Count parameter by 1. If sequence only has one step left, delete step will be rejected and popup error –221, “Setting conflict; Cannot delete current step, minimum number of steps reached”

| Key Path | Source, List Sequencer, List Sequencer Setup |
|----------------------|---|
| Notes | No remote command, Front Panel key only. If the list already contains the minimum limit of 1 step, no operation will be made after pressing this key |
| Initial S/W Revision | A.05.00 |

Clear List

Allows you to clear the list. Clearing the list sets the number of steps to the default value of 1 and sets the parameters for the only step to their default values.

| Key Path | Source, List Sequencer, List Sequencer Setup |
|----------------------|--|
| Initial S/W Revision | A.05.00 |

Step Trigger

Allows access to the sub-menu for selecting the trigger input for the current step.

| Key Path | Source, List Sequencer, List Sequencer Setup |
|-----------------------|---|
| Remote Command | :SOURce:LIST:STEP[1] 2 3...1000:SETup:INPut:TRIGger IMMEDIATE INTernal EXTernal2 KEY BUS EXTernal4 :SOURce:LIST:STEP[1] 2 3...1000:SETup:INPut:TRIGger? |
| Example | :SOUR:LIST:STEP2:SET:INP:TRIG BUS :SOUR:LIST:STEP2:SET:INP:TRIG? |
| Notes | SCPI is supported after A.09.40 |
| Preset | Free Run |
| Range | Free Run Internal Manual (Trigger Key) Bus External 2 EXTernal4 |
| Initial S/W Revision | A.05.00 |

Free Run

Sets the trigger input for the current step to Free Run.

| | |
|-----------------------------|---|
| Key Path | Source, List Sequencer, List Sequencer Setup, Step Trigger |
| Example | :SOUR:LIST:STEP2:SET:INP:TRIG IMM |
| Notes | SCPI is supported after A.09.40 |
| Initial S/W Revision | A.05.00 |

Internal

Sets the trigger input for the current step to Internal.

| | |
|-----------------------------|---|
| Key Path | Source, List Sequencer, List Sequencer Setup, Step Trigger |
| Example | :SOUR:LIST:STEP2:SET:INP:TRIG INT |
| Notes | SCPI is supported after A.09.40 |
| Initial S/W Revision | A.05.00 |

Manual (Trigger Key)

Sets the trigger input for the current step to Manual (Trigger Key). Any step in the sequence set to Manual will cause the sequence execution to stop until the manual trigger key is pressed. Sending the Bus Trigger SCPI command will have no effect. At any point in the sequence where the list sequencer is paused waiting for a software trigger, a pop up dialog is displayed until the trigger event occurs.

| | |
|-----------------------------|---|
| Key Path | Source, List Sequencer, List Sequencer Setup, Step Trigger |
| Example | :SOUR:LIST:STEP2:SET:INP:TRIG KEY |
| Notes | SCPI is supported after A.09.40 |
| Initial S/W Revision | A.05.00 |

Bus

Sets the trigger input for the current step to Bus. Any step in the sequence set to Bus will cause the sequence execution to stop until the Bus Trigger SCPI command is sent. Pressing the manual trigger key has no effect. At any point in the sequence where the list sequencer is paused waiting for a software trigger, a pop up dialog is displayed until the trigger event occurs.

| | |
|-----------------------------|---|
| Key Path | Source, List Sequencer, List Sequencer Setup, Step Trigger |
| Example | :SOUR:LIST:STEP2:SET:INP:TRIG BUS |
| Notes | SCPI is supported after A.09.40 |
| Initial S/W Revision | A.05.00 |

External 2

Sets the trigger input for the current step to External 2.

| | |
|----------------------|--|
| Key Path | Source, List Sequencer, List Sequencer Setup, Step Trigger |
| Example | :SOUR:LIST:STEP2:SET:INP:TRIG EXT2 |
| Notes | SCPI is supported after A.09.40 |
| Notes | Note: When on E6640A, trigger 2 is a bi-directional trigger port. So when trigger 2 has been configured as OUTPUT type, choosing External 2 as the input trigger for the current step will generate error. |
| Initial S/W Revision | A.05.00 |

Transition Time

Allows you to specify the transition time for the current step.

The transition time is the amount of time allowed for the source to settle at the current frequency or amplitude value.

Transition Time should not be taken as additional time before or inside the Step Duration. You can set a value for the settling time to allow the source output frequency or amplitude to become stable. Make sure that during this period of time, you do not use the source output signal.

The following table lists recommended values for appropriate settling times to allow for changes within the source.

| Value Changed | Recommended Transition Time |
|---------------|---|
| Frequency | 500 μ s |
| Amplitude | 100 μ s to within 0.1 dB 20 μ s to within 1.0 dB |

If the Transition Time value is shorter than the time necessary for the hardware to settle and a List Sequence is initiated, a **warning** is generated.

If the Transition Time value is longer than the Step Duration, an error is generated when initiating a source list sequence. For source list sequence, transition time is included in the step duration length. If the Transition Time value is longer than the Step Duration Time, the real step duration length is extended to equal the transition time and cause a timing shift.

| | |
|----------------|--|
| Key Path | Source, List Sequencer, List Sequencer Setup |
| Remote Command | :SOURce:LIST:STEP[1] 2 3...1000:SETup:TRANSition:TIME <time> :SOURce:LIST:STEP[1] 2 3...1000:SETup:TRANSition:TIME? |
| Example | :SOUR:LIST:STEP2:SET:TRAN:TIME 1ms :SOUR:LIST:STEP2:SET:TRAN:TIME? |

| | |
|----------------------|---------------------------------|
| Notes | SCPI is supported after A.09.40 |
| Preset | 1.0 ms |
| Min | 0.0 ms |
| Max | 4.0 ks |
| Initial S/W Revision | A.05.00 |

Radio Setup

Allows you access to the sub-menus for setting up the radio standard, band, and radio band link direction for the current step.

| | |
|----------------------|---|
| Key Path | Source, List Sequencer, List Sequencer Setup |
| Notes | No remote command, front panel only. |
| Initial S/W Revision | A.05.00 |

Radio Standard

Allows access to the sub-menus for selecting the radio standard and the associated radio band for use in the current step.

| | |
|-----------------------|--|
| Key Path | Source, List Sequencer, List Sequencer Setup, Radio Setup |
| Remote Command | :SOURce:LIST:STEP[1] 2 3...1000:SETup:RADio:BAND NONE PGSM EGSM RGSM DCS1800 PCS1900 TGSM810 GSM450 GSM480 GSM700 GSM850 BANDI BANDII BANDIII BANDIV BANDV BANDVI BANDVII BANDVIII BANDIX BANDX BANDXI BANDXII BANDXIII BANDXIV BANDXIX USCELL USPCS JAPAN KOREAN NMT IMT2K UPPER SECOND PAMR400 PAMR800 IMTEXT PCS1DOT9G AWS US2DOT5G PUBLIC LOWER NONE BAND1 BAND2 BAND3 BAND4 BAND5 BAND6 BAND7 BAND8 BAND10 BAND11 BAND12 BAND13 BAND14 BAND17 BAND18 BAND19 BAND20 BAND21 BAND24 BAND25 BAND26 BAND27 BAND28 BAND29 BAND30 BAND31 BAND33 BAND34 BAND35 BAND36 BAND37 BAND38 BAND39 BAND40 BAND41 BAND42 BAND43 BAND44 BANDA BANDB BANDC BANDD BANDE BANDF :SOURce:LIST:STEP[1] 2 3...1000:SETup: RADio:BAND? |
| Example | :SOUR:LIST:STEP2:SET:RAD:BAND PGSM :SOUR:LIST:STEP2:SET:RAD:BAND? |
| Notes | SCPI is supported after A.09.40 |
| Initial S/W Revision | A.05.00 |

None

Selects no radio standard for use on the current step.

| | |
|----------------------|--|
| Key Path | Source, List Sequencer, List Sequencer Setup, Radio Setup, Radio Standard |
| Example | :SOUR:LIST:STEP2:SET:RAD:BAND NONE |
| Notes | SCPI is supported after A.09.40 |
| Initial S/W Revision | A.05.00 |

GSM/EDGE

Pressing this key once selects GSM/EDGE as the radio standard and the current GSM/EDGE band as the active channel band. Pressing this key again allows access to the sub-menus for selecting a different GSM/EDGE band.

| | |
|----------------------|--|
| Key Path | Source, List Sequencer, List Sequencer Setup, Radio Setup, Radio Standard |
| Initial S/W Revision | A.05.00 |

P-GSM

Selects P-GSM as the band for the current step.

| | |
|----------------------|--|
| Key Path | Source, List Sequencer, List Sequencer Setup, Radio Setup, Radio Standard, GSM/EDGE |
| Initial S/W Revision | A.05.00 |

E-GSM

Selects E-GSM as the band for the current step.

| | |
|----------------------|--|
| Key Path | Source, List Sequencer, List Sequencer Setup, Radio Setup, Radio Standard, GSM/EDGE |
| Initial S/W Revision | A.05.00 |

R-GSM

Selects R-GSM as the band for the current step.

| | |
|----------------------|--|
| Key Path | Source, List Sequencer, List Sequencer Setup, Radio Setup, Radio Standard, GSM/EDGE |
| Initial S/W Revision | A.05.00 |

DCS 1800

Selects DCS 1800 as the band for the current step.

| | |
|----------------------|--|
| Key Path | Source, List Sequencer, List Sequencer Setup, Radio Setup, Radio Standard, GSM/EDGE |
| Initial S/W Revision | A.05.00 |

PCS 1900

Selects PCS 1900 as the band for the current step.

| | |
|----------------------|--|
| Key Path | Source, List Sequencer, List Sequencer Setup, Radio Setup, Radio Standard, GSM/EDGE |
| Initial S/W Revision | A.05.00 |

GSM 450

Selects GSM 450 as the band for the current step.

| | |
|----------------------|--|
| Key Path | Source, List Sequencer, List Sequencer Setup, Radio Setup, Radio Standard, GSM/EDGE |
| Initial S/W Revision | A.05.00 |

GSM 480

Selects GSM 480 as the band for the current step.

| | |
|----------------------|--|
| Key Path | Source, List Sequencer, List Sequencer Setup, Radio Setup, Radio Standard, GSM/EDGE |
| Initial S/W Revision | A.05.00 |

GSM 850

Selects GSM 850 as the band for the current step.

| | |
|----------------------|--|
| Key Path | Source, List Sequencer, List Sequencer Setup, Radio Setup, Radio Standard, GSM/EDGE |
| Initial S/W Revision | A.05.00 |

GSM 700

Selects GSM 700 as the band for the current step.

| | |
|----------------------|--|
| Key Path | Source, List Sequencer, List Sequencer Setup, Radio Setup, Radio Standard, GSM/EDGE |
| Initial S/W Revision | A.05.00 |

T-GSM 810

Selects T-GSM 810 as the band for the current step.

| | |
|----------------------|--|
| Key Path | Source, List Sequencer, List Sequencer Setup, Radio Setup, Radio Standard, GSM/EDGE |
| Initial S/W Revision | A.05.00 |

WCDMA

Pressing this key once selects WCDMA as the radio standard and the current WCDMA band as the active channel band. Pressing this key again allows access to the sub-menus for selecting a different WCDMA band.

| | |
|----------------------|--|
| Key Path | Source, List Sequencer, List Sequencer Setup, Radio Setup, Radio Standard |
| Initial S/W Revision | A.05.00 |

Band I

Selects Band I as the band for the current step.

| | |
|----------------------|---|
| Key Path | Source, List Sequencer, List Sequencer Setup, Radio Setup, Radio Standard, WCDMA |
| Initial S/W Revision | A.05.00 |

Band II

Selects Band II as the band for the current step.

| | |
|----------------------|---|
| Key Path | Source, List Sequencer, List Sequencer Setup, Radio Setup, Radio Standard, WCDMA |
| Initial S/W Revision | A.05.00 |

Band III

Selects Band III as the band for the current step.

| | |
|----------------------|---|
| Key Path | Source, List Sequencer, List Sequencer Setup, Radio Setup, Radio Standard, WCDMA |
| Initial S/W Revision | A.05.00 |

Band IV

Selects Band IV as the band for the current step.

| | |
|----------------------|---|
| Key Path | Source, List Sequencer, List Sequencer Setup, Radio Setup, Radio Standard, WCDMA |
| Initial S/W Revision | A.05.00 |

Band V

Selects Band V as the band for the current step.

| | |
|----------------------|---|
| Key Path | Source, List Sequencer, List Sequencer Setup, Radio Setup, Radio Standard, WCDMA |
| Initial S/W Revision | A.05.00 |

Band VI

Selects Band VI as the band for the current step.

| | |
|----------------------|---|
| Key Path | Source, List Sequencer, List Sequencer Setup, Radio Setup, Radio Standard, WCDMA |
| Initial S/W Revision | A.05.00 |

Band VII

Selects Band VII as the band for the current step.

| | |
|----------------------|---|
| Key Path | Source, List Sequencer, List Sequencer Setup, Radio Setup, Radio Standard, WCDMA |
| Initial S/W Revision | A.05.00 |

Band VIII

Selects Band VIII as the band for the current step.

| | |
|----------------------|---|
| Key Path | Source, List Sequencer, List Sequencer Setup, Radio Setup, Radio Standard, WCDMA |
| Initial S/W Revision | A.05.00 |

Band IX

Selects Band IX as the band for the current step.

| | |
|----------------------|---|
| Key Path | Source, List Sequencer, List Sequencer Setup, Radio Setup, Radio Standard, WCDMA |
| Initial S/W Revision | A.05.00 |

Band X

Selects Band X as the band for the current step.

| | |
|----------------------|---|
| Key Path | Source, List Sequencer, List Sequencer Setup, Radio Setup, Radio Standard, WCDMA |
| Initial S/W Revision | A.05.00 |

Band XI

Selects Band XI as the band for the current step.

| | |
|----------------------|---|
| Key Path | Source, List Sequencer, List Sequencer Setup, Radio Setup, Radio Standard, WCDMA |
| Initial S/W Revision | A.05.00 |

Band XII

Selects Band XII as the band for the current step.

| | |
|----------------------|---|
| Key Path | Source, List Sequencer, List Sequencer Setup, Radio Setup, Radio Standard, WCDMA |
| Initial S/W Revision | A.05.00 |

Band XIII

Selects Band XIII as the band for the current step.

| | |
|----------------------|---|
| Key Path | Source, List Sequencer, List Sequencer Setup, Radio Setup, Radio Standard, WCDMA |
| Initial S/W Revision | A.05.00 |

Band XIV

Selects Band XIV as the band for the current step.

| | |
|----------------------|---|
| Key Path | Source, List Sequencer, List Sequencer Setup, Radio Setup, Radio Standard, WCDMA |
| Initial S/W Revision | A.05.00 |

CDMA 2000 / 1xEVDO

Pressing this key once selects CDMA 2000/1xEVDO as the radio standard and the current CDMA 2000/1xEVDO band as the active channel band. Pressing this key again allows access to the sub-menus for selecting a different CDMA 2000/1xEVDO band.

| | |
|----------------------|--|
| Key Path | Source, List Sequencer, List Sequencer Setup, Radio Setup, Radio Standard |
| Initial S/W Revision | A.05.00 |

US CELL

Selects US Cell as the band for the current step.

| | |
|----------------------|--|
| Key Path | Source, List Sequencer, List Sequencer Setup, Radio Setup, Radio Standard, CDMA 2000 / 1xEVDO |
| Initial S/W Revision | A.05.00 |

US PCS

Selects US PCS as the band for the current step.

| | |
|----------------------|--|
| Key Path | Source, List Sequencer, List Sequencer Setup, Radio Setup, Radio Standard, CDMA 2000 / 1xEVDO |
| Initial S/W Revision | A.05.00 |

Japan Cell

Selects Japan Cell as the band for the current step.

| | |
|----------------------|--|
| Key Path | Source, List Sequencer, List Sequencer Setup, Radio Setup, Radio Standard, CDMA 2000 / 1xEVDO |
| Initial S/W Revision | A.05.00 |

Korean PCS

Selects Korean PCS as the band for the current step.

| | |
|----------------------|--|
| Key Path | Source, List Sequencer, List Sequencer Setup, Radio Setup, Radio Standard, CDMA 2000 / 1xEVDO |
| Initial S/W Revision | A.05.00 |

NMT 450

Selects NMT 450 as the band for the current step.

| | |
|----------------------|--|
| Key Path | Source, List Sequencer, List Sequencer Setup, Radio Setup, Radio Standard, CDMA 2000 / 1xEVDO |
| Initial S/W Revision | A.05.00 |

IMT 2000

Selects IMT 2000 as the band for the current step.

| | |
|----------------------|--|
| Key Path | Source, List Sequencer, List Sequencer Setup, Radio Setup, Radio Standard, CDMA 2000 / 1xEVDO |
| Initial S/W Revision | A.05.00 |

Upper 700

Selects Upper 700 as the band for the current step.

| | |
|----------------------|--|
| Key Path | Source, List Sequencer, List Sequencer Setup, Radio Setup, Radio Standard, CDMA 2000 / 1xEVDO |
| Initial S/W Revision | A.05.00 |

Secondary 800

Selects Secondary 800 as the band for the current step.

| | |
|----------------------|--|
| Key Path | Source, List Sequencer, List Sequencer Setup, Radio Setup, Radio Standard, CDMA 2000 / 1xEVDO |
| Initial S/W Revision | A.05.00 |

400 Euro PAMR

Selects 400 Euro PAMR as the band for the current step.

| | |
|----------------------|--|
| Key Path | Source, List Sequencer, List Sequencer Setup, Radio Setup, Radio Standard, CDMA 2000 / 1xEVDO |
| Initial S/W Revision | A.05.00 |

800 PAMR

Selects 800 PAMR as the band for the current step.

| | |
|----------------------|--|
| Key Path | Source, List Sequencer, List Sequencer Setup, Radio Setup, Radio Standard, CDMA 2000 / 1xEVDO |
| Initial S/W Revision | A.05.00 |

2.5GHz IMT EXT

Selects 2.5 GHz IMT EXT as the band for the current step.

| | |
|----------------------|--|
| Key Path | Source, List Sequencer, List Sequencer Setup, Radio Setup, Radio Standard, CDMA 2000 / 1xEVDO |
| Initial S/W Revision | A.05.00 |

US PCS 1.9GHz

Selects US PCS 1.9 GHz as the band for the current step.

| | |
|----------------------|--|
| Key Path | Source, List Sequencer, List Sequencer Setup, Radio Setup, Radio Standard, CDMA 2000 / 1xEVDO |
| Initial S/W Revision | A.05.00 |

AWS

Selects AWS as the band for the current step.

| | |
|----------------------|--|
| Key Path | Source, List Sequencer, List Sequencer Setup, Radio Setup, Radio Standard, CDMA 2000 / 1xEVDO |
| Initial S/W Revision | A.05.00 |

US 2.5GHz

Selects US 2.5 GHz as the band for the current step.

| | |
|----------------------|--|
| Key Path | Source, List Sequencer, List Sequencer Setup, Radio Setup, Radio Standard, CDMA 2000 / 1xEVDO |
| Initial S/W Revision | A.05.00 |

700 Public Safety

Selects 700 Public Safety as the band for the current step.

| | |
|----------------------|--|
| Key Path | Source, List Sequencer, List Sequencer Setup, Radio Setup, Radio Standard, CDMA 2000 / 1xEVDO |
| Initial S/W Revision | A.05.00 |

C2K Lower 700

Selects C2K Lower 700 as the band for the current step.

| | |
|----------------------|--|
| Key Path | Source, List Sequencer, List Sequencer Setup, Radio Setup, Radio Standard, CDMA 2000 / 1xEVDO |
| Initial S/W Revision | A.05.00 |

LTE

Pressing this key once selects LTE FDD as the radio standard and the current LTE FDD band as the active channel band. Pressing this key again allows access to the sub-menus for selecting a different LTE FDD band.

| | |
|----------------------|--|
| Key Path | Source, List Sequencer, List Sequencer Setup, Radio Setup, Radio Standard |
| Initial S/W Revision | A.09.50 |

BAND 1

Selects BAND 1 as the band for the current step.

| | |
|----------------------|---|
| Key Path | Source, List Sequencer, List Sequencer Setup, Radio Setup, Radio Standard, LTE |
| Initial S/W Revision | A.09.50 |

BAND 2

Selects BAND 2 as the band for the current step.

| | |
|----------------------|---|
| Key Path | Source, List Sequencer, List Sequencer Setup, Radio Setup, Radio Standard, LTE |
| Initial S/W Revision | A.09.50 |

BAND 3

Selects BAND 3 as the band for the current step.

| | |
|----------------------|---|
| Key Path | Source, List Sequencer, List Sequencer Setup, Radio Setup, Radio Standard, LTE |
| Initial S/W Revision | A.09.50 |

BAND 4

Selects BAND 4 as the band for the current step.

| | |
|----------------------|---|
| Key Path | Source, List Sequencer, List Sequencer Setup, Radio Setup, Radio Standard, LTE |
| Initial S/W Revision | A.09.50 |

BAND 5

Selects BAND 5 as the band for the current step.

| | |
|----------------------|---|
| Key Path | Source, List Sequencer, List Sequencer Setup, Radio Setup, Radio Standard, LTE |
| Initial S/W Revision | A.09.50 |

BAND 6

Selects BAND 6 as the band for the current step.

| | |
|----------------------|---|
| Key Path | Source, List Sequencer, List Sequencer Setup, Radio Setup, Radio Standard, LTE |
| Initial S/W Revision | A.09.50 |

BAND 7

Selects BAND 7 as the band for the current step.

| | |
|----------------------|---|
| Key Path | Source, List Sequencer, List Sequencer Setup, Radio Setup, Radio Standard, LTE |
| Initial S/W Revision | A.09.50 |

BAND 8

Selects BAND 8 as the band for the current step.

| | |
|----------------------|---|
| Key Path | Source, List Sequencer, List Sequencer Setup, Radio Setup, Radio Standard, LTE |
| Initial S/W Revision | A.09.50 |

BAND 9

Selects BAND 9 as the band for the current step.

| | |
|----------------------|---|
| Key Path | Source, List Sequencer, List Sequencer Setup, Radio Setup, Radio Standard, LTE |
| Initial S/W Revision | A.09.50 |

BAND 10

Selects BAND 10 as the band for the current step.

| | |
|----------------------|---|
| Key Path | Source, List Sequencer, List Sequencer Setup, Radio Setup, Radio Standard, LTE |
| Initial S/W Revision | A.09.50 |

BAND 11

Selects BAND 11 as the band for the current step.

| | |
|----------------------|---|
| Key Path | Source, List Sequencer, List Sequencer Setup, Radio Setup, Radio Standard, LTE |
| Initial S/W Revision | A.09.50 |

BAND 12

Selects BAND 12 as the band for the current step.

| | |
|----------------------|---|
| Key Path | Source, List Sequencer, List Sequencer Setup, Radio Setup, Radio Standard, LTE |
| Initial S/W Revision | A.09.50 |

BAND 13

Selects BAND 13 as the band for the current step.

| | |
|----------------------|---|
| Key Path | Source, List Sequencer, List Sequencer Setup, Radio Setup, Radio Standard, LTE |
| Initial S/W Revision | A.09.50 |

BAND 14

Selects BAND 14 as the band for the current step.

| | |
|----------------------|---|
| Key Path | Source, List Sequencer, List Sequencer Setup, Radio Setup, Radio Standard, LTE |
| Initial S/W Revision | A.09.50 |

BAND 17

Selects BAND 17 as the band for the current step.

| | |
|----------------------|---|
| Key Path | Source, List Sequencer, List Sequencer Setup, Radio Setup, Radio Standard, LTE |
| Initial S/W Revision | A.09.50 |

BAND 18

Selects BAND 18 as the band for the current step.

| | |
|----------------------|---|
| Key Path | Source, List Sequencer, List Sequencer Setup, Radio Setup, Radio Standard, LTE |
| Initial S/W Revision | A.09.50 |

BAND 19

Selects BAND 19 as the band for the current step.

| | |
|----------------------|---|
| Key Path | Source, List Sequencer, List Sequencer Setup, Radio Setup, Radio Standard, LTE |
| Initial S/W Revision | A.09.50 |

BAND 20

Selects BAND 20 as the band for the current step.

| | |
|----------------------|---|
| Key Path | Source, List Sequencer, List Sequencer Setup, Radio Setup, Radio Standard, LTE |
| Initial S/W Revision | A.09.50 |

BAND 21

Selects BAND 21 as the band for the current step.

| | |
|----------------------|---|
| Key Path | Source, List Sequencer, List Sequencer Setup, Radio Setup, Radio Standard, LTE |
| Initial S/W Revision | A.09.50 |

BAND 24

Selects BAND 24 as the band for the current step.

| | |
|----------------------|---|
| Key Path | Source, List Sequencer, List Sequencer Setup, Radio Setup, Radio Standard, LTE |
| Initial S/W Revision | A.09.50 |

BAND 25

Selects BAND 25 as the band for the current step.

| | |
|----------------------|---|
| Key Path | Source, List Sequencer, List Sequencer Setup, Radio Setup, Radio Standard, LTE |
| Initial S/W Revision | A.09.50 |

BAND 26

Selects BAND 26 as the band for the current step.

| | |
|----------------------|---|
| Key Path | Source, List Sequencer, List Sequencer Setup, Radio Setup, Radio Standard, LTE |
| Initial S/W Revision | A.12.53 |

BAND 27

Selects BAND 27 as the band for the current step.

| | |
|----------------------|---|
| Key Path | Source, List Sequencer, List Sequencer Setup, Radio Setup, Radio Standard, LTE |
| Initial S/W Revision | A.14.00 |

BAND 28

Selects BAND 28 as the band for the current step.

| | |
|----------------------|---|
| Key Path | Source, List Sequencer, List Sequencer Setup, Radio Setup, Radio Standard, LTE |
| Initial S/W Revision | A.14.00 |

BAND 31

Selects BAND 31 as the band for the current step.

| | |
|----------------------|---|
| Key Path | Source, List Sequencer, List Sequencer Setup, Radio Setup, Radio Standard, LTE |
| Initial S/W Revision | A.14.00 |

LTE TDD

Sets LTE TDD as the radio standard for use and accesses the LTE TDD specific channel band sub-menus..

| | |
|----------------------|---|
| Key Path | Source, Frequency, Radio Setup, Radio Standard |
| Initial S/W Revision | A.11.50 |

BAND 33

Selects BAND 33 as the band for the current step.

| | |
|----------------------|--|
| Key Path | Source, Frequency, Radio Setup, Radio Standard, LTE TDD |
| Example | :SOUR:FREQ:CHAN:BAND BAND33 |
| Initial S/W Revision | A.11.50 |

BAND 34

Selects BAND 34 as the band for the current step.

| | |
|----------------------|--|
| Key Path | Source, Frequency, Radio Setup, Radio Standard, LTE TDD |
| Example | :SOUR:FREQ:CHAN:BAND BAND34 |
| Initial S/W Revision | A.11.50 |

BAND 35

Selects BAND 35 as the band for the current step.

| | |
|----------------------|--|
| Key Path | Source, Frequency, Radio Setup, Radio Standard, LTE TDD |
| Example | :SOUR:FREQ:CHAN:BAND BAND35 |
| Initial S/W Revision | A.11.50 |

BAND 36

Selects BAND 36 as the band for the current step.

| | |
|----------------------|--|
| Key Path | Source, Frequency, Radio Setup, Radio Standard, LTE TDD |
| Example | :SOUR:FREQ:CHAN:BAND BAND36 |
| Initial S/W Revision | A.11.50 |

BAND 37

Selects BAND 37 as the band for the current step.

| | |
|----------------------|--|
| Key Path | Source, Frequency, Radio Setup, Radio Standard, LTE TDD |
| Example | :SOUR:FREQ:CHAN:BAND BAND37 |
| Initial S/W Revision | A.11.50 |

BAND 38

Selects BAND 38 as the band for the current step.

| | |
|----------------------|--|
| Key Path | Source, Frequency, Radio Setup, Radio Standard, LTE TDD |
| Example | :SOUR:FREQ:CHAN:BAND BAND38 |
| Initial S/W Revision | A.11.50 |

BAND 39

Selects BAND 39 as the band for the current step.

| | |
|----------------------|--|
| Key Path | Source, Frequency, Radio Setup, Radio Standard, LTE TDD |
| Example | :SOUR:FREQ:CHAN:BAND BAND39 |
| Initial S/W Revision | A.11.50 |

BAND 40

Selects BAND 40 as the band for the current step.

| | |
|----------------------|--|
| Key Path | Source, Frequency, Radio Setup, Radio Standard, LTE TDD |
| Example | :SOUR:FREQ:CHAN:BAND BAND40 |
| Initial S/W Revision | A.11.50 |

BAND 41

Selects BAND 41 as the band for the current step.

| | |
|----------------------|--|
| Key Path | Source, Frequency, Radio Setup, Radio Standard, LTE TDD |
| Example | :SOUR:FREQ:CHAN:BAND BAND41 |
| Initial S/W Revision | A.11.50 |

BAND 42

Selects BAND 42 as the band for the current step.

| | |
|----------------------|--|
| Key Path | Source, Frequency, Radio Setup, Radio Standard, LTE TDD |
| Example | :SOUR:FREQ:CHAN:BAND BAND42 |
| Initial S/W Revision | A.11.50 |

BAND 43

Selects BAND 43 as the band for the current step.

| | |
|----------------------|--|
| Key Path | Source, Frequency, Radio Setup, Radio Standard, LTE TDD |
| Example | :SOUR:FREQ:CHAN:BAND BAND43 |
| Initial S/W Revision | A.11.50 |

BAND 44

Selects BAND 44 as the band for the current step.

| | |
|----------------------|---|
| Key Path | Source, List Sequencer, List Sequencer Setup, Radio Setup, Radio Standard, LTE TDD |
| Initial S/W Revision | A.14.00 |

TDSCDMA

Sets TDSCDMA as the radio standard for use and accesses the TDSCDMA specific channel band sub-menus..

| | |
|----------------------|---|
| Key Path | Source, Frequency, Radio Setup, Radio Standard |
| Initial S/W Revision | A.11.50 |

BAND A

Selects BAND A as the band for the current step.

| | |
|----------------------|--|
| Key Path | Source, Frequency, Radio Setup, Radio Standard, TDSCDMA |
| Example | :SOUR:FREQ:CHAN:BAND BANDA |
| Initial S/W Revision | A.11.50 |

BAND B

Selects BAND B as the band for the current step.

| | |
|----------------------|--|
| Key Path | Source, Frequency, Radio Setup, Radio Standard, TDSCDMA |
| Example | :SOUR:FREQ:CHAN:BAND BANDB |
| Initial S/W Revision | A.11.50 |

BAND C

Selects BAND C as the band for the current step.

| | |
|----------------------|--|
| Key Path | Source, Frequency, Radio Setup, Radio Standard, TDSCDMA |
| Example | :SOUR:FREQ:CHAN:BAND BANDC |
| Initial S/W Revision | A.11.50 |

BAND D

Selects BAND D as the band for the current step.

| | |
|----------------------|--|
| Key Path | Source, Frequency, Radio Setup, Radio Standard, TDSCDMA |
| Example | :SOUR:FREQ:CHAN:BAND BANDD |
| Initial S/W Revision | A.11.50 |

BAND E

Selects BAND E as the band for the current step.

| | |
|----------------------|--|
| Key Path | Source, Frequency, Radio Setup, Radio Standard, TDSCDMA |
| Example | :SOUR:FREQ:CHAN:BAND BANDE |
| Initial S/W Revision | A.11.50 |

BAND F

Selects BAND F as the band for the current step.

| | |
|----------------------|--|
| Key Path | Source, Frequency, Radio Setup, Radio Standard, TDSCDMA |
| Example | :SOUR:FREQ:CHAN:BAND BANDF |
| Initial S/W Revision | A.11.50 |

Radio Band Link

Allows you to specify the radio band link direction for the steps within the list sequence. The link is used in conjunction with the channel band and channel number to determine the output frequency.

When set to “Uplink”, the source will calculate the uplink frequency according to an uplink formula together with selected channel band and channel number. When set to “Downlink”, the source will calculate the downlink frequency according to a downlink formula together with selected channel band and channel number.

| | |
|-----------------------|---|
| Key Path | Source, List Sequencer, List Sequencer Setup, Radio Setup |
| Remote Command | :SOURce:LIST:STEP[1] 2 3...1000:SETup:RADio:BAND:LINK DOWN UP :SOURce:LIST:STEP[1] 2 3...1000:SETup:RADio:BAND:LINK? |

| | |
|----------------------|--|
| Example | :SOUR:LIST:STEP2:SET:RAD:BAND:LINK UP :SOUR:LIST:STEP2:SET:RAD:BAND:LINK? |
| Notes | SCPI is supported after A.09.40 |
| Preset | DOWN |
| Range | DOWN UP |
| Initial S/W Revision | A.05.00 |

Channel

Allows you to specify the frequency of the current step via a channel number.

| Key Path | Source, List Sequencer, List Sequencer Setup |
|-----------------------|---|
| Remote Command | :SOURce:LIST:STEP[1] 2 3...1000:SETup:CNFRequency <double> :SOURce:LIST:STEP[1] 2 3...1000:SETup:CNFRequency? |
| Example | :SOUR:LIST:STEP2:SET:CNFR 124 :SOUR:LIST:STEP2:SET:CNFR? |
| Notes | SCPI is supported after A.09.40. This SCPI is used to setup channel number or frequency setting, according to current Radio Band setting. If Radio Band is "NONE", then it's frequency. If Radio Band is not "NONE", then it's channel number. |
| Couplings | The channel number is coupled to the step frequency value. When the step frequency value is changed, the channel number will increase or decrease to match the new step frequency. If the step frequency is not at an exact match for a channel number, the nearest channel number is displayed, along with a greater than, or less than sign to indicate the frequency is above or below the channel number. |
| Preset | 1 |
| Min | 0 (Please refer to for valid ranges.) |
| Max | 10838 (Please refer to for valid ranges.) |
| Initial S/W Revision | A.05.00 |

Frequency

Allows you to specify a frequency value for the current step.

| Key Path | Source, List Sequencer, List Sequencer Setup |
|-----------------------|--|
| Remote Command | :SOURce:LIST:STEP[1] 2 3...1000:SETup:CNFRequency <double> :SOURce:LIST:STEP[1] 2 3...1000:SETup:CNFRequency? |
| Example | :SOUR:LIST:STEP2:SET:CNFR 1GHz :SOUR:LIST:STEP2:SET:CNFR? |
| Notes | SCPI is supported after A.09.40. |

| | |
|----------------------|--|
| | This SCPI is used to setup channel number or frequency setting, according to current Radio Band setting. If Radio Band is "NONE", then it's frequency. If Radio Band is not "NONE", then it's channel number. |
| Couplings | The frequency value is coupled to the channel band and number for the step, such that updates to the radio band and channel number will update the frequency value to the corresponding absolute frequency. The reverse is also true, changing the frequency value causes the value of the channel number to be updated. |
| Preset | 1.00 GHz |
| Min | 10.00 MHz |
| Max | Hardware Dependant: Option 503 = 3.6 GHz Option 504 = 3.9 GHz Option 506 = 6.00 GHz |
| Initial S/W Revision | A.05.00 |

Power

Allows you to specify a power value for the current step.

| | |
|-----------------------|--|
| Key Path | Source, List Sequencer, List Sequencer Setup |
| Remote Command | :SOURce:LIST:STEP[1] 2 3...1000:SETup:AMPLitude <double> :SOURce:LIST:STEP[1] 2 3...1000:SETup:AMPLitude? |
| Example | :SOUR:LIST:STEP2:SET:AMPL -50dBm :SOUR:LIST:STEP2:SET:AMPL? |
| Notes | SCPI is supported after A.09.40 |
| Notes | Amplitude corrections can be specified for use with the source. In the event of amplitude corrections being applied, the valid ranges for the RF power do not change dependant on the current amplitude correction setting. Instead, if the combination of RF power + amplitude correction is higher or lower than the source output range, the Source Unleveled bit is set and the "Source Unleveled" indicator will appear on status panel to indicate that the source cannot maintain the output power that has been requested. The multiport adapter RFIO TX ports and GPS ports cannot ensure power accuracy when power setting is lower than -130dBm, this power setting value is defined by the sum of RF Power setting and related amplitude correction value. But user settable value could be lower than this limit. When application detected there exists power setting lower than -130dBm on MPA RFIO TX ports, then popup warning message . When application detected there exists power setting lower than -130dBm on MPA GPS ports, then popup warning message . These are only warning messages, and check is performed when RF is ON. |
| Notes | The Min and Max value here defined UI settable amplitude range. This range is larger than actual amplitude range with level accuracy defined in spec. |
| Dependencies | The RF power is dependent on the RF output port and frequency, such that the current frequency and selected output port determine the valid range of power values. |
| Preset | -100 dBm |

| | |
|----------------------|--|
| Min | The range of values depends on the current frequency and selected RF output port. Please refer to "RF Power" on page 2500 and the table RF Power Range for the valid ranges. |
| Max | The range of values depends on the current frequency and selected RF output port. Please refer to "RF Power" on page 2500 and the table RF Power Range for the valid ranges. |
| Initial S/W Revision | A.05.00 |

Waveform

Allows you access to the sub-menus for selecting the waveform to be played back during the current step. Pressing this key also changes the central display area to show the Waveform File Selection view.

| | |
|----------------------|--|
| Key Path | Source, List Sequencer, List Sequencer Setup |
| Remote Command | :SOURce:LIST:STEP[1] 2 3...1000:SETup:WAVeform <string> :SOURce:LIST:STEP[1] 2 3...1000:SETup:WAVeform? |
| Example | :SOUR:LIST:STEP2:SET:WAV "CW" :SOUR:LIST:STEP2:SET:WAV? |
| Notes | SCPI is supported after A.09.40 |
| Remote Command Notes | String type, takes "Off" "CW" "Cont" "waveform name" |
| Preset | CW |
| Range | Waveform Continue Previous CW Off |
| Initial S/W Revision | A.05.00 |

CW

Sets the current step to output a CW tone.

| | |
|----------------------|---|
| Key Path | Source, List Sequencer, List Sequencer Setup, Waveform |
| Example | :SOUR:LIST:STEP2:SET:WAV "CW" |
| Notes | SCPI is supported after A.09.40 |
| Initial S/W Revision | A.05.00 |

Selected Waveform

Inserts the currently selected waveform in the waveform selection view as the waveform for playback during the current step.

| | |
|----------|---|
| Key Path | Source, List Sequencer, List Sequencer Setup, Waveform |
| Example | :SOUR:LIST:STEP2:SET:WAV "waveform name" |
| Notes | SCPI is supported after A.09.40 If the selected waveform contains header (which contains ARB play parameters), source list |

sequence will automatically apply header settings of the selected waveform in that step.

Initial S/W Revision A.05.00

Continue Previous

Sets the current step to continue with playback of the waveform from the previous step. When continuing the previous waveform, the ARB playback will not pause while the source retunes to the new frequency or amplitude that may be defined for the new step.

Key Path **Source, List Sequencer, List Sequencer Setup, Waveform**

Example :SOUR:LIST:STEP2:SET:WAV "Cont"

Notes SCPI is supported after A.09.40

Initial S/W Revision A.05.00

Off

Disable RF output of the current step.

Key Path **Source, List Sequencer, List Sequencer Setup, Waveform**

Example :SOUR:LIST:STEP2:SET:WAV "Off"

Notes SCPI is supported after A.09.40

Initial S/W Revision A.05.00

Segments on Hard Disk

Allows you access to the sub-menus for loading waveform segments from the hard disk into ARB memory. The default directory is: D: varb.

Pressing this key changes the current view to the Waveform Management View.

Key Path **Source, Modulation Setup, ARB, Select Waveform**

Initial S/W Revision A.05.00

Load Segment To ARB Memory

Allows you to load the selected file into ARB memory. On the front panel you select the file for loading to the ARB memory by highlighting the desired file in the list. Using the SCPI command, you specify the file name on the HDD.

"NVWFM" (none-volatile storage) MSUS (Mass Storage Unit Specifier) is supported in the memory subsystem because the ARB memory cannot be accessed directly. Therefore, files must be downloaded to the instrument hard disk and then loaded into the ARB memory. "NVWFM" MSUS will be mapped to the

default directory D: VARB. The SCPI command supports using either “NVWFM” MSUS or specifying a full path. For more information, see [Memory Subsystem \(Remote Command Only\)](#).

If a file of the same name already exists within ARB memory, it is overwritten. If you wish to load two segments of the same name, you must rename one of the segments before loading it into ARB memory. To rename a segment, you can either use Windows File Explorer, or the :MMEMory:COPY command.

| | |
|-----------------------|---|
| Key Path | Source, Modulation Setup, ARB, Select Waveform, Segments on Hard Disk |
| Remote Command | :SOURce:RADio:ARB:LOAD <string> |
| Example | :SOUR:RAD:ARB:LOAD “D: VARB\testwaveform.bin” or :SOUR:RAD:ARB:LOAD “NVWFM:testwaveform.bin” |
| Notes | <p>Because loading the file involves a delay of unpredictable length, this command should be followed by the query *OPC?, which holds off subsequent commands until the loading operation is complete.</p> <p><string> – specifies the path name of the file to load from the HDD into ARB memory. It could be a <full path + filename>, or <“NVWFM” MSUS + colon + filename>.</p> <p>When in Sequence Analyzer mode, and Include Source is Yes, an attempt to load a file to ARB memory will be rejected with an error.</p> <p>When Include Source is No and if there is insufficient free ARB memory to load the selected waveform, an error is generated. .</p> <p>If you specify a file over SCPI, but the file is not at the specified location, an error is generated.</p> <p>If you try to load a waveform file but the file contains less than 500 IQ samples, an error is generated.</p> <p>If you try to load a Signal Studio waveform “*.wfm” which contains invalid waveform header, an error is generated.</p> <p>If the ARB is ON when you load a file to ARB memory or delete a file from ARB memory, the playing waveform segment may not keep phase continuity during the ARB memory operation. The waveform will be replayed after the ARB operation is finished.</p> <p>ARB can be loaded into ARB memory even if required licenses do not present on the instrument. In this case, a GUI only warning message –800, “Operation complete; Loaded <filename> successfully, but no license <required licenses> installed”. User can install required licenses according to <required licenses> string to license it, or multi-pack license it.</p> |
| Initial S/W Revision | A.05.00 |

Load All To ARB Memory

Allows you to load all the segment files within the currently selected directory into ARB memory. If a file of the same name already exists within ARB memory, it is overwritten. If you wish to load two segments of the same name, you must rename one of the segments before loading it into ARB memory. To rename a segment, you can either use Windows File Explorer, or the :MEMory:COPY command.

| | |
|-----------------------|--|
| Key Path | Source, Modulation Setup, ARB, Select Waveform, Segments on Hard Disk |
| Remote Command | :SOURce:RADio:ARB:LOAD:ALL <string> |
| Example | :SOUR:RAD:ARB:LOAD:ALL “D: varb” |
| Notes | <p><string> – specifies the directory on the HDD to load the files into ARB memory from.</p> <p>When in Sequence Analyzer mode, and Include Source is Yes, an attempt to load all files from a</p> |

directory to ARB memory is rejected with an error.
 When Include Source is No and there is insufficient free ARB memory to load all the waveforms, when the ARB memory is full, the copy ceases, and an error is generated.
 If you specify a directory over SCPI, but the directory does not exist, an error is generated.
 If the ARB is ON, a user then loads or deletes file to ARB memory, the playing waveform segment may not keep phase continuity during the ARB memory operation. The waveform will be replayed after the ARB operation is finished.

Initial S/W Revision A.05.00

Change Directory...

Allows you to change the currently selected directory on the hard disk. Pressing this key opens a standard windows change directory dialog allowing you to select the new directory of interest.

The current directory is used for manually loading waveform segments into ARB memory for playback, and as a search location for waveform segments that are required to be loaded into ARB memory for playback of a waveform sequence or a list sequence.

Key Path **Source, Modulation Setup, ARB, Select Waveform, Segments on Hard Disk**

Notes No remote command, SCPIfront panel only.

Initial S/W Revision A.05.00

Default Directory...

Allows you to change the default directory. It is used as a search location for waveform segments that are required to be loaded into ARB memory for playback of a waveform sequence, and as a search location for selecting waveforms using SCPI.

Key Path **Source, Modulation Setup, ARB, Select Waveform, Segments on Hard Disk**

Remote Command :SOURce:RADio:ARB:DEFault:DIRectory <string>
 :SOURce:RADio:ARB: DEFault:DIRectory?

Example :SOUR:RAD:ARB:DEF:DIR "D:\ArbFiles"
 :SOUR:RAD:ARB:DEF:DIR?

State Saved Persistent, survives a power cycle and a preset but not saved in the instrument state

Initial S/W Revision A.05.00

Segments in ARB Memory

Allows you access to the sub-menus for managing the files within ARB memory.

Key Path **Source, Modulation Setup, ARB, Select Waveform**

Initial S/W Revision A.05.00

Delete Segment From ARB Mem

Allows you to remove a segment from ARB playback memory.

| | |
|-----------------------|---|
| Key Path | Source, Modulation Setup, ARB, Select Waveform, Segments in ARB Memory |
| Remote Command | :SOURce:RADio:ARB:DELeTe <string> |
| Example | :SOUR:RAD:ARB:DEL "testwaveform.bin" |
| Notes | <p><string> - specifies the waveform to be deleted from the ARB playback memory.</p> <p>When in Sequence Analyzer mode and Include Source is Yes, an attempt to delete a file from ARB memory is rejected with an error.</p> <p>When Include Source is No and you specify a file that does not exist within ARB memory, an error is generated.</p> <p>It is possible to delete files from within the ARB memory when the ARB is ON. However, if you attempt to delete the file that is currently playing an error is generated.</p> <p>It is possible to delete a file from within the ARB memory when the sequencer state is ON and the file is not being used by the List Sequencer. If you attempt to delete a file which is being used by the list sequencer, an error is generated.</p> <p>When sequencer state is On, even if ARB state is On, the selected waveform will not be played. In this case, if the selected waveform is not used in List Sequence, it can be deleted and the ARB state is turned Off.</p> <p>If the ARB is ON and you load a file to ARB memory or delete a file from ARB memory, the playing waveform segment may not keep phase continuity during the ARB memory operation. The waveform will be replayed after the ARB operation is finished.</p> |
| Initial S/W Revision | A.05.00 |

Delete All From ARB Memory

Allows you to remove all segments from ARB playback memory.

| | |
|-----------------------|--|
| Key Path | Source, Modulation Setup, ARB, Select Waveform, Segments in ARB Memory |
| Remote Command | :SOURce:RADio:ARB:DELeTe:ALL |
| Example | :SOUR:RAD:ARB:DELeTe:ALL |
| Notes | <p>When in Sequence Analyzer mode and Include Source is Yes, an attempt to delete all files from ARB memory is rejected with an error.</p> <p>When Include Source is No and you attempt to delete all files from ARB memory when the ARB is currently playing a file, all files except the one playing are deleted and an error is generated.</p> <p>If you attempt to delete all files from ARB memory when there are waveform files used in "List Sequencer" on page 2585 and "Sequencer" on page 2586 state is ON, all files except the files currently being used in list sequencer are deleted, and an error is generated.</p> <p>If the ARB is ON and you load a file to ARB memory or delete a file from ARB memory, the playing waveform segment may not keep phase continuity during the ARB memory operation. The waveform will be replayed after the ARB operation is finished.</p> |

Delete All From ARB Memory

This key functions the same as "Delete All From ARB Memory" on page 2614.

| | |
|----------------------|--|
| Key Path | Source, List Sequencer, List Sequencer Setup, Waveform, Segments in ARB Memory, Segment in ARB Memory |
| Initial S/W Revision | Prior to A.09.00 |

Step Duration

Allows access to the sub-menus for setting up the duration of play for the current step.

The duration can be set to be either the number of times for the ARB file associated with the sequence to play, or a specific time value, or continuous. If the step is set to play a CW tone, the step duration cannot be set to a play count.

| | |
|----------------------|---|
| Key Path | Source, List Sequencer, List Sequencer Setup |
| Remote Command | :SOURce:LIST:STEP[1] 2 3...1000:SETup:DURation:TYPE TIME COUNT CONTInuous CABort :SOURce:LIST:STEP[1] 2 3...1000:SETup:DURation:TYPE? |
| Example | :SOUR:LIST:STEP2:SET:DUR:TYPE TIME :SOUR:LIST:STEP2:SET:DUR:TYPE? |
| Notes | SCPI is supported after A.09.40 |
| Notes | If "Step Duration" is set to "Time" or "Play Count" for the last step, the last step of ARB keeps playing as if set to "Continuous", until the set "Time" has expired or until the "Play Count" setting is reached. However, you can query Error! Reference source not found. Source Sweeping Condition Message to find out if the current list sequence is complete or not. |
| Range | Time Play Count Continuous Continuous Abort |
| Initial S/W Revision | A.05.00 |

Time

Sets the duration of the current step to be a time value for the length of time the step will play. Pressing this key again opens another menu which allows you to set the time value for the step duration.

| | |
|-----------------------------|--|
| Key Path | Source, List Sequencer, List Sequencer Setup, Step Duration |
| Example | :SOUR:LIST:STEP2:SET:DUR:TYPE TIME |
| Notes | SCPI is supported after A.09.40 |
| Initial S/W Revision | A.05.00 |

Duration Time

Allows you to specify the length of time the current step will play.

When Step Duration is **Continuous Abort** this parameter specifies the maximum duration that the waveform will continue to play after a step trigger is received before the transition to the next waveform will occur. Duration is limited to a maximum of 20 seconds.

If the Transition Time value is longer than the Step Duration Time, an error is generated when initiating a source list sequence. For source list sequence, transition time is included in the step duration length (not occupy additional time). If the Transition Time value is longer than the Step Duration Time, the real step duration length is extended to equal the transition time and cause a timing shift. This check is also described in section **Error! Reference source not found.** List Sequence Step Validation.

| | |
|-----------------------------|--|
| Key Path | Source, List Sequencer, List Sequencer Setup, Step Duration, Time |
| Remote Command | :SOURce:LIST:STEP[1] 2 3...1000:SETup:DURation:TCOut <double> :SOURce:LIST:STEP[1] 2 3...1000:SETup:DURation:TCOut? |
| Example | :SOUR:LIST:STEP2:SET:DUR:TCO 1s :SOUR:LIST:STEP2:SET:DUR:TCO? |
| Notes | SCPI is supported after A.09.40 This SCPI is reused by "Play Count", "Duration Time" and "Continuous Abort" according to current Duration Type setting is "Play Count" or "Duration Time" or "Continuous Abort". If current "Duration Type" is "Continuous", then popup error -221, "Settings conflict; Cannot accept time or count input when step duration type is Continuous on step #" |
| Notes | If "Duration Time" is set for the last step, the last step of ARB keeps playing as if set to "Continuous" after set time expires. However, you can query Source Sweeping Condition Message (:STAT:OPER:COND?) to find out if the current list sequence is complete or not. |
| Preset | 1.00 ms |
| Min | 100 µs |
| Max | 1800 s |
| Initial S/W Revision | A.05.00 |

Play Count

Sets the duration of the current step to be an integer value for the number of times (play count) the ARB file is selected for playback during this step. For example, a 5 second ARB will be set to play 5 times during the step.

| | |
|----------------------|---|
| Key Path | Source, List Sequencer, List Sequencer Setup, Step Duration |
| Example | :SOUR:LIST:STEP2:SET:DUR:TYPE COUN |
| Notes | SCPI is supported after A.09.40 This key is unavailable and is grayed out if the current step is configured to CW tone rather than an ARB waveform. |
| Initial S/W Revision | A.05.00 |

Header Utilities

Allows access to the header utilities sub-menu. Pressing this key also causes the central display area to change to display the File Header Information view.

| | |
|----------------------|---|
| Key Path | Source, Modulation Setup, ARB |
| Dependencies | This key is only available if there is currently a waveform selected for playback. If no waveform is selected, the key is grayed out. |
| Initial S/W Revision | A.05.00 |

Continuous

Sets the current step to be played continuously until the next step starts. The waveform will always play completely before transitioning to the next step.

| | |
|----------------------|--|
| Key Path | Source, List Sequencer, List Sequencer Setup, Step Duration |
| Example | :SOUR:LIST:STEP2:SET:DUR:TYPE CONT |
| Notes | SCPI is supported after A.09.40 |
| Initial S/W Revision | A.05.00 |

Output Trigger

Allows you to specify the trigger output for the current step. The trigger output signal is sent at the start of the step.

When select “On”, trigger event will occur on both Internal and External2 paths. Select “Off” will turn off trigger output.

| | |
|-----------------------|---|
| Key Path | Source, List Sequencer, List Sequencer Setup |
| Remote Command | :SOURce:LIST:STEP[1] 2 3...1000:SETup:OUTPut:TRIGger ON OFF 1 0 :SOURce:LIST:STEP[1] 2 3...1000:SETup:OUTPut:TRIGger |
| Example | :SOUR:LIST:STEP2:SET:OUTP:TRIG ON :SOUR:LIST:STEP2:SET:OUTP:TRIG? |
| Notes | SCPI is supported after A.09.40 |
| Preset | Off |

| | |
|----------------------|---------|
| Range | On Off |
| Initial S/W Revision | A.05.00 |

Step Configuration (Remote Command Only)

This SCPI command is used to configure the List Sequencer and is detailed in the table below. The command is defined such that you send one command per step, with the step number being specified as a subopcode of the SCPI command. Each command includes all the parameter settings for the step. As a step is setup, the values entered are run through several levels of validation.

| | |
|-----------------------|--|
| Remote Command | <pre>:SOURce:LIST:STEP[1] 2 ... 4..1000:SETup IMMEDIATE INTERNAL KEY BUS EXTERNAL2, <time>, NONE PGSM EGSM RGSM DCS1800 PCS1900 TGSM810 GSM450 GSM480 GSM700 GSM850 BANDI BANDII BANDIII BANDIV BANDV BANDVI BANDVII BANDVIII BANDIX BANDX BANDXI BANDXII BANDXIII BANDXIV BANDXIX USCELL USPCS JAPAN KOREAN NMT IMT2K UPPER SECOND PAMR400 PAMR800 IMTEXT PCS1DOT9G AWS US2DOT5G PUBLIC LOWER NONE BAND1 BAND2 BAND3 BAND4 BAND5 BAND6 BAND7 BAND8 BAND10 BAND11 BAND12 BAND13 BAND14 BAND17 BAND18 BAND19 BAND20 BAND21 BAND24 BAND25 BAND26 BAND33 BAND34 BAND35 BAND36 BAND37 BAND38 BAND39 BAND40 BAND41 BAND42 BAND43 BANDA BANDB BANDC BANDD BANDE BANDF, DOWN UP, <freq>, <ampl>, <string>, TIME COUNT CONTinuous, <time>, ON OFF 1 0, [<int>], :SOURce:LIST:STEP[1] 2 ... 4..1000:SETup?</pre> |
| Example | :SOUR:LIST:STEP1:SET INT, 1ms, PGSM, DOWN, 10, -25 dBm, "GSM_Test1.bin", TIME, 10ms, OFF, 255 |
| Notes | <p>The parameters are:</p> <p>(There is a total of 11 items in each step, the following is a list of the items in the order they must appear in the remote command.)</p> <ol style="list-style-type: none"> 1. Step Trigger <enum> – specifies the input trigger for the step. For details of the valid types of step trigger see "Step Trigger" on page 2588. 2. Transition Time <time> – specifies the transition time for the step in seconds. For details of the valid ranges for the transition time see "Transition Time" on page 2590. 3. Radio Band <enum> – specifies the radio band for the step. For details of the valid radio bands see "Radio Setup" on page 2591. 4. Radio Band Link <enum> – specifies the radio band link direction for the step. For details of the valid link types, see "Radio Band Link" on page 2607. 5. Frequency/Channel Number <freq>/<chan num> – specifies the frequency in Hz or the channel number for the step. The channel number and frequency are combined as one parameter that represents the frequency or channel number depending on the radio band setting. If the radio band is set to NONE, this value is interpreted as a frequency value in Hz. If the radio band is set to a valid band, this value is interpreted as a channel number. For details of the valid ranges for frequency and channel numbers, see "Channel" on page 2608 and "Frequency" on page 2608. 6. Power <ampl> – specifies the output power for the step in dBm. For details of the valid ranges see "Power" on page 2609. 7. Waveform <string> – specifies the waveform for playback during the step. The step can output either a new ARB waveform, continue playback of the previous waveform, or output a CW tone. The |

options for specifying these are:

<filename> - plays the specified waveform from the start. The filename value is the name of the file within ARB playback memory, it does not include the windows path to the file on the HDD. If you enter a filename for a waveform that does not reside within ARB playback memory, an error is generated.

CONT - continues playback of the ARB file from the previous step

CW - outputs a CW tone

OFF - disable RF output

8. Step Duration <enum> - specifies the duration of the step. The duration can be specified to be either time, or play count of the ARB file associated with the step, or continuous. If Waveform is set to "CW", this value cannot be set to Play Count and an error will be generated. If continuous is selected, the following Time or Count value is ignored. For further details of this setting, see "[Step Duration](#)" on page 2616.

9. Time or Count <time/int> - specifies time duration in seconds or play count of the ARB file associated with the step. For further details of this setting, including the valid ranges for the time or play count setting, "[Time](#)" on page 2616 and "[Play Count](#)" on page 2617.

10. Output Trigger <Boolean> - specifies the output trigger for the step. For details of the ranges for this setting see "[Output Trigger](#)" on page 2618.

| | |
|----------------------|--|
| Dependencies | The range of subopcode values is 1 to 1000 and the value you enter is determined by the number of steps you have configured. For details see " Number of Steps " on page 2587. If you attempt to remotely set or query a subopcode that is out of range, an error is generated. |
| Initial S/W Revision | A.05.00 |

Step Configuration of Step Trigger parameter list (Remote Command Only)

This SCPI command is to configure "Step Trigger" parameter array of the whole List Sequencer at one time. The number of array is same as step number defined in "[Number of Steps](#)" on page 2587 Number of Steps. As a step is setup, the value entered run through several levels of validation.

| | |
|-----------------------------|--|
| Remote Command | :SOURce:LIST:SETup:INPut:TRIGger <enum>, <enum>, <enum>, ... :SOURce:LIST:SETup:INPut:TRIGger? |
| Example | :SOUR:LIST:SET:INP:TRIG IMM,INT,EXT2 :SOUR:LIST:SET:INP:TRIG? |
| Notes | The command is to setup below parameter array of whole list sequence. Step Trigger <enum> - specifies the input trigger for the step. For details of the valid types of step trigger see " Step Trigger " on page 2588. If input parameter number exceeds the step number defined by " Number of Steps " on page 2587 Number of Steps then generate error ", and only those parametes whose index number falls in number of steps will be updated. |
| Remote Command Notes | IMMediate INTernal KEY BUS EXTernal2 |
| Dependencies | The range is 1 to 1000 which is determined by the number of steps you have configured. For details see " Number of Steps " on page 2587. |
| Initial S/W Revision | A.09.40 |

Step Configuration of Transition Time parameter list (Remote Command Only)

This SCPI command is to configure “Transition Time” parameter array of the whole List Sequencer at one time. The number of array is same as step number defined in ["Number of Steps" on page 2587](#) Number of Steps. As a step is setup, the value entered run through several levels of validation.

| | |
|-----------------------------|--|
| Remote Command | :SOURce:LIST:SETup:TRANSition:TIME <time>, <time>, <time>, ... :SOURce:LIST:SETup:TRANSition:TIME? |
| Example | :SOUR:LIST:SET:TRAN:TIME 1ms,1ms,1ms :SOUR:LIST:SET:TRAN:TIME? |
| Notes | The command is to setup below parameter array of whole list sequence. Transition Time <time> – specifies the transition time for the step in seconds. For details of the valid ranges for the transition time see "Transition Time" on page 2590 If input parameter number exceeds the step number defined by "Number of Steps" on page 2587 Number of Steps then generate error ", and only those parameters whose index number falls in number of steps will be updated. |
| Dependencies | The range is 1 to 1000 which is determined by the number of steps you have configured. For details see "Number of Steps" on page 2587 . |
| Initial S/W Revision | A.09.40 |

Step Configuration of Radio Band parameter list (Remote Command Only)

This SCPI command is to configure “Radio Band” parameter array of the whole List Sequencer at one time. The number of array is same as step number defined in ["Number of Steps" on page 2587](#) Number of Steps. As a step is setup, the value entered run through several levels of validation.

| Initial S/W Revision | A.09.40 |

Step Configuration of Waveform parameter list (Remote Command Only)

This SCPI command is to configure “Waveform” parameter array of the whole List Sequencer at one time. The number of array is same as step number defined in ["Number of Steps" on page 2587](#) Number of Steps. As a step is setup, the value entered run through several levels of validation.

| | |
|-----------------------|--|
| Remote Command | <pre>:SOURce:LIST:SETup:WAVEform <string>, <string>, <string>, ...</pre> |
|-----------------------|--|

| | |
|-----------------------------|--|
| | :SOURce:LIST:SETup:WAVeform? |
| Example | :SOUR:LIST:SET:WAV "CW","Off","CONT" :SOUR:LIST:SET:WAV? |
| Notes | <p>The command is to setup below parameter array of whole list sequence.</p> <p>Waveform <string> – specifies the waveform for playback during the step. The step can output either a new ARB waveform, continue playback of the previous waveform, or output a CW tone. The options for specifying these are:</p> <p><filename> - plays the specified waveform from the start. The filename value is the name of the file within ARB playback memory, it is does not include the windows path to the file on the HDD. If you enter a filename for a waveform that does not reside within ARB playback memory, an error is generated.</p> <p>CONT – continues playback of the ARB file from the previous step</p> <p>CW – outputs a CW tone</p> <p>OFF – disable RF output</p> <p>If input parameter number exceeds the step number defined by "Number of Steps" on page 2587 Number of Steps then generate error ", and only those parametes whose index number falls in number of steps will be updated.</p> |
| Dependencies | The range is 1 to 1000 which is determined by the number of steps you have configured. For details see "Number of Steps" on page 2587. |
| Range | "filename" "CW" "Off" "CONT" |
| Initial S/W Revision | A.09.40 |

Step Configuration of Step Duration parameter list (Remote Command Only)

This SCPI command is to configure "Step Duration" parameter array of the whole List Sequencer at one time. The number of array is same as step number defined in "Number of Steps" on page 2587 Number of Steps. As a step is setup, the value entered run through several levels of validation.

| | |
|-----------------------------|---|
| Remote Command | :SOURce:LIST:SETup:DURation:TYPE <enum>, <enum>, <enum>, ... :SOURce:LIST:SETup:DURation:TYPE? |
| Example | :SOUR:LIST:SET:DUR:TYPE COUN,TIME,CONT :SOUR:LIST:SET:DUR:TYPE? |
| Notes | <p>The command is to setup below parameter array of whole list sequence.</p> <p>Step Duration <enum> – specifies the duration of the step. The duration can be specified to be either time, or play count of the ARB file associated with the step, or continuous. If Waveform is set to "CW", this value cannot be set to Play Count and an error will be generated. If continuous is selected, the following Time or Count value is ignored. For further details of this setting, see "Step Duration" on page 2616.</p> <p>If input parameter number exceeds the step number defined by "Number of Steps" on page 2587 Number of Steps then generate error ", and only those parametes whose index number falls in number of steps will be updated.</p> |
| Remote Command Notes | TIME COUNT CONTInuous |
| Dependencies | The range is 1 to 1000 which is determined by the number of steps you have configured. For details |

see ["Number of Steps" on page 2587](#).

Initial S/W Revision A.09.40

Step Configuration of Duration Time or Play Count parameter list (Remote Command Only)

This SCPI command is to configure “Duration Time” or “Play Count” parameter array of the whole List Sequencer at one time. The number of array is same as step number defined in ["Number of Steps" on page 2587](#) Number of Steps. As a step is setup, the value entered run through several levels of validation.

Remote Command :SOURce:LIST:SETup:TOCount <time/int>, <time/int>, <time/int>, ...
:SOURce:LIST:SETup:TOCount?

Example :SOUR:LIST:SET:TOC 1s,2s,3s
:SOUR:LIST:SET:TOC?
:SOUR:LIST:SET:TOC 5,6,7
:SOUR:LIST:SET:TOC?

Notes The command is to setup below parameter array of whole list sequence.
Time or Count <time/int> – specifies time duration in seconds or play count of the ARB file associated with the step. For further details of this setting, including the valid ranges for the time or play count setting, ["Time" on page 2616](#) and ["Play Count" on page 2617](#).
If input parameter number exceeds the step number defined by ["Number of Steps" on page 2587](#) Number of Steps then generate error ", and only those parametes whose index number falls in number of steps will be updated.
If current ["Step Duration" on page 2616](#) is “Continuous”, then generate error -221, "Settings conflict;Cannot accept time or count input when step duration type is Continuous on step #"

Dependencies The range is 1 to 1000 which is determined by the number of steps you have configured. For details see ["Number of Steps" on page 2587](#).

Initial S/W Revision A.09.40

Step Configuration of Output Trigger parameter list (Remote Command Only)

This SCPI command is to configure “Output Trigger” parameter array of the whole List Sequencer at one time. The number of array is same as step number defined in ["Number of Steps" on page 2587](#) Number of Steps. As a step is setup, the value entered run through several levels of validation.

Remote Command :SOURce:LIST:SETup:OUTPut:TRIGger <bool>, <bool>, <bool>, ...
:SOURce:LIST:SETup:OUTPut:TRIGger ?

Example :SOUR:LIST:SET:OUTP:TRIG ON,OFF,ON
:SOUR:LIST:SET:OUTP:TRIG?

Notes The command is to setup below parameter array of whole list sequence.
Output Trigger <Boolean> – specifies the output trigger for the step. For details of the ranges for this setting see ["Output Trigger" on page 2618](#).
If input parameter number exceeds the step number defined by ["Number of Steps" on page 2587](#) Number of Steps then generate error ", and only those parametes whose index number falls in

| | |
|----------------------|--|
| | legal step number will be updated. |
| Remote Command Notes | ON OFF 1 0 |
| Dependencies | The range is 1 to 1000 which is determined by the number of steps you have configured. For details see " Number of Steps " on page 2587. |
| Initial S/W Revision | A.09.40 |

Clear List (Remote Command Only)

This command is the SCPI equivalent of the Clear List UI feature described in.

| | |
|-----------------------|--------------------------|
| Remote Command | :SOURce:LIST:SETup:CLEar |
| Example | :SOUR:LIST:SETup:CLE |
| Initial S/W Revision | A.05.00 |

Trigger Type

Allows access to the sub-menu for selecting the output trigger type for the list sequencer globally. It cannot be changed between different sequence steps.

| | |
|-----------------------|---|
| Key Path | Source, List Sequencer |
| Remote Command | :SOURce:LIST:TRIGgerout:TYPE BEGinningofstep DATamarker |
| Example | :SOUR:LIST:TRIG:TYP BEG :SOUR:LIST:TRIG:TYP? |
| Notes | SCPI is supported after A.14.00 This an alias SCPI of :SOURce:LIST:TRIGger:OUTPut:TYPE STEP MARKer Recommend to use : SOURce:LIST:TRIGger:OUTPut:TYPE STEP MARKer |
| Preset | BEGinningofstep |
| Range | BEGinningofstep DATamarker |
| Initial S/W Revision | A.14.00 |

BeginningOfStep

Sets the output trigger type as BeginningOfStep for the whole source sequence.

| | |
|-----------------|---|
| Key Path | Source, List Sequencer, Trigger Type |
| Example | :SOUR:LIST:TRIG:TYP BEG |
| Notes | SCPI is supported after A.14.00 This an alias SCPI of :SOURce:LIST:TRIGger:OUTPut:TYPE STEP Recommend to use : SOURce:LIST:TRIGger:OUTPut:TYPE STEP |

| | |
|----------------------|---------|
| Initial S/W Revision | A.14.00 |
|----------------------|---------|

DataMarker

Sets the output trigger type as DataMarker for the whole source sequence. When DataMarker is selected, which marker to route is also needed to be set.

| | |
|-----------------|---|
| Key Path | Source, List Sequencer, Trigger Type |
| Example | :SOUR:LIST:TRIG:TYP DAT |
| Notes | SCPI is supported after A.14.00 This an alias SCPI of :SOURce:LIST:TRIGger:OUTPut:TYPE MARKer Recommend to use : SOURce:LIST:TRIGger:OUTPut:TYPE MARKer |

| | |
|----------------------|---------|
| Initial S/W Revision | A.14.00 |
|----------------------|---------|

Marker 1

Sets the output trigger maker routing to Marker 1 for DataMarker in the whole source sequence.

| | |
|-----------------|--|
| Key Path | Source, List Sequencer, Trigger Type, DataMarker |
| Example | :SOUR:LIST:TRIG:TYPE:MARK M1 |
| Notes | SCPI is supported after A.14.00 This an alias SCPI of :SOURce:LIST:TRIGger:OUTPut:TYPE:MARKer M1 Recommend to use :SOURce:LIST:TRIGger:OUTPut:TYPE:MARKer M1 |

| | |
|----------------------|---------|
| Initial S/W Revision | A.14.00 |
|----------------------|---------|

Marker 2

Sets the output trigger maker routing to Marker 2 for DataMarker in the whole source sequence.

| | |
|-----------------|--|
| Key Path | Source, List Sequencer, Trigger Type, DataMarker |
| Example | :SOUR:LIST:TRIG:TYPE:MARK M2 |
| Notes | SCPI is supported after A.14.00 This an alias SCPI of :SOURce:LIST:TRIGger:OUTPut:TYPE:MARKer M2 Recommend to use :SOURce:LIST:TRIGger:OUTPut:TYPE:MARKer M2 |

| | |
|----------------------|---------|
| Initial S/W Revision | A.14.00 |
|----------------------|---------|

Marker 3

Sets the output trigger maker routing to Marker 3 for DataMarker in the whole source sequence.

| | |
|-----------------------------|--|
| Key Path | Source, List Sequencer, Trigger Type, DataMarker |
| Example | :SOUR:LIST:TRIG:TYPE:MARK M3 |
| Notes | SCPI is supported after A.14.00 This an alias SCPI of :SOURce:LIST:TRIGger:OUTPut:TYPE:MARKer M3 Recommend to use :SOURce:LIST:TRIGger:OUTPut:TYPE:MARKer M3 |
| Initial S/W Revision | A.14.00 |

Marker 4

Sets the output trigger maker routing to Marker 4 for DataMarker in the whole source sequence.

| | |
|-----------------------------|--|
| Key Path | Source, List Sequencer, Trigger Type, DataMarker |
| Example | :SOUR:LIST:TRIG:TYPE:MARK M4 |
| Notes | SCPI is supported after A.14.00 This an alias SCPI of :SOURce:LIST:TRIGger:OUTPut:TYPE:MARKer M4 Recommend to use :SOURce:LIST:TRIGger:OUTPut:TYPE:MARKer M4 |
| Initial S/W Revision | A.14.00 |

Manual Trigger Now

Pressing this key provides a software trigger event to the list sequencer. During execution of sequence, if the sequencer is halted on any step that has been configured with a “Manual” step trigger, then this key press will cause the sequencer to continue and execute the step.

| | |
|-----------------------------|--------------------------------------|
| Key Path | Source, List Sequencer |
| Remote Command | No remote command, front panel only. |
| Initial S/W Revision | A.05.00 |

Remote Software Trigger (Remote command Only)

During execution of a list sequence, the sequence will halt and wait at any step that has Step Trigger set to “Bus”. Sending this command will trigger the step and continue the sequence.

| | |
|-----------------------------|---|
| Remote Command | :SOURce:LIST:TRIGger:INITiate[:IMMediate] |
| Example | :SOUR:LIST:TRIG:INIT |
| Initial S/W Revision | A.05.00 |

Query List Sequence Initiation Armed Status (Remote Command Only)

This is a blocking SCPI query to determine if source list sequence being initiated successfully or not.

| | |
|-----------------------|--|
| Remote Command | :SOURce:LIST:INITiation:ARMed? |
| Example | :SOUR:LIST:INIT:ARMed? |
| Notes | The return data is in the following format: Integer |
| Notes | Query only SCPI. Returning "1" if list sequence has been initiated successfully, returning "0" if not. Once get "0", you can use :SYST:ERR? to query what error happened. Just like "*OPC?", this command can be blocked until event/status "IsSourceSweeping" happens, and then returns. Doing so can help user's script query armed status only once during the time interval of the initiation. As an ancillary SCPI of existing SCPI ":SOUR:LIST:TRIGger[:IMMediate]" (see "Initiate Sequence" on page 2586 Initiate Sequence), the right usage of this command is to use it after ":SOUR:LIST:TRIG". If not, this command will return "1" immediately. |
| Notes | There is an alias SCPI ":SOURce:LIST:TRIGger:INITiation:ARMed?". |
| Initial S/W Revision | A.09.40 |

Source Preset

Allows you to preset the source settings to their default values.

| | |
|-----------------------|----------------|
| Key Path | Source |
| Remote Command | :SOURce:PRESet |
| Example | :SOUR:PRES |

SPAN X Scale

Accesses a menu of functions that enable you set the horizontal scale parameters.

| | |
|----------------------|------------------------|
| Key Path | Front-panel key |
| Initial S/W Revision | A.10.01 |

Ref Value(Burst View)

Allows you to set the display X reference value.

| | |
|-----------------------|--|
| Key Path | SPAN X Scale |
| Mode | WLAN |
| Remote Command | :DISPlay:PVTime:VIEW[1]:WINDow[1]:TRACe:X[:SCALe]:RLEVel <time> :DISPlay:PVTime:VIEW[1]:WINDow[1]:TRACe:X[:SCALe]:RLEVel? |
| Example | DISP:PVT:VIEW:WIND:TRACE:X:RLEV 1s DISP:PVT:VIEW:WIND:TRACE:X:RLEV? |
| Notes | If X Auto Scale is On, this value is automatically determined by the measurement result. When a value is set manually, X Auto Scale is automatically set to Off. |
| Couplings | See Notes |
| Preset | 0 s |
| State Saved | Saved in instrument state. |
| Min | -10.0 s |
| Max | 10.00 s |
| Initial S/W Revision | A.10.01 |

Scale/Div(Burst View)

Allows you to set the display X scale/division value.

| | |
|-----------------------|---|
| Key Path | SPAN X Scale |
| Mode | WLAN |
| Remote Command | :DISPlay:PVTime:VIEW[1]:WINDow[1]:TRACe:X[:SCALe]:PDIVision <time> :DISPlay:PVTime:VIEW[1]:WINDow[1]:TRACe:X[:SCALe]:PDIVision? |
| Example | :DISP:PVT:VIEW:WIND:TRACE:X:PDIV 1ms :DISP:PVT:VIEW:WIND:TRACE:X:PDIV? |
| Notes | If X Auto Scale is set to On, this value is automatically determined by the measurement result. When a value is set manually, X Auto Scale is automatically set to Off. |
| Couplings | See Notes |
| Preset | 1.0 ms |

| | |
|----------------------|----------------------------|
| State Saved | Saved in instrument state. |
| Min | 1.00 ns |
| Max | 1.00 s |
| Initial S/W Revision | A.10.01 |
| MIN/MAX/DEF Support | Yes |

Ref Position(Burst View)

Allows you to set the X reference position to the left, center, or right of the display.

| | |
|-----------------------|---|
| Key Path | SPAN X Scale |
| Mode | WLAN |
| Remote Command | :DISPlay:PVTime:VIEW[1]:WINDow[1]:TRACe:X[:SCALe]:RPOStion LEFT CENTER RIGHT :DISPlay:PVTime:VIEW[1]:WINDow[1]:TRACe:X[:SCALe]:RPOStion? |
| Example | :DISP:PVT:VIEW:WIND:TRACE:X:RPOS LEFT :DISP:PVT:VIEW:WIND:TRACE:X:RPOS? |
| Preset | LEFT |
| State Saved | Saved in instrument state. |
| Range | Left Ctr Right |
| Initial S/W Revision | A.10.01 |

Auto Scaling(Burst View)

Allows you to toggle the X Auto Scale function between On and Off.

| | |
|-----------------------|--|
| Key Path | SPAN X Scale |
| Mode | WLAN |
| Remote Command | :DISPlay:PVTime:VIEW[1]:WINDow[1]:TRACe:X[:SCALe]:COUPlE 0 1 OFF ON :DISPlay:PVTime:VIEW[1]:WINDow[1]:TRACe:X[:SCALe]:COUPlE? |
| Example | :DISP:PVT:VIEW:WIND:TRAC:X:COUP OFF :DISP:PVT:VIEW:WIND:TRAC:X:COUP? |
| Notes | Upon pressing the Restart front-panel key, the scale coupling function automatically determines the scale per division and reference values, based on the measurement results, if this parameter is set to On. When you manually set a value to either X Rel Value or X Scale/Div, X Auto Scale is automatically set to Off. |
| Couplings | See Notes |
| Preset | ON |

11 Power vs. Time Measurement
SPAN X Scale

| | |
|----------------------|----------------------------|
| State Saved | Saved in instrument state. |
| Range | On Off |
| Initial S/W Revision | A.10.01 |

Sweep/Control

Accesses a menu that enables you to configure the Sweep and Control functions of the analyzer, such as Acquisition Time and Gating.

| | |
|----------------------|------------------------|
| Key Path | Front-panel key |
| Initial S/W Revision | Prior to A.02.00 |

Pause/Resume

Pauses a measurement after the current data acquisition is complete.

When Paused, the label on the key changes to Resume. Pressing Resume un-pauses the measurement. When you are Paused, pressing **Restart**, **Single** or **Cont** does a Resume.

| | |
|-----------------------|--|
| Key Path | Sweep/Control |
| Remote Command | :INITiate:PAUSE |
| Dependencies | Grayed out in Measurements that do not support Pausing. Blanked in Modes that do not support Pausing. |
| Initial S/W Revision | Prior to A.02.00 |

| | |
|-----------------------|--|
| Key Path | Sweep/Control |
| Remote Command | :INITiate:RESume |
| Dependencies | Grayed out in Measurements that do not support Pausing. Blanked in Modes that do not support Pausing. |
| Initial S/W Revision | Prior to A.02.00 |

Abort (Remote Command Only)

This command is used to stop the current measurement. It aborts the current measurement as quickly as possible, resets the sweep and trigger systems, and puts the measurement into an "idle" state. If the analyzer is in the process of aligning when ABORT is sent, the alignment finishes before the abort function is performed. So ABORT does not abort an alignment.

If the analyzer is set for Continuous measurement, it sets up the measurement and initiates a new data measurement sequence with a new data acquisition (sweep) taken once the trigger condition is met.

If the analyzer is set for Single measurement, it remains in the "idle" state until an :INIT:IMM command is received.

| | |
|-----------------------|--------|
| Remote Command | :ABORt |
| Example | :ABOR |

| | |
|------------------------------|---|
| Notes | If :INITiate:CONTInuous is ON, then a new continuous measurement will start immediately, with sweep (data acquisition) occurring once the trigger condition has been met. If :INITiate:CONTInuous is OFF, then :INITiate:IMMEDIATE is used to start a single measurement; with sweep (data acquisition) occurring once the trigger condition has been met. |
| Dependencies | For continuous measurement, ABORt is equivalent to the Restart key. Not all measurements support the abort command. |
| Status Bits/OPC dependencies | The STATus:OPERation register bits 0 through 8 are cleared. The STATus:QUEStionable register bit 9 (INTegrity sum) is cleared. Since all the bits that feed into OPC are cleared by the ABORt, the ABORt will cause the *OPC query to return true. |
| Initial S/W Revision | Prior to A.02.00 |

System

See "System" on page 278

Trace/Detector

Accesses a menu that allows you to control trace settings.

NOTE

Max/Min Hold Traces will be held during the averaging cycle.

| | |
|----------------------|-----------------|
| Key Path | Front-panel key |
| Initial S/W Revision | A.03.00 |

Max Hold Trace

This key allows you to make the Max Hold Trace visible or invisible in the display..

| | |
|----------------------|--|
| Key Path | Trace/Detector |
| Mode | LTETDD, LTE, LTEATDD, LTEAFDD |
| Remote Command | :DISPlay:PVTime:VIEW[1]:WINDow[1]:TRACe:MAXHold[:STATe] ON OFF 1 0 :DISPlay:PVTime:VIEW[1]:WINDow[1]:TRACe:MAXHold[:STATe]? |
| Example | :DISP:PVT:VIEW:WIND:TRAC:MAXH ON :DISP:PVT:VIEW:WIND:TRAC:MAXH? |
| Couplings | While Rise & Fall view is selected, this key will be grayed out. Rise & Fall view will not support trace max/min hold. |
| Preset | OFF |
| State Saved | Saved in instrument state. |
| Range | On Off |
| Initial S/W Revision | A.03.00 |

Min Hold Trace

This key allows you to make the Min Hold Trace visible or invisible in the display.

| | |
|----------------|--|
| Key Path | Trace/Detector |
| Mode | LTETDD, LTE, LTEATDD, LTEAFDD |
| Remote Command | :DISPlay:PVTime:VIEW[1]:WINDow[1]:TRACe:MINHold[:STATe] ON OFF 1 0 :DISPlay:PVTime:VIEW[1]:WINDow[1]:TRACe:MINHold[:STATe]? |
| Example | :DISP:PVT:VIEW:WIND:TRAC:MINH ON :DISP:PVT:VIEW:WIND:TRAC:MINH? |
| Couplings | While Rise & Fall view is selected, this key will be grayed out. Rise & Fall view will not support trace max/min hold. |
| Preset | OFF |

| | |
|----------------------|----------------------------|
| State Saved | Saved in instrument state. |
| Range | On Off |
| Initial S/W Revision | A.03.00 |

User Preset

Accesses a menu that gives you the following three choices:

- **User Preset** – recalls a state previously saved using the Save User Preset function.
- **User Preset All Modes** – presets all of the modes in the analyzer
- **Save User Preset**– saves the current state for the current mode

| Key Path | Front-panel key |
|-------------------------------|--|
| Backwards Compatibility Notes | <p>User Preset is actually loading a state, and in legacy analyzers, it was possible to load a state without affecting the trace data, limit lines or correction data. Similarly it was possible to do a User Preset without affecting the trace data, limit lines or correction data.</p> <p>In the X-Series, “state” always includes all of this data; so whenever state is loaded, or User Preset is executed, all of the traces, limit lines and corrections are affected. Although this differs from previous behavior, it is desirable behavior, and should not cause adverse issues for users.</p> <p>On ESA and PSA, User Preset affected the entire instrument’s state. In the X-Series, User Preset only recalls the state for the active mode. There is a User Preset file for each mode. User Preset can never cause a mode switch as it can in legacy analyzers. If you want to recall all modes to their user preset file state, you will need to do a User Preset after mode switching into each mode.</p> <p>User Preset recalls mode state which can now include data like traces; whereas on ESA and PSA, User Preset did not affect data.</p> |
| Initial S/W Revision | Prior to A.02.00 |

User Preset

User Preset sets the state of the currently active mode back to the state that was previously saved for this mode using the Save User Preset menu key or the SCPI command, `SYST:PRES:USER:SAV`. It not only recalls the Mode Preset settings, but it also recalls all of the mode persistent settings, and the Input/Output system setting that existed at the time Save User Preset was executed.

If a Save User Preset has not been done at any time, User Preset recalls the default user preset file for the currently active mode. The default user preset files are created if, at power-on, a mode detects there is no user preset file. There will never be a scenario when there is no user preset file to restore. For each mode, the default user preset state is the same state that would be saved if a Save User Preset is performed in each mode right after doing a Restore Mode Default and after a Restore Input/Output Defaults.

The User Preset function does the following:

- Aborts the currently running measurement.
- Sets the mode State to the values defined by Save User Preset.
- Makes the saved measurement for the currently running mode the active measurement.
- Brings up the saved menu for the power-on mode.
- Clears the input and output buffers.
- Sets the Status Byte to 0.

| | |
|-----------------------------|--|
| Key Path | User Preset |
| Remote Command | :SYSTem:PRESet:USER |
| Example | :SYST:PRES:USER:SAVE:SYST:PRES:USER |
| Notes | :SYST:PRES:USER:SAVE is used to save the current state as the user preset state. Clears all pending OPC bits. The Status Byte is set to 0. Pressing the User Preset front-panel key while already in the User Preset menu will cause the User Preset to get executed |
| Couplings | A user preset will cause the currently running measurement to be aborted and cause the saved measurement to be active. Recalling a User Preset file has the same issues that recalling a Save State file has. Some settings may need to be limited and therefore re-coupled, since the capabilities of the mode may have changes when the User Preset file was last saved. |
| Initial S/W Revision | Prior to A.02.00 |

User Preset All Modes

Recalls all of the User Preset files for each mode, switches to the power-on mode, and activates the saved measurement from the power-on mode User Preset file.

NOTE

When the instrument is secured, all of the user preset files are converted back to their default user preset files.

The User Preset function does the following:

- Aborts the currently running measurement.
- Switches the Mode to the power-on mode.
- Restores the User Preset files for each mode.
- Makes the saved measurement for the power-on mode the active measurement.
- Brings up the saved menu for the power-on mode.
- Clears the input and output buffers.
- Sets the Status Byte to 0.

| | |
|-----------------------|--|
| Key Path | User Preset |
| Remote Command | :SYSTem:PRESet:USER:ALL |
| Example | :SYST:PRES:USER:SAVE:SYST:PRES:USER:ALL |
| Notes | Clears all pending OPC bits. The Status Byte is set to 0. :SYST:PRES:USER:SAVE is used to save the current state as the user preset state. |
| Couplings | A user preset will cause the currently running measurement to be aborted, cause a mode switch to the power-on mode, and cause the saved measurement to be active in the power-on mode. Recalling a User Preset file has the same issues that recalling a Save State file has. Some settings may need to be limited and therefore re-coupled, since the capabilities of the mode may have changes when the User Preset file was last saved. |

| | |
|----------------------|------------------|
| Initial S/W Revision | Prior to A.02.00 |
|----------------------|------------------|

Save User Preset

Saves the currently active mode and its State. You can recall this User Preset file by pressing the User Preset menu key or sending the SYST:PRES:USER remote command. This same state is also saved by the Save State function.

| | |
|-----------------------|---|
| Key Path | User Preset |
| Remote Command | :SYSTem:PRESet:USER:SAVE |
| Example | :SYST:PRES:USER:SAVE |
| Notes | :SYST:PRES:SAVE creates the same file as if the user requested a *SAV or a MMEM:STOR:STAT, except User Preset Save does not allow the user to specify the filename or the location of the file. |
| Initial S/W Revision | Prior to A.02.00 |

View/Display

Accesses the View menu for the current measurement. The available views are specific to the current measurement selected under the Meas key. Many of the lower-level menu keys are also the same across all measurements. Unique functions are described below.

All Soft Keys in the “View/Display” menu work regardless of which result window currently has the focus.

The View/Display menu includes two View Selection keys as shown below, which allow you to select the desired view of the measurement.

| View | Name | Description |
|------|--------------------------|--|
| 1 | Burst (SCPI: ALL) | View Burst envelope, the length of burst can be determined by slot number in mode setup. |
| 2 | Rise & Fall (SCPI: BOTH) | Zooms in on the rising and falling portions of the burst being tested. |

View Selection by name

| | |
|-----------------------|--|
| Key Path | View/Display |
| Mode | WLAN |
| Remote Command | :DISPlay:PVTime:VIEW[:SElect] ALL BOTH :DISPlay:PVTime:VIEW[:SElect]? |
| Example | DISP:PVT:VIEW:SEL ALL DISP:PVT:VIEW:SEL? |
| Preset | ALL |
| State Saved | Saved in instrument state. |
| Range | Burst Rise & Fall |
| Initial S/W Revision | A.10.01 |

| | |
|-----------------------|--|
| Mode | WLAN |
| Remote Command | :DISPlay:PVTime:VIEW:NSElect <integer> :DISPlay:PVTime:VIEW:NSElect? |
| Example | DISP:PVT:VIEW:NSEL 2 DISP:PVT:VIEW:NSEL? |
| Notes | 1: Burst 2: Rise & Fall You must be in the WLAN mode to use this command. Use INSTRument:SElect to set the mode. |
| Preset | 1 |
| State Saved | Saved in instrument state. |
| Min | 1 |

| | |
|----------------------|---------|
| Max | 2 |
| Initial S/W Revision | A.10.01 |

Display

The Display menu is common to most measurements, and is used for configuring items on the display. Some Display menu settings apply to all the measurements in a mode, and some only to the current measurement. Those under the **System Display Settings** key apply to all measurements in all modes.

| | |
|----------------------|---------------------|
| Key Path | Display |
| Key Path | View/Display |
| Initial S/W Revision | Prior to A.02.00 |

Annotation

Turns on and off various parts of the display annotation. The annotation is divided up into four categories:

1. Meas Bar: This is the measurement bar at the top of the screen. It does not include the settings panel or the Active Function. Turning off the Meas Bar turns off the settings panel and the Active Function. When the Meas Bar is off, the graticule area expands to fill the area formerly occupied by the Meas Bar.
2. Screen Annotation: this is the annotation and annunciation around the graticule, including any annotation on lines (such as the display line, the threshold line, etc.) This does NOT include the marker number or the N dB result. When off, the graticule expands to fill the entire graticule area.
3. Trace annotation: these are the labels on the traces, showing their detector (or their math mode).
4. Active Function annotation: this is the active function display in the meas bar, and all of the active function values displayed on softkeys.

See the figure below. Each type of annotation can be turned on and off individually.

11 Power vs. Time Measurement
View/Display

| | |
|----------------------|-----------------------|
| Key Path | View/Display, Display |
| Initial S/W Revision | Prior to A.02.00 |

Meas Bar On/Off

This function turns the Measurement Bar on and off, including the settings panel. When off, the graticule area expands to fill the area formerly occupied by the Measurement Bar.

| | |
|----------------|---|
| Key Path | View/Display, Display, Annotation |
| Remote Command | :DISPlay:ANNOtation:MBAR[:STATe] OFF ON 0 1 :DISPlay:ANNOtation:MBAR[:STATe]? |
| Example | DISP:ANN:MBAR OFF |
| Dependencies | Grayed out and forced to OFF when System Display Settings, Annotation is set to Off. |
| Preset | On This should remain Off through a Preset when System DisplaySettings, Annotation is set to Off. |

| | |
|----------------------|----------------------------|
| State Saved | Saved in instrument state. |
| Initial S/W Revision | Prior to A.02.00 |

Screen

This controls the display of the annunciation and annotation around the graticule, including any annotation on lines (such as the display line, the threshold line, etc.) and the y-axis annotation. This does NOT include marker annotation (or the N dB result). When off, the graticule expands to fill the entire graticule area, leaving only the 1.5% gap above the graticule as described in the Trace/Detector chapter.

| Key Path | View/Display, Display, Annotation |
|-----------------------|--|
| Remote Command | :DISPlay:ANNotation:SCReen[:STATe] OFF ON 0 1 :DISPlay:ANNotation:SCReen[:STATe]? |
| Example | DISP:ANN:SCR OFF |
| Dependencies | Grayed-out and forced to OFF when System Display Settings, Annotation is set to Off. |
| Preset | On This should remain Off through a Preset when System DisplaySettings, Annotation is set to Off |
| State Saved | Saved in instrument state. |
| Initial S/W Revision | Prior to A.02.00 |

Active Function Values On/Off

Turns on and off the active function display in the Meas Bar, and all of the active function values displayed on the softkeys.

Note that all of the softkeys that have active functions have these numeric values blanked when this function is on. This is a security feature..

11 Power vs. Time Measurement
View/Display

| | |
|----------------------|--|
| Key Path | View/Display, Display, Annotation |
| Remote Command | :DISPlay:ACTivefunc[:STATE] ON OFF 1 0 :DISPlay:ACTivefunc[:STATE] ? |
| Example | DISP:ACT OFF |
| Dependencies | Grayed out and forced to OFF when System Display Settings, Annotation is set to Off. |
| Preset | On This should remain Off through a Preset when System DisplaySettings, Annotation is set to Off |
| State Saved | Saved in instrument state. |
| Initial S/W Revision | Prior to A.02.00 |

Title

Displays menu keys that enable you to change or clear a title on your display.

| | |
|----------------------|-----------------------|
| Key Path | View/Display, Display |
| Initial S/W Revision | Prior to A.02.00 |

Change Title

Writes a title into the "measurement name" field in the banner, for example, "Swept SA".

Press Change Title to enter a new title through the alpha editor. Press Enter or Return to complete the entry. Press ESC to cancel the entry and preserve your existing title.

The display title will replace the measurement name. It remains for this measurement until you press **Change Title** again, or you recall a state, or a Preset is performed. A title can also be cleared by pressing **Title, Clear Title**.

NOTE

Notice the inclusion of the <measurement> parameter in the command below. Because each measurement remembers the Display Title, the command must be qualified with the measurement name. For the Swept SA measurement this is not the case; no <measurement> parameter is used when changing the Display Title for the Swept SA measurement.

| | |
|-----------------------------|---|
| Key Path | View/Display, Display, Title |
| Mode | All |
| Remote Command | :DISPlay:<measurement>:ANNotation:TITLe:DATA <string> :DISPlay:<measurement>:ANNotation:TITLe:DATA? |
| Example | DISP:ANN:TITL:DATA "This Is My Title" This example is for the Swept SA measurement in the Spectrum Analyzer mode. The SANalyzer <measurement> name is not used. DISP:ACP:ANN:TITL:DATA "This Is My Title" This example is for Measurements other than Swept SA. Both set the title to: This Is My Title |
| Notes | Pressing this key cancels any active function. When a title is edited the previous title remains intact (it is not cleared) and the cursor goes at the end so that characters can be added or BKSP can be used to go back over previous characters. |
| Preset | No title (measurement name instead) |
| State Saved | Saved in instrument state. |
| Initial S/W Revision | Prior to A.02.00 |

Clear Title

Clears a title from the front-panel display. Once cleared, the title cannot be retrieved. After the title is cleared, the current Measurement Name replaces it in the title bar.

| | |
|-----------------|---|
| Key Path | View/Display, Display, Title |
| Example | The following commands clear the title and restore the measurement's original title: DISP:ANN:TITL:DATA "" This example is for the Swept SA measurement in the Spectrum Analyzer mode. The SANalyzer <measurement> name is not used. DISP:ACP:ANN:TITL:DATA "" This example is for ACP; in measurements other than Swept SA the measurement name is required. |
| Notes | Uses the :DISPlay:<measurement>:ANNotation:TITLe:DATA <string> command with an empty string (in the Swept SA, the <measurement> is omitted). |

| | |
|----------------------|----------------------|
| Preset | Performed on Preset. |
| Initial S/W Revision | Prior to A.02.00 |

Graticule

Pressing Graticule turns the display graticule On or Off. It also turns the graticule y-axis annotation on and off.

| | |
|----------------------|--|
| Key Path | View/Display, Display |
| Remote Command | :DISPlay:WINDow[1]:TRACe:GRATicule:GRID[:STATe] OFF ON 0 1 :DISPlay:WINDow[1]:TRACe:GRATicule:GRID[:STATe]? |
| Example | DISP:WIND:TRAC:GRAT:GRID OFF |
| Notes | The graticule is the set of horizontal and vertical lines that make up the grid/divisions for the x-axis and y-axis. |
| Preset | On |
| State Saved | Saved in instrument state |
| Initial S/W Revision | Prior to A.02.00 |

System Display Settings

These settings are "Mode Global" – they affect all modes and measurements and are reset only by **Restore Misc Defaults** or **Restore System Defaults** under System.

| | |
|----------------------|------------------------------|
| Key Path | View/Display, Display |
| Initial S/W Revision | Prior to A.02.00 |

Annotation Local Settings

This is a Mode Global override of the meas local annotation settings. When it is **All Off**, it forces **ScreenAnnotation, Meas Bar, Trace, and Active Function Values** settings to be **OFF** for all measurements in all modes. This provides the security based "annotation off" function of previous analyzers; hence it uses the legacy SCPI command.

When it is **All Off**, the **Screen, Meas Bar, Trace, and Active Function Values** keys under the **Display, Annotation** menu are grayed out and forced to **Off**. When **Local Settings** is selected, you are able to set the local annotation settings on a measurement by measurement basis.

| | |
|----------------|--|
| Key Path | View/Display, Display, System Display Settings |
| Remote Command | :DISPlay:WINDow[1]:ANNotation[:ALL] OFF ON 0 1 :DISPlay:WINDow[1]:ANNotation[:ALL]? |
| Example | :DISP:WIND:ANN OFF |

| | |
|-------------------------------|---|
| Preset | On (Set by Restore Misc Defaults) |
| State Saved | Not saved in instrument state. |
| Backwards Compatibility Notes | The WINDow parameter and optional subopcode is included for backwards compatibility but ignored – all windows are equally affected. |
| Initial S/W Revision | Prior to A.02.00 |

Themes

Accesses a menu of functions that enable you to choose the theme to be used when saving the screen image.

The **Themes** option is the same as the **Themes** option under the **Display** and **Page Setup** dialogs. It allows you to choose between themes to be used when saving the screen image.

| | |
|-------------------------------|---|
| Key Path | Save, Screen Image |
| Remote Command | :MMEMory:STORe:SCReen:THEMe TDColor TDMonochrome FCOLOR FMONochrome :MMEMory:STORe:SCReen:THEMe? |
| Example | :MMEM:STOR:SCR:THEM TDM |
| Preset | 3D Color; Is not part of Preset, but is reset by Restore Misc Defaults or Restore System Defaults All and survives subsequent running of the modes. |
| Readback | 3D Color 3D Mono Flat Color Flat Mono |
| Backwards Compatibility Notes | In ESA and PSA we offer the choice of "Reverse Bitmap" or "Reverse Metafile" when saving screen images. This is much like the "Flat Color" theme available in X-Series. Also, if you selected Reverse Bitmap AND a black & white screen image, that would be much like "Flat Monochrome". In other words, each of the X-Series themes has a similar screen image type in ESA/PSA. But they are not identical. |
| Initial S/W Revision | Prior to A.02.00 |

3D Color

Selects a standard color theme with each object filled, shaded and colored as designed.

| | |
|----------------------|-----------------------------------|
| Key Path | Save, Screen Image, Themes |
| Example | MMEM:STOR:SCR:THEM TDC |
| Readback | 3D Color |
| Initial S/W Revision | Prior to A.02.00 |

3D Monochrome

Selects a format that is like 3D color but shades of gray are used instead of colors.

| | |
|----------------------|-----------------------------------|
| Key Path | Save, Screen Image, Themes |
| Example | MMEM:STOR:SCR:THEM TDM |
| Readback | 3D Mono |
| Initial S/W Revision | Prior to A.02.00 |

Flat Color

Selects a format that is best when the screen is to be printed on an ink printer.

| | |
|----------------------|-----------------------------------|
| Key Path | Save, Screen Image, Themes |
| Example | MMEM:STOR:SCR:THEM FCOL |
| Readback | Flat Color |
| Initial S/W Revision | Prior to A.02.00 |

Flat Monochrome

Selects a format that is like Flat Color. But only black is used (no colors, not even gray), and no fill.

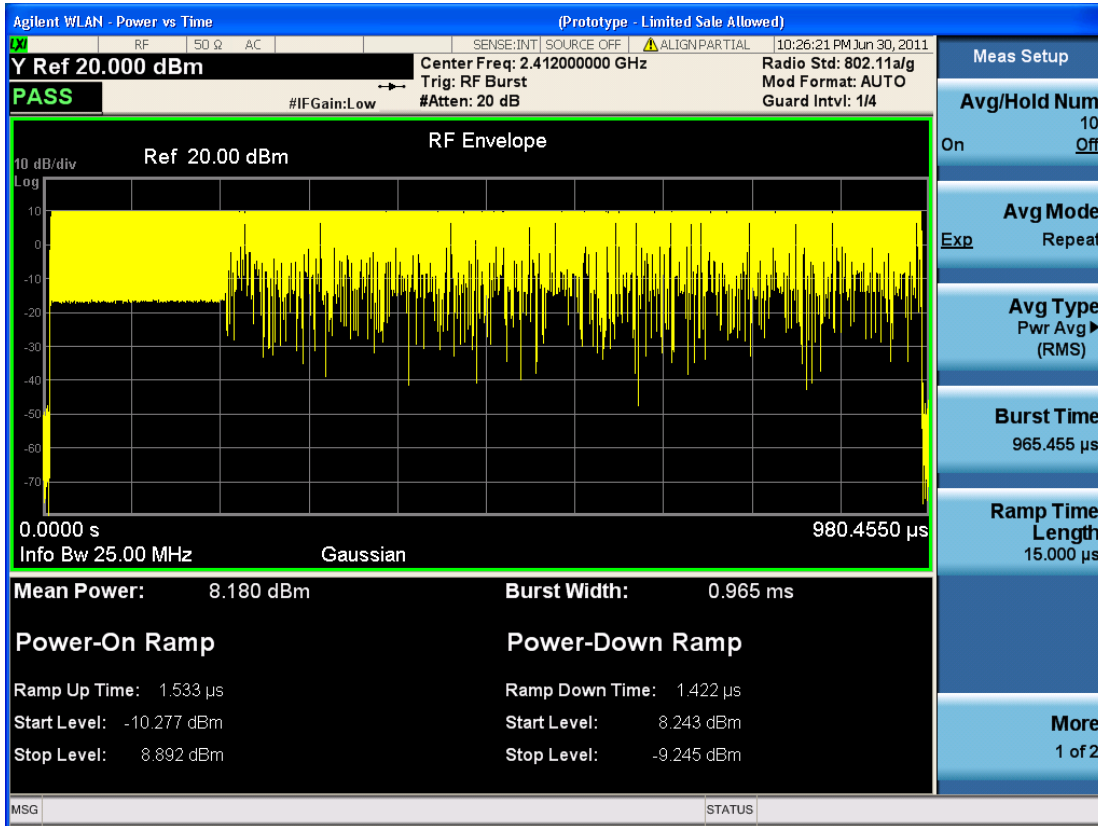

| | |
|----------------------|-----------------------------------|
| Key Path | Save, Screen Image, Themes |
| Example | MMEM:STOR:SCR:THEM FMON |
| Readback | Flat Mono |
| Initial S/W Revision | Prior to A.02.00 |

Burst View

This view shows power vs. time for a WLAN modulated burst. The view has two windows:

- "RF Envelope window" on page 1563(upper)
- "Result Metrics window" on page 1563(lower)

The figure below shows an example of the Burst View.

RF Envelope window

This table illustrates the details of RF envelope window:

| | |
|---------------------|---|
| Marker Operation | Yes |
| Corresponding Trace | Yellow: Signal wave form, n=2, 3, 4 Blue: Ramp up/down lines |

Result Metrics window

This table illustrates the details of metrics window:

| Name | Corresponding Results | Display Format |
|-----------------|-----------------------|----------------|
| Power-On Ramp | n=1 1st | 99.999 ms |
| Power-Down Ramp | n=1 2nd | 99.999 ms |

| Key Path | View/Display |
|----------------------|--------------|
| Initial S/W Revision | A.10.01 |

Burst Line

Turns the burst line On or Off.

| | |
|-----------------------------|--|
| Key Path | View/Display,Burst |
| Mode | WLAN |
| Remote Command | :DISPlay:PVTime:BLINes[:STATe] OFF ON 0 1 :DISPlay:PVTime:BLIN[:STATe]? |
| Example | :DISP:PVT:BLIN ON :DISP:PVT:BLIN? |
| Preset | OFF |
| State Saved | Saved in instrument state. |
| Range | On Off |
| Initial S/W Revision | A.10.01 |

Rise & Fall View

This view has three windows:

| | |
|-----------------------------|---|
| Rising RF Envelope Window. | The parameters of this window are identical to those of the RF Envelop Window in the Burst view. |
| Falling RF Envelope Window. | The parameters of this window are identical to those of the RF Envelop Window in the Burst view. |
| Numeric Results Window. | The parameters of this window are identical to those of the Numeric Results Window in the Burst view. |

The figure below shows an example of the Rise & Fall View.

| Key Path | View/Display |
|----------------------|--------------|
| Mode | WLAN |
| Initial S/W Revision | A.10.01 |

Ramp Lines

Turns the ramp lines On or Off.

| Key Path | View/Display |
|-----------------------|--|
| Mode | WLAN |
| Remote Command | :DISPlay:PVTime:RAMP[:STATe] OFF ON 0 1 :DISPlay:PVTime:RAMP[:STATe]? |
| Example | :DISP:PVT:RAMP ON :DISP:PVT:RAMP? |
| Preset | OFF |
| State Saved | Saved in instrument state. |
| Range | On Off |
| Initial S/W Revision | A.10.01 |

12 Spectral Flatness Measurement

Variation in carrier flatness of OFDM signals in IEEE 802.11a/g/n will reduce demodulation margins and degrade link performance. The spectral flatness measurement applies to test carrier flatness of OFDM signals in IEEE 802.11a/g and 802.11n Draft Version 11.

This topic contains the following sections:

["Measurement Commands for Spectral Flatness Measurement" on page 1568](#)

["Remote Command Results for Spectral Flatness Measurement" on page 1569](#)

Measurement Commands for Spectral Flatness Measurement

The following commands are used to retrieve the measurement results:

`:CONFigure:FLATness`

`:INITiate:FLATness`

`:FETCh:FLATness [n] ?`

`:READ:FLATness [n] ?`

`:MEASure:FLATness [n] ?`

Remote Command Results for Spectral Flatness Measurement

The following table displays the returned results from the (FETCh|MEASure|READ):FLAT commands, indexed by subopcode:

| | |
|--|---|
| non_ parameter_ table_ 11.93215 | 69.51885 |
| n | Results Returned |
| 0 | Returns unprocessed I/Q trace data, as a series of comma-separated trace points, in volts. The I values are listed first in each pair, using the 0 through even-indexed values. The Q values are the odd-indexed values. |
| not specified or n = 1 | <p>Returns comma-separated scalar results, in the following order:</p> <ol style="list-style-type: none"> 1. Return maximum peak energy deviation within all active sub-carriers. Different standard has different number of sub-carriers. Please refer to section 2.2, Measurement Algorithm. 2. Return PASS/FAIL (1:Fail, 0: Pass) 3. Return signal format; <ol style="list-style-type: none"> 0: 802.11a/g; 1: 802.11n 20MHz Non-HT 2: 802.11n 20MHz HT-greenfield 3: 802.11n 20MHz HT-Mixed 4: 802.11n 40MHz Non-HT Duplicate 5: 802.11n 40MHz HT-greenfield 6: 802.11n 40MHz HT-Mixed 7: 802.11n 40MHz MCS32 8. 802.11ac 20MHz 9. 802.11ac 40MHz VHT 10. 802.11ac 40MHz Non-HT Duplicate 11. 802.11ac 80MHz VHT 12. 802.11ac 80MHz Non-HT Duplicate 13. 802.11ac 160MHz 14. 802.11ac 160MHz Non-HT Duplicate 15. 802.11ah 1MHz (Normal Mode) 16. 802.11ah 2MHz (Normal Mode) 17. 802.11ah 2MHz (1 MHz Duplicate Mode) 18. 802.11ah 4MHz (Normal Mode) 19. 802.11ah 4MHz (1 MHz Duplicate Mode) 20. 802.11ah 4MHz (2MHz Duplicate Mode) 21. 802.11ah 8MHz (Normal Mode) 22. 802.11ah 8MHz (1 MHz Duplicate Mode) 23. 802.11ah 8MHz (2MHz Duplicate Mode) 24. 802.11ah 16MHz (Normal Mode) 25. 802.11ah 16MHz (1 MHz Duplicate Mode) |

| 26. 802.11ah 16MHz (2MHz Duplicate Mode) | |
|--|--|
| 2 | Return float values which stand for the energy deviations of each spectral lines. The exact number of values refers to section 2.2, Measurement Algorithm. |
| 3 | Return Spectral Flatness results of each section – summary data for spectral flatness results of each section: <ol style="list-style-type: none"> 1. Max Subcarrier Flatness Value (dB) in section 1 – a floating point number in dB. 2. Max Subcarrier Flatness Value to Upper Limit 1 (dB) – a floating point number in dB. 3. Max Subcarrier Flatness Index for section 1 – an integer number 4. Min Subcarrier Flatness Value (dB) in section 1 – a floating point number in dB. 5. Min Subcarrier Flatness Value to Lower Limit 1 (dB) – a floating point number in dB. 6. Min Subcarrier Flatness Index for section 1 – an integer number 7. Max Subcarrier Flatness Value (dB) in section 2 – a floating point number in dB. 8. Max Subcarrier Flatness Value to Upper Limit 2 (dB) – a floating point number in dB. 9. Max Subcarrier Flatness Index for section 2 – an integer number 10. Min Subcarrier Flatness Value (dB) in section 2 – a floating point number in dB. 11. Min Subcarrier Flatness Value to Lower Limit 2 (dB) – a floating point number in dB. 12. Min Subcarrier Flatness Index for section 2 – an integer number |

This key selects the Spectral Flatness measurement.

| | |
|--------------------------|-----------------|
| parameter_table_24.18339 | 54.41263 |
| Key Path | Meas |
| Mode | WLAN |
| Initial S/W Revision | A.10.01 |
| Help Map ID | 45700 |

AMPTD Y Scale

Accesses the AMPTD Y Scale menu that allows you to set desired vertical scale settings.

| | |
|--------------------------|------------------------|
| parameter_table_24.18339 | 54.41263 |
| Key Path | Front Panel key |
| Initial S/W Revision | A.10.01 |
| Help Map ID | 45701 |

Ref Value

Sets the relative power reference.

| | |
|--------------------------|---|
| parameter_table_24.18339 | 54.41263 |
| Key Path | AMPTD Y Scale |
| Mode | WLAN |
| Remote Command | :DISPlay:FLATness:VIEW[1]:WINDow[1]:TRACe:Y[:SCALE]:RLEVel <rel_amp1> :DISPlay:FLATness:VIEW[1]:WINDow[1]:TRACe:Y[:SCALE]:RLEVel? |
| Example | DISP:FLAT:VIEW:WIND:TRAC:Y:RLEV 5db DISP:FLAT:VIEW:WIND:TRAC:Y:RLEV? |
| Couplings | When Auto Scaling is set to On, this value is automatically determined by the measurement result. When you set this value manually, Auto Scaling is automatically set to Off. |
| Preset | 4.0 |
| State Saved | Saved in instrument state. |
| Min | -20.0 |
| Max | 20.0 |
| Initial S/W Revision | A.10.01 |
| Help Map ID | 45702 |

Range

The Range menu allows setting amplitude controls of the instrument.

| | |
|----------------------|----------------------|
| Key Path | AMPTD Y Scale |
| Scope | Meas Global |
| Initial S/W Revision | A.12.50 |

Range

Represents the amplitude of the largest sinusoidal signal that could be present within the IF without being clipped by the ADC. For signals with high peak-to-average ratios, the range may need to exceed the rms signal power by a fair amount to avoid clipping.

| | |
|-----------------------|---|
| Key Path | Range |
| Mode | BASIC |
| Remote Command | <code>[:SENSe] :POWer [:RF] :RANGe <real></code> <code>[:SENSe] :POWer [:RF] :RANGe?</code> |
| Example | <code>:POW:RANG 10.0</code> <code>:POW:RANG?</code> |
| Notes | The MIN and MAX values are affected by the External Gain parameters, and by the Center Frequency. (The hardware compensates for frequency response and alters the Range setting.) |
| Preset | 0 |
| State Saved | Saved in instrument state. |
| Min | -100 |
| Max | 100 |
| Initial S/W Revision | A.12.50 |

Adjust Range For Min Clip

Sets the combination of attenuation and gain based on the current measured signal level so that clipping will be at a minimum.

This is an "immediate action" function, that is, it executes once, when the key is pressed.

This key is grayed out in measurements that do not support this functionality.

| | |
|--------------------------|--|
| Key Path | AMPTD Y Scale, Attenuation |
| Remote Command | <code>[:SENSe] :POWer [:RF] :RANGe:OPTimize IMMEDIATE</code> |
| Initial S/W Revision | Prior to A.02.00 |
| Modified at S/W Revision | A.03.00 |

Pre-Adjust for Min Clip

If this function is on, it does the adjustment described under Adjust Range For Min Clip each time a measurement restarts. Therefore, in Continuous measurement mode, it only executes before the first measurement.

| | |
|-----------------------|---|
| Key Path | AMPTD Y Scale, Attenuation |
| Remote Command | <code>[:SENSe] :POWer [:RF] :RANGe:OPTimize:ATTenuation OFF ON ELEctrical COMBined</code> |

| | |
|--------------------------|---|
| | <code>[:SENSe] :POWer [:RF] :RANGe :OPTimize :ATTenuation ?</code> |
| Notes | This parameter is shared with old XA platform which uses AutoAtten. To keep the backward compatibility, ELECTrical and COMBined still can be used. Then, upon receiving ELECTrical and COMBined, these enums will be interpreted as aliases of ON. Then, when queried, ON will be returned. |
| Preset | OFF for Swept SA measurement; ON for all other measurements that support Pre-Adjust for Min Clip |
| State Saved | Saved in instrument state |
| Initial S/W Revision | Prior to A.02.00 |
| Modified at S/W Revision | A.03.00 |

Peak to Average

The Peak to Average Ratio is used with the Range setting to optimize the level control in the instrument. The value is the ratio, in dB, of the peak power to the average power of the signal to be measured. A ratio of 0 should be used for sinusoidal signals; for 802.11g OFDM signals use 9 dB.

All Applications (Modes) will show the current value of Peak to Average ratio on the softkey. However, some applications will not permit changing the value. In these situations the softkey will be grayed-out.

| | |
|----------------------|--|
| Key Path | AMPTD Y Scale, Range |
| Remote Command | <code>[:SENSe] :POWer [:RF] :RANGe :PARatio <real></code> <code>[:SENSe] :POWer [:RF] :RANGe :PARatio ?</code> |
| Example | POW:RANG:PAR 12 dB |
| Notes | In some Applications (Modes) this parameter will be read-only; meaning the value will appear on the softkey and query via SCPI, but not changeable. In such applications the softkey will be grayed-out. Attempting to change the value via SCPI will be ignored and no error message will be generated. |
| Preset | 10 dB |
| State Saved | Saved in instrument state |
| Min | 0 dB |
| Max | 20 dB |
| Initial S/W Revision | A.13.00 |

Mixer Level Offset

Mixer level offset is an advanced setting to adjust target Range at the input mixer which in turn affects the signal level in the instrument's IF. This setting can be used when additional optimization is needed after setting Peak to Average ratio. Positive values of offset optimize noise performance over distortion, negative values optimize distortion performance over noise.

| | |
|----------------|---|
| Key Path | AMPTD Y Scale, Range |
| Remote Command | <code>[:SENSe] :POWer [:RF] :RANGe :MIXer :OFFSet <real></code> |

| | |
|----------------------|--|
| | <code>[:SENSe] :POWer [:RF] :RANGe :MIXer :OFFSet ?</code> |
| Example | POW:RANG:MIX:OFFS -5 dB |
| Preset | 0 dB |
| State Saved | Saved in instrument state |
| Min | -35 dB |
| Max | 30 dB |
| Initial S/W Revision | A.13.00 |

Scale/Div

Allows you to enter a numeric value to change vertical display sensitivity.

| | |
|----------------------------|--|

Auto Couple

The Auto Couple feature provides a quick and convenient way to automatically couple multiple instrument settings. This helps ensure accurate measurements and optimum dynamic range. When the Auto Couple feature is activated, either from the front panel or remotely, all parameters of the current measurement that have an Auto/Manual mode are set to Auto mode and all measurement settings dependent on (or coupled to) the Auto/Man parameters are automatically adjusted for optimal performance.

However, the Auto Couple key actions are confined to the current measurement only. It does not affect other measurements in the mode, and it does not affect markers, marker functions, or trace or display attributes.

See "[More Information](#)" on page 1577

| | |
|-----------------------------|--|
| Key Path | Front-panel key |
| Remote Command | :COUPle ALL NONE |
| Example | :COUP ALL |
| Notes | :COUPle ALL puts all Auto/Man parameters in Auto mode (equivalent to pressing the Auto Couple key). :COUPLE NONE puts all Auto/Man parameters in manual mode. It decouples all the coupled instrument parameters and is not recommended for making measurements. |
| Initial S/W Revision | Prior to A.02.00 |

More Information

There are two types of functions that have Auto/Manual modes.

Auto/Man Active Function keys

An Auto/Man toggle key controls the binary state associated with an instrument parameter by toggling between **Auto** (where the parameter is automatically coupled to the other parameters it is dependent upon) and **Man** (where the parameter is controlled independent of the other parameters), as well as making the parameter the active function. The current mode is indicated on the softkey with either **Auto** or **Man** underlined as illustrated below.

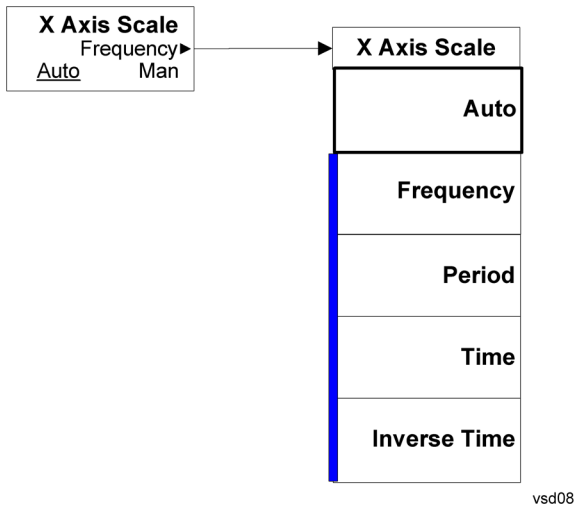

vsd07

Auto/Man 1-of-N keys

An Auto/Man 1-of-N key allows you to manually pick from a list of parameter values, or place the function in Auto, in which case the value is automatically selected (and indicated) as shown below. If in Auto, Auto is underlined on the calling key. If in manual operation, manual is indicated on the calling key. But the calling key does not actually toggle the function, it simply opens the menu.

12 Spectral Flatness Measurement
Auto Couple

BW

Accesses a menu that allows you to control bandwidth settings.

| | |
|--------------------------|------------------------|
| parameter_table_24.18339 | 54.41263 |
| Key Path | Front-panel key |
| Initial S/W Revision | A.10.01 |
| Help Map ID | 45706 |

Info BW

Sets the information bandwidth This is the bandwidth used for the power measurement. The optimal setting occurs when the bandwidth is wide enough to pass all the power of the bursted signal, while not being so wide that it passes noise, which reduces dynamic range and diminishes the accuracy of low level measurements.

| | |
|--------------------------|---|
| parameter_table_24.18339 | 54.41263 |
| Key Path | BW |
| Mode | WLAN |
| Remote Command | <code>[:SENSe] :FLATness :BANDwidth [:RESolution] <bandwidth></code> <code>[:SENSe] :FLATness :BANDwidth [:RESolution] ?</code> |
| Example | FLAT:BAND 1 kHz FLAT:BAND? |
| Dependencies | Default and Max Value are coupled with Hardware and Radio Std |
| Couplings | Info BW is coupled with subcarrier spacing value. |
| Preset | if Radio Std is 802.11 a/b/g: 25MHz if Radio Std is 802.11 n 20MHz : 25MHz if Radio Std is 802.11 n 40MHz : 40MHz if Radio Std is 802.11 ac 20MHz : 25MHz if Radio Std is 802.11 ac 40MHz : 40MHz if Radio Std is 802.11 ac 80MHz : 80MHz if Radio Std is 802.11 ac 160MHz : 160MHz if Radio Std is 802.11 ah-1MHz : 3MHz if Radio Std is 802.11 ah-2M : 3MHz if Radio Std is 802.11 ah-4M : 4MHz if Radio Std is 802.11 ah-8M : 8MHz if Radio Std is 802.11 ah-16M: 16MHz if Radio Std is 802.11 j/p-10M: 10MHz if Radio Std is 802.11 p-5M: 5MHz |

| Backwards Compatibility SCPI | [:SENSe] :FLATness :IFBW |
| Initial S/W Revision | A.10.01 |
| Help Map ID | 45707 |

Filter Type

Allows you to select a Gaussian or a Flattop filter. A Flattop is recommended in this measurement because Flattop will bring the less flatness distortion than Gaussian.

| | |
|----------------------------------|--|
| parameter_ table_ 24.18339 | 54.41263 |
| Key Path | BW |
| Mode | WLAN |
| Remote Command | [:SENSe] :FLATness :BANDwidth :TYPE GAUSSian FLATtop [:SENSe] :FLATness :BANDwidth :TYPE? |
| Example | FLAT:BAND:TYPE GAUS FLAT:BAND:TYPE? |
| Notes | This selects either a Gaussian or Flat (Flattop) filter. Gaussian is the better choice when looking at the overall burst, or rising and falling edges, because it has excellent pulse response. For most Time vs. Power measurements, the user is not mainly interested in trading off time domain accuracy vs. noise, but is more interested in total power accuracy vs. noise. If you want to want to examine just the useful part of the burst, choose Flat. This is an advanced control that normally does not need to be changed. Setting this to a value other than the factory default, may cause invalid measurement results. –FLATtop – a filter with a flat amplitude response, that provides the best amplitude accuracy. –GAUSSian – a filter with Gaussian characteristics, that provides the best pulse response. |
| Preset | FLATtop |
| State Saved | Saved in instrument state. |
| Range | Gaussian Flattop |
| Initial S/W Revision | A.10.01 |
| Help Map ID | 45708 |

Cont (Continuous Measurement/Sweep)

Sets the analyzer for Continuous measurement operation. The single/continuous state is Meas Global so the setting will affect all measurements. If you are Paused, pressing **Cont** does a Resume.

| | |
|-------------------------------|--|
| Key Path | Front-panel key |
| Remote Command | :INITiate:CONTinuous OFF ON 0 1 :INITiate:CONTinuous? |
| Example | :INIT:CONT 0 puts analyzer in Single measurement operation. :INIT:CONT 1 puts analyzer in Continuous measurement operation |
| Preset | ON (Note that SYST:PRESet sets INIT:CONT to ON but *RST sets INIT:CONT to OFF) |
| State Saved | Saved in instrument state |
| Backwards Compatibility Notes | For Spectrum Analysis mode in ESA and PSA, there is no Cont hardkey, instead there is a Sweep Single/Cont key. In these analyzers, switching the Sweep Single/Cont key from Single to Cont restarts averages (displayed average count reset to 1), but does not restart Max Hold and Min Hold . The X-Series has Single and Cont keys in place of the SweepSingleCont key. In the X-Series, if in single measurement, the Cont key (and INIT:CONT ON) switches to continuous measurement, but never restarts a measurement and never resets a sweep. |
| Initial S/W Revision | Prior to A.02.00 |

In Swept SA Measurement (Spectrum Analysis Mode):

The analyzer takes repetitive sweeps, averages, measurements, etc., when in Continuous mode. When the average count reaches the Average/Hold Number the count stops incrementing, but the analyzer keeps sweeping. See the Trace/Detector section for the averaging formula used both before and after the Average/Hold Number is reached. The trigger condition must be met prior to each sweep. The type of trace processing for multiple sweeps, is set under the Trace/Detector key, with choices of **Trace Average**, **Max Hold**, or **Min Hold**.

In Other Measurements/Modes:

With **Avg/Hold Num** (in the **Meas Setup** menu) set to **Off** or set to **On** with a value of 1, a sweep is taken after the trigger condition is met; and the analyzer continues to take new sweeps after the current sweep has completed and the trigger condition is again met. However, with **Avg/Hold Num** set to On with a value >1, multiple sweeps (data acquisitions) are taken for the measurement. The trigger condition must be met prior to each sweep. The sweep is not stopped when the average count k equals the number N set for Avg/Hold Num is reached, but the number k stops incrementing. A measurement average usually applies to all traces, marker results, and numeric results. But sometimes it only applies to the numeric results.

If the analyzer is in Single measurement, pressing the **Cont** key does not change k and does not cause the sweep to be reset; the only action is to put the analyzer into Continuous measurement operation.

If it is already in continuous sweep:

the INIT:CONT 1 command has no effect

12 Spectral Flatness Measurement
Cont (Continuous Measurement/Sweep)

the INIT:CONT 0 command will place the analyzer in Single Sweep but will have no effect on the current sequence until $k = N$, at which point the current sequence will stop and the instrument will go to the idle state.

File

See "File" on page 272

FREQ Channel

Accesses a menu of keys that allow you to control the Frequency and Channel parameters of the instrument.

Some features in the Frequency menu are the same for all measurements – they do not change as you change measurements. Settings like these are called “Meas Global” and are unaffected by Meas Preset. For example, the Center Freq setting is the same for all measurements - it does not change as you change measurements.

| Key Path | Front-panel key |
|----------------------|------------------|
| Initial S/W Revision | Prior to A.02.00 |

Center Freq

Sets the frequency that corresponds to the horizontal center of the graticule (when frequency Scale Type is set to linear). While adjusting the Center Frequency the Span is held constant, which means that both Start Frequency and Stop Frequency will change.

Pressing Center Freq also sets the frequency entry mode to Center/Span. In Center/Span mode, the center frequency and span values are displayed below the graticule, and the default active function in the Frequency menu is **Center Freq**.

The center frequency setting is the same for all measurements within a mode, that is, it is Meas Global. Some modes are also able to share a Mode Global center frequency value. If this is the case, the Mode will have a **Global Settings** key in its **Mode Setup** menu.

The **Center Freq** function sets (and queries) the Center Frequency for the currently selected input. If your analyzer has multiple inputs, and you select another input, the Center Freq changes to the value for that input. SCPI commands are available to directly set the Center Freq for a specific input.

Center Freq is remembered as you go from input to input. Thus you can set a Center Freq of 10 GHz with the RF Input selected, change to BBIQ and set a Center Freq of 20 MHz, then switch to External Mixing and set a Center Freq of 60 GHz, and when you go back to the RF Input the Center Freq will go back to 10 GHz; back to BBIQ and it is 20 MHz; back to External Mixing and it is 60 GHz.

See ["RF Center Freq" on page 1587](#)

See [Ext Mix Center Freq](#)

See ["I/Q Center Freq" on page 1589](#)

See ["Center Frequency Presets" on page 1585](#)

| Key Path | FREQ Channel |
|----------------|--|
| Scope | Meas Global |
| Remote Command | [:SENSe] :FREQuency:CENTer <freq> [:SENSe] :FREQuency:CENTer? |
| Example | FREQ:CENT 50 MHz |

| | |
|----------------------|--|
| | FREQ:CENT UP changes the center frequency to 150 MHz if you use FREQ:CENT:STEP 100 MHz to set the center frequency step size to 100 MHz FREQ:CENT? |
| Notes | This command sets either the RF or I/Q Center Frequency depending on the selected input. For RF input it is equivalent to FREQ:RF:CENT For I/Q input it is equivalent to FREQ:IQ:CENT Preset and Max values are dependent on Hardware Options (5xx) If no terminator (e.g. MHz) is sent the terminator Hz is used. If a terminator with unit other than Frequency is used, an invalid suffix error message is generated. |
| Dependencies | The Center Frequency can be limited by Start or Stop Freq limits, if the Span is so large that Start or Stop reach their limit. |
| Couplings | When operating in "swept span", any value of the Center Frequency or Span that is within the frequency range of the analyzer is allowed when the value is being set through the front panel numeric key pad or the SCPI command. The other parameter is forced to a different value if needed, to keep the Start and the Stop Frequencies within the analyzer's frequency range |
| Preset | Depends on instrument maximum frequency, mode, measurement, and selected input. See "Center Frequency Presets" on page 1585 and "RF Center Freq" on page 1587 and Ext Mix Center Freq and "I/Q Center Freq" on page 1589. |
| State Saved | Saved in instrument state |
| Min | Depends on instrument maximum frequency, mode, measurement, and selected input.. See "Center Frequency Presets" on page 1585 and "RF Center Freq" on page 1587 and "I/Q Center Freq" on page 1589. |
| Max | Depends on instrument maximum frequency, mode, measurement, and selected input.. See "Center Frequency Presets" on page 1585 and "RF Center Freq" on page 1587 and "I/Q Center Freq" on page 1589. |
| Default Unit | Hz |
| Status Bits/OPC | Non-overlapped |
| Dependencies | |
| Initial S/W Revision | Prior to A.02.00 |

Center Frequency Presets

The following table provides the Center Frequency Presets for the Spectrum Analyzer mode, and the Max Freq, for the various frequency options:

| Freq Option | CF after Mode Preset | Stop Freq after Mode Preset | Max Freq (can't tune above) |
|-------------|-------------------------|--------------------------------|--------------------------------------|
| | | | |

12 Spectral Flatness Measurement
 FREQ Channel

| | | | |
|---------------------------------------|------------|----------|--------------|
| 503 (all but N9000A) | 1.805 GHz | 3.6 GHz | 3.7 GHz |
| 503 (N9000A) | 1.505 GHz | 3.0 GHz | 3.08 GHz |
| 507 (all but N9000A) | 3.505 GHz | 7.0 GHz | 7.1 GHz |
| 507 (N9000A) | 3.755 GHz | 7.5 GHz | 7.58 GHz |
| 508 (all but N9038A) | 1.805 GHz | 3.6 GHz | 8.5 GHz |
| 508 (N9038A) | 4.205 GHz | 8.4 GHz | 8.5 GHz |
| 513 | 6.805 GHz | 13.6 GHz | 13.8 GHz |
| 526 (all but N9000A and N9038A) | 13.255 GHz | 26.5 GHz | 27.0 GHz |
| 526 (N9000A) | 13.255 GHz | 26.5 GHz | 26.55 GHz |
| 526 (N9038A) | 1.805 GHz | 3.6 GHz | 27.0 GHz |
| 532 | 16.005 GHz | 32.0 GHz | 32.5 GHz |
| 543 | 21.505 GHz | 43.0 GHz | TBD |
| 544 | 22.005 GHz | 44.0 GHz | 44.5 GHz |
| 550 | 25.005 GHz | 50.0 GHz | 51 GHz |

Input 2:

| Model | CF after Mode Preset | Stop Freq after Mode Preset | Max Freq (can't tune above) |
|----------------|----------------------------|-----------------------------------|-----------------------------------|
| N9000A opt C75 | 0.7505GHz | 1.5 GHz | 1.58 GHz |
| N9038A | 505 MHz | 1 GHz | 1.000025 GHz |

Tracking Generator Frequency Limits (N9000A only):

| Tracking Generator Option | Min Freq (clips to this freq when turn TG on and can't tune below | If above this Freq, Stop Freq clipped to this Freq when TG turned on | Max Freq (can't tune above) while TG on |
|---------------------------------|--|---|--|
| | | | |

| | while TG on) | | |
|-----|--------------|---------|----------|
| T03 | 9 kHz | 3.0 GHz | 3.08 GHz |
| T06 | 9 kHz | 6.0 GHz | 6.05 GHz |

The following table shows the Center Frequency Presets for modes other than Spectrum Analyzer:

| Mode | CF Preset for RF |
|-------------|------------------|
| WCDMA | 1 GHz |
| WIMAXOFDMA, | 1 GHz |
| BASIC | 1 GHz |
| ADEMOD | 1 GHz |
| VSA | 1 GHz |
| TDSCDMA | 1 GHz |
| PNOISE | 1 GHz |
| LTE | 1 GHz |
| LTETDD | 1 GHz |
| MSR | 1 GHz |
| GSM | 935.2 MHz |
| NFIGURE | 1.505 GHz |

RF Center Freq

SCPI command for specifying the RF Center Frequency. This command will set the Center Frequency to be used when the RF input is selected, even if the RF input is not the input that is selected at the time the command is sent. Note that the **Center Freq** function in the **Frequency** menu on the front panel always applies to the currently selected input.

| | |
|-----------------------|--|
| Scope | Meas Global |
| Remote Command | [:SENSe] :FREQuency:RF:CENTer <freq> [:SENSe] :FREQuency:RF:CENTer? |
| Example | FREQ:RF:CENT 30 MHz |
| Notes | This command is the same in all modes, but the parameter is Measurement Global. So the value is independent in each mode and common across all the measurements in the mode. |
| Dependencies | If the electronic/soft attenuator is enabled, any attempt to set Center Frequency such that the Stop Frequency would be >3.6 GHz fails and results in an advisory message. If the equivalent SCPI command is sent, this same message is generated as part of a “-221, Settings conflict” warning. If Source Mode is set to Tracking, and the Max or Min Center Freq is therefore limited by the limits of the source, a warning message is generated, “Data out of range;clipped to source max/min” if these limits are exceeded. Note that for an external source, these limits can be affected by the settings of Source Numerator, Source Denominator and Power Sweep. |

| | |
|--------------------------|--|
| Preset | See table above |
| State Saved | Saved in instrument state. |
| Min | -79.999995 MHz, unless Source Mode is set to Tracking, in which case it is limited by the minimum frequency of the Source |
| Max | See table above. Basically instrument maximum frequency - 5 Hz. Note that, if the Source Mode is set to Tracking, the effective instrument maximum frequency may be limited by the source maximum frequency. If the knob or step keys are being used, also depends on the value of the other three interdependent parameters Span, Start Frequency and Stop Frequency |
| Initial S/W Revision | Prior to A.02.00 |
| Modified at S/W Revision | A.03.00 |

Ext Mix Center Freq

SCPI command for specifying the External Mixer Center Frequency. This command will set the Center Frequency to be used when the External Mixer is selected, even if the External Mixer input is not the input which is selected at the time the command is sent. Note that the **Center Freq** function in the **Frequency** menu on the front panel always applies to the currently selected input.

| | |
|----------------|--|
| Scope | Meas Global |
| Remote Command | <code>[:SENSe] :FREQuency:EMIXer:CENTer <freq></code> <code>[:SENSe] :FREQuency:EMIXer:CENTer?</code> |
| Example | <code>:FREQ:EMIX:CENt 60 GHz</code> <code>:FREQ:EMIX:CENt?</code> |
| Notes | This command is the same in all modes, but the parameter is Measurement Global. So the value is independent in each mode and common across all the measurements in the mode. |
| Couplings | When returning to External Mixing after having been switched to one of the other inputs (e.g., RF), you will come back into the settings that you had when you left External Mixing. So you will come back to the band you were in with the Center Frequency that you had. However, Span is not an input-dependent parameter, therefore you will bring the span over from the other input. Therefore, the analyzer comes back with the span from the previous input, limited as necessary by the current mixer setup. |
| Preset | When a Mode Preset is performed while in External Mixing, the Start frequency of the current Mode is set to the nominal Min Freq of the lowest harmonic range in the Harmonic Table for the current mixer setup. Similarly, the Stop frequency of the current Mode is set to the nominal Max Freq of the highest harmonic range in the Harmonic Table. The Center Freq thus presets to the point arithmetically equidistant from these two frequencies. If the current measurement has a limited Span available to it, and cannot achieve the Span shown in the table ($\text{Span} = \text{Stop Freq} - \text{Start Freq}$), the analyzer uses the maximum Span the measurement allows, and still sets the Center Freq to the midpoint of the Start and Stop Freq values in the Harmonic Table. When Restore Input/Output Defaults is performed, the mixer presets to the 11970A, whose Start and Stop frequencies are 26.5 and 40 GHz respectively. The center of these two frequencies is |

| | |
|----------------------|---|
| | 33.25 GHz. Therefore, after a Restore Input/Output Defaults, if you go into External Mixing and do a Mode Preset while in the Spectrum Analyzer Mode, the resulting Center Freq is 33.25 GHz. |
| State Saved | Saved in instrument state. |
| Min | The minimum frequency in the currently selected mixer band + 5 Hz |
| Max | The maximum frequency in the currently selected mixer band – 5 Hz If the knob or step keys are being used, also depends on the value of the other three interdependent parameters Span, Start Frequency and Stop Frequency |
| Initial S/W Revision | A.08.01 |

I/Q Center Freq

SCPI command for specifying the I/Q Center Frequency. This command will set the Center Frequency to be used when the I/Q input is selected, even if the I/Q input is not the input which is selected at the time the command is sent. Note that the **Center Freq** function in the **Frequency** menu on the front panel always applies to the currently selected input.

| | |
|-----------------------|--|
| Scope | Meas Global |
| Remote Command | [:SENSe] :FREQuency:IQ:CENTer <freq> [:SENSe] :FREQuency:IQ:CENTer? |
| Example | FREQ:IQ:CENT: 30 MHz |
| Notes | This command is the same in all modes, but the parameter is Measurement Global. So the value is independent in each mode and common across all the measurements in the mode. |
| Preset | 0 Hz |
| State Saved | Saved in instrument state. |
| Min | -40.049995 MHz |
| Max | 40.049995 MHz |
| Initial S/W Revision | Prior to A.02.00 |

CF Step

Changes the step size for the center frequency and start and stop frequency functions. Once a step size has been selected and the center frequency function is active, the step keys (and the UP|DOWN parameters for Center Frequency from remote commands) change the center frequency by the step-size value. The step size function is useful for finding harmonics and sidebands beyond the current frequency span of the analyzer.

Note that the start and stop frequencies also step by the CF Step value.

| | |
|-----------------------|---|
| Key Path | FREQ Channel |
| Remote Command | [:SENSe] :FREQuency:CENTer:STEP [:INCRement] <freq> |

| | |
|------------------------------|--|
| | [:SENSe]:FREQuency:CENTer:STEP[:INCRement]? |
| | [:SENSe]:FREQuency:CENTer:STEP:AUTO OFF ON 0 1 |
| | [:SENSe]:FREQuency:CENTer:STEP:AUTO? |
| Example | <p>FREQ:CENT:STEP:AUTO ON</p> <p>FREQ:CENT:STEP 500 MHz</p> <p>FREQ:CENT UP increases the current center frequency value by 500 MHz</p> <p>FREQ:CENT:STEP?</p> <p>FREQ:CENT:STEP:AUTO?</p> |
| Notes | Preset and Max values are depending on Hardware Options (503, 507, 508, 513, 526) |
| Notes | Preset and Max values are dependent on Hardware Options (5xx) |
| Dependencies | Freq Offset is not available in External Mixing. In this case the Freq Offset key is grayed out and shows a value of zero. It will once again be available, and show the previously set value, when you return to the RF Input. |
| Dependencies | <p>Span, RBW, Center frequency</p> <p>If the electronic/soft attenuator is enabled, any attempt to change the value of the center frequency >3.6 GHz by pressing the Up-arrow key, fails and results in an advisory message. If the equivalent SCPI command is sent, this same message is generated as part of a “-221, Settings conflict” warning.</p> |
| Couplings | When auto-coupled in a non-zero span, the center frequency step size is set to 10% of the span. When auto-coupled in zero span, the center frequency step size is set to the equivalent -3 dB RBW value. |
| Preset | <p>Auto</p> <p>ADEM0D: 1 MHz</p> <p>ON</p> |
| State Saved | Saved in instrument state |
| Min | – (the maximum frequency of the instrument). That is, 27 GHz max freq instrument has a CF step range of +/- 27 GHz. Note that this is the maximum frequency given the current settings of the instrument, so in External Mixing, for example, it is the maximum frequency of the current mixer band. |
| Max | The maximum frequency of the instrument. That is, 27 GHz max freq instrument has a CF step range of +/- 27 GHz. Note that this is the maximum frequency given the current settings of the instrument, so in External Mixing, for example, it is the maximum frequency of the current mixer band. |
| Default Unit | Hz |
| Status Bits/OPC dependencies | non-overlapped |
| Initial S/W Revision | Prior to A.02.00 |
| Modified at S/W Revision | A.03.00 |

| Help Map ID | 45709 |

Select Marker

Displays 12 markers available for selection.

| | |
|--------------------------|-----------------|
| parameter_table_24.18339 | 54.41263 |
| Key Path | Marker |
| Initial S/W Revision | A.10.01 |
| Help Map ID | 45710 |

Marker Type

Sets the marker control mode. If the selected marker is Off, pressing Marker sets it to Normal and places it at the center of the screen on the trace determined by the **Marker Trace** rules. At the same time, Marker X axis value of the selected marker appears on the Active Function area.

| | |
|--------------------------|--|
| parameter_table_24.18339 | 54.41263 |
| Key Path | Marker |
| Mode | WLAN |
| Remote Command | :CALCulate:FLATness:MARKer[1] 2 ... 12:MODE POSITION DELTa OFF :CALCulate:FLATness:MARKer[1] 2 ... 12:MODE? |
| Example | CALC:FLAT:MARK:MODE POS CALC:FLAT:MARK:MODE? |
| Notes | If the selected marker is Off, pressing Marker sets it to Normal and places it at the center of the screen on the trace determined by the Marker Trace rules. At the same time, Marker X Axis Value appears on the Active Function area. Default Active Function: The active function for the selected marker's current control mode. If the current control mode is Off, there is no active function and the active function is turned off. Active Function Display: The marker X axis value for flatness graph |

| | |
|----------------------|----------------------------|
| Preset | OFF |
| State Saved | Saved in instrument state. |
| Range | Normal Delta Off |
| Initial S/W Revision | A.10.01 |
| Help Map ID | 45711 |

Relative To

Selects the marker that the selected marker is relative to (its reference marker).

| | |
|--------------------------|--|
| parameter_table_24.18339 | 54.41263 |
| Key Path | Marker, Properties |
| Mode | WLAN |
| Remote Command | :CALCulate:FLATness:MARKer[1] 2 ... 12:REFerence <integer> :CALCulate:FLATness:MARKer[1] 2 ... 12:REFerence? |
| Example | CALC:FLAT:MARK:REF 3 CALC:FLAT:MARK:REF? |
| Notes | A marker cannot be relative to itself so that choice is grayed out, and if sent from SCPI generates error -221: "Settings conflict; marker cannot be relative to itself." When queried, a single value is returned (the specified marker number's relative marker). |
| Preset | 2 3 4 5 6 7 8 9 10 11 12 1 |
| State Saved | Saved in instrument state. |
| Min | 1 |

| Example | CALC:FLAT:MARK2:TRAC FLAT CALC:FLAT:MARK:TRAC? |
| Preset | Flatness Trace |
| State Saved | Saved in instrument state. |
| Range | Flatness Trace Upper Limit Lower Limit |

| | |
|----------------------|---------|
| Initial S/W Revision | A.10.01 |
| Help Map ID | 45716 |

Couple Markers

Toggles the state of the markers to be coupled On or Off. When this function is true (On), moving any marker causes an “equal X Axis movement” of every other marker which is active. By “equal X Axis movement” we mean that we preserve the difference between each marker’s X Axis value (in the fundamental x-axis units of the trace that marker is on) and the X Axis value of the marker being moved (in the same fundamental x-axis units).

This may result in markers going offscreen.

| | |
|--------------------------|--|
| parameter_table_24.18339 | 54.41263 |
| Key Path | Marker |
| Mode | WLAN |
| Remote Command | :CALCulate:FLATness:MARKer:COUPle[:STATe] ON OFF 1 0 :CALCulate:FLATness:MARKer:COUPle[:STATe]? |
| Example | CALC:FLAT:MARK:COUP ON CALC:FLAT:MARK:COUP? |
| Preset | OFF |
| State Saved | Saved in instrument state. |
| Range | On Off |
| Initial S/W Revision | A.10.01 |
| Help Map ID | 45717 |

All Markers Off

Turns off all markers.

| | |
|--------------------------|---------------------------------|
| parameter_table_24.18339 | 54.41263 |
| Key Path | Marker |
| Mode | WLAN |
| Remote Command | :CALCulate:FLATness:MARKer:AOFF |
| Example | CALC:FLAT:MARK:AOFF |
| Initial S/W Revision | A.10.01 |
| Help Map ID | 45718 |

Marker X Axis Value

Sets the marker X Axis value in the current marker X Axis Scale unit. It has no effect if the control mode is **Off**, but is the SCPI equivalent of entering an X value if the control mode is **Normal** or **Delta**.

| | |
|------------------------------|--|
| parameter_table_ 24.18339 | 54.41263 |
| Mode | WLAN |
| Remote Command | :CALCulate:FLATness:MARKer[1] 2 ... 12:X <real> :CALCulate:FLATness:MARKer[1] 2 ... 12:X? |
| Example | CALC:FLAT:MARK3:X 0 CALC:FLAT:MARK3:X? |
| Preset | After a preset, all markers are set to Off, so a Marker X Axis Value query will return a not a number (NAN). |
| State Saved | No |
| Min | -9.9E+37 |
| Max | 9.9E+37. |
| Initial S/W Revision | A.10.01 |
| Help Map ID | 45712 |

Marker X Axis Position (Remote Command only)

Sets the marker X position in trace points. It has no effect if the control mode is **Off**, but is the SCPI equivalent of entering a value if the control mode is **Normal** or **Delta** - except in trace points rather than X Axis Scale units. The entered value is immediately translated into the current X Axis Scale units for setting the value of the marker.

| | |
|----------------------------------|--|
| parameter_ table_ 24.18339 | 54.41263 |
| Mode | WLAN |
| Remote Command | :CALCulate:FLATness:MARKer[1] 2 ... 12:X:POSition <real> :CALCulate:FLATness:MARKer[1] 2 ... 12:X:POSition? |
| Example | CALC:FLAT:MARK10:X:POS 10 CALC:FLAT:MARK10:X:POS? |
| Notes | The query returns the marker's absolute X Axis value in trace points if the control mode is Normal , or the offset from the marker's reference marker in trace points, if the control mode is Delta . The value is returned as a real number, not an integer, corresponding to the translation from X Axis Scale units to trace points. If the marker is Off the response is not a number(NAN). |
| Preset | After a preset, all markers are set to Off, so Marker X Axis Position query will return a not a number (NAN). |
| State Saved | No |
| Min | -9.9E+37 |
| Max | 9.9E+37 |

| | |
|----------------------|---------|
| Initial S/W Revision | A.10.01 |
| Help Map ID | 0 |

Marker Y Axis Value (Remote Command only)

Queries the marker Y Axis value in the current marker Y Axis unit.

| | |
|--------------------------|---|
| parameter_table_24.18339 | 54.41263 |
| Mode | WLAN |
| Remote Command | :CALCulate:FLATness:MARKer[1] 2 ... 12:Y? |
| Example | CALC:FLAT:MARK11:Y? |
| Preset | Result dependant on Markers setup and signal source |
| State Saved | No |
| Initial S/W Revision | A.10.01 |
| Help Map ID | 0 |

Marker Function

There are no 'Marker Functions' supported in this measurement, so this front-panel key displays a blank menu when pressed.

Meas

The information in this section is common to all measurements. For key and remote command information for a specific measurement, refer to the section that describes the measurement of interest.

Measurements available under the Meas key are specific to the current Mode.

When viewing Help for measurements, note the following:

NOTE

Operation for some keys differs between measurements. The information displayed in Help pertains to the current measurement. To see how a key operates in a different measurement, exit Help (press the Cancel Esc key), select the measurement, then reenter Help (press the Help key) and press that key.

| Key Path | Front-panel key |

|----------------------|------------------|

Measurement Group of Commands

Measure Commands:

:MEASure:<measurement>[n]?

This is a fast single-command way to make a measurement using the factory default instrument settings. These are the settings and units that conform to the Mode Setup settings (e.g. radio standard) that you have currently selected.

- Stops the current measurement (if any) and sets up the instrument for the specified measurement using the factory defaults
- Initiates the data acquisition for the measurement
- Blocks other SCPI communication, waiting until the measurement is complete before returning results.
- If the function does averaging, it is turned on and the number of averages is set to 10.
- After the data is valid it returns the scalar results, or the trace data, for the specified measurement. The type of data returned may be defined by an [n] value that is sent with the command.
- The scalar measurement results will be returned if the optional [n] value is not included, or is set to 1. If the [n] value is set to a value other than 1, the selected trace data results will be returned. See each command for details of what types of scalar results or trace data results are available.
- ASCII is the default format for the data output. (Older versions of Spectrum Analysis and Phase Noise mode measurements only use ASCII.) The binary data formats should be used for handling large blocks of data since they are smaller and faster than the ASCII format. Refer to the FORMat:DATA command for more information.

If you need to change some of the measurement parameters from the factory default settings you can set up the measurement with the CONFigure command. Use the commands in the SENSe:<measurement> and CALCulate:<measurement> subsystems to change the settings. Then you can use the READ? command to initiate the measurement and query the results.

If you need to repeatedly make a given measurement with settings other than the factory defaults, you can use the commands in the SENSe:<measurement> and CALCulate:<measurement> subsystems to set up the measurement. Then use the READ? command to initiate the measurement and query results.

Measurement settings persist if you initiate a different measurement and then return to a previous one. Use READ:<measurement>? if you want to use those persistent settings. If you want to go back to the default settings, use MEASure:<measurement>?.

Configure Commands:

:CONFigure:<measurement>

This command stops the current measurement (if any) and sets up the instrument for the specified measurement using

the factory default instrument settings. It does not initiate the taking of measurement data unless INIT:CONTinuous is ON. If you change any measurement settings after using the CONFigure command, the READ command can be used to initiate a measurement without changing the settings back to their defaults.

In the Swept SA measurement in Spectrum Analyzer mode the CONFigure command also turns the averaging function on and sets the number of averages to 10 for all measurements.

:CONFigure: <measurement>: NDEFault stops the current measurement and changes to the specified measurement. It does not change the settings to the defaults. It does not initiate the taking of measurement data unless INIT:CONTinuous is ON.

The CONFigure? query returns the current measurement name.

The CONFigure:CATalog? query returns a quoted string of all licensed measurement names in the current mode. For example, "SAN, CHP, OBW, ACP, PST, TXP, SPUR, SEM, LIST".

Fetch Commands:

:FETCh:<measurement>[n]?

This command puts selected data from the most recent measurement into the output buffer. Use FETCh if you have already made a good measurement and you want to return several types of data (different [n] values, for example, both scalars and trace data) from a single measurement. FETCh saves you the time of re-making the measurement. You can only FETCh results from the measurement that is currently active, it will not change to a different measurement. An error message is reported if a measurement other than the current one is specified.

If you need to get new measurement data, use the READ command, which is equivalent to an INITiate followed by a FETCh.

The scalar measurement results will be returned if the optional [n] value is not included, or is set to 1. If the [n] value is set to a value other than 1, the selected trace data results will be returned. See each command for details of what types of scalar results or trace data results are available. The binary data formats should be used for handling large blocks of data since they are smaller and transfer faster than the ASCII format. (FORMat:DATA)

FETCh may be used to return results other than those specified with the original READ or MEASure command that you sent.

INITiate Commands:

:INITiate:<measurement>

This command is not available for measurements in all the instrument modes:

- Initiates a trigger cycle for the specified measurement, but does not output any data. You must then use the FETCh<meas> command to return data. If a measurement other than the current one is specified, the instrument will switch to that measurement and then initiate it.
 - For example, suppose you have previously initiated the ACP measurement, but now you are running the channel power measurement. If you send INIT:ACP? it will change from channel power to ACP and will initiate an ACP measurement.
 - Does not change any of the measurement settings. For example, if you have previously started the ACP measurement and you send INIT:ACP? it will initiate a new ACP measurement using the same instrument settings as the last time ACP was run.
 - If your selected measurement is currently active (in the idle state) it triggers the measurement, assuming the trigger conditions are met. Then it completes one trigger cycle. Depending upon the measurement and the number of averages, there may be multiple data acquisitions, with multiple trigger events, for one full trigger cycle. It also holds off additional commands on GPIB until the acquisition is complete.
-

READ Commands:

:READ:<measurement>[n]?

- Does not preset the measurement to the factory default settings. For example, if you have previously initiated the ACP
-

measurement and you send READ:ACP? it will initiate a new measurement using the same instrument settings.

- Initiates the measurement and puts valid data into the output buffer. If a measurement other than the current one is specified, the instrument will switch to that measurement before it initiates the measurement and returns results.
 - For example, suppose you have previously initiated the ACP measurement, but now you are running the channel power measurement. Then you send READ:ACP? It will change from channel power back to ACP and, using the previous ACP settings, will initiate the measurement and return results.
 - Blocks other SCPI communication, waiting until the measurement is complete before returning the results
 - If the optional [n] value is not included, or is set to 1, the scalar measurement results will be returned. If the [n] value is set to a value other than 1, the selected trace data results will be returned. See each command for details of what types of scalar results or trace data results are available. The binary data formats should be used when handling large blocks of data since they are smaller and faster than the ASCII format. (FORMat:DATA)
-

| | |
|----------------------|------------------|
| Initial S/W Revision | Prior to A.02.00 |
|----------------------|------------------|

Current Measurement Query (Remote Command Only)

This command returns the name of the measurement that is currently running.

| | |
|-----------------------|-------------|
| Remote Command | :CONFigure? |
|-----------------------|-------------|

| | |
|----------------|-------|
| Example | CONF? |
|----------------|-------|

| | |
|----------------------|------------------|
| Initial S/W Revision | Prior to A.02.00 |
|----------------------|------------------|

Limit Test Current Results (Remote Command Only)

Queries the status of the current measurement limit testing. It returns a 0 if the measured results pass when compared with the current limits. It returns a 1 if the measured results fail any limit tests.

| | |
|-----------------------|--------------------------|
| Remote Command | :CALCulate:CLIMits:FAIL? |
|-----------------------|--------------------------|

| | |
|----------------|--|
| Example | CALC:CLIM:FAIL? queries the current measurement to see if it fails the defined limits. Returns a 0 or 1: 0 it passes, 1 it fails. |
|----------------|--|

| | |
|----------------------|------------------|
| Initial S/W Revision | Prior to A.02.00 |
|----------------------|------------------|

Data Query (Remote Command Only)

Returns the designated measurement data for the currently selected measurement and subopcode.

n = any valid subopcode for the current measurement. See the measurement command results table for your current measurement, for information about what data is returned for the subopcodes.

This command uses the data setting specified by the FORMat:BORDER and FORMat:DATA commands and can return real or ASCII data. (See the format command descriptions under Input/Output in the Analyzer Setup section.)

| | |
|-----------------------------|---|
| Remote Command | :CALCulate:DATA[n]? |
| Notes | The return trace depends on the measurement. In CALCulate:<meas>:DATA[n], n is any valid subopcode for the current measurement. It returns the same data as the FETCH:<measurement>? query where <measurement> is the current measurement. |
| Initial S/W Revision | Prior to A.02.00 |

Calculate/Compress Trace Data Query (Remote Command Only)

Returns compressed data for the currently selected measurement and sub-opcode [n].

n = any valid sub-opcode for that measurement. See the MEASure:<measurement>? command description of your specific measurement for information on the data that can be returned.

The data is returned in the current Y Axis Unit of the analyzer. The command is used with a sub-opcode <n> (default=1) to specify the trace. With trace queries, it is best if the analyzer is not sweeping during the query. Therefore, it is generally advisable to be in Single Sweep, or Update=Off.

This command is used to compress or decimate a long trace to extract and return only the desired data. A typical example would be to acquire N frames of GSM data and return the mean power of the first burst in each frame. The command can also be used to identify the best curve fit for the data.

| | |
|-----------------------------|---|
| Remote Command | :CALCulate:DATA<n>:COMPRESS? BLOCK CFIT MAXimum MINimum MEAN DMEan RMS RMSCubed SAMPLE SDEVIation PPHase [,<soffset> [,<length>[,<roffset>[,<rlimit>]]]] |
| Example | To query the mean power of a set of GSM bursts: Supply a signal that is a set of GSM bursts. Select the IQ Waveform measurement (in IQ Analyzer Mode). Set the sweep time to acquire at least one burst. Set the triggers such that acquisition happens at a known position relative to a burst. Then query the mean burst levels using, CALC:DATA2:COMP? MEAN, 24e-6, 526e-6 (These parameter values correspond to GSM signals, where 526e-6 is the length of the burst in the slot and you just want 1 burst.) |
| Notes | The command supports 5 parameters. Note that the last 4 (<soffset>, <length>, <roffset>, <rlimit>) are optional. But these optional parameters must be entered in the specified order. For example, if you want to specify <length>, then you must also specify <soffset>. See details below for a definition of each of these parameters. This command uses the data in the format specified by FORMat:DATA, returning either binary or ASCII data. |
| Initial S/W Revision | Prior to A.02.00 |

- BLOCK or block data - returns all the data points from the region of the trace data that you specify. For example, it could be used to return the data points of an input signal over several timeslots, excluding the portions of the trace data that you do not want. (This is x,y pairs for trace data and I,Q pairs for complex data.)

- CFIT or curve fit - applies curve fitting routines to the data. <soffset> and <length> are required to define the data that you want. <roffset> is an optional parameter for the desired order of the curve equation. The query will return the following values: the x-offset (in seconds) and the curve coefficients ((order + 1) values).

MIN, MAX, MEAN, DME, RMS, RMSC, SAMP, SDEV and PPH return one data value for each specified region (or <length>) of trace data, for as many regions as possible until you run out of trace data (using <roffset> to specify regions). Or they return the number of regions you specify (using <rlimit>) ignoring any data beyond that.

- MINimum - returns the minimum data point (y value) for the specified region(s) of trace data. For I/Q trace data, the minimum magnitude of the I/Q pairs is returned.
- MAXimum - returns the maximum data point (y value) for the specified region(s) of trace data. For I/Q trace data, the maximum magnitude of the I/Q pairs is returned.
- MEAN - returns a single value that is the arithmetic mean of the data point values (in dB/ dBm) for the specified region(s) of trace data. For I/Q trace data, the mean of the magnitudes of the I/Q pairs is returned. See the following equations.

-

NOTE

If the original trace data is in dB, this function returns the arithmetic mean of those log values, not log of the mean power which is a more useful value. The mean of the log is the better measurement technique when measuring CW signals in the presence of noise. The mean of the power, expressed in dB, is useful in power measurements such as Channel Power. To achieve the mean of the power, use the RMS option.

Equation 1

Mean Value of Data Points for Specified Region(s)

$$\text{MEAN} = \frac{1}{n} \sum_{X_i \in \text{region}(s)} X_i$$

where X_i is a data point value, and n is the number of data points in the specified region(s).

Equation 2

Mean Value of I/Q Data Pairs for Specified Region(s)

$$\text{MEAN} = \frac{1}{n} \sum_{X_i \in \text{region}(s)} |X_i|$$

where $|X_i|$ is the magnitude of an I/Q pair, and n is the number of I/Q pairs in the specified region(s).

- DMEan - returns a single value that is the mean power (in dB/ dBm) of the data point values for the specified region(s) of trace data. See the following equation:

Equation 3

DMEan Value of Data Points for Specified Region(s)

$$\text{DME} = 10 \times \log_{10} \left(\frac{1}{n} \sum_{X_i \in \text{region}(s)} 10^{\frac{X_i}{10}} \right)$$

- RMS - returns a single value that is the average power on a root-mean-squared voltage scale (arithmetic rms) of the data point values for the specified region(s) of trace data. See the following equation.

NOTE For I/Q trace data, the rms of the magnitudes of the I/Q pairs is returned. See the following equation. This function is very useful for I/Q trace data. However, if the original trace data is in dB, this function returns the rms of the log values which is not usually needed.

Equation 4

RMS Value of Data Points for Specified Region(s)

$$\text{RMS} = \sqrt{\frac{1}{n} \sum_{X_i \in \text{region}(s)} X_i^2}$$

where X_i is a data point value, and n is the number of data points in the specified region(s).

Equation 5

RMS Value of I/Q Data Pairs for Specified Region(s)

$$\text{RMS} = \sqrt{\frac{1}{n} \sum_{X_i \in \text{region}(s)} X_i X_i^*}$$

where X_i is the complex value representation of an I/Q pair, X_i^* its conjugate complex number, and n is the number of I/Q pairs in the specified region(s).

Once you have the rms value for a region of trace data (linear or I/Q), you may want to calculate the mean power. You must convert this rms value (peak volts) to power in dBm:

$$10 \times \log[10 \times (\text{rms value})^2]$$

- SAMPlE - returns the first data value (x,y pair) for the specified region(s) of trace data. For I/Q trace data, the first I/Q pair is returned.
- SDEVIation - returns a single value that is the arithmetic standard deviation for the data point values for the specified region(s) of trace data. See the following equation.
- For I/Q trace data, the standard deviation of the magnitudes of the I/Q pairs is returned. See the following equation.

Equation 6

Standard Deviation of Data Point Values for Specified Region(s)

$$\text{SDEV} = \sqrt{\frac{1}{n} \sum_{X_i \in \text{region}(s)} (X_i - \bar{X})^2}$$

where X_i is a data point value, \bar{X} is the arithmetic mean of the data point values for the specified region (s), and n is the number of data points in the specified region(s).

$$\text{SDEV} = \sqrt{\frac{1}{n} \sum_{X_i \in \text{region}(s)} (|X_i| - \bar{X})^2}$$

where $|X_i|$ is the magnitude of an I/Q pair, \bar{X} is the mean of the magnitudes for the specified region(s), and n is the number of data points in the specified region(s).

- PPHase - returns the x,y pairs of both rms power (dBm) and arithmetic mean phase (radian) for every specified region and frequency offset (Hz). The number of pairs is defined by the specified number of regions. This parameter can be used for I/Q vector ($n=0$) in Waveform (time domain) measurement and all parameters are specified by data point in PPHase.

The rms power of the specified region may be expressed as:

$$\text{Power} = 10 \times \log [10 \times (\text{RMS I/Q value})] + 10.$$

The RMS I/Q value (peak volts) is:

$$\sqrt{\frac{1}{n} \sum_{X_i \in \text{region}} X_i X_i^*}$$

where X_i is the complex value representation of an I/Q pair, X_i^* its conjugate complex number, and n is the number of I/Q pairs in the specified region.

The arithmetic mean phase of the specified region may be expressed as:

$$\frac{1}{n} \sum_{Y_i \in \text{region}} Y_i$$

where Y_i is the unwrapped phase of I/Q pair with applying frequency correction and n is the number of I/Q pairs in the specified region.

The frequency correction is made by the frequency offset calculated by the arithmetic mean of every specified region's frequency offset. Each frequency offset is calculated by the least square method against the unwrapped phase of I/Q pair.

Sample Trace Data - Constant Envelope

(See below for explanation of variables.)

Sample Trace Data - Not Constant Envelope

(See below for explanation of variables.)

<soffset> - start offset is an optional real number. (It is in seconds for time-domain traces, and is a dimensionless index 0 to Npoints - 1, for frequency-domain traces). It specifies the amount of data at the beginning of the trace that will be ignored before the decimation process starts. It is the time or frequency change from the start of the trace to the point where you want to start using the data. The default value is zero.

<length> - is an optional real number. (It is in seconds for time-domain traces, and is a dimensionless index 0 to Npoints - 1, for frequency-domain traces). It defines how much data will be compressed into one value. This parameter has a default value equal to the current trace length.

<roffset> - repeat offset is an optional real number. (It is in seconds for time-domain traces, and is a dimensionless index 0 to Npoints - 1, for frequency-domain traces). It defines the beginning of the next field of trace elements to be compressed. This is relative to the beginning of the previous field. This parameter has a default value equal to the <length> variable. Note that this parameter is used for a completely different purpose when curve fitting (see CFIT above).

<rlimit> - repeat limit is an optional integer. It specifies the number of data items that you want returned. It will ignore any additional items beyond that number. You can use the Start offset and the Repeat limit to pick out exactly what part of the data you want to use. The default value is all the data.

Calculate Peaks of Trace Data (Remote Command Only)

Returns a list of all the peaks for the currently selected measurement and sub-opcode [n]. The peaks must meet the requirements of the peak threshold and excursion values.

n = any valid sub-opcode for the current measurement. See the MEASure:<measurement> command description of your specific measurement for information on the data that can be returned.

The command can only be used with specific sub-opcodes with measurement results that are trace data. Both real and complex traces can be searched, but complex traces are converted to magnitude in dBm. In many measurements the sub-opcode n=0, is the raw trace data which cannot be searched for peaks. And Sub-opcode n=1, is often calculated results values which also cannot be searched for peaks.

This command uses the data setting specified by the FORMat:BORDER and FORMat:DATA commands and can return real or ASCII data. If the format is set to INT,32, it returns REAL,32 data.

The command has four types of parameters:

- Threshold (in dBm)
- Excursion (in dB)
- Sorting order (amplitude, frequency, time)
- Optional in some measurements: Display line use (all, > display line, < display line)

| | |
|-----------------------|---|
| Remote Command | <p>For Swept SA measurement:</p> <pre>:CALCulate:DATA[1] 2 ... 6:PEAKs? <threshold>,<excursion>[,AMPLitude FREQuency TIME[,ALL GTDLline LTDLine]]</pre> <p>For most other measurements:</p> <pre>:CALCulate:DATA[1] 2 ... 6:PEAKs? <threshold>,<excursion>[,AMPLitude FREQuency TIME]</pre> |
|-----------------------|---|

| | |
|----------------|---|
| Example | <p>Example for Swept SA measurement in Spectrum Analyzer Mode:</p> <p>CALC:DATA4:PEAK? -40, 10, FREQ, GTDL This will identify the peaks of trace 4 that are above -40 dBm, with excursions of at least 10 dB. The peaks are returned in order of increasing frequency, starting with the lowest frequency. Only the peaks that are above the display line are returned.</p> <p>Query Results 1:</p> <p>With FORMat:DATA REAL, 32 selected, it returns a list of floating-point numbers. The first value in the list is the number of peak points that are in the following list. A peak point consists of two values: a peak amplitude followed by its corresponding frequency (or time).</p> <p>If no peaks are found the peak list will consist of only the number of peaks, (0).</p> |
|----------------|---|

| | |
|--------------|---|
| Notes | <p><n> - is the trace that will be used</p> <p><threshold> - is the level below which trace data peaks are ignored. Note that the threshold value is required and is always used as a peak criterion. To effectively disable the threshold criterion for this command, provide a substantially low threshold value such as -200 dBm. Also note that the threshold value used in this command is independent of and has no effect on the threshold value stored under the Peak Criteria menu.</p> <p><excursion> - is the minimum amplitude variation (rise and fall) required for a signal to be identified as peak. Note that the excursion value is required and is always used as a peak criterion. To effectively disable the excursion criterion for this command, provide the minimum value of 0.0 dB. Also note that the excursion value used in this command is independent of and has no effect on the</p> |
|--------------|---|

excursion value stored under the Peak Criteria menu.

Values must be provided for threshold and excursion. The sorting and display line parameters are optional (defaults are AMPLitude and ALL).

Note that there is always a Y-axis value for the display line, regardless of whether the display line state is on or off. It is the current Y-axis value of the display line which is used by this command to determine whether a peak should be reported. Sorting order:

AMPLitude - lists the peaks in order of descending amplitude, with the highest peak first (default if optional parameter not sent)

FREQuency - lists the peaks in order of occurrence, left to right across the x-axis.

TIME - lists the peaks in order of occurrence, left to right across the x-axis.

Peaks vs. Display Line:

ALL - lists all of the peaks found (default if optional parameter not sent).

GTDLine (greater than display line) - lists all of the peaks found above the display line.

LTDLine (less than display line) - lists all of the peaks found below the display line.

| | |
|----------------------|------------------|
| Initial S/W Revision | Prior to A.02.00 |
|----------------------|------------------|

Hardware-Accelerated Fast Power Measurement (Remote Command Only)

The Fast Power option (FP2) enables very fast channel power measurements for instruments with the prerequisite hardware (DP2 and/or B40). It accomplishes this by performing real-time overlapped FFTs at the hardware layer, using software for basic post-processing before returning the result to the user. The upshot of this approach is improved throughput for user applications that require many sequential power measurements.

The analysis bandwidth of FP2 is limited by the licenses in the instrument, but its maximum overall analysis bandwidth per acquisition is 40 MHz.

FP2 is remote-only, which means the instrument does not switch to any particular mode or measurement. FP2 commands can be sent while another application is in use on the front panel.

Each Fast Power measurement can be predefined using an array index, and up to 1,000 measurements can be stored. In the following documentation, instances of [1,2,...,999] can be substituted with a particular measurement index, e.g. CALC:FPOW:POW1?, CALC:FPOW:POW2?, CALC:FPOW:POW134?. In this way, power measurements can be defined one time in a batch, and then executed multiple times without having to redefine them, similar to “list mode” on other measurements.

In addition to basic channel power measurements, there are a number of other measurement “functions” for each channel, including peak power, peak frequency, and power spectral density. See the Function parameter for more information.

Reset Fast Power Measurement (Remote Command Only)

Resets the measurement configuration to the defaults.

| | |
|-----------------------|---|
| Mode | All |
| Remote Command | :CALCulate:FPOWer:POWer [1, 2, ..., 999] :RESet |
| Example | :CALC:FPOW:POW1:RES |

| | |
|----------------------|-------------------------|
| Notes | Option FP2 is required. |
| Initial S/W Revision | A.14.00 |

Define Fast Power Measurement (Remote Command Only)

Fast Power acquisitions are configured using the DEFine command. This command accepts a comma-delimited string of configuration parameters and their appropriate values, which are all specified in the subsection below.

| | |
|-----------------------|--|
| Mode | All |
| Remote Command | :CALCulate:FPOWer:POWer[1,2,...,999]:DEFine "configuration string" |
| Example | :CALC:FPOW:POW1:DEF "CenterFrequency=2e9, AcquisitionTime=0.005" |
| Notes | See below for a list of measurement variables that can be defined in the configuration string. |
| Initial S/W Revision | A.14.00 |

Acquisition Time

| | |
|----------------------|--|
| Example | CALC:FPOW:POW1:DEF "AcquisitionTime=0.002" |
| Notes | The acquisition time parameter sets the time in which the entire spectrum is measured. An increase in the acquisition time yields an improvement in measurement repeatability. |
| Preset | 0.001 s |
| Range | 0 s to 1 s |
| Default Unit | Time (s) |
| Initial S/W Revision | A.14.00 |

Center Frequency

| | |
|----------------------|--|
| Example | CALC:FPOW:POW1:DEF "CenterFrequency=2e9" |
| Notes | The center frequency parameter sets the frequency in which the measurement is centered around. The OffsetFrequency parameter is calculated relative to the center frequency. |
| Preset | 1 GHz |
| Range | 0 Hz to maximum instrument frequency |
| Default Unit | Frequency (Hz) |
| Initial S/W Revision | A.14.00 |

DC Coupled

| | |
|----------------------|---|
| Example | CALC:FPOW:POW1:DEF "DCCoupled=True" |
| Notes | The DC coupled parameter allows the user to specify whether the DC blocking capacitor is utilized. Set parameter to true when measuring frequencies below 10 MHz. |
| Preset | False |
| Range | True (DC Coupled) or False (AC Coupled) |
| Default Unit | Boolean |
| Initial S/W Revision | A.14.00 |

DetectorType

| | |
|----------------------|--|
| Example | CALC:FPOW:POW1:DEF "DetectorType=Peak" |
| Notes | Option FP2 is required. The detector type parameter allows the user to choose whether a RMS average or peak value is used during the measurement. |
| Preset | RmsAverage |
| Range | RmsAverage, Peak |
| Initial S/W Revision | A.14.00 |

Do Noise Correction

| | |
|----------------------|--|
| Example | CALC:FPOW:POW1:DEF "DoNoiseCorrection=True" |
| Notes | When noise correction is enabled, the linear noise power contributed by the analyzer is subtracted from all measurements. This effectively lowers the noise floor of the analyzer. When noise correction is enabled, the first measurement for a given set of input parameters will take extra time. This is because the analyzer takes an extra acquisition with the RF input disconnected from the analyzer's front end to measure the noise of just the analyzer. The measured noise floor is stored in a cache so the noise acquisition will occur only once for the same state settings. In other words, if noise correction was turned on and the analyzer made an acquisition at frequency A, then frequency B, and back again to frequency A, the hidden initial noise floor acquisition would only occur for the first acquisition at frequency A and the cached noise floor would be used the second time frequency A was measured. |
| Preset | False |
| Range | True (enable noise correction) or False (disable noise correction) |
| Default Unit | Boolean |
| Initial S/W Revision | A.14.00 |

Do Spur Suppression

| | |
|----------------------|---|
| Example | CALC:FPOW:POW1:DEF "DoSpurSuppression=True" |
| Notes | <p>When measuring very low level signals, or when large out-of-band inputs are input into the analyzer, sometimes unwanted spurs and residuals can appear in the measured spectrum. Spur suppression is a method to help minimize the levels of these internally generated spurs and residuals.</p> <p>When spur suppression is enabled, the analyzer will automatically take two acquisitions using two different internal analog LO frequencies. The FFT spectrums from both acquisitions are combined by taking the minimum power between both traces on a per FFT bin basis. External signals will have the same amplitude for both traces and therefore will return the expected amplitudes. However, low level spurs and residuals generated internally to the analyzer tend to move to different FFT bins depending on the internal analog LO frequency used, and therefore tend to be suppressed using this spur suppression method.</p> <p>Because two acquisitions, rather than a single acquisition, are made when spur suppression is enabled, the measurement time will always be slower when spur suppression is enabled.</p> |
| Preset | False |
| Range | True (enable spur suppression) or False (disable spur suppression) |
| Default Unit | Boolean |
| Initial S/W Revision | A.14.00 |

Electronic Attenuator Bypass

| | |
|----------------------|--|
| Example | CALC:FPOW:POW1:DEF "ElecAttBypass =False" |
| Notes | The electronic attenuation bypass parameter allows the user to either utilize or bypass the electronic attenuator. The electronic attenuator is only available for frequencies up to 3.6 GHz. Set parameter to true when using frequencies above 3.6 GHz and set the parameter to false when using the preamp. |
| Preset | True |
| Range | True (bypass electronic attenuator) or False (use electronic attenuator) |
| Default Unit | Boolean |
| Initial S/W Revision | A.14.00 |

Electronic Attenuation

| | |
|---------|---|
| Example | CALC:FPOW:POW1:DEF "ElecAttenuation=10" |
| Notes | <p>Option EA3 is required.</p> <p>The electronic attenuation value parameter sets the amount of electrical attenuation from 0 to 24 dB (1 dB steps).</p> <p>Set "ElecAttBypass=False" to make sure the electronic attenuator path is enabled.</p> |
| Preset | 0 dB |
| Range | 0 - 24 dB (1 dB steps) |

| | |
|-------------------------|---------|
| Default Unit | dB |
| Initial S/W Revision | A.14.00 |

IF Gain

| | |
|-------------------------|--|
| Example | CALC:FPOW:POW1:DEF "IFGain=10" |
| Notes | The IF gain parameter allows the user to specify the gain at the IF stage anywhere from -6 to 16 dB (1 dB steps). This is an advanced feature, and for most cases this should remain at its default value of 0 dB. |
| Preset | 0 dB |
| Range | -6 - 16 dB (1 dB steps) |
| Default Unit | dB |
| Initial S/W Revision | A.14.00 |

IF Type

| | |
|-------------------------|---|
| Example | CALC:FPOW:POW1:DEF "IFType=B25M" |
| Notes | The IF type parameter allows the user to select between different IF paths. For example, if the signal is less than 25 MHz wide, then the user can select the B25M path to take advantage of additional filtering on this analog IF path. |
| Preset | B40M |
| Range | B10M, B25M, B40M |
| Initial S/W Revision | A.14.00 |

Include Power Spectrum

| | |
|-------------------------|---|
| Example | CALC:FPOW:POW1:DEF "IncludePowerSpectrum=True" |
| Notes | The power spectrum parameter allows the user to read data on the entire spectrum for diagnostic purposes. It is not recommended for production use. See CALC:FPOW:POW[n]:READ2? for details on the binary format of the response. |
| Preset | False |
| Range | True (return both channel power and full power spectrum) or False (returns only channel power) |
| Default Unit | Boolean |
| Initial S/W Revision | A.14.00 |

Mechanical Attenuation

| | |
|----------------------|---|
| Example | CALC:FPOW:POW1:DEF "MechAttenuation=10" |
| Notes | The mechanical attenuation value parameter sets the amount of mechanical attenuation anywhere from 0 to 70 dB (2 dB steps). |
| Preset | 0 dB |
| Range | 0 – 70 dB (2 dB steps) |
| Default Unit | dB |
| Initial S/W Revision | A.14.00 |

Preamp Mode

| | |
|----------------------|--|
| Example | CALC:FPOW:POW1:DEF "PreAmpMode=Low" |
| Notes | The license for the appropriate preamp is required. The preamp mode parameter specifies whether the preamps are being utilized. Low allows any preamps up to 3.6 GHz, and Full allows all licensed preamps. Set "ElecAttBypass=True" in order to utilize any preamps. |
| Preset | Off |
| Range | Off, Low, Full |
| Initial S/W Revision | A.14.00 |

Resolution Bandwidth Mode

| | |
|----------------------|--|
| Example | CALC:FPOW:POW1:DEF "PreAmpMode=Low" |
| Notes | The resolution bandwidth mode parameter allows the user to choose whether the RBW filter is automatically or manually set. The BestSpeed value minimizes measurement time, while the Narrowest value minimizes RBW size (minimum of two FFT bins per RBW). To manually specify an RBW, set this parameter to Explicit, and set the ResolutionBW parameter to the desired value. |
| Preset | BestSpeed |
| Range | BestSpeed, Narrowest, Explicit |
| Initial S/W Revision | A.14.00 |

Resolution Bandwidth

| | |
|---------|--|
| Example | CALC:FPOW:POW1:DEF "ResolutionBW=25e3" |
| Notes | The resolution bandwidth parameter sets the 3-dB bandwidth of the RBW filter. The ResolutionBWMode parameter must be set to Explicit in order to manually set the RBW. |

| | |
|----------------------|---------|
| Preset | 0 Hz |
| Default Unit | Hz |
| Initial S/W Revision | A.14.00 |

Trigger Delay

| | |
|----------------------|---|
| Example | CALC:FPOW:POW1:DEF "TriggerDelay=0.025" |
| Notes | The trigger delay parameter sets the time after an external trigger is detected until the measurement is performed. |
| Preset | 0 s |
| Range | 0 - 1 s |
| Default Unit | Seconds |
| Initial S/W Revision | A.14.00 |

Trigger Level

| | |
|----------------------|--|
| Example | CALC:FPOW:POW1:DEF "TriggerLevel=2" |
| Notes | The trigger level parameter sets the voltage value at which an external trigger is detected. |
| Preset | 1.2 V |
| Range | -5 to 5 V |
| Default Unit | Volts |
| Initial S/W Revision | A.14.00 |

Trigger Slope

| | |
|----------------------|--|
| Example | CALC:FPOW:POW1:DEF "TriggerSlope=Negative" |
| Notes | The trigger slope parameter indicates the direction of the edge trigger voltage for detection. |
| Preset | Positive |
| Range | Positive, Negative |
| Initial S/W Revision | A.14.00 |

Trigger Source

| | |
|-------------------------|---|
| Example | CALC:FPOW:POW1:DEF "TriggerSource=Ext1" |
| Notes | The trigger source parameter allows the user to choose between measurement's triggering freely or controlled by an external input. Ext1 and Ext2 correspond to Trigger 1 In and Trigger 2 In, respectively. |
| Preset | Free |
| Range | Free, Ext1, Ext2 |
| Initial S/W Revision | A.14.00 |

Trigger Timeout

| | |
|-------------------------|--|
| Example | CALC:FPOW:POW1:DEF "TriggerTimeout=0.1" |
| Notes | The trigger timeout parameter sets the time in which the analyzer will wait for a trigger before automatically performing the measurement. |
| Preset | 1 s |
| Range | 0 - 1 s |
| Default Unit | Seconds |
| Initial S/W Revision | A.14.00 |

Signal Input

| | |
|-------------------------|--|
| Example | CALC:FPOW:POW1:DEF "SignalInput=Fp50MHzCW" |
| Notes | The signal input parameter allows the user to select between using the main RF input or the internal analyzer reference CW signal of 50 MHz. |
| Preset | FpMainRf |
| Range | FpMainRf, Fp50MHzCW |
| Initial S/W Revision | A.14.00 |

Use Preselector

| | |
|---------|--|
| Example | CALC:FPOW:POW1:DEF "UsePreSelector=True" |
| Notes | The preselector parameter allows the user to either utilize or bypass the front end tunable filter at frequencies above 3.6 GHz. For frequencies below 3.6 GHz, the preselector is automatically bypassed, so you do not need to set this parameter to False in those cases. |
| Preset | False |
| Range | True (use preselector above 3.6 GHz), or False (preselector bypassed) |

| | |
|----------------------|---------|
| Default Unit | Boolean |
| Initial S/W Revision | A.14.00 |

Channel Bandwidth Array

| | |
|----------------------|---|
| Example | CALC:FPOW:POW1:DEF "Bandwidth=[3.84e6, 5e6, 3.84e6]" |
| Notes | The bandwidth parameter array defines the bandwidth of each channel that will be measured. All array parameters should have the same number of elements. Alternatively, if all the elements are the same value, a single number with no square brackets can be used to define the parameter. |
| Preset | [1e6] |
| Range | 0 to 40 MHz |
| Default Unit | Hz |
| Initial S/W Revision | A.14.00 |

Channel Filter Type Array

| | |
|----------------------|--|
| Example | CALC:FPOW:POW1:DEF "FilterType=[RRC, IBW, RRC]" |
| Notes | The filter type parameter allows the user to choose between an integration bandwidth (IBW) filter or a root-raised-cosine (RRC) filter. The integration bandwidth filter weighs all frequencies within the bandwidth equally. The root-raised-cosine filter has an associated shape parameter, defined by the FilterAlpha parameter. All array parameters should have the same number of elements. Alternatively, if all the elements are the same value, a single value with no square brackets can be used to define the parameter. |
| Preset | [IBW] |
| Range | IBW, RRC |
| Initial S/W Revision | A.14.00 |

Channel Filter Alpha Array

| | |
|---------|---|
| Example | CALC:FPOW:POW1:DEF "FilterAlpha=[0.5, 0.0, 0.5]" |
| Notes | The filter alpha parameter allows the user to adjust the alpha value associated with the root-raised-cosine (RRC) filter type. Set FilterType to RRC in order to utilize this parameter. All array parameters should have the same number of elements. Alternatively, if all the elements are the same value, a single number with no square brackets can be used to define the parameter. |
| Preset | [0.22] |
| Range | 0.0 - 1.0 |

| | |
|-------------------------|---------|
| Initial S/W Revision | A.14.00 |
|-------------------------|---------|

Channel Measurement Function Array

| | |
|-------------------------|---|
| Example | CALC:FPOW:POW1:DEF "Function=[BandPower, PeakPower, BandPower]" |
| Notes | <p>This parameter array defines what measurement is being made for each individually-specified channel:</p> <p>BandPower: Total power within the specified bandwidth of the channel (dBm)</p> <p>BandDensity: Total power density within the specified bandwidth of the channel (dBm/Hz)</p> <p>PeakPower: The peak power value within the specified bandwidth of the channel (dBm)</p> <p>PeakFrequency: The frequency which corresponds to the peak power value within the specified bandwidth of the channel. This frequency is relative to the center frequency (Hz)</p> <p>XdBBandwidth: The half power (-3.01 dB) bandwidth of the highest amplitude signal that resides within the channel (Hz), dB is configurable using XdBBandwidth parameter</p> <p>OccupiedBandwidth: The bandwidth at which 99% of the total power resides within the channel (Hz), percentage configurable using OccupiedBandwidthPercent parameter</p> <p>All array parameters should have the same number of elements. Alternatively, if all the elements are the same value, a single value with no square brackets can be used to define the parameter.</p> |
| Preset | [BandPower] |
| Range | BandPower, BandDensity, PeakPower, PeakFrequency, XdBBandwidth, OccupiedBandwidth |
| Initial S/W Revision | A.14.00 |

Channel Offset Frequency Array

| | |
|-------------------------|---|
| Example | CALC:FPOW:POW1:DEF "OffsetFrequency=[-5e6, 0, 5e6]" |
| Notes | <p>The offset frequency parameter array defines the difference between the center frequency to the center frequency of each channel.</p> <p>All array parameters should have the same number of elements.</p> |
| Preset | [0] |
| Range | 0 to 20 MHz |
| Default Unit | Hz |
| Initial S/W Revision | A.14.00 |

Channel Occupied Bandwidth Percent Array

| | |
|---------|---|
| Example | CALC:FPOW:POW1:DEF "OccupiedBandwidthPercent =[0.95, 0.95, 0.95]" |
| Notes | This parameter only applies for channels whose Function is set to OccupiedBandwidth. The occupied |

| | |
|-------------------------|--|
| | bandwidth percent parameter specifies the percent of total power in these channels. The valid range for this parameter is 0.0 to 1.0, where 1.0 represents 100%. The default for this parameter is 0.99, which will return the bandwidth that contains 99% of the total channel power. |
| Preset | [0.99] |
| Range | 0 - 1.0 |
| Initial S/W Revision | A.14.00 |

Channel x-dB Bandwidth Array

| | |
|-------------------------|---|
| Example | CALC:FPOW:POW1:DEF " XdBBandwidth =[-6.02, -3.01, -1.0]" |
| Notes | This parameter only applies for channels whose Function is set to XdBBandwidth. The X dB bandwidth parameter is used to specify the power relative to the peak channel power over which the bandwidth is calculated. The parameter value must be a negative number. |
| Preset | [-3.01] |
| Range | -200 to 0 dB |
| Default Unit | dB |
| Initial S/W Revision | A.14.00 |

Configure Fast Power Measurement (Remote Command Only)

The configure command begins hardware setup and returns immediately, with no acquisition made. This can be used in parallel with other hardware operations to effectively hide the hardware setup time.

| | |
|-----------------------|--|
| Mode | All |
| Remote Command | :CALCulate:FPOWER:POWer[1,2,...,999]:CONFigure |
| Example | :CALC:FPOW:POW1:CONF |
| Notes | Option FP2 is required. |
| Initial S/W Revision | A.14.00 |

Initiate Fast Power Measurement (Remote Command Only)

The INITiate command begins an acquisition and returns immediately. The results of the measurement can be retrieved using FETCh.

| | |
|-----------------------|---|
| Mode | All |
| Remote Command | :CALCulate:FPOWER:POWER[1,2,...,999]:INITiate |
| Example | :CALC:FPOW:POW1:INIT |
| Notes | Option FP2 is required. |
| Initial S/W Revision | A.14.00 |

Fetch Fast Power Measurement (Remote Command Only)

The FETCh command query is used to retrieve the results of an acquisition initiated by the INIT command. The returned results are in ASCII string format. The string begins and ends with quotation marks.

| | |
|-----------------------|--|
| Mode | All |
| Remote Command | :CALCulate:FPOWER:POWER[1,2,...,999]:FETCh? |
| Example | :CALC:FPOW:POW1:FETC? |
| Notes | Option FP2 is required. Returns m comma-separated ASCII values, where m corresponds to the number of bandwidths defined. 1. Declared function return in the 1st specified channel 2. Declared function return in the 2nd specified channel ... m. Declared function return in the last specified channel The INIT and FETC? command sequence performs the same functionality of a single CALC:FPOW:POW[n]? query. Units of the returned values are dependent on the Function parameter for each channel. |
| Initial S/W Revision | A.14.00 |

Execute Fast Power Measurement (Remote Command Only)

This command query is used as shorthand for an INIT command immediately followed by a FETC? command. The returned results are in ASCII string format. The string begins and ends with quotation marks.

| | |
|-----------------------|---------------------------------------|
| Mode | All |
| Remote Command | :CALCulate:FPOWER:POWER[1,2,...,999]? |
| Example | :CALC:FPOW:POW1? |

| | |
|----------------------|--|
| Notes | Option FP2 is required. See notes for Fast Power Fetch for return format. |
| Initial S/W Revision | A.14.00 |

Binary Read Fast Power Measurement (Remote Command Only)

This command query is used as shorthand for an INIT command immediately followed by a FETC? command. The returned results are in a binary format.

| | |
|-----------------------|--|
| Mode | All |
| Remote Command | :CALCulate:FPOWER:POWER[1,2,...,999]:READ? :CALCulate:FPOWER:POWER[1,2,...,999]:READ1? |
| Example | :CALC:FPOW:POW1:READ? :CALC:FPOW:POW1:READ1? |
| Notes | Option FP2 is required. Returns m 4 byte floating point binary values (Little-Endian), where m corresponds to the number of bandwidths defined. |
| Initial S/W Revision | A.14.00 |

Diagnostic Binary Read Fast Power Measurement (Remote Command Only)

This command query is used as shorthand for an INIT command immediately followed by a FETC? command. The returned results are in a binary format. This command is used primarily for diagnostic purposes to test for ADC overloads and to visibly inspect the spectrum.

| | |
|-----------------------|---|
| Mode | All |
| Remote Command | :CALCulate:FPOWER:POWER[1,2,...,999]:READ2? |
| Example | :CALC:FPOW:POW1:READ2? |
| Notes | Option FP2 is required. Note: Spectrum data is only returned if the IncludePowerSpectrum parameter is set to True. If IncludePowerSpectrum is False, the number of spectrum points will be zero (0). Units of the returned values are dependent on the Function parameter per channel (e.g. dBm for BandPower, Hz for PeakFrequency). Returns binary data (Little-Endian) that contains information on m amount of channels, along with ADC over range and full spectrum data. The following is the binary format of the response. Bandwidth Return Value 1. Number of channels specified, m [4 byte int] 2. Declared function result for the 1st specified channel [4 byte float] |

| | |
|--|---|
| | 3. Declared function result for the 2nd specified channel [4 byte float] |
| | ... |
| | (m + 1). Declared function result for the last (mth) specified channel [4 byte float] |
| | ADC Over Range |
| | 1. ADC over-range occurred (1: true, 0: false) [2 byte short] |
| | Spectrum Data |
| | 1. Number of points in the spectrum data, k [4 byte int] |
| | 2. Start frequency of spectrum data (Hz) [8 byte double] |
| | 3. Step frequency of spectrum data (Hz) [8 byte double] |
| | 4. FFT bin at 1st point (dBm) [4 byte float] |
| | 5. FFT bin at 2nd point (dBm) [4 byte float] |
| | ... |
| | (k + 3). FFT bin at last (kth) point (dBm) [4 byte float] |

| | |
|-------------------------|---------|
| Initial S/W Revision | A.14.00 |
|-------------------------|---------|

Format Data: Numeric Data (Remote Command Only)

This command specifies the format of the trace data input and output. It specifies the formats used for trace data during data transfer across any remote port. It affects only the data format for setting and querying trace data for the :TRACe[:DATA], TRACe[:DATA]?, :CALCulate:DATA[n]? and FETCh:SANalyzer [n]? commands and queries.

| | |
|--------------------------------|---|
| Remote Command | :FORMat [:TRACe] [:DATA] ASCii INTeger, 32 REAL, 32 REAL, 64 :FORMat [:TRACe] [:DATA] ? |
| Notes | The query response is: ASCii: ASC,8 REAL,32: REAL,32 REAL,64: REAL,64 INTeger,32: INT,32 When the numeric data format is REAL or ASCii, data is output in the current Y Axis unit. When the data format is INTeger, data is output in units of m dBm (.001 dBm). The INT,32 format returns binary 32-bit integer values in internal units (m dBm), in a definite length block. |
| Dependencies | Sending a data format spec with an invalid number (for example, INT,48) generates no error. The analyzer simply uses the default (8 for ASCii, 32 for INTeger, 32 for REAL). Sending data to the analyzer which does not conform to the current FORMat specified, results in an error. Sending ASCII data when a definite block is expected generates message -161 "Invalid Block Data" and sending a definite block when ASCII data is expected generates message -121 "Invalid Character in Number". |
| Preset | ASCii |
| Backwards Compatibility | Note that the INT,32 format is only applicable to the command, TRACe:DATA. This preserves |

| | |
|----------------------|--|
| Notes | backwards compatibility for the Swept SA measurement. For all other commands/queries which honor FORMat:DATA, if INT,32 is sent the analyzer will behave as though it were set to REAL,32. |
| Initial S/W Revision | Prior to A.02.00 |

The specs for each output type follow:

ASCIi - Amplitude values are in ASCII, in the current Y Axis Unit, one ASCII character per digit, values separated by commas, each value in the form:

SX.YYYYYEsZZ

Where:

S = sign (+ or -)

X = one digit to left of decimal point

Y = 5 digits to right of decimal point

E = E, exponent header

s = sign of exponent (+ or -)

ZZ = two digit exponent

REAL,32 - Binary 32-bit real values in the current Y Axis Unit, in a definite length block.

REAL,64 - Binary 64-bit real values in the current Y Axis Unit, in a definite length block.

Format Data: Byte Order (Remote Command Only)

This command selects the binary data byte order for data transfer and other queries. It controls whether binary data is transferred in normal or swapped mode. This command affects only the byte order for setting and querying trace data for the :TRACe[:DATA], TRACe[:DATA]? , :CALCulate:DATA[n]? and FETCh:SANalyzer[n]? commands and queries.

By definition any command that says it uses FORMat:DATA uses any format supported by FORMat:DATA.

The NORMal order is a byte sequence that begins with the most significant byte (MSB) first, and ends with the least significant byte (LSB) last in the sequence: 1|2|3|4. SWAPped order is when the byte sequence begins with the LSB first, and ends with the MSB last in the sequence: 4|3|2|1.

| | |
|-----------------------|--|
| Remote Command | :FORMat:BORDER NORMal SWAPped :FORMat:BORDER? |
| Preset | NORMal |
| Initial S/W Revision | Prior to A.02.00 |

Meas Setup

Accesses the measurement setup menu for the current measurement.

| | |
|--------------------------|------------------------|
| parameter_table_24.18339 | 54.41263 |
| Key Path | Front-panel key |
| Initial S/W Revision | A.10.01 |
| Help Map ID | 45721 |

Avg Number

Used to specify the number of data acquisitions that are averaged. After the specified number of average counts, the averaging mode (termination control) setting determines the averaging action.

- On - Sets measurement averaging on.
- Off - Sets measurement averaging off.

| | |
|--------------------------|---|
| parameter_table_24.18339 | 54.41263 |
| Key Path | Meas Setup |
| Mode | WLAN |
| Remote Command | [:SENSe]:FLATness:AVERage:COUNT <integer> [:SENSe]:FLATness:AVERage:COUNT? [:SENSe]:FLATness:AVERage[:STATe] OFF ON 0 1 [:SENSe]:FLATness:AVERage[:STATe]? |
| Example | FLAT:AVER:COUN 1 FLAT:AVER:COUN? FLAT:AVER OFF FLAT:AVER? |
| Preset | 10 OFF |
| State Saved | Saved in instrument state. |
| Min | 1 |
| Max | 10000 |
| Initial S/W Revision | A.10.01 |
| Help Map ID | 45722 |

Avg Mode

Selects the type of termination control used for the averaging function. This determines the averaging action after the specified number of data acquisitions (average count) is reached.

| | |
|-------------------------------------|--|
| non_parameter_table_20.27878 | 58.19128 |
| KEY:Exponential SCPI:EXPonential | After the average count is reached, each successive data acquisition is exponentially weighted and combined with the existing average. |
| KEY:Repeat SCPI:REPeat | After reaching the average count, the averaging is reset and a new average is started. |

Limits

Accesses the Format/Limits menu, which contains features that enable you to do limit check.

For IEEE 802.11a/g-ERP-OFDM/g-DSSS-OFDM specification, Section 1 includes the carriers -16...-1 and 1...16, Section 2 includes -26...-17 and 17... 26.

For IEEE 802.11n, 20MHz specification, Section 1 includes the carriers -16...-1 and 1...16, Section 2 includes -28...-17 and 17... 28.

For IEEE 802.11n, 40MHz transmission specification (excluding HT duplicate and Non-HT Duplicate), Section 1 includes the carriers -42...-2 and 2...42, while Section 2 includes -58...-43 and 43... 58.

For IEEE 802.11n, 40MHz Duplicate mode (including HT and Non-HT duplicate) , Section 1 includes the carriers -42 to -33, -31 to -6, +6 to +31, and +33 to +42, while Section 2 includes -58...-43 and 43... 58.

For IEEE 802.11ac, 20MHz specification, Section 1 includes the carriers -16...-1 and 1...16, Section 2 includes -28...-17 and 17... 28.

For IEEE 802.11ac, 40MHz transmission specification , Section 1 includes the carriers -42...-2 and 2...42, while Section 2 includes -58...-43 and 43... 58.

For IEEE 802.11n, 40MHz Non-HT duplicate mode , Section 1 includes the carriers -42 to -33, -31 to -6, +6 to +31, and +33 to +42, while Section 2 includes -58...-43 and 43... 58.

For IEEE 802.11ac, 80MHz transmission specification , Section 1 includes the carriers -84...-2 and 2...84, while Section 2 includes -122...-85 and 85... 122.

For IEEE 802.11n, 80MHz Non-HT duplicate mode , Section 1 includes the carriers -84 to -70, -58 to -33, -31 to -6, +6 to +31, and +33 to +58, +70 to +84, while Section 2 includes -122...-97, -95 to -85and +85... +95, +97 to +122.

For IEEE 802.11ac, 160MHz transmission specification , there is only one Section which includes the carriers -250...-6 and 6...250.

For IEEE802.11ah 1MHz, Section 1 includes the carriers -8...-1 and 1...8, Section 2 includes -13...-9 and 9... 13.

For IEEE802.11ah 2MHz normal mode, Section 1 includes the carriers -16...-1 and 1...16, Section 2 includes -28...-17 and 17... 28.

For IEEE802.11ah 2MHz 1MHz duplicate mode, Section 1 includes the carriers -15...-3 and 3...15, Section 2 includes -29...-17 and 17... 29.

For IEEE802.11ah4MHz normal mode, Section 1 includes the carriers -42...-2 and 2...42, while Section 2 includes -58...-43 and 43... 58.

For IEEE802.11ah4MHz 1MHz duplicate mode, Section 1 includes the carriers -42...-35, -29 to -17, -15 to -3 and 3 to 15, 17 to 29, 35...42, while Section 2 includes -61...-49, -47 to -43 and 43... 47, 49 to 61.

For IEEE802.11ah4MHz 2MHz duplicate mode, Section 1 includes the carriers -42 to -33, -31 to -6, +6 to +31, and +33 to +42, while Section 2 includes -58...-43 and 43... 58.

For IEEE802.11ah 8MHz normal mode, Section 1 includes the carriers -84...-2 and 2...84, while Section 2 includes -122...-85 and 85... 122.

For IEEE802.11ah 8MHz 1MHz duplicate mode, Section 1 includes the carriers -84...-81, -79 to -67, -61 to -49, -47 to -35, -29 to -17, -15 to -3, and 3 to 15, 17 to 29, 35 to 47, 49 to 61, 67 to 79, 81 to 84, while Section 2 includes -125 to -113, -111 to -99, -93 to -85 and 85 to 93, 99 to 111, and 113 to 125.

For IEEE802.11ah8MHz 2MHz duplicate mode, Section 1 includes the carriers -84 to -70, -58 to -33, -31 to -6, +6 to +31, and +33 to +58, +70 to +84, while Section 2 includes -122...-97, -95 to -85 and +85... +95, +97 to +122.

For IEEE802.11ah16MHz 1MHz duplicate mode, there is only one Section which includes the carriers -253...-6 and 6...253.

For IEEE802.11ah16MHz 2MHz duplicate mode or S1G mode, there is only one Section which includes the carriers -250...-6 and 6...250.

To be compatible with PSA existing commands, the X-Series WLAN Spectral Flatness measurement also provides the BWCC commands to configure the limit parameters, those commands will accept array parameters rather than single one, and the default values will be kept the same.

Advanced

Accesses advanced measurement setup features. These features are intended for the advanced user.

| | |
|--------------------------|-------------------------|
| parameter_table_24.18339 | 54.41263 |
| Key Path | Meas Setup, More |
| Initial S/W Revision | A.10.01 |
| Help Map ID | 45726 |

Symbol Timing Adjust

Normally, when demodulating of an OFDM symbol, the guard interval is skipped over, and an FFT is performed on the last portion of the symbol time. However, this means that the FFT would include the transition region between this symbol and the following symbol. To avoid this, it is generally beneficial to back up away from the end of the symbol time, and use a part of the guard interval.

This parameterSymbol Timing Adjust controls how far the FFT part of the symbol is adjusted away from the end of the symbol time. The value is in terms of percent of the used (FFT) part of the symbol time.

| | |
|-------------------------------------|---|
| parameter_table_24.18339 | 54.41263 |
| Key Path | Meas Setup, Advanced |
| Mode | WLAN |
| Remote Command | [:SENSe] :FLATness :TADJust <percent> [:SENSe] :FLATness :TADJust? |
| Example | FLAT:TADJ -3.125 FLAT:TADJ? |
| Couplings | The Min Value of Symbol Timing Adjust is -100.0 * Guard Interval . The value of Symbol Timing Adjust clipped to times of 1/128. (For 11 n, Bebob 's support can be clipped to 1/256, to keep simple, we use 1/128 also). |
| Preset | -3.125% |
| State Saved | Saved in instrument state. |

| Initial S/W Revision | A.10.01 |
| Help Map ID | 45730 |

Sync Training Sequence

This parameter specifies synchronization method to use when synchronizing to the start of the OFDM burst. The valid values are Short or Long. A value of Short means to search for and synchronize to an

802.11a preamble short symbol sequence.

A value of Long means to search for and synchronize to an 802.11a/g preamble long symbol sequence (also called the channel estimation sequence).

| Notes | Only used in 802.11a/g (OFDM), 801.11g (DSSS-OFDM) measurement, otherwise it will be grayed out. If SCPI command is sent to change this value, it generate message“-221 Setting conflict; Sync Training Sequence is not available for current Radio Setting” |
| Preset | SHORT |
| State Saved | Saved in instrument state. |
| Backwards Compatibility SCPI | [:SENSe] :FLATness :SYNCseq |
| Initial S/W Revision | A.10.01 |
| Help Map ID | 45731 |

Spectrum

Sets a spectrum to either normal or invert for demodulation related measurements. If invert is set, the upper and lower spectrums are swapped.

The invert function conjugates the spectrum, which is equivalent to taking the negative of the quadrature component in demodulation. The correct setting (Normal or Invert) depends on whether the signal at the input of the instrument has a high or a low side mix.

12 Spectral Flatness Measurement
Mode

Mode

See "[Mode](#)" on page 204

Mode Preset

Returns the active mode to a known state.

Mode Preset does the following for the currently active mode:

- Aborts the currently running measurement.
- Brings up the default menu for the mode, with no active function.
- Sets measurement Global settings to their preset values for the active mode only.
- Activates the default measurement.
- Brings up the default menu for the mode.
- Clears the input and output buffers.
- Sets Status Byte to 0.

Mode Preset does not:

- Cause a mode switch
- Affect mode persistent settings
- Affect system settings
- See "[How-To Preset](#)" on page 1638 for more information.

| | |
|--------------------------------------|---|
| Key Path | Front-panel key |
| Remote Command | :SYSTem:PRESet |
| Example | :SYST:PRES |
| Notes | *RST is preferred over :SYST:PRES for remote operation. *RST does a Mode Preset, as done by the :SYST:PRES command, and it sets the measurement mode to Single measurement rather than Continuous for optimal remote control throughput. Clears all pending OPC bits. The Status Byte is set to 0. |
| Couplings | A Mode Preset aborts the currently running measurement, activates the default measurement, and gets the mode to a consistent state with all of the default couplings set. |
| Backwards Compatibility Notes | In the X-Series, the legacy "Factory Preset" has been replaced with Mode Preset, which only presets the currently active mode, not the entire instrument. In the X-Series, the way to preset the entire instrument is by using System, Restore System Defaults All, which behaves essentially the same way as restore System Defaults does on ESA and PSA. There is also no "Preset Type" as there is on the PSA. There is a green Mode Preset front-panel key that does a Mode Preset and a white-with-green-letters User Preset front-panel key that does a User Preset. The old PRESet:TYPE command is ignored (without generating an error), and SYST:PRES without a parameter does a Mode Preset, which should cover most backward code compatibility issues. The settings and correction data under the Input/Output front-panel key (examples: Input Z Corr, Ext Amp Gain, etc.) are no longer part of any Mode, so they will not be preset by a Mode Preset. They are preset using Restore Input/Output Defaults, Restore System Defaults All. Note that because User Preset does a Recall State, and all of these settings are saved in State, they ARE recalled when using |

| | |
|----------------------|------------------|
| | User Preset. |
| Initial S/W Revision | Prior to A.02.00 |

How-To Preset

The table below shows all possible presets, their corresponding SCPI commands and front-panel access (key paths). Instrument settings depend on the current measurement context. Some settings are local to the current measurement, some are global (common) across all the measurements in the current mode, and some are global to all the available modes. In a similar way, restoring the settings to their preset state can be done within the different contexts.

Auto Couple - is a measurement local key. It sets all Auto/Man parameter couplings in the measurement to Auto. Any Auto/Man selection that is local to other measurements in the mode will not be affected.

Meas Preset - is a measurement local key. Meas Preset resets all the variables local to the current measurement except the persistent ones.

Mode Preset - resets all the current mode's measurement local and measurement global variables except the persistent ones.

Restore Mode Defaults - resets ALL the Mode variables (and all the Meas global and Meas local variables), including the persistent ones.

| Type Of Preset | SCPI Command | Front Panel Access |
|--------------------------------|--|--|
| Auto Couple | :COUPle ALL | Auto Couple front-panel key |
| Meas Preset | :CONFigure:<Measurement> | Meas Setup Menu |
| Mode Preset | :SYSTem:PRESet | Mode Preset (green key) |

Mode Setup

See "[Mode Setup](#)" on page 221

Peak Search

Places the selected marker on the trace point that has the maximum y-axis value for that marker's trace. Pressing Peak Search with the selected marker Off causes the selected marker to be set to Normal; then a peak search is immediately performed.

Print

See "[Print](#)" on page 277

Quick Save

The Quick Save front-panel key repeats the most recent save that was performed from the Save menu, with the following exceptions:

- Register saves are not remembered as Saves for the purpose of the Quick Save function
- If the current measurement does not support the last non-register save that was performed, an informational message is generated, “File type not supported for this measurement”

Quick Save repeats the last type of qualified save (that is, a save qualified by the above criteria) in the last save directory by creating a unique filename using the Auto File Naming algorithm described below.

If Quick Save is pressed after startup and before any qualified Save has been performed, the Quick Save function performs a Screen Image save using the current settings for Screen Image saves (current theme, current directory), which then becomes the “last save” for the purpose of subsequent Quick Saves.

The Auto File Naming feature automatically generates a file name for use when saving a file. The filename consists of a prefix and suffix separated by a dot, as is standard for the Windows® file system. A default prefix exists for each of the available file types:

| Type | Default Prefix | Menu |
|-----------------------|----------------|-----------------|
| State | State_ | (Save/Recall) |
| Trace + State | State_ | (Save/Recall) |
| Screen | Screen_ | (Save/Recall) |
| Amplitude Corrections | Ampcor_ | (Import/Export) |
| Traces | Trace_ | (Import/Export) |
| Limit Lines | LLine_ | (Import/Export) |
| Measurement Result | MeasR_ | (Import/Export) |
| Capture Buffer | CapBuf_ | (Import/Export) |

A four digit number is appended to the prefix to create a unique file name. The numbering sequence starts at 0000 within each Mode for each file type and updates incrementally to 9999, then wraps to 0000 again. It remembers where it was through a Mode Preset and when leaving and returning to the Mode. It is reset by Restore Misc Defaults and Restore System Defaults and subsequent running of the instrument application. So, for example, the first auto file name generated for State files is State_0000.state. The next is State_0001, and so forth.

One of the key features of Auto File Name is that we guarantee that the Auto File Name will never conflict with an existing file. The algorithm looks for the next available number. If it gets to 9999, then it looks for holes. If it find no holes, that is no more numbers are available, it gives an error.

For example, if when we get to State_0010.state there is already a State_0010.state file in the current directory, it advances the counter to State_0011.state to ensure that no conflict will exist (and then it verifies that State_0011.state also does not exist in the current directory and advances again if it does, and so forth).

If you enter a file name for a given file type, then the prefix becomes the filename you entered instead of the default prefix, followed by an underscore. The last four letters (the suffix) are the 4-digit number.

For example, if you save a measurement results file as “fred.csv”, then the next auto file name chosen for a measurement results save will be fred_0000.csv.

NOTE

Although 0000 is used in the example above, the number that is used is actually the current number in the Meas Results sequence, that is, the number that would have been used if you had not entered your own file name.

NOTE

If the filename you entered ends with _dddd, where d=any number, making it look just like an auto file name, then the next auto file name picks up where you left off with the suffix being dddd + 1.

| | |
|----------------------|--|
| Key Path | Front-panel key |
| Notes | No remote command for this key specifically. |
| Initial S/W Revision | Prior to A.02.00 |

Recall

The **Recall** menu lets you choose what you want to recall, and where you want to recall it from. Among the types of files you can recall are **States and Traces**. In addition, an **Import (Data)** option lets you recall a number of data types stored in CSV files (as used by Excel and other spreadsheet programs).

The default paths for Recall are data type dependent and are the same as for the Save key.

| Key Path | Front-panel key |
|-------------------------------|--|
| Notes | <p>No remote command for this key specifically, but the :MMEM:LOAD command is available for specific file types. An example is :MMEM:LOAD:STATe <filename>.</p> <p>If you try to recall a State file for a mode that is not licensed or not available in the instrument, an error message will occur and the state will not change.</p> |
| Backwards Compatibility Notes | <p>In legacy analyzers, it was possible to load a state without affecting the trace data, limit lines or correction data. Similarly (since User Preset is actually loading a state), it was possible to do a User Preset without affecting the trace data, limit lines or correction data.</p> <p>In the X-Series, “state” always includes all of this data; so whenever state is loaded, all of the traces, limit lines and corrections are affected. Although this differs from previous behavior, it is desirable behavior, and should not cause adverse issues for users.</p> |
| Backwards Compatibility Notes | <p>Recall for the X-Series supports backward compatibility in the sense that you can recall a state file from any X-Series model number and any version of X-Series software. This is only possible if part of the recalling process goes through a limiting step after recalling the mode settings, at least for settings that may vary with version number, model number, option and license differences. If you try to recall a state file onto an instrument with less capability than what was available on the instrument during the save, the recall will ignore the state it doesn't support and it will limit the recalled setting to what it allows.</p> <p>Example: if the saved state includes preamp ON, but the recalling instrument does not have a preamp; the preamp is limited to OFF. Conversely, if you save a state without a preamp, the preamp is OFF in the state file. When this saved file is recalled on an instrument with a licensed preamp, the preamp is changed to OFF. Another example is if the saved state has center frequency set to 20 GHz, but the instrument recalling the saved state is a different model and only supports 13.5 GHz. In this case, the center frequency is limited along with any other frequency based settings. Since the center frequency can't be preserved in this case, the recall limiting tries to at least preserve span to keep the measurement setup as intact as possible.</p> <p>It may be appropriate to issue a warning if the state is limited on the recall; warnings do not go out to SCPI so this would only affect the manual user.</p> <p>Note that there is no state file compatibility outside of the X-Series. For example, you cannot recall a state file from ESA or PSA.</p> |
| Initial S/W Revision | Prior to A.02.00 |

State

The **Recall State** menu lets you choose a register or file from which to recall the state.

The content of a state file includes all of the settings and data required to return the analyzer as closely as possible to the Mode it was in, with the exact settings that were in place, when the save occurred. The Mode settings in each state file include the settings that are affected by Mode Preset, as well as the

additional settings affected by Restore Mode Defaults; all of the Mode's settings. In addition, all of the settings of the **Input/Output** system are included, even though they are outside of the Mode's state, because they are needed to restore the complete setup. Persistent System settings (for example, GPIB address) are not affected by either a Mode Preset or Restore Mode Defaults, nor are they included in a saved State file.

Since each state file is only for one Mode, the settings for other Modes are unaffected when it is loaded. **Recall State** will cause a mode switch if the state being recalled is not from the current active mode.

After the recall completes, the message "File <filename> recalled" or "Recalled State Register <register number>" is displayed.

For rapid recalls, the State menu lists 16 registers that you can choose from to recall. Pressing a Register key initiates the recall. You can also select a file from which to recall.

The default path for all State Files is:

My Documents\<<mode name>\state

where <mode name> is the parameter used to select the mode with the INST:SEL command (for example, SA for the Spectrum Analyzer).

See "[More Information](#)" on page 1647.

| Key Path | Recall |
|----------------|--|
| Mode | All |
| Remote Command | :MMEMory:LOAD:STATe <filename> |
| Example | :MMEM:LOAD:STAT "myState.state" This recalls the file myState.state on the default path |
| Example | MMEM:LOAD:STAT "MyStateFile.state" This loads the state file data (on the default file directory path) into the instrument state. |
| Notes | <p>When you pick a file to recall, the analyzer first verifies that the file is recallable in the current instrument by checking the software version and model number of the instrument. If everything matches, a full recall proceeds by aborting the currently running measurement, clearing any pending operations, and then loading the State from the saved state file. You can open state files from any mode, so recalling a State file switches to the mode that was active when the save occurred. After switching to the mode of the saved state file, mode settings and data (if any for the mode) are loaded with values from the saved file. The saved measurement of the mode becomes the newly active measurement and the data relevant to the measurement (if there is any) is recalled.</p> <ul style="list-style-type: none"> • If there is a mismatch between file version or model number or instrument version or model number, the recall function tries to recall as much as possible and returns a warning message. It may limit settings that differ based on model number, licensing or version number. <p>After recalling the state, the Recall State function does the following:</p> <ul style="list-style-type: none"> • Makes the saved measurement for the mode the active measurement. • Clears the input and output buffers. • Status Byte is set to 0. • Executes a *CLS <p>If the file specified is empty an error is generated. If the specified file does not exist, another error is generated. If there is a mismatch between the file and the proper file type, an error is generated. If</p> |

| | |
|-------------------------------------|---|
| | there is a mismatch between file version or model number or instrument version or model number, a warning is displayed. Then it returns to the State menu and File Open dialog goes away. After the Recall, the analyzer exits the Recall menu and returns to the previous menu. |
| Backwards Compatibility SCPI | :MMEMory:LOAD:STATe 1,<filename> For backwards compatibility, the above syntax is supported. The "1" is simply ignored. |
| Initial S/W Revision | Prior to A.02.00 |

More Information

In measurements that support saving Traces, for example, Swept SA, the Trace data is saved along with the State in the State file. When recalling the State, the Trace data is recalled as well. Traces are recalled exactly as they were stored, including the writing mode and update and display modes. If a Trace was updating and visible when the State was saved, it will come back updating and visible, and its data will be rewritten right away. When you use State to save and recall traces, any trace whose data must be preserved should be placed in View or Blank mode before saving.

The following table describes the Trace Save and Recall possibilities:

| | | |
|---|--|--|
| You want to recall state and one trace's data, leaving other traces unaffected. | Save Trace+State from 1 trace. Make sure that no other traces are updating (they should all be in View or Blank mode) when the save is performed. | On Recall, specify the trace you want to load the one trace's data into. This trace will load in View. All other traces' data will be unaffected, although their trace mode will be as it was when the state save was performed. |
| You want to recall all traces | Save Trace+State from ALL traces. | On Recall, all traces will come back in View (or Blank if they were in Blank or Background when saved) |
| You want all traces to load exactly as they were when saved. | Save State | On recall, all traces' mode and data will be exactly as they were when saved. Any traces that were updating will have their data immediately overwritten. |

From File...

When you press "From File", the analyzer brings up a Windows dialog and a menu entitled "File Open." This menu allows you to navigate to the various fields in the Windows dialog without using a keyboard or mouse. The **Tab** and **Arrow** keys can also be used for dialog navigation.

Listed below are the functions of the various fields in the dialog, and the corresponding softkeys:

Open

Performs the recall of the specified file. While the recall is being performed, the floppy icon appears briefly in the Meas bar.

File/Folder List

Enables you to navigate to the center of the dialog that contains the list of files and folders. Once here you can get information about the file and use the tab keys to navigate to the other fields in the dialog, such as Look In.

Look In

The **Look In** field shows the path from which the file will be recalled and allows you to change the path using the up and down arrow keys to navigate to other paths; the Enter key to open a directory; and the Backspace key to go back one directory. The **Look In field** first uses the last path from the Save As dialog **Save In:** path for that same file type. There is no softkey for directly navigating to the Look In field, but you can use the left tab to get here from the File/Folder List.

User specified paths are remembered when you leave and return to a Mode and are reset back to the default using **Restore Mode Defaults**.

Sort

Accesses a menu that enables you to sort the files within the File Open dialog. Only one sorting type can be selected at a time and the sorting happens immediately. The sorting types are **By Date**, **By Name**, **By extension**, and **By Size**.

Files of Type

This field shows the file suffix for the type of file you have selected to recall. For example, if you navigated here while recalling State, "Mode state (*.state)" is in the field. If you navigated here while recalling Trace, ""Mode state (*.trace)" is in the field. If you navigated here while importing a trace data file, "Trace Data (*.csv)" is in the field. For some file types, there is more than one choice in the dropdown menu, which you can select by using the up and down arrow keys and Enter.

Up One Level

This key corresponds to the icon of a folder with the up arrow that is in the tool bar of the dialog. When pressed, it causes the file and folder list to navigate up one level in the directory structure. The Backspace key does the same thing.

Cancel

This key corresponds to the **Cancel** selection in the dialog. It causes the current **Open** request to be cancelled. The ESC key does the same thing.

| Key Path | Recall, State |
|----------------------|---|
| Notes | Brings up the Open dialog for recalling a State Save Type |
| Initial S/W Revision | Prior to A.02.00 |

Edit Register Names

You may enter a custom name on any of the Register keys, to help you remember what you are using that state to save. To do this, press the **Edit Register Names** key, choose the register whose name you wish to edit, and then enter the desired label using the Alpha Editor or an external PC keyboard.

The maximum number of characters that can be added is 30. In most cases, 30 characters will fit on two lines of the key.

For more information and the SCPI command, see Edit Register Names under the **Save, State** function.

| Key Path | Recall, State |
|----------------------|---|
| Mode | All |
| Dependencies | N9060A-7FP or N9060B-2FP license required to edit the register names. When the feature is not licensed, sending the SCPI command generates an error, -221, "Settings conflict;Option not available" |
| Initial S/W Revision | A.11.00 |

Register 1 thru Register 16

Selecting any one of these register keys causes the State of the mode from the specified Register to be recalled. Each of the register keys annotates whether it is empty or at what date and time it was last

modified. In addition, you can use the **Edit Register Names** key under **Save, State** to enter custom names for each register.

Registers are shared by all modes, so recalling from any one of the registers will cause a mode switch to the mode that was active when the save to the Register occurred.

Although these 16 registers are the only registers available from the front panel, there are 128 state registers available in the instrument. Registers 17–128 are only available from the SCPI interface, using the *RCL command.

After the recall completes, the message "Register <register number> recalled" appears in the message bar. If you are in the Spectrum Analyzer Mode, and you are recalling a register that was saved in the Spectrum Analyzer Mode, then after the recall, you will still be in the Recall Register menu. If the Recall causes you to switch modes, then after the Recall, you will be in the Frequency menu.

If a requested register is empty an error is generated.

| | |
|---------------------------------|---|
| Key Path | Recall, State |
| Example | *RCL 1 |
| Range | 1–16 from front panel, 1–128 from SCPI |
| Readback | Date and time with seconds resolution are displayed on the key OR A custom name of up to 30 characters entered using the Save, State, Edit Register Names key OR “(empty)” if no prior save operation has been performed to this register. |
| Initial S/W Revision | Prior to A.02.00 |
| Modified at S/W Revision | Prior to A.11.00 |

Register 1 thru Register 16

Selecting any one of these register keys causes the State of the mode from the specified Register to be recalled. Each of the register keys annotates whether it is empty or at what date and time it was last modified. In addition, you can use the **Edit Register Names** key under **Save, State** to enter custom names for each register.

Registers are shared by all modes, so recalling from any one of the registers will cause a mode switch to the mode that was active when the save to the Register occurred.

Although these 16 registers are the only registers available from the front panel, there are 128 state registers available in the instrument. Registers 17–128 are only available from the SCPI interface, using the *RCL command.

After the recall completes, the message "Register <register number> recalled" appears in the message bar. If you are in the Spectrum Analyzer Mode, and you are recalling a register that was saved in the Spectrum Analyzer Mode, then after the recall, you will still be in the Recall Register menu. | Initial S/W Revision | Prior to A.02.00 |
| Modified at S/W Revision | Prior to A.11.00 |

Sequences

These keys allow you to import a Tab separated or .txt file that will automatically setup all the parameters required for building a Sequence. The parameters will automatically be loaded into the Stated Sequencer.

Once selected, in order to import the selected Sequence Type you must select the Open key in the Source Sequence menu.

| | |
|-----------------------|--|
| Key Path | Recall, Sequences |
| Mode | All |
| Remote Command | :MMEMory:LOAD:SEquences: SLIS ALIS SAALIS "MySequence.txt" |
| Example | :MMEM:LOAD:SEQ:SLIS "MySequence.txt" |
| Notes | Available file types are: –CSV (Comma delimited) (*.csv) –Text (Tab delimited) (*.txt) |
| Initial S/W Revision | A.05.00 |

Source Sequence

The list of parameters, that configure steps, that makes up a sequence for the Source.

The Source sequence is a sequence of flexible configurable steps that can be set anywhere in the instruments frequency range.

| | |
|----------------------|--------------------------------------|
| Key Path | Recall, Sequences |
| Example | :MMEM:LOAD:SEQ:SLIS "MySequence.txt" |
| Dependencies | Only available in XOBT |
| Initial S/W Revision | A.05.00 |

Open...

When you press “Open”, the analyzer brings up a Windows dialog and a menu entitled “**File Open.**” This menu allows you to navigate to the various fields in the Windows dialog without using a keyboard or mouse. The **Tab** and **Arrow** keys can also be used for dialog navigation.

See "[From File...](#)" on page 2473 in **Recall, State**, for a full description of this dialog and menu.

| | |
|----------------------|--|
| Key Path | Recall, Data |
| Notes | The key location is mode-dependent and will vary. Brings up Open dialog for recalling a <mode specific> Save Type |
| Initial S/W Revision | Prior to A.02.00 |

Data (Import)

Importing a data file loads data that was previously saved from the current measurement or from other measurements and/or modes that produce compatible data files. The Import Menu only contains Data Types that are supported by the current measurement.

Since the commonly exported data files are in .csv format, the data can be edited by the user prior to importing. This allows you to export a data file, manipulate the data in Excel (the most common PC Application for manipulating .csv files) and then import it.

Importing Data loads measurement data from the specified file into the specified or default destination, depending on the data type selected. Selecting an Import Data menu key will not actually cause the importing to occur, since the analyzer still needs to know from where to get the data. Pressing the Open key in this menu brings up the Open dialog and Open menu that provides you with the options from where to recall the data. Once a filename has been selected or entered in the Open menu, the recall occurs as soon as the Open button is pressed.

| | |
|----------------------|--|
| Key Path | Recall |
| Mode | All |
| Notes | The menu is built from whatever data types are available for the mode. Some keys will be missing completely, so the key locations in the sub-menu will vary. No SCPI command directly controls the Data Type that this key controls. The Data Type is included in the MMEM:LOAD commands. |
| Dependencies | If a file type is not used by a certain measurement, it is grayed out for that measurement. The key for a file type will not show at all if there are no measurements in the Mode that support it. |
| Preset | Is not affected by Preset or shutdown, but is reset during Restore Mode Defaults |
| Readback | The data type that is currently selected |
| Initial S/W Revision | Prior to A.02.00 |

Masks

This key enables you to recall a preset mask file from the list. It is only available in SEM measurement under the Data menu: Limit Mask. Limit Mask enables setting a preset limit mask for 802.11p 5MHz and 10MHz system.

You cannot change or create the preset mask file since it is a binary file. This key is valid for the Spectrum Emission Mask measurement.

File location: "My Documents\WLAN\data.masks"

Note that "**My Documents**" is an alias to a directory and its location depends on which user is logged in. At XSA start up, all of the limit mask files in the current user's "My Documents\WLAN\data.masks" directory are overwritten.

File type: Binary

Filename:

11p_5MHz_A.mask

11p_5MHz_B.mask

11p_5MHz_C.mask

11p_5MHz_D.mask

11p_10MHz_A.mask

11p_10MHz_B.mask

11p_10MHz_C.mask

11p_10MHz_D.mask

File extension: .mask

Selecting OPEN under the Import Data menu, opens the above directory enabling you to select a mask file.

Example:

File Location: My Documents/WLAN/data/masks

File Name: 11p_5MHz_A.mask

| | |
|--------------------------|----------------------------------|
| parameter_table_23.52557 | 52.93253 |
| Key Path | Recall, Data |
| Mode | WLAN |
| Remote Command | MMEMory:LOAD:MASK <string> |
| Example | MMEM:LOAD:MASK "11p_5MHz_A.mask" |
| Initial S/W Revision | A.11.00 |
| Help Map ID | 45559 |

Capture Buffer

Capture buffer functionality is only available when measurement is Mod Accuracy and radio standard is not 802.11ac 80+80MHz. The captured data is raw data which is not processed.

| | |
|------------------------------|---|
| parameter_table_ 23.52557 | 52.93253 |
| Key Path | Recall, Data |
| Mode | WLAN |
| Example | MMEM:LOAD:CAPT "MyCaptureData.bin" This loads the file of capture data (on the default file directory path) into the instrument. |
| Dependencies | Capture buffer data is only available when measurement is Mod Accuracy and radio standard is not 802.11ac 80+80MHz. In other situation, this key is grayed out. |
| Initial S/W Revision | A.11.00 |
| Help Map ID | 45560 |

Open...

When you press "Open", the analyzer brings up a Windows dialog and a menu entitled "File Open." This menu allows you to navigate to the various fields in the Windows dialog without using a keyboard or mouse. The **Tab** and **Arrow** keys can also be used for dialog navigation.

See "[From File...](#)" on page 2473 in **Recall, State**, for a full description of this dialog and menu.

| | |
|----------------------|--|
| Key Path | Recall, Data |
| Notes | The key location is mode-dependent and will vary. Brings up Open dialog for recalling a <mode specific> Save Type |
| Initial S/W Revision | Prior to A.02.00 |

Restart

The Restart function restarts the current sweep, or measurement, or set of averaged/held sweeps or measurements. If you are Paused, pressing Restart does a Resume.

The Restart function is accessed in several ways:

- Pressing the Restart key
- Sending the remote command INIT:IMMEDIATE
- Sending the remote command INIT:RESTART

See "[More Information](#)" on page 1655

| Key Path | Front-panel key |
|-------------------------------|--|
| Remote Command | :INITiate[:IMMEDIATE] :INITiate:RESTART |
| Example | :INIT:IMM :INIT:REST |
| Notes | :INITiate:RESTART and :INITiate:IMMEDIATE perform exactly the same function. |
| Couplings | Resets average/hold count k. For the first sweep overwrites all active (update=on) traces with new current data. For application modes, it resets other parameters as required by the measurement. |
| Status Bits/OPC dependencies | This is an Overlapped command. The STATUS:OPERation register bits 0 through 8 are cleared. The STATUS:QUESTIONable register bit 9 (INTEgrity sum) is cleared. The SWEEPING bit is set. The MEASURING bit is set. |
| Backwards Compatibility Notes | For Spectrum Analysis mode in ESA and PSA, the Restart hardkey and the INITiate:RESTART command restart trace averages (displayed average count reset to 1) for a trace in Clear Write , but did not restart Max Hold and Min Hold . In the X-Series, the Restart hardkey and the INITiate:RESTART command restart not only Trace Average , but MaxHold and MinHold traces as well. For wireless comms modes in ESA and PSA, the Restart hardkey and the INITiate:RESTART command restart every measurement, which includes all traces and numeric results. There is no change to this operation. |
| Initial S/W Revision | Prior to A.02.00 |

More Information

The **Restart** function first aborts the current sweep/measurement as quickly as possible. It then resets the sweep and trigger systems, sets up the measurement and initiates a new data measurement sequence with a new data acquisition (sweep) taken once the trigger condition is met.

If the analyzer is in the process of aligning when **Restart** is executed, the alignment finishes before the restart function is performed.

Even when set for Single operation, multiple sweeps may be taken when Restart is pressed (for example, when averaging/holding is on). Thus when we say that **Restart** "restarts a measurement," we may mean:

- It restarts the current sweep
- It restarts the current measurement
- It restarts the current set of sweeps if any trace is in Trace Average, Max Hold or Min Hold
- It restarts the current set of measurements if Averaging, or Max Hold, or Min Hold is on for the measurement
- depending on the current settings.

With **Average/Hold Number** (in **Meas Setup** menu) set to 1, or Averaging off, or no trace in Trace Average or Hold, a single sweep is equivalent to a single measurement. A single sweep is taken after the trigger condition is met; and the analyzer stops sweeping once that sweep has completed. However, with **Average/Hold Number** >1 and at least one trace set to **Trace Average, Max Hold, or Min Hold (SA Measurement)** or **Averaging on (most other measurements)**, multiple sweeps/data acquisitions are taken for a single measurement. The trigger condition must be met prior to each sweep. The sweep is stopped when the average count k equals the number N set for **Average/Hold Number**. A measurement average usually applies to all traces, marker results, and numeric results; but sometimes it only applies to the numeric results.

Once the full set of sweeps has been taken, the analyzer will go to idle state. To take one more sweep without resetting the average count, increment the average count by 1, by pressing the step up key while **Average/Hold Number** is the active function, or sending the remote command `CALC:AVER:TCON UP`.

Save

The **Save** menu lets you choose what you want to save and where you want to save it. Among the types of files you can save are **States**, **Traces**, and **Screen Images**. In addition, an **Export (Data)** option lets you save a number of data types as CSV files for easy import into Excel and other spreadsheet programs.

| | |
|----------------------|---|
| Key Path | Front-panel key |
| Mode | All |
| Notes | No remote command for this key specifically, but the :MMEM:STORe command is available for specific file types. An example is :MMEM:STOR:STATe <filename>. |
| Initial S/W Revision | Prior to A.02.00 |

State

The Save State menu lets you choose a register or file for saving the state.

The content of a state file includes all of the settings and data required to return the analyzer as closely as possible to the Mode it was in, with the exact settings which were in place, when the save occurred. The Mode settings in each state file include the settings that are affected by Mode Preset, as well as the additional settings affected by Restore Mode Defaults; all of the Mode's settings. In addition, all of the settings of the **Input/Output** system are included, even though they are outside of the Mode's state, because they are needed to restore the complete setup. Persistent **System** settings (for example, Verbose SCPI) are not affected by either Mode Preset or Restore Mode Defaults, nor are they included in a saved State file.

After the save completes, the message "File <filename> saved" or "State Register <register number> saved" is displayed.

For rapid saving, the State menu lists 16 registers to save to. Pressing a Register key initiates the save. You can also select a file to save to.

The default path for all State Files is:

My Documents\<<mode name>\state

where <mode name> is the parameter used to select the mode with the INST:SEL command (for example, SA for the Spectrum Analyzer).

| | |
|----------------|---|
| Key Path | Save |
| Mode | All |
| Remote Command | :MMEMory:STORe:STATe <filename> |
| Example | MMEM:STOR:STATe "MyStateFile.state" This stores the current instrument state data in the file MyStateFile.state in the default directory. |
| Notes | Both single and double quotes are supported for any filename parameter over remote. After saving to a register, that register's menu key is updated with the date the time, unless a custom label has been entered for that key. After saving to a register, you remain in the Save State menu, so that you can see the Register key |

update. After saving to a file, the analyzer automatically returns to the previous menu and any Save As dialog goes away.

| | |
|-------------------------------------|-----------------------------------|
| Backwards Compatibility SCPI | :MMEMory:STORe:STATe 1,<filename> |
| Initial S/W Revision | Prior to A.02.00 |

To File . . .

When you press “To File”, the analyzer brings up a Windows dialog and a menu entitled “Save As.” This menu allows you to navigate to the various fields in the Windows dialog without using a keyboard or mouse. The **Tab** and **Arrow** keys can also be used for dialog navigation.

The Listed below are the functions of the various fields in the dialog, and the corresponding softkeys:

Save

Performs the save to the specified file of the selected type. If the file already exists, a dialog will appear that allows you to replace the existing file by selecting **OK**, or you can Cancel the request. If you select OK, the file will be overwritten. Using the C: drive is strongly discouraged, since it runs the risk of being overwritten during an instrument software upgrade.

While the save is being performed, the floppy icon appears briefly in the Meas bar.

File/Folder List

Enables you to navigate to the center of the dialog that contains the list of files and folders. Once here you can get information about the file and use the tab keys to navigate to the other fields in the dialog, such as Save In.

Save In

The Save In field shows the path to which the file will be saved and allows you to change the path using the up and down arrow keys to navigate to other paths; the Enter key to open a directory; and the Backspace key to go back one directory. The **Save In field** defaults to the default path for this type of file and remembers the last path you used to save this type of file. There is no softkey for directly navigating to the Save In field but you can use left tab to get here from the File/Folder List.

User specified paths are remembered when you leave and return to a Mode and are reset back to the default using **Restore Mode Defaults**.

File Name

The **File Name** field is initially loaded with an automatically generated filename specific to the appropriate Save Type. The automatically generated filename is guaranteed not to conflict with any filename currently in the directory. You may replace or modify this filename using the File Name key. See the ["Quick Save " on page 2469](#) documentation for more on the automatic file naming algorithm.

When you press the **File Name** key the analyzer displays the Alpha Editor. Use the knob to choose the letter to add and the front-panel Enter key to add the letter to the file name. The BK character moves you back and the FW character moves you forward in the filename. The Select key on the front panel generates a space character. When you are done entering the filename press the **Done** softkey. This returns back to the **File Open** dialog and menu, but does not cause the save to occur.

Save As Type

This field shows the file suffix for the type of file you have selected to save. For example, if you navigated here while saving State, "Mode state (*.state)" is in the field. If you navigated here from saving Trace, ""Mode state (*.trace)" is in the field. If you navigated here while exporting a trace data file, "Trace Data (*.csv)" is in the field. For some file types, there is more than one choice in the dropdown, which you can select by using the up and down arrow keys and Enter.

Up One Level

This key corresponds to the icon of a folder with the up arrow that is in the tool bar of the dialog. When pressed, it causes the file and folder list to navigate up one level in the directory structure. The Backspace key does the same thing.

Create New Folder

This key corresponds to the icon of a folder with the "*" that is in the tool bar of the dialog. When pressed, a new folder is created in the current directory with the name **New Folder** and you can enter a new folder name using the Alpha Editor.

Cancel

This key corresponds to the **Cancel** selection in the dialog. It causes the current **Save As** request to be cancelled. The ESC key does the same thing.

| | |
|----------------------|---|
| Key Path | Save, State |
| Mode | All |
| Notes | Brings up Save As dialog for saving a State Save Type |
| Initial S/W Revision | Prior to A.02.00 |

Edit Register Names

You may enter a custom name on any of the Register keys, to help you remember what you are using that state to save. To do this, press the **Edit Register Names** key, choose the register whose name you wish to edit, and then enter the desired label using the Alpha Editor or an external PC keyboard.

The maximum number of characters that can be added is 30. In most cases, 30 characters will fit on two lines of the key.

See ["More Information" on page 1660](#)

| | |
|-----------------------|--|
| Key Path | Save, State |
| Mode | All |
| Remote Command | :MMEMory:REGister:STATe:LABel <reg number>,"label" :MMEMory:REGister:STATe:LABel? <reg number> |
| Example | :MMEM:REG:STAT:LAB 1,"my label" |
| Notes | <reg number> is an integer from 1 to 16. If the SCPI specifies an invalid register number an error message is generated, -222,"Data out of range;Invalid register label number" "label" is a string from 0 to 30 characters in length. If a label exceeds 30 characters, an error message is generated, -150,"String data error;Label clipped to 30 characters" "label" of length 0 erases the custom label and restores the default (time and date) label. E.g.: :MMEM:REG:STAT:LAB 1,"" |
| Dependencies | N9060A-7FP or N9060B-2FP license required to edit the register names. When the feature is not licensed, sending this command generates an error, -221,"Settings conflict;Option not available" |
| Preset | The names are unaffected by Preset or power cycle but are set to the default label (time and date) on a "Restore System Defaults->Misc" |
| Initial S/W Revision | A.11.00 |

More Information

When you edit one of the register names, the time and date field will be replaced by the custom name.

If you delete all the characters in the custom name, it restores the default (time and date).

The register names are stored within the state files, but they are not part of the instrument state; that is, once you have edited a register name, loading a new state will not change that register name. Another consequence of this is that the names will be persistent through a power cycle. Also, if a named state file is transferred to another analyzer, it will bring its custom name along with it.

If you try to edit the name of an empty register, the analyzer will first save the state to have a file to put the name in. If you load a named state file into an analyzer with older firmware it will ignore the metadata.

The *SAV and *RCL commands will not be affected by the custom register names, nor will the MMEM commands.

Register 1 thru Register 16

Selecting any one of these register menu keys causes the State of the currently active mode to be saved to the specified Register. The registers are provided for rapid saving and recalling, since you do not need to specify a filename or navigate to a file. Each of the register menu keys annotates whether it is empty or at what date and time it was last modified. In addition, you can use the **Edit Register Names** key to enter custom names for each register.

Although these 16 registers are the only registers available from the front panel, there are 128 state registers available in the instrument. Registers 17–128 are only available from the SCPI interface, using the *SAV command.

There is one set of 128 state registers in the instrument, not one set for each Mode. When a state is saved, the Mode it was saved from is saved with it; then when it is recalled, the instrument switches to that Mode.

After the save completes, the corresponding register menu key annotation is updated with the date and time and the message "Register <register number> saved" is displayed.

| | |
|--------------------------|--|
| Key Path | Save, State |
| Mode | All |
| Example | *SAV 1 |
| Range | 1–16 from front panel, 1–128 from SCPI |
| Readback | Date and time with seconds resolution are displayed on the key OR A custom name of up to 30 characters entered using the Edit Register Names key OR “(empty)” if no prior save operation has been performed to this register. |
| Initial S/W Revision | Prior to A.02.00 |
| Modified at S/W Revision | A.11.00 |

Register 1 thru Register 16

Selecting any one of these register menu keys causes the State of the currently active mode to be saved to the specified Register. The registers are provided for rapid saving and recalling, since you do not need to specify a filename or navigate to a file. Each of the register menu keys annotates whether it is empty or at what date and time it was last modified. In addition, you can use the **Edit Register Names** key to enter custom names for each register.

Although these 16 registers are the only registers available from the front panel, there are 128 state registers available in the instrument. Registers 17–128 are only available from the SCPI interface, using the *SAV command.

There is one set of 128 state registers in the instrument, not one set for each Mode. When a state is saved, the Mode it was saved from is saved with it; then when it is recalled, the instrument switches to that Mode.

| Example | *SAV 1 |
| Range | 1-16 from front panel, 1-128 from SCPI |
| Readback | Date and time with seconds resolution are displayed on the key OR A custom name of up to 30 characters entered using the Edit Register Names key OR “(empty)” if no prior save operation has been performed to this register. |
| Initial S/W Revision | Prior to A.02.00 |
| Modified at S/W Revision | A.11.00 |

Mass Storage Catalog (Remote Command Only)

| | |
|-----------------------------|---|
| Key path | SCPI Only |
| Remote Command | :MMEMory:CATalog? [<directory_name>] |
| Notes | The string must be a valid logical path. Queries disk usage information (drive capacity, free space available) and obtains a list of files and directories in a specified directory in the following format: <numeric_value>,<numeric_value>,{<file_entry>} It returns two numeric parameters and as many strings as there are files and directories. The first parameter indicates the total amount of storage currently used in bytes. The second parameter indicates the total amount of storage available, also in bytes. The <file_entry> is a string. Each <file_entry> indicates the name, type, and size of one file in the directory list: <file_name>,<file_type>,<file_size> As the windows file system has an extension that indicates file type, <file_type> is always empty. <file_size> provides the size of the file in bytes. For directories, <file_entry> is surrounded by square brackets and both <file_type> and <file_size> are empty |
| Initial S/W Revision | Prior to A.02.00 |

Mass Storage Change Directory (Remote Command Only)

| | |
|-----------------------|--|
| Key path | SCPI Only |
| Remote Command | :MMEMory:CDIRectory [<directory_name>] :MMEMory:CDIRectory? |

| | |
|----------------------|---|
| Notes | <p>The string must be a valid logical path.</p> <p>Changes the default directory for a mass memory file system. The <directory_name> parameter is a string. If no parameter is specified, the directory is set to the *RST value.</p> <p>At *RST, this value is set to the default user data storage area, that is defined as System.Environment.SpecialFolder.Personal.</p> <p>Query returns full path of the default directory.</p> |
| Initial S/W Revision | Prior to A.02.00 |

Mass Storage Copy (Remote Command Only)

| | |
|-----------------------|--|
| Key path | SCPI Only |
| Remote Command | :MMEMory:COpy <string>,<string>[,<string>,<string>] |
| Notes | <p>The string must be a valid logical path.</p> <p>Copies an existing file to a new file or an existing directory to a new directory.</p> <p>Two forms of parameters are allowed. The first form has two parameters. In this form, the first parameter specifies the source, and the second parameter specifies the destination.</p> <p>The second form has four parameters. In this form, the first and third parameters specify the source. The second and fourth parameters specify the directories. The first pair of parameters specifies the source. The second pair specifies the destination. An error is generated if the source doesn't exist or the destination file already exists.</p> <p>This command will generate an "access denied" error if the destination is a restricted folder (e.g., C:\Windows) and the current user does not have Power User or Administrator privileges.</p> |

Mass Storage Device Copy (Remote Command Only)

This command transfers data to/from a file and a peripheral device.

| | |
|-----------------------|---|
| Key path | SCPI Only |
| Remote Command | :MMEMory:COpy:DEvice <source_string>,<dest_string> |
| Notes | <p>The strings must be a valid logical path or a valid device keyword. If the dest_string is a device keyword, the data is copied from the source file to the device. If the source_string is a device keyword, the data is copied to the source file from the device.</p> <p>Valid device keywords are:</p> <p>SNS (smart noise source)</p> <p>An error is generated if the file or device is not found.</p> |

Mass Storage Delete (Remote Command Only)

| | |
|-----------------------|--|
| Key path | SCPI Only |
| Remote Command | :MMEMory:DElete <file_name>[,<directory_name>] |

| | |
|----------------------|---|
| Notes | The string must be a valid logical path. Removes a file from the specified directory. The <file_name> parameter specifies the file name to be removed. This command will generate an “access denied” error if the file is in a restricted folder (e.g., C:\Windows) and the current user does not have Power User or Administrator privileges. |
| Initial S/W Revision | Prior to A.02.00 |

Mass Storage Data (Remote Command Only)

Creates a file containing the specified data OR queries the data from an existing file.

| | |
|----------------------|--|
| Key path | SCPI Only |
| Remote Command | :MMEMory:DATA <file_name>, <data> :MMEMory:DATA? <file_name> |
| Notes | The string must be a valid logical path. The command form is MMEMory:DATA <file_name>,<data>. It loads <data> into the file <file_name>. <data> is in 488.2 block format. <file_name> is string data. The query form is MMEMory:DATA? <file_name> with the response being the associated <data> in block format. |
| Initial S/W Revision | Prior to A.02.00 |

Mass Storage Make Directory (Remote Command Only)

| | |
|----------------------|---|
| Key path | SCPI Only |
| Remote Command | :MMEMory:MDIRectory <directory_name> |
| Notes | The string must be a valid logical path. Creates a new directory. The <directory_name> parameter specifies the name to be created. This command will generate an “access denied” error if the new directory would be in a restricted folder (e.g., C:\Windows) and the current user does not have Power User or Administrator privileges. |
| Initial S/W Revision | Prior to A.02.00 |

Mass Storage Move (Remote Command Only)

| | |
|----------------|---|
| Key path | SCPI Only |
| Remote Command | :MMEMory:MOVE <string>,<string>[,<string>,<string>] |
| Notes | The string must be a valid logical path. Moves an existing file to a new file or an existing directory to a new directory. Two forms of parameters are allowed. The first form has two parameters. In this form, the first parameter specifies the source, and the second parameter specifies the destination. The second form has four parameters. In this form, the first and third parameters specify the source. |

The second and fourth parameters specify the directories. The first pair of parameters specifies the source. The second pair specifies the destination. An error is generated if the source doesn't exist or the destination file already exists.

This command will generate an "access denied" error if the destination is a restricted folder (e.g., C:\Windows) and the current user does not have Power User or Administrator privileges.

| | |
|----------------------|------------------|
| Initial S/W Revision | Prior to A.02.00 |
|----------------------|------------------|

Mass Storage Remove Directory (Remote Command Only)

| | |
|----------|------------------|
| Key path | SCPI Only |
|----------|------------------|

| | |
|-----------------------|--------------------------------------|
| Remote Command | :MMEMory:RDIRectory <directory_name> |
|-----------------------|--------------------------------------|

| | |
|-------|--|
| Notes | <p>The string must be a valid logical path.</p> <p>Removes a directory. The <directory_name> parameter specifies the directory name to be removed. All files and directories under the specified directory shall also be removed.</p> <p>This command will generate an "access denied" error if the folder is a restricted folder (e.g., C:\Windows) or is in a restricted folder and the current user does not have Power User or Administrator privileges.</p> |
|-------|--|

| | |
|----------------------|------------------|
| Initial S/W Revision | Prior to A.02.00 |
|----------------------|------------------|

Sequences

These keys allow you to save a Tab separated or CSV file of the setup parameters required to build a Sequence.

In order to save you must select the Save As button and choose a destination folder.

| | |
|----------|------------------------|
| Key Path | Save, Sequences |
|----------|------------------------|

| | |
|------|-----|
| Mode | All |
|------|-----|

| | |
|-----------------------|---|
| Remote Command | :MMEM:STOR:SEquences: SLISt ALISt SAALISt SSTep "MySequence.txt" |
|-----------------------|---|

| | |
|----------------|---------------------------------------|
| Example | :MMEM:STOR:SEQ:SLISt "MySequence.txt" |
|----------------|---------------------------------------|

| | |
|-------|--|
| Notes | <p>Available file types are:</p> <ul style="list-style-type: none"> -CSV (Comma delimited) (*.csv) -Text (Tab delimited) (*.txt) |
|-------|--|

| | |
|----------------------|---------|
| Initial S/W Revision | A.05.00 |
|----------------------|---------|

Source Sequence

The list of parameters, that configure steps, that makes up a sequence for the Source.

The Source sequence is a sequence of flexible configurable steps that can be set anywhere in the instruments frequency range.

| | |
|-----------------------------|--------------------------------------|
| Key Path | Save, Sequences |
| Example | :MMEM:STOR:SEQ:SLIS "MySequence.txt" |
| Dependencies | Only available in XOBT |
| Initial S/W Revision | A.05.00 |

Save As . . .

This menu lets you select the location where you can save the Sequence. This menu is a standard Windows® dialog with Save As menu keys. The "File Name" field in the Save As dialog is initially loaded with an automatically generated filename specific to the appropriate Save Type. The automatically generated filename is guaranteed not to conflict with any filename currently in the directory. You may replace or modify this filename using the File Name softkey. See the Quick Save key documentation for more on the automatic file naming algorithm.

The default path for all Sequence Files is:

My Documents\Sequences

| | |
|-----------------------------|--|
| Key Path | Save, Sequences |
| Mode | All |
| Notes | Brings up Save As dialog for saving a Sequence Save Type |
| Initial S/W Revision | A.05.00 |

Data (Export)

Exporting a data file stores data from the current measurement to mass storage files. The Export Menu only contains data types that are supported by the current measurement.

Since the commonly exported data files are in .csv format, the data can be edited by you prior to importing. This allows you to export a data file, manipulate the data in Excel (the most common PC Application for manipulating .csv files) and then import it.

Selecting an Export Data menu key will not actually cause the exporting to occur, since the analyzer still needs to know where you wish to save the data. Pressing the Save As key in this menu brings up the Save As dialog and Save As menu that allows you to specify the destination file and directory. Once a filename has been selected or entered in the Open menu, the export will occur as soon as the Save key is pressed.

| | |
|-----------------|--|
| Key Path | Save |
| Mode | All |
| Notes | The menu is built from whatever data types are available for the mode. So the key locations in the sub menu will vary. No SCPI command directly controls the Data Type that this key controls. The Data Type is included in |

| | |
|----------------------|---|
| | the MMEM:STOR commands. |
| Dependencies | If a file type is not used by a certain measurement, that type is grayed out for that measurement. The key for a file type will not show at all if there are no measurements in the Mode that support it. |
| Preset | Is not affected by a Preset or shutdown, but is reset during Restore Mode Defaults |
| Readback | The data type that is currently selected |
| Initial S/W Revision | Prior to A.02.00 |

Meas Results

| | |
|--------------------------|---|
| parameter_table_23.52557 | 52.93253 |
| Key Path | Save, Data |
| Mode | WLAN |
| Example | MMEM:STOR:RES "MyResultsFile.csv" This stores the measurement results data in the file MyResultsFile.xml in the default directory. |
| Initial S/W Revision | A.11.00 |
| Help Map ID | 45561 |

Capture Buffer

Capture buffer functionality is only available when measurement is Mod Accuracy and radio standard is not 802.11ac 80+80MHz. The captured data is raw data which is not processed.

| | |
|--------------------------|--|
| parameter_table_23.52557 | 52.93253 |
| Key Path | Save, Data |
| Mode | WLAN |
| Example | MMEM:STOR:CAPT "MyCaptureData.bin" This stores the capture data in the file MyCaptureData.bin in the default directory. |
| Dependencies | Capture buffer data is only available when measurement is Mod Accuracy and radio standard is not 802.11ac 80+80MHz. In other measurements, this key is grayed out. |
| Initial S/W Revision | A.11.00 |
| Help Map ID | 45562 |

Save As . . .

When you press "Save As", the analyzer brings up a Windows dialog and a menu entitled "**Save As.**" This menu allows you to navigate to the various fields in the Windows dialog without using a keyboard or mouse. The **Tab** and **Arrow** keys can also be used for dialog navigation.

See "[To File . . .](#)" on page 2484 in **Save, State** for a full description of this dialog and menu.

The default path for saving files is:

For all of the Trace Data Files:

My Documents\`<mode name>`\data\traces

For all of the Limit Data Files:

My Documents\`<mode name>`\data\limits

For all of the Measurement Results Data Files:

My Documents\`<mode name>`\data\`<measurement name>`\results

For all of the Capture Buffer Data Files:

My Documents\`<mode name>`\data\captureBuffer

| Key Path | Save, Data |
|----------------------|---|
| Mode | All |
| Notes | The key location is mode-dependent and will vary. Brings up the Save As dialog for saving a <code><mode specific></code> Save Type. The save is performed immediately and does not wait until the measurement is complete. |
| Initial S/W Revision | Prior to A.02.00 |

Screen Image

Pressing Screen Image accesses a menu of functions that enable you to specify a format and location for the saved screen image. It brings up a menu that allows you to specify the color scheme of the Screen Image (Themes) or navigate to the Save As dialog to perform the actual save.

Screen Image files contain an exact representation of the analyzer display. They cannot be loaded back onto the analyzer, but they can be loaded into your PC for use in many popular applications.

The image to be saved is actually captured when the **Save** front panel key is pressed, and kept in temporary storage to be used if you ask for a Screen Image save. When the Screen Image key is pressed, a "thumbnail" of the captured image is displayed, as shown below:

When you continue on into the **Save As** menu and complete the Screen Image save, the image depicted in the thumbnail is the one that gets saved, showing the menus that were on the screen before going into the **Save** menus. The save is performed immediately and does not wait until the measurement is complete.

After you have completed the save, the **Quick Save** front-panel key lets you quickly repeat the last save performed, using an auto-named file, with the current screen data.

NOTE For versions previous to A.01.55, if you initiate a screen image save by navigating through the Save menus, the image that is saved will contain the Save menu softkeys, not the menus and the active function that were on the screen when you first pressed the Save front panel key.

| | |
|----------------------|--|
| Key Path | Save |
| Mode | All |
| Remote Command | :MMEMory:STORe:SCReem <filename> |
| Example | :MMEM:STOR:SCR "myScreen.png" This stores the current screen image in the file MyScreenFile.png in the default directory. |
| Initial S/W Revision | Prior to A.02.00 |

Themes

Accesses a menu of functions that enable you to choose the theme to be used when saving the screen image.

The **Themes** option is the same as the **Themes** option under the **Display** and **Page Setup** dialogs. It allows you to choose between themes to be used when saving the screen image.

| | |
|--------------------------------------|---|
| Key Path | Save, Screen Image |
| Remote Command | :MMEMory:STORe:SCReem:THEMe TDColor TDMonochrome FCOLor FMONochrome :MMEMory:STORe:SCReem:THEMe? |
| Example | :MMEM:STOR:SCR:THEM TDM |
| Preset | 3D Color; Is not part of Preset, but is reset by Restore Misc Defaults or Restore System Defaults All and survives subsequent running of the modes. |
| Readback | 3D Color 3D Mono Flat Color Flat Mono |
| Backwards Compatibility Notes | In ESA and PSA we offer the choice of "Reverse Bitmap" or "Reverse Metafile" when saving screen images. This is much like the "Flat Color" theme available in X-Series. Also, if you selected Reverse Bitmap AND a black & white screen image, that would be much like "Flat Monochrome". In other words, each of the X-Series themes has a similar screen image type in ESA/PSA. But they are not identical. |
| Initial S/W Revision | Prior to A.02.00 |

3D Color

Selects a standard color theme with each object filled, shaded and colored as designed.

| | |
|-----------------------------|-----------------------------------|
| Key Path | Save, Screen Image, Themes |
| Example | MMEM:STOR:SCR:THEM TDC |
| Readback | 3D Color |
| Initial S/W Revision | Prior to A.02.00 |

3D Monochrome

Selects a format that is like 3D color but shades of gray are used instead of colors.

| | |
|-----------------------------|-----------------------------------|
| Key Path | Save, Screen Image, Themes |
| Example | MMEM:STOR:SCR:THEM TDM |
| Readback | 3D Mono |
| Initial S/W Revision | Prior to A.02.00 |

Flat Color

Selects a format that is best when the screen is to be printed on an ink printer.

| | |
|-----------------|-----------------------------------|
| Key Path | Save, Screen Image, Themes |
|-----------------|-----------------------------------|

| | |
|----------------------|-------------------------|
| Example | MMEM:STOR:SCR:THEM FCOL |
| Readback | Flat Color |
| Initial S/W Revision | Prior to A.02.00 |

Flat Monochrome

Selects a format that is like Flat Color. But only black is used (no colors, not even gray), and no fill.

| | |
|----------------------|-----------------------------------|
| Key Path | Save, Screen Image, Themes |
| Example | MMEM:STOR:SCR:THEM FMON |
| Readback | Flat Mono |
| Initial S/W Revision | Prior to A.02.00 |

Save As...

When you press "Save As", the analyzer brings up a Windows dialog and a menu entitled "**Save As.**" This menu allows you to navigate to the various fields in the Windows dialog without using a keyboard or mouse. The **Tab** and **Arrow** keys can also be used for dialog navigation.

See "[To File . . .](#)" on page 2484 in **Save, State** for a full description of this dialog and menu.

The default path for Screen Images is

My Documents\`<mode name>`\screen.

where `<mode name>` is the parameter used to select the mode with the INST:SEL command (for example, SA for the Spectrum Analyzer).

| | |
|----------------------|--|
| Key Path | Save, Screen Image |
| Notes | Brings up Save As dialog for saving a Screen Image Save Type |
| Initial S/W Revision | Prior to A.02.00 |

Single (Single Measurement/Sweep)

Sets the analyzer for Single measurement operation. The single/continuous state is Meas Global, so the setting will affect all the measurements. If you are Paused, pressing **Single** does a Resume.

See "[More Information](#)" on page 1672

| | |
|-------------------------------|--|
| Key Path | Front-panel key |
| Example | :INIT:CONT OFF |
| Notes | See Cont key description. |
| Backwards Compatibility Notes | <p>For Spectrum Analysis mode in ESA and PSA, the Single hardkey and the INITiate:IMM switched from continuous measurement to single measurement and restarted sweeps and averages (displayed average count reset to 1), but did not restart Max Hold and Min Hold. In the X-Series, the Single hardkey and the INITiate:IMM command initiate a sweep/ measurement/ average sequence/hold sequence including MaxHold and MinHold.</p> <p>For Spectrum Analysis mode in ESA and PSA, the Single hardkey restarted the sweep regardless of whether or not you were in an active sweep or sweep sequence. In the X-Series, Restart does this but Single only restarts the sweep or sweep sequence if you are in the idle state.</p> <p>INIT[:IMM] in ESA & PSA Spectrum Analysis Mode does an implied ABORT. In some other PSA Modes, INIT[:IMM] is ignored if not in the idle state. . The X-Series follows the ESA/PSA SA Mode model, which may cause some Modes to have compatibility problems.</p> |
| Initial S/W Revision | Prior to A.02.00 |

More Information

See "[Restart](#)" on page 2481 for details on the INIT:IMMEDIATE (Restart) function.

If you are already in single sweep, the INIT:CONT OFF command has no effect.

If you are already in Single Sweep, then pressing the **Single** key in the middle of a sweep does not restart the sweep or sequence. Similarly, pressing the **Single** key does not restart the sweep or sequence if the sweep is not in the idle state (for example, if you are taking a very slow sweep, or the analyzer is waiting for a trigger). Instead, it results in a message. "Already in Single, press Restart to initiate a new sweep or sequence". Even though pressing the **Single** key in the middle of a sweep does not restart the sweep, sending INIT:IMMEDIATE does reset it.

To take one more sweep without resetting the average count, increment the average count by 1, by pressing the step up key while **Average/Hold Number** is the active function, or sending the remote command CALC:AVER:TCON UP.

Source

Opens a menu of keys that access various source configuration menus and settings. In the test set, pressing this key also causes the central view area to change and display the Source Control Main view.

| Key Path | Front-panel key |
|----------|-----------------|
|----------|-----------------|

RF Output

This parameter sets the source RF power output state.

| Key Path | Source |
|-----------------------|---|
| Remote Command | :OUTPut[:EXTernal][:STATe] ON OFF 1 0 :OUTPut[:EXTernal][:STATe]? |
| Example | OUTP OFF OUTP? |
| Notes | <p>The EXTERNAL node is shown in RD text so the SCPI remains the same between internal and external source control. However, for EXT we do not wish to document this node to the customer since we are controlling the internal source rather than the external source.</p> <p>This setting is for the independent mode and has no effect on the "List Sequencer" on page 2585. If the "Sequencer" on page 2586 is set to ON, the list sequencer controls the source output and this key will be grayed-out. And this setting will be none-forceful grey out on front panel to indicate out-of-scope. Non-forceful means user still can change this setting by SCPI but cannot change on front panel. When set to OFF will make source leave list sequencer and this setting will be black out and take effect immediately.</p> <p>When the RF Output is ON, an "RF" annunciator is displayed in the system settings panel. When the RF Output is turned Off, the RF annunciator is cleared. If the "Sequencer" on page 2586 is set to ON, the "RF" annunciator will be replaced by "SEQ" in the system settings panel, indicating that the output is controlled by the list sequencer.</p> |
| Preset | Off |
| Range | On Off |
| Initial S/W Revision | A.05.00 |

Amplitude

Allows you to access the Amplitude sub-menu.

| Key Path | Source |
|----------------------|--|
| Notes | <p>The sub-menu under this button is for independent mode and has no effect on "List Sequencer" on page 2585. If the "Sequencer" on page 2586 is set to ON, the list sequencer controls the source output and this key will be grayed-out on front panel to indicate out-of-scope. When you set "Sequencer" on page 2586 to Off will make source leave list sequencer and this button will be black out.</p> |
| Initial S/W Revision | A.05.00 |

RF Power

Allows you to adjust the power level of the source using the numeric keypad, step keys, or RPG. Pressing any digit, 0 through 9, on the numeric keypad brings up the unit terminator.

Please refer to the ["RF Power Range " on page 1675](#) table below for the valid ranges.

| Key Path | Source, Amplitude |
|-----------------------|--|
| Remote Command | :SOURce:POWer[:LEVel][:IMMediate][:AMPLitude] <ampl> :SOURce:POWer[:LEVel][:IMMediate][:AMPLitude]? |
| Example | :SOUR:POW -100 dBm |
| Notes | <p>Amplitude corrections can be specified for use with the source. In the event of amplitude corrections being applied, the valid ranges for the RF power do not change dependant on the current amplitude correction setting. If the combination of RF power + amplitude correction is higher or lower than the source output range, the Source Unleveled bit is set and the "Source Unleveled" indicator will appear on status panel to indicate that the source cannot maintain the output power that has been requested.</p> <p>When signal generator is unable to maintain the requested output level, the "Source Unleveled" indicator will appear on status panel. When the source output setting is restored to the normal range, the "Source Unleveled" is removed from status panel.</p> <p>Internal source has list sequence mode, which comprises of several steps which contain separate output power, frequency and waveform etc. When the source list sequence playing is complete, the last step keeps playing, and user can use this command to change the list sequence last step's output power.</p> <p>The multiport adapter RFIO TX ports and GPS ports cannot ensure power accuracy when power setting is lower than -130dBm, this power setting value is defined by the sum of RF Power setting and related amplitude correction value. But user settable value could be lower than this limit. When application detected there exists power setting lower than -130dBm on MPA RFIO TX ports, then popup warning message . When application detected there exists power setting lower than -130dBm on MPA GPS ports, then popup warning message . This is only warning message, and check is performed when RF is ON.</p> |
| Notes | The Min and Max value here defined UI settable amplitude range. This range is larger than actual amplitude range with level accuracy defined in spec. |
| Dependencies | The RF power is dependent on the RF output port and frequency, such that the current frequency and selected output port determine the valid range of power values. |
| Couplings | If "Real-Time AWGN" on page 2546 AWGN State is On and "ARB" on page 2535 ARB State is On, this setting will be adjusted to the value to maintain the AWGN power relationship defined by "Power Control Mode" on page 2547 Power Control Mode and other noise settings |
| Preset | -100 dBm |
| Min | The range of values depends on the current frequency and selected RF output port. Please refer to the "RF Power Range " on page 1675 table below for the valid ranges. |
| Max | The range of values depends on the current frequency and selected RF output port. Please refer to the "RF Power Range " on page 1675 table below for the valid ranges. |

| | |
|--------------------------|---|
| Initial S/W Revision | A.05.00 |
| Modified at S/W Revision | A.16.00 (Add couplings with AWGN state) |

RF Power Range

| RF Output Port | Frequency Range | Min Output Power | Max Output Power |
|-------------------|--------------------|------------------|------------------|
| High Power RF Out | 10 MHz ≤ f ≤ 6 GHz | -150 dBm | 20 dBm |
| RFIO 1 & RFIO 2 | 10 MHz ≤ f ≤ 6 GHz | -150 dBm | 0 dBm |
| GPS (Note2) | 10 MHz ≤ f ≤ 6 GHz | -150 dBm | 0 dBm |

Note: This is the UI power range, it's larger than actual spec.

Note2: GPS port is on the multiport adapter, or E6607C which has embedded MPA.

Set Reference Power

This key allows you to set the power reference. Pressing this key turns the power reference state to ON, sets the reference power value to the current RF output power, maintains this power at the RF output, and sets the displayed power to 0.00 dB. All subsequent RF power values entered under Source>Amplitude>RF Power are interpreted as being relative to this reference power.

When you use a power reference, the signal generator outputs an RF power that is set relative to the reference power by the value entered under Source>Amplitude>RF Power as follows:

Output power = reference power – entered power

Where:

reference power equals the original RF Power entered under Source>Amplitude>RF Power and set as the reference power

entered power equals a new value entered under Source>Amplitude>Amptd Offset

In addition, the displayed power value is the same as a new value entered under Source>Amplitude>RF Power.

NOTE

If Power Ref is set to ON with a reference value set, entering a value under Source>Amplitude>RF Power and pressing Set Reference Power will add that value to the existing Power Ref value.

If you wish to change the reference power value to a new value entered under Source>Amplitude>RF Power, first you must set Power Ref to OFF and then press Set Reference Power.

| Key Path | Source, Amplitude |
|----------------------|---|
| Dependencies | This key is unavailable, and is grayed out when the " List Sequencer " on page 2585 is turned ON. |
| Initial S/W Revision | A.05.00 |

Power Ref

This key allows you to toggle the state of the power reference.

When you use a power reference, the signal generator outputs an RF power that is set relative to the reference power by the value entered under Source>Amplitude>RF Power as follows:

Output power = reference power + entered power

Where:

reference power equals the original RF Power entered under Source>Amplitude>RF Power and set as the reference power

entered power equals a new value entered under Source>Amplitude>Amptd Offset

For more information on Reference Frequency refer to ["Set Reference Power " on page 2501](#)

| Key Path | Source, Amplitude |
|-----------------------|--|
| Remote Command | :SOURce:POWer:REFerence <ampl> :SOURce:POWer:REFerence? :SOURce:POWer:REFerence:STATe OFF ON 0 1 :SOURce:POWer:REFerence:STATe? |
| Example | :SOUR:POW:REF 0.00 dBm :SOUR:POW:REF:STATe ON |
| Dependencies | This setting is unavailable and is grayed out when the "List Sequencer" on page 2585 is turned ON. |
| Couplings | This value is coupled to the "Set Reference Power " on page 2501 key such that pressing the Set Reference Power key updates the reference power with the current output power. |
| Preset | 0.00 dBm OFF |
| Min | -125.00 dBm |
| Max | 10.00 dBm |
| Initial S/W Revision | A.05.00 |

Amptd Offset

Allows you to specify the RF output power offset value.

When the amplitude offset is set to zero (0) and you set a new offset value (positive or negative), the displayed amplitude value will change as follows and the RF output power will not change:

Displayed value = output power + offset value

Where:

output power equals the original RF Power entered under Source>Amplitude>RF Power

offset value equals the value entered under Source>Amplitude>Amptd Offset

When the amplitude offset is set to a value other than zero (0) and you enter a new RF power value under Source>Amplitude>RF Power, the displayed power will be the same as the value entered and the RF output power will be equal to the value entered minus the offset value as follows:

Output power = entered power – offset power

Displayed Power = output power + offset power

Displayed power = entered power

Where:

entered power equals the amplitude entered under Source>Amplitude>RF Power

offset power equals the value previously entered and set under Source>Amplitude>Amptd Offset

| Key Path | Source, Amplitude |
|-----------------------|--|
| Remote Command | :SOURce:POWer[:LEVel][:IMMediate]:OFFSet <rel_ampl> :SOURce:POWer[:LEVel][:IMMediate]:OFFSet? |
| Example | :SOUR:POW:OFFS 0.00 dB |
| Dependencies | This setting is unavailable, and is grayed out when the List Sequencer is turned ON. |
| Preset | 0.00 dB |
| Min | -200.00 dB |
| Max | 200.00 dB |
| Initial S/W Revision | A.05.00 |

Modulation

Allows you to toggle the state of the modulation.

| Key Path | Source |
|-----------------------|--|
| Remote Command | :OUTPut:MODulation[:STATe] ON OFF 1 0 :OUTPut:MODulation[:STATe]? |
| Example | :OUTP:MOD OFF |
| Notes | This setting is for independent mode and has no effect on " List Sequencer " on page 2585. If the " Sequencer " on page 2586 is set to ON, the list sequencer controls the source output and this key will be grayed-out. And this setting will be none-forceful grey out on front panel to indicate out-of-scope. Non-forceful means user still can change this setting by SCPI but cannot change manually on front panel. When set to Off will make source leave list sequencer and this setting will be black out and take effect immediately When the Modulation is ON, the "MOD" annunciator is displayed in the system settings panel. When the Modulation is turned Off, the "MOD" annunciator is cleared. If the " Sequencer " on page 2586 is set to ON, the "MOD" annunciator will be replaced by "SEQ" in the system settings panel indicating that the output is controlled by list sequencer. |
| Preset | Off |
| Range | On Off |
| Initial S/W Revision | A.05.00 |

Frequency

Allows you to access the Frequency sub-menu.

| Key Path | Source |
|----------------------|---|
| Notes | The sub-menu under this button is for independent mode and has no effect on "List Sequencer" on page 2585 . If the "Sequencer" on page 2586 is set to ON, the list sequencer controls the source output and this key will be grayed-out. And this button will be grey out on front panel to indicate out-of-scope. When set to Off will make source leave list sequencer and this button will be black out. |
| Initial S/W Revision | A.05.00 |

Frequency

Allows you to set the RF Output Frequency. You can adjust the frequency of the source using the numeric keypad, step keys, or RPG. Pressing any digit, 0 through 9, on the numeric keypad brings up the unit terminator.

| Key Path | Source, Frequency |
|-----------------------|---|
| Remote Command | :SOURce:FREQuency[:CW] <freq> :SOURce:FREQuency[:CW]? |
| Example | :SOUR:FREQ 1.00 GHz |
| Notes | Internal source has list sequence mode, which comprises of several steps which contain separate output power, frequency and waveform etc. When the source list sequence playing is complete, the last step keeps playing, and user can use this command to change the list sequence last step's output frequency. |
| Couplings | The frequency value is coupled to the current channel band and number, such that updates to the band and number will update the frequency value to the corresponding absolute frequency. |
| Preset | 1.00 GHz |
| Min | 10.00 MHz |
| Max | Hardware Dependant: Option 503 = 3.6 GHz Option 504 = 3.8 GHz Option 506 = 6.00 GHz |
| Initial S/W Revision | A.05.00 |

Channel

The frequency of the source can be specified by a channel number of a given frequency band. This key allows you to specify the current channel number. For the appropriate range of channel numbers for a given frequency band, refer to the following tables: ["GSM/EDGE Channel Number Ranges" on page 1679](#),

"W-CDMA Channel Number Ranges" on page 1680, "CDMA 2000 / 1xEVDO Channel Number Ranges" on page 1681, and "LTE FDD Channel Number Ranges" on page 1683.

| | |
|-----------------------|---|
| Key Path | Source, Frequency |
| Remote Command | :SOURce:FREQuency:CHANnels:NUMBer <int> :SOURce:FREQuency:CHANnels:NUMBer? |
| Example | :SOUR:FREQ:CHAN:NUMB 1 |
| Notes | This key is grayed out when the "Radio Standard" on page 2513 is set to NONE. This key is grayed out on E6630A. |
| Dependencies | This key is grayed out when the "Radio Standard" on page 2513 is set to NONE. This key is grayed out on E6630A. |
| Couplings | The channel number is coupled to the frequency value when the "Radio Standard" on page 2513 is not set to NONE. When the frequency value is changed, the channel number will increase or decrease to match the new frequency. If the frequency is not at an exact match for a channel number, the nearest channel number is displayed along with a greater than or less than sign to indicate the frequency is above or below the channel number. |
| Preset | 1 |
| Min | Please refer to the tables below for the valid ranges. |
| Max | Please refer to the tables below for the valid ranges. |
| Initial S/W Revision | A.05.00 |

GSM/EDGE Channel Number Ranges

| Band | Link (Device) | Range | Frequency (MHz) |
|----------|---------------|------------------------|---------------------------|
| P-GSM | Uplink (MS) | $1 \leq n \leq 124$ | $890.0 + 0.2*n$ |
| | Downlink (BS) | $1 \leq n \leq 124$ | $935.0 + 0.2*n$ |
| E-GSM | Uplink (MS) | $0 \leq n \leq 124$ | $890.0 + 0.2*n$ |
| | | $975 \leq n \leq 1023$ | $890.0 + 0.2*(n-1024)$ |
| | Downlink (BS) | $0 \leq n \leq 124$ | $935.0 + 0.2*n$ |
| | | $975 \leq n \leq 1023$ | $935.0 + 0.2*(n-1024)$ |
| DCS 1800 | Uplink (MS) | $512 \leq n \leq 885$ | $1710.200 + 0.20*(n-512)$ |
| | Downlink (BS) | $512 \leq n \leq 885$ | $1805.200 + 0.20*(n-512)$ |
| PCS 1900 | Uplink (MS) | $512 \leq n \leq 810$ | $1850.200 + 0.2*(n-512)$ |
| | Downlink (BS) | $512 \leq n \leq 810$ | $1930.200 + 0.2*(n-512)$ |
| R-GSM | Uplink (MS) | $0 \leq n \leq 124$ | $890.0 + 0.2*n$ |
| | | $955 \leq n \leq 1023$ | $890.0 + 0.2*(n-1024)$ |
| | Downlink (BS) | $0 \leq n \leq 124$ | $935.0 + 0.2*n$ |
| | | $955 \leq n \leq 1023$ | $935.0 + 0.2*(n-1024)$ |
| GSM 450 | Uplink (MS) | $256 \leq n \leq 293$ | $450.6 + 0.2*(n-259)$ |
| | Downlink (BS) | $256 \leq n \leq 293$ | $460.6 + 0.2*(n-259)$ |

| Band | Link (Device) | Range | Frequency (MHz) |
|----------|---------------|-----------------------|--------------------------|
| GSM 480 | Uplink (MS) | $306 \leq n \leq 340$ | $479.000 + 0.20*(n-306)$ |
| | Downlink (BS) | $306 \leq n \leq 340$ | $489.000 + 0.20*(n-306)$ |
| GSM 850 | Uplink (MS) | $128 \leq n \leq 251$ | $824.200 + 0.20*(n-128)$ |
| | Downlink (BS) | $128 \leq n \leq 251$ | $869.200 + 0.20*(n-128)$ |
| GSM 700 | Uplink (MS) | $438 \leq n \leq 516$ | $777.200 + 0.20*(n-438)$ |
| | Downlink (BS) | $438 \leq n \leq 516$ | $747.200 + 0.20*(n-438)$ |
| T-GSM810 | Uplink (MS) | $350 \leq n \leq 425$ | $806.0 + 0.20*(n-350)$ |
| | Downlink (BS) | $350 \leq n \leq 425$ | $851.0 + 0.20*(n-350)$ |

W-CDMA Channel Number Ranges

| Band | Link (Device) | Range | Frequency (MHz) |
|-----------|---------------|--|--|
| Band I | Downlink | $10562 \leq n \leq 10838$ | $n \div 5$ |
| | Uplink | $9612 \leq n \leq 9888$ | $n \div 5$ |
| Band II | Downlink | $412 \leq n \leq 687$ | $n \div 5 + 1850.1$ |
| | | $9662 \leq n \leq 9938$ | $n \div 5$ |

LTE FDD Channel Number Ranges

The carrier frequency in the uplink and downlink is designated by the E-UTRA Absolute Radio Frequency Channel Number (EARFCN) in the range 0 – 65535. The relation between EARFCN and the carrier

frequency in MHz for the downlink is given by the following equation, where FDL_low and NOffs-DL are given in table 5.4.4-1 and NDL is the downlink EARFCN.

$$FDL = FDL_low + 0.1(NDL - NOffs-DL)$$

The relation between EARFCN and the carrier frequency in MHz for the uplink is given by the following equation where FUL_low and NOffs-UL are given in table 5.4.4-1 and NUL is the uplink EARFCN.

$$FUL = FUL_low + 0.1(NUL - NOffs-UL)$$

| Band | Downlink | | Uplink | | | |
|------|---------------|----------|--------------|---------------|----------|---------------|
| | FDL_low (MHz) | NOffs-DL | Range of NDL | FUL_low (MHz) | NOffs-UL | Range of NUL |
| 1 | 2110 | | 0 | 0 - 599 | 1920 | 18000 - 18599 |
| 2 | 1930 | | 600 | 600 - 1199 | 1850 | 18600 - 19199 |

| 25 | 1930 | 8040 | 8040 - 8689 | 1850 | 26040 | 26040 - 26689 |
| 26 | 859 | 8690 | 8690 - 9039 | 814 | 26690 | 26690 - 27039 |
| ... | | | | | | |

Note: The channel numbers that designate carrier frequencies so close to the operating band edges that the carrier extends beyond the operating band edge shall not be used. This implies that the first 7, 15, 25, 50, 75 and 100 channel numbers at the lower operating band edge and the last 6, 14, 24, 49, 74 and 99 channel numbers at the upper operating band edge shall not be used for channel bandwidths of 1.4, 3, 5, 10, 15 and 20 MHz respectively.

LTE TDD Channel Number Ranges

The carrier frequency in the uplink and downlink is designated by the E-UTRA Absolute Radio Frequency Channel Number (EARFCN) in the range 0 – 65535. The relation between EARFCN and the carrier frequency in MHz for the downlink is given by the following equation, where FDL_low and NOffs-DL are given in table 5.4.4-1 and NDL is the downlink EARFCN.

$$FDL = FDL_low + 0.1(NDL - NOffs-DL)$$

The relation between EARFCN and the carrier frequency in MHz for the uplink is given by the following equation where FUL_low and NOffs-UL are given in table 5.4.4-1 and NUL is the uplink EARFCN.

$$FUL = FUL_low + 0.1(NUL - NOffs-UL)$$

| Band | Downlink | Uplink | | | | |
|---------------|----------|--------------|---------------|----------|--------------|---------------|
| FDL_low (MHz) | NOffs-DL | Range of NDL | FUL_low (MHz) | NOffs-UL | Range of NUL | |
| 33 | 1900 | 36000 | 36000 - 36199 | 1900 | 36000 | 36000 - 36199 |
| 34 | 2010 | 36200 | 36200 - 36349 | 2010 | 36200 | 36200 - 36349 |
| 35 | 1850 | 36350 | 36350 - 36949 | 1850 | 36350 | 36350 - 36949 |
| 36 | 1930 | 36950 | 36950 - 37549 | 1930 | 36950 | 36950 - 37549 |

| Band | Downlink | Uplink | | | | |
|------|----------|--------|---------------|------|-------|------------------|
| 37 | 1910 | 37550 | 37550 -37749 | 1910 | 37550 | 37550 - 37749 |
| 38 | 2570 | 37750 | 37750 -38249 | 2570 | 37750 | 37750 - 38249 |
| 39 | 1880 | 38250 | 38250 -38649 | 1880 | 38250 | 38250 - 38649 |
| 40 | 2300 | 38650 | 38650 -39649 | 2300 | 38650 | 38650 - 39649 |
| 41 | 2496 | 39650 | 39650 - 41589 | 2496 | 39650 | 39650 - 41589 |
| 42 | 3400 | 41590 | 41590 - 43589 | 3400 | 41590 | 41590 - 43589 |
| 43 | 3600 | 43590 | 43590 - 45589 | 3600 | 43590 | 43590 - 45589 |

Note: The channel numbers that designate carrier frequencies so close to the operating band edges that the carrier extends beyond the operating band edge shall not be used. This implies that the first 7, 15, 25, 50, 75 and 100 channel numbers at the lower operating band edge and the last 6, 14, 24, 49, 74 and 99 channel numbers at the upper operating band edge shall not be used for channel bandwidths of 1.4, 3, 5, 10, 15 and 20 MHz respectively.

TDSCDMA Channel Number Ranges

1.28 Mcps TDD Option

No TX-RX frequency separation is required as Time Division Duplex (TDD) is employed. Each subframe consists of 7 main timeslots where all main timeslots (at least the first one) before the single switching point are allocated DL and all main timeslots (at least the last one) after the single switching point are allocated UL.

The nominal channel spacing is 1.6 MHz, but this can be adjusted to optimise performance in a particular deployment scenario.

The carrier frequency is designated by the UTRA absolute radio frequency channel number (UARFCN). The value of the UARFCN in the IMT2000 band is defined in the general case as follows:

$$N_t = 5 * F \quad 0.0 \text{ MHz} \leq F \leq 3276.6 \text{ MHz}$$

where F is the carrier frequency in MHz

Additional channels applicable to operation in the frequency band defined in sub-clause 5.2(d) are defined via the following UARFCN definition:

$$N_t = 5 * (F - 2150.1 \text{ MHz}) \quad 2572.5 \text{ MHz} \leq F \leq 2617.5 \text{ MHz}$$

UARFCN

1.28 Mcps TDD Option

The following UARFCN range shall be supported for each band:

**Table: UTRA Absolute Radio
Frequency Channel Number 1.28
Mcps TDD Option**

| Frequency Band | Frequency Range | UARFCN Uplink and Downlink transmission |
|---|-----------------|---|
| For operation in frequency band as defined in subclause 5.2 (a) | 1900–1920 MHz | 9504 to 9596 |
| | 2010–2025 MHz | 10054 to 10121 |
| For operation in frequency band as defined in subclause 5.2 (b) | 1850–1910 MHz | 9254 to 9546 |
| | 1930–1990 MHz | 9654 to 9946 |
| For operation in frequency band as defined in subclause 5.2 (c) | 1910–1930 MHz | 9554 to 9646 |
| For operation in frequency band as defined in subclause 5.2 (d) | 2570–2620 MHz | 12854 to 13096 |
| For operation in frequency band as defined in subclause 5.2 (e) | 2300–2400 MHz | 11504 to 11996 |
| For operation in frequency band as defined in subclause 5.2 (f) | 1880–1920 MHz | 9404 to 9596 |

Radio Setup

Allows access to the sub-menus for selecting the radio standard and associated radio band. You can also set a frequency reference and offset.

This menu is greyed out when on E6630A. Radio band settings for GSM, cdma2000, and so on -- most of which are not actually supported in E6630A, which has three narrow frequency bands. So band settings are grayed out.

| Key Path | Source, Frequency |
|----------------------|-------------------|
| Initial S/W Revision | A.05.00 |

Radio Standard

Allows access to the channel band sub-menus to select the desired radio standard. When you have selected the radio standard, you can then set an active channel band. The radio standard and the active channel band allow you to use channel numbers to set frequency automatically.

| Key Path | Source, Frequency, Radio Setup |

| Example | :SOUR:FREQ:CHAN:BAND PGSM |
| Notes | Set this setting to "NONE" will grey out "Channel" on page 2504 Channel |
| Initial S/W Revision | A.05.00 |

None

Selects no radio standard for use. When you have selected the radio standard to NONE, you cannot use channel numbers to set frequency automatically. You will need to set the frequency manually.

| | |
|-----------------------------|---|
| Key Path | Source, Frequency, Radio Setup, Radio Standard |
| Initial S/W Revision | A.05.00 |

GSM/EDGE

Sets GSM/EDGE as the radio standard for use and accesses the GSM/EDGE specific channel band sub-menus.

| | |
|-----------------------------|---|
| Key Path | Source, Frequency, Radio Setup, Radio Standard |
| Initial S/W Revision | A.05.00 |

P-GSM

Selects P-GSM as the active channel band.

| | |
|-----------------------------|---|
| Key Path | Source, Frequency, Radio Setup, Radio Standard, GSM/EDGE |
| Example | :SOUR:FREQ:CHAN:BAND PGSM |
| Initial S/W Revision | A.05.00 |

E-GSM

Selects E-GSM as the active channel band.

| | |
|-----------------------------|---|
| Key Path | Source, Frequency, Radio Setup, Radio Standard, GSM/EDGE |
| Example | :SOUR:FREQ:CHAN:BAND EGSM |
| Initial S/W Revision | A.05.00 |

R-GSM

Selects R-GSM as the active channel band.

| | |
|----------------------|---|
| Key Path | Source, Frequency, Radio Setup, Radio Standard, GSM/EDGE |
| Example | :SOUR:FREQ:CHAN:BAND RGSM |
| Initial S/W Revision | A.05.00 |

DCS 1800

Selects DCS 1800 as the active channel band.

| | |
|----------------------|---|
| Key Path | Source, Frequency, Radio Setup, Radio Standard, GSM/EDGE |
| Example | :SOUR:FREQ:CHAN:BAND DCS1800 |
| Initial S/W Revision | A.05.00 |

PCS 1900

Selects PCS 1900 as the active channel band.

| | |
|----------------------|---|
| Key Path | Source, Frequency, Radio Setup, Radio Standard, GSM/EDGE |
| Example | :SOUR:FREQ:CHAN:BAND PCS1900 |
| Initial S/W Revision | A.05.00 |

GSM 450

Selects GSM 450 as the active channel band.

| | |
|----------------------|---|
| Key Path | Source, Frequency, Radio Setup, Radio Standard, GSM/EDGE |
| Example | :SOUR:FREQ:CHAN:BAND GSM450 |
| Initial S/W Revision | A.05.00 |

GSM 480

Selects GSM 480 as the active channel band.

| | |
|----------------------|---|
| Key Path | Source, Frequency, Radio Setup, Radio Standard, GSM/EDGE |
| Example | :SOUR:FREQ:CHAN:BAND GSM480 |
| Initial S/W Revision | A.05.00 |

GSM 850

Selects GSM 850 as the active channel band.

| | |
|----------------------|---|
| Key Path | Source, Frequency, Radio Setup, Radio Standard, GSM/EDGE |
| Example | :SOUR:FREQ:CHAN:BAND GSM850 |
| Initial S/W Revision | A.05.00 |

GSM 700

Selects GSM 700 as the active channel band.

| | |
|----------------------|---|
| Key Path | Source, Frequency, Radio Setup, Radio Standard, GSM/EDGE |
| Example | :SOUR:FREQ:CHAN:BAND GSM700 |
| Initial S/W Revision | A.05.00 |

T-GSM 810

Selects T-GSM 810 as the active channel band.

| | |
|----------------------|---|
| Key Path | Source, Frequency, Radio Setup, Radio Standard, GSM/EDGE |
| Example | :SOUR:FREQ:CHAN:BAND T-GSM810 |
| Initial S/W Revision | A.05.00 |

WCDMA

Sets WCDMA as the radio standard for use and accesses the W-CDMA specific channel band sub-menus.

| | |
|----------------------|---|
| Key Path | Source, Frequency, Radio Setup, Radio Standard |
| Initial S/W Revision | A.05.00 |

Band I

Selects Band I as the active channel band.

| | |
|----------------------|--|
| Key Path | Source, Frequency, Radio Setup, Radio Standard, WCDMA |
| Example | :SOUR:FREQ:CHAN:BAND BANDI |
| Initial S/W Revision | A.05.00 |

Band II

Selects Band II as the active channel band.

| | |
|----------------------|--|
| Key Path | Source, Frequency, Radio Setup, Radio Standard, WCDMA |
| Example | :SOUR:FREQ:CHAN:BAND BANDII |
| Initial S/W Revision | A.05.00 |

Band III

Selects Band III as the active channel band.

| | |
|----------------------|--|
| Key Path | Source, Frequency, Radio Setup, Radio Standard, WCDMA |
| Example | :SOUR:FREQ:CHAN:BAND BANDIII |
| Initial S/W Revision | A.05.00 |

Band IV

Selects Band IV as the active channel band.

| | |
|----------------------|--|
| Key Path | Source, Frequency, Radio Setup, Radio Standard, WCDMA |
| Example | :SOUR:FREQ:CHAN:BAND BANDIV |
| Initial S/W Revision | A.05.00 |

Band V

Selects Band V as the active channel band.

| | |
|----------------------|--|
| Key Path | Source, Frequency, Radio Setup, Radio Standard, WCDMA |
| Example | :SOUR:FREQ:CHAN:BAND BANDV |
| Initial S/W Revision | A.05.00 |

Band VI

Selects Band VI as the active channel band.

| | |
|----------------------|--|
| Key Path | Source, Frequency, Radio Setup, Radio Standard, WCDMA |
| Example | :SOUR:FREQ:CHAN:BAND BANDVI |
| Initial S/W Revision | A.05.00 |

Band VII

Selects Band VII as the active channel band.

| | |
|----------------------|--|
| Key Path | Source, Frequency, Radio Setup, Radio Standard, WCDMA |
| Example | :SOUR:FREQ:CHAN:BAND BANDVII |
| Initial S/W Revision | A.05.00 |

Band VIII

Selects Band VIII as the active channel band.

| | |
|----------------------|--|
| Key Path | Source, Frequency, Radio Setup, Radio Standard, WCDMA |
| Example | :SOUR:FREQ:CHAN:BAND BANDVIII |
| Initial S/W Revision | A.05.00 |

Band IX

Selects Band IX as the active channel band.

| | |
|----------------------|--|
| Key Path | Source, Frequency, Radio Setup, Radio Standard, WCDMA |
| Example | :SOUR:FREQ:CHAN:BAND BANDIX |
| Initial S/W Revision | A.05.00 |

Band X

Selects Band X as the active channel band.

| | |
|----------------------|--|
| Key Path | Source, Frequency, Radio Setup, Radio Standard, WCDMA |
| Example | :SOUR:FREQ:CHAN:BAND BANDX |
| Initial S/W Revision | A.05.00 |

Band XI

Selects Band XI as the active channel band.

| | |
|----------------------|--|
| Key Path | Source, Frequency, Radio Setup, Radio Standard, WCDMA |
| Example | :SOUR:FREQ:CHAN:BAND BANDXI |
| Initial S/W Revision | A.05.00 |

Band XII

Selects Band XII as the active channel band.

| | |
|----------------------|--|
| Key Path | Source, Frequency, Radio Setup, Radio Standard, WCDMA |
| Example | :SOUR:FREQ:CHAN:BAND BANDXII |
| Initial S/W Revision | A.05.00 |

Band XIII

Selects band XIII as the active channel band.

| | |
|----------------------|--|
| Key Path | Source, Frequency, Radio Setup, Radio Standard, WCDMA |
| Example | :SOUR:FREQ:CHAN:BAND BANDXIII |
| Initial S/W Revision | A.05.00 |

Band XIV

Selects Band XIV as the active channel band.

| | |
|----------------------|--|
| Key Path | Source, Frequency, Radio Setup, Radio Standard, WCDMA |
| Example | :SOUR:FREQ:CHAN:BAND BANDXIV |
| Initial S/W Revision | A.05.00 |

CDMA 2000 / 1xEVDO

Sets CDMA 2000 / 1xEVDO as the radio standard for use and accesses the CDMA 2000/1xEVDO specific channel band sub-menus.

| | |
|----------------------|---|
| Key Path | Source, Frequency, Radio Setup, Radio Standard |
| Initial S/W Revision | A.05.00 |

US CELL

Selects US Cell as the active channel band.

| | |
|----------------------|---|
| Key Path | Source, Frequency, Radio Setup, Radio Standard, CDMA 2000 / 1xEVDO |
| Example | :SOUR:FREQ:CHAN:BAND USCELL |
| Initial S/W Revision | A.05.00 |

US PCS

Selects US PCS as the active channel band.

| | |
|----------------------|---|
| Key Path | Source, Frequency, Radio Setup, Radio Standard, CDMA 2000 / 1xEVDO |
| Example | :SOUR:FREQ:CHAN:BAND PCS |
| Initial S/W Revision | A.05.00 |

Japan Cell

Selects Japan Cell as the active channel band.

| | |
|----------------------|---|
| Key Path | Source, Frequency, Radio Setup, Radio Standard, CDMA 2000 / 1xEVDO |
| Example | :SOUR:FREQ:CHAN:BAND JAPAN |
| Initial S/W Revision | A.05.00 |

Korean PCS

Selects Korean PCS as the active channel band.

| | |
|----------------------|---|
| Key Path | Source, Frequency, Radio Setup, Radio Standard, CDMA 2000 / 1xEVDO |
| Example | :SOUR:FREQ:CHAN:BAND KOREAN |
| Initial S/W Revision | A.05.00 |

NMT 450

Selects NMT 450 as the active channel band.

| | |
|----------------------|---|
| Key Path | Source, Frequency, Radio Setup, Radio Standard, CDMA 2000 / 1xEVDO |
| Example | :SOUR:FREQ:CHAN:BAND NMT |
| Initial S/W Revision | A.05.00 |

IMT 2000

Selects IMT 2000 as the active channel band.

| | |
|----------------------|---|
| Key Path | Source, Frequency, Radio Setup, Radio Standard, CDMA 2000 / 1xEVDO |
| Example | :SOUR:FREQ:CHAN:BAND IMT2K |
| Initial S/W Revision | A.05.00 |

Upper 700

Selects Upper 700 as the active channel band.

| | |
|----------------------|---|
| Key Path | Source, Frequency, Radio Setup, Radio Standard, CDMA 2000 / 1xEVDO |
| Example | :SOUR:FREQ:CHAN:BAND UPPER |
| Initial S/W Revision | A.05.00 |

Secondary 800

Selects Secondary 800 as the active channel band.

| | |
|----------------------|---|
| Key Path | Source, Frequency, Radio Setup, Radio Standard, CDMA 2000 / 1xEVDO |
| Example | :SOUR:FREQ:CHAN:BAND SECOND |
| Initial S/W Revision | A.05.00 |

400 Euro PAMR

Selects 400 Euro PAMR as the active channel band.

| | |
|----------------------|---|
| Key Path | Source, Frequency, Radio Setup, Radio Standard, CDMA 2000 / 1xEVDO |
| Example | :SOUR:FREQ:CHAN:BAND PAMR400 |
| Initial S/W Revision | A.05.00 |

800 PAMR

Selects 800 PAMR as the active channel band.

| | |
|----------------------|---|
| Key Path | Source, Frequency, Radio Setup, Radio Standard, CDMA 2000 / 1xEVDO |
| Example | :SOUR:FREQ:CHAN:BAND PAMR800 |
| Initial S/W Revision | A.05.00 |

2.5GHz IMT EXT

Selects 2.5 GHz IMT EXT as the active channel band.

| | |
|----------------------|---|
| Key Path | Source, Frequency, Radio Setup, Radio Standard, CDMA 2000 / 1xEVDO |
| Example | :SOUR:FREQ:CHAN:BAND IMTEXT |
| Initial S/W Revision | A.05.00 |

US PCS 1.9GHz

Selects US PCS 1.9 GHz as the active channel band.

| | |
|----------------------|---|
| Key Path | Source, Frequency, Radio Setup, Radio Standard, CDMA 2000 / 1xEVDO |
| Example | :SOUR:FREQ:CHAN:BAND PCS1DOT9G |
| Initial S/W Revision | A.05.00 |

AWS

Selects AWS as the active channel band.

| | |
|----------------------|---|
| Key Path | Source, Frequency, Radio Setup, Radio Standard, CDMA 2000 / 1xEVDO |
| Example | :SOUR:FREQ:CHAN:BAND AWS |
| Initial S/W Revision | A.05.00 |

US 2.5GHz

Selects US 2.5 GHz as the active channel band.

| | |
|----------------------|---|
| Key Path | Source, Frequency, Radio Setup, Radio Standard, CDMA 2000 / 1xEVDO |
| Example | :SOUR:FREQ:CHAN:BAND US2DOT5G |
| Initial S/W Revision | A.05.00 |

700 Public Safety

Selects 700 Public Safety as the active channel band.

| | |
|----------------------|---|
| Key Path | Source, Frequency, Radio Setup, Radio Standard, CDMA 2000 / 1xEVDO |
| Example | :SOUR:FREQ:CHAN:BAND PUBLIC |
| Initial S/W Revision | A.05.00 |

C2K Lower 700

Selects C2K Lower 700 as the active channel band.

| | |
|----------------------|---|
| Key Path | Source, Frequency, Radio Setup, Radio Standard, CDMA 2000 / 1xEVDO |
| Example | :SOUR:FREQ:CHAN:BAND LOWER |
| Initial S/W Revision | A.05.00 |

LTE

Sets LTE FDD as the radio standard for use and accesses the LTE FDD specific channel band sub-menus..

| | |
|----------------------|---|
| Key Path | Source, Frequency, Radio Setup, Radio Standard |
| Initial S/W Revision | A.09.50 |

BAND 1

Selects BAND 1 as the band for the current step.

| | |
|----------------------|--|
| Key Path | Source, Frequency, Radio Setup, Radio Standard, LTE |
| Example | :SOUR:FREQ:CHAN:BAND BAND1 |
| Initial S/W Revision | A.09.50 |

BAND 2

Selects BAND 2 as the band for the current step.

| | |
|----------------------|--|
| Key Path | Source, Frequency, Radio Setup, Radio Standard, LTE |
| Example | :SOUR:FREQ:CHAN:BAND BAND2 |
| Initial S/W Revision | A.09.50 |

BAND 3

Selects BAND 3 as the band for the current step.

| | |
|----------------------|--|
| Key Path | Source, Frequency, Radio Setup, Radio Standard, LTE |
| Example | :SOUR:FREQ:CHAN:BAND BAND3 |
| Initial S/W Revision | A.09.50 |

BAND 4

Selects BAND 4 as the band for the current step.

| | |
|----------------------|--|
| Key Path | Source, Frequency, Radio Setup, Radio Standard, LTE |
| Example | :SOUR:FREQ:CHAN:BAND BAND4 |
| Initial S/W Revision | A.09.50 |

BAND 5

Selects BAND 5 as the band for the current step.

| | |
|----------|--|
| Key Path | Source, Frequency, Radio Setup, Radio Standard, LTE |
|----------|--|

| | |
|----------------------|----------------------------|
| Example | :SOUR:FREQ:CHAN:BAND BAND5 |
| Initial S/W Revision | A.09.50 |

BAND 6

Selects BAND 6 as the band for the current step.

| | |
|----------------------|--|
| Key Path | Source, Frequency, Radio Setup, Radio Standard, LTE |
| Example | :SOUR:FREQ:CHAN:BAND BAND6 |
| Initial S/W Revision | A.09.50 |

BAND 7

Selects BAND 7 as the band for the current step.

| | |
|----------------------|--|
| Key Path | Source, Frequency, Radio Setup, Radio Standard, LTE |
| Example | :SOUR:FREQ:CHAN:BAND BAND7 |
| Initial S/W Revision | A.09.50 |

BAND 8

Selects BAND 8 as the band for the current step.

| | |
|----------------------|--|
| Key Path | Source, Frequency, Radio Setup, Radio Standard, LTE |
| Example | :SOUR:FREQ:CHAN:BAND BAND8 |
| Initial S/W Revision | A.09.50 |

BAND 9

Selects BAND 9 as the band for the current step.

| | |
|----------------------|--|
| Key Path | Source, Frequency, Radio Setup, Radio Standard, LTE |
| Example | :SOUR:FREQ:CHAN:BAND BAND9 |
| Initial S/W Revision | A.09.50 |

BAND 10

Selects BAND 10 as the band for the current step.

| | |
|----------|--|
| Key Path | Source, Frequency, Radio Setup, Radio Standard, LTE |
|----------|--|

| | |
|----------------------|-----------------------------|
| Example | :SOUR:FREQ:CHAN:BAND BAND10 |
| Initial S/W Revision | A.09.50 |

BAND 11

Selects BAND 11 as the band for the current step.

| | |
|----------------------|--|
| Key Path | Source, Frequency, Radio Setup, Radio Standard, LTE |
| Example | :SOUR:FREQ:CHAN:BAND BAND11 |
| Initial S/W Revision | A.09.50 |

BAND 12

Selects BAND 12 as the band for the current step.

| | |
|----------------------|--|
| Key Path | Source, Frequency, Radio Setup, Radio Standard, LTE |
| Example | :SOUR:FREQ:CHAN:BAND BAND12 |
| Initial S/W Revision | A.09.50 |

BAND 13

Selects BAND 13 as the band for the current step.

| | |
|----------------------|--|
| Key Path | Source, Frequency, Radio Setup, Radio Standard, LTE |
| Example | :SOUR:FREQ:CHAN:BAND BAND13 |
| Initial S/W Revision | A.09.50 |

BAND 14

Selects BAND 14 as the band for the current step.

| | |
|----------------------|--|
| Key Path | Source, Frequency, Radio Setup, Radio Standard, LTE |
| Example | :SOUR:FREQ:CHAN:BAND BAND14 |
| Initial S/W Revision | A.09.50 |

BAND 17

Selects BAND 17 as the band for the current step.

| | |
|----------|--|
| Key Path | Source, Frequency, Radio Setup, Radio Standard, LTE |
|----------|--|

| | |
|----------------------|-----------------------------|
| Example | :SOUR:FREQ:CHAN:BAND BAND17 |
| Initial S/W Revision | A.09.50 |

BAND 18

Selects BAND 18 as the band for the current step.

| | |
|----------------------|--|
| Key Path | Source, Frequency, Radio Setup, Radio Standard, LTE |
| Example | :SOUR:FREQ:CHAN:BAND BAND18 |
| Initial S/W Revision | A.09.50 |

BAND 19

Selects BAND 19 as the band for the current step.

| | |
|----------------------|--|
| Key Path | Source, Frequency, Radio Setup, Radio Standard, LTE |
| Example | :SOUR:FREQ:CHAN:BAND BAND19 |
| Initial S/W Revision | A.09.50 |

BAND 20

Selects BAND 20 as the band for the current step.

| | |
|----------------------|--|
| Key Path | Source, Frequency, Radio Setup, Radio Standard, LTE |
| Example | :SOUR:FREQ:CHAN:BAND BAND20 |
| Initial S/W Revision | A.09.50 |

BAND 21

Selects BAND 21 as the band for the current step.

| | |
|----------------------|--|
| Key Path | Source, Frequency, Radio Setup, Radio Standard, LTE |
| Example | :SOUR:FREQ:CHAN:BAND BAND21 |
| Initial S/W Revision | A.09.50 |

BAND 24

Selects BAND 24 as the band for the current step.

| | |
|----------|--|
| Key Path | Source, Frequency, Radio Setup, Radio Standard, LTE |
|----------|--|

| | |
|----------------------|-----------------------------|
| Example | :SOUR:FREQ:CHAN:BAND BAND24 |
| Initial S/W Revision | A.09.50 |

BAND 25

Selects BAND 25 as the band for the current step.

| | |
|----------------------|--|
| Key Path | Source, Frequency, Radio Setup, Radio Standard, LTE |
| Example | :SOUR:FREQ:CHAN:BAND BAND25 |
| Initial S/W Revision | A.09.50 |

BAND 26

Selects BAND 26 as the band for the current step.

| | |
|----------------------|--|
| Key Path | Source, Frequency, Radio Setup, Radio Standard, LTE |
| Example | :SOUR:FREQ:CHAN:BAND BAND26 |
| Initial S/W Revision | A.12.53 |

BAND 27

Selects BAND 27 as the band for the current step.

| | |
|----------------------|--|
| Key Path | Source, Frequency, Radio Setup, Radio Standard, LTE |
| Example | :SOUR:FREQ:CHAN:BAND BAND27 |
| Initial S/W Revision | A.14.00 |

BAND 28

Selects BAND 28 as the band for the current step.

| | |
|----------------------|--|
| Key Path | Source, Frequency, Radio Setup, Radio Standard, LTE |
| Example | :SOUR:FREQ:CHAN:BAND BAND28 |
| Initial S/W Revision | A.14.00 |

BAND 31

Selects BAND 31 as the band for the current step.

| | |
|----------|--|
| Key Path | Source, Frequency, Radio Setup, Radio Standard, LTE |
|----------|--|

| | |
|----------------------|-----------------------------|
| Example | :SOUR:FREQ:CHAN:BAND BAND31 |
| Initial S/W Revision | A.14.00 |

LTE TDD

Sets LTE TDD as the radio standard for use and accesses the LTE TDD specific channel band sub-menus..

| | |
|----------------------|---|
| Key Path | Source, Frequency, Radio Setup, Radio Standard |
| Initial S/W Revision | A.11.50 |

BAND 33

Selects BAND 33 as the band for the current step.

| | |
|----------------------|--|
| Key Path | Source, Frequency, Radio Setup, Radio Standard, LTE TDD |
| Example | :SOUR:FREQ:CHAN:BAND BAND33 |
| Initial S/W Revision | A.11.50 |

BAND 34

Selects BAND 34 as the band for the current step.

| | |
|----------------------|--|
| Key Path | Source, Frequency, Radio Setup, Radio Standard, LTE TDD |
| Example | :SOUR:FREQ:CHAN:BAND BAND34 |
| Initial S/W Revision | A.11.50 |

BAND 35

Selects BAND 35 as the band for the current step.

| | |
|----------------------|--|
| Key Path | Source, Frequency, Radio Setup, Radio Standard, LTE TDD |
| Example | :SOUR:FREQ:CHAN:BAND BAND35 |
| Initial S/W Revision | A.11.50 |

BAND 36

Selects BAND 36 as the band for the current step.

| | |
|----------------------|--|
| Key Path | Source, Frequency, Radio Setup, Radio Standard, LTE TDD |
| Example | :SOUR:FREQ:CHAN:BAND BAND36 |
| Initial S/W Revision | A.11.50 |

BAND 37

Selects BAND 37 as the band for the current step.

| | |
|----------------------|--|
| Key Path | Source, Frequency, Radio Setup, Radio Standard, LTE TDD |
| Example | :SOUR:FREQ:CHAN:BAND BAND37 |
| Initial S/W Revision | A.11.50 |

BAND 38

Selects BAND 38 as the band for the current step.

| | |
|----------------------|--|
| Key Path | Source, Frequency, Radio Setup, Radio Standard, LTE TDD |
| Example | :SOUR:FREQ:CHAN:BAND BAND38 |
| Initial S/W Revision | A.11.50 |

BAND 39

Selects BAND 39 as the band for the current step.

| | |
|----------------------|--|
| Key Path | Source, Frequency, Radio Setup, Radio Standard, LTE TDD |
| Example | :SOUR:FREQ:CHAN:BAND BAND39 |
| Initial S/W Revision | A.11.50 |

BAND 40

Selects BAND 40 as the band for the current step.

| | |
|----------------------|--|
| Key Path | Source, Frequency, Radio Setup, Radio Standard, LTE TDD |
| Example | :SOUR:FREQ:CHAN:BAND BAND40 |
| Initial S/W Revision | A.11.50 |

BAND 41

Selects BAND 41 as the band for the current step.

| | |
|----------------------|--|
| Key Path | Source, Frequency, Radio Setup, Radio Standard, LTE TDD |
| Example | :SOUR:FREQ:CHAN:BAND BAND41 |
| Initial S/W Revision | A.11.50 |

BAND 42

Selects BAND 42 as the band for the current step.

| | |
|----------------------|--|
| Key Path | Source, Frequency, Radio Setup, Radio Standard, LTE TDD |
| Example | :SOUR:FREQ:CHAN:BAND BAND42 |
| Initial S/W Revision | A.11.50 |

BAND 43

Selects BAND 43 as the band for the current step.

| | |
|----------------------|--|
| Key Path | Source, Frequency, Radio Setup, Radio Standard, LTE TDD |
| Example | :SOUR:FREQ:CHAN:BAND BAND43 |
| Initial S/W Revision | A.11.50 |

BAND 44

Selects BAND 44 as the band for the current step.

| | |
|----------------------|--|
| Key Path | Source, Frequency, Radio Setup, Radio Standard, LTE TDD |
| Example | :SOUR:FREQ:CHAN:BAND BAND44 |
| Initial S/W Revision | A.14.00 |

TDSCDMA

Sets TDSCDMA as the radio standard for use and accesses the TDSCDMA specific channel band sub-menus..

| | |
|----------------------|---|
| Key Path | Source, Frequency, Radio Setup, Radio Standard |
| Initial S/W Revision | A.11.50 |

BAND A

Selects BAND A as the band for the current step.

| | |
|----------------------|--|
| Key Path | Source, Frequency, Radio Setup, Radio Standard, TDSCDMA |
| Example | :SOUR:FREQ:CHAN:BAND BANDA |
| Initial S/W Revision | A.11.50 |

BAND B

Selects BAND B as the band for the current step.

| | |
|----------------------|--|
| Key Path | Source, Frequency, Radio Setup, Radio Standard, TDSCDMA |
| Example | :SOUR:FREQ:CHAN:BAND BANDB |
| Initial S/W Revision | A.11.50 |

BAND C

Selects BAND C as the band for the current step.

| | |
|----------------------|--|
| Key Path | Source, Frequency, Radio Setup, Radio Standard, TDSCDMA |
| Example | :SOUR:FREQ:CHAN:BAND BANDC |
| Initial S/W Revision | A.11.50 |

BAND D

Selects BAND D as the band for the current step.

| | |
|----------------------|--|
| Key Path | Source, Frequency, Radio Setup, Radio Standard, TDSCDMA |
| Example | :SOUR:FREQ:CHAN:BAND BANDD |
| Initial S/W Revision | A.11.50 |

BAND E

Selects BAND E as the band for the current step.

| | |
|----------------------|--|
| Key Path | Source, Frequency, Radio Setup, Radio Standard, TDSCDMA |
| Example | :SOUR:FREQ:CHAN:BAND BANDE |
| Initial S/W Revision | A.11.50 |

BAND F

Selects BAND F as the band for the current step.

| | |
|----------------------|--|
| Key Path | Source, Frequency, Radio Setup, Radio Standard, TDSCDMA |
| Example | :SOUR:FREQ:CHAN:BAND BANDF |
| Initial S/W Revision | A.11.50 |

Radio Band Link

Allows you to specify the channel band type as either uplink or downlink link direction. This value is used in conjunction with the channel band and channel number to determine the absolute frequency output by the

source. When set to “Uplink”, the source will calculate the uplink frequency using an uplink formula together with the selected channel band and channel number . When set to “Downlink”, the source will calculate the downlink frequency using a downlink formula together with the selected channel band and channel number.

| | |
|--------------------------------------|---|
| Key Path | Source, Frequency, Radio Setup |
| Remote Command | :SOURce:RADio:BAND:LINK DOWN UP :SOURce:RADio:BAND:LINK? |
| Example | :SOUR:RAD:BAND:LINK UP |
| Preset | DOWN |
| Range | DOWN UP |
| Backwards Compatibility SCPI | :SOURce:RADio:DEVIce BTS MS :SOURce:RADio:DEVIce? |
| Backwards Compatibility Notes | BTS maps to the Downlink frequency MS maps to the Uplink frequency |
| Initial S/W Revision | A.05.00 |

Set Reference Frequency

This key allows you to set the frequency reference. Pressing this key turns the frequency reference state to ON, sets the reference frequency value to the current frequency, maintains this frequency at the RF output, and sets the displayed frequency to 0.00 Hz. All subsequent frequencies entered under Source>Frequency>Frequency are interpreted as being relative to this reference frequency.

When you use a frequency reference, the signal generator outputs a frequency that is set relative to the reference frequency by the value entered under Source>Frequency>Frequency as follows:

$$\text{Output frequency} = \text{reference frequency} - \text{entered frequency}$$

Where:

reference frequency equals the original RF frequency entered under Source>Frequency>Frequency and set as the reference frequency

entered frequency equals a new value entered under Source>Frequency>Frequency

In addition, the displayed frequency value will be the same as the value entered under Source>Frequency>Frequency.

NOTE

If Freq Reference is set to ON with a reference value set, entering a value under Source>Frequency>Frequency and pressing Set Frequency Reference will add that value to the existing Freq Reference value.

If you wish to change the reference frequency value to the new value entered under Source>Frequency>Frequency, first you must set Freq Reference to OFF and then press Set Frequency Reference.

| | |
|-----------------|--------------------------|
| Key Path | Source, Frequency |
|-----------------|--------------------------|

| | |
|-----------------------------|--|
| Remote Command | :SOURce:FREQuency:REFerence:SET |
| Example | :SOUR:FREQ:REF:SET |
| Dependencies | This setting is unavailable, and is grayed out when the List Sequencer is turned ON. |
| Initial S/W Revision | A.05.00 |

Freq Reference

This key allows you to toggle the state of the frequency reference. When the frequency reference state is ON, an annunciator is displayed on the main source view to indicate this state to the user.

When you use a frequency reference, the signal generator outputs a frequency that is set relative to the reference frequency by the value entered under Source>Frequency>Frequency as follows:

Output frequency = reference frequency + entered frequency

Where:

reference frequency equals the original RF frequency entered under Source>Frequency>Frequency and set as the reference frequency

entered frequency equals a new value entered under Source>Frequency>Frequency

For more information on Reference Frequency refer to ["Set Reference Frequency" on page 2532](#)

| Key Path | Source, Frequency |
|-----------------------------|--|
| Remote Command | :SOURce:FREQuency:REFerence <freq> :SOURce:FREQuency:REFerence? :SOURce:FREQuency:REFerence:STATe OFF ON 0 1 :SOURce:FREQuency:REFerence:STATe? |
| Example | :SOUR:FREQ:REF 0.00 Hz :SOUR:FREQ:REF:STATe ON |
| Dependencies | This setting is unavailable, and is grayed out when the List Sequencer is turned ON. |
| Couplings | The frequency reference state is coupled to the frequency reference set immediate action. When the reference set immediate action key is pressed, or the SCPI command issued, it turns the frequency reference state ON. |
| Preset | 0.00 Hz OFF |
| Min | 0.00 Hz |
| Max | Hardware Dependant: Option 503 = 3.6 GHz Option 504 = 3.8 GHz Option 506 = 6.00 GHz |
| Initial S/W Revision | A.05.00 |

Freq Offset

Allows you to specify the frequency offset value. When the frequency offset state is ON, an annunciator is displayed on the main source view to indicate this state to the user.

When the frequency offset is set to zero (0) and you set a new offset value, the displayed frequency value will change as follows and the RF output frequency will not change:

Displayed value = output frequency + offset value

Where:

output frequency equals the original frequency entered under Source > Frequency > Frequency

offset value equals the value entered under Source > Frequency > Freq Offset

When the frequency offset is set to a value other than zero (0) and you enter a new frequency value under Source > Frequency > Frequency, the displayed frequency will be the same as the value entered and the RF output frequency will be equal to the value entered minus the offset value as follows:

Output frequency = entered frequency – offset frequency

Displayed frequency = output frequency + offset frequency

Displayed frequency = entered frequency

Where:

entered frequency equals the frequency entered under Source > Frequency > Frequency

offset frequency equals the value previously entered and set under Source > Frequency > Freq Offset

| | |
|-----------------------------|--|
| Key Path | Source, Frequency |
| Remote Command | :SOURce:FREQuency:OFFSet <freq> :SOURce:FREQuency:OFFSet? |
| Example | :SOUR:FREQ:OFFS 0 Hz |
| Dependencies | This setting is unavailable, and is grayed out when the List Sequencer is turned ON. |
| Preset | 0 Hz |
| Min | -100.00 GHz |
| Max | 100.00 GHz |
| Initial S/W Revision | A.05.00 |

Modulation Setup

Allows access to the menus for setting up the available modulation types: "ARB" on page 2535, "AM" on page 2581, "FM" on page 2583, and "PM" on page 2584.

| | |
|-----------------------------|---------------|
| Key Path | Source |
| Initial S/W Revision | A.05.00 |

ARB

Allows you access to the ARB sub-menus.

| | |
|----------------------|---------------------------------|
| Key Path | Source, Modulation Setup |
| Initial S/W Revision | A.05.00 |

ARB

Allows you to toggle the state of the ARB function. When the ARB is On, a “MOD” annunciator is displayed in the system settings panel. When the ARB is turned Off, the MOD annunciator is cleared

| | |
|--------------------------|---|
| Key Path | Source, Modulation Setup, ARB |
| Remote Command | :SOURce:RADio:ARB[:STATe] ON OFF 1 0 :SOURce:RADio:ARB[:STATe]? |
| Example | :SOUR:RAD:ARB OFF :SOUR:RAD:ARB? |
| Notes | If the ARB is ON, a user then loads or deletes another file to ARB memory, the playing waveform segment may not keep phase continuity during the ARB memory operation. The waveform will be replayed after the ARB operation is finished. |
| Dependencies | This setting is for independent mode and has no effect on 3.3.8 list sequencer mode. Setting "Sequencer" on page 2586 Sequencer to On will put source enter list sequencer mode, and even if ARB state is On, the ARB file will not be played. Setting "Sequencer" on page 2586 Sequencer to Off will make source leave list sequencer mode, and this setting will take effect immediately. The ARB can only be turned on when there is a waveform file selected for playback. On the GUI If no waveform is selected, this key is grayed out. If you send the SCPI command to turn the ARB on with no waveform selected for playback, the ARB state remains OFF and an error is generated. "- When you try to recall a certain set of states in which the selected waveform is not in ARB memory and the ARB state is On, errors are reported |
| Couplings | If "Real-Time AWGN" on page 2546 AWGN State is On and this setting is On, "RF Power" on page 2500 RF Power will be adjusted to the value to maintain the AWGN power relationship defined by "Power Control Mode" on page 2547 Power Control Mode and other noise settings |
| Preset | Off |
| Range | On Off |
| Initial S/W Revision | A.05.00 |
| Modified at S/W Revision | A.16.00 (Add couplings with AWGN state) |

Select Waveform

Allows you to access to the waveform selection sub-menus.

Pressing this key changes the central view area to show the Waveform File Selection view.

| | |
|----------------------|--------------------------------------|
| Key Path | Source, Modulation Setup, ARB |
| Initial S/W Revision | A.05.00 |

Select Waveform

Allows you to select a waveform sequence or segment for the dual ARB to play.

| | |
|----------------------|---|
| Key Path | Source, Modulation Setup, ARB, Select Waveform |
| Remote Command | :SOURce:RADio:ARB:WAVeform <string> :SOURce:RADio:ARB:WAVeform? |
| Example | :SOUR:RAD:ARB:WAV "test_waveform.bin" |
| Notes | <p>If intended waveform is not in the memory yet, then issuing this command by SCPI will invoke ARB loading operation first, which involves a delay of unpredictable length. So this command should be followed by the query *OPC?, which holds off subsequent commands until the loading operating is complete.</p> <p><string> - specifies the name of the waveform segment or waveform sequence to be played by the ARB.</p> <p>When in Sequence Analyzer mode, and Include Source is Yes, if the you attempt to play a waveform sequence but not all the required waveform segments are in the ARB playback memory, the application will reject the loading operation with an error is generated .</p> <p>When Include Source is No, if you attempt to play a waveform sequence but not all the required waveform segments are contained in the ARB playback memory, the application will attempt to load the required segments from either the default directory of the current directory. If the ARB memory does not have enough space for all the waveform segments to be loaded, an error is generated and none of the waveform segments is loaded.</p> <p>If the ARB is ON, and you attampt to play a waveform sequence but not all the waveform segments within the sequence could be found to be loaded into ARB memory, an error is generated. The selected waveform keeps the previous value and ARB state remains On.</p> <p>If you specify a waveform segment over SCPI but the waveform segment is not present within ARB playback memory and cannot be found for auto loading within the current directory or the default directory, an error is generatedand the file selection remains unchanged.</p> <p>If you select a waveform for playback and the waveform requires a license that is not installed on the instrument, an error is generated.error is generated.</p> <p>If the ARB is ON and you load a file to ARB memory or delete a file from ARB memory, the playing waveform segment may not keep phase continuity during the ARB memory operation. The waveform will be replayed after the ARB operation is finished.</p> |
| Initial S/W Revision | A.05.00 |

Segments on Hard Disk

Allows you access to the sub-menus for loading waveform segments from the hard disk into ARB memory. The default directory is: D: varb.

Pressing this key changes the current view to the Waveform Management View.

| | |
|----------------------|---|
| Key Path | Source, Modulation Setup, ARB, Select Waveform |
| Initial S/W Revision | A.05.00 |

Load Segment To ARB Memory

Allows you to load the selected file into ARB memory. On the front panel you select the file for loading to the ARB memory by highlighting the desired file in the list. Using the SCPI command, you specify the file name on the HDD.

“NVWFM” (none-volatile storage) MSUS (Mass Storage Unit Specifier) is supported in the memory subsystem because the ARB memory cannot be accessed directly. Therefore, files must be downloaded to the instrument hard disk and then loaded into the ARB memory. “NVWFM” MSUS will be mapped to the default directory D: VARB. The SCPI command supports using either “NVWFM” MSUS or specifying a full path. For more information, see [Memory Subsystem \(Remote Command Only\)](#).

If a file of the same name already exists within ARB memory, it is overwritten. If you wish to load two segments of the same name, you must rename one of the segments before loading it into ARB memory. To rename a segment, you can either use Windows File Explorer, or the :MMEMory:COpy command.

| | |
|-----------------------|--|
| Key Path | Source, Modulation Setup, ARB, Select Waveform, Segments on Hard Disk |
| Remote Command | :SOURce:RADio:ARB:LOAD <string> |
| Example | :SOUR:RAD:ARB:LOAD "D: VARB\testwaveform.bin" or :SOUR:RAD:ARB:LOAD "NVWFM:testwaveform.bin" |
| Notes | <p>Because loading the file involves a delay of unpredictable length, this command should be followed by the query *OPC?, which holds off subsequent commands until the loading operating is complete.</p> <p><string> – specifies the path name of the file to load from the HDD into ARB memory. It could be a <full path + filename>, or <“NVWFM” MSUS + colon + filename>.</p> <p>When in Sequence Analyzer mode, and Include Source is Yes, an attempt to load a file to ARB memory will be rejected with an error.</p> <p>When Include Source is No and if there is insufficient free ARB memory to load the selected waveform, an error is generated. .</p> <p>If you specify a file over SCPI, but the file is not at the specified location, an error is generated.</p> <p>If you try to load a waveform file but the file contains less than 500 IQ samps, an error is generated.</p> <p>If you try to load a Signal Studio waveform “*.wfm” which contains invalid waveform header, an error is generated.</p> <p>If the ARB is ON when you load afile to ARB memory or delete a file from ARB memory, the playing waveform segment may not keep phase continuity during the ARB memory operation. The waveform will be replayed after the ARB operation is finished.</p> <p>ARB can be loaded into ARB memory even required licenses do not present on the instrument. In this</p> |

case, a GUI only warning message -800, "Operation complete; Loaded <filename> successfully, but no license <required licenses> installed". User can install required licenses according to <required licenses> string to license it, or multi-pack license it.

Initial S/W Revision A.05.00

Load All To ARB Memory

Allows you to load all the segment files within the currently selected directory into ARB memory. If a file of the same name already exists within ARB memory, it is overwritten. If you wish to load two segments of the same name, you must rename one of the segments before loading it into ARB memory. To rename a segment, you can either use Windows File Explorer, or the :MEMory:COPY command.

Key Path **Source, Modulation Setup, ARB, Select Waveform, Segments on Hard Disk**

Remote Command :SOURce:RADio:ARB:LOAD:ALL <string>

Example :SOUR:RAD:ARB:LOAD:ALL "D: varb"

Notes

<string> - specifies the directory on the HDD to load the files into ARB memory from.

When in Sequence Analyzer mode, and Include Source is Yes, an attempt to load all files from a directory to ARB memory is rejected with an error.

When Include Source is No and there is insufficient free ARB memory to load all the waveforms, when the ARB memory is full, the copy ceases, and an error is generated.

If you specify a directory over SCPI, but the directory does not exist, an error is generated.

If the ARB is ON, a user then loads or deletes file to ARB memory, the playing waveform segment may not keep phase continuity during the ARB memory operation. The waveform will be replayed after the ARB operation is finished.

Initial S/W Revision A.05.00

Change Directory...

Allows you to change the currently selected directory on the hard disk. Pressing this key opens a standard windows change directory dialog allowing you to select the new directory of interest.

The current directory is used for manually loading waveform segments into ARB memory for playback, and as a search location for waveform segments that are required to be loaded into ARB memory for playback of a waveform sequence or a list sequence.

Key Path **Source, Modulation Setup, ARB, Select Waveform, Segments on Hard Disk**

Notes No remote command, SCPIfront panel only.

Initial S/W Revision A.05.00

Default Directory...

Allows you to change the default directory. It is used as a search location for waveform segments that are required to be loaded into ARB memory for playback of a waveform sequence, and as a search location for

selecting waveforms using SCPI.

| | |
|----------------------|---|
| Key Path | Source, Modulation Setup, ARB, Select Waveform, Segments on Hard Disk |
| Remote Command | :SOURce:RADio:ARB:DEFault:DIRectory <string> :SOURce:RADio:ARB: DEFault:DIRectory? |
| Example | :SOUR:RAD:ARB:DEF:DIR "D:\ArbFiles" :SOUR:RAD:ARB:DEF:DIR? |
| State Saved | Persistent, survives a power cycle and a preset but not saved in the instrument state |
| Initial S/W Revision | A.05.00 |

Segments in ARB Memory

Allows you access to the sub-menus for managing the files within ARB memory.

| | |
|----------------------|---|
| Key Path | Source, Modulation Setup, ARB, Select Waveform |
| Initial S/W Revision | A.05.00 |

Delete Segment From ARB Mem

Allows you to remove a segment from ARB playback memory.

| | |
|----------------------|---|
| Key Path | Source, Modulation Setup, ARB, Select Waveform, Segments in ARB Memory |
| Remote Command | :SOURce:RADio:ARB:DELete <string> |
| Example | :SOUR:RAD:ARB:DEL "testwaveform.bin" |
| Notes | <p><string> - specifies the waveform to be deleted from the ARB playback memory.</p> <p>When in Sequence Analyzer mode and Include Source is Yes, an attempt to delete a file from ARB memory is rejected with an error.</p> <p>When Include Source is No and you specify a file that does not exist within ARB memory, an error is generated.</p> <p>It is possible to delete files from within the ARB memory when the ARB is ON. However, if you attempt to delete the file that is currently playing an error is generated.</p> <p>It is possible to delete a file from within the ARB memory when the sequencer state is ON and the file is not being used by the List Sequencer. If you attempt to delete a file which is being used by the list sequencer, an error is generated.</p> <p>When sequencer state is On, even if ARB state is On, the selected waveform will not be played. In this case, if the selected waveform is not used in List Sequence, it can be deleted and the ARB state is turned Off.</p> <p>If the ARB is ON and you load a file to ARB memory or delete a file from ARB memory, the playing waveform segment may not keep phase continuity during the ARB memory operation. The waveform will be replayed after the ARB operation is finished.</p> |
| Initial S/W Revision | A.05.00 |

Delete All From ARB Memory

Allows you to remove all segments from ARB playback memory.

| | |
|----------------------|--|
| Key Path | Source, Modulation Setup, ARB, Select Waveform, Segments in ARB Memory |
| Remote Command | :SOURce:RADio:ARB:DELeTe:ALL |
| Example | :SOUR:RAD:ARB:DELeTe:ALL |
| Notes | <p>When in Sequence Analyzer mode and Include Source is Yes, an attempt to delete all files from ARB memory is rejected with an error.</p> <p>When Include Source is No and you attempt to delete all files from ARB memory when the ARB is currently playing a file, all files except the one playing are deleted and an error is generated.</p> <p>If you attempt to delete all files from ARB memory when there are waveform files used in "List Sequencer" on page 2585 and "Sequencer" on page 2586 state is ON, all files except the files currently being used in list sequencer are deleted, and an error is generated.</p> <p>If the ARB is ON and you load a file to ARB memory or delete a file from ARB memory, the playing waveform segment may not keep phase continuity during the ARB memory operation. The waveform will be replayed after the ARB operation is finished.</p> |
| Initial S/W Revision | A.05.00 |

Query ARB Memory File List (Remote Command Only)

Queries the test set for the list of waveform segments in the ARB memory.

NOTE

This command returns a string for waveform segment names in ARB memory. If you want a string list of waveform segments in the ARB memory, use **"Query ARB Memory Full File List (Remote Command Only)" on page 2540**.

| | |
|----------------------|--|
| Remote Command | :SOURce:RADio:ARB:CATalog? |
| Example | :SOUR:RAD:ARB:CATalog? |
| Notes | <p>The return data is in the following format:</p> <p><integer> - memory used</p> <p><integer> - memory free</p> <p><string> ... - comma separated list of waveform segments within ARB memory</p> |
| Initial S/W Revision | A.05.00 |

Query ARB Memory Full File List (Remote Command Only)

Queries the test set for the string list of waveform segments in the ARB memory. It returns a string list for waveform segment names in the ARB memory.

| | |
|----------------|---|
| Remote Command | :SOURce:RADio:ARB:FCATalog? |
| Example | :SOUR:RAD:ARB:FCATalog? |
| Notes | <p>The return data is in the following format:</p> <p><integer> - memory used</p> |

| | |
|----------------------|--|
| | <p><integer> - memory free <integer> - file count in ARB memory <string>, <string>, ... <string> - comma separated string list of waveform segments within ARB memory Example: SOUR:RAD:ARB:FCAT? EXT returns: 27499,2069653,3,"c2k.wfm","gsm.wfm","wcdma.wfm"</p> |
| Initial S/W Revision | A.09.00 |

ARB Setup

Allows access to the ARB setup sub-menus.

| | |
|----------------------|--------------------------------------|
| Key Path | Source, Modulation Setup, ARB |
| Initial S/W Revision | A.05.00 |

Sample Rate

Allows you to set the ARB waveform playback sample rate.

| | |
|-----------------------|---|
| Key Path | Source, Modulation Setup, ARB, ARB Setup |
| Remote Command | :SOURce:RADio:ARB:SCLock:RATE <freq> :SOURce:RADio:ARB:SCLock:RATE? |
| Example | :SOUR:RAD:ARB:SCL:RATE 48.00 MHz |
| Notes | If there is a sample rate specified in the header of the waveform file, changing that sample rate is not recommended, as it may cause problems with burst timing. |
| Dependencies | When a new waveform is selected for playback the settings contained within the associated waveform header file are applied to the ARB. The sample rate is one of the values stored within the header file. If the newly selected waveform file has an associated header file, the sample rate is updated with the value from the header file. The sample rate will remain unchanged if the newly selected waveform does not have an associated header file. |
| Preset | 125.00 MHz |
| Min | 1.00 kHz |
| Max | 125.00 MHz |
| Initial S/W Revision | A.05.00 |

Run-Time Scaling

Allows you to adjust the run-time scaling value. The run-time scaling value is applied in real-time while the waveform is playing.

| | |
|----------|---|
| Key Path | Source, Modulation Setup, ARB, ARB Setup |
|----------|---|

| | |
|-----------------------------|--|
| Remote Command | :SOURce:RADio:ARB:RSCaling <real> :SOURce:RADio:ARB:RSCaling? |
| Example | :SOUR:RAD:ARB:RSC 100.00 |
| Dependencies | When a new waveform is selected for playback the settings contained within the associated waveform header file are applied to the ARB. The run-time scaling is one of the values stored within the header file. If the newly selected waveform file has an associated header file, the run-time scaling is updated with the value from the header file. The run-time scaling will remain unchanged if the newly selected waveform does not have an associated header file. |
| Preset | 70.00 % |
| Min | 1.00 % |
| Max | 100.00 % |
| Initial S/W Revision | A.05.00 |

Baseband Freq Offset

Allows you to adjust the value by which the baseband frequency is offset relative to the carrier.

| | |
|-----------------------------|---|
| Key Path | Source, Modulation Setup, ARB, ARB Setup |
| Remote Command | :SOURce:RADio:ARB:BASEband:FREQuency:OFFSet <freq> :SOURce:RADio:ARB:BASEband:FREQuency:OFFSet? |
| Example | :SOUR:RAD:ARB:BAS:FREQ:OFFS 0.00 Hz |
| Dependencies | When a new waveform is selected for playback the settings contained within the associated waveform header file are applied to the ARB. The baseband frequency offset is one of the values stored within the header file. If the newly selected waveform file has an associated header file, the baseband frequency offset is updated with the value from the header file. The baseband frequency offset will remain unchanged if the newly selected waveform does not have an associated header file. |
| Preset | 0.00 Hz |
| Min | -50.00 MHz |
| Max | 50.00 MHz |
| Initial S/W Revision | A.05.00 |

Edit RMS

Allows you to edit or calculate current RMS of selected waveform.

| | |
|-----------------------------|---|
| Key Path | Source, Modulation Setup, ARB, ARB Setup |
| Initial S/W Revision | A.14.50 |

Current RMS

Allows you to directly specify current RMS value used to playback currently selected waveform. Please note incorrect RMS value may cause inaccurate power output in E6640A that is sensitive to RMS value.

This setting is also updated by RMS in waveform header or updated when invoking RMS calculation operation.

This setting can be saved to the header of currently selected waveform by invoking ["Save Setup To Header" on page 2580](#) "Save Setup To Header".

| | |
|-----------------------------|---|
| Key Path | Source, Modulation Setup, ARB, ARB Setup, Edit RMS |
| Remote Command | :SOURce:RADio:ARB:RMS <float> :SOURce:RADio:ARB:RMS? |
| Example | :SOUR:RAD:ARB:HEAD:RMS 0.7 :SOUR:RAD:ARB:HEAD:RMS? |
| Notes | Valid range is 0 to 1.414, values outside the range will be clipped to the closest boundary. Note this value does not affect "List Sequencer" on page 2585 Source List Sequencer that always uses RMS value resides in each ARB header. If want this value to take effect in list sequencer, use "Save Setup To Header" on page 2580 "Save Setup to Header" to save current RMS value to header first, then play the ARB in source list sequencer. |
| Dependencies | When a new waveform is selected for playback, this setting is updated by the RMS value defined in associated waveform header file. If selected waveform has no associated header file or header file does not specify RMS value, then instrument will try to calculate out one automatically. Calculating RMS can also update this setting. |
| Preset | 0 |
| Range | 0 ~ 1.414 |
| Initial S/W Revision | A.14.50 |

RMS Calculation Mode

Allows you to specify the mode to calculate the current RMS.

| | |
|-----------------------------|--|
| Key Path | Source, Modulation Setup, ARB, ARB Setup, Edit RMS |
| Remote Command | :SOURce:RADio:ARB:RMS:CALCulation:MODE AUTO M1 M2 M3 M4 :SOURce:RADio:ARB:RMS:CALCulation:MODE? |
| Example | :SOUR:RAD:ARB:RMS:CALC:MODE AUTO |
| Notes | If no waveform is selected, or selected waveform is waveform sequence, the key will grey out. |
| Preset | AUTO |
| Range | AUTO M1 M2 M3 M4 |
| Initial S/W Revision | A.14.50 |

Auto

RMS will be calculated based on the whole sample range of current selected waveform.

| | |
|-----------------------------|--|
| Key Path | Source, Modulation Setup, ARB, ARB Setup, Edit RMS, Calculate RMS, RMS Calculation Mode |
| Example | :SOUR:RAD:ARB:RMS:CALC:MODE AUTO |
| Initial S/W Revision | A.14.50 |

Marker 1

Selects marker 1 to designate sample range used for RMS calculation.

| | |
|-----------------------------|---|
| Key Path | Source, Modulation Setup, ARB, ARB Setup, Edit RMS, Calculate RMS, RMS Calculation Mode , Marker |
| Example | :SOUR:RAD:ARB:RMS:CALC:MODE M1 |
| Initial S/W Revision | A.14.50 |

Marker 2

Selects marker 2 to designate sample range used for RMS calculation.

| | |
|-----------------------------|---|
| Key Path | Source, Modulation Setup, ARB, ARB Setup, Edit RMS, Calculate RMS, RMS Calculation Mode , Marker |
| Example | :SOUR:RAD:ARB:RMS:CALC:MODE M2 |
| Initial S/W Revision | A.14.50 |

Marker 3

Selects marker 3 to designate sample range used for RMS calculation.

| | |
|-----------------------------|---|
| Key Path | Source, Modulation Setup, ARB, ARB Setup, Edit RMS, Calculate RMS, RMS Calculation Mode , Marker |
| Example | :SOUR:RAD:ARB:RMS:CALC:MODE M3 |
| Initial S/W Revision | A.14.50 |

Marker 4

Selects marker 4 to designate sample range used for RMS calculation.

| | |
|-----------------------------|---|
| Key Path | Source, Modulation Setup, ARB, ARB Setup, Edit RMS, Calculate RMS, RMS Calculation Mode , Marker |
| Example | :SOUR:RAD:ARB:RMS:CALC:MODE M4 |
| Initial S/W Revision | A.14.50 |

Calculate RMS

Allows you to calculate current RMS based on mode selected. This will update ["Current RMS" on page 2543](#) Current RMS setting.

| | |
|----------------------|--|
| Key Path | Source, Modulation Setup, ARB, ARB Setup, Edit RMS, Calculate RMS |
| Remote Command | :SOURce:RADio:ARB:RMS:CALCulate |
| Example | :SOUR:RAD:ARB:RMS:CALC |
| Notes | <p>If no waveform is selected, invoking this operation will get error “-221 Setting conflict; No waveform is selected for RMS operation”.</p> <p>If no waveform is selected, or selected waveform is waveform sequence, the key will grey out.</p> <p>If selected waveform does not contain marker data, but "RMS Calculation Mode" on page 2543 “RMS Calculation Mode” is set to marker, under this circumstance, invoking calculation operation will get error “-221 Setting conflict; There is no marker for currently selected waveform, auto RMS calculation mode is used instead”, and "RMS Calculation Mode" on page 2543 “RMS Calculation Mode” will be coupled to “Auto” mode automatically.</p> <p>RMS calculation does not suit for waveform sequence. If selected waveform is waveform sequence file, invoking this operation will get error “-221 Setting conflict; RMS calculation does not apply to waveform sequence”. But users can still edit current RMS as play parameter, and can save current RMS to waveform sequence header for later use.</p> |
| Initial S/W Revision | A.14.50 |

Use Header RMS

Allows you to quickly set RMS in ARB header to ["Current RMS" on page 2543](#) Current RMS setting.

| | |
|----------------------|---|
| Key Path | Source, Modulation Setup, ARB, ARB Setup, Edit RMS, |
| Notes | <p>No remote command, front panel only.</p> <p>If no waveform is selected, the key will grey out.</p> <p>If no waveform is selected, invoking this operation will get error “-221 Setting conflict; No waveform is selected for RMS operation”.</p> |
| Initial S/W Revision | A.14.50 |

Real-Time AWGN Setup

The source allows you to apply additive white Gaussian noise (AWGN) to a carrier in real time while the modulating waveform plays in the dual ARB player. Pressing this key allows access to the real time AWGN sub-menus and changes the central display area to show the AWGN Setup view.

This feature is controlled by E6650A-AW1 option

| | |
|----------------------|--|
| Key Path | Source, Modulation Setup, ARB, ARB Setup |
| Notes | This menu only appears and related SCPIs are only available when E6650A-AW1 option presents. |
| Initial S/W Revision | A.16.00 |

Real-Time AWGN

Allows you to enable or disable adding real-time AWGN to the carrier modulated by the waveform currently being played by the dual ARB.

| | |
|-----------------------------|--|
| Key Path | Source, Modulation Setup, ARB, ARB Setup, Real-Time AWGN Setup |
| Remote Command | :SOURce:RADio:ARB:NOISe[:STATe] ON OFF 1 0 :SOURce:RADio:ARB:NOISe[:STATe]? |
| Example | :SOUR:RAD:ARB:NOIS OFF |
| Dependencies | When a new waveform is selected for playback the settings contained within the associated waveform header file are applied to the ARB. The AWGN state is one of the values stored within the header file. If the newly selected waveform file has an associated header file, the AWGN state is updated with the value from the header file. The AWGN state will remain unchanged if the newly selected waveform does not have an associated header file. |
| Couplings | If this setting is On and "ARB" on page 2535 ARB State is On, "RF Power" on page 2500 RF Power will be adjusted to the value to maintain the AWGN power relationship defined by "Power Control Mode" on page 2547 Power Control Mode and other noise settings |
| Preset | Off |
| Range | On Off |
| Initial S/W Revision | A.16.00 |

Carrier To Noise Ratio

Allows you to specify the carrier to noise ratio (C/N) in dB. The carrier power is defined as the total modulated signal power without noise power added. The noise power is applied over the specified bandwidth of the carrier signal.

| | |
|-----------------------------|--|
| Key Path | Source, Modulation Setup, ARB, ARB Setup, Real-Time AWGN Setup |
| Remote Command | :SOURce:RADio:ARB:NOISe:CN <ampl> :SOURce:RADio:ARB:NOISe:CN? |
| Example | :SOUR:RAD:ARB:NOIS:CN 0.00 dB |
| Dependencies | When a new waveform is selected for playback the settings contained within the associated waveform header file are applied to the ARB. The AWGN C/N ratio is one of the values stored within the header file. If the newly selected waveform file has an associated header file, the AWGN C/N ratio is updated with the value from the header file. The AWGN C/N ratio will remain unchanged if the newly selected waveform does not have an associated header file. |
| Preset | 0.00 dB |
| Min | -100.00 dB |
| Max | 100.00 dB |
| Initial S/W Revision | A.16.00 |

Carrier Bandwidth

Allows you to specify the bandwidth over which the AWGN is applied. The carrier RMS power and the noise power are integrated over the selected carrier bandwidth for the purpose of calculating carrier to noise ratio (C/N).

| | |
|-----------------------------|--|
| Key Path | Source, Modulation Setup, ARB, ARB Setup, Real-Time AWGN Setup |
| Remote Command | :SOURCE:RADio:ARB:NOISe:CBWidth <freq> :SOURCE:RADio:ARB:NOISe:CBWidth? |
| Example | :SOUR:RAD:ARB:NOIS:CBW 1.00 Hz |
| Dependencies | When a new waveform is selected for playback the settings contained within the associated waveform header file are applied to the ARB. The AWGN carrier bandwidth is one of the values stored within the header file. If the newly selected waveform file has an associated header file, the AWGN carrier bandwidth is updated with the value from the header file. The AWGN carrier bandwidth will remain unchanged if the newly selected waveform does not have an associated header file. |
| Min | 1.00 Hz |
| Max | 200.00 MHz |
| Initial S/W Revision | A.16.00 |

Noise Bandwidth

Allows you to specify the flat noise bandwidth of the real-time noise for an ARB waveform.

| | |
|-----------------------------|--|
| Key Path | Source, Modulation Setup, ARB, ARB Setup, Real-Time AWGN Setup |
| Remote Command | :SOURCE:RADio:ARB:NOISe:BANDwidth <freq> :SOURCE:RADio:ARB:NOISe:BANDwidth? |
| Example | :SOUR:RAD:ARB:NOIS:BAND 1.00 Hz |
| Notes | Generally, flat noise bandwidth should be set slightly wider than the carrier bandwidth (typically 1.6 times wider) |
| Notes | Max Noise Bandwidth equals $0.8 * \text{Maximum ARB Sample Rate}$ reported in HW capability |
| Dependencies | When a new waveform is selected for playback the settings contained within the associated waveform header file are applied to the ARB. The AWGN carrier bandwidth is one of the values stored within the header file. If the newly selected waveform file has an associated header file, the AWGN carrier bandwidth is updated with the value from the header file. The AWGN carrier bandwidth will remain unchanged if the newly selected waveform does not have an associated header file. |
| Preset | 1.00 Hz |
| Min | 1.00 Hz |
| Max | 160.00 MHz |
| Initial S/W Revision | A.16.00 |

Power Control Mode

This setting offers four ways to control the RF output power when adding AWGN to a signal.

| | |
|----------------------|---|
| Key Path | Source, Modulation Setup, ARB, ARB Setup, Real-Time AWGN Setup |
| Remote Command | :SOURce:RADio:ARB:NOISe:POWer:CONTRol[:MODE] TOTal CARRier NOISe NCHannel :SOURce:RADio:ARB:NOISe: POWer:CONTRol[:MODE]? |
| Example | :SOUR:RAD:ARB:NOIS:POW:CONT NCHannel :SOUR:RAD:ARB:NOIS:POW:CONT? |
| Preset | TOTal |
| Range | Total Power Carrier Power Total Noise Power Noise Power in Channel |
| Initial S/W Revision | A.16.00 |

Total

Set the power control mode as total power.

| | |
|----------------------|---|
| Key Path | Source, Modulation Setup, ARB, ARB Setup, Real-Time AWGN Setup, Power Control Mode |
| Example | :SOUR:RAD:ARB:NOIS:POW:CONT TOTal |
| Couplings | Set to this value will make Carrier Power Carrier Power, Total Noise Power Total Noise Power, and Channel Noise Power Channel Noise Power buttons invisible on menu. Selecting Total as the power control mode makes the total power and C/N independent variables while making the carrier power and total noise power dependent variables. The dependent variables carrier power and total noise power are set by the total power, C/N, and the rest of the Noise settings. The carrier power and total noise power change as any noise parameter is adjusted to keep the total power and the C/N at their last specified values. |
| Initial S/W Revision | A.16.00 |

Carrier

Set the power control mode as carrier power.

| | |
|----------------------|---|
| Key Path | Source, Modulation Setup, ARB, ARB Setup, Real-Time AWGN Setup, Power Control Mode |
| Example | :SOUR:RAD:ARB:NOIS:POW:CONT CARRier |
| Couplings | Set to this value will make Carrier Power Carrier Power button visible, while Total Noise Power Total Noise Power and Channel Noise Power Channel Noise Power buttons invisible from menu. Selecting Carrier as the power control mode makes the carrier power and C/N independent variables while making the total power and total noise power dependent variables. The dependent variables total power and total noise power are set by the carrier power, C/N, and the rest of the Noise settings. The total power and total noise power change as any noise parameter is adjusted to keep the carrier power and the C/N at their last specified values. |
| Initial S/W Revision | A.16.00 |

Total Noise

Set the power control mode as total noise power.

| | |
|----------------------|---|
| Key Path | Source, Modulation Setup, ARB, ARB Setup, Real-Time AWGN Setup, Power Control Mode |
| Example | :SOUR:RAD:ARB:NOIS:POW:CONT NOISe |
| Couplings | Set to this value will make Total Noise Power Total Noise Power button visible, while Carrier Power Carrier Power and Channel Noise Power Channel Noise Power buttons invisible from menu. Selecting Total Noise as the power control mode makes the total noise power and C/N independent variables while making the total power and carrier power dependent variables. The dependent variables total power and carrier power are set by the total noise power, C/N, and the rest of the Noise settings. The total power and carrier power change as any noise parameter is adjusted to keep the total noise power and the C/N at their last specified values. |
| Initial S/W Revision | A.16.00 |

Channel Noise

Set the power control mode as channel noise power.

| | |
|----------------------|--|
| Key Path | Source, Modulation Setup, ARB, ARB Setup, Real-Time AWGN Setup, Power Control Mode |
| Example | :SOUR:RAD:ARB:NOIS:POW:CONT NChannel |
| Couplings | Set to this value will make Channel Noise Power Channel Noise Power button visible, while Total Noise Power Total Noise Power and Carrier Power Carrier Power buttons invisible from menu. Selecting Channel Noise as the power control mode makes the noise power in channel and C/N independent variables while making the carrier power and total noise power dependent variables. The dependent variables carrier power and total noise power are set by the channel noise power, C/N, and the rest of the Noise settings. The carrier power and total noise power change as any noise parameter is adjusted to keep the channel noise power and the C/N at their last specified values. |
| Initial S/W Revision | A.16.00 |

Trigger Type

Allows access to the trigger type sub-menus. The setting for trigger type determines the behavior of the waveform when it plays.

| | |
|-----------------------|--|
| Key Path | Source, Modulation Setup, ARB |
| Remote Command | :SOURce:RADio:ARB:TRIGger:TYPE CONTInuous SINGle SADVance :SOURce:RADio:ARB:TRIGger:TYPE? |
| Example | :SOUR:RAD:ARB:TRIG:TYPE CONT :SOUR:RAD:ARB:TRIG:TYPE? |
| Notes | Gated trigger type will be implemented at a later release |
| Preset | CONTInuous |
| Range | Continuous Single Seg Adv |
| Initial S/W Revision | A.05.00 |

Continuous

Sets the active trigger type to Continuous. If Continuous is already selected as the active trigger type, pressing this key allows access to the continuous trigger type setup menu. In Continuous trigger mode, the waveform repeats continuously.

| | |
|-----------------------------|--|
| Key Path | Source, Modulation Setup, ARB, Trigger Type |
| Remote Command | :SOURce:RADio:ARB:TRIGger:TYPE:CONTinuous[:TYPE] FREE TRIGger RESet :SOURce:RADio:ARB:TRIGger:TYPE:CONTinuous[:TYPE]? |
| Example | :SOUR:RAD:ARB:TRIG:TYPE:CONT FREE |
| Preset | FREE |
| Range | Free Run Trigger + Run Reset + Run |
| Initial S/W Revision | A.05.00 |

Free Run

Selects Free Run as the trigger response for the continuous trigger type. Free Run sets the waveform generator to play a waveform sequence or segment continuously, without waiting for a trigger. In this mode, the waveform generator does not respond to triggers.

| | |
|-----------------------------|--|
| Key Path | Source, Modulation Setup, ARB, Trigger Type, Continuous |
| Example | :SOUR:RAD:ARB:TRIG:TYPE:CONT FREE |
| Initial S/W Revision | A.05.00 |

Trigger + Run

Sets Trigger and Run as the trigger response for the continuous trigger type. Trigger and Run sets the waveform generator to play a waveform sequence or segment continuously when the first trigger is received, and to ignore any subsequent triggers.

| | |
|-----------------------------|--|
| Key Path | Source, Modulation Setup, ARB, Trigger Type, Continuous |
| Example | :SOUR:RAD:ARB:TRIG:TYPE:CONT TRIG |
| Initial S/W Revision | A.05.00 |

Reset + Run

Sets Reset and Run as the trigger response for the continuous trigger type. Reset and Run sets the waveform generator to play a waveform sequence or segment continuously when the first trigger is received. Subsequent triggers reset the waveform sequence or segment to the start, and then play it continuously.

| | |
|-----------------------------|--|
| Key Path | Source, Modulation Setup, ARB, Trigger Type, Continuous |
| Example | :SOUR:RAD:ARB:TRIG:TYPE:CONT RES |
| Initial S/W Revision | A.05.00 |

Single

Sets the active trigger type to Single. If Single is already selected as the active trigger type, pressing this key allows access to the single trigger type setup menu. In Single trigger mode, the waveform plays once.

| | |
|-----------------------------|--|
| Key Path | Source, Modulation Setup, ARB, Trigger Type |
| Remote Command | :SOURce:RADio:ARB:RETRigger ON OFF IMMediate :SOURce:RADio:ARB:RETRigger? |
| Example | :SOUR:RAD:ARB:RETR OFF |
| Notes | ON: Buffered Trigger OFF: No Retrigger Immediate: Restart on Trigger This is defined as an enumerated SCPI command, with ON OFF being considered as enumerated types rather than Boolean. This means the query will return OFF instead of 0, and ON instead of 1. |
| Preset | ON |
| Range | No Retrigger Buffered Trigger Restart on Trigger |
| Initial S/W Revision | A.05.00 |

No Retrigger

Selects No Retrigger as the trigger response for single trigger type. No Retrigger sets the waveform generator to play a waveform sequence or segment once when a trigger is received. Any triggers then received during playback are ignored.

| | |
|-----------------------------|--|
| Key Path | Source, Modulation Setup, ARB, Trigger Type, Single |
| Example | :SOUR:RAD:ARB:RETR OFF |
| Initial S/W Revision | A.05.00 |

Buffered Trigger

Selects Buffered Trigger as the trigger response for single trigger type. Buffered Trigger sets the waveform generator to play a waveform sequence or segment once when a trigger is received. If a trigger is received during playback, the waveform generator plays the sequence or segment to the end, then plays the sequence or segment once more.

| | |
|-----------------------------|--|
| Key Path | Source, Modulation Setup, ARB, Trigger Type, Single |
| Example | :SOUR:RAD:ARB:RETR ON |
| Initial S/W Revision | A.05.00 |

Restart on Trigger

Selects Restart on Trigger as the trigger response for single trigger type. Restart on Trigger sets the waveform generator to play a waveform sequence or segment once when a trigger is received. If a trigger is received during playback, the waveform generator resets and plays the sequence or segment from the start.

| | |
|-----------------------------|--|
| Key Path | Source, Modulation Setup, ARB, Trigger Type, Single |
| Example | :SOUR:RAD:ARB:RETR IMM |
| Initial S/W Revision | A.05.00 |

Segment Advance

Sets the active trigger type to Segment Advance. If Segment Advance is already selected as the active trigger type, pressing this key allows access to the segment advance trigger type setup menu.

Segment Advance triggering allows you to control the playback of waveform segments within a waveform sequence. When a trigger is received the ARB advances to the next waveform segment within the waveform sequence. This type of triggering ignores the repetition count for the waveform segment within the waveform sequence. For example, if a waveform segment has a repetition count of 10 and you select single segment advance triggering mode, the waveform segment will only play once.

Segment Advance triggering can also be used for waveform segments only. In this situation the same waveform segment is played again when a trigger is received.

| | |
|-----------------------------|---|
| Key Path | Source, Modulation Setup, ARB, Trigger Type |
| Remote Command | :SOURce:RADio:ARB:TRIGger:TYPE:SADVance[:TYPE] SINGLE CONTInuous :SOURce:RADio:ARB:TRIGger:TYPE:SADVance[:TYPE]? |
| Example | :SOUR:RAD:ARB:TRIG:TYPE:SADV SING |
| Preset | CONTInuous |
| Range | Single Continuous |
| Initial S/W Revision | A.05.00 |

Single

Selects Single as the trigger response for Segment Advance trigger type. With single selected, once a trigger is received a segment is played once. If a trigger is received during playback of a segment, the segment plays to completion and the next segment is played once.

| | |
|-----------------------------|---|
| Key Path | Source, Modulation Setup, ARB, Trigger Type, Segment Advance |
| Example | :SOUR:RAD:ARB:TRIG:TYPE:SADV SING |
| Initial S/W Revision | A.05.00 |

Continuous

Selects Continuous as the trigger response for Segment Advance trigger type. With continuous selected, once a trigger is received a segment is played continuously. When subsequent triggers are received, the currently playing segment plays to completion and then the next segment is played continuously.

| | |
|----------------------|---|
| Key Path | Source, Modulation Setup, ARB, Trigger Type, Segment Advance |
| Example | :SOUR:RAD:ARB:TRIG:TYPE:SADV CONT |
| Initial S/W Revision | A.05.00 |

Trigger Source

The trigger source setting determines how the source receives the trigger that starts the waveform playing. Therefore, this key is grayed out if the trigger type is free run, since free run triggers immediately with no trigger source required.

| | |
|-----------------------|---|
| Key Path | Source, Modulation Setup, ARB |
| Remote Command | :SOURce:RADio:ARB:TRIGger[:SOURce] KEY BUS EXTernal2 :SOURce:RADio:ARB:TRIGger[:SOURce]? |
| Example | :SOUR:RAD:ARB:TRIGger KEY |
| Dependencies | This key is grayed out if the current trigger type is Continuous, Free Run. |
| Preset | EXTernal2 |
| Range | Trigger Key Bus External 2 |
| Initial S/W Revision | A.05.00 |

Trigger Key

Sets the current trigger source to the front panel Trigger key. When Trigger Key is selected, the waveform is triggered when you press the front panel Trigger key.

| | |
|----------------------|--|
| Key Path | Source, Modulation Setup, ARB, Trigger Source |
| Example | :SOUR:RAD:ARB:TRIGger KEY |
| Initial S/W Revision | A.05.00 |

Bus

Sets the current trigger source to Bus. Selecting Bus trigger source enables triggering over GPIB, LAN, or USB using the :SOURce:RADio:ARB:TRIGger:INITiate command.

| | |
|----------------------|--|
| Key Path | Source, Modulation Setup, ARB, Trigger Source |
| Example | :SOUR:RAD:ARB:TRIGger BUS |
| Initial S/W Revision | A.05.00 |

External 2

Sets the current trigger source to External 2. Selecting External 2 enables triggering a waveform by an externally applied signal.

| | |
|----------------------|--|
| Key Path | Source, Modulation Setup, ARB, Trigger Source |
| Example | :SOUR:RAD:ARB:TRIGger EXT2 |
| Notes | Note: When on E6640A, trigger 2 is a bi-directional trigger port. So when trigger 2 has been configured as OUTPUT type, choosing External 2 as the input trigger for the current step will generate error. |
| Initial S/W Revision | A.05.00 |

Trigger Initiate

Used to initiate an immediate trigger event if the trigger source is set to Trigger Key.

| | |
|----------------------|---|
| Key Path | Source, Modulation Setup, ARB |
| Notes | No remote command, SCPI front panel only. |
| Initial S/W Revision | A.05.00 |

Waveform Sequences

Allows access to the waveform sequence sub-menus. Pressing this key changes the central view area to display the Waveform Sequence List view.

| | |
|----------------------|---|
| Key Path | Source, Modulation Setup, ARB |
| Notes | No remote command, SCPI front panel only. |
| Initial S/W Revision | A.05.00 |

Build New Sequence

Allows access to the sub-menus for creating a new waveform sequence. Pressing this key changes the central view area to display the Waveform Sequence Creation and Editing view.

| | |
|----------------------|--|
| Key Path | Source, Modulation Setup, ARB, Waveform Sequences |
| Notes | No remote command, SCPI front panel only. |
| Initial S/W Revision | A.05.00 |

Current Segment

Specifies the selected sequence segment that will be affected by the menu functions.

| | |
|----------------------|---|
| Key Path | Source, Modulation Setup , ARB, Waveform Sequences, Build New Sequence |
| Notes | No remote command, SCPI front panel only. This key is grayed out and unavailable if the sequence is currently empty. |
| Initial S/W Revision | A.05.00 |

Insert New Waveform

Allows you access to the sub-menu for inserting a new waveform segment or sequence. Pressing this key also changes the central display to show the Waveform File Selection View.

| | |
|----------------------|---|
| Key Path | Source, Modulation Setup, ARB, Waveform Sequences, Build New Sequence |
| Notes | No remote command, SCPI front panel only. Waveform segment name string length upper limit is 128 chars. Please do NOT insert waveform which name string exceeds 128 chars. |
| Initial S/W Revision | A.05.00 |

Insert Waveform

Inserts the currently highlighted waveform to the end of the waveform sequence. Pressing this key also returns you to the menus for creating or editing a sequence, and returns the central view to the sequence creation view.

| | |
|----------------------|---|
| Key Path | Source, Modulation Setup, ARB, Waveform Sequences, Build New Sequence, Insert New Waveform |
| Notes | No remote command, SCPI front panel only. Waveform segment name string length upper limit is 128 chars. Please do NOT insert waveform which name string exceeds 128 chars. |
| Initial S/W Revision | A.05.00 |

Segments on Hard Disk

Allows you access to the sub-menus for loading waveform segments from the hard disk into ARB memory. The default directory is: D: varb.

Pressing this key changes the current view to the Waveform Management View.

| | |
|----------------------|---|
| Key Path | Source, Modulation Setup, ARB, Select Waveform |
| Initial S/W Revision | A.05.00 |

Load Segment To ARB Memory

Allows you to load the selected file into ARB memory. On the front panel you select the file for loading to the ARB memory by highlighting the desired file in the list. Using the SCPI command, you specify the file name on the HDD.

“NVWFM” (none-volatile storage) MSUS (Mass Storage Unit Specifier) is supported in the memory subsystem because the ARB memory cannot be accessed directly. Therefore, files must be downloaded to the instrument hard disk and then loaded into the ARB memory. “NVWFM” MSUS will be mapped to the default directory D: VARB. The SCPI command supports using either “NVWFM” MSUS or specifying a full path. For more information, see [Memory Subsystem \(Remote Command Only\)](#).

If a file of the same name already exists within ARB memory, it is overwritten. If you wish to load two segments of the same name, you must rename one of the segments before loading it into ARB memory. To rename a segment, you can either use Windows File Explorer, or the :MMEMory:COPI command.

| | |
|-----------------------------|--|
| Key Path | Source, Modulation Setup, ARB, Select Waveform, Segments on Hard Disk |
| Remote Command | :SOURce:RADio:ARB:LOAD <string> |
| Example | :SOUR:RAD:ARB:LOAD "D: VARB\testwaveform.bin" or :SOUR:RAD:ARB:LOAD "NVWFM:testwaveform.bin" |
| Notes | <p>Because loading the file involves a delay of unpredictable length, this command should be followed by the query *OPC?, which holds off subsequent commands until the loading operating is complete.</p> <p><string> – specifies the path name of the file to load from the HDD into ARB memory. It could be a <full path + filename>, or <"NVWFM" MSUS + colon + filename>.</p> <p>When in Sequence Analyzer mode, and Include Source is Yes, an attempt to load a file to ARB memory will be rejected with an error.</p> <p>When Include Source is No and if there is insufficient free ARB memory to load the selected waveform, an error is generated. .</p> <p>If you specify a file over SCPI, but the file is not at the specified location, an error is generated.</p> <p>If you try to load a waveform file but the file contains less than 500 IQ samples, an error is generated.</p> <p>If you try to load a Signal Studio waveform "*.wfm" which contains invalid waveform header, an error is generated.</p> <p>If the ARB is ON when you load a file to ARB memory or delete a file from ARB memory, the playing waveform segment may not keep phase continuity during the ARB memory operation. The waveform will be replayed after the ARB operation is finished.</p> <p>ARB can be loaded into ARB memory even required licenses do not present on the instrument. In this case, a GUI only warning message –800, "Operation complete; Loaded <filename> successfully, but no license <required licenses> installed". User can install required licenses according to <required licenses> string to license it, or multi-pack license it.</p> |
| Initial S/W Revision | A.05.00 |

Load All To ARB Memory

Allows you to load all the segment files within the currently selected directory into ARB memory. If a file of the same name already exists within ARB memory, it is overwritten. If you wish to load two segments of the

same name, you must rename one of the segments before loading it into ARB memory. To rename a segment, you can either use Windows File Explorer, or the :MEMory:COpy command.

| | |
|----------------------|---|
| Key Path | Source, Modulation Setup, ARB, Select Waveform, Segments on Hard Disk |
| Remote Command | :SOURce:RADio:ARB:LOAD:ALL <string> |
| Example | :SOUR:RAD:ARB:LOAD:ALL "D: varb" |
| Notes | <p><string> - specifies the directory on the HDD to load the files into ARB memory from.</p> <p>When in Sequence Analyzer mode, and Include Source is Yes, an attempt to load all files from a directory to ARB memory is rejected with an error.</p> <p>When Include Source is No and there is insufficient free ARB memory to load all the waveforms, when the ARB memory is full, the copy ceases, and an error is generated.</p> <p>If you specify a directory over SCPI, but the directory does not exist, an error is generated.</p> <p>If the ARB is ON, a user then loads or deletes file to ARB memory, the playing waveform segment may not keep phase continuity during the ARB memory operation. The waveform will be replayed after the ARB operation is finished.</p> |
| Initial S/W Revision | A.05.00 |

Change Directory...

Allows you to change the currently selected directory on the hard disk. Pressing this key opens a standard windows change directory dialog allowing you to select the new directory of interest.

The current directory is used for manually loading waveform segments into ARB memory for playback, and as a search location for waveform segments that are required to be loaded into ARB memory for playback of a waveform sequence or a list sequence.

| | |
|----------------------|--|
| Key Path | Source, Modulation Setup, ARB, Select Waveform, Segments on Hard Disk |
| Notes | No remote command, SCPIfront panel only. |
| Initial S/W Revision | A.05.00 |

Default Directory...

Allows you to change the default directory. It is used as a search location for waveform segments that are required to be loaded into ARB memory for playback of a waveform sequence, and as a search location for selecting waveforms using SCPI.

| | |
|----------------------|---|
| Key Path | Source, Modulation Setup, ARB, Select Waveform, Segments on Hard Disk |
| Remote Command | :SOURce:RADio:ARB:DEFault:DIRectory <string> :SOURce:RADio:ARB: DEFault:DIRectory? |
| Example | :SOUR:RAD:ARB:DEF:DIR "D:\ArbFiles" :SOUR:RAD:ARB:DEF:DIR? |
| State Saved | Persistent, survives a power cycle and a preset but not saved in the instrument state |
| Initial S/W Revision | A.05.00 |

Segments in ARB Memory

Allows you access to the sub-menus for managing the files within ARB memory.

| | |
|----------------------|---|
| Key Path | Source, Modulation Setup, ARB, Select Waveform |
| Initial S/W Revision | A.05.00 |

Delete Segment From ARB Mem

Allows you to remove a segment from ARB playback memory.

| | |
|----------------------|---|
| Key Path | Source, Modulation Setup, ARB, Select Waveform, Segments in ARB Memory |
| Remote Command | :SOURce:RADio:ARB:DELeTe <string> |
| Example | :SOUR:RAD:ARB:DEL "testwaveform.bin" |
| Notes | <p><string> - specifies the waveform to be deleted from the ARB playback memory.</p> <p>When in Sequence Analyzer mode and Include Source is Yes, an attempt to delete a file from ARB memory is rejected with an error.</p> <p>When Include Source is No and you specify a file that does not exist within ARB memory, an error is generated.</p> <p>It is possible to delete files from within the ARB memory when the ARB is ON. However, if you attempt to delete the file that is currently playing an error is generated.</p> <p>It is possible to delete a file from within the ARB memory when the sequencer state is ON and the file is not being used by the List Sequencer. If you attempt to delete a file which is being used by the list sequencer, an error is generated.</p> <p>When sequencer state is On, even if ARB state is On, the selected waveform will not be played. In this case, if the selected waveform is not used in List Sequence, it can be deleted and the ARB state is turned Off.</p> <p>If the ARB is ON and you load a file to ARB memory or delete a file from ARB memory, the playing waveform segment may not keep phase continuity during the ARB memory operation. The waveform will be replayed after the ARB operation is finished.</p> |
| Initial S/W Revision | A.05.00 |

Delete All From ARB Memory

Allows you to remove all segments from ARB playback memory.

| | |
|----------------|---|
| Key Path | Source, Modulation Setup, ARB, Select Waveform, Segments in ARB Memory |
| Remote Command | :SOURce:RADio:ARB:DELeTe:ALL |
| Example | :SOUR:RAD:ARB:DELeTe:ALL |
| Notes | <p>When in Sequence Analyzer mode and Include Source is Yes, an attempt to delete all files from ARB memory is rejected with an error.</p> <p>When Include Source is No and you attempt to delete all files from ARB memory when the ARB is currently playing a file, all files except the one playing are deleted and an error is generated.</p> <p>If you attempt to delete all files from ARB memory when there are waveform files used in "List</p> |

"Sequencer" on page 2585 and **"Sequencer" on page 2586** state is ON, all files except the files currently being used in list sequencer are deleted, and an error is generated.

If the ARB is ON and you load a file to ARB memory or delete a file from ARB memory, the playing waveform segment may not keep phase continuity during the ARB memory operation. The waveform will be replayed after the ARB operation is finished.

| | |
|----------------------|---------|

Query ARB Memory File List (Remote Command Only)

This command functions the same as ["Query ARB Memory File List \(Remote Command Only\)" on page 2540](#).

| | |
|----------------------|------------------|
| Initial S/W Revision | Prior to A.09.00 |
|----------------------|------------------|

Edit Selected Waveform

Allows access to the sub-menus for editing the details of the currently selected waveform segment.

| | |
|----------------------|--|
| Key Path | Source, Modulation Setup, ARB, Waveform Sequences, Build New Sequence |
| Notes | No remote command, front panel only. |
| Initial S/W Revision | A.05.00 |

Repetitions

Allows you to specify the number of times the currently selected waveform is played within the sequence.

| | |
|----------------------|--|
| Key Path | Source, Modulation Setup, ARB, Waveform Sequences, Build New Sequence, Edit Selected Waveform |
| Notes | No remote command, SCPI front panel only. |
| Preset | 1 |
| Min | 1 |
| Max | 65535 |
| Initial S/W Revision | A.05.00 |

Marker 1

Allows you to enable or disable marker 1 for the currently selected waveform. For a waveform sequence, you can enable and disable markers on a per-segment basis, allowing you to output markers from some waveform segments within the sequence, but not for others.

| | |
|----------------------|--|
| Key Path | Source, Modulation Setup, ARB, Waveform Sequences, Build New Sequence, Edit Selected Waveform |
| Notes | No remote command, front panel only. |
| Preset | Enabled |
| Range | Enabled Disabled |
| Initial S/W Revision | A.05.00 |

Marker 2

Allows you to enable or disable marker 2 for the currently selected waveform. For a waveform sequence, you can enable and disable markers on a per-segment basis, allowing you to output markers from some waveform segments within the sequence, but not for others.

| | |
|----------------------|--|
| Key Path | Source, Modulation Setup, ARB, Waveform Sequences, Build New Sequence, Edit Selected Waveform |
| Notes | No remote command, front panel only. |
| Preset | Enabled |
| Range | Enabled Disabled |
| Initial S/W Revision | A.05.00 |

Marker 3

Allows you to enable or disable marker 3 for the currently selected waveform. For a waveform sequence, you can enable and disable markers on a per-segment basis, allowing you to output markers from some waveform segments within the sequence, but not for others.

| | |
|----------------------|--|
| Key Path | Source, Modulation Setup, ARB, Waveform Sequences, Build New Sequence, Edit Selected Waveform |
| Notes | No remote command, front panel only. |
| Preset | Enabled |
| Range | Enabled Disabled |
| Initial S/W Revision | A.05.00 |

Marker 4

Allows you to enable or disable marker 4 for the currently selected waveform. For a waveform sequence, you can enable and disable markers on a per-segment basis, allowing you to output markers from some waveform segments within the sequence, but not for others.

| | |
|----------------------|--|
| Key Path | Source, Modulation Setup, ARB, Waveform Sequences, Build New Sequence, Edit Selected Waveform |
| Notes | No remote command, front panel only. |
| Preset | Enabled |
| Range | Enabled Disabled |
| Initial S/W Revision | A.05.00 |

Delete Segment

Allows you to delete the selected segment from the waveform sequence.

| | |
|----------------------|--|
| Key Path | Source, Modulation Setup, ARB, Waveform Sequences, Build New Sequence |
| Notes | No remote command, front panel only. |
| Initial S/W Revision | A.05.00 |

Save Sequence...

Pressing this key displays the "Save As" dialog. The sequence name is passed to the save as dialog to use as the filename for saving, and the directory the save as dialog will open into is the default waveform directory.

| | |
|----------------------|--|
| Key Path | Source, Modulation Setup, ARB, Waveform Sequences, Build New Sequence |
| Initial S/W Revision | A.05.00 |

Build New Sequence (Remote Command Only)

This command is the SCPI equivalent of the waveform sequence creation features described in ["Build New Sequence" on page 2554](#).

This command writes a waveform sequence file to the hard disk. You must specify the waveform sequence file path and filename which will be saved on the hard disk, and the waveform segment file path and name which will be nested into the waveform sequence file. You can utilize mass storage unit specifier (MSUS) "NVWFM" or use a real full path representation. See the example below. MSUS "NVWFM" is mapped to D: VARB directory on test set hard disk.

Any number of segments, up to a segment count limit of 64, can be used to create a sequence. Repeated segments are included in the count limit.

Each waveform segment name string length upper limit is 128 chars. Please do NOT insert waveform which name string exceeds 128 chars.

The internal source does not support nesting one waveform sequence file into another waveform sequence file.

Remote Command :SOURce:RADio:ARB:SEquence[:MWAVeform] <filename>, <waveform1>, <reps>, NONE | M1 | M2 | M3 | M4 | M1M2 | M1M3 | M1M4 | M2M3 | M2M4 | M3M4 | M1M2M3 | M1M2M4 | M1M3M4 | M2M3M4 | M1M2M3M4 | ALL, {<waveform2>, <reps>, NONE | M1 | M2 | M3 | M4 | M1M2 | M1M3 | M1M4 | M2M3 | M2M4 | M3M4 | M1M2M3 | M1M2M4 | M1M3M4 | M2M3M4 | M1M2M3M4 | ALL, } ...

(For additional description of each item, see Notes below ["For Setup SCPI" on page 1737](#) "For Setup SCPI".)

:SOURce:RADio:ARB:SEquence[:MWAVeform]? <filename>

(For additional description of each item, see Notes ["For Query SCPI" on page 1738](#) below.)

Example

For setup:

```
>:SOUR:RAD:ARB:SEQ "NVWFM:testSeq1.seq", "NVWFM:wfmSegment1.wfm", 10, M2M3M4, "NVWFM:wfmSegment2.wfm", 20, M1M3
```

Or

```
>:SOUR:RAD:ARB:SEQ "D: VARB\testSeq1.seq", " D: VARB\wfmSegment1.wfm", 10, M2M3M4, " D: VARB\wfmSegment2.wfm", 20, M1M3
```

For query, must specify which waveform sequence file to query.

```
>:SOUR:RAD:ARB:SEQ? "NVWFM:testSeq1.seq"
```

Or

```
>:SOUR:RAD:ARB:SEQ? "D: VARB\testSeq1.seq",
```

Notes

For Setup SCPI

For the Setup SCPI command, the parameters are:

<filename> - String Type

This variable specifies the path and name for the waveform sequence file. The path supports MSUS (NVWFM) or a real full path representation. See example.

<waveform1> - String Type

This variable specifies the path and name of the first existing waveform segment. The path supports

MSUS (NVWFM) or a real full path representation. See example.

The segment file must reside within ARB playback memory before it can be played by the ARB player.

<reps> - Integer Type

This variable specifies the number of times a segment or sequence plays before moving on to the next segment or sequence.

<marker> - Enum Type

NONE - This choice disables all four markers for the waveform. Disabling markers means that the waveform sequence ignores the segments or sequence marker settings.

M1, M2, M3, M4 - these choices, either individually or a combination of them, enable the markers for the waveform segment or sequence. Markers not specified are ignored for that segment or sequence.

ALL - This choice enables all four markers in the waveform segment or sequence.

<waveform2> - String type.

This variable specifies the name of a second existing waveform segment. The path supports MSUS (NVWFM) and real full path representation both. See example.

The segment file must reside within ARB playback memory before it can be played by the ARB player.

<reps> same as above, for the 2nd waveform segment.

<marker> same as above, for the 2nd waveform segment.

You can insert several waveform segments into a waveform sequence file. Just repeat inserting waveform segments as described above.

Error Checks for Setup SCPI command:

If you do not specify a filename, or you use an unsupported MSUS (that is, not NVWFM), or have an error in the waveform sequence file path, an error is generated.

Notes

Error Checks for Query SCPI command: (Continued)

If the specified waveform sequence file name suffix is not “.seq”, error is generated.

If you use an unsupported MSUS (that is, not NVWFM), or have an error in the waveform segment file path, an error is generated.

If the first specified waveform file cannot be found, an error is generated.

If you nest one waveform sequence file into another waveform sequence file, an error is generated.

If the specified repetition value is larger than 65535 or smaller than 1, an error is generated.

If the specified marker type is unrecognized, an error is generated.

For Query SCPI

For the Query the parameters are:

<filename> - String type.

This variable specifies the path and name of the waveform sequence file being queried. The path supports MSUS (NVWFM) or a real full path representation. See example.

The return value is a <string>, which includes each waveform segment file name, repetitions, and marker type. For example:

>:SOUR:RAD:ARB:SEQ? “NVWFM:testSeq1.seq”,

<“wfmSegment1.wfm, 10, ALL, wfmSegment2.wfm, 20, M1M3”,

Error Checks for Query SCPI command:

If you do not specify a filename, an error is generated.
 If the waveform sequence file name is empty, an error is generated.
 If the specified waveform sequence file cannot be found, an error is generated.

| | |
|----------------------|---------|
| Initial S/W Revision | A.05.00 |
|----------------------|---------|

Edit Selected Sequence

Allows access to the sub-menus for editing the sequence currently selected within the Waveform Sequence List view. Pressing this key changes the central view area to display the Waveform Sequence Creation and Editing view.

| | |
|----------|--|
| Key Path | Source, Modulation Setup, ARB, Waveform Sequences |
|----------|--|

| | |
|-------|--------------------------------------|
| Notes | No remote command, front panel only. |
|-------|--------------------------------------|

| | |
|----------------------|---------|
| Initial S/W Revision | A.05.00 |
|----------------------|---------|

Current Directory...

Allows you to change the currently selected directory on the hard disk. Pressing this key opens a standard windows change directory dialog and allows you to select the new directory of interest.

| | |
|----------|--|
| Key Path | Source, Modulation Setup, ARB, Waveform Sequences |
|----------|--|

| | |
|-------|--------------------------------------|
| Notes | No remote command, front panel only. |
|-------|--------------------------------------|

| | |
|----------------------|---------|
| Initial S/W Revision | A.05.00 |
|----------------------|---------|

Waveform Utilities

Allows you access to the waveform utilities sub-menus.

| | |
|----------|--------------------------------------|
| Key Path | Source, Modulation Setup, ARB |
|----------|--------------------------------------|

| | |
|----------------------|---------|
| Initial S/W Revision | A.05.00 |
|----------------------|---------|

Multi-Pack Licenses

Allows you access to the Multi - Pack License sub-menus. Pressing this key also changes the central view area to display the Multi -Pack License Management view.

On modular instrument like E6630A or E6640A, multi-pack license operations are only allowed on the default module, i.e. “Left” module for E6630A or “TRX1” module for E6640A.

| | |
|----------|--|
| Key Path | Source, Modulation Setup, ARB, Waveform Utilities |
|----------|--|

| | |
|--------------|---|
| Dependencies | This key is only available if there is at least one Multi-pack license installed on the instrument. |
|--------------|---|

| | |
|----------------------|---------|
| Initial S/W Revision | A.05.00 |
|----------------------|---------|

Add Waveform

Pressing this key accesses the Add Waveform sub-menu. It also changes the central display area to display the Multi-Pack License Waveform Add view.

| | |
|-----------------------------|--|
| Key Path | Source, Modulation Setup, ARB, Waveform Utilities, Multi-Pack Licenses |
| Dependencies | This key is only available if there is at least one slot available within at least one multi-pack license. |
| Initial S/W Revision | A.05.00 |

Add Waveform

Allows you to add the currently selected waveform segment to a multi-pack license. The new waveform is added to the next available slot regardless of which slot was selected on the Multi-Pack License Management view.

| | |
|-----------------------------|---|
| Key Path | Source, Modulation Setup, ARB, Waveform Utilities, Multi-Pack Licenses, Add Waveform |
| Remote Command | :SYSTem:LKEY:WAVeform:ADD <string> or :SYSTem:LIcense[:FPACK]:WAVeform:ADD <string> |
| Example | SYST:LKEY:WAV:ADD "mywaveform.wfm" or SYST:LIC:WAV:ADD "mywaveform.wfm" |
| Notes | The second SCPI :SYSTem:LIcense[:FPACK]:WAVeform:ADD is provided to be consistent with the style of Keysight signal sources. You can use either one of them. Since adding a waveform segment to a Multi-Pack license causes the license slot to enter the trial period of only 48 hours, pressing this key causes a confirmation dialog to be displayed to ensure you do want to add the waveform segment to the Multi-Pack. If you attempt to license a waveform that is already licensed using another slot an error is generated. . |
| Dependencies | This key is only available if the currently selected file is a secure waveform requiring a license, and there is at least one slot available within at least one multi-pack license. If the waveform highlighted is a secure waveform, but is already licensed, this key will be unavailable. |
| Initial S/W Revision | A.05.00 |

Segments on Hard Disk

Allows you access to the sub-menus for loading waveform segments from the hard disk into ARB memory. The default directory is: D: varb.

Pressing this key changes the current view to the Waveform Management View.

| | |
|-----------------------------|---|
| Key Path | Source, Modulation Setup, ARB, Select Waveform |
| Initial S/W Revision | A.05.00 |

Load Segment To ARB Memory

Allows you to load the selected file into ARB memory. On the front panel you select the file for loading to the ARB memory by highlighting the desired file in the list. Using the SCPI command, you specify the file name on the HDD.

“NVWFM” (none-volatile storage) MSUS (Mass Storage Unit Specifier) is supported in the memory subsystem because the ARB memory cannot be accessed directly. Therefore, files must be downloaded to the instrument hard disk and then loaded into the ARB memory. “NVWFM” MSUS will be mapped to the default directory D: VARB. The SCPI command supports using either “NVWFM” MSUS or specifying a full path. For more information, see [Memory Subsystem \(Remote Command Only\)](#).

If a file of the same name already exists within ARB memory, it is overwritten. If you wish to load two segments of the same name, you must rename one of the segments before loading it into ARB memory. To rename a segment, you can either use Windows File Explorer, or the :MMEMory:COPI command.

| | |
|-----------------------------|---|
| Key Path | Source, Modulation Setup, ARB, Select Waveform, Segments on Hard Disk |
| Remote Command | :SOURce:RADio:ARB:LOAD <string> |
| Example | :SOUR:RAD:ARB:LOAD "D: VARB\testwaveform.bin" or :SOUR:RAD:ARB:LOAD "NVWFM:testwaveform.bin" |
| Notes | <p>Because loading the file involves a delay of unpredictable length, this command should be followed by the query *OPC?, which holds off subsequent commands until the loading operation is complete.</p> <p><string> – specifies the path name of the file to load from the HDD into ARB memory. It could be a <full path + filename>, or <“NVWFM” MSUS + colon + filename>.</p> <p>When in Sequence Analyzer mode, and Include Source is Yes, an attempt to load a file to ARB memory will be rejected with an error.</p> <p>When Include Source is Noand if there is insufficient free ARB memory to load the selected waveform, an error is generated. .</p> <p>If you specify a file over SCPI, but the file is not at the specified location, an error is generated.</p> <p>If you try to load a waveform file but the file contains less than 500 IQ sampes, an error is generated.</p> <p>If you try to load a Signal Studio waveform “*.wfm” which contains invalid waveform header, an error is generated.</p> <p>If the ARB is ON when you load afile to ARB memory or delete a file from ARB memory, the playing waveform segment may not keep phase continuity during the ARB memory operation. The waveform will be replayed after the ARB operation is finished.</p> <p>ARB can be loaded into ARB memory even required licenses do not present on the instrument. In this case, a GUI only warning message -800, “Operation complete; Loaded <filename> successfully, but no license <required licenses> installed”. User can install required licenses according to <required licenses> string to license it, or multi-pack license it.</p> |
| Initial S/W Revision | A.05.00 |

Load All To ARB Memory

Allows you to load all the segment files within the currently selected directory into ARB memory. If a file of the same name already exists within ARB memory, it is overwritten. If you wish to load two segments of the same name, you must rename one of the segments before loading it into ARB memory. To rename a segment, you can either use Windows File Explorer, or the :MEMory:COpy command.

| | |
|-----------------------------|---|
| Key Path | Source, Modulation Setup, ARB, Select Waveform, Segments on Hard Disk |
| Remote Command | :SOURce:RADio:ARB:LOAD:ALL <string> |
| Example | :SOUR:RAD:ARB:LOAD:ALL "D: varb" |
| Notes | <p><string> - specifies the directory on the HDD to load the files into ARB memory from.</p> <p>When in Sequence Analyzer mode, and Include Source is Yes, an attempt to load all files from a directory to ARB memory is rejected with an error.</p> <p>When Include Source is No and there is insufficient free ARB memory to load all the waveforms, when the ARB memory is full, the copy ceases, and an error is generated.</p> <p>If you specify a directory over SCPI, but the directory does not exist, an error is generated.</p> <p>If the ARB is ON, a user then loads or deletes file to ARB memory, the playing waveform segment may not keep phase continuity during the ARB memory operation. The waveform will be replayed after the ARB operation is finished.</p> |
| Initial S/W Revision | A.05.00 |

Change Directory...

Allows you to change the currently selected directory on the hard disk. Pressing this key opens a standard windows change directory dialog allowing you to select the new directory of interest.

The current directory is used for manually loading waveform segments into ARB memory for playback, and as a search location for waveform segments that are required to be loaded into ARB memory for playback of a waveform sequence or a list sequence.

| | |
|-----------------------------|--|
| Key Path | Source, Modulation Setup, ARB, Select Waveform, Segments on Hard Disk |
| Notes | No remote command, SCPIfront panel only. |
| Initial S/W Revision | A.05.00 |

Default Directory...

Allows you to change the default directory. It is used as a search location for waveform segments that are required to be loaded into ARB memory for playback of a waveform sequence, and as a search location for selecting waveforms using SCPI.

| | |
|-----------------------|---|
| Key Path | Source, Modulation Setup, ARB, Select Waveform, Segments on Hard Disk |
| Remote Command | :SOURce:RADio:ARB:DEFault:DIRectory <string> :SOURce:RADio:ARB: DEFault:DIRectory? |
| Example | :SOUR:RAD:ARB:DEF:DIR "D:\ArbFiles" |

| | |
|----------------------|---|
| | :SOUR:RAD:ARB:DEF:DIR? |
| State Saved | Persistent, survives a power cycle and a preset but not saved in the instrument state |
| Initial S/W Revision | A.05.00 |

Clear Waveform from Slot

Allows you to clear the waveform from the selected slot.

| | |
|-----------------------|--|
| Key Path | Source, Modulation Setup, ARB, Waveform Utilities, Multi-Pack Licenses |
| Remote Command | :SYSTem:LKEY:WAVeform:CLEar <int> or :SYSTem:LIcense[:FPACK]:WAVeform:CLEar <int> |
| Example | SYST:LKEY:WAV:CLE 1 or :SYST:LIC:WAV:CLE 1 |
| Notes | The second SCPI :SYSTem:LIcense[:FPACK]:WAVeform:CLEar is provided to be consistent with the style of Keysight signal sources. You can use either one of them. |

Waveform slot number <int> is positive. If you attempt to input a slot number less than or equals 0, an error is generated.

Dependencies This key is only available if the currently selected slot is in the trial state.

Initial S/W Revision A.05.00

Lock Waveform in Slot

If the selected slot is in the trial state or the lock required state, the waveform that occupies the slot is locked and permanently licensed.

Key Path **Source, Modulation Setup, ARB, Waveform Utilities, Multi-Pack Licenses**

Remote Command :SYSTem:LKEY:WAVeform:LOCK <int>
or
:SYSTem:LICense[:FPACK]:WAVeform:LOCK <int>

Example SYST:LKEY:WAV:LOCK 1
or
SYST:LIC:WAV:LOCK 1

Notes The second SCPI :SYSTem:LICense[:FPACK]:WAVeform:LOCK is provided to be consistent with the style of Keysight signal sources. You can use either one of them.
Waveform slot number <int> is positive. If you attempt to input a slot number less than or equals 0, an error is generated.

Dependencies This key is only available if the currently selected slot is in the trial state or the lock required state.

Initial S/W Revision A.05.00

Slot Status Query (Remote Command Only)

Returns the status of the specified slot.

Remote Command :SYSTem:LKEY:WAVeform:STATus? <int>
or
:SYSTem:LICense[:FPACK]:WAVeform:STATus? <int>

Example :SYST:LKEY:WAV:STAT? 1
<"Locked"
or
:SYST:LIC:WAV:STAT? 1
<"Locked"

Notes The second SCPI :SYSTem:LICense[:FPACK]:WAVeform:STATus is provided to be consistent with the style of Keysight signal sources. You can use either one of them.
Waveform slot number <int> is positive. If you attempt to input a slot number less than or equals 0, an

| | |
|----------------------|--|
| | error is generated. Result type is string. If input slot number exceeds total available slot number, "Nonexistent" is returned. |
| Range | "Locked" "Available" "Trail" "LockRequired" "Nonexistent" |
| Initial S/W Revision | A.05.00 |

Slots Free Query (Remote Command Only)

Returns the number of license slots free.

| | |
|-----------------------|---|
| Remote Command | :SYSTem:LKEY:WAVeform:FREE? or :SYSTem:LICense[:FPACK]:WAVeform:FREE? |
| Example | :SYST:LKEY:WAV:FREE? or :SYST:LIC:WAV:FREE? |
| Notes | The second SCPI :SYSTem:LICense[:FPACK]:WAVeform:FREE is provided to be consistent with the style of Keysight signal sources. You can use either one of them. |
| Initial S/W Revision | A.05.00 |

Slot Used Query (Remote Command Only)

Returns the number of license slots used.

| | |
|-----------------------|---|
| Remote Command | :SYSTem:LKEY:WAVeform:USED? or :SYSTem:LICense[:FPACK]:WAVeform:USED? |
| Example | :SYST:LKEY:WAV:USED? or :SYST:LIC:WAV:USED? |
| Notes | The second SCPI :SYSTem:LICense[:FPACK]:WAVeform:USED is provided to be consistent with the style of Keysight signal sources. You can use either one of them. |
| Initial S/W Revision | A.05.00 |

Slot Waveform Name Query (Remote Command Only)

Returns the waveform name of the specified slot

| | |
|-----------------------|---|
| Remote Command | :SYSTem:LKEY:WAVeform:NAME? <int> or :SYSTem:LICense[:FPACK]:WAVeform:NAME? <int> |
|-----------------------|---|

| | |
|-----------------------------|---|
| Example | :SYST:LKEY:WAV:NAME? 1 <"CDMA2K_22.wfm" or :SYST:LIC:WAV:NAME? 1 <"CDMA2K_22.wfm" |
| Notes | Waveform slot number <int> is positive. If you attempt to input a slot number less than or equals 0, an error is generated. Result type is string. If input slot number exceeds total available slot number, "Nonexistent" is returned. If no waveform stored in the specified slot, then empty string is returned. |
| Initial S/W Revision | A.12.00 |

Slot Waveform Unique ID Query (Remote Command Only)

Returns the waveform unique ID of the specified slot

| | |
|-----------------------------|---|
| Remote Command | :SYSTem:LKEY:WAVeform:UID? <int> or :SYSTem:LICense[:FPACK]:WAVeform:UID? <int> |
| Example | :SYST:LKEY:WAV:UID? 2 <"1346752140" or :SYST:LIC:WAV:UID? 2 <"1346752140" |
| Notes | Waveform slot number <int> is positive. If you attempt to input a slot number less than or equals 0, an error is generated. Result type is string. If input slot number exceeds total available slot number, "Nonexistent" is returned. If no waveform stored in the specified slot, then "0" is returned |
| Initial S/W Revision | A.12.00 |

Locked Waveform Name List Query (Remote Command Only)

Returns the waveform name list of locked.

| | |
|-----------------------------|---|
| Remote Command | :SOURce:RADio:ARB:MPLicensed:NAME:LOCKed? |
| Example | SOUR:RAD:ARB:MPL:NAME:LOCKed? <"CDMA2K_27.wfm", "GSM_MCS1.WFM", "c2kWfm.wfm" |
| Initial S/W Revision | A.11.00 |

Locked Waveform Unique ID List Query (Remote Command Only)

Returns the waveform unique id list of locked.

| | |
|-----------------------------|---|
| Remote Command | :SOURce:RADio:ARB:MPLicensed:UID:LOCKed? |
| Example | SOUR:RAD:ARB:MPL:UID:LOCKed? <"2996927136","3812603511","3710986266" |
| Notes | Each Signal Studio waveform has a unique id recorded in header. So if the unique ids are same, that means they are same one waveform. So besides SCPI to query locked waveform name list, also provide a SCPI to query locked waveform unique id list |
| Initial S/W Revision | A.11.00 |

Marker Utilities

Allows access to the marker utilities sub-menus.

| | |
|-----------------------------|--------------------------------------|
| Key Path | Source, Modulation Setup, ARB |
| Initial S/W Revision | A.05.00 |

Marker Polarity

Allows access to the marker polarity sub-menu, which allows you to specify the polarity for the four markers. For a positive polarity, the marker signal is high during the marker points. For a negative marker polarity, the marker signal is high during the period of no marker points.

| | |
|-----------------------------|--|
| Key Path | Source, Modulation Setup, ARB, Marker Utilities |
| Initial S/W Revision | A.05.00 |

Mkr 1 Polarity

Allows you to set the polarity of marker 1.

| | |
|-----------------------------|---|
| Key Path | Source, Modulation Setup, ARB, Marker Utilities, Marker Polarity |
| Remote Command | :SOURce:RADio:ARB:MPOLarity:MARKer1 POSitive NEGative :SOURce:RADio:ARB:MPOLarity:MARKer1? |
| Example | :SOUR:RAD:ARB:MPOL:MARK1 NEG |
| Dependencies | When a new waveform is selected for playback the settings contained within the associated waveform header file are applied to the ARB. The marker polarity is one of the values stored within the header file. If the newly selected waveform file has an associated header file, the marker polarity is updated with the value from the header file. The marker polarity will remain unchanged if the newly selected waveform does not have an associated header file. |
| Preset | Pos |
| Range | Neg Pos |
| Initial S/W Revision | A.05.00 |

Mkr 2 Polarity

Allows you to set the polarity of marker 2.

| | |
|-----------------------------|---|
| Key Path | Source, Modulation Setup, ARB, Marker Utilities, Marker Polarity |
| Remote Command | :SOURce:RADio:ARB:MPOLarity:MARKer2 POSitive NEGative :SOURce:RADio:ARB:MPOLarity:MARKer2? |
| Example | :SOUR:RAD:ARB:MPOL:MARK2 NEG |
| Dependencies | When a new waveform is selected for playback the settings contained within the associated waveform header file are applied to the ARB. The marker polarity is one of the values stored within the header file. If the newly selected waveform file has an associated header file, the marker polarity is updated with the value from the header file. The marker polarity will remain unchanged if the newly selected waveform does not have an associated header file. |
| Preset | Pos |
| Range | Neg Pos |
| Initial S/W Revision | A.05.00 |

Mkr 3 Polarity

Allows you to set the polarity of marker 3.

| | |
|-----------------------------|---|
| Key Path | Source, Modulation Setup, ARB, Marker Utilities, Marker Polarity |
| Remote Command | :SOURce:RADio:ARB:MPOLarity:MARKer3 POSitive NEGative :SOURce:RADio:ARB:MPOLarity:MARKer3? |
| Example | :SOUR:RAD:ARB:MPOL:MARK3 NEG |
| Dependencies | When a new waveform is selected for playback the settings contained within the associated waveform header file are applied to the ARB. The marker polarity is one of the values stored within the header file. If the newly selected waveform file has an associated header file, the marker polarity is updated with the value from the header file. The marker polarity will remain unchanged if the newly selected waveform does not have an associated header file. |
| Preset | Pos |
| Range | Neg Pos |
| Initial S/W Revision | A.05.00 |

Mkr 4 Polarity

Allows you to set the polarity of marker 4.

| | |
|-----------------------|---|
| Key Path | Source, Modulation Setup, ARB, Marker Utilities, Marker Polarity |
| Remote Command | :SOURce:RADio:ARB:MPOLarity:MARKer4 POSitive NEGative :SOURce:RADio:ARB:MPOLarity:MARKer4? |

| | |
|-----------------------------|---|
| Example | :SOUR:RAD:ARB:MPOL:MARK4 NEG |
| Dependencies | When a new waveform is selected for playback the settings contained within the associated waveform header file are applied to the ARB. The marker polarity is one of the values stored within the header file. If the newly selected waveform file has an associated header file, the marker polarity is updated with the value from the header file. The marker polarity will remain unchanged if the newly selected waveform does not have an associated header file. |
| Preset | Pos |
| Range | Neg Pos |
| Initial S/W Revision | A.05.00 |

Marker Routing

Allows access to the marker routing sub-menus, which allow you to specify where the marker events are routed. It should be noted that the markers can also be routed to Trigger 1 Out and Trigger 2 Out, however this must be set up using the menus accessed by pressing the “Trigger” hard key.

| | |
|-----------------------------|--|
| Key Path | Source, Modulation Setup, ARB, Marker Utilities |
| Initial S/W Revision | A.05.00 |

Pulse/RF Blank

Allows you to select which marker is used for the pulse/RF blanking function. The pulse/RF blanking function blanks the RF when the marker signal goes low. The marker polarity determines when the marker signal is high. For a positive polarity, this is during the marker points. For a negative polarity, this is when there are no marker points.

Marker points should be set before using this function. Enabling this function without setting maker points may create a continuous low or high signal, dependant on the marker polarity. This causes either no RF output, or a continuous RF output.

| | |
|-----------------------------|---|
| Key Path | Source, Modulation Setup, ARB, Marker Utilities, Marker Routing |
| Remote Command | :SOURce:RADio:ARB:MDEStination:PULSe NONE M1 M2 M3 M4 :SOURce:RADio:ARB:MDEStination:PULSe? |
| Example | :SOUR:RAD:ARB:MDES:PULS NONE |
| Dependencies | When a new waveform is selected for playback the settings contained within the associated waveform header file are applied to the ARB. The pulse/RF blanking setting is one of the values stored within the header file. If the newly selected waveform file has an associated header file, the pulse/RF blanking setting is updated with the value from the header file. The pulse/RF blanking setting will remain unchanged if the newly selected waveform does not have an associated header file. |
| Range | None M1 M2 M3 M4 |
| Initial S/W Revision | A.05.00 |

None

Sets no marker to be used for the pulse/RF blanking function, essentially turning the RF blanking function off.

| | |
|----------------------|--|
| Key Path | Source, Modulation Setup, ARB, Marker Utilities, Marker Routing, Pulse/RF Blank |
| Example | :SOUR:RAD:ARB:MDES:PULS NONE |
| Initial S/W Revision | A.05.00 |

Marker 1

Sets marker 1 to be used for the pulse/RF blanking function.

| | |
|----------------------|--|
| Key Path | Source, Modulation Setup, ARB, Marker Utilities, Marker Routing, Pulse/RF Blank |
| Example | :SOUR:RAD:ARB:MDES:PULS M1 |
| Initial S/W Revision | A.05.00 |

Marker 2

Sets marker 2 to be used for the pulse/RF blanking function.

| | |
|----------------------|--|
| Key Path | Source, Modulation Setup, ARB, Marker Utilities, Marker Routing, Pulse/RF Blank |
| Example | :SOUR:RAD:ARB:MDES:PULS M2 |
| Initial S/W Revision | A.05.00 |

Marker 3

Sets marker 3 to be used for the pulse/RF blanking function.

| | |
|----------------------|--|
| Key Path | Source, Modulation Setup, ARB, Marker Utilities, Marker Routing, Pulse/RF Blank |
| Example | :SOUR:RAD:ARB:MDES:PULS M3 |
| Initial S/W Revision | A.05.00 |

Marker 4

Sets marker 4 to be used for the pulse/RF blanking function.

| | |
|----------------------|--|
| Key Path | Source, Modulation Setup, ARB, Marker Utilities, Marker Routing, Pulse/RF Blank |
| Example | :SOUR:RAD:ARB:MDES:PULS M4 |
| Initial S/W Revision | A.05.00 |

ALC Hold

Allows you to specify which marker is routed for use within the ALC hold function. The ALC hold marker function holds the ALC circuitry at the average value of the sample points set by the marker.

The ALC hold function operates during the low periods of the marker signal. The marker polarity determines when the marker signal is high. For positive polarity, this is during the marker points. For a negative polarity, this is when there are no marker points.

| | |
|-----------------------------|--|
| Key Path | Source, Modulation Setup, ARB, Marker Utilities, Marker Routing |
| Remote Command | :SOURce:RADio:ARB:MDEStination:ALCHold NONE M1 M2 M3 M4 :SOURce:RADio:ARB:MDEStination:ALCHold? |
| Example | :SOUR:RAD:ARB:MDES:ALCH NONE |
| Dependencies | When a new waveform is selected for playback the settings contained within the associated waveform header file are applied to the ARB. The ALC hold setting is one of the values stored within the header file. If the newly selected waveform file has an associated header file, the ALC hold setting is updated with the value from the header file. The ALC hold setting will remain unchanged if the newly selected waveform does not have an associated header file. |
| Range | None M1 M2 M3 M4 |
| Initial S/W Revision | A.05.00 |

None

Sets no marker to be used for the ALC hold function, essentially turning the ALC hold function off.

| | |
|-----------------------------|--|
| Key Path | Source, Modulation Setup, ARB, Marker Utilities, Marker Routing, ALC Hold |
| Example | :SOUR:RAD:ARB:MDES:PULS NONE |
| Initial S/W Revision | A.05.00 |

Marker 1

Sets marker 1 to be used for the ALC hold function.

| | |
|-----------------------------|--|
| Key Path | Source, Modulation Setup, ARB, Marker Utilities, Marker Routing, ALC Hold |
| Example | :SOUR:RAD:ARB:MDES:PULS M1 |
| Initial S/W Revision | A.05.00 |

Marker 2

Sets marker 2 to be used for the ALC hold function.

| | |
|-----------------------------|--|
| Key Path | Source, Modulation Setup, ARB, Marker Utilities, Marker Routing, ALC Hold |
| Example | :SOUR:RAD:ARB:MDES:PULS M2 |
| Initial S/W Revision | A.05.00 |

Marker 3

Sets marker 3 to be used for the ALC hold function.

| | |
|-----------------------------|--|
| Key Path | Source, Modulation Setup, ARB, Marker Utilities, Marker Routing, ALC Hold |
| Example | :SOUR:RAD:ARB:MDES:PULS M3 |
| Initial S/W Revision | A.05.00 |

Marker 4

Sets marker 4 to be used for the ALC hold function.

| | |
|-----------------------------|--|
| Key Path | Source, Modulation Setup, ARB, Marker Utilities, Marker Routing, ALC Hold |
| Example | :SOUR:RAD:ARB:MDES:PULS M4 |
| Initial S/W Revision | A.05.00 |

Header Utilities

Allows access to the header utilities sub-menu. Pressing this key also causes the central display area to change to display the File Header Information view.

| | |
|-----------------------------|---|
| Key Path | Source, Modulation Setup, ARB |
| Dependencies | This key is only available if there is currently a waveform selected for playback. If no waveform is selected, the key is grayed out. |
| Initial S/W Revision | A.05.00 |

Clear Header

Allows you to clear the header information from the file header associated with the currently selected waveform.

| | |
|-----------------------------|--|
| Key Path | Source, Modulation Setup, ARB, Header Utilities |
| Remote Command | :SOURce:RADio:ARB:HEADer:CLEar |
| Example | :SOUR:RAD:ARB:HEAD:CLE |
| Notes | Attempting to clear the header details via SCPI when no waveform was selected for playback will generate an error. |
| Initial S/W Revision | A.05.00 |

Save Setup To Header

Allows you to save new file header information details to the file.

| | |
|--------------------------|---|
| Key Path | Source, Modulation Setup, ARB, Header Utilities |
| Remote Command | :SOURce:RADio:ARB:HEADer:SAVE |
| Example | :SOUR:RAD:ARB:HEAD:SAVE |
| Notes | Attempting to save the header details via SCPI when no waveform was selected for playback will generate an error. |
| Initial S/W Revision | A.05.00 |
| Modified at S/W Revision | A.16.00 (AWGN settings will be saved to header as well) |

Query Waveform Unique ID (Remote Command Only)

Each Signal Studio waveform contains a unique waveform ID, which recorded in the header. This command allows you to query the unique waveform ID from the header. This is a SCPI only command. User can also check [Error! Reference source not found.](#) for waveform unique ID display.

| | |
|----------------------|--|
| Remote Command | :MMEMorY:HEADer:ID? "<file name>" |
| Example | :MMEM:HEAD:ID? "test.wfm" (query the waveform already loaded into the ARB memory) :MMEM:HEAD:ID? "D: VARB\test.wfm" (query the waveform on the hard disk by absolute path) :MMEM:HEAD:ID? "NVWFM:test.wfm" (query the waveform on the hard disk by MSUS) |
| Notes | SCPI query only. The queried waveform file can be in ARB memory, or on hard disk. If want to query ARB in ARB memory, then give out the file name directly. If want to query ARB on the hard disk, then absolute file path or MSUS should be given along with the file name. The valid MSUS is "NVWFM" which is mapped to D: VARB on hard disk. If the file cannot be found in ARB memory or on hard disk, an error is generated and value -1 is returned |
| Initial S/W Revision | A.09.00 |

Bus Trigger Command (Remote Command Only)

Used to initiate an immediate trigger event if the trigger source is set to Bus.

| | |
|----------------------|------------------------------------|
| Remote Command | :SOURce:RADio:ARB:TRIGger:INITiate |
| Example | :SOUR:RAD:ARB:TRIG:INIT |
| Initial S/W Revision | A.05.00 |

AM

Allows access to the menu for configuring the Amplitude Modulation.

| | |
|----------------------|---------------------------------|
| Key Path | Source, Modulation Setup |
| Initial S/W Revision | A.05.00 |

AM

Enables or disables the amplitude modulation.

Turning AM on when another modulation format is already on results in the previous modulation format being turned off and the generation of an error.

| | |
|-----------------------|---------------------------------------|
| Key Path | Source, Modulation Setup, AM |
| Remote Command | :SOURce:AM:STATe :SOURce:AM:STATe? |
| Example | :SOUR:AM:STAT OFF |
| Preset | Off |
| Range | On Off |
| Initial S/W Revision | A.05.00 |

AM Depth

Allows you to set the amplitude modulation depth in percent.

| | |
|-----------------------|---|
| Key Path | Source, Modulation Setup, AM |
| Remote Command | :SOURce:AM[:DEPTh] [:LINear] :SOURce:AM[:DEPTh] [:LINear]? |
| Example | :SOUR:AM 0.1 |
| Preset | 0.1 % |
| Min | 0.1 % |
| Max | 95.0 % |
| Initial S/W Revision | A.05.00 |

AM Rate

Allows you to set the internal amplitude modulation rate.

| | |
|-----------------------|---|
| Key Path | Source, Modulation Setup, AM |
| Remote Command | :SOURce:AM:INTernal:FREQuency :SOURce:AM:INTernal:FREQuency? |
| Example | :SOUR:AM:INT:FREQ 40.0 Hz |

| | |
|----------------------|----------|
| Preset | 400.0 Hz |
| Min | 10 Hz |
| Max | 40 kHz |
| Initial S/W Revision | A.05.00 |

FM

Allows access to the menu for configuring the frequency modulation.

| | |
|----------------------|---------------------------------|
| Key Path | Source, Modulation Setup |
| Initial S/W Revision | A.05.00 |

FM

Enables or disables the frequency modulation.

Turning FM on when another modulation format is already on results in the previous modulation format being turned off and the generation of an error.

| | |
|-----------------------|---------------------------------------|
| Key Path | Source, Modulation Setup, FM |
| Remote Command | :SOURce:FM:STATe :SOURce:FM:STATe? |
| Example | :SOUR:FM:STAT OFF |
| Preset | Off |
| Range | On Off |
| Initial S/W Revision | A.05.00 |

FM Deviation

Allows you to set the frequency modulation deviation.

| | |
|-----------------------|---|
| Key Path | Source, Modulation Setup, FM |
| Remote Command | :SOURce:FM[:DEViation] :SOURce:FM[:DEViation]? |
| Example | :SOUR:FM 1.00 kHz |
| Preset | 1.00 Hz |
| Min | 1.00 Hz |
| Max | 100.00 kHz |
| Initial S/W Revision | A.05.00 |

FM Rate

Allows you to set the internal frequency modulation rate.

| | |
|----------------------|---|
| Key Path | Source, Modulation Setup, FM |
| Remote Command | :SOURce:FM:INTernal:FREQuency :SOURce:FM:INTernal:FREQuency? |
| Example | :SOUR:FM:INT:FREQ 40.0 Hz |
| Preset | 400.0 Hz |
| Min | 10 Hz |
| Max | 40 kHz |
| Initial S/W Revision | A.05.00 |

PM

Allows access to the menu for configuring the phase modulation.

| | |
|----------------------|---------------------------------|
| Key Path | Source, Modulation Setup |
| Initial S/W Revision | A.05.00 |

PM

Enables or disables the phase modulation.

Turning PM on when another modulation format is already on results in the previous modulation format being turned off and the generation of an error.

| | |
|----------------------|---------------------------------------|
| Key Path | Source, Modulation Setup, PM |
| Remote Command | :SOURce:PM:STATe :SOURce:PM:STATe? |
| Example | :SOUR:PM:STAT OFF |
| Preset | Off |
| Range | On Off |
| Initial S/W Revision | A.05.00 |

PM Deviation

Allows you to set the phase modulation deviation.

| | |
|----------------|---|
| Key Path | Source, Modulation Setup, PM |
| Remote Command | :SOURce:PM[:DEViation] :SOURce:PM[:DEViation]? |

| | |
|----------------------|-------------------|
| Example | :SOUR:PM 1.00 rad |
| Preset | 0.1 rad |
| Min | 0.1 rad |
| Max | 20.0 rad |
| Initial S/W Revision | A.05.00 |

PM Rate

Allows you to set the internal phase modulation rate.

| | |
|-----------------------|---|
| Key Path | Source, Modulation Setup, PM |
| Remote Command | :SOURce:PM:INTernal:FREQuency :SOURce:PM:INTernal:FREQuency? |
| Example | :SOUR:PM:INT:FREQ 40.0 Hz |
| Preset | 400.0 Hz |
| Min | 10 Hz |
| Max | 40 kHz |
| Initial S/W Revision | A.05.00 |

List Sequencer

Allows you access to the sub-menus for configuring the list sequencer.

List sequences allows you to enter frequencies and amplitudes at unequal intervals in nonlinear ascending, descending or random order. Each step within the list can also include its own waveform file for playback, step duration, trigger event and trigger output.

The complexities involved in configuring the list sequencer do not lend itself to manual configuration; hence the manual configuration for this feature is limited. For easier configuration of the list sequencer, it is recommended that you use either SCPI or load a tab delimited file containing the setup parameters in a tabular form. The details of the SCPI for configuring the list sequencer can be found in ["Step Configuration \(Remote Command Only\)" on page 2619](#).

Once the List Sequencer has been configured using the front panel, SCPI, or loading in a tab delimited file, the sequence must be initiated using the front panel Initiate Sequence key or the corresponding SCPI command.

| | |
|----------------------|---------------|
| Key Path | Source |
| Initial S/W Revision | A.05.00 |

Sequencer

Allows you to set the state of the list sequencer. When the list sequencer is on, the source is outputting the sequence defined by the sequencer. When the list sequencer is off, the source outputs a single waveform segment or sequence (independent mode) at a single frequency and amplitude.

| | |
|----------------------|---|
| Key Path | Source, List Sequencer |
| Remote Command | :SOURce:LIST[:STATe] ON OFF 1 0 :SOURce:LIST[:STATe]? |
| Example | :SOUR:LIST OFF |
| Notes | When the sequencer is set to ON, the list sequencer controls the output of the source. |
| Couplings | When in Sequence Analyzer mode and the list sequencer state is Off, Include Source is forced to No, and the Include Source key is grayed out. When in Sequence Analyzer mode and the list sequencer state is On, Include Source is available to set. And, an ARB memory related operation, like load or delete will be rejected. |
| Preset | Off |
| Range | On Off |
| Initial S/W Revision | A.05.00 |

Initiate Sequence

Pressing this key arms the sequence for single execution. Once the sequence is armed the source begins the sequence as soon as the trigger is received. If the trigger is set to Free Run, the sequence starts immediately.

| | |
|----------------------|---|
| Key Path | Source, List Sequencer |
| Remote Command | :SOURce:LIST:TRIGger[:IMMediate] |
| Example | :SOUR:LIST:TRIG |
| Notes | When in Sequence Analyzer mode and Include Source is Yes, the Initiate list sequencer operation is rejected, and the key is grayed out, since source list sequence request is sent to physics via Parallel batch by sequence analyzer. If the file needed by the sequencer is not already in ARB memory, the sequence cannot be initiated and an error will be generated. There is a blocking SCPI query which can be used to query if source list sequence being initiated successfully or not. (see " Query List Sequence Initiation Armed Status (Remote Command Only) " on page 2630 Query Source List Sequence Armed Status) |
| Dependencies | Under the Sequence Analyzer Mode, if Meas Setup->Include Source is set to YES, Source->List Sequencer->Initiate Sequence is disabled. |
| Initial S/W Revision | A.05.00 |

List Sequencer Setup

Allows you access to the list sequencer setup menus.

| | |
|----------|-------------------------------|
| Key Path | Source, List Sequencer |
|----------|-------------------------------|

Number of Steps

Allows you to specify the number of steps within the list sequence.

| | |
|-----------------------|--|
| Key Path | Source, List Sequencer, List Sequencer Setup |
| Remote Command | :SOURce:LIST:NUMBer:STEPs <integer> :SOURce:LIST:NUMBer:STEPs? |
| Example | :SOUR:LIST:NUMB:STEP 1 |
| Notes | Increasing the number of steps creates additional steps at the end of the list, with all the settings within the steps set to their default values. Decreasing the number of steps removes steps from the end of the list. The settings within the removed steps are not reset. This means that increasing the number of steps again would allow you to retrieve these steps. |
| Dependencies | The Step Count parameter is increased or decreased when you insert or delete a point from within the GUI interface to the sequencer. |
| Preset | 1 |
| Min | 1 |
| Max | 1000 |
| Initial S/W Revision | A.05.00 |

Current Step

Allows you to select the step number you wish to view or edit.

| | |
|----------------------|---|
| Key Path | Source, List Sequencer, List Sequencer Setup |
| Notes | No remote command, front panel only. |
| Preset | 1 |
| Min | 1 |
| Max | Step Count |
| Initial S/W Revision | A.05.00 |

Insert Step Before

Allows you to insert a new step, containing default values, before the currently selected step. Inserting a step will automatically increase the Step Count parameter by 1. If sequence already reaches upper limit of

1000 steps, then insert more step will be rejected and popup error –221, “Setting Conflict; Cannot insert more steps, maximum number of steps reached”

| | |
|-----------------------------|---|
| Key Path | Source, List Sequencer, List Sequencer Setup |
| Notes | No remote command, front panel only. If the list already contains the maximum limit of 1000 steps, no operation will be made after pressing this key. |
| Initial S/W Revision | A.05.00 |

Delete Step

Allows you to delete the current step. Deleting a step will automatically decrease the Step Count parameter by 1. If sequence only has one step left, delete step will be rejected and popup error –221, “Setting conflict; Cannot delete current step, minimum number of steps reached”

| | |
|-----------------------------|---|
| Key Path | Source, List Sequencer, List Sequencer Setup |
| Notes | No remote command, Front Panel key only. If the list already contains the minimum limit of 1 step, no operation will be made after pressing this key |
| Initial S/W Revision | A.05.00 |

Clear List

Allows you to clear the list. Clearing the list sets the number of steps to the default value of 1 and sets the parameters for the only step to their default values.

| | |
|-----------------------------|---|
| Key Path | Source, List Sequencer, List Sequencer Setup |
| Initial S/W Revision | A.05.00 |

Step Trigger

Allows access to the sub-menu for selecting the trigger input for the current step.

| | |
|-----------------------------|--|
| Key Path | Source, List Sequencer, List Sequencer Setup |
| Remote Command | :SOURCE:LIST:STEP[1] 2 3...1000:SETup:INPut:TRIGger IMMEDIATE INTERNAL EXTERNAL2 KEY BUS EXTERNAL4 :SOURCE:LIST:STEP[1] 2 3...1000:SETup:INPut:TRIGger? |
| Example | :SOUR:LIST:STEP2:SET:INP:TRIG BUS :SOUR:LIST:STEP2:SET:INP:TRIG? |
| Notes | SCPI is supported after A.09.40 |
| Preset | Free Run |
| Range | Free Run Internal Manual (Trigger Key) Bus External 2 EXTERNAL4 |
| Initial S/W Revision | A.05.00 |

Free Run

Sets the trigger input for the current step to Free Run.

| | |
|-----------------------------|---|
| Key Path | Source, List Sequencer, List Sequencer Setup, Step Trigger |
| Example | :SOUR:LIST:STEP2:SET:INP:TRIG IMM |
| Notes | SCPI is supported after A.09.40 |
| Initial S/W Revision | A.05.00 |

Internal

Sets the trigger input for the current step to Internal.

| | |
|-----------------------------|---|
| Key Path | Source, List Sequencer, List Sequencer Setup, Step Trigger |
| Example | :SOUR:LIST:STEP2:SET:INP:TRIG INT |
| Notes | SCPI is supported after A.09.40 |
| Initial S/W Revision | A.05.00 |

Manual (Trigger Key)

Sets the trigger input for the current step to Manual (Trigger Key). Any step in the sequence set to Manual will cause the sequence execution to stop until the manual trigger key is pressed. Sending the Bus Trigger SCPI command will have no effect. At any point in the sequence where the list sequencer is paused waiting for a software trigger, a pop up dialog is displayed until the trigger event occurs.

| | |
|-----------------------------|---|
| Key Path | Source, List Sequencer, List Sequencer Setup, Step Trigger |
| Example | :SOUR:LIST:STEP2:SET:INP:TRIG KEY |
| Notes | SCPI is supported after A.09.40 |
| Initial S/W Revision | A.05.00 |

Bus

Sets the trigger input for the current step to Bus. Any step in the sequence set to Bus will cause the sequence execution to stop until the Bus Trigger SCPI command is sent. Pressing the manual trigger key has no effect. At any point in the sequence where the list sequencer is paused waiting for a software trigger, a pop up dialog is displayed until the trigger event occurs.

| | |
|-----------------------------|---|
| Key Path | Source, List Sequencer, List Sequencer Setup, Step Trigger |
| Example | :SOUR:LIST:STEP2:SET:INP:TRIG BUS |
| Notes | SCPI is supported after A.09.40 |
| Initial S/W Revision | A.05.00 |

External 2

Sets the trigger input for the current step to External 2.

| | |
|-----------------------------|--|
| Key Path | Source, List Sequencer, List Sequencer Setup, Step Trigger |
| Example | :SOUR:LIST:STEP2:SET:INP:TRIG EXT2 |
| Notes | SCPI is supported after A.09.40 |
| Notes | Note: When on E6640A, trigger 2 is a bi-directional trigger port. So when trigger 2 has been configured as OUTPUT type, choosing External 2 as the input trigger for the current step will generate error. |
| Initial S/W Revision | A.05.00 |

Transition Time

Allows you to specify the transition time for the current step.

The transition time is the amount of time allowed for the source to settle at the current frequency or amplitude value.

Transition Time should not be taken as additional time before or inside the Step Duration. You can set a value for the settling time to allow the source output frequency or amplitude to become stable. Make sure that during this period of time, you do not use the source output signal.

The following table lists recommended values for appropriate settling times to allow for changes within the source.

| Value Changed | Recommended Transition Time |
|---------------|---|
| Frequency | 500 μ s |
| Amplitude | 100 μ s to within 0.1 dB 20 μ s to within 1.0 dB |

If the Transition Time value is shorter than the time necessary for the hardware to settle and a List Sequence is initiated, a **warning** is generated.

If the Transition Time value is longer than the Step Duration, an error is generated when initiating a source list sequence. For source list sequence, transition time is included in the step duration length. If the Transition Time value is longer than the Step Duration Time, the real step duration length is extended to equal the transition time and cause a timing shift.

| | |
|-----------------------|--|
| Key Path | Source, List Sequencer, List Sequencer Setup |
| Remote Command | :SOURce:LIST:STEP[1] 2 3...1000:SETup:TRANsition:TIME <time> :SOURce:LIST:STEP[1] 2 3...1000:SETup:TRANsition:TIME? |
| Example | :SOUR:LIST:STEP2:SET:TRAN:TIME 1ms :SOUR:LIST:STEP2:SET:TRAN:TIME? |

| | |
|----------------------|---------------------------------|
| Notes | SCPI is supported after A.09.40 |
| Preset | 1.0 ms |
| Min | 0.0 ms |
| Max | 4.0 ks |
| Initial S/W Revision | A.05.00 |

Radio Setup

Allows you access to the sub-menus for setting up the radio standard, band, and radio band link direction for the current step.

| | |
|----------------------|---|
| Key Path | Source, List Sequencer, List Sequencer Setup |
| Notes | No remote command, front panel only. |
| Initial S/W Revision | A.05.00 |

Radio Standard

Allows access to the sub-menus for selecting the radio standard and the associated radio band for use in the current step.

| | |
|-----------------------|---|
| Key Path | Source, List Sequencer, List Sequencer Setup, Radio Setup |

| Notes | SCPI is supported after A.09.40 |
| Initial S/W Revision | A.05.00 |

None

Selects no radio standard for use on the current step.

| | |
|----------------------|--|
| Key Path | Source, List Sequencer, List Sequencer Setup, Radio Setup, Radio Standard |
| Example | :SOUR:LIST:STEP2:SET:RAD:BAND NONE |
| Notes | SCPI is supported after A.09.40 |
| Initial S/W Revision | A.05.00 |

GSM/EDGE

Pressing this key once selects GSM/EDGE as the radio standard and the current GSM/EDGE band as the active channel band. Pressing this key again allows access to the sub-menus for selecting a different GSM/EDGE band.

| | |
|----------------------|--|
| Key Path | Source, List Sequencer, List Sequencer Setup, Radio Setup, Radio Standard |
| Initial S/W Revision | A.05.00 |

P-GSM

Selects P-GSM as the band for the current step.

| | |
|----------------------|--|
| Key Path | Source, List Sequencer, List Sequencer Setup, Radio Setup, Radio Standard, GSM/EDGE |
| Initial S/W Revision | A.05.00 |

E-GSM

Selects E-GSM as the band for the current step.

| | |
|----------------------|--|
| Key Path | Source, List Sequencer, List Sequencer Setup, Radio Setup, Radio Standard, GSM/EDGE |
| Initial S/W Revision | A.05.00 |

R-GSM

Selects R-GSM as the band for the current step.

| | |
|----------------------|--|
| Key Path | Source, List Sequencer, List Sequencer Setup, Radio Setup, Radio Standard, GSM/EDGE |
| Initial S/W Revision | A.05.00 |

DCS 1800

Selects DCS 1800 as the band for the current step.

| | |
|----------------------|--|
| Key Path | Source, List Sequencer, List Sequencer Setup, Radio Setup, Radio Standard, GSM/EDGE |
| Initial S/W Revision | A.05.00 |

PCS 1900

Selects PCS 1900 as the band for the current step.

| | |
|----------------------|--|
| Key Path | Source, List Sequencer, List Sequencer Setup, Radio Setup, Radio Standard, GSM/EDGE |
| Initial S/W Revision | A.05.00 |

GSM 450

Selects GSM 450 as the band for the current step.

| | |
|----------------------|--|
| Key Path | Source, List Sequencer, List Sequencer Setup, Radio Setup, Radio Standard, GSM/EDGE |
| Initial S/W Revision | A.05.00 |

GSM 480

Selects GSM 480 as the band for the current step.

| | |
|----------------------|--|
| Key Path | Source, List Sequencer, List Sequencer Setup, Radio Setup, Radio Standard, GSM/EDGE |
| Initial S/W Revision | A.05.00 |

GSM 850

Selects GSM 850 as the band for the current step.

| | |
|----------------------|--|
| Key Path | Source, List Sequencer, List Sequencer Setup, Radio Setup, Radio Standard, GSM/EDGE |
| Initial S/W Revision | A.05.00 |

GSM 700

Selects GSM 700 as the band for the current step.

| | |
|----------------------|--|
| Key Path | Source, List Sequencer, List Sequencer Setup, Radio Setup, Radio Standard, GSM/EDGE |
| Initial S/W Revision | A.05.00 |

T-GSM 810

Selects T-GSM 810 as the band for the current step.

| | |
|----------------------|--|
| Key Path | Source, List Sequencer, List Sequencer Setup, Radio Setup, Radio Standard, GSM/EDGE |
| Initial S/W Revision | A.05.00 |

WCDMA

Pressing this key once selects WCDMA as the radio standard and the current WCDMA band as the active channel band. Pressing this key again allows access to the sub-menus for selecting a different WCDMA band.

| | |
|----------------------|--|
| Key Path | Source, List Sequencer, List Sequencer Setup, Radio Setup, Radio Standard |
| Initial S/W Revision | A.05.00 |

Band I

Selects Band I as the band for the current step.

| | |
|----------------------|---|
| Key Path | Source, List Sequencer, List Sequencer Setup, Radio Setup, Radio Standard, WCDMA |
| Initial S/W Revision | A.05.00 |

Band II

Selects Band II as the band for the current step.

| | |
|----------------------|---|
| Key Path | Source, List Sequencer, List Sequencer Setup, Radio Setup, Radio Standard, WCDMA |
| Initial S/W Revision | A.05.00 |

Band III

Selects Band III as the band for the current step.

| | |
|----------------------|---|
| Key Path | Source, List Sequencer, List Sequencer Setup, Radio Setup, Radio Standard, WCDMA |
| Initial S/W Revision | A.05.00 |

Band IV

Selects Band IV as the band for the current step.

| | |
|----------------------|---|
| Key Path | Source, List Sequencer, List Sequencer Setup, Radio Setup, Radio Standard, WCDMA |
| Initial S/W Revision | A.05.00 |

Band V

Selects Band V as the band for the current step.

| | |
|----------------------|---|
| Key Path | Source, List Sequencer, List Sequencer Setup, Radio Setup, Radio Standard, WCDMA |
| Initial S/W Revision | A.05.00 |

Band VI

Selects Band VI as the band for the current step.

| | |
|----------------------|---|
| Key Path | Source, List Sequencer, List Sequencer Setup, Radio Setup, Radio Standard, WCDMA |
| Initial S/W Revision | A.05.00 |

Band VII

Selects Band VII as the band for the current step.

| | |
|----------------------|---|
| Key Path | Source, List Sequencer, List Sequencer Setup, Radio Setup, Radio Standard, WCDMA |
| Initial S/W Revision | A.05.00 |

Band VIII

Selects Band VIII as the band for the current step.

| | |
|----------------------|---|
| Key Path | Source, List Sequencer, List Sequencer Setup, Radio Setup, Radio Standard, WCDMA |
| Initial S/W Revision | A.05.00 |

Band IX

Selects Band IX as the band for the current step.

| | |
|----------------------|---|
| Key Path | Source, List Sequencer, List Sequencer Setup, Radio Setup, Radio Standard, WCDMA |
| Initial S/W Revision | A.05.00 |

Band X

Selects Band X as the band for the current step.

| | |
|----------------------|---|
| Key Path | Source, List Sequencer, List Sequencer Setup, Radio Setup, Radio Standard, WCDMA |
| Initial S/W Revision | A.05.00 |

Band XI

Selects Band XI as the band for the current step.

| | |
|----------------------|---|
| Key Path | Source, List Sequencer, List Sequencer Setup, Radio Setup, Radio Standard, WCDMA |
| Initial S/W Revision | A.05.00 |

Band XII

Selects Band XII as the band for the current step.

| | |
|----------------------|---|
| Key Path | Source, List Sequencer, List Sequencer Setup, Radio Setup, Radio Standard, WCDMA |
| Initial S/W Revision | A.05.00 |

Band XIII

Selects Band XIII as the band for the current step.

| | |
|----------------------|---|
| Key Path | Source, List Sequencer, List Sequencer Setup, Radio Setup, Radio Standard, WCDMA |
| Initial S/W Revision | A.05.00 |

Band XIV

Selects Band XIV as the band for the current step.

| | |
|----------------------|---|
| Key Path | Source, List Sequencer, List Sequencer Setup, Radio Setup, Radio Standard, WCDMA |
| Initial S/W Revision | A.05.00 |

CDMA 2000 / 1xEVDO

Pressing this key once selects CDMA 2000/1xEVDO as the radio standard and the current CDMA 2000/1xEVDO band as the active channel band. Pressing this key again allows access to the sub-menus for selecting a different CDMA 2000/1xEVDO band.

| | |
|----------------------|--|
| Key Path | Source, List Sequencer, List Sequencer Setup, Radio Setup, Radio Standard |
| Initial S/W Revision | A.05.00 |

US CELL

Selects US Cell as the band for the current step.

| | |
|----------------------|--|
| Key Path | Source, List Sequencer, List Sequencer Setup, Radio Setup, Radio Standard, CDMA 2000 / 1xEVDO |
| Initial S/W Revision | A.05.00 |

US PCS

Selects US PCS as the band for the current step.

| | |
|----------------------|--|
| Key Path | Source, List Sequencer, List Sequencer Setup, Radio Setup, Radio Standard, CDMA 2000 / 1xEVDO |
| Initial S/W Revision | A.05.00 |

Japan Cell

Selects Japan Cell as the band for the current step.

| | |
|----------------------|--|
| Key Path | Source, List Sequencer, List Sequencer Setup, Radio Setup, Radio Standard, CDMA 2000 / 1xEVDO |
| Initial S/W Revision | A.05.00 |

Korean PCS

Selects Korean PCS as the band for the current step.

| | |
|----------------------|--|
| Key Path | Source, List Sequencer, List Sequencer Setup, Radio Setup, Radio Standard, CDMA 2000 / 1xEVDO |
| Initial S/W Revision | A.05.00 |

NMT 450

Selects NMT 450 as the band for the current step.

| | |
|----------------------|--|
| Key Path | Source, List Sequencer, List Sequencer Setup, Radio Setup, Radio Standard, CDMA 2000 / 1xEVDO |
| Initial S/W Revision | A.05.00 |

IMT 2000

Selects IMT 2000 as the band for the current step.

| | |
|----------------------|--|
| Key Path | Source, List Sequencer, List Sequencer Setup, Radio Setup, Radio Standard, CDMA 2000 / 1xEVDO |
| Initial S/W Revision | A.05.00 |

Upper 700

Selects Upper 700 as the band for the current step.

| | |
|----------------------|--|
| Key Path | Source, List Sequencer, List Sequencer Setup, Radio Setup, Radio Standard, CDMA 2000 / 1xEVDO |
| Initial S/W Revision | A.05.00 |

Secondary 800

Selects Secondary 800 as the band for the current step.

| | |
|----------------------|--|
| Key Path | Source, List Sequencer, List Sequencer Setup, Radio Setup, Radio Standard, CDMA 2000 / 1xEVDO |
| Initial S/W Revision | A.05.00 |

400 Euro PAMR

Selects 400 Euro PAMR as the band for the current step.

| | |
|----------------------|--|
| Key Path | Source, List Sequencer, List Sequencer Setup, Radio Setup, Radio Standard, CDMA 2000 / 1xEVDO |
| Initial S/W Revision | A.05.00 |

800 PAMR

Selects 800 PAMR as the band for the current step.

| | |
|----------------------|--|
| Key Path | Source, List Sequencer, List Sequencer Setup, Radio Setup, Radio Standard, CDMA 2000 / 1xEVDO |
| Initial S/W Revision | A.05.00 |

2.5GHz IMT EXT

Selects 2.5 GHz IMT EXT as the band for the current step.

| | |
|----------------------|--|
| Key Path | Source, List Sequencer, List Sequencer Setup, Radio Setup, Radio Standard, CDMA 2000 / 1xEVDO |
| Initial S/W Revision | A.05.00 |

US PCS 1.9GHz

Selects US PCS 1.9 GHz as the band for the current step.

| | |
|----------------------|--|
| Key Path | Source, List Sequencer, List Sequencer Setup, Radio Setup, Radio Standard, CDMA 2000 / 1xEVDO |
| Initial S/W Revision | A.05.00 |

AWS

Selects AWS as the band for the current step.

| | |
|----------------------|--|
| Key Path | Source, List Sequencer, List Sequencer Setup, Radio Setup, Radio Standard, CDMA 2000 / 1xEVDO |
| Initial S/W Revision | A.05.00 |

US 2.5GHz

Selects US 2.5 GHz as the band for the current step.

| | |
|----------------------|--|
| Key Path | Source, List Sequencer, List Sequencer Setup, Radio Setup, Radio Standard, CDMA 2000 / 1xEVDO |
| Initial S/W Revision | A.05.00 |

700 Public Safety

Selects 700 Public Safety as the band for the current step.

| | |
|----------------------|--|
| Key Path | Source, List Sequencer, List Sequencer Setup, Radio Setup, Radio Standard, CDMA 2000 / 1xEVDO |
| Initial S/W Revision | A.05.00 |

C2K Lower 700

Selects C2K Lower 700 as the band for the current step.

| | |
|----------------------|--|
| Key Path | Source, List Sequencer, List Sequencer Setup, Radio Setup, Radio Standard, CDMA 2000 / 1xEVDO |
| Initial S/W Revision | A.05.00 |

LTE

Pressing this key once selects LTE FDD as the radio standard and the current LTE FDD band as the active channel band. Pressing this key again allows access to the sub-menus for selecting a different LTE FDD band.

| | |
|----------------------|--|
| Key Path | Source, List Sequencer, List Sequencer Setup, Radio Setup, Radio Standard |
| Initial S/W Revision | A.09.50 |

BAND 1

Selects BAND 1 as the band for the current step.

| | |
|----------------------|---|
| Key Path | Source, List Sequencer, List Sequencer Setup, Radio Setup, Radio Standard, LTE |
| Initial S/W Revision | A.09.50 |

BAND 2

Selects BAND 2 as the band for the current step.

| | |
|----------------------|---|
| Key Path | Source, List Sequencer, List Sequencer Setup, Radio Setup, Radio Standard, LTE |
| Initial S/W Revision | A.09.50 |

BAND 3

Selects BAND 3 as the band for the current step.

| | |
|----------------------|---|
| Key Path | Source, List Sequencer, List Sequencer Setup, Radio Setup, Radio Standard, LTE |
| Initial S/W Revision | A.09.50 |

BAND 4

Selects BAND 4 as the band for the current step.

| | |
|----------------------|---|
| Key Path | Source, List Sequencer, List Sequencer Setup, Radio Setup, Radio Standard, LTE |
| Initial S/W Revision | A.09.50 |

BAND 5

Selects BAND 5 as the band for the current step.

| | |
|----------------------|---|
| Key Path | Source, List Sequencer, List Sequencer Setup, Radio Setup, Radio Standard, LTE |
| Initial S/W Revision | A.09.50 |

BAND 6

Selects BAND 6 as the band for the current step.

| | |
|----------------------|---|
| Key Path | Source, List Sequencer, List Sequencer Setup, Radio Setup, Radio Standard, LTE |
| Initial S/W Revision | A.09.50 |

BAND 7

Selects BAND 7 as the band for the current step.

| | |
|----------------------|---|
| Key Path | Source, List Sequencer, List Sequencer Setup, Radio Setup, Radio Standard, LTE |
| Initial S/W Revision | A.09.50 |

BAND 8

Selects BAND 8 as the band for the current step.

| | |
|----------------------|---|
| Key Path | Source, List Sequencer, List Sequencer Setup, Radio Setup, Radio Standard, LTE |
| Initial S/W Revision | A.09.50 |

BAND 9

Selects BAND 9 as the band for the current step.

| | |
|----------------------|---|
| Key Path | Source, List Sequencer, List Sequencer Setup, Radio Setup, Radio Standard, LTE |
| Initial S/W Revision | A.09.50 |

BAND 10

Selects BAND 10 as the band for the current step.

| | |
|----------------------|---|
| Key Path | Source, List Sequencer, List Sequencer Setup, Radio Setup, Radio Standard, LTE |
| Initial S/W Revision | A.09.50 |

BAND 11

Selects BAND 11 as the band for the current step.

| | |
|----------------------|---|
| Key Path | Source, List Sequencer, List Sequencer Setup, Radio Setup, Radio Standard, LTE |
| Initial S/W Revision | A.09.50 |

BAND 12

Selects BAND 12 as the band for the current step.

| | |
|----------------------|---|
| Key Path | Source, List Sequencer, List Sequencer Setup, Radio Setup, Radio Standard, LTE |
| Initial S/W Revision | A.09.50 |

BAND 13

Selects BAND 13 as the band for the current step.

| | |
|----------------------|---|
| Key Path | Source, List Sequencer, List Sequencer Setup, Radio Setup, Radio Standard, LTE |
| Initial S/W Revision | A.09.50 |

BAND 14

Selects BAND 14 as the band for the current step.

| | |
|----------------------|---|
| Key Path | Source, List Sequencer, List Sequencer Setup, Radio Setup, Radio Standard, LTE |
| Initial S/W Revision | A.09.50 |

BAND 17

Selects BAND 17 as the band for the current step.

| | |
|----------------------|---|
| Key Path | Source, List Sequencer, List Sequencer Setup, Radio Setup, Radio Standard, LTE |
| Initial S/W Revision | A.09.50 |

BAND 18

Selects BAND 18 as the band for the current step.

| | |
|----------------------|---|
| Key Path | Source, List Sequencer, List Sequencer Setup, Radio Setup, Radio Standard, LTE |
| Initial S/W Revision | A.09.50 |

BAND 19

Selects BAND 19 as the band for the current step.

| | |
|----------------------|---|
| Key Path | Source, List Sequencer, List Sequencer Setup, Radio Setup, Radio Standard, LTE |
| Initial S/W Revision | A.09.50 |

BAND 20

Selects BAND 20 as the band for the current step.

| | |
|----------------------|---|
| Key Path | Source, List Sequencer, List Sequencer Setup, Radio Setup, Radio Standard, LTE |
| Initial S/W Revision | A.09.50 |

BAND 21

Selects BAND 21 as the band for the current step.

| | |
|----------------------|---|
| Key Path | Source, List Sequencer, List Sequencer Setup, Radio Setup, Radio Standard, LTE |
| Initial S/W Revision | A.09.50 |

BAND 24

Selects BAND 24 as the band for the current step.

| | |
|----------------------|---|
| Key Path | Source, List Sequencer, List Sequencer Setup, Radio Setup, Radio Standard, LTE |
| Initial S/W Revision | A.09.50 |

BAND 25

Selects BAND 25 as the band for the current step.

| | |
|----------------------|---|
| Key Path | Source, List Sequencer, List Sequencer Setup, Radio Setup, Radio Standard, LTE |
| Initial S/W Revision | A.09.50 |

BAND 26

Selects BAND 26 as the band for the current step.

| | |
|----------------------|---|
| Key Path | Source, List Sequencer, List Sequencer Setup, Radio Setup, Radio Standard, LTE |
| Initial S/W Revision | A.12.53 |

BAND 27

Selects BAND 27 as the band for the current step.

| | |
|----------------------|---|
| Key Path | Source, List Sequencer, List Sequencer Setup, Radio Setup, Radio Standard, LTE |
| Initial S/W Revision | A.14.00 |

BAND 28

Selects BAND 28 as the band for the current step.

| | |
|----------------------|---|
| Key Path | Source, List Sequencer, List Sequencer Setup, Radio Setup, Radio Standard, LTE |
| Initial S/W Revision | A.14.00 |

BAND 31

Selects BAND 31 as the band for the current step.

| | |
|----------------------|---|
| Key Path | Source, List Sequencer, List Sequencer Setup, Radio Setup, Radio Standard, LTE |
| Initial S/W Revision | A.14.00 |

LTE TDD

Sets LTE TDD as the radio standard for use and accesses the LTE TDD specific channel band sub-menus..

| | |
|----------------------|---|
| Key Path | Source, Frequency, Radio Setup, Radio Standard |
| Initial S/W Revision | A.11.50 |

BAND 33

Selects BAND 33 as the band for the current step.

| | |
|----------------------|--|
| Key Path | Source, Frequency, Radio Setup, Radio Standard, LTE TDD |
| Example | :SOUR:FREQ:CHAN:BAND BAND33 |
| Initial S/W Revision | A.11.50 |

BAND 34

Selects BAND 34 as the band for the current step.

| | |
|----------------------|--|
| Key Path | Source, Frequency, Radio Setup, Radio Standard, LTE TDD |
| Example | :SOUR:FREQ:CHAN:BAND BAND34 |
| Initial S/W Revision | A.11.50 |

BAND 35

Selects BAND 35 as the band for the current step.

| | |
|----------------------|--|
| Key Path | Source, Frequency, Radio Setup, Radio Standard, LTE TDD |
| Example | :SOUR:FREQ:CHAN:BAND BAND35 |
| Initial S/W Revision | A.11.50 |

BAND 36

Selects BAND 36 as the band for the current step.

| | |
|----------------------|--|
| Key Path | Source, Frequency, Radio Setup, Radio Standard, LTE TDD |
| Example | :SOUR:FREQ:CHAN:BAND BAND36 |
| Initial S/W Revision | A.11.50 |

BAND 37

Selects BAND 37 as the band for the current step.

| | |
|----------------------|--|
| Key Path | Source, Frequency, Radio Setup, Radio Standard, LTE TDD |
| Example | :SOUR:FREQ:CHAN:BAND BAND37 |
| Initial S/W Revision | A.11.50 |

BAND 38

Selects BAND 38 as the band for the current step.

| | |
|----------------------|--|
| Key Path | Source, Frequency, Radio Setup, Radio Standard, LTE TDD |
| Example | :SOUR:FREQ:CHAN:BAND BAND38 |
| Initial S/W Revision | A.11.50 |

BAND 39

Selects BAND 39 as the band for the current step.

| | |
|----------------------|--|
| Key Path | Source, Frequency, Radio Setup, Radio Standard, LTE TDD |
| Example | :SOUR:FREQ:CHAN:BAND BAND39 |
| Initial S/W Revision | A.11.50 |

BAND 40

Selects BAND 40 as the band for the current step.

| | |
|----------------------|--|
| Key Path | Source, Frequency, Radio Setup, Radio Standard, LTE TDD |
| Example | :SOUR:FREQ:CHAN:BAND BAND40 |
| Initial S/W Revision | A.11.50 |

BAND 41

Selects BAND 41 as the band for the current step.

| | |
|----------------------|--|
| Key Path | Source, Frequency, Radio Setup, Radio Standard, LTE TDD |
| Example | :SOUR:FREQ:CHAN:BAND BAND41 |
| Initial S/W Revision | A.11.50 |

BAND 42

Selects BAND 42 as the band for the current step.

| | |
|----------------------|--|
| Key Path | Source, Frequency, Radio Setup, Radio Standard, LTE TDD |
| Example | :SOUR:FREQ:CHAN:BAND BAND42 |
| Initial S/W Revision | A.11.50 |

BAND 43

Selects BAND 43 as the band for the current step.

| | |
|----------------------|--|
| Key Path | Source, Frequency, Radio Setup, Radio Standard, LTE TDD |
| Example | :SOUR:FREQ:CHAN:BAND BAND43 |
| Initial S/W Revision | A.11.50 |

BAND 44

Selects BAND 44 as the band for the current step.

| | |
|----------------------|---|
| Key Path | Source, List Sequencer, List Sequencer Setup, Radio Setup, Radio Standard, LTE TDD |
| Initial S/W Revision | A.14.00 |

TDSCDMA

Sets TDSCDMA as the radio standard for use and accesses the TDSCDMA specific channel band sub-menus..

| | |
|----------------------|---|
| Key Path | Source, Frequency, Radio Setup, Radio Standard |
| Initial S/W Revision | A.11.50 |

BAND A

Selects BAND A as the band for the current step.

| | |
|----------------------|--|
| Key Path | Source, Frequency, Radio Setup, Radio Standard, TDSCDMA |
| Example | :SOUR:FREQ:CHAN:BAND BANDA |
| Initial S/W Revision | A.11.50 |

BAND B

Selects BAND B as the band for the current step.

| | |
|----------------------|--|
| Key Path | Source, Frequency, Radio Setup, Radio Standard, TDSCDMA |
| Example | :SOUR:FREQ:CHAN:BAND BANDB |
| Initial S/W Revision | A.11.50 |

BAND C

Selects BAND C as the band for the current step.

| | |
|----------------------|--|
| Key Path | Source, Frequency, Radio Setup, Radio Standard, TDSCDMA |
| Example | :SOUR:FREQ:CHAN:BAND BANDC |
| Initial S/W Revision | A.11.50 |

BAND D

Selects BAND D as the band for the current step.

| | |
|----------------------|--|
| Key Path | Source, Frequency, Radio Setup, Radio Standard, TDSCDMA |
| Example | :SOUR:FREQ:CHAN:BAND BANDD |
| Initial S/W Revision | A.11.50 |

BAND E

Selects BAND E as the band for the current step.

| | |
|----------------------|--|
| Key Path | Source, Frequency, Radio Setup, Radio Standard, TDSCDMA |
| Example | :SOUR:FREQ:CHAN:BAND BANDE |
| Initial S/W Revision | A.11.50 |

BAND F

Selects BAND F as the band for the current step.

| | |
|----------------------|--|
| Key Path | Source, Frequency, Radio Setup, Radio Standard, TDSCDMA |
| Example | :SOUR:FREQ:CHAN:BAND BANDF |
| Initial S/W Revision | A.11.50 |

Radio Band Link

Allows you to specify the radio band link direction for the steps within the list sequence. The link is used in conjunction with the channel band and channel number to determine the output frequency.

When set to “Uplink”, the source will calculate the uplink frequency according to an uplink formula together with selected channel band and channel number. When set to “Downlink”, the source will calculate the downlink frequency according to a downlink formula together with selected channel band and channel number.

| | |
|-----------------------|---|
| Key Path | Source, List Sequencer, List Sequencer Setup, Radio Setup |
| Remote Command | :SOURce:LIST:STEP[1] 2 3...1000:SETup:RADio:BAND:LINK DOWN UP :SOURce:LIST:STEP[1] 2 3...1000:SETup:RADio:BAND:LINK? |

| | |
|----------------------|--|
| Example | :SOUR:LIST:STEP2:SET:RAD:BAND:LINK UP :SOUR:LIST:STEP2:SET:RAD:BAND:LINK? |
| Notes | SCPI is supported after A.09.40 |
| Preset | DOWN |
| Range | DOWN UP |
| Initial S/W Revision | A.05.00 |

Channel

Allows you to specify the frequency of the current step via a channel number.

| | |
|-----------------------|---|
| Key Path | Source, List Sequencer, List Sequencer Setup |
| Remote Command | :SOURce:LIST:STEP[1] 2 3...1000:SETup:CNFRfrequency <double> :SOURce:LIST:STEP[1] 2 3...1000:SETup:CNFRfrequency? |
| Example | :SOUR:LIST:STEP2:SET:CNFR 124 :SOUR:LIST:STEP2:SET:CNFR? |
| Notes | SCPI is supported after A.09.40. This SCPI is used to setup channel number or frequency setting, according to current Radio Band setting. If Radio Band is "NONE", then it's frequency. If Radio Band is not "NONE", then it's channel number. |
| Couplings | The channel number is coupled to the step frequency value. When the step frequency value is changed, the channel number will increase or decrease to match the new step frequency. If the step frequency is not at an exact match for a channel number, the nearest channel number is displayed, along with a greater than, or less than sign to indicate the frequency is above or below the channel number. |
| Preset | 1 |
| Min | 0 (Please refer to for valid ranges.) |
| Max | 10838 (Please refer to for valid ranges.) |
| Initial S/W Revision | A.05.00 |

Frequency

Allows you to specify a frequency value for the current step.

| | |
|-----------------------|--|
| Key Path | Source, List Sequencer, List Sequencer Setup |
| Remote Command | :SOURce:LIST:STEP[1] 2 3...1000:SETup:CNFRfrequency <double> :SOURce:LIST:STEP[1] 2 3...1000:SETup:CNFRfrequency? |
| Example | :SOUR:LIST:STEP2:SET:CNFR 1GHz :SOUR:LIST:STEP2:SET:CNFR? |
| Notes | SCPI is supported after A.09.40. |

| | |
|----------------------|--|
| | This SCPI is used to setup channel number or frequency setting, according to current Radio Band setting. If Radio Band is "NONE", then it's frequency. If Radio Band is not "NONE", then it's channel number. |
| Couplings | The frequency value is coupled to the channel band and number for the step, such that updates to the radio band and channel number will update the frequency value to the corresponding absolute frequency. The reverse is also true, changing the frequency value causes the value of the channel number to be updated. |
| Preset | 1.00 GHz |
| Min | 10.00 MHz |
| Max | Hardware Dependant: Option 503 = 3.6 GHz Option 504 = 3.9 GHz Option 506 = 6.00 GHz |
| Initial S/W Revision | A.05.00 |

Power

Allows you to specify a power value for the current step.

| | |
|----------------|--|
| Key Path | Source, List Sequencer, List Sequencer Setup |
| Remote Command | :SOURce:LIST:STEP[1] 2 3...1000:SETup:AMPLitude <double> :SOURce:LIST:STEP[1] 2 3...1000:SETup:AMPLitude? |
| Example | :SOUR:LIST:STEP2:SET:AMPL -50dBm :SOUR:LIST:STEP2:SET:AMPL? |
| Notes | SCPI is supported after A.09.40 |
| Notes | Amplitude corrections can be specified for use with the source. In the event of amplitude corrections being applied, the valid ranges for the RF power do not change dependant on the current amplitude correction setting. Instead, if the combination of RF power + amplitude correction is higher or lower than the source output range, the Source Unleveled bit is set and the "Source Unleveled" indicator will appear on status panel to indicate that the source cannot maintain the output power that has been requested. The multiport adapter RFIO TX ports and GPS ports cannot ensure power accuracy when power setting is lower than -130dBm, this power setting value is defined by the sum of RF Power setting and related amplitude correction value. But user settable value could be lower than this limit. When application detected there exists power setting lower than -130dBm on MPA RFIO TX ports, then popup warning message . When application detected there exists power setting lower than -130dBm on MPA GPS ports, then popup warning message . These are only warning messages, and check is performed when RF is ON. |
| Notes | The Min and Max value here defined UI settable amplitude range. This range is larger than actual amplitude range with level accuracy defined in spec. |
| Dependencies | The RF power is dependent on the RF output port and frequency, such that the current frequency and selected output port determine the valid range of power values. |
| Preset | -100 dBm |

| | |
|----------------------|--|
| Min | The range of values depends on the current frequency and selected RF output port. Please refer to "RF Power" on page 2500 and the table RF Power Range for the valid ranges. |
| Max | The range of values depends on the current frequency and selected RF output port. Please refer to "RF Power" on page 2500 and the table RF Power Range for the valid ranges. |
| Initial S/W Revision | A.05.00 |

Waveform

Allows you access to the sub-menus for selecting the waveform to be played back during the current step. Pressing this key also changes the central display area to show the Waveform File Selection view.

| | |
|----------------------|--|
| Key Path | Source, List Sequencer, List Sequencer Setup |
| Remote Command | :SOURce:LIST:STEP[1] 2 3...1000:SETup:WAVeform <string> :SOURce:LIST:STEP[1] 2 3...1000:SETup:WAVeform? |
| Example | :SOUR:LIST:STEP2:SET:WAV "CW" :SOUR:LIST:STEP2:SET:WAV? |
| Notes | SCPI is supported after A.09.40 |
| Remote Command Notes | String type, takes "Off" "CW" "Cont" "waveform name" |
| Preset | CW |
| Range | Waveform Continue Previous CW Off |
| Initial S/W Revision | A.05.00 |

CW

Sets the current step to output a CW tone.

| | |
|----------------------|---|
| Key Path | Source, List Sequencer, List Sequencer Setup, Waveform |
| Example | :SOUR:LIST:STEP2:SET:WAV "CW" |
| Notes | SCPI is supported after A.09.40 |
| Initial S/W Revision | A.05.00 |

Selected Waveform

Inserts the currently selected waveform in the waveform selection view as the waveform for playback during the current step.

| | |
|----------|---|
| Key Path | Source, List Sequencer, List Sequencer Setup, Waveform |
| Example | :SOUR:LIST:STEP2:SET:WAV "waveform name" |
| Notes | SCPI is supported after A.09.40 If the selected waveform contains header (which contains ARB play parameters), source list |

sequence will automatically apply header settings of the selected waveform in that step.

| | |
|----------------------|---------|
| Initial S/W Revision | A.05.00 |
|----------------------|---------|

Continue Previous

Sets the current step to continue with playback of the waveform from the previous step. When continuing the previous waveform, the ARB playback will not pause while the source retunes to the new frequency or amplitude that may be defined for the new step.

| | |
|----------|---|
| Key Path | Source, List Sequencer, List Sequencer Setup, Waveform |
|----------|---|

| | |
|----------------|---------------------------------|
| Example | :SOUR:LIST:STEP2:SET:WAV "Cont" |
|----------------|---------------------------------|

| | |
|-------|---------------------------------|
| Notes | SCPI is supported after A.09.40 |
|-------|---------------------------------|

| | |
|----------------------|---------|
| Initial S/W Revision | A.05.00 |
|----------------------|---------|

Off

Disable RF output of the current step.

| | |
|----------|---|
| Key Path | Source, List Sequencer, List Sequencer Setup, Waveform |
|----------|---|

| | |
|----------------|--------------------------------|
| Example | :SOUR:LIST:STEP2:SET:WAV "Off" |
|----------------|--------------------------------|

| | |
|-------|---------------------------------|
| Notes | SCPI is supported after A.09.40 |
|-------|---------------------------------|

| | |
|----------------------|---------|
| Initial S/W Revision | A.05.00 |
|----------------------|---------|

Segments on Hard Disk

Allows you access to the sub-menus for loading waveform segments from the hard disk into ARB memory. The default directory is: D: varb.

Pressing this key changes the current view to the Waveform Management View.

| | |
|----------|---|
| Key Path | Source, Modulation Setup, ARB, Select Waveform |
|----------|---|

| | |
|----------------------|---------|
| Initial S/W Revision | A.05.00 |
|----------------------|---------|

Load Segment To ARB Memory

Allows you to load the selected file into ARB memory. On the front panel you select the file for loading to the ARB memory by highlighting the desired file in the list. Using the SCPI command, you specify the file name on the HDD.

"NVWFM" (none-volatile storage) MSUS (Mass Storage Unit Specifier) is supported in the memory subsystem because the ARB memory cannot be accessed directly. Therefore, files must be downloaded to the instrument hard disk and then loaded into the ARB memory. "NVWFM" MSUS will be mapped to the

default directory D: VARB. The SCPI command supports using either “NVWFM” MSUS or specifying a full path. For more information, see [Memory Subsystem \(Remote Command Only\)](#).

If a file of the same name already exists within ARB memory, it is overwritten. If you wish to load two segments of the same name, you must rename one of the segments before loading it into ARB memory. To rename a segment, you can either use Windows File Explorer, or the :MMEMory:COPI command.

| | |
|-----------------------------|--|
| Key Path | Source, Modulation Setup, ARB, Select Waveform, Segments on Hard Disk |
| Remote Command | :SOURce:RADio:ARB:LOAD <string> |
| Example | :SOUR:RAD:ARB:LOAD “D: VARB\testwaveform.bin” or :SOUR:RAD:ARB:LOAD “NVWFM:testwaveform.bin” |
| Notes | <p>Because loading the file involves a delay of unpredictable length, this command should be followed by the query *OPC?, which holds off subsequent commands until the loading operating is complete.</p> <p><string> – specifies the path name of the file to load from the HDD into ARB memory. It could be a <full path + filename>, or <“NVWFM” MSUS + colon + filename>.</p> <p>When in Sequence Analyzer mode, and Include Source is Yes, an attempt to load a file to ARB memory will be rejected with an error.</p> <p>When Include Source is No and if there is insufficient free ARB memory to load the selected waveform, an error is generated. .</p> <p>If you specify a file over SCPI, but the file is not at the specified location, an error is generated.</p> <p>If you try to load a waveform file but the file contains less than 500 IQ samples, an error is generated.</p> <p>If you try to load a Signal Studio waveform “*.wfm” which contains invalid waveform header, an error is generated.</p> <p>If the ARB is ON when you load a file to ARB memory or delete a file from ARB memory, the playing waveform segment may not keep phase continuity during the ARB memory operation. The waveform will be replayed after the ARB operation is finished.</p> <p>ARB can be loaded into ARB memory even required licenses do not present on the instrument. In this case, a GUI only warning message –800, “Operation complete; Loaded <filename> successfully, but no license <required licenses> installed”. User can install required licenses according to <required licenses> string to license it, or multi-pack license it.</p> |
| Initial S/W Revision | A.05.00 |

Load All To ARB Memory

Allows you to load all the segment files within the currently selected directory into ARB memory. If a file of the same name already exists within ARB memory, it is overwritten. If you wish to load two segments of the same name, you must rename one of the segments before loading it into ARB memory. To rename a segment, you can either use Windows File Explorer, or the :MEMory:COPI command.

| | |
|-----------------------|--|
| Key Path | Source, Modulation Setup, ARB, Select Waveform, Segments on Hard Disk |
| Remote Command | :SOURce:RADio:ARB:LOAD:ALL <string> |
| Example | :SOUR:RAD:ARB:LOAD:ALL “D: varb” |
| Notes | <p><string> - specifies the directory on the HDD to load the files into ARB memory from.</p> <p>When in Sequence Analyzer mode, and Include Source is Yes, an attempt to load all files from a</p> |

directory to ARB memory is rejected with an error.
 When Include Source is No and there is insufficient free ARB memory to load all the waveforms, when the ARB memory is full, the copy ceases, and an error is generated.
 If you specify a directory over SCPI, but the directory does not exist, an error is generated.
 If the ARB is ON, a user then loads or deletes file to ARB memory, the playing waveform segment may not keep phase continuity during the ARB memory operation. The waveform will be replayed after the ARB operation is finished.

| | |
|----------------------|---------|
| Initial S/W Revision | A.05.00 |
|----------------------|---------|

Change Directory...

Allows you to change the currently selected directory on the hard disk. Pressing this key opens a standard windows change directory dialog allowing you to select the new directory of interest.

The current directory is used for manually loading waveform segments into ARB memory for playback, and as a search location for waveform segments that are required to be loaded into ARB memory for playback of a waveform sequence or a list sequence.

| | |
|----------------------|--|
| Key Path | Source, Modulation Setup, ARB, Select Waveform, Segments on Hard Disk |
| Notes | No remote command, SCPIfront panel only. |
| Initial S/W Revision | A.05.00 |

Default Directory...

Allows you to change the default directory. It is used as a search location for waveform segments that are required to be loaded into ARB memory for playback of a waveform sequence, and as a search location for selecting waveforms using SCPI.

| | |
|-----------------------|---|
| Key Path | Source, Modulation Setup, ARB, Select Waveform, Segments on Hard Disk |
| Remote Command | :SOURce:RADio:ARB:DEFault:DIRectory <string> :SOURce:RADio:ARB: DEFault:DIRectory? |
| Example | :SOUR:RAD:ARB:DEF:DIR "D:\ArbFiles" :SOUR:RAD:ARB:DEF:DIR? |
| State Saved | Persistent, survives a power cycle and a preset but not saved in the instrument state |
| Initial S/W Revision | A.05.00 |

Segments in ARB Memory

Allows you access to the sub-menus for managing the files within ARB memory.

| | |
|----------------------|---|
| Key Path | Source, Modulation Setup, ARB, Select Waveform |
| Initial S/W Revision | A.05.00 |

Delete Segment From ARB Mem

Allows you to remove a segment from ARB playback memory.

| | |
|-----------------------|---|
| Key Path | Source, Modulation Setup, ARB, Select Waveform, Segments in ARB Memory |
| Remote Command | :SOURce:RADio:ARB:DELeTe <string> |
| Example | :SOUR:RAD:ARB:DEL "testwaveform.bin" |
| Notes | <p><string> - specifies the waveform to be deleted from the ARB playback memory.</p> <p>When in Sequence Analyzer mode and Include Source is Yes, an attempt to delete a file from ARB memory is rejected with an error.</p> <p>When Include Source is No and you specify a file that does not exist within ARB memory, an error is generated.</p> <p>It is possible to delete files from within the ARB memory when the ARB is ON. However, if you attempt to delete the file that is currently playing an error is generated.</p> <p>It is possible to delete a file from within the ARB memory when the sequencer state is ON and the file is not being used by the List Sequencer. If you attempt to delete a file which is being used by the list sequencer, an error is generated.</p> <p>When sequencer state is On, even if ARB state is On, the selected waveform will not be played. In this case, if the selected waveform is not used in List Sequence, it can be deleted and the ARB state is turned Off.</p> <p>If the ARB is ON and you load a file to ARB memory or delete a file from ARB memory, the playing waveform segment may not keep phase continuity during the ARB memory operation. The waveform will be replayed after the ARB operation is finished.</p> |
| Initial S/W Revision | A.05.00 |

Delete All From ARB Memory

Allows you to remove all segments from ARB playback memory.

| | |
|-----------------------|--|
| Key Path | Source, Modulation Setup, ARB, Select Waveform, Segments in ARB Memory |
| Remote Command | :SOURce:RADio:ARB:DELeTe:ALL |
| Example | :SOUR:RAD:ARB:DELeTe:ALL |
| Notes | <p>When in Sequence Analyzer mode and Include Source is Yes, an attempt to delete all files from ARB memory is rejected with an error.</p> <p>When Include Source is No and you attempt to delete all files from ARB memory when the ARB is currently playing a file, all files except the one playing are deleted and an error is generated.</p> <p>If you attempt to delete all files from ARB memory when there are waveform files used in "List Sequencer" on page 2585 and "Sequencer" on page 2586 state is ON, all files except the files currently being used in list sequencer are deleted, and an error is generated.</p> <p>If the ARB is ON and you load a file to ARB memory or delete a file from ARB memory, the playing waveform segment may not keep phase continuity during the ARB memory operation. The waveform will be replayed after the ARB operation is finished.</p> |
| Initial S/W Revision | A.05.00 |

Segments on Hard Disk

This key functions the same as ["Segments on Hard Disk" on page 2611](#).

| | |
|----------------------|---|
| Key Path | Source, List Sequencer, List Sequencer Setup, Waveform |
| Initial S/W Revision | Prior to A.09.00 |

| | |
|----------------------|--|
| Key Path | Source, List Sequencer, List Sequencer Setup, Waveform, Segments in ARB Memory, Segment in ARB Memory |
| Initial S/W Revision | Prior to A.09.00 |

Step Duration

Allows access to the sub-menus for setting up the duration of play for the current step.

The duration can be set to be either the number of times for the ARB file associated with the sequence to play, or a specific time value, or continuous. If the step is set to play a CW tone, the step duration cannot be set to a play count.

| | |
|----------------------|---|
| Key Path | Source, List Sequencer, List Sequencer Setup |
| Remote Command | :SOURce:LIST:STEP[1] 2 3...1000:SETup:DURation:TYPE TIME COUNT CONTInuous CABort :SOURce:LIST:STEP[1] 2 3...1000:SETup:DURation:TYPE? |
| Example | :SOUR:LIST:STEP2:SET:DUR:TYPE TIME :SOUR:LIST:STEP2:SET:DUR:TYPE? |
| Notes | SCPI is supported after A.09.40 |
| Notes | If "Step Duration" is set to "Time" or "Play Count" for the last step, the last step of ARB keeps playing as if set to "Continuous", until the set "Time" has expired or until the "Play Count" setting is reached. However, you can query Error! Reference source not found. Source Sweeping Condition Message to find out if the current list sequence is complete or not. |
| Range | Time Play Count Continuous Continuous Abort |
| Initial S/W Revision | A.05.00 |

Time

Sets the duration of the current step to be a time value for the length of time the step will play. Pressing this key again opens another menu which allows you to set the time value for the step duration.

| | |
|----------------------|--|
| Key Path | Source, List Sequencer, List Sequencer Setup, Step Duration |
| Example | :SOUR:LIST:STEP2:SET:DUR:TYPE TIME |
| Notes | SCPI is supported after A.09.40 |
| Initial S/W Revision | A.05.00 |

Duration Time

Allows you to specify the length of time the current step will play.

When Step Duration is **Continuous Abort** this parameter specifies the maximum duration that the waveform will continue to play after a step trigger is received before the transition to the next waveform will occur. Duration is limited to a maximum of 20 seconds.

If the Transition Time value is longer than the Step Duration Time, an error is generated when initiating a source list sequence. For source list sequence, transition time is included in the step duration length (not occupy additional time). If the Transition Time value is longer than the Step Duration Time, the real step duration length is extended to equal the transition time and cause a timing shift. This check is also described in section **Error! Reference source not found.** List Sequence Step Validation.

| | |
|-----------------------|--|
| Key Path | Source, List Sequencer, List Sequencer Setup, Step Duration, Time |
| Remote Command | :SOURce:LIST:STEP[1] 2 3...1000:SETup:DURation:TCOUNT <double> :SOURce:LIST:STEP[1] 2 3...1000:SETup:DURation:TCOUNT? |
| Example | :SOUR:LIST:STEP2:SET:DUR:TCO 1s :SOUR:LIST:STEP2:SET:DUR:TCO? |
| Notes | SCPI is supported after A.09.40 This SCPI is reused by "Play Count", "Duration Time" and "Continuous Abort" according to current Duration Type setting is "Play Count" or "Duration Time" or "Continuous Abort". If current "Duration Type" is "Continuous", then popup error -221, "Settings conflict; Cannot accept time or count input when step duration type is Continuous on step #" |
| Notes | If "Duration Time" is set for the last step, the last step of ARB keeps playing as if set to "Continuous" after set time expires. However, you can query Source Sweeping Condition Message (:STAT:OPER:COND?) to find out if the current list sequence is complete or not. |
| Preset | 1.00 ms |
| Min | 100 µs |
| Max | 1800 s |
| Initial S/W Revision | A.05.00 |

Play Count

Sets the duration of the current step to be an integer value for the number of times (play count) the ARB file is selected for playback during this step. For example, a 5 second ARB will be set to play 5 times during the step.

| | |
|-----------------------------|---|
| Key Path | Source, List Sequencer, List Sequencer Setup, Step Duration |
| Example | :SOUR:LIST:STEP2:SET:DUR:TYPE COUN |
| Notes | SCPI is supported after A.09.40 This key is unavailable and is grayed out if the current step is configured to CW tone rather than an ARB waveform. |
| Initial S/W Revision | A.05.00 |

Header Utilities

Allows access to the header utilities sub-menu. Pressing this key also causes the central display area to change to display the File Header Information view.

| | |
|-----------------------------|---|
| Key Path | Source, Modulation Setup, ARB |
| Dependencies | This key is only available if there is currently a waveform selected for playback. If no waveform is selected, the key is grayed out. |
| Initial S/W Revision | A.05.00 |

Continuous

Sets the current step to be played continuously until the next step starts. The waveform will always play completely before transitioning to the next step.

| | |
|-----------------------------|--|
| Key Path | Source, List Sequencer, List Sequencer Setup, Step Duration |
| Example | :SOUR:LIST:STEP2:SET:DUR:TYPE CONT |
| Notes | SCPI is supported after A.09.40 |
| Initial S/W Revision | A.05.00 |

Output Trigger

Allows you to specify the trigger output for the current step. The trigger output signal is sent at the start of the step.

When select "On", trigger event will occur on both Internal and External2 paths. Select "Off" will turn off trigger output.

| | |
|-----------------------|---|
| Key Path | Source, List Sequencer, List Sequencer Setup |
| Remote Command | :SOURce:LIST:STEP[1] 2 3...1000:SETup:OUTPut:TRIGger ON OFF 1 0 :SOURce:LIST:STEP[1] 2 3...1000:SETup:OUTPut:TRIGger |
| Example | :SOUR:LIST:STEP2:SET:OUTP:TRIG ON :SOUR:LIST:STEP2:SET:OUTP:TRIG? |
| Notes | SCPI is supported after A.09.40 |
| Preset | Off |

| | |
|----------------------|---------|
| Range | On Off |
| Initial S/W Revision | A.05.00 |

Step Configuration (Remote Command Only)

This SCPI command is used to configure the List Sequencer and is detailed in the table below. The command is defined such that you send one command per step, with the step number being specified as a subopcode of the SCPI command. Each command includes all the parameter settings for the step. As a step is setup, the values entered are run through several levels of validation.

| | |
|-----------------------|--|
| Remote Command | <pre>:SOURce:LIST:STEP[1] 2 ... 4..1000:SETup IMMEDIATE INTernal KEY BUS EXTernal2, <time>, NONE PGSM EGSM RGSM DCS1800 PCS1900 TGSM810 GSM450 GSM480 GSM700 GSM850 BANDI BANDII BANDIII BANDIV BANDV BANDVI BANDVII BANDVIII BANDIX BANDX BANDXI BANDXII BANDXIII BANDXIV BANDXIX USCELL USPCS JAPAN KOREAN NMT IMT2K UPPER SECOND PAMR400 PAMR800 IMTEXT PCS1DOT9G AWS US2DOT5G PUBLIC LOWER NONE BAND1 BAND2 BAND3 BAND4 BAND5 BAND6 BAND7 BAND8 BAND10 BAND11 BAND12 BAND13 BAND14 BAND17 BAND18 BAND19 BAND20 BAND21 BAND24 BAND25 BAND26 BAND33 BAND34 BAND35 BAND36 BAND37 BAND38 BAND39 BAND40 BAND41 BAND42 BAND43 BANDA BANDB BANDC BANDD BANDE BANDF, DOWN UP, <freq>, <ampl>, <string>, TIME COUNT CONTinuous, <time>, ON OFF 1 0, [<int>], :SOURce:LIST:STEP[1] 2 ... 4..1000:SETup?</pre> |
| Example | :SOUR:LIST:STEP1:SET INT, 1ms, PGSM, DOWN, 10, -25 dBm, "GSM_Test1.bin", TIME, 10ms, OFF, 255 |
| Notes | <p>The parameters are:</p> <p>(There is a total of 11 items in each step, the following is a list of the items in the order they must appear in the remote command.)</p> <ol style="list-style-type: none"> 1. Step Trigger <enum> – specifies the input trigger for the step. For details of the valid types of step trigger see "Step Trigger" on page 2588. 2. Transition Time <time> – specifies the transition time for the step in seconds. For details of the valid ranges for the transition time see "Transition Time" on page 2590. 3. Radio Band <enum> – specifies the radio band for the step. For details of the valid radio bands see "Radio Setup" on page 2591. 4. Radio Band Link <enum> – specifies the radio band link direction for the step. For details of the valid link types, see "Radio Band Link" on page 2607. 5. Frequency/Channel Number <freq>/<chan num> – specifies the frequency in Hz or the channel number for the step. The channel number and frequency are combined as one parameter that represents the frequency or channel number depending on the radio band setting. If the radio band is set to NONE, this value is interpreted as a frequency value in Hz. If the radio band is set to a valid band, this value is interpreted as a channel number. For details of the valid ranges for frequency and channel numbers, see "Channel" on page 2608 and "Frequency" on page 2608. 6. Power <ampl> – specifies the output power for the step in dBm. For details of the valid ranges see "Power" on page 2609. 7. Waveform <string> – specifies the waveform for playback during the step. The step can output either a new ARB waveform, continue playback of the previous waveform, or output a CW tone. The |

options for specifying these are:

<filename> - plays the specified waveform from the start. The filename value is the name of the file within ARB playback memory, it does not include the windows path to the file on the HDD. If you enter a filename for a waveform that does not reside within ARB playback memory, an error is generated.

CONT - continues playback of the ARB file from the previous step

CW - outputs a CW tone

OFF - disable RF output

8. Step Duration <enum> - specifies the duration of the step. The duration can be specified to be either time, or play count of the ARB file associated with the step, or continuous. If Waveform is set to "CW", this value cannot be set to Play Count and an error will be generated. If continuous is selected, the following Time or Count value is ignored. For further details of this setting, see "[Step Duration](#)" on page 2616.

9. Time or Count <time/int> - specifies time duration in seconds or play count of the ARB file associated with the step. For further details of this setting, including the valid ranges for the time or play count setting, "[Time](#)" on page 2616 and "[Play Count](#)" on page 2617.

10. Output Trigger <Boolean> - specifies the output trigger for the step. For details of the ranges for this setting see "[Output Trigger](#)" on page 2618.

| | |
|----------------------|--|
| Dependencies | The range of subopcode values is 1 to 1000 and the value you enter is determined by the number of steps you have configured. For details see " Number of Steps " on page 2587. If you attempt to remotely set or query a subopcode that is out of range, an error is generated. |
| Initial S/W Revision | A.05.00 |

Step Configuration of Step Trigger parameter list (Remote Command Only)

This SCPI command is to configure "Step Trigger" parameter array of the whole List Sequencer at one time. The number of array is same as step number defined in "[Number of Steps](#)" on page 2587 Number of Steps. As a step is setup, the value entered run through several levels of validation.

| | |
|-----------------------------|--|
| Remote Command | :SOURce:LIST:SETup:INPut:TRIGger <enum>, <enum>, <enum>, ... :SOURce:LIST:SETup:INPut:TRIGger? |
| Example | :SOUR:LIST:SET:INP:TRIG IMM,INT,EXT2 :SOUR:LIST:SET:INP:TRIG? |
| Notes | The command is to setup below parameter array of whole list sequence. Step Trigger <enum> - specifies the input trigger for the step. For details of the valid types of step trigger see " Step Trigger " on page 2588. If input parameter number exceeds the step number defined by " Number of Steps " on page 2587 Number of Steps then generate error ", and only those parametes whose index number falls in number of steps will be updated. |
| Remote Command Notes | IMMEDIATE INTERNAL KEY BUS EXTERNAL2 |
| Dependencies | The range is 1 to 1000 which is determined by the number of steps you have configured. For details see " Number of Steps " on page 2587. |
| Initial S/W Revision | A.09.40 |

Step Configuration of Transition Time parameter list (Remote Command Only)

This SCPI command is to configure “Transition Time” parameter array of the whole List Sequencer at one time. The number of array is same as step number defined in ["Number of Steps" on page 2587](#) Number of Steps. As a step is setup, the value entered run through several levels of validation.

| | |
|-----------------------------|---|
| Remote Command | :SOURce:LIST:SETup:TRANsition:TIME <time>, <time>, <time>, ... :SOURce:LIST:SETup:TRANsition:TIME? |
| Example | :SOUR:LIST:SET:TRAN:TIME 1ms,1ms,1ms :SOUR:LIST:SET:TRAN:TIME? |
| Notes | The command is to setup below parameter array of whole list sequence. Transition Time <time> – specifies the transition time for the step in seconds. For details of the valid ranges for the transition time see "Transition Time" on page 2590 If input parameter number exceeds the step number defined by "Number of Steps" on page 2587 Number of Steps then generate error ", and only those parametes whose index number falls in number of steps will be updated. |
| Dependencies | The range is 1 to 1000 which is determined by the number of steps you have configured. For details see "Number of Steps" on page 2587 . |
| Initial S/W Revision | A.09.40 |

Step Configuration of Radio Band parameter list (Remote Command Only)

This SCPI command is to configure “Radio Band” parameter array of the whole List Sequencer at one time. The number of array is same as step number defined in ["Number of Steps" on page 2587](#) Number of Steps. As a step is setup, the value entered run through several levels of validation.

Step Configuration of Radio Band Link parameter list (Remote Command Only)

This SCPI command is to configure “Radio Band Link” parameter array of the whole List Sequencer at one time. The number of array is same as step number defined in ["Number of Steps" on page 2587](#) Number of Steps. As a step is setup, the value entered run through several levels of validation.

| | |
|-----------------------------|---|
| Remote Command | :SOURce:LIST:SETup:RADio:BAND:LINK <enum>, <enum>, <enum>, ... :SOURce:LIST:SETup:RADio:BAND:LINK? |
| Example | :SOUR:LIST:SET:RAD:BAND:LINK DOWN,UP,UP :SOUR:LIST:SET:RAD:BAND:LINK? |
| Notes | The command is to setup below parameter array of whole list sequence. Radio Band Link <enum> – specifies the radio band link direction for the step. For details of the valid link types, see "Radio Band Link" on page 2607 . If input parameter number exceeds the step number defined by "Number of Steps" on page 2587 Number of Steps then generate error ", and only those parametes whose index number falls in number of steps will be updated. |
| Remote Command Notes | DOWN UP |
| Dependencies | The range is 1 to 1000 which is determined by the number of steps you have configured. For details see "Number of Steps" on page 2587 . |
| Initial S/W Revision | A.09.40 |

Step Configuration of Frequency/Channel Number parameter list (Remote Command Only)

This SCPI command is to configure “Frequency” or “Channel Number” parameter array of the whole List Sequencer at one time. The number of array is same as step number defined in ["Number of Steps" on page 2587](#) Number of Steps. As a step is setup, the value entered run through several levels of validation.

| | |
|-----------------------|--|
| Remote Command | :SOURce:LIST:SETup:CNFRrequency <double>, <double>, <double>, ... :SOURce:LIST:SETup:CNFRrequency? |
| Example | :SOUR:LIST:SET:CNFR 1GHz,100MHz,100MHz :SOUR:LIST:SET:CNFR? SOUR:LIST:SET:CNFR 124,124,124 :SOUR:LIST:SET:CNFR? |

| | |
|----------------------|---|
| Notes | <p>The command is to setup below parameter array of whole list sequence.</p> <p>Frequency/Channel Number <freq>/<chan num> – specifies the frequency in Hz or the channel number for the step. The channel number and frequency are combined as one parameter that represents the frequency or channel number depending on the radio band setting. If the radio band is set to NONE, this value is interpreted as a frequency value in Hz. If the radio band is set to a valid band, this value is interpreted as a channel number. For details of the valid ranges for frequency and channel numbers, see "Channel" on page 2608 and "Frequency" on page 2608</p> <p>This SCPI is used to setup/query channel number or frequency setting, according to current Radio Band setting of that step. If Radio Band is “NONE”, then it’s frequency. If Radio Band is not “NONE”, then it’s channel number</p> <p>If input parameter number exceeds the step number defined by "Number of Steps" on page 2587 Number of Steps then generate error ", and only those parametes whose index number falls in legal step number will be updated.</p> |
| Dependencies | <p>The range is 1 to 1000 which is determined by the number of steps you have configured. For details see "Number of Steps" on page 2587.</p> |
| Initial S/W Revision | A.09.40 |

Step Configuration of Power parameter list (Remote Command Only)

This SCPI command is to configure “Power” parameter array of the whole List Sequencer at one time. The number of array is same as step number defined in ["Number of Steps" on page 2587](#) Number of Steps. As a step is setup, the value entered run through several levels of validation.

| | |
|-----------------------|--|
| Remote Command | <pre>:SOURce:LIST:SETup:AMPLitude <ampl>, <ampl>, <ampl>, ... :SOURce:LIST:SETup:AMPLitude?</pre> |
| Example | <pre>:SOUR:LIST:SET:AMPL -50dBm,-40dBm,-30dBm :SOUR:LIST:SET:AMPL?</pre> |
| Notes | <p>The command is to setup below parameter array of whole list sequence.</p> <p>Power <ampl> – specifies the output power for the step in dBm. For details of the valid ranges see "Power" on page 2609.</p> <p>If input parameter number exceeds the step number defined by "Number of Steps" on page 2587 Number of Steps then generate error ", and only those parametes whose index number falls in legal step number will be updated.</p> |
| Dependencies | <p>The range is 1 to 1000 which is determined by the number of steps you have configured. For details see "Number of Steps" on page 2587.</p> |
| Initial S/W Revision | A.09.40 |

Step Configuration of Waveform parameter list (Remote Command Only)

This SCPI command is to configure “Waveform” parameter array of the whole List Sequencer at one time. The number of array is same as step number defined in ["Number of Steps" on page 2587](#) Number of Steps. As a step is setup, the value entered run through several levels of validation.

| | |
|-----------------------|--|
| Remote Command | <pre>:SOURce:LIST:SETup:WAVEform <string>, <string>, <string>, ...</pre> |
|-----------------------|--|

| | |
|-----------------------------|--|
| | :SOURce:LIST:SETup:WAVeform? |
| Example | :SOUR:LIST:SET:WAV "CW","Off","CONT" :SOUR:LIST:SET:WAV? |
| Notes | <p>The command is to setup below parameter array of whole list sequence.</p> <p>Waveform <string> – specifies the waveform for playback during the step. The step can output either a new ARB waveform, continue playback of the previous waveform, or output a CW tone. The options for specifying these are:</p> <p><filename> - plays the specified waveform from the start. The filename value is the name of the file within ARB playback memory, it does not include the windows path to the file on the HDD. If you enter a filename for a waveform that does not reside within ARB playback memory, an error is generated.</p> <p>CONT – continues playback of the ARB file from the previous step</p> <p>CW – outputs a CW tone</p> <p>OFF – disable RF output</p> <p>If input parameter number exceeds the step number defined by "Number of Steps" on page 2587 then generate error ", and only those parameters whose index number falls in number of steps will be updated.</p> |
| Dependencies | The range is 1 to 1000 which is determined by the number of steps you have configured. For details see " Number of Steps " on page 2587. |
| Range | "filename" "CW" "Off" "CONT" |
| Initial S/W Revision | A.09.40 |

Step Configuration of Step Duration parameter list (Remote Command Only)

This SCPI command is to configure "Step Duration" parameter array of the whole List Sequencer at one time. The number of array is same as step number defined in "[Number of Steps](#)" on page 2587 Number of Steps. As a step is setup, the value entered run through several levels of validation.

| | |
|-----------------------------|--|
| Remote Command | :SOURce:LIST:SETup:DURation:TYPE <enum>, <enum>, <enum>, ... :SOURce:LIST:SETup:DURation:TYPE? |
| Example | :SOUR:LIST:SET:DUR:TYPE COUN,TIME,CONT :SOUR:LIST:SET:DUR:TYPE? |
| Notes | <p>The command is to setup below parameter array of whole list sequence.</p> <p>Step Duration <enum> – specifies the duration of the step. The duration can be specified to be either time, or play count of the ARB file associated with the step, or continuous. If Waveform is set to "CW", this value cannot be set to Play Count and an error will be generated. If continuous is selected, the following Time or Count value is ignored. For further details of this setting, see "Step Duration" on page 2616.</p> <p>If input parameter number exceeds the step number defined by "Number of Steps" on page 2587 then generate error ", and only those parameters whose index number falls in number of steps will be updated.</p> |
| Remote Command Notes | TIME COUNT CONTinuous |
| Dependencies | The range is 1 to 1000 which is determined by the number of steps you have configured. For details |

| | |
|----------------------|--|
| | see "Number of Steps" on page 2587 . |
| Initial S/W Revision | A.09.40 |

Step Configuration of Duration Time or Play Count parameter list (Remote Command Only)

This SCPI command is to configure “Duration Time” or “Play Count” parameter array of the whole List Sequencer at one time. The number of array is same as step number defined in ["Number of Steps" on page 2587](#) Number of Steps. As a step is setup, the value entered run through several levels of validation.

| | |
|-----------------------|--|
| Remote Command | :SOURce:LIST:SETup:TOCount <time/int>, <time/int>, <time/int>, ... :SOURce:LIST:SETup:TOCount? |
| Example | :SOUR:LIST:SET:TOC 1s,2s,3s :SOUR:LIST:SET:TOC? :SOUR:LIST:SET:TOC 5,6,7 :SOUR:LIST:SET:TOC? |
| Notes | The command is to setup below parameter array of whole list sequence. Time or Count <time/int> – specifies time duration in seconds or play count of the ARB file associated with the step. For further details of this setting, including the valid ranges for the time or play count setting, "Time" on page 2616 and "Play Count" on page 2617 . If input parameter number exceeds the step number defined by "Number of Steps" on page 2587 Number of Steps then generate error ", and only those parametes whose index number falls in number of steps will be updated. If current "Step Duration" on page 2616 is “Continuous”, then generate error -221, "Settings conflict;Cannot accept time or count input when step duration type is Continuous on step #" |
| Dependencies | The range is 1 to 1000 which is determined by the number of steps you have configured. For details see "Number of Steps" on page 2587 . |
| Initial S/W Revision | A.09.40 |

Step Configuration of Output Trigger parameter list (Remote Command Only)

This SCPI command is to configure “Output Trigger” parameter array of the whole List Sequencer at one time. The number of array is same as step number defined in ["Number of Steps" on page 2587](#) Number of Steps. As a step is setup, the value entered run through several levels of validation.

| | |
|-----------------------|--|
| Remote Command | :SOURce:LIST:SETup:OUTPut:TRIGger <bool>, <bool>, <bool>, ... :SOURce:LIST:SETup:OUTPut:TRIGger ? |
| Example | :SOUR:LIST:SET:OUTP:TRIG ON,OFF,ON :SOUR:LIST:SET:OUTP:TRIG? |
| Notes | The command is to setup below parameter array of whole list sequence. Output Trigger <Boolean> – specifies the output trigger for the step. For details of the ranges for this setting see "Output Trigger" on page 2618 . If input parameter number exceeds the step number defined by "Number of Steps" on page 2587 Number of Steps then generate error ", and only those parametes whose index number falls in |

| | |
|----------------------|--|
| | legal step number will be updated. |
| Remote Command Notes | ON OFF 1 0 |
| Dependencies | The range is 1 to 1000 which is determined by the number of steps you have configured. For details see " Number of Steps " on page 2587. |
| Initial S/W Revision | A.09.40 |

Clear List (Remote Command Only)

This command is the SCPI equivalent of the Clear List UI feature described in.

| | |
|-----------------------|--------------------------|
| Remote Command | :SOURce:LIST:SETup:CLEar |
| Example | :SOUR:LIST:SETup:CLE |
| Initial S/W Revision | A.05.00 |

Trigger Type

Allows access to the sub-menu for selecting the output trigger type for the list sequencer globally. It cannot be changed between different sequence steps.

| | |
|-----------------------|---|
| Key Path | Source, List Sequencer |
| Remote Command | :SOURce:LIST:TRIGgerout:TYPE BEGinningofstep DATamarker |
| Example | :SOUR:LIST:TRIG:TYP BEG :SOUR:LIST:TRIG:TYP? |
| Notes | SCPI is supported after A.14.00 This an alias SCPI of :SOURce:LIST:TRIGger:OUTPut:TYPE STEP MARKer Recommend to use : SOURce:LIST:TRIGger:OUTPut:TYPE STEP MARKer |
| Preset | BEGinningofstep |
| Range | BEGinningofstep DATamarker |
| Initial S/W Revision | A.14.00 |

BeginningOfStep

Sets the output trigger type as BeginningOfStep for the whole source sequence.

| | |
|-----------------|---|
| Key Path | Source, List Sequencer, Trigger Type |
| Example | :SOUR:LIST:TRIG:TYP BEG |
| Notes | SCPI is supported after A.14.00 This an alias SCPI of :SOURce:LIST:TRIGger:OUTPut:TYPE STEP Recommend to use : SOURce:LIST:TRIGger:OUTPut:TYPE STEP |

| | |
|----------------------|---------|
| Initial S/W Revision | A.14.00 |
|----------------------|---------|

DataMarker

Sets the output trigger type as DataMarker for the whole source sequence. When DataMarker is selected, which marker to route is also needed to be set.

| | |
|-----------------|---|
| Key Path | Source, List Sequencer, Trigger Type |
| Example | :SOUR:LIST:TRIG:TYP DAT |
| Notes | SCPI is supported after A.14.00 This an alias SCPI of :SOURce:LIST:TRIGger:OUTPut:TYPE MARKer Recommend to use : SOURce:LIST:TRIGger:OUTPut:TYPE MARKer |

| | |
|----------------------|---------|
| Initial S/W Revision | A.14.00 |
|----------------------|---------|

Marker 1

Sets the output trigger maker routing to Marker 1 for DataMarker in the whole source sequence.

| | |
|-----------------|--|
| Key Path | Source, List Sequencer, Trigger Type, DataMarker |
| Example | :SOUR:LIST:TRIG:TYPE:MARK M1 |
| Notes | SCPI is supported after A.14.00 This an alias SCPI of :SOURce:LIST:TRIGger:OUTPut:TYPE:MARKer M1 Recommend to use :SOURce:LIST:TRIGger:OUTPut:TYPE:MARKer M1 |

| | |
|----------------------|---------|
| Initial S/W Revision | A.14.00 |
|----------------------|---------|

Marker 2

Sets the output trigger maker routing to Marker 2 for DataMarker in the whole source sequence.

| | |
|-----------------|--|
| Key Path | Source, List Sequencer, Trigger Type, DataMarker |
| Example | :SOUR:LIST:TRIG:TYPE:MARK M2 |
| Notes | SCPI is supported after A.14.00 This an alias SCPI of :SOURce:LIST:TRIGger:OUTPut:TYPE:MARKer M2 Recommend to use :SOURce:LIST:TRIGger:OUTPut:TYPE:MARKer M2 |

| | |
|----------------------|---------|
| Initial S/W Revision | A.14.00 |
|----------------------|---------|

Marker 3

Sets the output trigger maker routing to Marker 3 for DataMarker in the whole source sequence.

| | |
|----------------------|--|
| Key Path | Source, List Sequencer, Trigger Type, DataMarker |
| Example | :SOUR:LIST:TRIG:TYPE:MARK M3 |
| Notes | SCPI is supported after A.14.00 This an alias SCPI of :SOURce:LIST:TRIGger:OUTPut:TYPE:MARKer M3 Recommend to use :SOURce:LIST:TRIGger:OUTPut:TYPE:MARKer M3 |
| Initial S/W Revision | A.14.00 |

Marker 4

Sets the output trigger maker routing to Marker 4 for DataMarker in the whole source sequence.

| | |
|----------------------|--|
| Key Path | Source, List Sequencer, Trigger Type, DataMarker |
| Example | :SOUR:LIST:TRIG:TYPE:MARK M4 |
| Notes | SCPI is supported after A.14.00 This an alias SCPI of :SOURce:LIST:TRIGger:OUTPut:TYPE:MARKer M4 Recommend to use :SOURce:LIST:TRIGger:OUTPut:TYPE:MARKer M4 |
| Initial S/W Revision | A.14.00 |

Manual Trigger Now

Pressing this key provides a software trigger event to the list sequencer. During execution of sequence, if the sequencer is halted on any step that has been configured with a “Manual” step trigger, then this key press will cause the sequencer to continue and execute the step.

| | |
|-----------------------|--------------------------------------|
| Key Path | Source, List Sequencer |
| Remote Command | No remote command, front panel only. |
| Initial S/W Revision | A.05.00 |

Remote Software Trigger (Remote command Only)

During execution of a list sequence, the sequence will halt and wait at any step that has Step Trigger set to “Bus”. Sending this command will trigger the step and continue the sequence.

| | |
|-----------------------|---|
| Remote Command | :SOURce:LIST:TRIGger:INITiate[:IMMediate] |
| Example | :SOUR:LIST:TRIG:INIT |
| Initial S/W Revision | A.05.00 |

Query List Sequence Initiation Armed Status (Remote Command Only)

This is a blocking SCPI query to determine if source list sequence being initiated successfully or not.

| | |
|-----------------------------|--|
| Remote Command | :SOURce:LIST:INITiation:ARMed? |
| Example | :SOUR:LIST:INIT:ARMed? |
| Notes | The return data is in the following format: Integer |
| Notes | Query only SCPI. Returning "1" if list sequence has been initiated successfully, returning "0" if not. Once get "0", you can use :SYST:ERR? to query what error happened. Just like "*OPC?", this command can be blocked until event/status "IsSourceSweeping" happens, and then returns. Doing so can help user's script query armed status only once during the time interval of the initiation. As an ancillary SCPI of existing SCPI ":SOUR:LIST:TRIGger[:IMMediate]" (see "Initiate Sequence" on page 2586 Initiate Sequence), the right usage of this command is to use it after ":SOUR:LIST:TRIG". If not, this command will return "1" immediately. |
| Notes | There is an alias SCPI ":SOURce:LIST:TRIGger:INITiation:ARMed?". |
| Initial S/W Revision | A.09.40 |

Source Preset

Allows you to preset the source settings to their default values.

| | |
|-----------------------|----------------|
| Key Path | Source |
| Remote Command | :SOURce:PRESet |
| Example | :SOUR:PRES |

SPAN X Scale

Accesses the SPAN/X Scale menu that allows you to set the desired horizontal scale settings.

| | |
|--------------------------|------------------------|
| parameter_table_24.18339 | 54.41263 |
| Key Path | Front-panel key |
| Initial S/W Revision | A.10.01 |
| Help Map ID | 45739 |

Ref Value

Allows you to set the display X reference value.

| | |
|--------------------------|--|
| parameter_table_24.18339 | 54.41263 |
| Key Path | SPAN X Scale |
| Mode | WLAN |
| Remote Command | :DISPlay:FLATness:VIEW[1]:WINDow[1]:TRACe:X[:SCALE]:RLEVel <real> :DISPlay:FLATness:VIEW[1]:WINDow[1]:TRACe:X[:SCALE]:RLEVel? |
| Example | DISP:FLAT:VIEW:WIND:TRAC:X:RLEV 1 DISP:FLAT:VIEW:WIND:TRAC:X:RLEV? |
| Notes | Default value is coupled with Radio Std. |
| Couplings | If Auto Scaling is On, this value is automatically determined by the measurement result. When a value is set manually, Auto Scaling is automatically set to Off. |
| Preset | If Radio Std is 802.11 a/g-ERP-OFDM/g-DSSS-OFDM: -26 Carr If Radio Std is 802.11 n is 64: -28 Carr If Radio Std is 802.11 n is 128: -58 Carr If Radio Std is 802.11 ac is 64: -28 Carr If Radio Std is 802.11 ac is 128: -58 Carr If Radio Std is 802.11 ac is 256: -122 Carr If Radio Std is 802.11 ac is 512: -250 Carr If Radio Std is 802.11 ah 1MHz: -13 Carr If Radio Std is 802.11 ah 2MHz: -28 Carr If Radio Std is 802.11 ah 4MHz: -58 Carr If Radio Std is 802.11 ah 8MHz: -122 Carr If Radio Std is 802.11 ah 16MHz: -250 Carr |
| State Saved | Saved in instrument state. |
| Min | -512.0 carriers |
| Max | 512.0 carriers |
| Initial S/W Revision | A.10.01 |

Help Map ID 45740

Scale/Div

Allows you to set the display X scale/division value.

| | |
|--------------------------|---|
| parameter_table_24.18339 | 54.41263 |
| Key Path | SPAN X Scale |
| Mode | WLAN |
| Remote Command | :DISPlay:FLATness:VIEW[1]:WINDow[1]:TRACe:X[:SCALe]:PDIVision <real> :DISPlay:FLATness:VIEW[1]:WINDow[1]:TRACe:X[:SCALe]:PDIVision? |
| Example | DISP:FLAT:VIEW:WIND:TRAC:X:PDIV 1 DISP:FLAT:VIEW:WIND:TRAC:X:PDIV? |
| Notes | Default value is coupled with Radio Std and FFT Size |
| Couplings | If Auto Scaling is set to On, this value is automatically determined by the measurement result. When a value is set manually, Auto Scaling is automatically set to Off. |
| Preset | If Radio Std is 802.11a/g-ERP-OFDM/g-DSSS-OFDM: 5.2 Carr If Radio Std is 802.11n 20MHz: 5.6 Carr If Radio Std is 802.11n 40MHz: 11.6 Carr If Radio Std is 802.11ac 20MHz: 5.6 Carr If Radio Std is 802.11ac 40MHz: 11.6 Carr If Radio Std is 802.11ac 80MHz: 24.4 Carr If Radio Std is 802.11ac 160MHz: 50.0 Carr If Radio Std is 802.11ah 1MHz: 2.6 Carr If Radio Std is 802.11ah 2MHz: 5.6 Carr If Radio Std is 802.11ah 4MHz: 11.6 Carr If Radio Std is 802.11ah 8MHz: 24.4 Carr If Radio Std is 802.11ah 16MHz : 50.0 Carr |
| State Saved | Saved in instrument state. |
| Min | 0.1 carriers |
| Max | 51.2 carriers |
| Initial S/W Revision | A.10.01 |
| Help Map ID | 45741 |

Ref Position

Allows you to set the X reference position to the left, center, or right of the display.

| | |
|--------------------------|---|
| parameter_table_24.18339 | 54.41263 |
| Key Path | SPAN X Scale |
| Mode | WLAN |
| Remote Command | :DISPlay:FLATness:VIEW[1]:WINDow[1]:TRACe:X[:SCALe]:RPOSition LEFT CENTER RIGHT :DISPlay:FLATness:VIEW[1]:WINDow[1]:TRACe:X[:SCALe]:RPOSition? |
| Example | DISP:FLAT:VIEW:WIND:TRAC:X:RPOS LEFT DISP:FLAT:VIEW:WIND:TRAC:X:RPOS? |
| Preset | LEFT |
| State Saved | Saved in instrument state. |
| Range | Left Ctr Right |
| Initial S/W Revision | A.10.01 |
| Help Map ID | 45742 |

Auto Scaling

Allows you to toggle the X Auto Scaling function between On and Off.

| | |
|--------------------------|--|
| parameter_table_24.18339 | 54.41263 |
| Key Path | SPAN X Scale |
| Mode | WLAN |
| Remote Command | :DISPlay:FLATness:VIEW[1]:WINDow[1]:TRACe:X[:SCALe]:COUPle 0 1 OFF ON :DISPlay:FLATness:VIEW[1]:WINDow[1]:TRACe:X[:SCALe]:COUPle? |
| Example | DISP:FLAT:VIEW:WIND:TRAC:X:COUP OFF DISP:FLAT:VIEW:WIND:TRAC:X:COUP? |
| Couplings | Upon pressing the Restart front-panel key, the scale coupling function automatically determines the scale per division and reference values, based on the measurement results, if this parameter is set to On. When you manually set a value to either Rel Value or Scale/Div, X Auto Scaling is automatically set to Off. |
| Preset | ON |
| State Saved | Saved in instrument state. |
| Range | On Off |
| Initial S/W Revision | A.10.01 |
| Help Map ID | 45743 |

Sweep/Control

Accesses a menu that allows you to select parameters that affect the sweep of the displayed measurement signal.

Only the Pause/Resume key is available.

See Key and Command Descriptions – Sweep/Control@3273 for more information.

| | |
|--------------------------|------------------------|
| parameter_table_24.18339 | 54.41263 |
| Key Path | Front-panel key |
| Initial S/W Revision | A.10.01 |
| Help Map ID | 45744 |

Pause/Resume

Pauses a measurement after the current data acquisition is complete.

When Paused, the label on the key changes to Resume. Pressing Resume un-pauses the measurement. When you are Paused, pressing **Restart**, **Single** or **Cont** does a Resume.

| | |
|-----------------------|--|
| Key Path | Sweep/Control |
| Remote Command | :INITiate:PAUSE |
| Dependencies | Grayed out in Measurements that do not support Pausing. Blanked in Modes that do not support Pausing. |

User Preset

Accesses a menu that gives you the following three choices:

- **User Preset** – recalls a state previously saved using the Save User Preset function.
- **User Preset All Modes** – presets all of the modes in the analyzer
- **Save User Preset**– saves the current state for the current mode

| Key Path | Front-panel key |
|-------------------------------|--|
| Backwards Compatibility Notes | <p>User Preset is actually loading a state, and in legacy analyzers, it was possible to load a state without affecting the trace data, limit lines or correction data. Similarly it was possible to do a User Preset without affecting the trace data, limit lines or correction data.</p> <p>In the X-Series, “state” always includes all of this data; so whenever state is loaded, or User Preset is executed, all of the traces, limit lines and corrections are affected. Although this differs from previous behavior, it is desirable behavior, and should not cause adverse issues for users.</p> <p>On ESA and PSA, User Preset affected the entire instrument’s state. In the X-Series, User Preset only recalls the state for the active mode. There is a User Preset file for each mode. User Preset can never cause a mode switch as it can in legacy analyzers. If you want to recall all modes to their user preset file state, you will need to do a User Preset after mode switching into each mode.</p> <p>User Preset recalls mode state which can now include data like traces; whereas on ESA and PSA, User Preset did not affect data.</p> |
| Initial S/W Revision | Prior to A.02.00 |

User Preset

User Preset sets the state of the currently active mode back to the state that was previously saved for this mode using the Save User Preset menu key or the SCPI command, `SYST:PRES:USER:SAV`. It not only recalls the Mode Preset settings, but it also recalls all of the mode persistent settings, and the Input/Output system setting that existed at the time Save User Preset was executed.

If a Save User Preset has not been done at any time, User Preset recalls the default user preset file for the currently active mode. The default user preset files are created if, at power-on, a mode detects there is no user preset file. There will never be a scenario when there is no user preset file to restore. For each mode, the default user preset state is the same state that would be saved if a Save User Preset is performed in each mode right after doing a Restore Mode Default and after a Restore Input/Output Defaults.

The User Preset function does the following:

- Aborts the currently running measurement.
- Sets the mode State to the values defined by Save User Preset.
- Makes the saved measurement for the currently running mode the active measurement.
- Brings up the saved menu for the power-on mode.
- Clears the input and output buffers.
- Sets the Status Byte to 0.

| | |
|----------------------|--|
| Key Path | User Preset |
| Remote Command | :SYSTem:PRESet:USER |
| Example | :SYST:PRES:USER:SAVE:SYST:PRES:USER |
| Notes | :SYST:PRES:USER:SAVE is used to save the current state as the user preset state. Clears all pending OPC bits. The Status Byte is set to 0. Pressing the User Preset front-panel key while already in the User Preset menu will cause the User Preset to get executed |
| Couplings | A user preset will cause the currently running measurement to be aborted and cause the saved measurement to be active. Recalling a User Preset file has the same issues that recalling a Save State file has. Some settings may need to be limited and therefore re-coupled, since the capabilities of the mode may have changes when the User Preset file was last saved. |
| Initial S/W Revision | Prior to A.02.00 |

User Preset All Modes

Recalls all of the User Preset files for each mode, switches to the power-on mode, and activates the saved measurement from the power-on mode User Preset file.

NOTE

When the instrument is secured, all of the user preset files are converted back to their default user preset files.

The User Preset function does the following:

- Aborts the currently running measurement.
- Switches the Mode to the power-on mode.
- Restores the User Preset files for each mode.
- Makes the saved measurement for the power-on mode the active measurement.
- Brings up the saved menu for the power-on mode.
- Clears the input and output buffers.
- Sets the Status Byte to 0.

| | |
|----------------|--|
| Key Path | User Preset |
| Remote Command | :SYSTem:PRESet:USER:ALL |
| Example | :SYST:PRES:USER:SAVE:SYST:PRES:USER:ALL |
| Notes | Clears all pending OPC bits. The Status Byte is set to 0. :SYST:PRES:USER:SAVE is used to save the current state as the user preset state. |
| Couplings | A user preset will cause the currently running measurement to be aborted, cause a mode switch to the power-on mode, and cause the saved measurement to be active in the power-on mode. Recalling a User Preset file has the same issues that recalling a Save State file has. Some settings may need to be limited and therefore re-coupled, since the capabilities of the mode may have changes when the User Preset file was last saved. |

| | |
|----------------------|------------------|
| Initial S/W Revision | Prior to A.02.00 |
|----------------------|------------------|

Save User Preset

Saves the currently active mode and its State. You can recall this User Preset file by pressing the User Preset menu key or sending the SYST:PRES:USER remote command. This same state is also saved by the Save State function.

| | |
|-----------------------|---|
| Key Path | User Preset |
| Remote Command | :SYSTem:PRESet:USER:SAVE |
| Example | :SYST:PRES:USER:SAVE |
| Notes | :SYST:PRES:SAVE creates the same file as if the user requested a *SAV or a MMEM:STOR:STAT, except User Preset Save does not allow the user to specify the filename or the location of the file. |
| Initial S/W Revision | Prior to A.02.00 |

View/Display

Accesses the View/Display menu for the current measurement. This menu includes the Display key which allows you to access parameters that control the display. All softkeys in the “View/Display” menu work regardless of which result window currently has the focus.

| | |
|--------------------------|------------------------|
| parameter_table_24.18339 | 54.41263 |
| Key Path | Front-panel key |
| Initial S/W Revision | A.10.01 |
| Help Map ID | 45746 |

This measurement consists of one view, and only one window.

Flatness window

| | |
|------------------------------|--------------------------------|
| non_parameter_table_19.64901 | 39.29801 |
| Marker Operation | Yes |
| Corresponding Trace | Corrected measured trace (n=1) |

Display

The Display menu is common to most measurements, and is used for configuring items on the display. Some Display menu settings apply to all the measurements in a mode, and some only to the current measurement. Those under the **System Display Settings** key apply to all measurements in all modes.

| | |
|----------------------|---------------------|
| Key Path | Display |
| Key Path | View/Display |
| Initial S/W Revision | Prior to A.02.00 |

Annotation

Turns on and off various parts of the display annotation. The annotation is divided up into four categories:

1. Meas Bar: This is the measurement bar at the top of the screen. It does not include the settings panel or the Active Function. Turning off the Meas Bar turns off the settings panel and the Active Function. When the Meas Bar is off, the graticule area expands to fill the area formerly occupied by the Meas Bar.
2. Screen Annotation: this is the annotation and annunciation around the graticule, including any annotation on lines (such as the display line, the threshold line, etc.) This does NOT include the marker number or the N dB result. When off, the graticule expands to fill the entire graticule area.
3. Trace annotation: these are the labels on the traces, showing their detector (or their math mode).

4. Active Function annotation: this is the active function display in the meas bar, and all of the active function values displayed on softkeys.

See the figure below. Each type of annotation can be turned on and off individually.

| | |
|----------------------|-----------------------|
| Key Path | View/Display, Display |
| Initial S/W Revision | Prior to A.02.00 |

Meas Bar On/Off

This function turns the Measurement Bar on and off, including the settings panel. When off, the graticule area expands to fill the area formerly occupied by the Measurement Bar.

| | |
|----------------|--|
| Key Path | View/Display, Display, Annotation |
| Remote Command | :DISPlay:ANNotation:MBAR[:STATe] OFF ON 0 1 :DISPlay:ANNotation:MBAR[:STATe]? |
| Example | DISP:ANN:MBAR OFF |

| | |
|----------------------|---|
| Dependencies | Grayed out and forced to OFF when System Display Settings, Annotation is set to Off. |
| Preset | On This should remain Off through a Preset when System DisplaySettings, Annotation is set to Off. |
| State Saved | Saved in instrument state. |
| Initial S/W Revision | Prior to A.02.00 |

Screen

This controls the display of the annunciation and annotation around the graticule, including any annotation on lines (such as the display line, the threshold line, etc.) and the y-axis annotation. This does NOT include marker annotation (or the N dB result). When off, the graticule expands to fill the entire graticule area, leaving only the 1.5% gap above the graticule as described in the Trace/Detector chapter.

| | |
|-----------------------|--|
| Key Path | View/Display, Display, Annotation |
| Remote Command | :DISPlay:ANNotation:SCReen[:STATe] OFF ON 0 1 :DISPlay:ANNotation:SCReen[:STATe]? |
| Example | DISP:ANN:SCR OFF |
| Dependencies | Grayed-out and forced to OFF when System Display Settings, Annotation is set to Off. |
| Preset | On This should remain Off through a Preset when System DisplaySettings, Annotation is set to Off |
| State Saved | Saved in instrument state. |
| Initial S/W Revision | Prior to A.02.00 |

Active Function Values On/Off

Turns on and off the active function display in the Meas Bar, and all of the active function values displayed on the softkeys.

Note that all of the softkeys that have active functions have these numeric values blanked when this function is on. This is a security feature..

12 Spectral Flatness Measurement
View/Display

| | |
|----------------------|--|
| Key Path | View/Display, Display, Annotation |
| Remote Command | :DISPlay:ACTivefunc[:STATE] ON OFF 1 0 :DISPlay:ACTivefunc[:STATE] ? |
| Example | DISP:ACT OFF |
| Dependencies | Grayed out and forced to OFF when System Display Settings, Annotation is set to Off. |
| Preset | On This should remain Off through a Preset when System DisplaySettings, Annotation is set to Off |
| State Saved | Saved in instrument state. |
| Initial S/W Revision | Prior to A.02.00 |

Title

Displays menu keys that enable you to change or clear a title on your display.

| | |
|----------------------|-----------------------|
| Key Path | View/Display, Display |
| Initial S/W Revision | Prior to A.02.00 |

Change Title

Writes a title into the "measurement name" field in the banner, for example, "Swept SA".

Press Change Title to enter a new title through the alpha editor. Press Enter or Return to complete the entry. Press ESC to cancel the entry and preserve your existing title.

The display title will replace the measurement name. It remains for this measurement until you press **Change Title** again, or you recall a state, or a Preset is performed. A title can also be cleared by pressing **Title, Clear Title**.

NOTE

Notice the inclusion of the <measurement> parameter in the command below. Because each measurement remembers the Display Title, the command must be qualified with the measurement name. For the Swept SA measurement this is not the case; no <measurement> parameter is used when changing the Display Title for the Swept SA measurement.

| | |
|----------------------|---|
| Key Path | View/Display, Display, Title |
| Mode | All |
| Remote Command | :DISPlay:<measurement>:ANNotation:TITLe:DATA <string> :DISPlay:<measurement>:ANNotation:TITLe:DATA? |
| Example | DISP:ANN:TITL:DATA "This Is My Title" This example is for the Swept SA measurement in the Spectrum Analyzer mode. The SANalyzer <measurement> name is not used. DISP:ACP:ANN:TITL:DATA "This Is My Title" This example is for Measurements other than Swept SA. Both set the title to: This Is My Title |
| Notes | Pressing this key cancels any active function. When a title is edited the previous title remains intact (it is not cleared) and the cursor goes at the end so that characters can be added or BKSP can be used to go back over previous characters. |
| Preset | No title (measurement name instead) |
| State Saved | Saved in instrument state. |
| Initial S/W Revision | Prior to A.02.00 |

Clear Title

Clears a title from the front-panel display. Once cleared, the title cannot be retrieved. After the title is cleared, the current Measurement Name replaces it in the title bar.

| | |
|----------|---|
| Key Path | View/Display, Display, Title |
| Example | The following commands clear the title and restore the measurement's original title: DISP:ANN:TITL:DATA "" This example is for the Swept SA measurement in the Spectrum Analyzer mode. The SANalyzer <measurement> name is not used. DISP:ACP:ANN:TITL:DATA "" This example is for ACP; in measurements other than Swept SA the measurement name is required. |
| Notes | Uses the :DISPlay:<measurement>:ANNotation:TITLe:DATA <string> command with an empty string (in the Swept SA, the <measurement> is omitted). |

| | |
|----------------------|----------------------|
| Preset | Performed on Preset. |
| Initial S/W Revision | Prior to A.02.00 |

Graticule

Pressing Graticule turns the display graticule On or Off. It also turns the graticule y-axis annotation on and off.

| | |
|----------------------|--|
| Key Path | View/Display, Display |
| Remote Command | :DISPlay:WINDow[1]:TRACe:GRATicule:GRID[:STATe] OFF ON 0 1 :DISPlay:WINDow[1]:TRACe:GRATicule:GRID[:STATe]? |
| Example | DISP:WIND:TRAC:GRAT:GRID OFF |
| Notes | The graticule is the set of horizontal and vertical lines that make up the grid/divisions for the x-axis and y-axis. |
| Preset | On |
| State Saved | Saved in instrument state |
| Initial S/W Revision | Prior to A.02.00 |

System Display Settings

These settings are "Mode Global" – they affect all modes and measurements and are reset only by **Restore Misc Defaults** or **Restore System Defaults** under System.

| | |
|----------------------|------------------------------|
| Key Path | View/Display, Display |
| Initial S/W Revision | Prior to A.02.00 |

Annotation Local Settings

This is a Mode Global override of the meas local annotation settings. When it is **All Off**, it forces **ScreenAnnotation, Meas Bar, Trace, and Active Function Values** settings to be **OFF** for all measurements in all modes. This provides the security based "annotation off" function of previous analyzers; hence it uses the legacy SCPI command.

When it is **All Off**, the **Screen, Meas Bar, Trace, and Active Function Values** keys under the **Display, Annotation** menu are grayed out and forced to **Off**. When **Local Settings** is selected, you are able to set the local annotation settings on a measurement by measurement basis.

| | |
|----------------|--|
| Key Path | View/Display, Display, System Display Settings |
| Remote Command | :DISPlay:WINDow[1]:ANNotation[:ALL] OFF ON 0 1 :DISPlay:WINDow[1]:ANNotation[:ALL]? |
| Example | :DISP:WIND:ANN OFF |

| | |
|-------------------------------|---|
| Preset | On (Set by Restore Misc Defaults) |
| State Saved | Not saved in instrument state. |
| Backwards Compatibility Notes | The WINDow parameter and optional subopcode is included for backwards compatibility but ignored – all windows are equally affected. |
| Initial S/W Revision | Prior to A.02.00 |

Themes

Accesses a menu of functions that enable you to choose the theme to be used when saving the screen image.

The **Themes** option is the same as the **Themes** option under the **Display** and **Page Setup** dialogs. It allows you to choose between themes to be used when saving the screen image.

| | |
|-------------------------------|---|
| Key Path | Save, Screen Image |
| Remote Command | :MMEMory:STORe:SCReen:THEMe TDColor TDMonochrome FCOLOR FMONochrome :MMEMory:STORe:SCReen:THEMe? |
| Example | :MMEM:STOR:SCR:THEM TDM |
| Preset | 3D Color; Is not part of Preset, but is reset by Restore Misc Defaults or Restore System Defaults All and survives subsequent running of the modes. |
| Readback | 3D Color 3D Mono Flat Color Flat Mono |
| Backwards Compatibility Notes | In ESA and PSA we offer the choice of "Reverse Bitmap" or "Reverse Metafile" when saving screen images. This is much like the "Flat Color" theme available in X-Series. Also, if you selected Reverse Bitmap AND a black & white screen image, that would be much like "Flat Monochrome". In other words, each of the X-Series themes has a similar screen image type in ESA/PSA. But they are not identical. |
| Initial S/W Revision | Prior to A.02.00 |

3D Color

Selects a standard color theme with each object filled, shaded and colored as designed.

| | |
|----------------------|-----------------------------------|
| Key Path | Save, Screen Image, Themes |
| Example | MMEM:STOR:SCR:THEM TDC |
| Readback | 3D Color |
| Initial S/W Revision | Prior to A.02.00 |

3D Monochrome

Selects a format that is like 3D color but shades of gray are used instead of colors.

| | |
|----------------------|-----------------------------------|
| Key Path | Save, Screen Image, Themes |
| Example | MMEM:STOR:SCR:THEM TDM |
| Readback | 3D Mono |
| Initial S/W Revision | Prior to A.02.00 |

Flat Color

Selects a format that is best when the screen is to be printed on an ink printer.

| | |
|----------------------|-----------------------------------|
| Key Path | Save, Screen Image, Themes |
| Example | MMEM:STOR:SCR:THEM FCOL |
| Readback | Flat Color |
| Initial S/W Revision | Prior to A.02.00 |

Flat Monochrome

Selects a format that is like Flat Color. But only black is used (no colors, not even gray), and no fill.

| | |
|----------------------|-----------------------------------|
| Key Path | Save, Screen Image, Themes |
| Example | MMEM:STOR:SCR:THEM FMON |
| Readback | Flat Mono |
| Initial S/W Revision | Prior to A.02.00 |

Limit Line

This key allows you to toggle the limit line on the view

13 WLAN Modulation Analysis measurement

This section contains the following two topics

["Measurement Commands for Modulation Analysis" on page 1828](#)

["Remote Command Results for Modulation Analysis Measurement" on page 1829](#)

Measurement Commands for Modulation Analysis

The following commands are used to retrieve the measurement results:

:CONFigure:EVM

:CONFigure:EVM:NDEFault

:INITiate:EVM

:FETCh:EVM[n]?

:READ:EVM[n]?

:MEASure:EVM[n]?

For more measurement related commands, see the SENSE subsystem, and the section "[Remote Measurement Functions](#)" on page 2430.

Remote Command Results for Modulation Analysis Measurement

When Radio Std is 802.11ac 80+80MHz, these measurement results are also for one channel. Using SCPI “:CALCulte:EVM:SEGM” to specify that these contents are the first segment results or the second segment results.

If selects Radio Std 802.11a/g/j/p (OFDM), 801.11g (DSSS-OFDM), 802.11n, 802.11ac or 802.11ah

| Index: n | Results Returned |
|----------------------|--|
| <Mnemonic> | |
| 0 | Returns unprocessed I/Q trace data of Capture Interval, as a series of trace point values. The I values are listed first in each pair, using the 0 through even-indexed values. The Q values are the odd-indexed values. |
| 1 (or not specified) | <p>Returns the following 43 comma-separated scalar results, results 41 and 42 will be -999, they are reserved for 802.11b/g (DSSS/CCK/PBCC):</p> <p>“Avg” means the average of the individual measurements when averaging is on. “Max” means the maximum of the individual measurements when averaging is on.</p> <ol style="list-style-type: none"> 1. | | | |
|---|--|--|
| 2 | | EVM vs. Symbol trace . vs. Symbol trace of Capture Interval. The first number is the symbol 0 decision point. |
| 3 | | EVM vs. Carrier trace . vs. Carrier trace of Capture Interval. |
| 7 | | Corrected measured trace . , when the IQ Normalize is turned on. The first number is the in-phase (I) sample and the second is the quadrature-phase (Q) sample. |
| 8 | | Returns Demod Bits |

9

Returns 4 comma-separated scalar values of the pass/fail (0.0 = passed, or 1.0 = failed) results determined by testing the following items.

802.11 standard (OFDM) specifies that EVM / IQ offset pass fail test should use average value.

1. Test result of RMS EVM(Avg)
2. Test result of Frequency Error (Max)
3. Test result of symbol clock error(Max)
4. Test result of I/Q Origin Offset(Avg)

10

- If radio stand is 11n, return the decode bits of HT-SIG Signal.

- If radio stand is 11ac, return the decode bits of VHT-SIG-A and VHT_SIG_B Signal. the length of it depend on radio standard.

-For 11ac 20M, trace length is 48 + 26;

-For 11ac 40M, trace length is 48 + 27;

-For 11ac 80M,160M, 80+80M, trace length is 48 + 29;

- If radio standard is 11ah and PPDU format is greater than or equal to 2MHz long format, return the decode bits of SIG-A and SIG-B signal. The length of it depends on radio standard and MU/SU

-For SU, trace length is 48

| | |
|----|---|
| | <p>-For MU and 11ah 2MHz, trace length is 48 + 26;</p> <p>-For MU and 11ah 4MHz M, trace length is 48 + 27;</p> <p>-For MU and 11ah 8M/16MHz, trace length is 48 +29;</p> <ul style="list-style-type: none"> • If radio standard is 11ah and PPDU format is greater than or equal to 2MHz short format, return the decode bits of SIG fields which length is 48 bits. <p>If radio standard is 11ah and PPDU format is 1MHz short format, return the decode bits of SIG fields which length is 36 bits.</p> |
| 11 | Return the decode bits of L-SIG Signal. |
| 12 | Preamble Freq Error vs. Time, the total frequency error during the preamble portion of the OFDM burst. |
| 19 | IQ gain imbalance vs. Carrier trace . |
| 20 | IQ quadrature error vs. Carrier trace . |
| 21 | |
| 22 | |

* when the input is BBIQ, this number will be -999.0.

** This result will return integer numbers, 0 represents BPSK, 1 represents QPSK, 2 represents 16-QAM, 3 represents 64-QAM, 4 represents 256-QAM, 5 represents 1024-QAM.

*** Peak EVM Index is an instant value. While Average Number great than 1, Peak EVM Index is the last measurement's results in the average cycle.

If the Radio Std selects 802.11b/g (DSSS/CCK/PBCC)

| Index: n | Results Returned |
|----------|------------------|
|----------|------------------|

| <Mnemonic> | |
|----------------------|--|
| 0 | Returns unprocessed I/Q trace data of Capture Interval, as a series of trace point values. The I values are listed first in each pair, using the 0 through even-indexed values. The Q values are the odd-indexed values. |
| 1 (or not specified) | <p>Returns the following 42 comma-separated scalar results:</p> <p>“Avg” means the average of the individual measurements when averaging is on. “Max” means the maximum of the individual measurements when averaging is on. “Min” means the minimum of the individual measurements when averaging is on.</p> <ol style="list-style-type: none"> 1. | 10 | Return the demod bits of PLCP Preamble. |

11

Return the demod bits of PLCP Header.

* when the input is BBIQ, this number will be -999.0

** this result will return integer numbers, 0 represents DSSS1, 1 represents DSSS2, 2 represents CCK5.5, 3 represents CCK11, 4 represents PBCC5.5, 5 represents PBCC11, 6 represents PBCC22, 7 represents PBCC33.

*** Peak EVM Index, Peak Magnitude Error Index and Peak Phase Error Index are instant value. While Average Number great than 1, they keep the last measurement's results in the average cycle.

Selects the Modulation Analysis measurement.

| Key Path | Meas |
|----------------------|---------|
| Initial S/W Revision | A.10.01 |

AMPTD Y Scale

Accesses the AMPTD Y Scale menu that allows you to set desired vertical scale settings.

| Key Path | Front-panel key |
|----------------------|-----------------|
| Initial S/W Revision | A.10.01 |

Range

The Range menu allows setting amplitude controls of the instrument.

| Key Path | AMPTD Y Scale |
|----------------------|---------------|
| Scope | Meas Global |
| Initial S/W Revision | A.12.50 |

Range

Represents the amplitude of the largest sinusoidal signal that could be present within the IF without being clipped by the ADC. For signals with high peak-to-average ratios, the range may need to exceed the rms signal power by a fair amount to avoid clipping.

| Key Path | Range |
|-----------------------|---|
| Mode | BASIC |
| Remote Command | <code>[:SENSe] :POWer [:RF] :RANGe <real></code> <code>[:SENSe] :POWer [:RF] :RANGe?</code> |
| Example | <code>:POW:RANG 10.0</code> <code>:POW:RANG?</code> |
| Notes | The MIN and MAX values are affected by the External Gain parameters, and by the Center Frequency. (The hardware compensates for frequency response and alters the Range setting.) |
| Preset | 0 |
| State Saved | Saved in instrument state. |
| Min | -100 |
| Max | 100 |
| Initial S/W Revision | A.12.50 |

Adjust Range For Min Clip

Sets the combination of attenuation and gain based on the current measured signal level so that clipping will be at a minimum.

This is an "immediate action" function, that is, it executes once, when the key is pressed.

This key is grayed out in measurements that do not support this functionality.

| | |
|--------------------------|---|
| Key Path | AMPTD Y Scale, Attenuation |
| Remote Command | <code>[:SENSe] :POWer [:RF] :RANGe :OPTimize IMMEDIATE</code> |
| Initial S/W Revision | Prior to A.02.00 |
| Modified at S/W Revision | A.03.00 |

Pre-Adjust for Min Clip

If this function is on, it does the adjustment described under Adjust Range For Min Clip each time a measurement restarts. Therefore, in Continuous measurement mode, it only executes before the first measurement.

| | |
|--------------------------|---|
| Key Path | AMPTD Y Scale, Attenuation |
| Remote Command | <code>[:SENSe] :POWer [:RF] :RANGe :OPTimize :ATTenuation OFF ON ELECTrical COMBined</code> <code>[:SENSe] :POWer [:RF] :RANGe :OPTimize :ATTenuation?</code> |
| Notes | This parameter is shared with old XA platform which uses AutoAtten. To keep the backward compatibility, ELECTrical and COMBined still can be used. Then, upon receiving ELECTrical and COMBined, these enums will be interpreted as aliases of ON. Then, when queried, ON will be returned. |
| Preset | OFF for Swept SA measurement; ON for all other measurements that support Pre-Adjust for Min Clip |
| State Saved | Saved in instrument state |
| Initial S/W Revision | Prior to A.02.00 |
| Modified at S/W Revision | A.03.00 |

Peak to Average

The Peak to Average Ratio is used with the Range setting to optimize the level control in the instrument. The value is the ratio, in dB, of the peak power to the average power of the signal to be measured. A ratio of 0 should be used for sinusoidal signals; for 802.11g OFDM signals use 9 dB.

All Applications (Modes) will show the current value of Peak to Average ratio on the softkey. However, some applications will not permit changing the value. In these situations the softkey will be grayed-out.

| | |
|----------------|--|
| Key Path | AMPTD Y Scale, Range |
| Remote Command | <code>[:SENSe] :POWer [:RF] :RANGe :PARatio <real></code> <code>[:SENSe] :POWer [:RF] :RANGe :PARatio?</code> |
| Example | POW:RANG:PAR 12 dB |
| Notes | In some Applications (Modes) this parameter will be read-only; meaning the value will appear on the softkey and query via SCPI, but not changeable. In such applications the softkey will be grayed-out. Attempting to change the value via SCPI will be ignored and no error message will be generated. |

| | |
|----------------------|---------------------------|
| Preset | 10 dB |
| State Saved | Saved in instrument state |
| Min | 0 dB |
| Max | 20 dB |
| Initial S/W Revision | A.13.00 |

Mixer Level Offset

Mixer level offset is an advanced setting to adjust target Range at the input mixer which in turn affects the signal level in the instrument's IF. This setting can be used when additional optimization is needed after setting Peak to Average ratio. Positive values of offset optimize noise performance over distortion, negative values optimize distortion performance over noise.

| | |
|-----------------------|--|
| Key Path | AMPTD Y Scale, Range |
| Remote Command | [:SENSe] :POWer [:RF] :RANGe :MIXer :OFFSet <real> [:SENSe] :POWer [:RF] :RANGe :MIXer :OFFSet? |
| Example | POW:RANG:MIX:OFFS -5 dB |
| Preset | 0 dB |
| State Saved | Saved in instrument state |
| Min | -35 dB |
| Max | 30 dB |
| Initial S/W Revision | A.13.00 |

Auto Couple

The Auto Couple feature provides a quick and convenient way to automatically couple multiple instrument settings. This helps ensure accurate measurements and optimum dynamic range. When the Auto Couple feature is activated, either from the front panel or remotely, all parameters of the current measurement that have an Auto/Manual mode are set to Auto mode and all measurement settings dependent on (or coupled to) the Auto/Man parameters are automatically adjusted for optimal performance.

However, the Auto Couple key actions are confined to the current measurement only. It does not affect other measurements in the mode, and it does not affect markers, marker functions, or trace or display attributes.

See "[More Information](#)" on page 1839

| | |
|-----------------------------|--|
| Key Path | Front-panel key |
| Remote Command | :COUPle ALL NONE |
| Example | :COUP ALL |
| Notes | :COUPle ALL puts all Auto/Man parameters in Auto mode (equivalent to pressing the Auto Couple key). :COUPLE NONE puts all Auto/Man parameters in manual mode. It decouples all the coupled instrument parameters and is not recommended for making measurements. |
| Initial S/W Revision | Prior to A.02.00 |

More Information

There are two types of functions that have Auto/Manual modes.

Auto/Man Active Function keys

An Auto/Man toggle key controls the binary state associated with an instrument parameter by toggling between **Auto** (where the parameter is automatically coupled to the other parameters it is dependent upon) and **Man** (where the parameter is controlled independent of the other parameters), as well as making the parameter the active function. The current mode is indicated on the softkey with either **Auto** or **Man** underlined as illustrated below.

vsd07

Auto/Man 1-of-N keys

An Auto/Man 1-of-N key allows you to manually pick from a list of parameter values, or place the function in Auto, in which case the value is automatically selected (and indicated) as shown below. If in Auto, Auto is underlined on the calling key. If in manual operation, manual is indicated on the calling key. But the calling key does not actually toggle the function, it simply opens the menu.

BW

Accesses a menu that allows you to control bandwidth settings.

| | |
|----------------------|------------------------|
| Key Path | Front-panel key |
| Initial S/W Revision | A.10.01 |

Info BW

Activates the **Info BW** active function, which allows you to manually set the information bandwidth (Info BW) of the analyzer.

| | |
|-------------------------------------|--|
| Key Path | BW |
| Mode | WLAN |
| Remote Command | [:SENSe] :EVM: BANDwidth [:RESolution] <bandwidth> [:SENSe] :EVM: BANDwidth [:RESolution] ? |
| Example | EVM: BAND 20e6 EVM: BAND ? |
| Couplings | Info BW is coupled with Subcarrier Spacing |
| Preset | Info BW is limited by hardware capability if Radio Std is 802.11a/b/g = 25MHz if Radio Std is 802.11n-20M = 25MHz if Radio Std is 802.11n-40M = 40MHz if Radio Std is 802.11ac-20M = 25MHz if Radio Std is 802.11ac-40M = 40MHz if Radio Std is 802.11ac-80M / 80M+ 80M = 80MHz if Radio Std is 802.11ac-160M = 160MHz if Radio Std is 802.11ah-1MHz : 3MHz if Radio Std is 802.11ah-2M = 3MHz if Radio Std is 802.11ah-4M = 4MHz if Radio Std is 802.11ah-8M = 8MHz if Radio Std is 802.11ah-16M = 16MHz (25MHz if only B25 option installed) if Radio Std is 802.11j/p-10M = 10MHz if Radio Std is 802.11p-5M = 5MHz |
| State Saved | Saved in instrument state. |
| Min | 1 kHz |
| Max | Hardware Dependent: B25 = 25 MHz WB (40 MHz or wider) = Hardware Option Limit |
| Backwards Compatibility SCPI | [:SENSe] :EVM: I FBW |

| | |
|----------------------|---------|
| Initial S/W Revision | A.10.01 |
|----------------------|---------|

Cont (Continuous Measurement/Sweep)

Sets the analyzer for Continuous measurement operation. The single/continuous state is Meas Global so the setting will affect all measurements. If you are Paused, pressing **Cont** does a Resume.

| | |
|-------------------------------|--|
| Key Path | Front-panel key |
| Remote Command | :INITiate:CONTinuous OFF ON 0 1 :INITiate:CONTinuous? |
| Example | :INIT:CONT 0 puts analyzer in Single measurement operation. :INIT:CONT 1 puts analyzer in Continuous measurement operation |
| Preset | ON (Note that SYST:PRESet sets INIT:CONT to ON but *RST sets INIT:CONT to OFF) |
| State Saved | Saved in instrument state |
| Backwards Compatibility Notes | For Spectrum Analysis mode in ESA and PSA, there is no Cont hardkey, instead there is a Sweep Single/Cont key. In these analyzers, switching the Sweep Single/Cont key from Single to Cont restarts averages (displayed average count reset to 1), but does not restart Max Hold and Min Hold . The X-Series has Single and Cont keys in place of the SweepSingleCont key. In the X-Series, if in single measurement, the Cont key (and INIT:CONT ON) switches to continuous measurement, but never restarts a measurement and never resets a sweep. |
| Initial S/W Revision | Prior to A.02.00 |

In Swept SA Measurement (Spectrum Analysis Mode):

The analyzer takes repetitive sweeps, averages, measurements, etc., when in Continuous mode. When the average count reaches the Average/Hold Number the count stops incrementing, but the analyzer keeps sweeping. See the Trace/Detector section for the averaging formula used both before and after the Average/Hold Number is reached. The trigger condition must be met prior to each sweep. The type of trace processing for multiple sweeps, is set under the Trace/Detector key, with choices of **Trace Average**, **Max Hold**, or **Min Hold**.

In Other Measurements/Modes:

With **Avg/Hold Num** (in the **Meas Setup** menu) set to **Off** or set to **On** with a value of 1, a sweep is taken after the trigger condition is met; and the analyzer continues to take new sweeps after the current sweep has completed and the trigger condition is again met. However, with **Avg/Hold Num** set to On with a value >1, multiple sweeps (data acquisitions) are taken for the measurement. The trigger condition must be met prior to each sweep. The sweep is not stopped when the average count k equals the number N set for Avg/Hold Num is reached, but the number k stops incrementing. A measurement average usually applies to all traces, marker results, and numeric results. But sometimes it only applies to the numeric results.

If the analyzer is in Single measurement, pressing the **Cont** key does not change k and does not cause the sweep to be reset; the only action is to put the analyzer into Continuous measurement operation.

If it is already in continuous sweep:

the INIT:CONT 1 command has no effect

13 WLAN Modulation Analysis measurement
Cont (Continuous Measurement/Sweep)

the INIT:CONT 0 command will place the analyzer in Single Sweep but will have no effect on the current sequence until $k = N$, at which point the current sequence will stop and the instrument will go to the idle state.

File

See "File" on page 272

FREQ Channel

Accesses a menu of keys that allow you to control the Frequency and Channel parameters of the instrument.

Some features in the Frequency menu are the same for all measurements – they do not change as you change measurements. Settings like these are called “Meas Global” and are unaffected by Meas Preset. For example, the Center Freq setting is the same for all measurements - it does not change as you change measurements.

| Key Path | Front-panel key |
|----------------------|------------------|
| Initial S/W Revision | Prior to A.02.00 |

Center Freq

Sets the frequency that corresponds to the horizontal center of the graticule (when frequency Scale Type is set to linear). While adjusting the Center Frequency the Span is held constant, which means that both Start Frequency and Stop Frequency will change.

Pressing Center Freq also sets the frequency entry mode to Center/Span. In Center/Span mode, the center frequency and span values are displayed below the graticule, and the default active function in the Frequency menu is **Center Freq**.

The center frequency setting is the same for all measurements within a mode, that is, it is Meas Global. Some modes are also able to share a Mode Global center frequency value. If this is the case, the Mode will have a **Global Settings** key in its **Mode Setup** menu.

The **Center Freq** function sets (and queries) the Center Frequency for the currently selected input. If your analyzer has multiple inputs, and you select another input, the Center Freq changes to the value for that input. SCPI commands are available to directly set the Center Freq for a specific input.

Center Freq is remembered as you go from input to input. Thus you can set a Center Freq of 10 GHz with the RF Input selected, change to BBIQ and set a Center Freq of 20 MHz, then switch to External Mixing and set a Center Freq of 60 GHz, and when you go back to the RF Input the Center Freq will go back to 10 GHz; back to BBIQ and it is 20 MHz; back to External Mixing and it is 60 GHz.

See ["RF Center Freq" on page 1849](#)

See [Ext Mix Center Freq](#)

See ["I/Q Center Freq" on page 1851](#)

See ["Center Frequency Presets" on page 1847](#)

| Key Path | FREQ Channel |
|----------------|--|
| Scope | Meas Global |
| Remote Command | [:SENSe] :FREQuency:CENTer <freq> [:SENSe] :FREQuency:CENTer? |
| Example | FREQ:CENT 50 MHz |

| | |
|----------------------|--|
| | FREQ:CENT UP changes the center frequency to 150 MHz if you use FREQ:CENT:STEP 100 MHz to set the center frequency step size to 100 MHz FREQ:CENT? |
| Notes | This command sets either the RF or I/Q Center Frequency depending on the selected input. For RF input it is equivalent to FREQ:RF:CENT For I/Q input it is equivalent to FREQ:IQ:CENT Preset and Max values are dependent on Hardware Options (5xx) If no terminator (e.g. MHz) is sent the terminator Hz is used. If a terminator with unit other than Frequency is used, an invalid suffix error message is generated. |
| Dependencies | The Center Frequency can be limited by Start or Stop Freq limits, if the Span is so large that Start or Stop reach their limit. |
| Couplings | When operating in "swept span", any value of the Center Frequency or Span that is within the frequency range of the analyzer is allowed when the value is being set through the front panel numeric key pad or the SCPI command. The other parameter is forced to a different value if needed, to keep the Start and the Stop Frequencies within the analyzer's frequency range |
| Preset | Depends on instrument maximum frequency, mode, measurement, and selected input. See "Center Frequency Presets" on page 1847 and "RF Center Freq" on page 1849 and Ext Mix Center Freq and "I/Q Center Freq" on page 1851. |
| State Saved | Saved in instrument state |
| Min | Depends on instrument maximum frequency, mode, measurement, and selected input.. See "Center Frequency Presets" on page 1847 and "RF Center Freq" on page 1849 and "I/Q Center Freq" on page 1851. |
| Max | Depends on instrument maximum frequency, mode, measurement, and selected input.. See "Center Frequency Presets" on page 1847 and "RF Center Freq" on page 1849 and "I/Q Center Freq" on page 1851. |
| Default Unit | Hz |
| Status Bits/OPC | Non-overlapped |
| Dependencies | |
| Initial S/W Revision | Prior to A.02.00 |

Center Frequency Presets

The following table provides the Center Frequency Presets for the Spectrum Analyzer mode, and the Max Freq, for the various frequency options:

| Freq Option | CF after Mode Preset | Stop Freq after Mode Preset | Max Freq (can't tune above) |
|-------------|-------------------------|--------------------------------|--------------------------------------|
| | | | |

13 WLAN Modulation Analysis measurement
 FREQ Channel

| | | | |
|---------------------------------------|------------|----------|--------------|
| 503 (all but N9000A) | 1.805 GHz | 3.6 GHz | 3.7 GHz |
| 503 (N9000A) | 1.505 GHz | 3.0 GHz | 3.08 GHz |
| 507 (all but N9000A) | 3.505 GHz | 7.0 GHz | 7.1 GHz |
| 507 (N9000A) | 3.755 GHz | 7.5 GHz | 7.58 GHz |
| 508 (all but N9038A) | 1.805 GHz | 3.6 GHz | 8.5 GHz |
| 508 (N9038A) | 4.205 GHz | 8.4 GHz | 8.5 GHz |
| 513 | 6.805 GHz | 13.6 GHz | 13.8 GHz |
| 526 (all but N9000A and N9038A) | 13.255 GHz | 26.5 GHz | 27.0 GHz |
| 526 (N9000A) | 13.255 GHz | 26.5 GHz | 26.55 GHz |
| 526 (N9038A) | 1.805 GHz | 3.6 GHz | 27.0 GHz |
| 532 | 16.005 GHz | 32.0 GHz | 32.5 GHz |
| 543 | 21.505 GHz | 43.0 GHz | TBD |
| 544 | 22.005 GHz | 44.0 GHz | 44.5 GHz |
| 550 | 25.005 GHz | 50.0 GHz | 51 GHz |

Input 2:

| Model | CF after Mode Preset | Stop Freq after Mode Preset | Max Freq (can't tune above) |
|----------------|----------------------------|-----------------------------------|-----------------------------------|
| N9000A opt C75 | 0.7505GHz | 1.5 GHz | 1.58 GHz |
| N9038A | 505 MHz | 1 GHz | 1.000025 GHz |

Tracking Generator Frequency Limits (N9000A only):

| Tracking Generator Option | Min Freq (clips to this freq when turn TG on and can't tune below | If above this Freq, Stop Freq clipped to this Freq when TG turned on | Max Freq (can't tune above) while TG on |
|---------------------------------|--|---|--|
| | | | |

| | while TG on) | | |
|-----|--------------|---------|----------|
| T03 | 9 kHz | 3.0 GHz | 3.08 GHz |
| T06 | 9 kHz | 6.0 GHz | 6.05 GHz |

The following table shows the Center Frequency Presets for modes other than Spectrum Analyzer:

| Mode | CF Preset for RF |
|-------------|------------------|
| WCDMA | 1 GHz |
| WIMAXOFDMA, | 1 GHz |
| BASIC | 1 GHz |
| ADEMOD | 1 GHz |
| VSA | 1 GHz |
| TDSCDMA | 1 GHz |
| PNOISE | 1 GHz |
| LTE | 1 GHz |
| LTETDD | 1 GHz |
| MSR | 1 GHz |
| GSM | 935.2 MHz |
| NFIGURE | 1.505 GHz |

RF Center Freq

SCPI command for specifying the RF Center Frequency. This command will set the Center Frequency to be used when the RF input is selected, even if the RF input is not the input that is selected at the time the command is sent. Note that the **Center Freq** function in the **Frequency** menu on the front panel always applies to the currently selected input.

| | |
|-----------------------|--|
| Scope | Meas Global |
| Remote Command | <code>[:SENSe] :FREQuency:RF:CENTer <freq></code> <code>[:SENSe] :FREQuency:RF:CENTer?</code> |
| Example | FREQ:RF:CENT 30 MHz |
| Notes | This command is the same in all modes, but the parameter is Measurement Global. So the value is independent in each mode and common across all the measurements in the mode. |
| Dependencies | If the electronic/soft attenuator is enabled, any attempt to set Center Frequency such that the Stop Frequency would be >3.6 GHz fails and results in an advisory message. If the equivalent SCPI command is sent, this same message is generated as part of a “-221, Settings conflict” warning. If Source Mode is set to Tracking, and the Max or Min Center Freq is therefore limited by the limits of the source, a warning message is generated, “Data out of range;clipped to source max/min” if these limits are exceeded. Note that for an external source, these limits can be affected by the settings of Source Numerator, Source Denominator and Power Sweep. |

| | |
|--------------------------|--|
| Preset | See table above |
| State Saved | Saved in instrument state. |
| Min | -79.999995 MHz, unless Source Mode is set to Tracking, in which case it is limited by the minimum frequency of the Source |
| Max | See table above. Basically instrument maximum frequency - 5 Hz. Note that, if the Source Mode is set to Tracking, the effective instrument maximum frequency may be limited by the source maximum frequency. If the knob or step keys are being used, also depends on the value of the other three interdependent parameters Span, Start Frequency and Stop Frequency |
| Initial S/W Revision | Prior to A.02.00 |
| Modified at S/W Revision | A.03.00 |

Ext Mix Center Freq

SCPI command for specifying the External Mixer Center Frequency. This command will set the Center Frequency to be used when the External Mixer is selected, even if the External Mixer input is not the input which is selected at the time the command is sent. Note that the **Center Freq** function in the **Frequency** menu on the front panel always applies to the currently selected input.

| | |
|----------------|---|
| Scope | Meas Global |
| Remote Command | <code>[:SENSe] :FREQuency:EMIXer:CENTer <freq></code> <code>[:SENSe] :FREQuency:EMIXer:CENTer?</code> |
| Example | <code>:FREQ:EMIX:CENt 60 GHz</code> <code>:FREQ:EMIX:CENt?</code> |
| Notes | This command is the same in all modes, but the parameter is Measurement Global. So the value is independent in each mode and common across all the measurements in the mode. |
| Couplings | When returning to External Mixing after having been switched to one of the other inputs (e.g., RF), you will come back into the settings that you had when you left External Mixing. So you will come back to the band you were in with the Center Frequency that you had. However, Span is not an input-dependent parameter, therefore you will bring the span over from the other input. Therefore, the analyzer comes back with the span from the previous input, limited as necessary by the current mixer setup. |
| Preset | When a Mode Preset is performed while in External Mixing, the Start frequency of the current Mode is set to the nominal Min Freq of the lowest harmonic range in the Harmonic Table for the current mixer setup. Similarly, the Stop frequency of the current Mode is set to the nominal Max Freq of the highest harmonic range in the Harmonic Table. The Center Freq thus presets to the point arithmetically equidistant from these two frequencies. If the current measurement has a limited Span available to it, and cannot achieve the Span shown in the table (Span=Stop Freq - Start Freq), the analyzer uses the maximum Span the measurement allows, and still sets the Center Freq to the midpoint of the Start and Stop Freq values in the Harmonic Table. When Restore Input/Output Defaults is performed, the mixer presets to the 11970A, whose Start and Stop frequencies are 26.5 and 40 GHz respectively. The center of these two frequencies is |

| | |
|----------------------|---|
| | 33.25 GHz. Therefore, after a Restore Input/Output Defaults, if you go into External Mixing and do a Mode Preset while in the Spectrum Analyzer Mode, the resulting Center Freq is 33.25 GHz. |
| State Saved | Saved in instrument state. |
| Min | The minimum frequency in the currently selected mixer band + 5 Hz |
| Max | The maximum frequency in the currently selected mixer band – 5 Hz If the knob or step keys are being used, also depends on the value of the other three interdependent parameters Span, Start Frequency and Stop Frequency |
| Initial S/W Revision | A.08.01 |

I/Q Center Freq

SCPI command for specifying the I/Q Center Frequency. This command will set the Center Frequency to be used when the I/Q input is selected, even if the I/Q input is not the input which is selected at the time the command is sent. Note that the **Center Freq** function in the **Frequency** menu on the front panel always applies to the currently selected input.

| | |
|-----------------------|--|
| Scope | Meas Global |
| Remote Command | [:SENSe] :FREQuency:IQ:CENTer <freq> [:SENSe] :FREQuency:IQ:CENTer? |
| Example | FREQ:IQ:CENT: 30 MHz |
| Notes | This command is the same in all modes, but the parameter is Measurement Global. So the value is independent in each mode and common across all the measurements in the mode. |
| Preset | 0 Hz |
| State Saved | Saved in instrument state. |
| Min | -40.049995 MHz |
| Max | 40.049995 MHz |
| Initial S/W Revision | Prior to A.02.00 |

CF Step

Changes the step size for the center frequency and start and stop frequency functions. Once a step size has been selected and the center frequency function is active, the step keys (and the UP|DOWN parameters for Center Frequency from remote commands) change the center frequency by the step-size value. The step size function is useful for finding harmonics and sidebands beyond the current frequency span of the analyzer.

Note that the start and stop frequencies also step by the CF Step value.

| | |
|-----------------------|---|
| Key Path | FREQ Channel |
| Remote Command | [:SENSe] :FREQuency:CENTer:STEP [:INCRement] <freq> |

| | |
|------------------------------|--|
| | [:SENSe]:FREQuency:CENTer:STEP[:INCRement]? |
| | [:SENSe]:FREQuency:CENTer:STEP:AUTO OFF ON 0 1 |
| | [:SENSe]:FREQuency:CENTer:STEP:AUTO? |
| Example | FREQ:CENT:STEP:AUTO ON FREQ:CENT:STEP 500 MHz FREQ:CENT UP increases the current center frequency value by 500 MHz FREQ:CENT:STEP? FREQ:CENT:STEP:AUTO? |
| Notes | Preset and Max values are depending on Hardware Options (503, 507, 508, 513, 526) |
| Notes | Preset and Max values are dependent on Hardware Options (5xx) |
| Dependencies | Freq Offset is not available in External Mixing. In this case the Freq Offset key is grayed out and shows a value of zero. It will once again be available, and show the previously set value, when you return to the RF Input. |
| Dependencies | Span, RBW, Center frequency If the electronic/soft attenuator is enabled, any attempt to change the value of the center frequency >3.6 GHz by pressing the Up-arrow key, fails and results in an advisory message. If the equivalent SCPI command is sent, this same message is generated as part of a “-221, Settings conflict” warning. |
| Couplings | When auto-coupled in a non-zero span, the center frequency step size is set to 10% of the span. When auto-coupled in zero span, the center frequency step size is set to the equivalent -3 dB RBW value. |
| Preset | Auto ADEM0D: 1 MHz ON |
| State Saved | Saved in instrument state |
| Min | – (the maximum frequency of the instrument). That is, 27 GHz max freq instrument has a CF step range of +/- 27 GHz. Note that this is the maximum frequency given the current settings of the instrument, so in External Mixing, for example, it is the maximum frequency of the current mixer band. |
| Max | The maximum frequency of the instrument. That is, 27 GHz max freq instrument has a CF step range of +/- 27 GHz. Note that this is the maximum frequency given the current settings of the instrument, so in External Mixing, for example, it is the maximum frequency of the current mixer band. |
| Default Unit | Hz |
| Status Bits/OPC dependencies | non-overlapped |
| Initial S/W Revision | Prior to A.02.00 |
| Modified at S/W Revision | A.03.00 |

Input/Output

See "Input/Output" on page 162

Marker

Accesses a menu that enables you to select, set up and control the markers for the current measurement.

| Key Path | Front-panel key |
|----------------------|-----------------|
| Initial S/W Revision | A.10.01 |

Select Marker

Displays 12 markers available for selection.

| Key Path | Marker |
|----------------------|---------|
| Initial S/W Revision | A.10.01 |

Marker Type

Sets the marker control mode. If the selected marker is Off, pressing Marker sets it to Normal and places it at the center of the screen on the trace determined by the **Marker Trace** rules. At the same time, reference value of the selected marker appears on the Active Function area.

Active Function Display:

Marker index at I/Q Measured Polar Vector graph

Marker X-axis value at other graphs

Default Active Function: the active function for the selected marker's current control mode. If the current control mode is Off, there is no active function and the active function is turned off.

The marker X axis value entered in the active function area displays the marker value to its full entered precision.

| Key Path | Marker |
|-----------------------|--|
| Mode | WLAN |
| Remote Command | :CALCulate:EVM:MARKer[1] 2 ... 12:MODE POSition DELTA OFF :CALCulate:EVM:MARKer[1] 2 ... 12:MODE? |
| Example | CALC:EVM:MARK:MODE POS CALC:EVM:MARK:MODE? |
| Notes | If the selected marker is Off, pressing Marker sets it to Normal and places it at the center of the screen on the trace determined by the Marker Trace rules. At the same time, Marker X Axis Value appears on the Active Function area. Default Active Function: The active function for the selected marker's current control mode. If the current control mode is Off, there is no active function and the active function is turned off. Active Function Display: |

- the marker index for the IQ Measured Polar Vector graph
 - the marker X axis value for any other graph
 The value entered in the active function area displays the marker value to its full entered precision.

| | |
|----------------------|----------------------------|
| Preset | OFF |
| State Saved | Saved in instrument state. |
| Range | Normal Delta Off |
| Initial S/W Revision | A.10.01 |

Properties

Accesses a menu that enables you to select a reference marker and marker trace.

| | |
|----------------------|---------------|
| Key Path | Marker |
| Initial S/W Revision | A.10.01 |

Select Marker

Displays 12 markers available for selection.

| | |
|----------------------|---------------|
| Key Path | Marker |
| Initial S/W Revision | A.10.01 |

Relative To

Selects the marker that the selected marker is relative to (its reference marker).

| | |
|-----------------------|--|
| Key Path | Marker, Properties |
| Mode | WLAN |
| Remote Command | :CALCulate:EVM:MARKer[1] 2 ... 12:REFerence <integer> :CALCulate:EVM:MARKer[1] 2 ... 12:REFerence? |
| Example | CALC:EVM:MARK:REF 3 CALC:EVM:MARK:REF? |
| Notes | A marker cannot be relative to itself so that choice is grayed out, and if sent from SCPI generates error -221: "Settings conflict; marker cannot be relative to itself." When queried, a single value is returned (the specified marker number's relative marker). |
| Preset | 2 3 4 5 6 7 8 9 10 11 12 1 |
| State Saved | Saved in instrument state. |
| Min | 1 |

| | |
|----------------------|---------|
| Max | 12 |
| Initial S/W Revision | A.10.01 |

Marker Trace

Assigns the specified marker to the designated trace.

| | |
|-----------------------|--|
| Key Path | Marker |
| Mode | WLAN |
| Remote Command | :CALCulate:EVM:MARKer[1] 2 ... 12:TRACe POLar EVM MERRor PERRor EVMS EVMC PFERRor IQGain IQQuad IQTime :CALCulate:EVM:MARKer[1] 2 ... 12:TRACe? |
| Example | CALC:EVM:MARK2:TRAC EVM CALC:EVM:MARK:TRACE? |
| Couplings | EVM, MERRor, PERRor, PFERRor will be available if the Radio Std is 802.11b/g (DSSS/CCK/PBCC), otherwise they are grayed out EVMS and EVMC will be available if the Radio Std is 802.11 a/g/j/p (OFDM), 801.11g (DSSS-OFDM), 802.11n, 802.11ac or 802.11ah otherwise they are grayed out IQGain, IQQuad, and IQTime will be available if the Radio Std is 802.11 n , 802.11ac or 802.11ah, otherwise they are grayed out. |
| Preset | POLar |
| State Saved | Saved in instrument state. |
| Range | EVM Mag Err Phase Err EVM vs Symbol EVM vs Carrier IQ Polar |
| Initial S/W Revision | A.10.01 |

Marker Trace

Accesses a menu that enables you to assign a specified marker to the designated trace.

Symbol Traces means that three traces for I/Q polar, Symbol Error Carrier, Symbol Error Symbol, Symbol Power Carrier, and Symbol Power Symbol can be assigned. If used, a marker pointer is placed on each trace. In this case, the three pointers will move at the same time, as coupled markers, whenever the X position of the Symbol Traces changes.

| | |
|-----------------------|--|
| Key Path | Marker |
| Mode | WIMAXOFDMA |

| | |
|----------------------|--|
| Example | CALC:EVM:MARK:TRAC SYMB CALC:EVM:MARK:TRAC? |
| Preset | SYMB |
| State Saved | Saved in instrument state. |
| Range | Symbol Traces IQ Measured Polar ConstIn Error Vector Carrier RMS Error Vector Carrier Error Vector Symbol RMS Error Vector Symbol Symbol Power Carrier RMS Symbol Power Carrier Symbol Power Symbol RMS Symbol Power Symbol PvT Spectrum |
| Initial S/W Revision | Prior to A.02.00 |

Couple Markers

Toggles the state of the markers to be coupled On or Off. When this function is true (On), moving any marker causes an “equal X Axis movement” of every other marker which is active. By “equal X Axis movement” we mean that we preserve the difference between each marker’s X Axis value (in the fundamental x-axis units of the trace that marker is on) and the X Axis value of the marker being moved (in the same fundamental x-axis units).

This may result in markers going offscreen.

| | |
|-----------------------|--|
| Key Path | Marker |
| Mode | WLAN |
| Remote Command | :CALCulate:EVM:MARKer:COUPle[:STATe] ON OFF 1 0 :CALCulate:EVM:MARKer:COUPle[:STATe]? |
| Example | CALC:EVM:MARK:COUP ON CALC:EVM:MARK:COUP? |
| Preset | OFF |
| State Saved | Saved in instrument state. |
| Range | On Off |
| Initial S/W Revision | A.10.01 |

All Markers Off

Turns off all markers.

| | |
|-----------------------|----------------------------|
| Key Path | Marker |
| Mode | WLAN |
| Remote Command | :CALCulate:EVM:MARKer:AOFF |
| Example | CALC:EVM:MARK:AOFF |
| Initial S/W Revision | A.10.01 |

Marker X Axis Value (Remote Command only)

Sets the marker X Axis value in the current marker X Axis Scale unit. It has no effect if the control mode is **Off**, but is the SCPI equivalent of entering an X value if the control mode is **Normal** or **Delta**.

| | |
|-----------------------|---|
| Mode | WLAN |
| Remote Command | :CALCulate:EVM:MARKer[1] 2 ... 12:X <real> :CALCulate:EVM:MARKer[1] 2 ... 12:X? |
| Example | CALC:EVM:MARK3:X 0 CALC:EVM:MARK3:X? |
| Notes | If no suffix is sent, it will use the fundamental units for the current marker X Axis Scale. If a suffix is sent that does not match the current marker X Axis Scale unit, an "Invalid suffix" error will be generated. The query returns the marker's absolute X Axis value if the control mode is Normal , or the offset from the marker's reference marker if the control mode is Delta . The query is returned in the fundamental units for the current marker X Axis scale: Hz for Frequency and Inverse Time , seconds for Period and Time . If the marker is Off the response is not a number (NAN). |
| Preset | After a preset, all markers are set to Off, so a Marker X Axis Value query will return a not a number (NAN). |
| State Saved | Saved in instrument state. |
| Min | -9.9E+37 |
| Max | 9.9E+37. |
| Initial S/W Revision | A.10.01 |

Marker X Axis Position (Remote Command only)

Sets the marker X position in trace points. It has no effect if the control mode is **Off**, but is the SCPI equivalent of entering a value if the control mode is **Normal** or **Delta** - except in trace points rather than X Axis Scale units. The entered value is immediately translated into the current X Axis Scale units for setting the value of the marker.

| | |
|-----------------------|--|
| Mode | WLAN |
| Remote Command | :CALCulate:EVM:MARKer[1] 2 ... 12:X:POsition <real> :CALCulate:EVM:MARKer[1] 2 ... 12:X:POsition? |
| Example | CALC:EVM:MARK10:X:POS 10 CALC:EVM:MARK10:X:POS? |
| Notes | The query returns the marker's absolute X Axis value in trace points if the control mode is Normal , or the offset from the marker's reference marker in trace points, if the control mode is Delta . The value is returned as a real number, not an integer, corresponding to the translation from X Axis Scale units to trace points. If the marker is Off the response is not a number(NAN). |
| Preset | After a preset, all markers are set to Off, so Marker X Axis Position query will return a not a number (NAN). |
| State Saved | Saved in instrument state. |

| | |
|----------------------|----------|
| Min | -9.9E+37 |
| Max | 9.9E+37 |
| Initial S/W Revision | A.10.01 |

Marker Y Axis Value (Remote Command only)

Queries the marker Y Axis value in the current marker Y Axis unit.

| | |
|-----------------------|---|
| Mode | WLAN |
| Remote Command | :CALCulate:EVM:MARKer[1] 2 ... 12:Y? |
| Example | CALC:EVM:MARK11:Y? |
| Notes | <p>The query returns the marker Y-axis result if the control mode is Normal or Delta. If the marker is Off the response is not a number (NAN)</p> <p>Query results depend on the selected Marker Trace as follows:</p> <p>I/Q Measured Polar: I, Q (In normalized voltage)</p> <p>EVM vs. Symbol: EVM(dB)</p> <p>EVM vs. Carrier: EVM(dB)</p> <p>Mag Error: Mag Err(%)</p> <p>Phase Error: Phase Err(°)</p> <p>EVM: EVM(%)</p> |
| Preset | Result dependant on Markers setup and signal source |
| State Saved | No |
| Initial S/W Revision | A.10.01 |

Backward Compatibility SCPI Commands

Sets or queries the state of a marker. Setting a marker which is Off to On, or 1, puts it in Normal mode and places it at the center of the screen.

| | |
|-----------------------|--|
| Mode | WLAN |
| Remote Command | :CALCulate:EVM:MARKer[1] 2 ... 12:STATe OFF ON 0 1 :CALCulate:EVM:MARKer[1] 2 ... 12:STATe? |
| Example | CALC:EVM:MARK3:STAT ON CALC:EVM:MARK3:STAT? |
| Preset | OFF |
| State Saved | Saved in instrument state. |
| Range | On Off |
| Initial S/W Revision | A.10.01 |

Marker Function

There are no 'Marker Functions' supported in Mod Analysis so this front-panel key will display a blank softkey when pressed.

| Key Path | Front-panel key |
|----------------------|-----------------|
| Initial S/W Revision | A.10.01 |

Marker To

There is no 'Marker To' functionality supported in Mod Analysis so this front-panel key will display a blank softkey when pressed.

| | |
|----------------------|------------------------|
| Key Path | Front-panel key |
| Initial S/W Revision | A.10.01 |

Meas

The information in this section is common to all measurements. For key and remote command information for a specific measurement, refer to the section that describes the measurement of interest.

Measurements available under the Meas key are specific to the current Mode.

When viewing Help for measurements, note the following:

NOTE

Operation for some keys differs between measurements. The information displayed in Help pertains to the current measurement. To see how a key operates in a different measurement, exit Help (press the Cancel Esc key), select the measurement, then reenter Help (press the Help key) and press that key.

| Key Path | Front-panel key |
|----------------------|------------------|
| Initial S/W Revision | Prior to A.02.00 |

Remote Measurement Functions

This section contains the following topics:

| Initial S/W Revision | Prior to A.02.00 |
|----------------------|------------------|

Measurement Group of Commands

Measure Commands:

:MEASure:<measurement>[n]?

This is a fast single-command way to make a measurement using the factory default instrument settings. These are the settings and units that conform to the Mode Setup settings (e.g. radio standard) that you have currently selected.

- Stops the current measurement (if any) and sets up the instrument for the specified measurement using the factory defaults
- Initiates the data acquisition for the measurement
- Blocks other SCPI communication, waiting until the measurement is complete before returning results.
- If the function does averaging, it is turned on and the number of averages is set to 10.
- After the data is valid it returns the scalar results, or the trace data, for the specified measurement. The type of data returned may be defined by an [n] value that is sent with the command.
- The scalar measurement results will be returned if the optional [n] value is not included, or is set to 1. If the [n] value is set to a value other than 1, the selected trace data results will be returned. See each command for details of what types of scalar results or trace data results are available.
- ASCII is the default format for the data output. (Older versions of Spectrum Analysis and Phase Noise mode measurements only use ASCII.) The binary data formats should be used for handling large blocks of data since they are smaller and faster than the ASCII format. Refer to the FORMat:DATA command for more information.

If you need to change some of the measurement parameters from the factory default settings you can set up the measurement with the CONFigure command. Use the commands in the SENSe:<measurement> and CALCulate:<measurement> subsystems to change the settings. Then you can use the READ? command to initiate the measurement and query the results.

If you need to repeatedly make a given measurement with settings other than the factory defaults, you can use the commands in the SENSe:<measurement> and CALCulate:<measurement> subsystems to set up the measurement. Then use the READ? command to initiate the measurement and query results.

Measurement settings persist if you initiate a different measurement and then return to a previous one. Use READ:<measurement>? if you want to use those persistent settings. If you want to go back to the default settings, use MEASure:<measurement>?.

Configure Commands:

:CONFigure:<measurement>

This command stops the current measurement (if any) and sets up the instrument for the specified measurement using

the factory default instrument settings. It does not initiate the taking of measurement data unless INIT:CONTinuous is ON. If you change any measurement settings after using the CONFigure command, the READ command can be used to initiate a measurement without changing the settings back to their defaults.

In the Swept SA measurement in Spectrum Analyzer mode the CONFigure command also turns the averaging function on and sets the number of averages to 10 for all measurements.

:CONFigure: <measurement>: NDEFault stops the current measurement and changes to the specified measurement. It does not change the settings to the defaults. It does not initiate the taking of measurement data unless INIT:CONTinuous is ON.

The CONFigure? query returns the current measurement name.

The CONFigure:CATalog? query returns a quoted string of all licensed measurement names in the current mode. For example, "SAN, CHP, OBW, ACP, PST, TXP, SPUR, SEM, LIST".

Fetch Commands:

:FETCh:<measurement>[n]?

This command puts selected data from the most recent measurement into the output buffer. Use FETCh if you have already made a good measurement and you want to return several types of data (different [n] values, for example, both scalars and trace data) from a single measurement. FETCh saves you the time of re-making the measurement. You can only FETCh results from the measurement that is currently active, it will not change to a different measurement. An error message is reported if a measurement other than the current one is specified.

If you need to get new measurement data, use the READ command, which is equivalent to an INITiate followed by a FETCh.

The scalar measurement results will be returned if the optional [n] value is not included, or is set to 1. If the [n] value is set to a value other than 1, the selected trace data results will be returned. See each command for details of what types of scalar results or trace data results are available. The binary data formats should be used for handling large blocks of data since they are smaller and transfer faster than the ASCII format. (FORMat:DATA)

FETCh may be used to return results other than those specified with the original READ or MEASure command that you sent.

INITiate Commands:

:INITiate:<measurement>

This command is not available for measurements in all the instrument modes:

- Initiates a trigger cycle for the specified measurement, but does not output any data. You must then use the FETCh<meas> command to return data. If a measurement other than the current one is specified, the instrument will switch to that measurement and then initiate it.
 - For example, suppose you have previously initiated the ACP measurement, but now you are running the channel power measurement. If you send INIT:ACP? it will change from channel power to ACP and will initiate an ACP measurement.
 - Does not change any of the measurement settings. For example, if you have previously started the ACP measurement and you send INIT:ACP? it will initiate a new ACP measurement using the same instrument settings as the last time ACP was run.
 - If your selected measurement is currently active (in the idle state) it triggers the measurement, assuming the trigger conditions are met. Then it completes one trigger cycle. Depending upon the measurement and the number of averages, there may be multiple data acquisitions, with multiple trigger events, for one full trigger cycle. It also holds off additional commands on GPIB until the acquisition is complete.
-

READ Commands:

:READ:<measurement>[n]?

- Does not preset the measurement to the factory default settings. For example, if you have previously initiated the ACP
-

measurement and you send READ:ACP? it will initiate a new measurement using the same instrument settings.

- Initiates the measurement and puts valid data into the output buffer. If a measurement other than the current one is specified, the instrument will switch to that measurement before it initiates the measurement and returns results.
 - For example, suppose you have previously initiated the ACP measurement, but now you are running the channel power measurement. Then you send READ:ACP? It will change from channel power back to ACP and, using the previous ACP settings, will initiate the measurement and return results.
 - Blocks other SCPI communication, waiting until the measurement is complete before returning the results
 - If the optional [n] value is not included, or is set to 1, the scalar measurement results will be returned. If the [n] value is set to a value other than 1, the selected trace data results will be returned. See each command for details of what types of scalar results or trace data results are available. The binary data formats should be used when handling large blocks of data since they are smaller and faster than the ASCII format. (FORMat:DATA)
-

| | |
|----------------------|------------------|
| Initial S/W Revision | Prior to A.02.00 |
|----------------------|------------------|

Current Measurement Query (Remote Command Only)

This command returns the name of the measurement that is currently running.

| | |
|-----------------------|-------------|
| Remote Command | :CONFigure? |
|-----------------------|-------------|

| | |
|----------------|-------|
| Example | CONF? |
|----------------|-------|

| | |
|----------------------|------------------|
| Initial S/W Revision | Prior to A.02.00 |
|----------------------|------------------|

Limit Test Current Results (Remote Command Only)

Queries the status of the current measurement limit testing. It returns a 0 if the measured results pass when compared with the current limits. It returns a 1 if the measured results fail any limit tests.

| | |
|-----------------------|--------------------------|
| Remote Command | :CALCulate:CLIMits:FAIL? |
|-----------------------|--------------------------|

| | |
|----------------|--|
| Example | CALC:CLIM:FAIL? queries the current measurement to see if it fails the defined limits. Returns a 0 or 1: 0 it passes, 1 it fails. |
|----------------|--|

| | |
|----------------------|------------------|
| Initial S/W Revision | Prior to A.02.00 |
|----------------------|------------------|

Data Query (Remote Command Only)

Returns the designated measurement data for the currently selected measurement and subopcode.

n = any valid subopcode for the current measurement. See the measurement command results table for your current measurement, for information about what data is returned for the subopcodes.

This command uses the data setting specified by the FORMat:BORDER and FORMat:DATA commands and can return real or ASCII data. (See the format command descriptions under Input/Output in the Analyzer Setup section.)

| | |
|-----------------------------|---|
| Remote Command | :CALCulate:DATA[n]? |
| Notes | The return trace depends on the measurement. In CALCulate:<meas>:DATA[n], n is any valid subopcode for the current measurement. It returns the same data as the FETCH:<measurement>? query where <measurement> is the current measurement. |
| Initial S/W Revision | Prior to A.02.00 |

Calculate/Compress Trace Data Query (Remote Command Only)

Returns compressed data for the currently selected measurement and sub-opcode [n].

n = any valid sub-opcode for that measurement. See the MEASure:<measurement>? command description of your specific measurement for information on the data that can be returned.

The data is returned in the current Y Axis Unit of the analyzer. The command is used with a sub-opcode <n> (default=1) to specify the trace. With trace queries, it is best if the analyzer is not sweeping during the query. Therefore, it is generally advisable to be in Single Sweep, or Update=Off.

This command is used to compress or decimate a long trace to extract and return only the desired data. A typical example would be to acquire N frames of GSM data and return the mean power of the first burst in each frame. The command can also be used to identify the best curve fit for the data.

| | |
|-----------------------------|---|
| Remote Command | :CALCulate:DATA<n>:COMPRESS? BLOCK CFIT MAXimum MINimum MEAN DMEan RMS RMSCubed SAMPLE SDEVIation PPHase [,<soffset> [,<length>[,<roffset>[,<rlimit>]]]] |
| Example | To query the mean power of a set of GSM bursts: Supply a signal that is a set of GSM bursts. Select the IQ Waveform measurement (in IQ Analyzer Mode). Set the sweep time to acquire at least one burst. Set the triggers such that acquisition happens at a known position relative to a burst. Then query the mean burst levels using, CALC:DATA2:COMP? MEAN, 24e-6, 526e-6 (These parameter values correspond to GSM signals, where 526e-6 is the length of the burst in the slot and you just want 1 burst.) |
| Notes | The command supports 5 parameters. Note that the last 4 (<soffset>, <length>, <roffset>, <rlimit>) are optional. But these optional parameters must be entered in the specified order. For example, if you want to specify <length>, then you must also specify <soffset>. See details below for a definition of each of these parameters. This command uses the data in the format specified by FORMat:DATA, returning either binary or ASCII data. |
| Initial S/W Revision | Prior to A.02.00 |

- BLOCK or block data - returns all the data points from the region of the trace data that you specify. For example, it could be used to return the data points of an input signal over several timeslots, excluding the portions of the trace data that you do not want. (This is x,y pairs for trace data and I,Q pairs for complex data.)

- CFIT or curve fit - applies curve fitting routines to the data. <soffset> and <length> are required to define the data that you want. <roffset> is an optional parameter for the desired order of the curve equation. The query will return the following values: the x-offset (in seconds) and the curve coefficients ((order + 1) values).

MIN, MAX, MEAN, DME, RMS, RMSC, SAMP, SDEV and PPH return one data value for each specified region (or <length>) of trace data, for as many regions as possible until you run out of trace data (using <roffset> to specify regions). Or they return the number of regions you specify (using <rlimit>) ignoring any data beyond that.

- MINimum - returns the minimum data point (y value) for the specified region(s) of trace data. For I/Q trace data, the minimum magnitude of the I/Q pairs is returned.
- MAXimum - returns the maximum data point (y value) for the specified region(s) of trace data. For I/Q trace data, the maximum magnitude of the I/Q pairs is returned.
- MEAN - returns a single value that is the arithmetic mean of the data point values (in dB/ dBm) for the specified region(s) of trace data. For I/Q trace data, the mean of the magnitudes of the I/Q pairs is returned. See the following equations.

-

NOTE

If the original trace data is in dB, this function returns the arithmetic mean of those log values, not log of the mean power which is a more useful value. The mean of the log is the better measurement technique when measuring CW signals in the presence of noise. The mean of the power, expressed in dB, is useful in power measurements such as Channel Power. To achieve the mean of the power, use the RMS option.

Equation 1

Mean Value of Data Points for Specified Region(s)

$$\text{MEAN} = \frac{1}{n} \sum_{X_i \in \text{region}(s)} X_i$$

where X_i is a data point value, and n is the number of data points in the specified region(s).

Equation 2

Mean Value of I/Q Data Pairs for Specified Region(s)

$$\text{MEAN} = \frac{1}{n} \sum_{X_i \in \text{region}(s)} |X_i|$$

where $|X_i|$ is the magnitude of an I/Q pair, and n is the number of I/Q pairs in the specified region(s).

- DMEan - returns a single value that is the mean power (in dB/ dBm) of the data point values for the specified region(s) of trace data. See the following equation:

Equation 3

DMEan Value of Data Points for Specified Region(s)

$$\text{DME} = 10 \times \log_{10} \left(\frac{1}{n} \sum_{X_i \in \text{region}(s)} 10^{\frac{X_i}{10}} \right)$$

- RMS - returns a single value that is the average power on a root-mean-squared voltage scale (arithmetic rms) of the data point values for the specified region(s) of trace data. See the following equation.

NOTE

For I/Q trace data, the rms of the magnitudes of the I/Q pairs is returned. See the following equation. This function is very useful for I/Q trace data. However, if the original trace data is in dB, this function returns the rms of the log values which is not usually needed.

Equation 4

RMS Value of Data Points for Specified Region(s)

$$\text{RMS} = \sqrt{\frac{1}{n} \sum_{X_i \in \text{region}(s)} X_i^2}$$

where X_i is a data point value, and n is the number of data points in the specified region(s).

Equation 5

RMS Value of I/Q Data Pairs for Specified Region(s)

$$\text{RMS} = \sqrt{\frac{1}{n} \sum_{X_i \in \text{region}(s)} X_i X_i^*}$$

where X_i is the complex value representation of an I/Q pair, X_i^* its conjugate complex number, and n is the number of I/Q pairs in the specified region(s).

Once you have the rms value for a region of trace data (linear or I/Q), you may want to calculate the mean power. You must convert this rms value (peak volts) to power in dBm:

$$10 \times \log[10 \times (\text{rms value})^2]$$

- SAMPlE - returns the first data value (x,y pair) for the specified region(s) of trace data. For I/Q trace data, the first I/Q pair is returned.
- SDEVIation - returns a single value that is the arithmetic standard deviation for the data point values for the specified region(s) of trace data. See the following equation.
- For I/Q trace data, the standard deviation of the magnitudes of the I/Q pairs is returned. See the following equation.

Equation 6

Standard Deviation of Data Point Values for Specified Region(s)

$$\text{SDEV} = \sqrt{\frac{1}{n} \sum_{X_i \in \text{region}(s)} (X_i - \bar{X})^2}$$

where X_i is a data point value, \bar{X} is the arithmetic mean of the data point values for the specified region (s), and n is the number of data points in the specified region(s).

$$\text{SDEV} = \sqrt{\frac{1}{n} \sum_{X_i \in \text{region}(s)} (|X_i| - \bar{X})^2}$$

where $|X_i|$ is the magnitude of an I/Q pair, \bar{X} is the mean of the magnitudes for the specified region(s), and n is the number of data points in the specified region(s).

- PPHase - returns the x,y pairs of both rms power (dBm) and arithmetic mean phase (radian) for every specified region and frequency offset (Hz). The number of pairs is defined by the specified number of regions. This parameter can be used for I/Q vector (n=0) in Waveform (time domain) measurement and all parameters are specified by data point in PPHase.

The rms power of the specified region may be expressed as:

$$\text{Power} = 10 \times \log [10 \times (\text{RMS I/Q value})] + 10.$$

The RMS I/Q value (peak volts) is:

$$\sqrt{\frac{1}{n} \sum_{X_i \in \text{region}} X_i X_i^*}$$

where X_i is the complex value representation of an I/Q pair, X_i^* its conjugate complex number, and n is the number of I/Q pairs in the specified region.

The arithmetic mean phase of the specified region may be expressed as:

$$\frac{1}{n} \sum_{Y_i \in \text{region}} Y_i$$

where Y_i is the unwrapped phase of I/Q pair with applying frequency correction and n is the number of I/Q pairs in the specified region.

The frequency correction is made by the frequency offset calculated by the arithmetic mean of every specified region's frequency offset. Each frequency offset is calculated by the least square method against the unwrapped phase of I/Q pair.

Sample Trace Data - Constant Envelope

(See below for explanation of variables.)

Sample Trace Data - Not Constant Envelope

(See below for explanation of variables.)

<soffset> - start offset is an optional real number. (It is in seconds for time-domain traces, and is a dimensionless index 0 to Npoints - 1, for frequency-domain traces). It specifies the amount of data at the beginning of the trace that will be ignored before the decimation process starts. It is the time or frequency change from the start of the trace to the point where you want to start using the data. The default value is zero.

<length> - is an optional real number. (It is in seconds for time-domain traces, and is a dimensionless index 0 to Npoints - 1, for frequency-domain traces). It defines how much data will be compressed into one value. This parameter has a default value equal to the current trace length.

<roffset> - repeat offset is an optional real number. (It is in seconds for time-domain traces, and is a dimensionless index 0 to Npoints - 1, for frequency-domain traces). It defines the beginning of the next field of trace elements to be compressed. This is relative to the beginning of the previous field. This parameter has a default value equal to the <length> variable. Note that this parameter is used for a completely different purpose when curve fitting (see CFIT above).

<rlimit> - repeat limit is an optional integer. It specifies the number of data items that you want returned. It will ignore any additional items beyond that number. You can use the Start offset and the Repeat limit to pick out exactly what part of the data you want to use. The default value is all the data.

Calculate Peaks of Trace Data (Remote Command Only)

Returns a list of all the peaks for the currently selected measurement and sub-opcode [n]. The peaks must meet the requirements of the peak threshold and excursion values.

n = any valid sub-opcode for the current measurement. See the MEASure:<measurement> command description of your specific measurement for information on the data that can be returned.

The command can only be used with specific sub-opcodes with measurement results that are trace data. Both real and complex traces can be searched, but complex traces are converted to magnitude in dBm. In many measurements the sub-opcode n=0, is the raw trace data which cannot be searched for peaks. And Sub-opcode n=1, is often calculated results values which also cannot be searched for peaks.

This command uses the data setting specified by the FORMat:BORDER and FORMat:DATA commands and can return real or ASCII data. If the format is set to INT,32, it returns REAL,32 data.

The command has four types of parameters:

- Threshold (in dBm)
- Excursion (in dB)
- Sorting order (amplitude, frequency, time)
- Optional in some measurements: Display line use (all, > display line, < display line)

| | |
|-----------------------|---|
| Remote Command | <p>For Swept SA measurement:</p> <pre>:CALCulate:DATA[1] 2 ... 6:PEAKs? <threshold>,<excursion>[,AMPLitude FREQuency TIME[,ALL GTDLline LTDLine]]</pre> <p>For most other measurements:</p> <pre>:CALCulate:DATA[1] 2 ... 6:PEAKs? <threshold>,<excursion>[,AMPLitude FREQuency TIME]</pre> |
|-----------------------|---|

| | |
|----------------|---|
| Example | <p>Example for Swept SA measurement in Spectrum Analyzer Mode:</p> <p>CALC:DATA4:PEAK? -40, 10, FREQ, GTDL This will identify the peaks of trace 4 that are above -40 dBm, with excursions of at least 10 dB. The peaks are returned in order of increasing frequency, starting with the lowest frequency. Only the peaks that are above the display line are returned.</p> <p>Query Results 1:</p> <p>With FORMat:DATA REAL, 32 selected, it returns a list of floating-point numbers. The first value in the list is the number of peak points that are in the following list. A peak point consists of two values: a peak amplitude followed by its corresponding frequency (or time).</p> <p>If no peaks are found the peak list will consist of only the number of peaks, (0).</p> |
|----------------|---|

| | |
|--------------|---|
| Notes | <p><n> - is the trace that will be used</p> <p><threshold> - is the level below which trace data peaks are ignored. Note that the threshold value is required and is always used as a peak criterion. To effectively disable the threshold criterion for this command, provide a substantially low threshold value such as -200 dBm. Also note that the threshold value used in this command is independent of and has no effect on the threshold value stored under the Peak Criteria menu.</p> <p><excursion> - is the minimum amplitude variation (rise and fall) required for a signal to be identified as peak. Note that the excursion value is required and is always used as a peak criterion. To effectively disable the excursion criterion for this command, provide the minimum value of 0.0 dB. Also note that the excursion value used in this command is independent of and has no effect on the</p> |
|--------------|---|

excursion value stored under the Peak Criteria menu.

Values must be provided for threshold and excursion. The sorting and display line parameters are optional (defaults are AMPLitude and ALL).

Note that there is always a Y-axis value for the display line, regardless of whether the display line state is on or off. It is the current Y-axis value of the display line which is used by this command to determine whether a peak should be reported

Sorting order:

AMPLitude - lists the peaks in order of descending amplitude, with the highest peak first (default if optional parameter not sent)

FREQuency - lists the peaks in order of occurrence, left to right across the x-axis.

TIME - lists the peaks in order of occurrence, left to right across the x-axis.

Peaks vs. Display Line:

ALL - lists all of the peaks found (default if optional parameter not sent).

GTDLine (greater than display line) - lists all of the peaks found above the display line.

LTDLine (less than display line) - lists all of the peaks found below the display line.

| | |
|----------------------|------------------|
| Initial S/W Revision | Prior to A.02.00 |
|----------------------|------------------|

Hardware-Accelerated Fast Power Measurement (Remote Command Only)

The Fast Power option (FP2) enables very fast channel power measurements for instruments with the prerequisite hardware (DP2 and/or B40). It accomplishes this by performing real-time overlapped FFTs at the hardware layer, using software for basic post-processing before returning the result to the user. The upshot of this approach is improved throughput for user applications that require many sequential power measurements.

The analysis bandwidth of FP2 is limited by the licenses in the instrument, but its maximum overall analysis bandwidth per acquisition is 40 MHz.

FP2 is remote-only, which means the instrument does not switch to any particular mode or measurement. FP2 commands can be sent while another application is in use on the front panel.

Each Fast Power measurement can be predefined using an array index, and up to 1,000 measurements can be stored. In the following documentation, instances of [1,2,...,999] can be substituted with a particular measurement index, e.g. CALC:FPOW:POW1?, CALC:FPOW:POW2?, CALC:FPOW:POW134?. In this way, power measurements can be defined one time in a batch, and then executed multiple times without having to redefine them, similar to “list mode” on other measurements.

In addition to basic channel power measurements, there are a number of other measurement “functions” for each channel, including peak power, peak frequency, and power spectral density. See the Function parameter for more information.

Reset Fast Power Measurement (Remote Command Only)

Resets the measurement configuration to the defaults.

| | |
|-----------------------|---|
| Mode | All |
| Remote Command | :CALCulate:FPOWer:POWer [1, 2, ..., 999] :RESet |
| Example | :CALC:FPOW:POW1:RES |

| | |
|----------------------|-------------------------|
| Notes | Option FP2 is required. |
| Initial S/W Revision | A.14.00 |

Define Fast Power Measurement (Remote Command Only)

Fast Power acquisitions are configured using the DEFine command. This command accepts a comma-delimited string of configuration parameters and their appropriate values, which are all specified in the subsection below.

| | |
|-----------------------|--|
| Mode | All |
| Remote Command | :CALCulate:FPOWer:POWer[1,2,...,999]:DEFine "configuration string" |
| Example | :CALC:FPOW:POW1:DEF "CenterFrequency=2e9, AcquisitionTime=0.005" |
| Notes | See below for a list of measurement variables that can be defined in the configuration string. |
| Initial S/W Revision | A.14.00 |

Acquisition Time

| | |
|----------------------|--|
| Example | CALC:FPOW:POW1:DEF "AcquisitionTime=0.002" |
| Notes | The acquisition time parameter sets the time in which the entire spectrum is measured. An increase in the acquisition time yields an improvement in measurement repeatability. |
| Preset | 0.001 s |
| Range | 0 s to 1 s |
| Default Unit | Time (s) |
| Initial S/W Revision | A.14.00 |

Center Frequency

| | |
|----------------------|--|
| Example | CALC:FPOW:POW1:DEF "CenterFrequency=2e9" |
| Notes | The center frequency parameter sets the frequency in which the measurement is centered around. The OffsetFrequency parameter is calculated relative to the center frequency. |
| Preset | 1 GHz |
| Range | 0 Hz to maximum instrument frequency |
| Default Unit | Frequency (Hz) |
| Initial S/W Revision | A.14.00 |

DC Coupled

| | |
|----------------------|---|
| Example | CALC:FPOW:POW1:DEF "DCCoupled=True" |
| Notes | The DC coupled parameter allows the user to specify whether the DC blocking capacitor is utilized. Set parameter to true when measuring frequencies below 10 MHz. |
| Preset | False |
| Range | True (DC Coupled) or False (AC Coupled) |
| Default Unit | Boolean |
| Initial S/W Revision | A.14.00 |

DetectorType

| | |
|----------------------|--|
| Example | CALC:FPOW:POW1:DEF "DetectorType=Peak" |
| Notes | Option FP2 is required. The detector type parameter allows the user to choose whether a RMS average or peak value is used during the measurement. |
| Preset | RmsAverage |
| Range | RmsAverage, Peak |
| Initial S/W Revision | A.14.00 |

Do Noise Correction

| | |
|----------------------|--|
| Example | CALC:FPOW:POW1:DEF "DoNoiseCorrection=True" |
| Notes | When noise correction is enabled, the linear noise power contributed by the analyzer is subtracted from all measurements. This effectively lowers the noise floor of the analyzer. When noise correction is enabled, the first measurement for a given set of input parameters will take extra time. This is because the analyzer takes an extra acquisition with the RF input disconnected from the analyzer's front end to measure the noise of just the analyzer. The measured noise floor is stored in a cache so the noise acquisition will occur only once for the same state settings. In other words, if noise correction was turned on and the analyzer made an acquisition at frequency A, then frequency B, and back again to frequency A, the hidden initial noise floor acquisition would only occur for the first acquisition at frequency A and the cached noise floor would be used the second time frequency A was measured. |
| Preset | False |
| Range | True (enable noise correction) or False (disable noise correction) |
| Default Unit | Boolean |
| Initial S/W Revision | A.14.00 |

Do Spur Suppression

| | |
|----------------------|---|
| Example | CALC:FPOW:POW1:DEF "DoSpurSuppression=True" |
| Notes | <p>When measuring very low level signals, or when large out-of-band inputs are input into the analyzer, sometimes unwanted spurs and residuals can appear in the measured spectrum. Spur suppression is a method to help minimize the levels of these internally generated spurs and residuals.</p> <p>When spur suppression is enabled, the analyzer will automatically take two acquisitions using two different internal analog LO frequencies. The FFT spectrums from both acquisitions are combined by taking the minimum power between both traces on a per FFT bin basis. External signals will have the same amplitude for both traces and therefore will return the expected amplitudes. However, low level spurs and residuals generated internally to the analyzer tend to move to different FFT bins depending on the internal analog LO frequency used, and therefore tend to be suppressed using this spur suppression method.</p> <p>Because two acquisitions, rather than a single acquisition, are made when spur suppression is enabled, the measurement time will always be slower when spur suppression is enabled.</p> |
| Preset | False |
| Range | True (enable spur suppression) or False (disable spur suppression) |
| Default Unit | Boolean |
| Initial S/W Revision | A.14.00 |

Electronic Attenuator Bypass

| | |
|----------------------|--|
| Example | CALC:FPOW:POW1:DEF "ElecAttBypass =False" |
| Notes | The electronic attenuation bypass parameter allows the user to either utilize or bypass the electronic attenuator. The electronic attenuator is only available for frequencies up to 3.6 GHz. Set parameter to true when using frequencies above 3.6 GHz and set the parameter to false when using the preamp. |
| Preset | True |
| Range | True (bypass electronic attenuator) or False (use electronic attenuator) |
| Default Unit | Boolean |
| Initial S/W Revision | A.14.00 |

Electronic Attenuation

| | |
|---------|---|
| Example | CALC:FPOW:POW1:DEF "ElecAttenuation=10" |
| Notes | <p>Option EA3 is required.</p> <p>The electronic attenuation value parameter sets the amount of electrical attenuation from 0 to 24 dB (1 dB steps).</p> <p>Set "ElecAttBypass=False" to make sure the electronic attenuator path is enabled.</p> |
| Preset | 0 dB |
| Range | 0 - 24 dB (1 dB steps) |

| | |
|-------------------------|---------|
| Default Unit | dB |
| Initial S/W Revision | A.14.00 |

IF Gain

| | |
|-------------------------|--|
| Example | CALC:FPOW:POW1:DEF "IFGain=10" |
| Notes | The IF gain parameter allows the user to specify the gain at the IF stage anywhere from -6 to 16 dB (1 dB steps). This is an advanced feature, and for most cases this should remain at its default value of 0 dB. |
| Preset | 0 dB |
| Range | -6 - 16 dB (1 dB steps) |
| Default Unit | dB |
| Initial S/W Revision | A.14.00 |

IF Type

| | |
|-------------------------|---|
| Example | CALC:FPOW:POW1:DEF "IFType=B25M" |
| Notes | The IF type parameter allows the user to select between different IF paths. For example, if the signal is less than 25 MHz wide, then the user can select the B25M path to take advantage of additional filtering on this analog IF path. |
| Preset | B40M |
| Range | B10M, B25M, B40M |
| Initial S/W Revision | A.14.00 |

Include Power Spectrum

| | |
|-------------------------|---|
| Example | CALC:FPOW:POW1:DEF "IncludePowerSpectrum=True" |
| Notes | The power spectrum parameter allows the user to read data on the entire spectrum for diagnostic purposes. It is not recommended for production use. See CALC:FPOW:POW[n]:READ2? for details on the binary format of the response. |
| Preset | False |
| Range | True (return both channel power and full power spectrum) or False (returns only channel power) |
| Default Unit | Boolean |
| Initial S/W Revision | A.14.00 |

Mechanical Attenuation

| | |
|----------------------|---|
| Example | CALC:FPOW:POW1:DEF "MechAttenuation=10" |
| Notes | The mechanical attenuation value parameter sets the amount of mechanical attenuation anywhere from 0 to 70 dB (2 dB steps). |
| Preset | 0 dB |
| Range | 0 - 70 dB (2 dB steps) |
| Default Unit | dB |
| Initial S/W Revision | A.14.00 |

Preamp Mode

| | |
|----------------------|--|
| Example | CALC:FPOW:POW1:DEF "PreAmpMode=Low" |
| Notes | The license for the appropriate preamp is required. The preamp mode parameter specifies whether the preamps are being utilized. Low allows any preamps up to 3.6 GHz, and Full allows all licensed preamps. Set "ElecAttBypass=True" in order to utilize any preamps. |
| Preset | Off |
| Range | Off, Low, Full |
| Initial S/W Revision | A.14.00 |

Resolution Bandwidth Mode

| | |
|----------------------|--|
| Example | CALC:FPOW:POW1:DEF "PreAmpMode=Low" |
| Notes | The resolution bandwidth mode parameter allows the user to choose whether the RBW filter is automatically or manually set. The BestSpeed value minimizes measurement time, while the Narrowest value minimizes RBW size (minimum of two FFT bins per RBW). To manually specify an RBW, set this parameter to Explicit, and set the ResolutionBW parameter to the desired value. |
| Preset | BestSpeed |
| Range | BestSpeed, Narrowest, Explicit |
| Initial S/W Revision | A.14.00 |

Resolution Bandwidth

| | |
|---------|--|
| Example | CALC:FPOW:POW1:DEF "ResolutionBW=25e3" |
| Notes | The resolution bandwidth parameter sets the 3-dB bandwidth of the RBW filter. The ResolutionBWMode parameter must be set to Explicit in order to manually set the RBW. |

| | |
|----------------------|---------|
| Preset | 0 Hz |
| Default Unit | Hz |
| Initial S/W Revision | A.14.00 |

Trigger Delay

| | |
|----------------------|---|
| Example | CALC:FPOW:POW1:DEF "TriggerDelay=0.025" |
| Notes | The trigger delay parameter sets the time after an external trigger is detected until the measurement is performed. |
| Preset | 0 s |
| Range | 0 - 1 s |
| Default Unit | Seconds |
| Initial S/W Revision | A.14.00 |

Trigger Level

| | |
|----------------------|--|
| Example | CALC:FPOW:POW1:DEF "TriggerLevel=2" |
| Notes | The trigger level parameter sets the voltage value at which an external trigger is detected. |
| Preset | 1.2 V |
| Range | -5 to 5 V |
| Default Unit | Volts |
| Initial S/W Revision | A.14.00 |

Trigger Slope

| | |
|----------------------|--|
| Example | CALC:FPOW:POW1:DEF "TriggerSlope=Negative" |
| Notes | The trigger slope parameter indicates the direction of the edge trigger voltage for detection. |
| Preset | Positive |
| Range | Positive, Negative |
| Initial S/W Revision | A.14.00 |

Trigger Source

| | |
|-------------------------|---|
| Example | CALC:FPOW:POW1:DEF "TriggerSource=Ext1" |
| Notes | The trigger source parameter allows the user to choose between measurement's triggering freely or controlled by an external input. Ext1 and Ext2 correspond to Trigger 1 In and Trigger 2 In, respectively. |
| Preset | Free |
| Range | Free, Ext1, Ext2 |
| Initial S/W Revision | A.14.00 |

Trigger Timeout

| | |
|-------------------------|--|
| Example | CALC:FPOW:POW1:DEF "TriggerTimeout=0.1" |
| Notes | The trigger timeout parameter sets the time in which the analyzer will wait for a trigger before automatically performing the measurement. |
| Preset | 1 s |
| Range | 0 - 1 s |
| Default Unit | Seconds |
| Initial S/W Revision | A.14.00 |

Signal Input

| | |
|-------------------------|--|
| Example | CALC:FPOW:POW1:DEF "SignalInput=Fp50MHzCW" |
| Notes | The signal input parameter allows the user to select between using the main RF input or the internal analyzer reference CW signal of 50 MHz. |
| Preset | FpMainRf |
| Range | FpMainRf, Fp50MHzCW |
| Initial S/W Revision | A.14.00 |

Use Preselector

| | |
|---------|--|
| Example | CALC:FPOW:POW1:DEF "UsePreSelector=True" |
| Notes | The preselector parameter allows the user to either utilize or bypass the front end tunable filter at frequencies above 3.6 GHz. For frequencies below 3.6 GHz, the preselector is automatically bypassed, so you do not need to set this parameter to False in those cases. |
| Preset | False |
| Range | True (use preselector above 3.6 GHz), or False (preselector bypassed) |

| | |
|----------------------|---------|
| Default Unit | Boolean |
| Initial S/W Revision | A.14.00 |

Channel Bandwidth Array

| | |
|----------------------|---|
| Example | CALC:FPOW:POW1:DEF "Bandwidth=[3.84e6, 5e6, 3.84e6]" |
| Notes | The bandwidth parameter array defines the bandwidth of each channel that will be measured. All array parameters should have the same number of elements. Alternatively, if all the elements are the same value, a single number with no square brackets can be used to define the parameter. |
| Preset | [1e6] |
| Range | 0 to 40 MHz |
| Default Unit | Hz |
| Initial S/W Revision | A.14.00 |

Channel Filter Type Array

| | |
|----------------------|--|
| Example | CALC:FPOW:POW1:DEF "FilterType=[RRC, IBW, RRC]" |
| Notes | The filter type parameter allows the user to choose between an integration bandwidth (IBW) filter or a root-raised-cosine (RRC) filter. The integration bandwidth filter weighs all frequencies within the bandwidth equally. The root-raised-cosine filter has an associated shape parameter, defined by the FilterAlpha parameter. All array parameters should have the same number of elements. Alternatively, if all the elements are the same value, a single value with no square brackets can be used to define the parameter. |
| Preset | [IBW] |
| Range | IBW, RRC |
| Initial S/W Revision | A.14.00 |

Channel Filter Alpha Array

| | |
|---------|---|
| Example | CALC:FPOW:POW1:DEF "FilterAlpha=[0.5, 0.0, 0.5]" |
| Notes | The filter alpha parameter allows the user to adjust the alpha value associated with the root-raised-cosine (RRC) filter type. Set FilterType to RRC in order to utilize this parameter. All array parameters should have the same number of elements. Alternatively, if all the elements are the same value, a single number with no square brackets can be used to define the parameter. |
| Preset | [0.22] |
| Range | 0.0 - 1.0 |

| | |
|-------------------------|---------|
| Initial S/W Revision | A.14.00 |
|-------------------------|---------|

Channel Measurement Function Array

| | |
|-------------------------|---|
| Example | CALC:FPOW:POW1:DEF "Function=[BandPower, PeakPower, BandPower]" |
| Notes | <p>This parameter array defines what measurement is being made for each individually-specified channel:</p> <p>BandPower: Total power within the specified bandwidth of the channel (dBm)</p> <p>BandDensity: Total power density within the specified bandwidth of the channel (dBm/Hz)</p> <p>PeakPower: The peak power value within the specified bandwidth of the channel (dBm)</p> <p>PeakFrequency: The frequency which corresponds to the peak power value within the specified bandwidth of the channel. This frequency is relative to the center frequency (Hz)</p> <p>XdBBandwidth: The half power (-3.01 dB) bandwidth of the highest amplitude signal that resides within the channel (Hz), dB is configurable using XdBBandwidth parameter</p> <p>OccupiedBandwidth: The bandwidth at which 99% of the total power resides within the channel (Hz), percentage configurable using OccupiedBandwidthPercent parameter</p> <p>All array parameters should have the same number of elements. Alternatively, if all the elements are the same value, a single value with no square brackets can be used to define the parameter.</p> |
| Preset | [BandPower] |
| Range | BandPower, BandDensity, PeakPower, PeakFrequency, XdBBandwidth, OccupiedBandwidth |
| Initial S/W Revision | A.14.00 |

Channel Offset Frequency Array

| | |
|-------------------------|---|
| Example | CALC:FPOW:POW1:DEF "OffsetFrequency=[-5e6, 0, 5e6]" |
| Notes | <p>The offset frequency parameter array defines the difference between the center frequency to the center frequency of each channel.</p> <p>All array parameters should have the same number of elements.</p> |
| Preset | [0] |
| Range | 0 to 20 MHz |
| Default Unit | Hz |
| Initial S/W Revision | A.14.00 |

Channel Occupied Bandwidth Percent Array

| | |
|---------|---|
| Example | CALC:FPOW:POW1:DEF "OccupiedBandwidthPercent =[0.95, 0.95, 0.95]" |
| Notes | This parameter only applies for channels whose Function is set to OccupiedBandwidth. The occupied |

| | |
|-------------------------|--|
| | bandwidth percent parameter specifies the percent of total power in these channels. The valid range for this parameter is 0.0 to 1.0, where 1.0 represents 100%. The default for this parameter is 0.99, which will return the bandwidth that contains 99% of the total channel power. |
| Preset | [0.99] |
| Range | 0 - 1.0 |
| Initial S/W Revision | A.14.00 |

Channel x-dB Bandwidth Array

| | |
|-------------------------|---|
| Example | CALC:FPOW:POW1:DEF " XdBBandwidth =[-6.02, -3.01, -1.0]" |
| Notes | This parameter only applies for channels whose Function is set to XdBBandwidth. The X dB bandwidth parameter is used to specify the power relative to the peak channel power over which the bandwidth is calculated. The parameter value must be a negative number. |
| Preset | [-3.01] |
| Range | -200 to 0 dB |
| Default Unit | dB |
| Initial S/W Revision | A.14.00 |

Define Fast Power Measurement Query (Remote Command Only)

The DEFine? command is used to retrieve a list of all defined parameters in an ASCII string format

```

M All
o
d

Configure Fast Power Measurement (Remote Command Only)

The configure command begins hardware setup and returns immediately, with no acquisition made. This can be used in parallel with other hardware operations to effectively hide the hardware setup time.

| | |
|-----------------------|--|
| Mode | All |
| Remote Command | :CALCulate:FPOWER:POWER[1,2,...,999]:CONFigure |
| Example | :CALC:FPOW:POW1:CONF |
| Notes | Option FP2 is required. |
| Initial S/W Revision | A.14.00 |

Initiate Fast Power Measurement (Remote Command Only)

The INITiate command begins an acquisition and returns immediately. The results of the measurement can be retrieved using FETCh.

| | |
|-----------------------|---|
| Mode | All |
| Remote Command | :CALCulate:FPOWER:POWER[1,2,...,999]:INITiate |
| Example | :CALC:FPOW:POW1:INIT |
| Notes | Option FP2 is required. |
| Initial S/W Revision | A.14.00 |

Fetch Fast Power Measurement (Remote Command Only)

The FETCh command query is used to retrieve the results of an acquisition initiated by the INIT command. The returned results are in ASCII string format. The string begins and ends with quotation marks.

| | |
|-----------------------|--|
| Mode | All |
| Remote Command | :CALCulate:FPOWER:POWER[1,2,...,999]:FETCh? |
| Example | :CALC:FPOW:POW1:FETC? |
| Notes | Option FP2 is required. Returns m comma-separated ASCII values, where m corresponds to the number of bandwidths defined. 1. Declared function return in the 1st specified channel 2. Declared function return in the 2nd specified channel ... m. Declared function return in the last specified channel The INIT and FETC? command sequence performs the same functionality of a single CALC:FPOW:POW[n]? query. Units of the returned values are dependent on the Function parameter for each channel. |
| Initial S/W Revision | A.14.00 |

Execute Fast Power Measurement (Remote Command Only)

This command query is used as shorthand for an INIT command immediately followed by a FETC? command. The returned results are in ASCII string format. The string begins and ends with quotation marks.

| | |
|-----------------------|---------------------------------------|
| Mode | All |
| Remote Command | :CALCulate:FPOWER:POWER[1,2,...,999]? |
| Example | :CALC:FPOW:POW1? |

| | |
|----------------------|--|
| Notes | Option FP2 is required. See notes for Fast Power Fetch for return format. |
| Initial S/W Revision | A.14.00 |

Binary Read Fast Power Measurement (Remote Command Only)

This command query is used as shorthand for an INIT command immediately followed by a FETC? command. The returned results are in a binary format.

| | |
|-----------------------|--|
| Mode | All |
| Remote Command | :CALCulate:FPOWER:POWER[1,2,...,999]:READ? :CALCulate:FPOWER:POWER[1,2,...,999]:READ1? |
| Example | :CALC:FPOW:POW1:READ? :CALC:FPOW:POW1:READ1? |
| Notes | Option FP2 is required. Returns m 4 byte floating point binary values (Little-Endian), where m corresponds to the number of bandwidths defined. |
| Initial S/W Revision | A.14.00 |

Diagnostic Binary Read Fast Power Measurement (Remote Command Only)

This command query is used as shorthand for an INIT command immediately followed by a FETC? command. The returned results are in a binary format. This command is used primarily for diagnostic purposes to test for ADC overloads and to visibly inspect the spectrum.

| | |
|-----------------------|---|
| Mode | All |
| Remote Command | :CALCulate:FPOWER:POWER[1,2,...,999]:READ2? |
| Example | :CALC:FPOW:POW1:READ2? |
| Notes | Option FP2 is required. Note: Spectrum data is only returned if the IncludePowerSpectrum parameter is set to True. If IncludePowerSpectrum is False, the number of spectrum points will be zero (0). Units of the returned values are dependent on the Function parameter per channel (e.g. dBm for BandPower, Hz for PeakFrequency). Returns binary data (Little-Endian) that contains information on m amount of channels, along with ADC over range and full spectrum data. The following is the binary format of the response. Bandwidth Return Value 1. Number of channels specified, m [4 byte int] 2. Declared function result for the 1st specified channel [4 byte float] |

| | |
|--|---|
| | 3. Declared function result for the 2nd specified channel [4 byte float] |
| | ... |
| | (m + 1). Declared function result for the last (mth) specified channel [4 byte float] |
| | ADC Over Range |
| | 1. ADC over-range occurred (1: true, 0: false) [2 byte short] |
| | Spectrum Data |
| | 1. Number of points in the spectrum data, k [4 byte int] |
| | 2. Start frequency of spectrum data (Hz) [8 byte double] |
| | 3. Step frequency of spectrum data (Hz) [8 byte double] |
| | 4. FFT bin at 1st point (dBm) [4 byte float] |
| | 5. FFT bin at 2nd point (dBm) [4 byte float] |
| | ... |
| | (k + 3). FFT bin at last (kth) point (dBm) [4 byte float] |

| | |
|-------------|---------|
| Initial S/W | A.14.00 |
| Revision | |

Format Data: Numeric Data (Remote Command Only)

This command specifies the format of the trace data input and output. It specifies the formats used for trace data during data transfer across any remote port. It affects only the data format for setting and querying trace data for the :TRACe[:DATA], TRACe[:DATA]?, :CALCulate:DATA[n]? and FETCh:SANalyzer [n]? commands and queries.

| | |
|--------------------------------|---|
| Remote Command | :FORMat [:TRACe] [:DATA] ASCii INTeger, 32 REAL, 32 REAL, 64 :FORMat [:TRACe] [:DATA] ? |
| Notes | The query response is: ASCii: ASC,8 REAL,32: REAL,32 REAL,64: REAL,64 INTeger,32: INT,32 When the numeric data format is REAL or ASCii, data is output in the current Y Axis unit. When the data format is INTeger, data is output in units of m dBm (.001 dBm). The INT,32 format returns binary 32-bit integer values in internal units (m dBm), in a definite length block. |
| Dependencies | Sending a data format spec with an invalid number (for example, INT,48) generates no error. The analyzer simply uses the default (8 for ASCii, 32 for INTeger, 32 for REAL). Sending data to the analyzer which does not conform to the current FORMat specified, results in an error. Sending ASCII data when a definite block is expected generates message -161 "Invalid Block Data" and sending a definite block when ASCII data is expected generates message -121 "Invalid Character in Number". |
| Preset | ASCii |
| Backwards Compatibility | Note that the INT,32 format is only applicable to the command, TRACe:DATA. This preserves |

| | |
|----------------------|--|
| Notes | backwards compatibility for the Swept SA measurement. For all other commands/queries which honor FORMat:DATA, if INT,32 is sent the analyzer will behave as though it were set to REAL,32. |
| Initial S/W Revision | Prior to A.02.00 |

The specs for each output type follow:

ASCIi - Amplitude values are in ASCII, in the current Y Axis Unit, one ASCII character per digit, values separated by commas, each value in the form:

SX.YYYYYEsZZ

Where:

S = sign (+ or -)

X = one digit to left of decimal point

Y = 5 digits to right of decimal point

E = E, exponent header

s = sign of exponent (+ or -)

ZZ = two digit exponent

REAL,32 - Binary 32-bit real values in the current Y Axis Unit, in a definite length block.

REAL,64 - Binary 64-bit real values in the current Y Axis Unit, in a definite length block.

Format Data: Byte Order (Remote Command Only)

This command selects the binary data byte order for data transfer and other queries. It controls whether binary data is transferred in normal or swapped mode. This command affects only the byte order for setting and querying trace data for the :TRACe[:DATA], TRACe[:DATA]? , :CALCulate:DATA[n]? and FETCh:SANalyzer[n]? commands and queries.

By definition any command that says it uses FORMat:DATA uses any format supported by FORMat:DATA.

The NORMAl order is a byte sequence that begins with the most significant byte (MSB) first, and ends with the least significant byte (LSB) last in the sequence: 1|2|3|4. SWAPped order is when the byte sequence begins with the LSB first, and ends with the MSB last in the sequence: 4|3|2|1.

| | |
|-----------------------|--|
| Remote Command | :FORMat:BORDER NORMAl SWAPped :FORMat:BORDER? |
| Preset | NORMAl |
| Initial S/W Revision | Prior to A.02.00 |

Meas Setup

Accesses the measurement setup menu for the current measurement.

| Key Path | Front-panel key |
|----------------------|-----------------|
| Initial S/W Revision | A.10.01 |

Avg/Burst Number

Used to specify the number of data acquisitions that are averaged. After the specified number of average counts, the averaging mode (termination control) setting determines the averaging action.

Avg number is the number of bursts, is NOT the number of data acquisition. If search length is large enough to include all the bursts, acquisition will only execute once (single mode). If the bursts number include in one capture is smaller than average number, multi capture and measurement is necessary.

- On – Sets measurement averaging on.
- Off – Sets measurement averaging off.

| Key Path | Meas Setup |
|-----------------------|--|
| Mode | WLAN |
| Remote Command | [:SENSe] :EVM:AVERage:COUNT <integer> [:SENSe] :EVM:AVERage:COUNT? [:SENSe] :EVM:AVERage [:STATe] OFF ON 0 1 [:SENSe] :EVM:AVERage [:STATe] ? |
| Example | EVM:AVER:COUN 1 EVM:AVER:COUN? EVM:AVER OFF EVM:AVER? |
| Preset | 10 ON |
| State Saved | Saved in instrument state. |
| Min | 1 |
| Max | 10000 |
| Initial S/W Revision | A.10.01 |

Avg Mode

Selects the type of termination control used for the averaging function. This determines the averaging action after the specified number of data acquisitions (average count) is reached.

| | |
|-----------------|---|
| KEY:Exponential | After the average count is reached, each successive data acquisition is exponentially |
|-----------------|---|

| | |
|------------------|--|
| SCPI:EXPonential | weighted and combined with the existing average. |
| KEY:Repeat | After reaching the average count, the averaging is reset and a new average is started. |
| SCPI:REPeat | The default value is Exp. |

| Key Path | Meas Setup |
|-----------------------|---|
| Mode | WLAN |
| Remote Command | [:SENSe] :EVM:AVERAge:TCONtrol EXPonential REPeat [:SENSe] :EVM:AVERAge:TCONtrol ? |
| Example | EVM:AVER:TCON REP EVM:AVER:TCON ? |
| Preset | EXP |
| State Saved | Saved in instrument state. |
| Range | Exp Repeat |
| Initial S/W Revision | A.10.01 |

Meas Time

Accesses the meas time menu for the current measurement.

| Key Path | Meas Setup |
|----------------------|------------|
| Initial S/W Revision | A.10.01 |

Search Length

Sets the length of time to acquire the input signal. This defines the length of time that the burst search is performed.

The analyzer searches within the specified search length, find all burst positions within this search length, and demodulates burst one by one if average state is on and average number is still not reached. If one acquisition does not include total required bursts, multi capture is needed. So if want to get results for continues bursts, make sure search length is large enough to include all the bursts. Otherwise multi acquisitions will be performed.

| Key Path | Meas Setup, Meas Time |
|-----------------------|--|
| Mode | WLAN |
| Remote Command | [:SENSe] :EVM:TIME:SLENgth <time> [:SENSe] :EVM:TIME:SLENgth ? [:SENSe] :EVM:TIME:SEARchlength <real> [:SENSe] :EVM:TIME:SEARchlength ? |

| | |
|-------------------------------------|---|
| Example | EVM:TIME:SLEN 1 ms EVM:TIME:SLEN? |
| Notes | Min Value is coupled with Radio Std, Result Length, Guard Interval and Subcarrier Spacing Max Value is coupled with Radio Std, Info BW |
| Preset | 1.0 ms |
| State Saved | Saved in instrument state. |
| Min | <p>If Radio Std is 802.11a/g/j/p (OFDM) or 801.11g (DSSS-OFDM) If Result Length is set to Man, Min Value will be: $1.17 * (\text{Result Length} + 9) * (1 + \text{Guard Interval}) / \text{Subcarrier Spacing } s$ If Result Length is set to Auto, Min Value will be: $1.17 * (\text{Max Result Length} + 9) * (1 + \text{Guard Interval}) / \text{Subcarrier Spacing}$ If Radio Std is 802.11n (20 MHz)/(40 MHz): If Result Length is set to Man, Min Value will be: $1.17 * (\text{Result Length} + 13) * (1 + \text{Guard Interval}) / \text{Subcarrier Spacing } s$ If Result Length is set to Auto, Min Value will be: $1.17 * (\text{Max Result Length} + 13) * (1 + \text{Guard Interval}) / \text{Subcarrier Spacing}$ If Radio Std is 802.11ac or 802.11ah If Result Length is set to Man, Min Value will be: $1.17 * (\text{Result Length} + 13) * (1 + \text{Guard Interval}) / \text{Subcarrier Spacing } s$ If Result Length is set to Auto, Min Value will be: $1.17 * (\text{Max Result Length} + 13) * (1 + \text{Guard Interval}) / \text{Subcarrier Spacing}$ If Radio Std is 802.11b/g (DSSS/CCK/PBCC): If Result Length is set to Man, Min Value will be: Ceil (Result Length/Chip Rate) usec If Result Length is set to Auto, Min Value will be: Ceil (Max Result Length/Chip Rate) usec</p> |
| Max | <p>Hardware Dependent: 4000000 / Sampling Rate B25: Sampling Rate = 45M (when info BW is 25MHz); WB (B40 or Wider): Sampling Rate = Info BW * 1.25</p> |
| Backwards Compatibility SCPI | [:SENSE] :EVM:TIME:SEARChlength |
| Initial S/W Revision | A.10.01 |

Meas Interval

For standard 802.11a/g/j/p (OFDM), 801.11g (DSSS-OFDM), 802.11n , 802.11ac, or 802.11ah:

This parameter specifies the measurement interval (length), in symbol times, of the portion of the OFDM burst that will be analyzed. This analyzed portion of the OFDM burst starts at a measurement offset specified by Meas Offset.

| Key Path | Meas Setup, Meas Time |
|-----------------------|---|
| Mode | WLAN |
| Remote Command | [:SENSe] :EVM:TIME:INTerval <integer> [:SENSe] :EVM:TIME:INTerval? |
| Example | EVM:TIME:INT 15 EVM:TIME:INT? |
| Couplings | Default value, Min/Max value, will be coupled with Radio Std |
| Preset | 802.11a/g/j/p (OFDM), 801.11g (DSSS-OFDM), 802.11n , 802.11ac, and 802.11ah: 60 symbols 802.11b/g (DSSS/CCK/PBCC): 2794 chips |
| State Saved | Saved in instrument state. |
| Min | 802.11a/g/j/p (OFDM), 801.11g (DSSS-OFDM), 802.11n , 802.11ac, and 802.11ah: 1 symbols 802.11b/g (DSSS/CCK/PBCC): 1 chips |
| Max | 802.11a/g/j/p (OFDM), 801.11g (DSSS-OFDM): 1367 symbols 802.11n , 802.11ac, and 802.11ah: 21848 symbols 802.11b/g (DSSS/CCK/PBCC): 96360 chips Max value is also limited by Hardware capability. |
| Initial S/W Revision | A.10.01 |

Meas Offset

802.11a/g/j/p (OFDM), 801.11g (DSSS-OFDM), 802.11n, 802.11ac or 802.11ah:

This parameter specifies the measurement offset, in symbol times, of the portion of the OFDM burst that will be analyzed. The length of this analyzed portion of the OFDM burst is specified by Meas Interval.

802.11b/g (DSSS/CCK/PBCC):

Used to set the measurement offset, in chips, of the portion of the WLAN burst that will be analyzed. The length of this analyzed portion of the WLAN burst is specified by Meas Interval. If the specified measurement offset is less than zero, a value of zero is used instead.

The measurement interval and offset are relative to the ideal starting point of the PLCP preamble portion of the burst. For a signal that uses the long PLCP format, the ideal starting point of the PLCP preamble is exactly 128 symbol times (128*11 chip times) before the start of the SFD sync pattern. For a signal that uses the short PLCP format, the ideal starting point of the PLCP preamble is exactly 56 symbol times (56*11 chip times) before the start of the SFD sync pattern.

| Key Path | Meas Setup, Meas Time |
|-----------------------|---|
| Mode | WLAN |
| Remote Command | [:SENSe] :EVM:TIME:OFFSet <integer> [:SENSe] :EVM:TIME:OFFSet? |

| | |
|----------------------|---|
| Example | EVM:TIME:OFFS 15 EVM:TIME:OFFS? |
| Couplings | Default value, Min/Max value, will be coupled with Radio Std and Result Length |
| Preset | 802.11a/g/j/p (OFDM), 801.11g (DSSS-OFDM), 802.11n , 802.11ac, and 802.11ah: 0 symbols 802.11b/g (DSSS/CCK/PBCC): 22 chips |
| State Saved | Saved in instrument state. |
| Min | 802.11a/g/j/p (OFDM), 801.11g (DSSS-OFDM), 802.11n , 802.11ac, and 802.11ah: 0 symbols 802.11b/g (DSSS/CCK/PBCC): 0 chips |
| Max | If Result Length is Auto, then the specified measurement offset will be clipped to be less than or equal to the value of Max Result Length – Meas Interval. If Result Length is Man, then the specified measurement offset will be clipped to be less than or equal to the value of Result Length – Meas Interval. |
| Initial S/W Revision | A.10.01 |

Result Length

For 802.11a/g/j/p (OFDM) and 801.11g (DSSS-OFDM), when Result Length is Auto, the length of the burst is auto-detected. The result length is determined from the decoded SIGNAL symbol. The value of Max Result Length specifies the maximum result length for the burst; any burst longer than that will be treated as though that were the length of the burst.

When Result Length is Man, you can specify the result length of the burst regardless of the actual length of the burst.

- For 802.11n, if From HT-Sig is On:

The result length is detected from the High Throughput Signal Field. It compares the decode length information to the Max Result Length parameter and uses the smaller value as the measurement result length.

- For 802.11n, if From HT-Sig is Off:

When Result Length is Auto, the analyzer automatically determines the measurement result length by burst search. It compares the detected result length to the Max Result Length parameter and uses the smaller value as the measurement result length.

When Result Length is Man, it compares the input result length to the Result Length parameter and uses the smaller value as the measurement.

| | |
|-----------------------|---|
| Key Path | Meas Setup, Meas Time |
| Mode | WLAN |
| Remote Command | [:SENSe] :EVM:TIME:RESult:LENGth <integer> [:SENSe] :EVM:TIME:RESult:LENGth? [:SENSe] :EVM:TIME:RESult [:STATe] :AUTO OFF ON 0 1 [:SENSe] :EVM:TIME:RESult [:STATe] :AUTO? |

| | |
|----------------------|--|
| Example | EVM:TIME:RES:LENG 10 EVM:TIME:RES:LENG? EVM:TIME:RES:AUTO ON EVM:TIME:RES:AUTO? |
| Couplings | Default value, Min/Max value, will be coupled with Radio Std |
| Preset | 802.11a/g/j/p (OFDM), 801.11g (DSSS-OFDM), 802.11n , 802.11ac, and 802.11ah: 60 symbols 802.11b/g (DSSS/CCK/PBCC): 2816 chips ON |
| State Saved | Saved in instrument state. |
| Min | 802.11a/g/j/p (OFDM), 801.11g (DSSS-OFDM), 802.11n , 802.11ac, and 802.11ah: 2 symbols 802.11b/g (DSSS/CCK/PBCC): 150 chips |
| Max | 802.11a/g/j/p (OFDM), 801.11g (DSSS-OFDM): 1367 symbols 802.11n , 802.11ac, and 802.11ah: 21848 symbols 802.11b/g (DSSS/CCK/PBCC): 96360 chips Max value is also limited by Hardware capability |
| Initial S/W Revision | A.10.01 |

Max Result Length

Max Result Length specifies a maximum result length.

If the auto-detected length is greater than the specified maximum result length, the maximum result length is used instead.

The actual results returned will be for a subset of this maximum, as specified by the Meas Interval and Meas Offset, and will be further limited to the auto-detected result length if that is shorter than the maximum result length.

| | |
|-----------------------|--|
| Key Path | Meas Setup, Meas Time |
| Mode | WLAN |
| Remote Command | [:SENSe] :EVM:TIME:RESult:MAX <integer> [:SENSe] :EVM:TIME:RESult:MAX? |
| Example | EVM:TIME:RES:MAX 45 EVM:TIME:RES:MAX? |

| Max | 802.11a/g/j/p (OFDM), 801.11g (DSSS-OFDM), 802.11n , 802.11ac, and 802.11ah: 21848 |

| | |
|-------------------------------------|---|
| | symbols 802.11b/g (DSSS/CCK/PBCC): 96360 chips Max value is also limited by Hardware capability |
| Backwards Compatibility SCPI | [:SENSe] :EVM:TIME:RESMax <integer> |
| | [:SENSe] :EVM:TIME:RESMax? |
| Initial S/W Revision | A.10.01 |

From SIG Symbols

- For 802.11n, if From SIG Syms is On:

The result length is detected from the High Throughput Signal Field. It compares the decoded length information to the Max Result Length parameter and uses the smaller value as the measurement result length.

- For 802.11n, if From SIG Syms Off:

When Result Length is Auto, the analyzer automatically determines the measurement result length by burst search. It compares the detected result length to Max Result Length parameter and uses the smaller value as the measurement result length.

When Result Length is Man, it compares the input result length to the Result Length parameter and uses the smaller value as the measurement.

| | |
|-----------------------|--|
| Key Path | Meas Setup, Meas Time |
| Mode | WLAN |
| Remote Command | [:SENSe] :EVM:TIME:RESult:SIG OFF ON 0 1 [:SENSe] :EVM:TIME:RESult:SIG? |
| Example | EVM:TIME:RES:SIG ON EVM:TIME:RES:SIG? |
| Notes | If Radio Std is not 802.11n, 802.11ac or 802.11ah, it will be grayed out. The result length is determined by decoding the HT-SIG symbols and using the HT Length field. The value of Max Result Length specifies a maximum result length for the pulse; any pulse longer than that will be treated as though that were the length of the pulse. |
| Dependencies | The key is NOT available when Radio Std is 802.11b/g (DSSS/CCK/PBCC). |
| Preset | OFF |
| State Saved | Saved in instrument state. |
| Range | On Off |
| Initial S/W Revision | A.10.01 |

Subcarrier

This parameter specifies whether the demodulation results are for all subcarriers in the signal, or for a single subcarrier, or for just the pilot subcarriers.

| Key Path | Meas Setup |
|-----------------------|---|
| Mode | WLAN |
| Remote Command | :CALCulate:EVM:SUBCarrier ALL PILOt SINGle :CALCulate:EVM:SUBCarrier? |
| Example | CALC:EVM:SUBC ALL CALC:EVM:SUBC? |
| Notes | Only effective in OFDM demodulation, if Radio Std is 802.11b/g (DSSS/CCK/PBCC), this key will be NOT available. |
| Preset | ALL |
| State Saved | Saved in instrument state. |
| Range | All Pilot Single |
| Readback Text | All Pilot subcarrier number (in integer format, like "Subcarrier 2") |
| Initial S/W Revision | A.10.01 |

Subcarrier Number

This parameter specifies the demodulation results are for which subcarrier. When Subcarrier selects "Single", this number will indicate which subcarrier is used to do demodulation.

| Key Path | Meas Setup |
|-----------------------|--|
| Mode | WLAN |
| Remote Command | :CALCulate:EVM:SUBCarrier:COUNT <integer> :CALCulate:EVM:SUBCarrier:COUNT |
| Example | CALC:EVM:SUBC:COUN 2 CALC:EVM:SUBC:COUN? |
| Notes | Only be available as in OFDM demodulation and Subcarrier is selected as Single, otherwise this key will be grayed out. For Radio Std 802.11a/g/j/p (OFDM), 801.11g (DSSS-OFDM), 802.11n (20 MHz), 802.11ac (20 MHz), 802.11ah(1MHz), and 802.11ah (2 MHz) if the value was set to 0, it will change to 1. For Radio Std 802.11n (40MHz), 802.11ac (40MHz), 802.11ac (80MHz) or 802.11ac (80 + 80MHz), 802.11ah (4MHz), 802.11ah(8MHz), if the value was set to 0, it will be change to 2. For Radio Std 802.11ac (160MHz), and 802.11ah (16MHz), if the value was set to 0, it will be change to 6. |
| Dependencies | Only effective in OFDM demodulation, if Radio Std is 802.11b/g (DSSS/CCK/PBCC), this key will be NOT available. |
| Couplings | Valid only when Subcarrier selects "Single". Min and Max Value is coupled with Radio Std. |
| Preset | Radio Std 802.11ac (160MHz): 6 |

| | |
|----------------------|--|
| | Others : 2 |
| State Saved | Saved in instrument state. |
| Min | -26: if Radio Std is 802.11a/g/j/p (OFDM), 801.11g (DSSS-OFDM) -28: if Radio Std is 802.11n 20 MHz, 802.11ac 20 MHz. -58: if Radio Std is 802.11n 40 MHz, 802.11ac 40 MHz -122: if Radio std is 802.11ac 80MHz, 802.11ac 80+80MHz -250: if Radio std is 802.11ac 160MHz -13: if Radio Std is 802.11ah 1MHz -29: if Radio Std is 802.11ah 2MHz -61: if Radio Std is 802.11ah 4MHz -125: if Radio Std is 802.11ah 8MHz -253: if Radio Std is 802.11ah 16MHz |
| Max | 26: if Radio Std is 802.11a/g/j/p (OFDM), 801.11g (DSSS-OFDM) 28: if Radio Std is 802.11n 20 MHz, 802.11ac 20 MHz 58: if Radio Std is 802.11n 40 MHz, 802.11ac 40 MHz 122: if Radio std is 802.11ac 80MHz, 802.11ac 80+80MHz 250: if Radio std is 802.11ac 160MHz 13: if Radio Std is 802.11ah 1MHz 29: if Radio Std is 802.11ah 2MHz 61: if Radio Std is 802.11ah 4MHz 125: if Radio Std is 802.11ah 8MHz 253: if Radio Std is 802.11ah 16MHz |
| Initial S/W Revision | A.10.01 |

Subcarrier I/Q Estimation

This parameter allows turn On or Off the estimation for IQ Gain Imbalance vs. subcarrier, IQ Quadrature Error vs. subcarrier in the input signal.

| | |
|----------------|---|
| Key Path | Meas Setup, Advanced |
| Mode | WLAN |
| Remote Command | :CALCulate:EVM:IQEstimation OFF ON 0 1 :CALCulate:EVM:IQEstimation? |
| Example | CALC:EVM: IQES ON CALC:EVM: IQES? |
| Notes | The accuracy of the IQ gain imbalance and quadrature error estimation is affected by the receiver's ability to determine the correct ideal reference constellation points for each symbol in the modulated signal. Large IQ impairments may result in incorrect determination of reference points, which will lead to incorrect estimates for the IQ errors. Generally, the receiver can provide correct IQ estimation with greater levels of IQ impairment for lower-order modulation such as QPSK than for higher-order modulation such as 64QAM. |

| | |
|----------------------|----------------------------|
| Preset | OFF |
| State Saved | Saved in instrument state. |
| Range | On Off |
| Initial S/W Revision | A.14.01 |

Limits

Accesses the Limits menu allows you to set the fail/pass criteria of the limit check

| | |
|----------------------|-------------------|
| Key Path | Meas Setup |
| Initial S/W Revision | A.10.01 |

BPSK-1/2 RMS EVM

Sets BPSK coding rate 1/2 RMS EVM limit to warn you if the measured average RMS EVM value exceeds a limit.

| | |
|-----------------------|---|
| Key Path | Meas Setup, Limits |
| Mode | WLAN |
| Remote Command | :CALCulate:EVM:LIMit:RMS:BPSK:R1B2 <rel_ampl> :CALCulate:EVM:LIMit:RMS:BPSK:R1B2 |
| Example | CALC:EVM:LIM:RMS:BPSK:R1B2 -20 CALC:EVM:LIM:RMS:BPSK:R1B2? |
| Notes | This limit value is used in 802.11j/p 10M, 802.11p 5M, 802.11n, 802.11ac and 802.11ah |
| Preset | -5.00 dB |
| State Saved | Saved in instrument state. |
| Min | -1000.00 |
| Max | 0 |
| Initial S/W Revision | A.10.01 |

QPSK-1/2 RMS EVM

Sets QPSK coding rate 1/2 RMS EVM limit to warn you if the measured average RMS EVM value exceeds a limit.

| | |
|-----------------------|---|
| Key Path | Meas Setup, Limits |
| Mode | WLAN |
| Remote Command | :CALCulate:EVM:LIMit:RMS:QPSK:R1B2 <rel_ampl> :CALCulate:EVM:LIMit:RMS:QPSK:R1B2 |

| | |
|----------------------|---|
| Example | CALC:EVM:LIM:RMS:QPSK:R1B2 -20 CALC:EVM:LIM:RMS:QPSK:R1B2? |
| Notes | This limit value is used in 802.11j/p 10M, 802.11p 5M, 802.11n, 802.11ac and 802.11ah |
| Preset | -10.00 dB |
| State Saved | Saved in instrument state. |
| Min | -1000.00 |
| Max | 0 |
| Initial S/W Revision | A.10.01 |

QPSK-3/4 RMS EVM

Sets QPSK coding rate 3/4 RMS EVM limit to warn you if the measured average RMS EVM value exceeds a limit.

| | |
|-----------------------|---|
| Key Path | Meas Setup, Limits |
| Mode | WLAN |
| Remote Command | :CALCulate:EVM:LIMit:RMS:QPSK:R3B4 <rel_ampl> :CALCulate:EVM:LIMit:RMS:QPSK:R3B4 |
| Example | CALC:EVM:LIM:RMS:QPSK:R3B4 -20 CALC:EVM:LIM:RMS:QPSK:R3B4? |
| Notes | This limit value is used in 802.11j/p 10M, 802.11p 5M, 802.11n, 802.11ac and 802.11ah |
| Preset | -13.00 dB |
| State Saved | Saved in instrument state. |
| Min | -1000.00 |
| Max | 0 |
| Initial S/W Revision | A.10.01 |

16QAM-1/2 RMS EVM

Sets 16QAM coding rate 1/2 RMS EVM limit to warn you if the measured average RMS EVM value exceeds a limit.

| | |
|-----------------------|---|
| Key Path | Meas Setup, Limits |
| Mode | WLAN |
| Remote Command | :CALCulate:EVM:LIMit:RMS:QA16:R1B2 <rel_ampl> :CALCulate:EVM:LIMit:RMS:QA16:R1B2 |
| Example | CALC:EVM:LIM:RMS:QA16:R1B2 -20 CALC:EVM:LIM:RMS:QA16:R1B2? |

| | |
|----------------------|---|
| Notes | This limit value is used in 802.11j/p 10M, 802.11p 5M, 802.11n, 802.11ac and 802.11ah |
| Preset | -16.00 dB |
| State Saved | Saved in instrument state. |
| Min | -1000.00 |
| Max | 0 |
| Initial S/W Revision | A.10.01 |

16QAM-3/4 RMS EVM

Sets 16QAM coding rate 3/4 RMS EVM limit to warn you if the measured average RMS EVM value exceeds a limit.

| Key Path | Meas Setup, Limits |
|-----------------------|---|
| Mode | WLAN |
| Remote Command | :CALCulate:EVM:LIMit:RMS:QA16:R3B4 <rel_ampl> :CALCulate:EVM:LIMit:RMS:QA16:R3B4? |
| Example | CALC:EVM:LIM:RMS:QA16:R3B4 -20 CALC:EVM:LIM:RMS:QA16:R3B4? |
| Notes | This limit value is used in 802.11j/p 10M, 802.11p 5M, 802.11n, 802.11ac and 802.11ah |
| Preset | -19.00 dB |
| State Saved | Saved in instrument state. |
| Min | -1000.00 |
| Max | 0 |
| Initial S/W Revision | A.10.01 |

64QAM-2/3 RMS EVM

Sets 64QAM coding rate 2/3 RMS EVM limit to warn you if the measured average RMS EVM value exceeds a limit.

| Key Path | Meas Setup, Limits |
|-----------------------|---|
| Mode | WLAN |
| Remote Command | :CALCulate:EVM:LIMit:RMS:QA64:R2B3 <rel_ampl> :CALCulate:EVM:LIMit:RMS:QA64:R2B3? |
| Example | CALC:EVM:LIM:RMS:QA64:R2B3 -20 CALC:EVM:LIM:RMS:QA64:R2B3? |
| Notes | This limit value is used in 802.11j/p 10M, 802.11p 5M, 802.11n, 802.11ac and 802.11ah |
| Preset | -22.00 dB |

| | |
|----------------------|----------------------------|
| State Saved | Saved in instrument state. |
| Min | -1000.00 |
| Max | 0 |
| Initial S/W Revision | A.10.01 |

64QAM-3/4 RMS EVM

Sets 64QAM coding rate 3/4 RMS EVM limit to warn you if the measured average RMS EVM value exceeds a limit.

| | |
|----------------------|---|
| Key Path | Meas Setup, Limits |
| Mode | WLAN |
| Remote Command | :CALCulate:EVM:LIMit:RMS:QA64:R3B4 <rel_ampl> :CALCulate:EVM:LIMit:RMS:QA64:R3B4 |
| Example | CALC:EVM:LIM:RMS:QA64:R3B4 -20 CALC:EVM:LIM:RMS:QA64:R3B4? |
| Notes | This limit value is used in 802.11j/p 10M, 802.11p 5M, 802.11n, 802.11ac and 802.11ah |
| Preset | -25.00 dB |
| State Saved | Saved in instrument state. |
| Min | -1000.00 |
| Max | 0 |
| Initial S/W Revision | A.10.01 |

64QAM-5/6 RMS EVM

Sets 64QAM coding rate 5/6 RMS EVM limit to warn you if the measured average RMS EVM value exceeds a limit.

| | |
|----------------|---|
| Key Path | Meas Setup, Limits |
| Mode | WLAN |
| Remote Command | :CALCulate:EVM:LIMit:RMS:QA64:R5B6 <rel_ampl> :CALCulate:EVM:LIMit:RMS:QA64:R5B6 |
| Example | CALC:EVM:LIM:RMS:QA64:R5B6 -20 CALC:EVM:LIM:RMS:QA64:R5B6? |
| Notes | This limit value is used in 802.11j/p 10M, 802.11p 5M, 802.11n, 802.11ac and 802.11ah |
| Preset | -27.00 dB |
| State Saved | Saved in instrument state. |
| Min | -1000.00 |

| | |
|----------------------|---------|
| Max | 0 |
| Initial S/W Revision | A.10.01 |

256QAM–3/4 RMS EVM

Sets 256QAM coding rate 3/4 RMS EVM limit to warn you if the measured average RMS EVM value exceeds a limit. When the average RMS EVM result exceeds the limit, a red FAIL indicator appears in the PASS/FAIL indication. When the average RMS EVM result is less than the limit, a green PASS indicator appears in the PASS/FAIL indication.

| Key Path | Meas Setup, Limits |
|-----------------------|---|
| Mode | WLAN |
| Remote Command | :CALCulate:EVM:LIMit:RMS:QA256:R3B4 <rel_ampl> :CALCulate:EVM:LIMit:RMS:QA256:R3B4 |
| Example | CALC:EVM:LIM:RMS:QA256:R3B4 -20 CALC:EVM:LIM:RMS:QA256:R3B4? |
| Notes | This limit value is used in 802.11ac or 802.11ah |
| Preset | -30.00 dB |
| State Saved | Saved in instrument state. |
| Min | -1000.00 |
| Max | 0 |
| Initial S/W Revision | A.11.01 |

256QAM–5/6 RMS EVM

Sets 256QAM coding rate 5/6 RMS EVM limit to warn you if the measured average RMS EVM value exceeds a limit. When the average RMS EVM result exceeds the limit, a red FAIL indicator appears in the PASS/FAIL indication. When the average RMS EVM result is less than the limit, a green PASS indicator appears in the PASS/FAIL indication.

| Key Path | Meas Setup, Limits |
|-----------------------|---|
| Mode | WLAN |
| Remote Command | :CALCulate:EVM:LIMit:RMS:QA256:R5B6 <rel_ampl> :CALCulate:EVM:LIMit:RMS:QA256:R5B6 |
| Example | CALC:EVM:LIM:RMS:QA256:R5B6 -20 CALC:EVM:LIM:RMS:QA256:R5B6? |
| Notes | This limit value is used in 802.11ac or 802.11ah |
| Preset | -32.00 dB |
| State Saved | Saved in instrument state. |

| | |
|----------------------|----------|
| Min | -1000.00 |
| Max | 0 |
| Initial S/W Revision | A.11.01 |

Freq Error

Sets a frequency error limit to warn you if the measured maximum frequency error value exceeds the limit.

| | |
|-----------------------|--|
| Key Path | Meas Setup, Limits |
| Mode | WLAN |
| Remote Command | :CALCulate:EVM:LIMit:FERRor <real> :CALCulate:EVM:LIMit:FERRor ? |
| Example | CALC:EVM:LIM:FERR 15 CALC:EVM:LIM:FERR? |
| Couplings | If Radio Std is 802.11n (20 MHz) or 802.11n (40 MHz) and Center Frequency is above 5GHz, freq error limit will be coupled to 20.0ppm |
| Preset | If Radio Std is 802.11a/g/j/p (OFDM), 802.11ac or 802.11ah: 20.00 ppm If Radio Std is 802.11b/g (DSSS/CCK/PBCC), 801.11g (DSSS-OFDM): 25.00 ppm If Radio Std is 802.11n (20 MHz) or 802.11n (40 MHz) : 25.0ppm |
| State Saved | Saved in instrument state. |
| Min | 0 |
| Max | 500 ppm |
| Initial S/W Revision | A.10.01 |

Clock Error

Sets a clock error limit to warn you if the measured maximum clock error value exceeds the limit.

| | |
|-----------------------|---|
| Key Path | Meas Setup, Limits |
| Mode | WLAN |
| Remote Command | :CALCulate:EVM:LIMit:CLKerror <real> :CALCulate:EVM:LIMit:CLKerror ? |
| Example | CALC:EVM:LIM:CLK 15 CALC:EVM:LIM:CLK? |
| Couplings | If Radio Std is 802.11n (20 MHz) or 802.11n (40 MHz) and Center Frequency is above 5GHz, freq error limit will be coupled to 20.0ppm |
| Preset | If Radio Std is 802.11a/g/j/p (OFDM), 802.11ac or 802.11ah: 20.00 ppm If Radio Std is 802.11b/g (DSSS/CCK/PBCC), 801.11g (DSSS-OFDM): 25.00 ppm If Radio Std is 802.11n (20 MHz) or 802.11n (40 MHz) : 25.0ppm |

| | |
|----------------------|----------------------------|
| State Saved | Saved in instrument state. |
| Min | 0 |
| Max | 100 ppm |
| Initial S/W Revision | A.10.01 |

Center Freq Leakage

Sets Center Freq Leakage limit to warn you if the measured average Center Freq Leakage exceeds the limit.

| Key Path | Meas Setup, Limits |
|-------------------------------------|--|
| Mode | WLAN |
| Remote Command | :CALCulate:EVM:LIMit:CFLeakage <rel_ampl> :CALCulate:EVM:LIMit: CFLeakage? |
| Example | CALC:EVM:LIM:CFL -15 CALC:EVM:LIM:CFL? |
| Preset | If Radio Std is 802.11a/g/j/p (OFDM), 801.11g (DSSS-OFDM), 802.11n (20 MHz): -15dB If Radio Std is 802.11n (40 MHz): -20 dB If Radio Std is 802.11ac: $-10\log_{10}(N)$ (N is fft length) 11ac20M: -18dB 11ac40M: -21dB 11ac80M: -24dB 11ac160M: -27dB If Radio Std is 802.11ah: $-10\log_{10}(N)$ (N is fft length) 11ah 1M: -15dB 11ah 2M: -18dB 11ah 4M: -21dB 11ah 8M: -24dB 11ah 16M: -27dB |
| State Saved | Saved in instrument state. |
| Min | -100 |
| Max | 0 |
| Backwards Compatibility SCPI | :CALCulate:EVM:LIMit:IQOffset <rel_ampl> |
| Initial S/W Revision | A.10.01 |

48 Mbits/s RMS EVM

Sets 48 Mbits/s RMS EVM limit to warn you if the measured average RMS EVM value exceeds a limit.

| | |
|-----------------------|---|
| Key Path | Meas Setup, Limits |
| Mode | WLAN |
| Remote Command | :CALCulate:EVM:LIMit:RMS:M48 <rel_ampl> :CALCulate:EVM:LIMit:RMS:M48? |
| Example | CALC:EVM:LIM:RMS:M48 -20 CALC:EVM:LIM:RMS:M48? |
| Notes | This limit value is used in 802.11a/g/j/p (OFDM 20M), 801.11g (DSSS-OFDM) |
| Preset | -22.00 dB |
| State Saved | Saved in instrument state. |
| Min | -1000.00 |
| Max | 0 |
| Initial S/W Revision | A.10.01 |

54 Mbits/s RMS EVM

Sets 54 Mbits/s RMS EVM limit to warn you if the measured average RMS EVM value exceeds a limit.

| | |
|-----------------------|---|
| Key Path | Meas Setup, Limits |
| Mode | WLAN |
| Remote Command | :CALCulate:EVM:LIMit:RMS:M54 <rel_ampl> :CALCulate:EVM:LIMit:RMS:M54? |
| Example | CALC:EVM:LIM:RMS:M54 -20 CALC:EVM:LIM:RMS:M54? |
| Notes | This limit value is used in 802.11a/g/j/p (OFDM 20M), 801.11g (DSSS-OFDM) |
| Preset | -25.00 dB |
| State Saved | Saved in instrument state. |
| Min | -1000.00 |
| Max | 0 |
| Initial S/W Revision | A.10.01 |

RMS EVM

Sets an RMS EVM limit to warn you if the measured average RMS EVM value exceeds a limit.

| | |
|-----------------------|---|
| Key Path | Meas Setup, Limits |
| Mode | WLAN |
| Remote Command | :CALCulate:EVM:LIMit:RMS <percent> :CALCulate:EVM:LIMit:RMS? |

| | |
|----------------------|---|
| Example | CALC:EVM:LIM:RMS 20 CALC:EVM:LIM:RMS? |
| Notes | This limit value is used in 802.11b/g (DSSS/CCK/PBCC) |
| Preset | 16.0 % |
| State Saved | Saved in instrument state. |
| Min | 0 |
| Max | 100.0 % |
| Initial S/W Revision | A.10.01 |

1000 Chips EVM

Sets an 1000 Chips EVM limit to warn you if the measured average 1000 Chips value exceeds a limit.

| | |
|-----------------------|---|
| Key Path | Meas Setup, Limits |
| Mode | WLAN |
| Remote Command | :CALCulate:EVM:LIMit:CHIP <percent> :CALCulate:EVM:LIMit:CHIP? |
| Example | CALC:EVM:LIM:CHIP 20 CALC:EVM:LIM:CHIP? |
| Notes | This limit value is used in 802.11b/g (DSSS/CCK/PBCC) |
| Preset | 35.0 % |
| State Saved | Saved in instrument state. |
| Min | 0 |
| Max | 100.0 % |
| Initial S/W Revision | A.10.01 |

RF Carrier Suppression

Sets an RF Carrier Suppression limit to warn you if the measured average RF Carrier Suppression value is less than a limit.

| | |
|-----------------------|--|
| Key Path | Meas Setup, More, Limits |
| Mode | WLAN |
| Remote Command | :CALCulate:EVM:LIMit:CARRier <rel_ampl> :CALCulate:EVM:LIMit:CARRier? |
| Example | CALC:EVM:LIM:CARR 20 CALC:EVM:LIM:CARR? |
| Notes | This limit value is used in 802.11b/g (DSSS/CCK/PBCC) |
| Preset | 15.00 |

| | |
|----------------------|----------------------------|
| State Saved | Saved in instrument state. |
| Min | 0 |
| Max | 100.00 |
| Initial S/W Revision | A.10.01 |

6 Mbits/s RMS EVM

Sets 6 Mbits/s RMS EVM limit to warn you if the measured average RMS EVM value exceeds a limit.

| | |
|----------------------|---|
| Key Path | Meas Setup, Limits |
| Mode | WLAN |
| Remote Command | :CALCulate:EVM:LIMit:RMS:M6 <rel_ampl> :CALCulate:EVM:LIMit:RMS:M6? |
| Example | CALC:EVM:LIM:RMS:M6 -20 CALC:EVM:LIM:RMS:M6? |
| Notes | This limit value is used in 802.11a/g/j/p (OFDM 20M), 801.11g (DSSS-OFDM) |
| Preset | -5.00 dB |
| State Saved | Saved in instrument state. |
| Min | -1000.00 |
| Max | 0 |
| Initial S/W Revision | A.10.01 |

9 Mbits/s RMS EVM

Sets 9 Mbits/s RMS EVM limit to warn you if the measured average RMS EVM value exceeds a limit.

| | |
|----------------------|---|
| Key Path | Meas Setup, Limits |
| Mode | WLAN |
| Remote Command | :CALCulate:EVM:LIMit:RMS:M9 <rel_ampl> :CALCulate:EVM:LIMit:RMS:M9? |
| Example | CALC:EVM:LIM:RMS:M9 -20 CALC:EVM:LIM:RMS:M9? |
| Notes | This limit value is used in 802.11a/g/j/p (OFDM 20M), 801.11g (DSSS-OFDM) |
| Preset | -8.00 dB |
| State Saved | Saved in instrument state. |
| Min | -1000.00 |
| Max | 0 |
| Initial S/W Revision | A.10.01 |

12 Mbits/s RMS EVM

Sets 12 Mbits/s RMS EVM limit to warn you if the measured average RMS EVM value exceeds a limit.

| Key Path | Meas Setup, Limits |
|-----------------------|---|
| Mode | WLAN |
| Remote Command | :CALCulate:EVM:LIMit:RMS:M12 <rel_ampl> :CALCulate:EVM:LIMit:RMS:M12? |
| Example | CALC:EVM:LIM:RMS:M12 -20 CALC:EVM:LIM:RMS:M12? |
| Notes | This limit value is used in 802.11a/g/j/p (OFDM 20M), 801.11g (DSSS-OFDM) |
| Preset | -10.00 dB |
| State Saved | Saved in instrument state. |
| Min | -1000.00 |

18 Mbits/s RMS EVM

Sets 18 Mbits/s RMS EVM limit to warn you if the measured average RMS EVM value exceeds a limit.

| Key Path | Meas Setup, Limits |
|-----------------------|---|
| Mode | WLAN |
| Remote Command | :CALCulate:EVM:LIMit:RMS:M18 <rel_ampl> :CALCulate:EVM:LIMit:RMS:M18? |
| Example | CALC:EVM:LIM:RMS:M18 -20 CALC:EVM:LIM:RMS:M18? |
| Notes | This limit value is used in 802.11a/g/j/p (OFDM 20M), 801.11g (DSSS-OFDM) |
| Preset | -13.00 dB |
| State Saved | Saved in instrument state. |
| Min | -1000.00 |
| Max | 0 |
| Initial S/W Revision | A.10.01 |

24 Mbits/s RMS EVM

Sets 24 Mbits/s RMS EVM limit to warn you if the measured average RMS EVM value exceeds a limit.

| Key Path | Meas Setup, Limits |
|----------|--------------------|
|----------|--------------------|

| | |
|-----------------------|---|
| Mode | WLAN |
| Remote Command | :CALCulate:EVM:LIMit:RMS:M24 <rel_ampl> :CALCulate:EVM:LIMit:RMS:M24? |
| Example | CALC:EVM:LIM:RMS:M24 -20 CALC:EVM:LIM:RMS:M24? |
| Notes | This limit value is used in 802.11a/g/j/p (OFDM 20M), 801.11g (DSSS-OFDM) |
| Preset | -16.00 dB |
| State Saved | Saved in instrument state. |
| Min | -1000.00 |
| Max | 0 |
| Initial S/W Revision | A.10.01 |

36 Mbits/s RMS EVM

Sets 36 Mbits/s RMS EVM limit to warn you if the measured average RMS EVM value exceeds a limit.

| | |
|-----------------------|---|
| Key Path | Meas Setup, Limits |
| Mode | WLAN |
| Remote Command | :CALCulate:EVM:LIMit:RMS:M36 <rel_ampl> :CALCulate:EVM:LIMit:RMS:M36? |
| Example | CALC:EVM:LIM:RMS:M36 -20 CALC:EVM:LIM:RMS:M36? |
| Notes | This limit value is used in 802.11a/g/j/p (OFDM 20M), 801.11g (DSSS-OFDM) |
| Preset | -19.00 dB |
| State Saved | Saved in instrument state. |
| Min | -1000.00 |
| Max | 0 |
| Initial S/W Revision | A.10.01 |

Advanced

Accesses advanced features. These features are recommended for use only by advanced users.

| | |
|----------------------|-------------------|
| Key Path | Meas Setup |
| Initial S/W Revision | A.10.01 |

Pilot Tracking

802.11 OFDM performs demodulation relative to the data in pilot carriers embedded in the signal. These pilot carriers replace data-carrying elements of the signal and allow some kinds of impairments to be removed or “tracked out”.

Many impairments will be common to all pilot carriers and can be measured and displayed as “common pilot error”.

In addition, several specific tracking functions can be individually switched on and off in the demodulation performed by this measurement. This is a very useful troubleshooting approach, since modulation errors can be examined with and without the benefit of particular types of pilot tracking.

| | |
|----------------------|-----------------------------|
| Key Path | Meas Setup, Advanced |
| Initial S/W Revision | A.10.01 |

Track Amplitude

Track Amplitude specifies whether the analyzer tracks amplitude changes in the pilot subcarriers. When Track Amplitude is selected, the analyzer applies pilot subcarrier amplitude error correction to the pilot and data subcarriers. This is in addition to Track Phase and Track Timing error correction, if selected.

| | |
|-------------------------------------|---|
| Key Path | Meas Setup, Advanced, Pilot Track |
| Mode | WLAN |
| Remote Command | :CALCulate:EVM:PILot:TRACk:AMPLitude OFF ON 0 1 :CALCulate:EVM:PILot:TRACk:AMPLitude? |
| Example | CALC:EVM:PIL:TRAC:AMPL 1 CALC:EVM:PIL:TRAC:AMPL? |
| Notes | Only used in 802.11a/g/j/p (OFDM), 801.11g (DSSS-OFDM), 802.11n, 802.11ac or 802.11ah measurement |
| Preset | OFF |
| State Saved | Saved in instrument state. |
| Range | On Off |
| Backwards Compatibility SCPI | [:SENSe] :EVM:TRACk:AMP OFF ON 0 1 [:SENSe] :EVM:TRACk:AMP? |
| Initial S/W Revision | A.10.01 |

Track Phase

The Track Phase parameter specifies whether the analyzer tracks phase changes in the pilot subcarriers. When Track Phase is selected, the analyzer applies pilot subcarrier phase error correction to the pilot and data subcarriers. This is in addition to Track Amplitude and Track Timing error correction if selected.

| | |
|-----------------------------|---|
| Key Path | Meas Setup, Advanced, Pilot Track |
| Mode | WLAN |
| Remote Command | :CALCulate:EVM:PILot:TRACk:PHASe OFF ON 0 1 :CALCulate:EVM:PILot:TRACk:PHASe? |
| Example | CALC:EVM:PIL:TRAC:PHAS 0 CALC:EVM:PIL:TRAC:PHAS? |
| Notes | Only used in 802.11a/g/j/p (OFDM), 801.11g (DSSS-OFDM), 802.11n, 802.11ac or 802.11ah measurement |
| Preset | ON |
| State Saved | Saved in instrument state. |
| Range | On Off |
| Initial S/W Revision | A.10.01 |

Track Timing

The Track Timing parameter specifies whether the analyzer tracks timing changes in the pilot subcarriers. When Track Timing is selected the analyzer applies pilot subcarrier timing error correction (frequency offset correction) to the pilot and data subcarriers. This is in addition to Track Amplitude and Track Phase error correction if selected.

| | |
|-------------------------------------|---|
| Key Path | Meas Setup, Advanced, Pilot Track |
| Mode | WLAN |
| Remote Command | :CALCulate:EVM:PILot:TRACk:TIMing OFF ON 0 1 :CALCulate:EVM:PILot:TRACk:TIMing? |
| Example | CALC:EVM:PIL:TRAC:TIM 1 CALC:EVM:PIL:TRAC:TIM? |
| Notes | Only used in 802.11a/g/j/p (OFDM), 801.11g (DSSS-OFDM), 802.11n, 802.11ac or 802.11ah measurement |
| Preset | OFF |
| State Saved | Saved in instrument state. |
| Range | On Off |
| Backwards Compatibility SCPI | [:SENSe] :EVM:TRACk:TIMing |
| Initial S/W Revision | A.10.01 |

Sync Training Sequence

This parameter specifies synchronization method to use when synchronizing to the start of the OFDM burst.

A value of Short means to search for and synchronize to an 802.11a/g/j/p (OFDM) preamble short symbol sequence.

A value of Long means to search for and synchronize to an 802.11a/g (OFDM) preamble long symbol sequence (also called the channel estimation sequence).

| | |
|-------------------------------------|--|
| Key Path | Meas Setup, More, Advanced |
| Mode | WLAN |
| Remote Command | [:SENSe] :EVM:STSequence LONG SHORT [:SENSe] :EVM:STSequence? |
| Example | EVM:STS LONG EVM:STS? |
| Notes | Only used in 802.11a/g/j/p (OFDM), 801.11g (DSSS-OFDM) measurement, otherwise it will be grayed out. Forceful message “-221 Setting Conflict, Sync Training Sequence is not available for current Radio Setting” |
| Preset | SHORT |
| State Saved | Saved in instrument state. |
| Backwards Compatibility SCPI | [:SENSe] :EVM:SYNCseq LONG SHORT [:SENSe] :EVM:SYNCseq? |
| Initial S/W Revision | A.10.01 |

Equalizer Training

This specifies how the equalizer is initialized, or “trained”. The valid values are Channel Estimation Seq Only and Channel Estimation Seq & Data. The value Channel Estimation Seq Only, which is the default, specifies that the equalizer is trained using only the channel estimation sequence (also called the “long sync”) portion of the burst preamble. The 802.11a/g/n standards imply that the equalizer should be implemented this way when measuring EVM, and this matches how a real receiver would probably implement an equalizer.

The value and Channel Estimation Seq & Data specifies that the equalizer should be trained using both the channel estimation sequence and the entire data portion of the burst. This usually gives a more accurate estimate of the equalizer response. It also typically lowers the EVM by between one and three dB.

| | |
|-----------------------|---|
| Key Path | Meas Setup, Advanced |
| Mode | WLAN |
| Remote Command | :CALCulate:EVM:EQUalizer:TMODe SEQuence SDATa :CALCulate:EVM:EQUalizer:TMODe? |
| Example | CALC:EVM:EQU:TMOD SDAT CALC:EVM:EQU:TMOD? |
| Notes | Only used in 802.11a/g/j/p (OFDM), 801.11g (DSSS-OFDM), 802.11n, 802.11ac or 802.11ah measurement |
| Preset | SEQ |

| | |
|-------------------------------------|--|

| | [:SENSe] :EVM:EQualizer:TRaining? |
| Initial S/W Revision | A.10.01 |

I/Q Normalize

This parameter specifies if the I/Q signals will be normalized.

| | |
|-------------------------------------|--|
| Key Path | Meas Setup, Advanced |
| Mode | WLAN |
| Remote Command | :CALCulate:EVM:IQNorm OFF ON 0 1 :CALCulate:EVM:IQNorm? |
| Example | CALC:EVM:IQN ON CALC:EVM:IQN? |
| Preset | ON |
| State Saved | Saved in instrument state. |
| Range | On Off |
| Backwards Compatibility SCPI | [:SENSe] :EVM:IQNorm OFF ON 0 1 [:SENSe] :EVM:IQNorm? |
| Initial S/W Revision | A.10.01 |

I/Q Compensation

This parameter allows to turn On or Off the compensation for IQ Gain Imbalance, IQ Quadrature Error, and IQ Timing Skew found in the input signal.

| | |
|-----------------------|---|
| Key Path | Meas Setup, Advanced, More |
| Mode | WLAN |
| Remote Command | [:SENSe] :EVM:COMPensate OFF ON 0 1 [:SENSe] :EVM:COMPensate? |
| Example | EVM:COMP ON EVM:COMP? |
| Notes | If the Radio Std is not 802.11 n, it will be grayed out .Forceful message “-221 Setting conflict, IQ Compensation is not available for current Radio Setting” |
| Preset | Off |

| | |
|----------------------|----------------------------|
| State Saved | Saved in instrument state. |
| Range | On Off |
| Initial S/W Revision | A.10.01 |

Spectrum

Sets a spectrum to either normal or to inverted for demodulation related measurements. If set to INVert, the upper and lower spectrums are swapped.

The invert function conjugates the spectrum, which is equivalent to taking the negative of the quadrature component in demodulation. The correct setting (Normal or Invert) depends on whether the signal at the input of the instrument has a high or a low side mix.

| | |
|-------------------------------------|--|
| Key Path | Meas Setup, Advanced, More |
| Mode | WLAN |
| Remote Command | :CALCulate:EVM:SPECTrum INVert NORMal :CALCulate:EVM:SPECTrum? |
| Example | CALC:EVM:SPEC INV CALC:EVM:SPEC? |
| Preset | NORMal |
| State Saved | Saved in instrument state. |
| Range | Normal Invert |
| Backwards Compatibility SCPI | [:SENSe] :EVM:MIRRorspec OFF ON 0 1 [:SENSe] :EVM:MIRRorspec? |
| Initial S/W Revision | A.10.01 |

Frequency Sync

Frequency Sync setting determines which portion of data is used for carrier frequency offset estimation in modulation analysis.

| | |
|-----------------------|---|
| Key Path | Meas Setup, Advanced |
| Mode | WLAN |
| Remote Command | [:SENSe] :EVM:FREQuency:SYNC PPILot PPData PREamble [:SENSe] :EVM:FREQ:SYNC? |
| Example | EVM:FREQ:SYNC PPIL EVM:FREQ:SYNC? |
| Preset | PPILot |
| State Saved | Saved in instrument state. |
| Readback Text | Preamble & Pilot Pre., Pilot & Data Preamble |
| Initial S/W Revision | 15.0 |

Meas Preset

Returns parameters for the current measurement to those set by the factory.

| | |
|----------------------|-------------------------|
| Key Path | Meas Setup, More |
| Mode | WLAN |
| Remote Command | :CONFigure:EVM |
| Example | CONF:EVM |
| Initial S/W Revision | A.10.01 |

Filter

Accesses Filter settings. These settings are used only for 802.11b/g (DSSS/CCK/PBCC) standard.

| | |
|----------------------|-------------------|
| Key Path | Meas Setup |
| Initial S/W Revision | A.10.01 |

Reference Filter

This parameter controls the reference filter type used when computing the reference data for computing EVM

| | |
|----------------------|--|
| Key Path | Meas Setup, Filter |
| Remote Command | [:SENSe] :EVM:FILTer:REFeRence:TYPE GAUSSian RECT RC [:SENSe] :EVM:FILTer:REFeRence:TYPE? |
| Example | EVM:FILT:REF:TYPE GAUS EVM:FILT:REF:TYPE? |
| Notes | Only used in 802.11b/g (DSSS/CCK/PBCC) measurement |
| Preset | RECT |
| State Saved | Saved in instrument state. |
| Range | Gaussian Rect Raised Cosine |
| Readback Text | Gaussian Rect Raised Cosine |
| Initial S/W Revision | A.10.01 |

Alpha/BT

This parameter is used only when the Reference Filter is set to “GAUSSIAN” or “Raised Cosine”, or the Measurement filter is set to “RRC”. In these cases, this parameter controls the bT value for the Gaussian filter and alpha values for Raised Cosine and RRC filters.

| | |
|-------------------------------------|--|
| Key Path | Meas Setup, Filter |
| Mode | WLAN |
| Remote Command | <code>[:SENSe] :EVM:FILTer:ALPHa <real></code> <code>[:SENSe] :EVM:FILTer:ALPHa?</code> |
| Example | EVM:FILT:ALPH 0.5 EVM:FILT:ALPH? |
| Notes | Only be available in 802.11 b/g (DSSS/CCK/PBCC) measurement |
| Couplings | Max Value is coupled with Reference Filter |
| Preset | 0.50 |
| State Saved | Saved in instrument state. |
| Min | 0.05 |
| Max | When Reference Filter is set to Gaussian:100.00 When Reference Filter is set to Raised Cosine: 1.00 |
| Backwards Compatibility SCPI | <code>[:SENSe] :EVM:FILTer:BT <real></code> <code>[:SENSe] :EVM:FILTer:BT?</code> |
| Initial S/W Revision | A.10.01 |

Measurement Filter

This parameter controls the measurement filter type used for computing EVM.

| | |
|-----------------------|--|
| Key Path | Meas Setup, Filter |
| Mode | WLAN |
| Remote Command | <code>[:SENSe] :EVM:FILTer:MEASurement:TYPE NONE RRC</code> <code>[:SENSe] :EVM:FILTer:MEASurement:TYPE?</code> |
| Example | EVM:FILT:MEAS:TYPE RRC EVM:FILT:MEAS:TYPE? |
| Notes | Only be available in 802.11 b/g (DSSS/CCK/PBCC) measurement |
| State Saved | Saved in instrument state. |
| Range | None RRC |
| Initial S/W Revision | A.10.01 |

Mode

See "[Mode](#)" on page 204

Mode Preset

Returns the active mode to a known state.

Mode Preset does the following for the currently active mode:

- Aborts the currently running measurement.
- Brings up the default menu for the mode, with no active function.
- Sets measurement Global settings to their preset values for the active mode only.
- Activates the default measurement.
- Brings up the default menu for the mode.
- Clears the input and output buffers.
- Sets Status Byte to 0.

Mode Preset does not:

- Cause a mode switch
- Affect mode persistent settings
- Affect system settings
- See "[How-To Preset](#)" on page 1918 for more information.

| | |
|-------------------------------|---|
| Key Path | Front-panel key |
| Remote Command | :SYSTem:PRESet |
| Example | :SYST:PRES |
| Notes | *RST is preferred over :SYST:PRES for remote operation. *RST does a Mode Preset, as done by the :SYST:PRES command, and it sets the measurement mode to Single measurement rather than Continuous for optimal remote control throughput. Clears all pending OPC bits. The Status Byte is set to 0. |
| Couplings | A Mode Preset aborts the currently running measurement, activates the default measurement, and gets the mode to a consistent state with all of the default couplings set. |
| Backwards Compatibility Notes | In the X-Series, the legacy "Factory Preset" has been replaced with Mode Preset, which only presets the currently active mode, not the entire instrument. In the X-Series, the way to preset the entire instrument is by using System, Restore System Defaults All, which behaves essentially the same way as restore System Defaults does on ESA and PSA. There is also no "Preset Type" as there is on the PSA. There is a green Mode Preset front-panel key that does a Mode Preset and a white-with-green-letters User Preset front-panel key that does a User Preset. The old PRESet:TYPE command is ignored (without generating an error), and SYST:PRES without a parameter does a Mode Preset, which should cover most backward code compatibility issues. The settings and correction data under the Input/Output front-panel key (examples: Input Z Corr, Ext Amp Gain, etc.) are no longer part of any Mode, so they will not be preset by a Mode Preset. They are preset using Restore Input/Output Defaults, Restore System Defaults All. Note that because User Preset does a Recall State, and all of these settings are saved in State, they ARE recalled when using |

| | |
|----------------------|------------------|
| | User Preset. |
| Initial S/W Revision | Prior to A.02.00 |

How-To Preset

The table below shows all possible presets, their corresponding SCPI commands and front-panel access (key paths). Instrument settings depend on the current measurement context. Some settings are local to the current measurement, some are global (common) across all the measurements in the current mode, and some are global to all the available modes. In a similar way, restoring the settings to their preset state can be done within the different contexts.

Auto Couple - is a measurement local key. It sets all Auto/Man parameter couplings in the measurement to Auto. Any Auto/Man selection that is local to other measurements in the mode will not be affected.

Meas Preset - is a measurement local key. Meas Preset resets all the variables local to the current measurement except the persistent ones.

Mode Preset - resets all the current mode's measurement local and measurement global variables except the persistent ones.

Restore Mode Defaults - resets ALL the Mode variables (and all the Meas global and Meas local variables), including the persistent ones.

| Type Of Preset | SCPI Command | Front Panel Access |
|--------------------------------|--|--|
| Auto Couple | :COUPle ALL | Auto Couple front-panel key |
| Meas Preset | :CONFigure:<Measurement> | Meas Setup Menu |
| Mode Preset | :SYSTem:PRESet | Mode Preset (green key) |
| Restore Mode Defaults | :INSTrument:DEFault | Mode Setup Menu |
| Restore All Mode Defaults | :SYSTem:DEFault MODes | System Menu; Restore System Default Menu |
| *RST | *RST | not possible (Mode Preset with Single) |
| Restore Input/Output Defaults | :SYSTem:DEFault INPUt | System Menu; Restore System Default Menu |
| Restore Power On Defaults | :SYSTem:DEFault PON | System Menu; Restore System Default Menu |
| Restore Alignment Defaults | :SYSTem:DEFault ALIGN | System Menu; Restore System Default Menu |
| Restore Miscellaneous Defaults | :SYSTem:DEFault MISC | System Menu; Restore System Default Menu |
| Restore All System Defaults | :SYSTem:DEFault [ALL] :SYSTem:PRESet:PERsistent | System Menu; Restore System Default Menu |
| User Preset | :SYSTem:PRESet:USER | User Preset Menu |
| User Preset All Modes | :SYSTem:PRESet:USER:ALL | User Preset Menu |

| | | |

| Power On User Preset | :SYSTem:PON:TYPE USER | System Menu |
| Power On Last State | :SYSTem:PON:TYPE LAST | System Menu |

Mode Setup

See "[Mode Setup](#)" on page 221

Peak Search

Displays the Peak Search menu and places the selected marker on the trace point with the maximum y-axis value for that marker's trace.

| | |
|-----------------------------|--|
| Key Path | Peak Search |
| Mode | WIMAXOFDMA |
| Remote Command | :CALCulate:EVM:MARKer[1] 2 ...12:MAXimum |
| Example | CALC:EVM:MARK2:MAX |
| Initial S/W Revision | Prior to A.02.00 |

Next Peak

Moves the selected marker to the peak that has the next highest amplitude that is less than the marker's current value.

| | |
|-----------------------------|---|
| Key Path | Peak Search |
| Mode | WIMAXOFDMA |
| Remote Command | :CALCulate:EVM:MARKer[1] 2 ...12:MAXimum:NEXT |
| Example | CALC:EVM:MARK2:MAX:NEXT |
| Initial S/W Revision | Prior to A.02.00 |

Next Pk Right

Moves the selected marker to the next peak to the right of the current marker.

| | |
|-----------------------------|--|
| Key Path | Peak Search |
| Mode | WIMAXOFDMA |
| Remote Command | :CALCulate:EVM:MARKer[1] 2 ...12:MAXimum:RIGHT |
| Example | CALC:EVM:MARK2:MAX:RIGH |
| Initial S/W Revision | Prior to A.02.00 |

Next Pk Left

Moves the selected marker to the next peak to the left of the current marker.

| | |
|-----------------------|---|
| Key Path | Peak Search |
| Mode | WIMAXOFDMA |
| Remote Command | :CALCulate:EVM:MARKer[1] 2 ...12:MAXimum:LEFT |

| | |
|----------------------|-------------------------|
| Example | CALC:EVM:MARK2:MAX:LEFT |
| Initial S/W Revision | Prior to A.02.00 |

Marker Delta

Performs the same function as the Delta 1-of-N selection key in the Marker menu. This sets the control mode for the selected marker to Delta mode. The softkey enables you to conveniently perform a peak search and change the marker's control mode to Delta without having to access two separate menus.

| | |
|----------------------|--------------------|
| Key Path | Peak Search |
| Initial S/W Revision | Prior to A.02.00 |

Pk-Pk Search

Finds and displays the amplitude and frequency (or time, if in zero span) differences between the highest and lowest y-axis value.

| | |
|-----------------------|--|
| Key Path | Peak Search, More |
| Mode | WIMAXOFDMA |
| Remote Command | :CALCulate:EVM:MARKer[1] 2 ...12:PTPeak |
| Example | CALC:EVM:MARK:PTP |
| Notes | Turns on the Marker Δ active function. |
| Dependencies | This key is not available when Coupled Markers is on. |
| Initial S/W Revision | Prior to A.02.00 |

Min Search

Moves the selected marker to the minimum y-axis value of the current trace.

| | |
|-----------------------|--|
| Key Path | Peak Search, More |
| Mode | WIMAXOFDMA |
| Remote Command | :CALCulate:EVM:MARKer[1] 2 ...12:MINimum |
| Example | CALC:EVM:MARK:MIN |
| Initial S/W Revision | Prior to A.02.00 |

Print

See "Print " on page 277

Quick Save

The Quick Save front-panel key repeats the most recent save that was performed from the Save menu, with the following exceptions:

- Register saves are not remembered as Saves for the purpose of the Quick Save function
- If the current measurement does not support the last non-register save that was performed, an informational message is generated, “File type not supported for this measurement”

Quick Save repeats the last type of qualified save (that is, a save qualified by the above criteria) in the last save directory by creating a unique filename using the Auto File Naming algorithm described below.

If Quick Save is pressed after startup and before any qualified Save has been performed, the Quick Save function performs a Screen Image save using the current settings for Screen Image saves (current theme, current directory), which then becomes the “last save” for the purpose of subsequent Quick Saves.

The Auto File Naming feature automatically generates a file name for use when saving a file. The filename consists of a prefix and suffix separated by a dot, as is standard for the Windows® file system. A default prefix exists for each of the available file types:

| Type | Default Prefix | Menu |
|-----------------------|----------------|-----------------|
| State | State_ | (Save/Recall) |
| Trace + State | State_ | (Save/Recall) |
| Screen | Screen_ | (Save/Recall) |
| Amplitude Corrections | Ampcor_ | (Import/Export) |
| Traces | Trace_ | (Import/Export) |
| Limit Lines | LLine_ | (Import/Export) |
| Measurement Result | MeasR_ | (Import/Export) |
| Capture Buffer | CapBuf_ | (Import/Export) |

A four digit number is appended to the prefix to create a unique file name. The numbering sequence starts at 0000 within each Mode for each file type and updates incrementally to 9999, then wraps to 0000 again. It remembers where it was through a Mode Preset and when leaving and returning to the Mode. It is reset by Restore Misc Defaults and Restore System Defaults and subsequent running of the instrument application. So, for example, the first auto file name generated for State files is State_0000.state. The next is State_0001, and so forth.

One of the key features of Auto File Name is that we guarantee that the Auto File Name will never conflict with an existing file. The algorithm looks for the next available number. If it gets to 9999, then it looks for holes. If it find no holes, that is no more numbers are available, it gives an error.

For example, if when we get to State_0010.state there is already a State_0010.state file in the current directory, it advances the counter to State_0011.state to ensure that no conflict will exist (and then it verifies that State_0011.state also does not exist in the current directory and advances again if it does, and so forth).

If you enter a file name for a given file type, then the prefix becomes the filename you entered instead of the default prefix, followed by an underscore. The last four letters (the suffix) are the 4-digit number.

For example, if you save a measurement results file as “fred.csv”, then the next auto file name chosen for a measurement results save will be fred_0000.csv.

NOTE Although 0000 is used in the example above, the number that is used is actually the current number in the Meas Results sequence, that is, the number that would have been used if you had not entered your own file name.

NOTE If the filename you entered ends with _dddd, where d=any number, making it look just like an auto file name, then the next auto file name picks up where you left off with the suffix being dddd + 1.

| | |
|----------------------|--|
| Key Path | Front-panel key |
| Notes | No remote command for this key specifically. |
| Initial S/W Revision | Prior to A.02.00 |

Recall

The **Recall** menu lets you choose what you want to recall, and where you want to recall it from. Among the types of files you can recall are **States and Traces**. In addition, an **Import (Data)** option lets you recall a number of data types stored in CSV files (as used by Excel and other spreadsheet programs).

The default paths for Recall are data type dependent and are the same as for the Save key.

| Key Path | Front-panel key |
|-------------------------------|--|
| Notes | <p>No remote command for this key specifically, but the :MMEM:LOAD command is available for specific file types. An example is :MMEM:LOAD:STATe <filename>.</p> <p>If you try to recall a State file for a mode that is not licensed or not available in the instrument, an error message will occur and the state will not change.</p> |
| Backwards Compatibility Notes | <p>In legacy analyzers, it was possible to load a state without affecting the trace data, limit lines or correction data. Similarly (since User Preset is actually loading a state), it was possible to do a User Preset without affecting the trace data, limit lines or correction data.</p> <p>In the X-Series, “state” always includes all of this data; so whenever state is loaded, all of the traces, limit lines and corrections are affected. Although this differs from previous behavior, it is desirable behavior, and should not cause adverse issues for users.</p> |
| Backwards Compatibility Notes | <p>Recall for the X-Series supports backward compatibility in the sense that you can recall a state file from any X-Series model number and any version of X-Series software. This is only possible if part of the recalling process goes through a limiting step after recalling the mode settings, at least for settings that may vary with version number, model number, option and license differences. If you try to recall a state file onto an instrument with less capability than what was available on the instrument during the save, the recall will ignore the state it doesn't support and it will limit the recalled setting to what it allows.</p> <p>Example: if the saved state includes preamp ON, but the recalling instrument does not have a preamp; the preamp is limited to OFF. Conversely, if you save a state without a preamp, the preamp is OFF in the state file. When this saved file is recalled on an instrument with a licensed preamp, the preamp is changed to OFF. Another example is if the saved state has center frequency set to 20 GHz, but the instrument recalling the saved state is a different model and only supports 13.5 GHz. In this case, the center frequency is limited along with any other frequency based settings. Since the center frequency can't be preserved in this case, the recall limiting tries to at least preserve span to keep the measurement setup as intact as possible.</p> <p>It may be appropriate to issue a warning if the state is limited on the recall; warnings do not go out to SCPI so this would only affect the manual user.</p> <p>Note that there is no state file compatibility outside of the X-Series. For example, you cannot recall a state file from ESA or PSA.</p> |
| Initial S/W Revision | Prior to A.02.00 |

State

The **Recall State** menu lets you choose a register or file from which to recall the state.

The content of a state file includes all of the settings and data required to return the analyzer as closely as possible to the Mode it was in, with the exact settings that were in place, when the save occurred. The Mode settings in each state file include the settings that are affected by Mode Preset, as well as the

additional settings affected by Restore Mode Defaults; all of the Mode’s settings. In addition, all of the settings of the **Input/Output** system are included, even though they are outside of the Mode’s state, because they are needed to restore the complete setup. Persistent System settings (for example, GPIB address) are not affected by either a Mode Preset or Restore Mode Defaults, nor are they included in a saved State file.

Since each state file is only for one Mode, the settings for other Modes are unaffected when it is loaded. **Recall State** will cause a mode switch if the state being recalled is not from the current active mode.

After the recall completes, the message "File <filename> recalled" or “Recalled State Register <register number>” is displayed.

For rapid recalls, the State menu lists 16 registers that you can choose from to recall. Pressing a Register key initiates the recall. You can also select a file from which to recall.

The default path for all State Files is:

My Documents\<<mode name>\state

where <mode name> is the parameter used to select the mode with the INST:SEL command (for example, SA for the Spectrum Analyzer).

See "[More Information](#)" on page 1928.

| Key Path | Recall |
|-----------------------|--|
| Mode | All |
| Remote Command | :MMEMory:LOAD:STATe <filename> |
| Example | :MMEM:LOAD:STAT "myState.state" This recalls the file myState.state on the default path |
| Example | MMEM:LOAD:STAT "MyStateFile.state" This loads the state file data (on the default file directory path) into the instrument state. |
| Notes | <p>When you pick a file to recall, the analyzer first verifies that the file is recallable in the current instrument by checking the software version and model number of the instrument. If everything matches, a full recall proceeds by aborting the currently running measurement, clearing any pending operations, and then loading the State from the saved state file. You can open state files from any mode, so recalling a State file switches to the mode that was active when the save occurred. After switching to the mode of the saved state file, mode settings and data (if any for the mode) are loaded with values from the saved file. The saved measurement of the mode becomes the newly active measurement and the data relevant to the measurement (if there is any) is recalled.</p> <ul style="list-style-type: none"> • If there is a mismatch between file version or model number or instrument version or model number, the recall function tries to recall as much as possible and returns a warning message. It may limit settings that differ based on model number, licensing or version number. <p>After recalling the state, the Recall State function does the following:</p> <ul style="list-style-type: none"> • Makes the saved measurement for the mode the active measurement. • Clears the input and output buffers. • Status Byte is set to 0. • Executes a *CLS <p>If the file specified is empty an error is generated. If the specified file does not exist, another error is generated. If there is a mismatch between the file and the proper file type, an error is generated. If</p> |

| | |
|-------------------------------------|---|
| | there is a mismatch between file version or model number or instrument version or model number, a warning is displayed. Then it returns to the State menu and File Open dialog goes away. After the Recall, the analyzer exits the Recall menu and returns to the previous menu. |
| Backwards Compatibility SCPI | :MMEMory:LOAD:STATe 1,<filename> For backwards compatibility, the above syntax is supported. The "1" is simply ignored. |
| Initial S/W Revision | Prior to A.02.00 |

More Information

In measurements that support saving Traces, for example, Swept SA, the Trace data is saved along with the State in the State file. When recalling the State, the Trace data is recalled as well. Traces are recalled exactly as they were stored, including the writing mode and update and display modes. If a Trace was updating and visible when the State was saved, it will come back updating and visible, and its data will be rewritten right away. When you use State to save and recall traces, any trace whose data must be preserved should be placed in View or Blank mode before saving.

The following table describes the Trace Save and Recall possibilities:

| | | |
|---|--|--|
| You want to recall state and one trace's data, leaving other traces unaffected. | Save Trace+State from 1 trace. Make sure that no other traces are updating (they should all be in View or Blank mode) when the save is performed. | On Recall, specify the trace you want to load the one trace's data into. This trace will load in View. All other traces' data will be unaffected, although their trace mode will be as it was when the state save was performed. |
| You want to recall all traces | Save Trace+State from ALL traces. | On Recall, all traces will come back in View (or Blank if they were in Blank or Background when saved) |
| You want all traces to load exactly as they were when saved. | Save State | On recall, all traces' mode and data will be exactly as they were when saved. Any traces that were updating will have their data immediately overwritten. |

From File...

When you press "From File", the analyzer brings up a Windows dialog and a menu entitled "File Open." This menu allows you to navigate to the various fields in the Windows dialog without using a keyboard or mouse. The **Tab** and **Arrow** keys can also be used for dialog navigation.

Listed below are the functions of the various fields in the dialog, and the corresponding softkeys:

Open

Performs the recall of the specified file. While the recall is being performed, the floppy icon appears briefly in the Meas bar.

File/Folder List

Enables you to navigate to the center of the dialog that contains the list of files and folders. Once here you can get information about the file and use the tab keys to navigate to the other fields in the dialog, such as Look In.

Look In

The **Look In** field shows the path from which the file will be recalled and allows you to change the path using the up and down arrow keys to navigate to other paths; the Enter key to open a directory; and the Backspace key to go back one directory. The **Look In field** first uses the last path from the Save As dialog **Save In**: path for that same file type. There is no softkey for directly navigating to the Look In field, but you can use the left tab to get here from the File/Folder List.

User specified paths are remembered when you leave and return to a Mode and are reset back to the default using **Restore Mode Defaults**.

Sort

Accesses a menu that enables you to sort the files within the File Open dialog. Only one sorting type can be selected at a time and the sorting happens immediately. The sorting types are **By Date**, **By Name**, **By extension**, and **By Size**.

Files of Type

This field shows the file suffix for the type of file you have selected to recall. For example, if you navigated here while recalling State, "Mode state (*.state)" is in the field. If you navigated here while recalling Trace, ""Mode state (*.trace)" is in the field. If you navigated here while importing a trace data file, "Trace Data (*.csv)" is in the field. For some file types, there is more than one choice in the dropdown menu, which you can select by using the up and down arrow keys and Enter.

Up One Level

This key corresponds to the icon of a folder with the up arrow that is in the tool bar of the dialog. When pressed, it causes the file and folder list to navigate up one level in the directory structure. The Backspace key does the same thing.

Cancel

This key corresponds to the **Cancel** selection in the dialog. It causes the current **Open** request to be cancelled. The ESC key does the same thing.

| Key Path | Recall, State |
|----------------------|---|
| Notes | Brings up the Open dialog for recalling a State Save Type |
| Initial S/W Revision | Prior to A.02.00 |

Edit Register Names

You may enter a custom name on any of the Register keys, to help you remember what you are using that state to save. To do this, press the **Edit Register Names** key, choose the register whose name you wish to edit, and then enter the desired label using the Alpha Editor or an external PC keyboard.

The maximum number of characters that can be added is 30. In most cases, 30 characters will fit on two lines of the key.

For more information and the SCPI command, see Edit Register Names under the **Save, State** function.

| Key Path | Recall, State |
|----------------------|---|
| Mode | All |
| Dependencies | N9060A-7FP or N9060B-2FP license required to edit the register names. When the feature is not licensed, sending the SCPI command generates an error, -221, "Settings conflict;Option not available" |
| Initial S/W Revision | A.11.00 |

Register 1 thru Register 16

Selecting any one of these register keys causes the State of the mode from the specified Register to be recalled. Each of the register keys annotates whether it is empty or at what date and time it was last

modified. In addition, you can use the **Edit Register Names** key under **Save, State** to enter custom names for each register.

Registers are shared by all modes, so recalling from any one of the registers will cause a mode switch to the mode that was active when the save to the Register occurred.

Although these 16 registers are the only registers available from the front panel, there are 128 state registers available in the instrument. Registers 17–128 are only available from the SCPI interface, using the *RCL command.

After the recall completes, the message "Register <register number> recalled" appears in the message bar. If you are in the Spectrum Analyzer Mode, and you are recalling a register that was saved in the Spectrum Analyzer Mode, then after the recall, you will still be in the Recall Register menu. If the Recall causes you to switch modes, then after the Recall, you will be in the Frequency menu.

If a requested register is empty an error is generated.

| Key Path | Recall, State |
|--------------------------|--|
| Example | *RCL 1 |
| Range | 1–16 from front panel, 1–128 from SCPI |
| Readback | Date and time with seconds resolution are displayed on the key OR A custom name of up to 30 characters entered using the Save, State,Edit Register Names key OR “(empty)” if no prior save operation has been performed to this register. |
| Initial S/W Revision | Prior to A.02.00 |
| Modified at S/W Revision | Prior to A.11.00 |

Register 1 thru Register 16

Selecting any one of these register keys causes the State of the mode from the specified Register to be recalled. Each of the register keys annotates whether it is empty or at what date and time it was last modified. In addition, you can use the **Edit Register Names** key under **Save, State** to enter custom names for each register.

Registers are shared by all modes, so recalling from any one of the registers will cause a mode switch to the mode that was active when the save to the Register occurred.

Although these 16 registers are the only registers available from the front panel, there are 128 state registers available in the instrument. Registers 17–128 are only available from the SCPI interface, using the *RCL command.

After the recall completes, the message "Register <register number> recalled" appears in the message bar. If you are in the Spectrum Analyzer Mode, and you are recalling a register that was saved in the Spectrum Analyzer Mode, then after the recall, you will still be in the Recall Register menu. If the Recall causes you to switch modes, then after the Recall, you will be in the Frequency menu.

If a requested register is empty an error is generated.

| | |
|--------------------------|--|
| Key Path | Recall, State |
| Example | *RCL 1 |
| Range | 1–16 from front panel, 1–128 from SCPI |
| Readback | Date and time with seconds resolution are displayed on the key OR A custom name of up to 30 characters entered using the Save, State,Edit Register Names key OR “(empty)” if no prior save operation has been performed to this register. |
| Initial S/W Revision | Prior to A.02.00 |
| Modified at S/W Revision | Prior to A.11.00 |

Sequences

These keys allow you to import a Tab separated or .txt file that will automatically setup all the parameters required for building a Sequence. The parameters will automatically be loaded into the Stated Sequencer.

Once selected, in order to import the selected Sequence Type you must select the Open key in the Source Sequence menu.

| | |
|-----------------------|--|
| Key Path | Recall, Sequences |
| Mode | All |
| Remote Command | :MMEMory:LOAD:SEquences: SLIS ALIS SAALIS "MySequence.txt" |
| Example | :MMEM:LOAD:SEQ:SLIS "MySequence.txt" |
| Notes | Available file types are: –CSV (Comma delimited) (*.csv) –Text (Tab delimited) (*.txt) |
| Initial S/W Revision | A.05.00 |

Source Sequence

The list of parameters, that configure steps, that makes up a sequence for the Source.

The Source sequence is a sequence of flexible configurable steps that can be set anywhere in the instruments frequency range.

| | |
|----------------------|--------------------------------------|
| Key Path | Recall, Sequences |
| Example | :MMEM:LOAD:SEQ:SLIS "MySequence.txt" |
| Dependencies | Only available in XOBT |
| Initial S/W Revision | A.05.00 |

Open...

When you press “Open”, the analyzer brings up a Windows dialog and a menu entitled “**File Open.**” This menu allows you to navigate to the various fields in the Windows dialog without using a keyboard or mouse. The **Tab** and **Arrow** keys can also be used for dialog navigation.

See "[From File...](#)" on page 2473 in **Recall, State**, for a full description of this dialog and menu.

| | |
|----------------------|--|
| Key Path | Recall, Data |
| Notes | The key location is mode-dependent and will vary. Brings up Open dialog for recalling a <mode specific> Save Type |
| Initial S/W Revision | Prior to A.02.00 |

Data (Import)

Importing a data file loads data that was previously saved from the current measurement or from other measurements and/or modes that produce compatible data files. The Import Menu only contains Data Types that are supported by the current measurement.

Since the commonly exported data files are in .csv format, the data can be edited by the user prior to importing. This allows you to export a data file, manipulate the data in Excel (the most common PC Application for manipulating .csv files) and then import it.

Importing Data loads measurement data from the specified file into the specified or default destination, depending on the data type selected. Selecting an Import Data menu key will not actually cause the importing to occur, since the analyzer still needs to know from where to get the data. Pressing the Open key in this menu brings up the Open dialog and Open menu that provides you with the options from where to recall the data. Once a filename has been selected or entered in the Open menu, the recall occurs as soon as the Open button is pressed.

| | |
|----------------------|--|
| Key Path | Recall |
| Mode | All |
| Notes | The menu is built from whatever data types are available for the mode. Some keys will be missing completely, so the key locations in the sub-menu will vary. No SCPI command directly controls the Data Type that this key controls. The Data Type is included in the MMEM:LOAD commands. |
| Dependencies | If a file type is not used by a certain measurement, it is grayed out for that measurement. The key for a file type will not show at all if there are no measurements in the Mode that support it. |
| Preset | Is not affected by Preset or shutdown, but is reset during Restore Mode Defaults |
| Readback | The data type that is currently selected |
| Initial S/W Revision | Prior to A.02.00 |

Masks

This key enables you to recall a preset mask file from the list. It is only available in SEM measurement under the Data menu: Limit Mask. Limit Mask enables setting a preset limit mask for 802.11p 5MHz and 10MHz system.

You cannot change or create the preset mask file since it is a binary file. This key is valid for the Spectrum Emission Mask measurement.

File location: "My Documents\WLAN\data\masks"

Note that "**My Documents**" is an alias to a directory and its location depends on which user is logged in. At XSA start up, all of the limit mask files in the current user's "My Documents\WLAN\data\masks" directory are overwritten.

File type: Binary

Filename:

11p_5MHz_A.mask

11p_5MHz_B.mask

11p_5MHz_C.mask

11p_5MHz_D.mask

11p_10MHz_A.mask

11p_10MHz_B.mask

11p_10MHz_C.mask

11p_10MHz_D.mask

File extension: .mask

Selecting OPEN under the Import Data menu, opens the above directory enabling you to select a mask file.

Example:

File Location: My Documents/WLAN/data/masks

File Name: 11p_5MHz_A.mask

| | |
|--------------------------|----------------------------------|
| parameter_table_23.52557 | 52.93253 |
| Key Path | Recall, Data |
| Mode | WLAN |
| Remote Command | MMEMoRY:LOAD:MASK <string> |
| Example | MMEM:LOAD:MASK "11p_5MHz_A.mask" |
| Initial S/W Revision | A.11.00 |
| Help Map ID | 45559 |

Capture Buffer

Capture buffer functionality is only available when measurement is Mod Accuracy and radio standard is not 802.11ac 80+80MHz. The captured data is raw data which is not processed.

| | |
|------------------------------|---|
| parameter_table_ 23.52557 | 52.93253 |
| Key Path | Recall, Data |
| Mode | WLAN |
| Example | MMEM:LOAD:CAPT "MyCaptureData.bin" This loads the file of capture data (on the default file directory path) into the instrument. |
| Dependencies | Capture buffer data is only available when measurement is Mod Accuracy and radio standard is not 802.11ac 80+80MHz. In other situation, this key is grayed out. |
| Initial S/W Revision | A.11.00 |
| Help Map ID | 45560 |

Open...

When you press "Open", the analyzer brings up a Windows dialog and a menu entitled "**File Open.**" This menu allows you to navigate to the various fields in the Windows dialog without using a keyboard or mouse. The **Tab** and **Arrow** keys can also be used for dialog navigation.

See "[From File...](#)" on page 2473 in **Recall, State**, for a full description of this dialog and menu.

| | |
|----------------------|--|
| Key Path | Recall, Data |
| Notes | The key location is mode-dependent and will vary. Brings up Open dialog for recalling a <mode specific> Save Type |
| Initial S/W Revision | Prior to A.02.00 |

Restart

The Restart function restarts the current sweep, or measurement, or set of averaged/held sweeps or measurements. If you are Paused, pressing Restart does a Resume.

The Restart function is accessed in several ways:

- Pressing the Restart key
- Sending the remote command INIT:IMMEDIATE
- Sending the remote command INIT:RESTART

See "[More Information](#)" on page 1936

| Key Path | Front-panel key |
|--------------------------------------|--|
| Remote Command | :INITiate[:IMMEDIATE] :INITiate:RESTART |
| Example | :INIT:IMM :INIT:REST |
| Notes | :INITiate:RESTART and :INITiate:IMMEDIATE perform exactly the same function. |
| Couplings | Resets average/hold count k. For the first sweep overwrites all active (update=on) traces with new current data. For application modes, it resets other parameters as required by the measurement. |
| Status Bits/OPC dependencies | This is an Overlapped command. The STATus:OPERation register bits 0 through 8 are cleared. The STATus:QUESTionable register bit 9 (INTEgrity sum) is cleared. The SWEEPING bit is set. The MEASURING bit is set. |
| Backwards Compatibility Notes | For Spectrum Analysis mode in ESA and PSA, the Restart hardkey and the INITiate:RESTART command restart trace averages (displayed average count reset to 1) for a trace in Clear Write , but did not restart Max Hold and Min Hold . In the X-Series, the Restart hardkey and the INITiate:RESTART command restart not only Trace Average , but MaxHold and MinHold traces as well. For wireless comms modes in ESA and PSA, the Restart hardkey and the INITiate:RESTART command restart every measurement, which includes all traces and numeric results. There is no change to this operation. |
| Initial S/W Revision | Prior to A.02.00 |

More Information

The **Restart** function first aborts the current sweep/measurement as quickly as possible. It then resets the sweep and trigger systems, sets up the measurement and initiates a new data measurement sequence with a new data acquisition (sweep) taken once the trigger condition is met.

If the analyzer is in the process of aligning when **Restart** is executed, the alignment finishes before the restart function is performed.

Even when set for Single operation, multiple sweeps may be taken when Restart is pressed (for example, when averaging/holding is on). Thus when we say that **Restart** "restarts a measurement," we may mean:

- It restarts the current sweep
- It restarts the current measurement
- It restarts the current set of sweeps if any trace is in Trace Average, Max Hold or Min Hold
- It restarts the current set of measurements if Averaging, or Max Hold, or Min Hold is on for the measurement
- depending on the current settings.

With **Average/Hold Number** (in **Meas Setup** menu) set to 1, or Averaging off, or no trace in Trace Average or Hold, a single sweep is equivalent to a single measurement. A single sweep is taken after the trigger condition is met; and the analyzer stops sweeping once that sweep has completed. However, with **Average/Hold Number** >1 and at least one trace set to **Trace Average, Max Hold, or Min Hold (SA Measurement)** or **Averaging on (most other measurements)**, multiple sweeps/data acquisitions are taken for a single measurement. The trigger condition must be met prior to each sweep. The sweep is stopped when the average count k equals the number N set for **Average/Hold Number**. A measurement average usually applies to all traces, marker results, and numeric results; but sometimes it only applies to the numeric results.

Once the full set of sweeps has been taken, the analyzer will go to idle state. To take one more sweep without resetting the average count, increment the average count by 1, by pressing the step up key while **Average/Hold Number** is the active function, or sending the remote command `CALC:AVER:TCON UP`.

Save

The **Save** menu lets you choose what you want to save and where you want to save it. Among the types of files you can save are **States**, **Traces**, and **Screen Images**. In addition, an **Export (Data)** option lets you save a number of data types as CSV files for easy import into Excel and other spreadsheet programs.

| | |
|-----------------------------|---|
| Key Path | Front-panel key |
| Mode | All |
| Notes | No remote command for this key specifically, but the :MMEM:STORe command is available for specific file types. An example is :MMEM:STOR:STATe <filename>. |
| Initial S/W Revision | Prior to A.02.00 |

State

The Save State menu lets you choose a register or file for saving the state.

The content of a state file includes all of the settings and data required to return the analyzer as closely as possible to the Mode it was in, with the exact settings which were in place, when the save occurred. The Mode settings in each state file include the settings that are affected by Mode Preset, as well as the additional settings affected by Restore Mode Defaults; all of the Mode's settings. In addition, all of the settings of the **Input/Output** system are included, even though they are outside of the Mode's state, because they are needed to restore the complete setup. Persistent **System** settings (for example, Verbose SCPI) are not affected by either Mode Preset or Restore Mode Defaults, nor are they included in a saved State file.

After the save completes, the message "File <filename> saved" or "State Register <register number> saved" is displayed.

For rapid saving, the State menu lists 16 registers to save to. Pressing a Register key initiates the save. You can also select a file to save to.

The default path for all State Files is:

My Documents\<<mode name>\state

where <mode name> is the parameter used to select the mode with the INST:SEL command (for example, SA for the Spectrum Analyzer).

| | |
|-----------------------|---|
| Key Path | Save |
| Mode | All |
| Remote Command | :MMEMory:STORe:STATe <filename> |
| Example | MMEM:STOR:STATe "MyStateFile.state" This stores the current instrument state data in the file MyStateFile.state in the default directory. |
| Notes | Both single and double quotes are supported for any filename parameter over remote. After saving to a register, that register's menu key is updated with the date the time, unless a custom label has been entered for that key. After saving to a register, you remain in the Save State menu, so that you can see the Register key |

update. After saving to a file, the analyzer automatically returns to the previous menu and any Save As dialog goes away.

| | |
|-------------------------------------|-----------------------------------|
| Backwards Compatibility SCPI | :MMEMoRY:STORe:STATe 1,<filename> |
| Initial S/W Revision | Prior to A.02.00 |

To File . . .

When you press “To File”, the analyzer brings up a Windows dialog and a menu entitled “**Save As.**” This menu allows you to navigate to the various fields in the Windows dialog without using a keyboard or mouse. The **Tab** and **Arrow** keys can also be used for dialog navigation.

The Listed below

are the functions of the various fields in the dialog, and the corresponding softkeys:

Save

Performs the save to the specified file of the selected type. If the file already exists, a dialog will appear that allows you to replace the existing file by selecting **OK**, or you can **Cancel** the request. If you select **OK**, the file will be overwritten. Using the C: drive is strongly discouraged, since it runs the risk of being overwritten during an instrument software upgrade.

While the save is being performed, the floppy icon appears briefly in the Meas bar.

File/Folder List

Enables you to navigate to the center of the dialog that contains the list of files and folders. Once here you can get information about the file and use the tab keys to navigate to the other fields in the dialog, such as Save In.

Save In

The Save In field shows the path to which the file will be saved and allows you to change the path using the up and down arrow keys to navigate to other paths; the Enter key to open a directory; and the Backspace key to go back one directory. The **Save In field** defaults to the default path for this type of file and remembers the last path you used to save this type of file. There is no softkey for directly navigating to the Save In field but you can use left tab to get here from the File/Folder List.

User specified paths are remembered when you leave and return to a Mode and are reset back to the default using **Restore Mode Defaults**.

File Name

The **File Name** field is initially loaded with an automatically generated filename specific to the appropriate Save Type. The automatically generated filename is guaranteed not to conflict with any filename currently in the directory. You may replace or modify this filename using the File Name key. See the ["Quick Save " on page 2469](#) documentation for more on the automatic file naming algorithm.

When you press the **File Name** key the analyzer displays the Alpha Editor. Use the knob to choose the letter to add and the front-panel Enter key to add the letter to the file name. The BK character moves you back and the FW character moves you forward in the filename. The Select key on the front panel generates a space character. When you are done entering the filename press the **Done** softkey. This returns back to the **File Open** dialog and menu, but does not cause the save to occur.

Save As Type

This field shows the file suffix for the type of file you have selected to save. For example, if you navigated here while saving State, "Mode state (*.state)" is in the field. If you navigated here from saving Trace, ""Mode state (*.trace)" is in the field. If you navigated here while exporting a trace data file, "Trace Data (*.csv)" is in the field. For some file types, there is more than one choice in the dropdown, which you can select by using the up and down arrow keys and Enter.

Up One Level

This key corresponds to the icon of a folder with the up arrow that is in the tool bar of the dialog. When pressed, it causes the file and folder list to navigate up one level in the directory structure. The Backspace key does the same thing.

Create New Folder

This key corresponds to the icon of a folder with the "*" that is in the tool bar of the dialog. When pressed, a new folder is created in the current directory with the name **New Folder** and you can enter a new folder name using the Alpha Editor.

Cancel

This key corresponds to the **Cancel** selection in the dialog. It causes the current **Save As** request to be cancelled. The ESC key does the same thing.

| | |
|----------------------|---|
| Key Path | Save, State |
| Mode | All |
| Notes | Brings up Save As dialog for saving a State Save Type |
| Initial S/W Revision | Prior to A.02.00 |

Edit Register Names

You may enter a custom name on any of the Register keys, to help you remember what you are using that state to save. To do this, press the **Edit Register Names** key, choose the register whose name you wish to edit, and then enter the desired label using the Alpha Editor or an external PC keyboard.

The maximum number of characters that can be added is 30. In most cases, 30 characters will fit on two lines of the key.

See "[More Information](#)" on page 1941

| | |
|-----------------------|--|
| Key Path | Save, State |
| Mode | All |
| Remote Command | :MMEMory:REGister:STATe:LABel <reg number>,"label" :MMEMory:REGister:STATe:LABel? <reg number> |
| Example | :MMEM:REG:STAT:LAB 1,"my label" |
| Notes | <reg number> is an integer from 1 to 16. If the SCPI specifies an invalid register number an error message is generated, -222,"Data out of range;Invalid register label number" "label" is a string from 0 to 30 characters in length. If a label exceeds 30 characters, an error message is generated, -150,"String data error;Label clipped to 30 characters" "label" of length 0 erases the custom label and restores the default (time and date) label. E.g.: :MMEM:REG:STAT:LAB 1,"" |
| Dependencies | N9060A-7FP or N9060B-2FP license required to edit the register names. When the feature is not licensed, sending this command generates an error, -221,"Settings conflict;Option not available" |
| Preset | The names are unaffected by Preset or power cycle but are set to the default label (time and date) on a "Restore System Defaults->Misc" |
| Initial S/W Revision | A.11.00 |

More Information

When you edit one of the register names, the time and date field will be replaced by the custom name.

If you delete all the characters in the custom name, it restores the default (time and date).

The register names are stored within the state files, but they are not part of the instrument state; that is, once you have edited a register name, loading a new state will not change that register name. Another consequence of this is that the names will be persistent through a power cycle. Also, if a named state file is transferred to another analyzer, it will bring its custom name along with it.

If you try to edit the name of an empty register, the analyzer will first save the state to have a file to put the name in. If you load a named state file into an analyzer with older firmware it will ignore the metadata.

The *SAV and *RCL commands will not be affected by the custom register names, nor will the MMEM commands.

Register 1 thru Register 16

Selecting any one of these register menu keys causes the State of the currently active mode to be saved to the specified Register. The registers are provided for rapid saving and recalling, since you do not need to specify a filename or navigate to a file. Each of the register menu keys annotates whether it is empty or at what date and time it was last modified. In addition, you can use the **Edit Register Names** key to enter custom names for each register.

Although these 16 registers are the only registers available from the front panel, there are 128 state registers available in the instrument. Registers 17–128 are only available from the SCPI interface, using the *SAV command.

There is one set of 128 state registers in the instrument, not one set for each Mode. When a state is saved, the Mode it was saved from is saved with it; then when it is recalled, the instrument switches to that Mode.

After the save completes, the corresponding register menu key annotation is updated with the date and time and the message "Register <register number> saved" is displayed.

| | |
|--------------------------|--|
| Key Path | Save, State |
| Mode | All |
| Example | *SAV 1 |
| Range | 1–16 from front panel, 1–128 from SCPI |
| Readback | Date and time with seconds resolution are displayed on the key OR A custom name of up to 30 characters entered using the Edit Register Names key OR “(empty)” if no prior save operation has been performed to this register. |
| Initial S/W Revision | Prior to A.02.00 |
| Modified at S/W Revision | A.11.00 |

Register 1 thru Register 16

Selecting any one of these register menu keys causes the State of the currently active mode to be saved to the specified Register. The registers are provided for rapid saving and recalling, since you do not need to specify a filename or navigate to a file. Each of the register menu keys annotates whether it is empty or at what date and time it was last modified. In addition, you can use the **Edit Register Names** key to enter custom names for each register.

Although these 16 registers are the only registers available from the front panel, there are 128 state registers available in the instrument. Registers 17–128 are only available from the SCPI interface, using the *SAV command.

There is one set of 128 state registers in the instrument, not one set for each Mode. When a state is saved, the Mode it was saved from is saved with it; then when it is recalled, the instrument switches to that Mode.

After the save completes, the corresponding register menu key annotation is updated with the date and time and the message "Register <register number> saved" is displayed.

| Initial S/W Revision | Prior to A.02.00 |
| Modified at S/W Revision | A.11.00 |

Mass Storage Catalog (Remote Command Only)

| | |
|-----------------------|---|
| Key path | SCPI Only |
| Remote Command | :MMEMory:CATalog? [<directory_name>] |
| Notes | The string must be a valid logical path. Queries disk usage information (drive capacity, free space available) and obtains a list of files and directories in a specified directory in the following format: <numeric_value>,<numeric_value>,{<file_entry>} It returns two numeric parameters and as many strings as there are files and directories. The first parameter indicates the total amount of storage currently used in bytes. The second parameter indicates the total amount of storage available, also in bytes. The <file_entry> is a string. Each <file_entry> indicates the name, type, and size of one file in the directory list: <file_name>,<file_type>,<file_size> As the windows file system has an extension that indicates file type, <file_type> is always empty. <file_size> provides the size of the file in bytes. For directories, <file_entry> is surrounded by square brackets and both <file_type> and <file_size> are empty |
| Initial S/W Revision | Prior to A.02.00 |

Mass Storage Change Directory (Remote Command Only)

| | |
|-----------------------|--|
| Key path | SCPI Only |
| Remote Command | :MMEMory:CDIRectory [<directory_name>] :MMEMory:CDIRectory? |

| | |
|----------------------|---|
| Notes | <p>The string must be a valid logical path.</p> <p>Changes the default directory for a mass memory file system. The <directory_name> parameter is a string. If no parameter is specified, the directory is set to the *RST value.</p> <p>At *RST, this value is set to the default user data storage area, that is defined as System.Environment.SpecialFolder.Personal.</p> <p>Query returns full path of the default directory.</p> |
| Initial S/W Revision | Prior to A.02.00 |

Mass Storage Copy (Remote Command Only)

| | |
|-----------------------|--|
| Key path | SCPI Only |
| Remote Command | :MMEMory:COpy <string>,<string>[,<string>,<string>] |
| Notes | <p>The string must be a valid logical path.</p> <p>Copies an existing file to a new file or an existing directory to a new directory.</p> <p>Two forms of parameters are allowed. The first form has two parameters. In this form, the first parameter specifies the source, and the second parameter specifies the destination.</p> <p>The second form has four parameters. In this form, the first and third parameters specify the source. The second and fourth parameters specify the directories. The first pair of parameters specifies the source. The second pair specifies the destination. An error is generated if the source doesn't exist or the destination file already exists.</p> <p>This command will generate an "access denied" error if the destination is a restricted folder (e.g., C:\Windows) and the current user does not have Power User or Administrator privileges.</p> |

Mass Storage Device Copy (Remote Command Only)

This command transfers data to/from a file and a peripheral device.

| | |
|-----------------------|---|
| Key path | SCPI Only |
| Remote Command | :MMEMory:COpy:DEvice <source_string>,<dest_string> |
| Notes | <p>The strings must be a valid logical path or a valid device keyword. If the dest_string is a device keyword, the data is copied from the source file to the device. If the source_string is a device keyword, the data is copied to the source file from the device.</p> <p>Valid device keywords are:</p> <p>SNS (smart noise source)</p> <p>An error is generated if the file or device is not found.</p> |

Mass Storage Delete (Remote Command Only)

| | |
|-----------------------|--|
| Key path | SCPI Only |
| Remote Command | :MMEMory:DElete <file_name>[,<directory_name>] |

| | |
|----------------------|---|
| Notes | The string must be a valid logical path. Removes a file from the specified directory. The <file_name> parameter specifies the file name to be removed. This command will generate an “access denied” error if the file is in a restricted folder (e.g., C:\Windows) and the current user does not have Power User or Administrator privileges. |
| Initial S/W Revision | Prior to A.02.00 |

Mass Storage Data (Remote Command Only)

Creates a file containing the specified data OR queries the data from an existing file.

| | |
|-----------------------|--|
| Key path | SCPI Only |
| Remote Command | :MMEMory:DATA <file_name>, <data> :MMEMory:DATA? <file_name> |
| Notes | The string must be a valid logical path. The command form is MMEMory:DATA <file_name>,<data>. It loads <data> into the file <file_name>. <data> is in 488.2 block format. <file_name> is string data. The query form is MMEMory:DATA? <file_name> with the response being the associated <data> in block format. |
| Initial S/W Revision | Prior to A.02.00 |

Mass Storage Make Directory (Remote Command Only)

| | |
|-----------------------|---|
| Key path | SCPI Only |
| Remote Command | :MMEMory:MDIRectory <directory_name> |
| Notes | The string must be a valid logical path. Creates a new directory. The <directory_name> parameter specifies the name to be created. This command will generate an “access denied” error if the new directory would be in a restricted folder (e.g., C:\Windows) and the current user does not have Power User or Administrator privileges. |
| Initial S/W Revision | Prior to A.02.00 |

Mass Storage Move (Remote Command Only)

| | |
|-----------------------|---|
| Key path | SCPI Only |
| Remote Command | :MMEMory:MOVE <string>,<string>[,<string>,<string>] |
| Notes | The string must be a valid logical path. Moves an existing file to a new file or an existing directory to a new directory. Two forms of parameters are allowed. The first form has two parameters. In this form, the first parameter specifies the source, and the second parameter specifies the destination. The second form has four parameters. In this form, the first and third parameters specify the source. |

| | |
|----------------------|--|
| | The second and fourth parameters specify the directories. The first pair of parameters specifies the source. The second pair specifies the destination. An error is generated if the source doesn't exist or the destination file already exists. This command will generate an "access denied" error if the destination is a restricted folder (e.g., C:\Windows) and the current user does not have Power User or Administrator privileges. |
| Initial S/W Revision | Prior to A.02.00 |

Mass Storage Remove Directory (Remote Command Only)

| | |
|-----------------------|---|
| Key path | SCPI Only |
| Remote Command | :MMEMory:RDIRECTory <directory_name> |
| Notes | The string must be a valid logical path. Removes a directory. The <directory_name> parameter specifies the directory name to be removed. All files and directories under the specified directory shall also be removed. This command will generate an "access denied" error if the folder is a restricted folder (e.g., C:\Windows) or is in a restricted folder and the current user does not have Power User or Administrator privileges. |
| Initial S/W Revision | Prior to A.02.00 |

Sequences

These keys allow you to save a Tab separated or CSV file of the setup parameters required to build a Sequence.

In order to save you must select the Save As button and choose a destination folder.

| | |
|-----------------------|--|
| Key Path | Save, Sequences |
| Mode | All |
| Remote Command | :MMEM:STOR:SEQuences: SLIST ALIST SAAList SSTep "MySequence.txt" |
| Example | :MMEM:STOR:SEQ:SLIST "MySequence.txt" |
| Notes | Available file types are: –CSV (Comma delimited) (*.csv) –Text (Tab delimited) (*.txt) |
| Initial S/W Revision | A.05.00 |

Source Sequence

The list of parameters, that configure steps, that makes up a sequence for the Source.

The Source sequence is a sequence of flexible configurable steps that can be set anywhere in the instruments frequency range.

| | |
|----------------------|--------------------------------------|
| Key Path | Save, Sequences |
| Example | :MMEM:STOR:SEQ:SLIS "MySequence.txt" |
| Dependencies | Only available in XOBT |
| Initial S/W Revision | A.05.00 |

Save As . . .

This menu lets you select the location where you can save the Sequence. This menu is a standard Windows® dialog with Save As menu keys. The "File Name" field in the Save As dialog is initially loaded with an automatically generated filename specific to the appropriate Save Type. The automatically generated filename is guaranteed not to conflict with any filename currently in the directory. You may replace or modify this filename using the File Name softkey. See the Quick Save key documentation for more on the automatic file naming algorithm.

The default path for all Sequence Files is:

My Documents\Sequences

| | |
|----------------------|--|
| Key Path | Save, Sequences |
| Mode | All |
| Notes | Brings up Save As dialog for saving a Sequence Save Type |
| Initial S/W Revision | A.05.00 |

Data (Export)

Exporting a data file stores data from the current measurement to mass storage files. The Export Menu only contains data types that are supported by the current measurement.

Since the commonly exported data files are in .csv format, the data can be edited by you prior to importing. This allows you to export a data file, manipulate the data in Excel (the most common PC Application for manipulating .csv files) and then import it.

Selecting an Export Data menu key will not actually cause the exporting to occur, since the analyzer still needs to know where you wish to save the data. Pressing the Save As key in this menu brings up the Save As dialog and Save As menu that allows you to specify the destination file and directory. Once a filename has been selected or entered in the Open menu, the export will occur as soon as the Save key is pressed.

| | |
|----------|--|
| Key Path | Save |
| Mode | All |
| Notes | The menu is built from whatever data types are available for the mode. So the key locations in the sub menu will vary. No SCPI command directly controls the Data Type that this key controls. The Data Type is included in |

| | |
|----------------------|---|
| | the MMEM:STOR commands. |
| Dependencies | If a file type is not used by a certain measurement, that type is grayed out for that measurement. The key for a file type will not show at all if there are no measurements in the Mode that support it. |
| Preset | Is not affected by a Preset or shutdown, but is reset during Restore Mode Defaults |
| Readback | The data type that is currently selected |
| Initial S/W Revision | Prior to A.02.00 |

Meas Results

| | |
|--------------------------|---|
| parameter_table_23.52557 | 52.93253 |
| Key Path | Save, Data |
| Mode | WLAN |
| Example | MMEM:STOR:RES "MyResultsFile.csv" This stores the measurement results data in the file MyResultsFile.xml in the default directory. |
| Initial S/W Revision | A.11.00 |
| Help Map ID | 45561 |

Capture Buffer

Capture buffer functionality is only available when measurement is Mod Accuracy and radio standard is not 802.11ac 80+80MHz. The captured data is raw data which is not processed.

| | |
|--------------------------|--|
| parameter_table_23.52557 | 52.93253 |
| Key Path | Save, Data |
| Mode | WLAN |
| Example | MMEM:STOR:CAPT "MyCaptureData.bin" This stores the capture data in the file MyCaptureData.bin in the default directory. |
| Dependencies | Capture buffer data is only available when measurement is Mod Accuracy and radio standard is not 802.11ac 80+80MHz. In other measurements, this key is grayed out. |
| Initial S/W Revision | A.11.00 |
| Help Map ID | 45562 |

Save As . . .

When you press "Save As", the analyzer brings up a Windows dialog and a menu entitled "**Save As.**" This menu allows you to navigate to the various fields in the Windows dialog without using a keyboard or mouse. The **Tab** and **Arrow** keys can also be used for dialog navigation.

See "To File . . ." on page 2484 in **Save, State** for a full description of this dialog and menu.

The default path for saving files is:

For all of the Trace Data Files:

My Documents\<<mode name>\data\traces

For all of the Limit Data Files:

My Documents\<<mode name>\data\limits

For all of the Measurement Results Data Files:

My Documents\<<mode name>\data\<<measurement name>\results

For all of the Capture Buffer Data Files:

My Documents\<<mode name>\data\captureBuffer

| Key Path | Save, Data |
|----------------------|--|
| Mode | All |
| Notes | The key location is mode-dependent and will vary. Brings up the Save As dialog for saving a <mode specific> Save Type. The save is performed immediately and does not wait until the measurement is complete. |
| Initial S/W Revision | Prior to A.02.00 |

Screen Image

Pressing Screen Image accesses a menu of functions that enable you to specify a format and location for the saved screen image. It brings up a menu that allows you to specify the color scheme of the Screen Image (Themes) or navigate to the Save As dialog to perform the actual save.

Screen Image files contain an exact representation of the analyzer display. They cannot be loaded back onto the analyzer, but they can be loaded into your PC for use in many popular applications.

The image to be saved is actually captured when the **Save** front panel key is pressed, and kept in temporary storage to be used if you ask for a Screen Image save. When the Screen Image key is pressed, a "thumbnail" of the captured image is displayed, as shown below:

When you continue on into the **Save As** menu and complete the Screen Image save, the image depicted in the thumbnail is the one that gets saved, showing the menus that were on the screen before going into the **Save** menus. The save is performed immediately and does not wait until the measurement is complete.

After you have completed the save, the **Quick Save** front-panel key lets you quickly repeat the last save performed, using an auto-named file, with the current screen data.

NOTE For versions previous to A.01.55, if you initiate a screen image save by navigating through the Save menus, the image that is saved will contain the Save menu softkeys, not the menus and the active function that were on the screen when you first pressed the Save front panel key.

| | |
|----------------------|--|
| Key Path | Save |
| Mode | All |
| Remote Command | :MMEMory:STORe:SCReem <filename> |
| Example | :MMEM:STOR:SCR "myScreen.png" This stores the current screen image in the file MyScreenFile.png in the default directory. |
| Initial S/W Revision | Prior to A.02.00 |

Themes

Accesses a menu of functions that enable you to choose the theme to be used when saving the screen image.

The **Themes** option is the same as the **Themes** option under the **Display** and **Page Setup** dialogs. It allows you to choose between themes to be used when saving the screen image.

| | |
|--------------------------------------|---|
| Key Path | Save, Screen Image |
| Remote Command | :MMEMory:STORe:SCReen:THEMe TDColor TDMonochrome FCOLOR FMONochrome :MMEMory:STORe:SCReen:THEMe? |
| Example | :MMEM:STOR:SCR:THEM TDM |
| Preset | 3D Color; Is not part of Preset, but is reset by Restore Misc Defaults or Restore System Defaults All and survives subsequent running of the modes. |
| Readback | 3D Color 3D Mono Flat Color Flat Mono |
| Backwards Compatibility Notes | In ESA and PSA we offer the choice of "Reverse Bitmap" or "Reverse Metafile" when saving screen images. This is much like the "Flat Color" theme available in X-Series. Also, if you selected Reverse Bitmap AND a black & white screen image, that would be much like "Flat Monochrome". In other words, each of the X-Series themes has a similar screen image type in ESA/PSA. But they are not identical. |
| Initial S/W Revision | Prior to A.02.00 |

3D Color

Selects a standard color theme with each object filled, shaded and colored as designed.

| | |
|-----------------------------|-----------------------------------|
| Key Path | Save, Screen Image, Themes |
| Example | MMEM:STOR:SCR:THEM TDC |
| Readback | 3D Color |
| Initial S/W Revision | Prior to A.02.00 |

3D Monochrome

Selects a format that is like 3D color but shades of gray are used instead of colors.

| | |
|-----------------------------|-----------------------------------|
| Key Path | Save, Screen Image, Themes |
| Example | MMEM:STOR:SCR:THEM TDM |
| Readback | 3D Mono |
| Initial S/W Revision | Prior to A.02.00 |

Flat Color

Selects a format that is best when the screen is to be printed on an ink printer.

| | |
|-----------------|-----------------------------------|
| Key Path | Save, Screen Image, Themes |
|-----------------|-----------------------------------|

| | |
|----------------------|-------------------------|
| Example | MMEM:STOR:SCR:THEM FCOL |
| Readback | Flat Color |
| Initial S/W Revision | Prior to A.02.00 |

Flat Monochrome

Selects a format that is like Flat Color. But only black is used (no colors, not even gray), and no fill.

| | |
|----------------------|-----------------------------------|
| Key Path | Save, Screen Image, Themes |
| Example | MMEM:STOR:SCR:THEM FMON |
| Readback | Flat Mono |
| Initial S/W Revision | Prior to A.02.00 |

Save As...

When you press "Save As", the analyzer brings up a Windows dialog and a menu entitled "**Save As.**" This menu allows you to navigate to the various fields in the Windows dialog without using a keyboard or mouse. The **Tab** and **Arrow** keys can also be used for dialog navigation.

See "[To File . . .](#)" on page 2484 in **Save, State** for a full description of this dialog and menu.

The default path for Screen Images is

My Documents\`<mode name>`\screen.

where `<mode name>` is the parameter used to select the mode with the INST:SEL command (for example, SA for the Spectrum Analyzer).

| | |
|----------------------|--|
| Key Path | Save, Screen Image |
| Notes | Brings up Save As dialog for saving a Screen Image Save Type |
| Initial S/W Revision | Prior to A.02.00 |

Single (Single Measurement/Sweep)

Sets the analyzer for Single measurement operation. The single/continuous state is Meas Global, so the setting will affect all the measurements. If you are Paused, pressing **Single** does a Resume.

See "[More Information](#)" on page 1953

| | |
|-------------------------------|--|
| Key Path | Front-panel key |
| Example | :INIT:CONT OFF |
| Notes | See Cont key description. |
| Backwards Compatibility Notes | <p>For Spectrum Analysis mode in ESA and PSA, the Single hardkey and the INITiate:IMM switched from continuous measurement to single measurement and restarted sweeps and averages (displayed average count reset to 1), but did not restart Max Hold and Min Hold. In the X-Series, the Single hardkey and the INITiate:IMM command initiate a sweep/ measurement/ average sequence/hold sequence including MaxHold and MinHold.</p> <p>For Spectrum Analysis mode in ESA and PSA, the Single hardkey restarted the sweep regardless of whether or not you were in an active sweep or sweep sequence. In the X-Series, Restart does this but Single only restarts the sweep or sweep sequence if you are in the idle state.</p> <p>INIT[:IMM] in ESA & PSA Spectrum Analysis Mode does an implied ABORt. In some other PSA Modes, INIT[:IMM] is ignored if not in the idle state. . The X-Series follows the ESA/PSA SA Mode model, which may cause some Modes to have compatibility problems.</p> |
| Initial S/W Revision | Prior to A.02.00 |

More Information

See "[Restart](#)" on page 2481 for details on the INIT:IMMediate (Restart) function.

If you are already in single sweep, the INIT:CONT OFF command has no effect.

If you are already in Single Sweep, then pressing the **Single** key in the middle of a sweep does not restart the sweep or sequence. Similarly, pressing the **Single** key does not restart the sweep or sequence if the sweep is not in the idle state (for example, if you are taking a very slow sweep, or the analyzer is waiting for a trigger). Instead, it results in a message. "Already in Single, press Restart to initiate a new sweep or sequence". Even though pressing the **Single** key in the middle of a sweep does not restart the sweep, sending INIT:IMMediate does reset it.

To take one more sweep without resetting the average count, increment the average count by 1, by pressing the step up key while **Average/Hold Number** is the active function, or sending the remote command CALC:AVER:TCON UP.

Source

Opens a menu of keys that access various source configuration menus and settings. In the test set, pressing this key also causes the central view area to change and display the Source Control Main view.

| Key Path | Front-panel key |
|----------|-----------------|
|----------|-----------------|

RF Output

This parameter sets the source RF power output state.

| Key Path | Source |
|-----------------------------|---|
| Remote Command | :OUTPut[:EXTErnal][:STATe] ON OFF 1 0 :OUTPut[:EXTErnal][:STATe]? |
| Example | OUTP OFF OUTP? |
| Notes | <p>The EXTErnal node is shown in RD text so the SCPI remains the same between internal and external source control. However, for EXT we do not wish to document this node to the customer since we are controlling the internal source rather than the external source.</p> <p>This setting is for the independent mode and has no effect on the "List Sequencer" on page 2585. If the "Sequencer" on page 2586 is set to ON, the list sequencer controls the source output and this key will be grayed-out. And this setting will be none-forceful grey out on front panel to indicate out-of-scope. Non-forceful means user still can change this setting by SCPI but cannot change on front panel. When set to OFF will make source leave list sequencer and this setting will be black out and take effect immediately.</p> <p>When the RF Output is ON, an "RF" annunciator is displayed in the system settings panel. When the RF Output is turned Off, the RF annunciator is cleared. If the "Sequencer" on page 2586 is set to ON, the "RF" annunciator will be replaced by "SEQ" in the system settings panel, indicating that the output is controlled by the list sequencer.</p> |
| Preset | Off |
| Range | On Off |
| Initial S/W Revision | A.05.00 |

Amplitude

Allows you to access the Amplitude sub-menu.

| Key Path | Source |
|-----------------------------|--|
| Notes | <p>The sub-menu under this button is for independent mode and has no effect on "List Sequencer" on page 2585. If the "Sequencer" on page 2586 is set to ON, the list sequencer controls the source output and this key will be grayed-out on front panel to indicate out-of-scope. When you set "Sequencer" on page 2586 to Off will make source leave list sequencer and this button will be black out.</p> |
| Initial S/W Revision | A.05.00 |

RF Power

Allows you to adjust the power level of the source using the numeric keypad, step keys, or RPG. Pressing any digit, 0 through 9, on the numeric keypad brings up the unit terminator.

Please refer to the ["RF Power Range " on page 1956](#) table below for the valid ranges.

| Key Path | Source, Amplitude |
|-----------------------|--|
| Remote Command | :SOURce:POWer[:LEVel][:IMMediate][:AMPLitude] <ampl> :SOURce:POWer[:LEVel][:IMMediate][:AMPLitude]? |
| Example | :SOUR:POW -100 dBm |
| Notes | <p>Amplitude corrections can be specified for use with the source. In the event of amplitude corrections being applied, the valid ranges for the RF power do not change dependant on the current amplitude correction setting. If the combination of RF power + amplitude correction is higher or lower than the source output range, the Source Unleveled bit is set and the "Source Unleveled" indicator will appear on status panel to indicate that the source cannot maintain the output power that has been requested.</p> <p>When signal generator is unable to maintain the requested output level, the "Source Unleveled" indicator will appear on status panel. When the source output setting is restored to the normal range, the "Source Unleveled" is removed from status panel.</p> <p>Internal source has list sequence mode, which comprises of several steps which contain separate output power, frequency and waveform etc. When the source list sequence playing is complete, the last step keeps playing, and user can use this command to change the list sequence last step's output power.</p> <p>The multiport adapter RFIO TX ports and GPS ports cannot ensure power accuracy when power setting is lower than -130dBm, this power setting value is defined by the sum of RF Power setting and related amplitude correction value. But user settable value could be lower than this limit. When application detected there exists power setting lower than -130dBm on MPA RFIO TX ports, then popup warning message . When application detected there exists power setting lower than -130dBm on MPA GPS ports, then popup warning message . This is only warning message, and check is performed when RF is ON.</p> |
| Notes | The Min and Max value here defined UI settable amplitude range. This range is larger than actual amplitude range with level accuracy defined in spec. |
| Dependencies | The RF power is dependent on the RF output port and frequency, such that the current frequency and selected output port determine the valid range of power values. |
| Couplings | If "Real-Time AWGN" on page 2546 AWGN State is On and "ARB" on page 2535 ARB State is On, this setting will be adjusted to the value to maintain the AWGN power relationship defined by "Power Control Mode" on page 2547 Power Control Mode and other noise settings |
| Preset | -100 dBm |
| Min | The range of values depends on the current frequency and selected RF output port. Please refer to the "RF Power Range " on page 1956 table below for the valid ranges. |
| Max | The range of values depends on the current frequency and selected RF output port. Please refer to the "RF Power Range " on page 1956 table below for the valid ranges. |

| | |
|--------------------------|---|
| Initial S/W Revision | A.05.00 |
| Modified at S/W Revision | A.16.00 (Add couplings with AWGN state) |

RF Power Range

| RF Output Port | Frequency Range | Min Output Power | Max Output Power |
|-------------------|--------------------|------------------|------------------|
| High Power RF Out | 10 MHz ≤ f ≤ 6 GHz | -150 dBm | 20 dBm |
| RFIO 1 & RFIO 2 | 10 MHz ≤ f ≤ 6 GHz | -150 dBm | 0 dBm |
| GPS (Note2) | 10 MHz ≤ f ≤ 6 GHz | -150 dBm | 0 dBm |

Note: This is the UI power range, it's larger than actual spec.

Note2: GPS port is on the multiport adapter, or E6607C which has embedded MPA.

Set Reference Power

This key allows you to set the power reference. Pressing this key turns the power reference state to ON, sets the reference power value to the current RF output power, maintains this power at the RF output, and sets the displayed power to 0.00 dB. All subsequent RF power values entered under Source>Amplitude>RF Power are interpreted as being relative to this reference power.

When you use a power reference, the signal generator outputs an RF power that is set relative to the reference power by the value entered under Source>Amplitude>RF Power as follows:

Output power = reference power – entered power

Where:

reference power equals the original RF Power entered under Source>Amplitude>RF Power and set as the reference power

entered power equals a new value entered under Source>Amplitude>Amptd Offset

In addition, the displayed power value is the same as a new value entered under Source>Amplitude>RF Power.

NOTE

If Power Ref is set to ON with a reference value set, entering a value under Source>Amplitude>RF Power and pressing Set Reference Power will add that value to the existing Power Ref value.

If you wish to change the reference power value to a new value entered under Source>Amplitude>RF Power, first you must set Power Ref to OFF and then press Set Reference Power.

| | |
|----------------------|---|
| Key Path | Source, Amplitude |
| Dependencies | This key is unavailable, and is grayed out when the "List Sequencer" on page 2585 is turned ON. |
| Initial S/W Revision | A.05.00 |

Power Ref

This key allows you to toggle the state of the power reference.

When you use a power reference, the signal generator outputs an RF power that is set relative to the reference power by the value entered under Source>Amplitude>RF Power as follows:

Output power = reference power + entered power

Where:

reference power equals the original RF Power entered under Source>Amplitude>RF Power and set as the reference power

entered power equals a new value entered under Source>Amplitude>Amptd Offset

For more information on Reference Frequency refer to ["Set Reference Power " on page 2501](#)

| Key Path | Source, Amplitude |
|-----------------------|--|
| Remote Command | :SOURce:POWer:REFeRence <ampl> :SOURce:POWer:REFeRence? :SOURce:POWer:REFeRence:STATe OFF ON 0 1 :SOURce:POWer:REFeRence:STATe? |
| Example | :SOUR:POW:REF 0.00 dBm :SOUR:POW:REF:STATe ON |
| Dependencies | This setting is unavailable and is grayed out when the "List Sequencer" on page 2585 is turned ON. |
| Couplings | This value is coupled to the "Set Reference Power " on page 2501 key such that pressing the Set Reference Power key updates the reference power with the current output power. |
| Preset | 0.00 dBm OFF |
| Min | -125.00 dBm |
| Max | 10.00 dBm |
| Initial S/W Revision | A.05.00 |

Amptd Offset

Allows you to specify the RF output power offset value.

When the amplitude offset is set to zero (0) and you set a new offset value (positive or negative), the displayed amplitude value will change as follows and the RF output power will not change:

Displayed value = output power + offset value

Where:

output power equals the original RF Power entered under Source>Amplitude>RF Power

offset value equals the value entered under Source>Amplitude>Amptd Offset

When the amplitude offset is set to a value other than zero (0) and you enter a new RF power value under Source>Amplitude>RF Power, the displayed power will be the same as the value entered and the RF output power will be equal to the value entered minus the offset value as follows:

Output power = entered power – offset power

Displayed Power = output power + offset power

Displayed power = entered power

Where:

entered power equals the amplitude entered under Source>Amplitude>RF Power

offset power equals the value previously entered and set under Source>Amplitude>Amptd Offset

| Key Path | Source, Amplitude |
|-----------------------------|--|
| Remote Command | :SOURce:POWer[:LEVel][:IMMediate]:OFFSet <rel_amp1> :SOURce:POWer[:LEVel][:IMMediate]:OFFSet? |
| Example | :SOUR:POW:OFFS 0.00 dB |
| Dependencies | This setting is unavailable, and is grayed out when the List Sequencer is turned ON. |
| Preset | 0.00 dB |
| Min | -200.00 dB |
| Max | 200.00 dB |
| Initial S/W Revision | A.05.00 |

Modulation

Allows you to toggle the state of the modulation.

| Key Path | Source |
|-----------------------------|--|
| Remote Command | :OUTPut:MODulation[:STATe] ON OFF 1 0 :OUTPut:MODulation[:STATe]? |
| Example | :OUTP:MOD OFF |
| Notes | This setting is for independent mode and has no effect on "List Sequencer" on page 2585 . If the "Sequencer" on page 2586 is set to ON, the list sequencer controls the source output and this key will be grayed-out. And this setting will be none-forceful grey out on front panel to indicate out-of-scope. Non-forceful means user still can change this setting by SCPI but cannot change manually on front panel. When set to Off will make source leave list sequencer and this setting will be black out and take effect immediately. When the Modulation is ON, the "MOD" annunciator is displayed in the system settings panel. When the Modulation is turned Off, the "MOD" annunciator is cleared. If the "Sequencer" on page 2586 is set to ON, the "MOD" annunciator will be replaced by "SEQ" in the system settings panel indicating that the output is controlled by list sequencer. |
| Preset | Off |
| Range | On Off |
| Initial S/W Revision | A.05.00 |

Frequency

Allows you to access the Frequency sub-menu.

| Key Path | Source |
|----------------------|---|
| Notes | The sub-menu under this button is for independent mode and has no effect on "List Sequencer" on page 2585 . If the "Sequencer" on page 2586 is set to ON, the list sequencer controls the source output and this key will be grayed-out. And this button will be grey out on front panel to indicate out-of-scope. When set to Off will make source leave list sequencer and this button will be black out. |
| Initial S/W Revision | A.05.00 |

Frequency

Allows you to set the RF Output Frequency. You can adjust the frequency of the source using the numeric keypad, step keys, or RPG. Pressing any digit, 0 through 9, on the numeric keypad brings up the unit terminator.

| Key Path | Source, Frequency |
|-----------------------|---|
| Remote Command | :SOURce:FREQuency[:CW] <freq> :SOURce:FREQuency[:CW]? |
| Example | :SOUR:FREQ 1.00 GHz |
| Notes | Internal source has list sequence mode, which comprises of several steps which contain separate output power, frequency and waveform etc. When the source list sequence playing is complete, the last step keeps playing, and user can use this command to change the list sequence last step's output frequency. |
| Couplings | The frequency value is coupled to the current channel band and number, such that updates to the band and number will update the frequency value to the corresponding absolute frequency. |
| Preset | 1.00 GHz |
| Min | 10.00 MHz |
| Max | Hardware Dependant: Option 503 = 3.6 GHz Option 504 = 3.8 GHz Option 506 = 6.00 GHz |
| Initial S/W Revision | A.05.00 |

Channel

The frequency of the source can be specified by a channel number of a given frequency band. This key allows you to specify the current channel number. For the appropriate range of channel numbers for a given frequency band, refer to the following tables: **"GSM/EDGE Channel Number Ranges" on page 1960**,

"W-CDMA Channel Number Ranges" on page 1961, "CDMA 2000 / 1xEVDO Channel Number Ranges" on page 1962, and "LTE FDD Channel Number Ranges" on page 1964.

| | |
|-----------------------------|---|
| Key Path | Source, Frequency |
| Remote Command | :SOURce:FREQuency:CHANnels:NUMBer <int> :SOURce:FREQuency:CHANnels:NUMBer? |
| Example | :SOUR:FREQ:CHAN:NUMB 1 |
| Notes | This key is grayed out when the "Radio Standard" on page 2513 is set to NONE. This key is grayed out on E6630A. |
| Dependencies | This key is grayed out when the "Radio Standard" on page 2513 is set to NONE. This key is grayed out on E6630A. |
| Couplings | The channel number is coupled to the frequency value when the "Radio Standard" on page 2513 is not set to NONE. When the frequency value is changed, the channel number will increase or decrease to match the new frequency. If the frequency is not at an exact match for a channel number, the nearest channel number is displayed along with a greater than or less than sign to indicate the frequency is above or below the channel number. |
| Preset | 1 |
| Min | Please refer to the tables below for the valid ranges. |
| Max | Please refer to the tables below for the valid ranges. |
| Initial S/W Revision | A.05.00 |

GSM/EDGE Channel Number Ranges

| Band | Link (Device) | Range | Frequency (MHz) |
|----------|---------------|------------------------|---------------------------|
| P-GSM | Uplink (MS) | $1 \leq n \leq 124$ | $890.0 + 0.2*n$ |
| | Downlink (BS) | $1 \leq n \leq 124$ | $935.0 + 0.2*n$ |
| E-GSM | Uplink (MS) | $0 \leq n \leq 124$ | $890.0 + 0.2*n$ |
| | | $975 \leq n \leq 1023$ | $890.0 + 0.2*(n-1024)$ |
| | Downlink (BS) | $0 \leq n \leq 124$ | $935.0 + 0.2*n$ |
| | | $975 \leq n \leq 1023$ | $935.0 + 0.2*(n-1024)$ |
| DCS 1800 | Uplink (MS) | $512 \leq n \leq 885$ | $1710.200 + 0.20*(n-512)$ |
| | Downlink (BS) | $512 \leq n \leq 885$ | $1805.200 + 0.20*(n-512)$ |
| PCS 1900 | Uplink (MS) | $512 \leq n \leq 810$ | $1850.200 + 0.2*(n-512)$ |
| | Downlink (BS) | $512 \leq n \leq 810$ | $1930.200 + 0.2*(n-512)$ |

LTE FDD Channel Number Ranges

The carrier frequency in the uplink and downlink is designated by the E-UTRA Absolute Radio Frequency Channel Number (EARFCN) in the range 0 – 65535. The relation between EARFCN and the carrier

frequency in MHz for the downlink is given by the following equation, where FDL_low and NOffs-DL are given in table 5.4.4-1 and NDL is the downlink EARFCN.

$$FDL = FDL_low + 0.1(NDL - NOffs-DL)$$

The relation between EARFCN and the carrier frequency in MHz for the uplink is given by the following equation where FUL_low and NOffs-UL are given in table 5.4.4-1 and NUL is the uplink EARFCN.

$$FUL = FUL_low + 0.1(NUL - NOffs-UL)$$

| Band | Downlink | | Uplink | | | |
|------|---------------|----------|--------------|---------------|----------|---------------|
| | FDL_low (MHz) | NOffs-DL | Range of NDL | FUL_low (MHz) | NOffs-UL | Range of NUL |
| 1 | | 2110 | 0 | 0 - 599 | 1920 | 18000 - 18599 |
| 2 | | 1930 | 600 | 600 - 1199 | 1850 | 18600 - 19199 |
| 3 | | 1805 | 1200 | 1200 - 1949 | 1710 | 19200 - 19949 |
| 4 | | 2110 | 1950 | 1950 - 2399 | 1710 | 19950 - 20399 |
| 5 | | 869 | 2400 | 2400 - 2649 | 824 | 20400 - 20649 |

| 18 | | 860 | 5850 | 5850 - 5999 | 815 | 23850 - 23999 |

| Band | Downlink | Uplink | | | | |
|------|----------|--------|-------------|--------|-------|---------------|
| 19 | 875 | 6000 | 6000 – 6149 | 830 | 24000 | 24000 – 24149 |
| 20 | 791 | 6150 | 6150 – 6449 | 832 | 24150 | 24150 – 24449 |
| 21 | 1495.9 | 6450 | 6450 – 6599 | 1447.9 | 24450 | 24450 – 24599 |
| ... | | | | | | |
| 24 | 1525 | 7700 | 7700 – 8039 | 1626.5 | 25700 | 25700 – 26039 |
| 25 | 1930 | 8040 | 8040 – 8689 | 1850 | 26040 | 26040 – 26689 |
| 26 | 859 | 8690 | 8690 – 9039 | 814 | 26690 | 26690 – 27039 |
| ... | | | | | | |

Note: The channel numbers that designate carrier frequencies so close to the operating band edges that the carrier extends beyond the operating band edge shall not be used. This implies that the first 7, 15, 25, 50, 75 and 100 channel numbers at the lower operating band edge and the last 6, 14, 24, 49, 74 and 99 channel numbers at the upper operating band edge shall not be used for channel bandwidths of 1.4, 3, 5, 10, 15 and 20 MHz respectively.

LTE TDD Channel Number Ranges

The carrier frequency in the uplink and downlink is designated by the E-UTRA Absolute Radio Frequency Channel Number (EARFCN) in the range 0 – 65535. The relation between EARFCN and the carrier frequency in MHz for the downlink is given by the following equation, where FDL_low and NOffs-DL are given in table 5.4.4–1 and NDL is the downlink EARFCN.

$$FDL = FDL_low + 0.1(NDL - NOffs-DL)$$

The relation between EARFCN and the carrier frequency in MHz for the uplink is given by the following equation where FUL_low and NOffs-UL are given in table 5.4.4–1 and NUL is the uplink EARFCN.

$$FUL = FUL_low + 0.1(NUL - NOffs-UL)$$

| Band | Downlink | Uplink | | | | |
|---------------|----------|--------------|---------------|----------|--------------|---------------|
| FDL_low (MHz) | NOffs-DL | Range of NDL | FUL_low (MHz) | NOffs-UL | Range of NUL | |
| 33 | 1900 | 36000 | 36000 – 36199 | 1900 | 36000 | 36000 – 36199 |
| 34 | 2010 | 36200 | 36200 – 36349 | 2010 | 36200 | 36200 – 36349 |
| 35 | 1850 | 36350 | 36350 – 36949 | 1850 | 36350 | 36350 – 36949 |
| 36 | 1930 | 36950 | 36950 – 37549 | 1930 | 36950 | 36950 – 37549 |

| Band | Downlink | Uplink | | | | |
|------|----------|--------|---------------|------|-------|---------------|
| 37 | 1910 | 37550 | 37550 - 37749 | 1910 | 37550 | 37550 - 37749 |
| 38 | 2570 | 37750 | 37750 - 38249 | 2570 | 37750 | 37750 - 38249 |
| 39 | 1880 | 38250 | 38250 - 38649 | 1880 | 38250 | 38250 - 38649 |
| 40 | 2300 | 38650 | 38650 - 39649 | 2300 | 38650 | 38650 - 39649 |
| 41 | 2496 | 39650 | 39650 - 41589 | 2496 | 39650 | 39650 - 41589 |
| 42 | 3400 | 41590 | 41590 - 43589 | 3400 | 41590 | 41590 - 43589 |
| 43 | 3600 | 43590 | 43590 - 45589 | 3600 | 43590 | 43590 - 45589 |

Note: The channel numbers that designate carrier frequencies so close to the operating band edges that the carrier extends beyond the operating band edge shall not be used. This implies that the first 7, 15, 25, 50, 75 and 100 channel numbers at the lower operating band edge and the last 6, 14, 24, 49, 74 and 99 channel numbers at the upper operating band edge shall not be used for channel bandwidths of 1.4, 3, 5, 10, 15 and 20 MHz respectively.

TDSCDMA Channel Number Ranges

1.28 Mcps TDD Option

No TX-RX frequency separation is required as Time Division Duplex (TDD) is employed. Each subframe consists of 7 main timeslots where all main timeslots (at least the first one) before the single switching point are allocated DL and all main timeslots (at least the last one) after the single switching point are allocated UL.

The nominal channel spacing is 1.6 MHz, but this can be adjusted to optimise performance in a particular deployment scenario.

The carrier frequency is designated by the UTRA absolute radio frequency channel number (UARFCN). The value of the UARFCN in the IMT2000 band is defined in the general case as follows:

$$N_t = 5 * F \quad 0.0 \text{ MHz} \leq F \leq 3276.6 \text{ MHz}$$

where F is the carrier frequency in MHz

Additional channels applicable to operation in the frequency band defined in sub-clause 5.2(d) are defined via the following UARFCN definition:

$$N_t = 5 * (F - 2150.1 \text{ MHz}) \quad 2572.5 \text{ MHz} \leq F \leq 2617.5 \text{ MHz}$$

UARFCN

1.28 Mcps TDD Option

The following UARFCN range shall be supported for each band:

**Table: UTRA Absolute Radio
Frequency Channel Number 1.28
Mcps TDD Option**

| Frequency Band | Frequency Range | UARFCN Uplink and Downlink transmission |
|---|-----------------|---|
| For operation in frequency band as defined in subclause 5.2 (a) | 1900-1920 MHz | 9504 to 9596 |
| | 2010-2025 MHz | 10054 to 10121 |
| For operation in frequency band as defined in subclause 5.2 (b) | 1850-1910 MHz | 9254 to 9546 |
| | 1930-1990 MHz | 9654 to 9946 |
| For operation in frequency band as defined in subclause 5.2 (c) | 1910-1930 MHz | 9554 to 9646 |
| For operation in frequency band as defined in subclause 5.2 (d) | 2570-2620 MHz | 12854 to 13096 |
| For operation in frequency band as defined in subclause 5.2 (e) | 2300-2400 MHz | 11504 to 11996 |
| For operation in frequency band as defined in subclause 5.2 (f) | 1880-1920 MHz | 9404 to 9596 |

Radio Setup

Allows access to the sub-menus for selecting the radio standard and associated radio band. You can also set a frequency reference and offset.

This menu is greyed out when on E6630A. Radio band settings for GSM, cdma2000, and so on -- most of which are not actually supported in E6630A, which has three narrow frequency bands. So band settings are grayed out.

| Key Path | Source, Frequency |
|----------------------|-------------------|
| Initial S/W Revision | A.05.00 |

Radio Standard

Allows access to the channel band sub-menus to select the desired radio standard. When you have selected the radio standard, you can then set an active channel band. The radio standard and the active channel band allow you to use channel numbers to set frequency automatically.

| | |
|----------------------|---|
| Example | :SOUR:FREQ:CHAN:BAND PGSM |
| Notes | Set this setting to "NONE" will grey out "Channel" on page 2504 Channel |
| Initial S/W Revision | A.05.00 |

None

Selects no radio standard for use. When you have selected the radio standard to NONE, you cannot use channel numbers to set frequency automatically. You will need to set the frequency manually.

| | |
|----------------------|---|
| Key Path | Source, Frequency, Radio Setup, Radio Standard |
| Initial S/W Revision | A.05.00 |

GSM/EDGE

Sets GSM/EDGE as the radio standard for use and accesses the GSM/EDGE specific channel band sub-menus.

| | |
|----------------------|---|
| Key Path | Source, Frequency, Radio Setup, Radio Standard |
| Initial S/W Revision | A.05.00 |

P-GSM

Selects P-GSM as the active channel band.

| | |
|----------------------|---|
| Key Path | Source, Frequency, Radio Setup, Radio Standard, GSM/EDGE |
| Example | :SOUR:FREQ:CHAN:BAND PGSM |
| Initial S/W Revision | A.05.00 |

E-GSM

Selects E-GSM as the active channel band.

| | |
|----------------------|---|
| Key Path | Source, Frequency, Radio Setup, Radio Standard, GSM/EDGE |
| Example | :SOUR:FREQ:CHAN:BAND EGSM |
| Initial S/W Revision | A.05.00 |

R-GSM

Selects R-GSM as the active channel band.

| | |
|----------------------|---|
| Key Path | Source, Frequency, Radio Setup, Radio Standard, GSM/EDGE |
| Example | :SOUR:FREQ:CHAN:BAND RGSM |
| Initial S/W Revision | A.05.00 |

DCS 1800

Selects DCS 1800 as the active channel band.

| | |
|----------------------|---|
| Key Path | Source, Frequency, Radio Setup, Radio Standard, GSM/EDGE |
| Example | :SOUR:FREQ:CHAN:BAND DCS1800 |
| Initial S/W Revision | A.05.00 |

PCS 1900

Selects PCS 1900 as the active channel band.

| | |
|----------------------|---|
| Key Path | Source, Frequency, Radio Setup, Radio Standard, GSM/EDGE |
| Example | :SOUR:FREQ:CHAN:BAND PCS1900 |
| Initial S/W Revision | A.05.00 |

GSM 450

Selects GSM 450 as the active channel band.

| | |
|----------------------|---|
| Key Path | Source, Frequency, Radio Setup, Radio Standard, GSM/EDGE |
| Example | :SOUR:FREQ:CHAN:BAND GSM450 |
| Initial S/W Revision | A.05.00 |

GSM 480

Selects GSM 480 as the active channel band.

| | |
|----------------------|---|
| Key Path | Source, Frequency, Radio Setup, Radio Standard, GSM/EDGE |
| Example | :SOUR:FREQ:CHAN:BAND GSM480 |
| Initial S/W Revision | A.05.00 |

GSM 850

Selects GSM 850 as the active channel band.

| | |
|----------------------|---|
| Key Path | Source, Frequency, Radio Setup, Radio Standard, GSM/EDGE |
| Example | :SOUR:FREQ:CHAN:BAND GSM850 |
| Initial S/W Revision | A.05.00 |

GSM 700

Selects GSM 700 as the active channel band.

| | |
|----------------------|---|
| Key Path | Source, Frequency, Radio Setup, Radio Standard, GSM/EDGE |
| Example | :SOUR:FREQ:CHAN:BAND GSM700 |
| Initial S/W Revision | A.05.00 |

T-GSM 810

Selects T-GSM 810 as the active channel band.

| | |
|----------------------|---|
| Key Path | Source, Frequency, Radio Setup, Radio Standard, GSM/EDGE |
| Example | :SOUR:FREQ:CHAN:BAND T-GSM810 |
| Initial S/W Revision | A.05.00 |

WCDMA

Sets WCDMA as the radio standard for use and accesses the W-CDMA specific channel band sub-menus.

| | |
|----------------------|---|
| Key Path | Source, Frequency, Radio Setup, Radio Standard |
| Initial S/W Revision | A.05.00 |

Band I

Selects Band I as the active channel band.

| | |
|----------------------|--|
| Key Path | Source, Frequency, Radio Setup, Radio Standard, WCDMA |
| Example | :SOUR:FREQ:CHAN:BAND BANDI |
| Initial S/W Revision | A.05.00 |

Band II

Selects Band II as the active channel band.

| | |
|----------------------|--|
| Key Path | Source, Frequency, Radio Setup, Radio Standard, WCDMA |
| Example | :SOUR:FREQ:CHAN:BAND BANDII |
| Initial S/W Revision | A.05.00 |

Band III

Selects Band III as the active channel band.

| | |
|----------------------|--|
| Key Path | Source, Frequency, Radio Setup, Radio Standard, WCDMA |
| Example | :SOUR:FREQ:CHAN:BAND BANDIII |
| Initial S/W Revision | A.05.00 |

Band IV

Selects Band IV as the active channel band.

| | |
|----------------------|--|
| Key Path | Source, Frequency, Radio Setup, Radio Standard, WCDMA |
| Example | :SOUR:FREQ:CHAN:BAND BANDIV |
| Initial S/W Revision | A.05.00 |

Band V

Selects Band V as the active channel band.

| | |
|----------------------|--|
| Key Path | Source, Frequency, Radio Setup, Radio Standard, WCDMA |
| Example | :SOUR:FREQ:CHAN:BAND BANDV |
| Initial S/W Revision | A.05.00 |

Band VI

Selects Band VI as the active channel band.

| | |
|----------------------|--|
| Key Path | Source, Frequency, Radio Setup, Radio Standard, WCDMA |
| Example | :SOUR:FREQ:CHAN:BAND BANDVI |
| Initial S/W Revision | A.05.00 |

Band VII

Selects Band VII as the active channel band.

| | |
|----------------------|--|
| Key Path | Source, Frequency, Radio Setup, Radio Standard, WCDMA |
| Example | :SOUR:FREQ:CHAN:BAND BANDVII |
| Initial S/W Revision | A.05.00 |

Band VIII

Selects Band VIII as the active channel band.

| | |
|----------------------|--|
| Key Path | Source, Frequency, Radio Setup, Radio Standard, WCDMA |
| Example | :SOUR:FREQ:CHAN:BAND BANDVIII |
| Initial S/W Revision | A.05.00 |

Band IX

Selects Band IX as the active channel band.

| | |
|----------------------|--|
| Key Path | Source, Frequency, Radio Setup, Radio Standard, WCDMA |
| Example | :SOUR:FREQ:CHAN:BAND BANDIX |
| Initial S/W Revision | A.05.00 |

Band X

Selects Band X as the active channel band.

| | |
|----------------------|--|
| Key Path | Source, Frequency, Radio Setup, Radio Standard, WCDMA |
| Example | :SOUR:FREQ:CHAN:BAND BANDX |
| Initial S/W Revision | A.05.00 |

Band XI

Selects Band XI as the active channel band.

| | |
|----------------------|--|
| Key Path | Source, Frequency, Radio Setup, Radio Standard, WCDMA |
| Example | :SOUR:FREQ:CHAN:BAND BANDXI |
| Initial S/W Revision | A.05.00 |

Band XII

Selects Band XII as the active channel band.

| | |
|----------------------|--|
| Key Path | Source, Frequency, Radio Setup, Radio Standard, WCDMA |
| Example | :SOUR:FREQ:CHAN:BAND BANDXII |
| Initial S/W Revision | A.05.00 |

Band XIII

Selects band XIII as the active channel band.

| | |
|----------------------|--|
| Key Path | Source, Frequency, Radio Setup, Radio Standard, WCDMA |
| Example | :SOUR:FREQ:CHAN:BAND BANDXIII |
| Initial S/W Revision | A.05.00 |

Band XIV

Selects Band XIV as the active channel band.

| | |
|----------------------|--|
| Key Path | Source, Frequency, Radio Setup, Radio Standard, WCDMA |
| Example | :SOUR:FREQ:CHAN:BAND BANDXIV |
| Initial S/W Revision | A.05.00 |

CDMA 2000 / 1xEVDO

Sets CDMA 2000 / 1XEVDO as the radio standard for use and accesses the CDMA 2000/1xEVDO specific channel band sub-menus.

| | |
|----------------------|---|
| Key Path | Source, Frequency, Radio Setup, Radio Standard |
| Initial S/W Revision | A.05.00 |

US CELL

Selects US Cell as the active channel band.

| | |
|----------------------|---|
| Key Path | Source, Frequency, Radio Setup, Radio Standard, CDMA 2000 / 1xEVDO |
| Example | :SOUR:FREQ:CHAN:BAND USCELL |
| Initial S/W Revision | A.05.00 |

US PCS

Selects US PCS as the active channel band.

| | |
|----------------------|---|
| Key Path | Source, Frequency, Radio Setup, Radio Standard, CDMA 2000 / 1xEVDO |
| Example | :SOUR:FREQ:CHAN:BAND PCS |
| Initial S/W Revision | A.05.00 |

Japan Cell

Selects Japan Cell as the active channel band.

| | |
|----------------------|---|
| Key Path | Source, Frequency, Radio Setup, Radio Standard, CDMA 2000 / 1xEVDO |
| Example | :SOUR:FREQ:CHAN:BAND JAPAN |
| Initial S/W Revision | A.05.00 |

Korean PCS

Selects Korean PCS as the active channel band.

| | |
|----------------------|---|
| Key Path | Source, Frequency, Radio Setup, Radio Standard, CDMA 2000 / 1xEVDO |
| Example | :SOUR:FREQ:CHAN:BAND KOREAN |
| Initial S/W Revision | A.05.00 |

NMT 450

Selects NMT 450 as the active channel band.

| | |
|----------------------|---|
| Key Path | Source, Frequency, Radio Setup, Radio Standard, CDMA 2000 / 1xEVDO |
| Example | :SOUR:FREQ:CHAN:BAND NMT |
| Initial S/W Revision | A.05.00 |

IMT 2000

Selects IMT 2000 as the active channel band.

| | |
|----------------------|---|
| Key Path | Source, Frequency, Radio Setup, Radio Standard, CDMA 2000 / 1xEVDO |
| Example | :SOUR:FREQ:CHAN:BAND IMT2K |
| Initial S/W Revision | A.05.00 |

Upper 700

Selects Upper 700 as the active channel band.

| | |
|----------------------|---|
| Key Path | Source, Frequency, Radio Setup, Radio Standard, CDMA 2000 / 1xEVDO |
| Example | :SOUR:FREQ:CHAN:BAND UPPER |
| Initial S/W Revision | A.05.00 |

Secondary 800

Selects Secondary 800 as the active channel band.

| | |
|----------------------|---|
| Key Path | Source, Frequency, Radio Setup, Radio Standard, CDMA 2000 / 1xEVDO |
| Example | :SOUR:FREQ:CHAN:BAND SECOND |
| Initial S/W Revision | A.05.00 |

400 Euro PAMR

Selects 400 Euro PAMR as the active channel band.

| | |
|----------------------|---|
| Key Path | Source, Frequency, Radio Setup, Radio Standard, CDMA 2000 / 1xEVDO |
| Example | :SOUR:FREQ:CHAN:BAND PAMR400 |
| Initial S/W Revision | A.05.00 |

800 PAMR

Selects 800 PAMR as the active channel band.

| | |
|----------------------|---|
| Key Path | Source, Frequency, Radio Setup, Radio Standard, CDMA 2000 / 1xEVDO |
| Example | :SOUR:FREQ:CHAN:BAND PAMR800 |
| Initial S/W Revision | A.05.00 |

2.5GHz IMT EXT

Selects 2.5 GHz IMT EXT as the active channel band.

| | |
|----------------------|---|
| Key Path | Source, Frequency, Radio Setup, Radio Standard, CDMA 2000 / 1xEVDO |
| Example | :SOUR:FREQ:CHAN:BAND IMTEXT |
| Initial S/W Revision | A.05.00 |

US PCS 1.9GHz

Selects US PCS 1.9 GHz as the active channel band.

| | |
|----------------------|---|
| Key Path | Source, Frequency, Radio Setup, Radio Standard, CDMA 2000 / 1xEVDO |
| Example | :SOUR:FREQ:CHAN:BAND PCS1DOT9G |
| Initial S/W Revision | A.05.00 |

AWS

Selects AWS as the active channel band.

| | |
|----------------------|---|
| Key Path | Source, Frequency, Radio Setup, Radio Standard, CDMA 2000 / 1xEVDO |
| Example | :SOUR:FREQ:CHAN:BAND AWS |
| Initial S/W Revision | A.05.00 |

US 2.5GHz

Selects US 2.5 GHz as the active channel band.

| | |
|----------------------|---|
| Key Path | Source, Frequency, Radio Setup, Radio Standard, CDMA 2000 / 1xEVDO |
| Example | :SOUR:FREQ:CHAN:BAND US2DOT5G |
| Initial S/W Revision | A.05.00 |

700 Public Safety

Selects 700 Public Safety as the active channel band.

| | |
|----------------------|---|
| Key Path | Source, Frequency, Radio Setup, Radio Standard, CDMA 2000 / 1xEVDO |
| Example | :SOUR:FREQ:CHAN:BAND PUBLIC |
| Initial S/W Revision | A.05.00 |

C2K Lower 700

Selects C2K Lower 700 as the active channel band.

| | |
|----------------------|---|
| Key Path | Source, Frequency, Radio Setup, Radio Standard, CDMA 2000 / 1xEVDO |
| Example | :SOUR:FREQ:CHAN:BAND LOWER |
| Initial S/W Revision | A.05.00 |

LTE

Sets LTE FDD as the radio standard for use and accesses the LTE FDD specific channel band sub-menus..

| | |
|----------------------|---|
| Key Path | Source, Frequency, Radio Setup, Radio Standard |
| Initial S/W Revision | A.09.50 |

BAND 1

Selects BAND 1 as the band for the current step.

| | |
|----------------------|--|
| Key Path | Source, Frequency, Radio Setup, Radio Standard, LTE |
| Example | :SOUR:FREQ:CHAN:BAND BAND1 |
| Initial S/W Revision | A.09.50 |

BAND 2

Selects BAND 2 as the band for the current step.

| | |
|----------------------|--|
| Key Path | Source, Frequency, Radio Setup, Radio Standard, LTE |
| Example | :SOUR:FREQ:CHAN:BAND BAND2 |
| Initial S/W Revision | A.09.50 |

BAND 3

Selects BAND 3 as the band for the current step.

| | |
|----------------------|--|
| Key Path | Source, Frequency, Radio Setup, Radio Standard, LTE |
| Example | :SOUR:FREQ:CHAN:BAND BAND3 |
| Initial S/W Revision | A.09.50 |

BAND 4

Selects BAND 4 as the band for the current step.

| | |
|----------------------|--|
| Key Path | Source, Frequency, Radio Setup, Radio Standard, LTE |
| Example | :SOUR:FREQ:CHAN:BAND BAND4 |
| Initial S/W Revision | A.09.50 |

BAND 5

Selects BAND 5 as the band for the current step.

| | |
|----------|--|
| Key Path | Source, Frequency, Radio Setup, Radio Standard, LTE |
|----------|--|

| | |
|----------------------|----------------------------|
| Example | :SOUR:FREQ:CHAN:BAND BAND5 |
| Initial S/W Revision | A.09.50 |

BAND 6

Selects BAND 6 as the band for the current step.

| | |
|----------------------|--|
| Key Path | Source, Frequency, Radio Setup, Radio Standard, LTE |
| Example | :SOUR:FREQ:CHAN:BAND BAND6 |
| Initial S/W Revision | A.09.50 |

BAND 7

Selects BAND 7 as the band for the current step.

| | |
|----------------------|--|
| Key Path | Source, Frequency, Radio Setup, Radio Standard, LTE |
| Example | :SOUR:FREQ:CHAN:BAND BAND7 |
| Initial S/W Revision | A.09.50 |

BAND 8

Selects BAND 8 as the band for the current step.

| | |
|----------------------|--|
| Key Path | Source, Frequency, Radio Setup, Radio Standard, LTE |
| Example | :SOUR:FREQ:CHAN:BAND BAND8 |
| Initial S/W Revision | A.09.50 |

BAND 9

Selects BAND 9 as the band for the current step.

| | |
|----------------------|--|
| Key Path | Source, Frequency, Radio Setup, Radio Standard, LTE |
| Example | :SOUR:FREQ:CHAN:BAND BAND9 |
| Initial S/W Revision | A.09.50 |

BAND 10

Selects BAND 10 as the band for the current step.

| | |
|----------|--|
| Key Path | Source, Frequency, Radio Setup, Radio Standard, LTE |
|----------|--|

| | |
|----------------------|-----------------------------|
| Example | :SOUR:FREQ:CHAN:BAND BAND10 |
| Initial S/W Revision | A.09.50 |

BAND 11

Selects BAND 11 as the band for the current step.

| | |
|----------------------|--|
| Key Path | Source, Frequency, Radio Setup, Radio Standard, LTE |
| Example | :SOUR:FREQ:CHAN:BAND BAND11 |
| Initial S/W Revision | A.09.50 |

BAND 12

Selects BAND 12 as the band for the current step.

| | |
|----------------------|--|
| Key Path | Source, Frequency, Radio Setup, Radio Standard, LTE |
| Example | :SOUR:FREQ:CHAN:BAND BAND12 |
| Initial S/W Revision | A.09.50 |

BAND 13

Selects BAND 13 as the band for the current step.

| | |
|----------------------|--|
| Key Path | Source, Frequency, Radio Setup, Radio Standard, LTE |
| Example | :SOUR:FREQ:CHAN:BAND BAND13 |
| Initial S/W Revision | A.09.50 |

BAND 14

Selects BAND 14 as the band for the current step.

| | |
|----------------------|--|
| Key Path | Source, Frequency, Radio Setup, Radio Standard, LTE |
| Example | :SOUR:FREQ:CHAN:BAND BAND14 |
| Initial S/W Revision | A.09.50 |

BAND 17

Selects BAND 17 as the band for the current step.

| | |
|----------|--|
| Key Path | Source, Frequency, Radio Setup, Radio Standard, LTE |
|----------|--|

| | |
|----------------------|-----------------------------|
| Example | :SOUR:FREQ:CHAN:BAND BAND17 |
| Initial S/W Revision | A.09.50 |

BAND 18

Selects BAND 18 as the band for the current step.

| | |
|----------------------|--|
| Key Path | Source, Frequency, Radio Setup, Radio Standard, LTE |
| Example | :SOUR:FREQ:CHAN:BAND BAND18 |
| Initial S/W Revision | A.09.50 |

BAND 19

Selects BAND 19 as the band for the current step.

| | |
|----------------------|--|
| Key Path | Source, Frequency, Radio Setup, Radio Standard, LTE |
| Example | :SOUR:FREQ:CHAN:BAND BAND19 |
| Initial S/W Revision | A.09.50 |

BAND 20

Selects BAND 20 as the band for the current step.

| | |
|----------------------|--|
| Key Path | Source, Frequency, Radio Setup, Radio Standard, LTE |
| Example | :SOUR:FREQ:CHAN:BAND BAND20 |
| Initial S/W Revision | A.09.50 |

BAND 21

Selects BAND 21 as the band for the current step.

| | |
|----------------------|--|
| Key Path | Source, Frequency, Radio Setup, Radio Standard, LTE |
| Example | :SOUR:FREQ:CHAN:BAND BAND21 |
| Initial S/W Revision | A.09.50 |

BAND 24

Selects BAND 24 as the band for the current step.

| | |
|----------|--|
| Key Path | Source, Frequency, Radio Setup, Radio Standard, LTE |
|----------|--|

| | |
|----------------------|-----------------------------|
| Example | :SOUR:FREQ:CHAN:BAND BAND24 |
| Initial S/W Revision | A.09.50 |

BAND 25

Selects BAND 25 as the band for the current step.

| | |
|----------------------|--|
| Key Path | Source, Frequency, Radio Setup, Radio Standard, LTE |
| Example | :SOUR:FREQ:CHAN:BAND BAND25 |
| Initial S/W Revision | A.09.50 |

BAND 26

Selects BAND 26 as the band for the current step.

| | |
|----------------------|--|
| Key Path | Source, Frequency, Radio Setup, Radio Standard, LTE |
| Example | :SOUR:FREQ:CHAN:BAND BAND26 |
| Initial S/W Revision | A.12.53 |

BAND 27

Selects BAND 27 as the band for the current step.

| | |
|----------------------|--|
| Key Path | Source, Frequency, Radio Setup, Radio Standard, LTE |
| Example | :SOUR:FREQ:CHAN:BAND BAND27 |
| Initial S/W Revision | A.14.00 |

BAND 28

Selects BAND 28 as the band for the current step.

| | |
|----------------------|--|
| Key Path | Source, Frequency, Radio Setup, Radio Standard, LTE |
| Example | :SOUR:FREQ:CHAN:BAND BAND28 |
| Initial S/W Revision | A.14.00 |

BAND 31

Selects BAND 31 as the band for the current step.

| | |
|----------|--|
| Key Path | Source, Frequency, Radio Setup, Radio Standard, LTE |
|----------|--|

| | |
|----------------------|-----------------------------|
| Example | :SOUR:FREQ:CHAN:BAND BAND31 |
| Initial S/W Revision | A.14.00 |

LTE TDD

Sets LTE TDD as the radio standard for use and accesses the LTE TDD specific channel band sub-menus..

| | |
|----------------------|---|
| Key Path | Source, Frequency, Radio Setup, Radio Standard |
| Initial S/W Revision | A.11.50 |

BAND 33

Selects BAND 33 as the band for the current step.

| | |
|----------------------|--|
| Key Path | Source, Frequency, Radio Setup, Radio Standard, LTE TDD |
| Example | :SOUR:FREQ:CHAN:BAND BAND33 |
| Initial S/W Revision | A.11.50 |

BAND 34

Selects BAND 34 as the band for the current step.

| | |
|----------------------|--|
| Key Path | Source, Frequency, Radio Setup, Radio Standard, LTE TDD |
| Example | :SOUR:FREQ:CHAN:BAND BAND34 |
| Initial S/W Revision | A.11.50 |

BAND 35

Selects BAND 35 as the band for the current step.

| | |
|----------------------|--|
| Key Path | Source, Frequency, Radio Setup, Radio Standard, LTE TDD |
| Example | :SOUR:FREQ:CHAN:BAND BAND35 |
| Initial S/W Revision | A.11.50 |

BAND 36

Selects BAND 36 as the band for the current step.

| | |
|----------------------|--|
| Key Path | Source, Frequency, Radio Setup, Radio Standard, LTE TDD |
| Example | :SOUR:FREQ:CHAN:BAND BAND36 |
| Initial S/W Revision | A.11.50 |

BAND 37

Selects BAND 37 as the band for the current step.

| | |
|----------------------|--|
| Key Path | Source, Frequency, Radio Setup, Radio Standard, LTE TDD |
| Example | :SOUR:FREQ:CHAN:BAND BAND37 |
| Initial S/W Revision | A.11.50 |

BAND 38

Selects BAND 38 as the band for the current step.

| | |
|----------------------|--|
| Key Path | Source, Frequency, Radio Setup, Radio Standard, LTE TDD |
| Example | :SOUR:FREQ:CHAN:BAND BAND38 |
| Initial S/W Revision | A.11.50 |

BAND 39

Selects BAND 39 as the band for the current step.

| | |
|----------------------|--|
| Key Path | Source, Frequency, Radio Setup, Radio Standard, LTE TDD |
| Example | :SOUR:FREQ:CHAN:BAND BAND39 |
| Initial S/W Revision | A.11.50 |

BAND 40

Selects BAND 40 as the band for the current step.

| | |
|----------------------|--|
| Key Path | Source, Frequency, Radio Setup, Radio Standard, LTE TDD |
| Example | :SOUR:FREQ:CHAN:BAND BAND40 |
| Initial S/W Revision | A.11.50 |

BAND 41

Selects BAND 41 as the band for the current step.

| | |
|----------------------|--|
| Key Path | Source, Frequency, Radio Setup, Radio Standard, LTE TDD |
| Example | :SOUR:FREQ:CHAN:BAND BAND41 |
| Initial S/W Revision | A.11.50 |

BAND 42

Selects BAND 42 as the band for the current step.

| | |
|----------------------|--|
| Key Path | Source, Frequency, Radio Setup, Radio Standard, LTE TDD |
| Example | :SOUR:FREQ:CHAN:BAND BAND42 |
| Initial S/W Revision | A.11.50 |

BAND 43

Selects BAND 43 as the band for the current step.

| | |
|----------------------|--|
| Key Path | Source, Frequency, Radio Setup, Radio Standard, LTE TDD |
| Example | :SOUR:FREQ:CHAN:BAND BAND43 |
| Initial S/W Revision | A.11.50 |

BAND 44

Selects BAND 44 as the band for the current step.

| | |
|----------------------|--|
| Key Path | Source, Frequency, Radio Setup, Radio Standard, LTE TDD |
| Example | :SOUR:FREQ:CHAN:BAND BAND44 |
| Initial S/W Revision | A.14.00 |

TDSCDMA

Sets TDSCDMA as the radio standard for use and accesses the TDSCDMA specific channel band sub-menus..

| | |
|----------------------|---|
| Key Path | Source, Frequency, Radio Setup, Radio Standard |
| Initial S/W Revision | A.11.50 |

BAND A

Selects BAND A as the band for the current step.

| | |
|----------------------|--|
| Key Path | Source, Frequency, Radio Setup, Radio Standard, TDSCDMA |
| Example | :SOUR:FREQ:CHAN:BAND BANDA |
| Initial S/W Revision | A.11.50 |

BAND B

Selects BAND B as the band for the current step.

| | |
|----------------------|--|
| Key Path | Source, Frequency, Radio Setup, Radio Standard, TDSCDMA |
| Example | :SOUR:FREQ:CHAN:BAND BANDB |
| Initial S/W Revision | A.11.50 |

BAND C

Selects BAND C as the band for the current step.

| | |
|----------------------|--|
| Key Path | Source, Frequency, Radio Setup, Radio Standard, TDSCDMA |
| Example | :SOUR:FREQ:CHAN:BAND BANDC |
| Initial S/W Revision | A.11.50 |

BAND D

Selects BAND D as the band for the current step.

| | |
|----------------------|--|
| Key Path | Source, Frequency, Radio Setup, Radio Standard, TDSCDMA |
| Example | :SOUR:FREQ:CHAN:BAND BANDD |
| Initial S/W Revision | A.11.50 |

BAND E

Selects BAND E as the band for the current step.

| | |
|----------------------|--|
| Key Path | Source, Frequency, Radio Setup, Radio Standard, TDSCDMA |
| Example | :SOUR:FREQ:CHAN:BAND BANDE |
| Initial S/W Revision | A.11.50 |

BAND F

Selects BAND F as the band for the current step.

| | |
|----------------------|--|
| Key Path | Source, Frequency, Radio Setup, Radio Standard, TDSCDMA |
| Example | :SOUR:FREQ:CHAN:BAND BANDF |
| Initial S/W Revision | A.11.50 |

Radio Band Link

Allows you to specify the channel band type as either uplink or downlink link direction. This value is used in conjunction with the channel band and channel number to determine the absolute frequency output by the

source. When set to “Uplink”, the source will calculate the uplink frequency using an uplink formula together with the selected channel band and channel number . When set to “Downlink”, the source will calculate the downlink frequency using a downlink formula together with the selected channel band and channel number.

| | |
|--------------------------------------|---|
| Key Path | Source, Frequency, Radio Setup |
| Remote Command | :SOURce:RADio:BAND:LINK DOWN UP :SOURce:RADio:BAND:LINK? |
| Example | :SOUR:RAD:BAND:LINK UP |
| Preset | DOWN |
| Range | DOWN UP |
| Backwards Compatibility SCPI | :SOURce:RADio:DEVIce BTS MS :SOURce:RADio:DEVIce? |
| Backwards Compatibility Notes | BTS maps to the Downlink frequency MS maps to the Uplink frequency |
| Initial S/W Revision | A.05.00 |

Set Reference Frequency

This key allows you to set the frequency reference. Pressing this key turns the frequency reference state to ON, sets the reference frequency value to the current frequency, maintains this frequency at the RF output, and sets the displayed frequency to 0.00 Hz. All subsequent frequencies entered under Source>Frequency>Frequency are interpreted as being relative to this reference frequency.

When you use a frequency reference, the signal generator outputs a frequency that is set relative to the reference frequency by the value entered under Source>Frequency>Frequency as follows:

Output frequency = reference frequency - entered frequency

Where:

reference frequency equals the original RF frequency entered under Source>Frequency>Frequency and set as the reference frequency

entered frequency equals a new value entered under Source>Frequency>Frequency

In addition, the displayed frequency value will be the same as the value entered under Source>Frequency>Frequency.

NOTE

If Freq Reference is set to ON with a reference value set, entering a value under Source>Frequency>Frequency and pressing Set Frequency Reference will add that value to the existing Freq Reference value.

If you wish to change the reference frequency value to the new value entered under Source>Frequency>Frequency, first you must set Freq Reference to OFF and then press Set Frequency Reference.

| | |
|-----------------|--------------------------|
| Key Path | Source, Frequency |
|-----------------|--------------------------|

| | |
|-----------------------------|--|
| Remote Command | :SOURce:FREQuency:REFerence:SET |
| Example | :SOUR:FREQ:REF:SET |
| Dependencies | This setting is unavailable, and is grayed out when the List Sequencer is turned ON. |
| Initial S/W Revision | A.05.00 |

Freq Reference

This key allows you to toggle the state of the frequency reference. When the frequency reference state is ON, an annunciator is displayed on the main source view to indicate this state to the user.

When you use a frequency reference, the signal generator outputs a frequency that is set relative to the reference frequency by the value entered under Source>Frequency>Frequency as follows:

Output frequency = reference frequency + entered frequency

Where:

reference frequency equals the original RF frequency entered under Source>Frequency>Frequency and set as the reference frequency

entered frequency equals a new value entered under Source>Frequency>Frequency

For more information on Reference Frequency refer to ["Set Reference Frequency" on page 2532](#)

| Key Path | Source, Frequency |
|-----------------------------|--|
| Remote Command | :SOURce:FREQuency:REFerence <freq> :SOURce:FREQuency:REFerence? :SOURce:FREQuency:REFerence:STATe OFF ON 0 1 :SOURce:FREQuency:REFerence:STATe? |
| Example | :SOUR:FREQ:REF 0.00 Hz :SOUR:FREQ:REF:STATe ON |
| Dependencies | This setting is unavailable, and is grayed out when the List Sequencer is turned ON. |
| Couplings | The frequency reference state is coupled to the frequency reference set immediate action. When the reference set immediate action key is pressed, or the SCPI command issued, it turns the frequency reference state ON. |
| Preset | 0.00 Hz OFF |
| Min | 0.00 Hz |
| Max | Hardware Dependant: Option 503 = 3.6 GHz Option 504 = 3.8 GHz Option 506 = 6.00 GHz |
| Initial S/W Revision | A.05.00 |

Freq Offset

Allows you to specify the frequency offset value. When the frequency offset state is ON, an annunciator is displayed on the main source view to indicate this state to the user.

When the frequency offset is set to zero (0) and you set a new offset value, the displayed frequency value will change as follows and the RF output frequency will not change:

Displayed value = output frequency + offset value

Where:

output frequency equals the original frequency entered under Source>Frequency>Frequency

offset value equals the value entered under Source>Frequency>Freq Offset

When the frequency offset is set to a value other than zero (0) and you enter a new frequency value under Source>Frequency>Frequency, the displayed frequency will be the same as the value entered and the RF output frequency will be equal to the value entered minus the offset value as follows:

Output frequency = entered frequency – offset frequency

Displayed frequency = output frequency + offset frequency

Displayed frequency = entered frequency

Where:

entered frequency equals the frequency entered under Source>Frequency>Frequency

offset frequency equals the value previously entered and set under Source>Frequency>Freq Offset

| Key Path | Source, Frequency |
|-----------------------|--|
| Remote Command | :SOURce:FREQuency:OFFSet <freq> :SOURce:FREQuency:OFFSet? |
| Example | :SOUR:FREQ:OFFS 0 Hz |
| Dependencies | This setting is unavailable, and is grayed out when the List Sequencer is turned ON. |
| Preset | 0 Hz |
| Min | -100.00 GHz |
| Max | 100.00 GHz |
| Initial S/W Revision | A.05.00 |

Modulation Setup

Allows access to the menus for setting up the available modulation types: "ARB" on page 2535, "AM" on page 2581, "FM" on page 2583, and "PM" on page 2584.

| Key Path | Source |
|----------------------|---------|
| Initial S/W Revision | A.05.00 |

ARB

Allows you access to the ARB sub-menus.

| | |
|----------------------|---------------------------------|
| Key Path | Source, Modulation Setup |
| Initial S/W Revision | A.05.00 |

ARB

Allows you to toggle the state of the ARB function. When the ARB is On, a “MOD” annunciator is displayed in the system settings panel. When the ARB is turned Off, the MOD annunciator is cleared

| | |
|--------------------------|---|
| Key Path | Source, Modulation Setup, ARB |
| Remote Command | :SOURce:RADio:ARB[:STATe] ON OFF 1 0 :SOURce:RADio:ARB[:STATe]? |
| Example | :SOUR:RAD:ARB OFF :SOUR:RAD:ARB? |
| Notes | If the ARB is ON, a user then loads or deletes another file to ARB memory, the playing waveform segment may not keep phase continuity during the ARB memory operation. The waveform will be replayed after the ARB operation is finished. |
| Dependencies | This setting is for independent mode and has no effect on 3.3.8 list sequencer mode. Setting " Sequencer " on page 2586 Sequencer to On will put source enter list sequencer mode, and even if ARB state is On, the ARB file will not be played. Setting " Sequencer " on page 2586 Sequencer to Off will make source leave list sequencer mode, and this setting will take effect immediately. The ARB can only be turned on when there is a waveform file selected for playback. On the GUI if no waveform is selected, this key is grayed out. If you send the SCPI command to turn the ARB on with no waveform selected for playback, the ARB state remains OFF and an error is generated. "- When you try to recall a certain set of states in which the selected waveform is not in ARB memory and the ARB state is On, errors are reported |
| Couplings | If " Real-Time AWGN " on page 2546 AWGN State is On and this setting is On, " RF Power " on page 2500 RF Power will be adjusted to the value to maintain the AWGN power relationship defined by " Power Control Mode " on page 2547 Power Control Mode and other noise settings |
| Preset | Off |
| Range | On Off |
| Initial S/W Revision | A.05.00 |
| Modified at S/W Revision | A.16.00 (Add couplings with AWGN state) |

Select Waveform

Allows you to access to the waveform selection sub-menus.

Pressing this key changes the central view area to show the Waveform File Selection view.

| | |
|----------------------|--------------------------------------|
| Key Path | Source, Modulation Setup, ARB |
| Initial S/W Revision | A.05.00 |

Select Waveform

Allows you to select a waveform sequence or segment for the dual ARB to play.

| | |
|----------------------|--|
| Key Path | Source, Modulation Setup, ARB, Select Waveform |
| Remote Command | :SOURce:RADio:ARB:WAVeform <string> :SOURce:RADio:ARB:WAVeform? |
| Example | :SOUR:RAD:ARB:WAV "test_waveform.bin" |
| Notes | <p>If intended waveform is not in the memory yet, then issuing this command by SCPI will invoke ARB loading operation first, which involves a delay of unpredictable length. So this command should be followed by the query *OPC?, which holds off subsequent commands until the loading operating is complete.</p> <p><string> - specifies the name of the waveform segment or waveform sequence to be played by the ARB.</p> <p>When in Sequence Analyzer mode, and Include Source is Yes, if the you attempt to play a waveform sequence but not all the required waveform segments are in the ARB playback memory, the application will reject the loading operation with an error is generated .</p> <p>When Include Source is No, if you attempt to play a waveform sequence but not all the required waveform segments are contained in the ARB playback memory, the application will attempt to load the required segments from either the default directory of the current directory. If the ARB memory does not have enough space for all the waveform segments to be loaded, an error is generated and none of the waveform segments is loaded.</p> <p>If the ARB is ON, and you attempt to play a waveform sequence but not all the waveform segments within the sequence could be found to be loaded into ARB memory, an error is generated. The selected waveform keeps the previous value and ARB state remains On.</p> <p>If you specify a waveform segment over SCPI but the waveform segment is not present within ARB playback memory and cannot be found for auto loading within the current directory or the default directory, an error is generated and the file selection remains unchanged.</p> <p>If you select a waveform for playback and the waveform requires a license that is not installed on the instrument, an error is generated.error is generated.</p> <p>If the ARB is ON and you load a file to ARB memory or delete a file from ARB memory, the playing waveform segment may not keep phase continuity during the ARB memory operation. The waveform will be replayed after the ARB operation is finished.</p> |
| Initial S/W Revision | A.05.00 |

Segments on Hard Disk

Allows you access to the sub-menus for loading waveform segments from the hard disk into ARB memory. The default directory is: D: varb.

Pressing this key changes the current view to the Waveform Management View.

| | |
|----------------------|---|
| Key Path | Source, Modulation Setup, ARB, Select Waveform |
| Initial S/W Revision | A.05.00 |

Load Segment To ARB Memory

Allows you to load the selected file into ARB memory. On the front panel you select the file for loading to the ARB memory by highlighting the desired file in the list. Using the SCPI command, you specify the file name on the HDD.

“NVWFM” (none-volatile storage) MSUS (Mass Storage Unit Specifier) is supported in the memory subsystem because the ARB memory cannot be accessed directly. Therefore, files must be downloaded to the instrument hard disk and then loaded into the ARB memory. “NVWFM” MSUS will be mapped to the default directory D: VARB. The SCPI command supports using either “NVWFM” MSUS or specifying a full path. For more information, see [Memory Subsystem \(Remote Command Only\)](#).

If a file of the same name already exists within ARB memory, it is overwritten. If you wish to load two segments of the same name, you must rename one of the segments before loading it into ARB memory. To rename a segment, you can either use Windows File Explorer, or the :MMEMory:COPI command.

| | |
|----------------|---|
| Key Path | Source, Modulation Setup, ARB, Select Waveform, Segments on Hard Disk |
| Remote Command | :SOURce:RADio:ARB:LOAD <string> |
| Example | :SOUR:RAD:ARB:LOAD "D: VARB\testwaveform.bin" or :SOUR:RAD:ARB:LOAD "NVWFM:testwaveform.bin" |
| Notes | <p>Because loading the file involves a delay of unpredictable length, this command should be followed by the query *OPC?, which holds off subsequent commands until the loading operating is complete.</p> <p><string> – specifies the path name of the file to load from the HDD into ARB memory. It could be a <full path + filename>, or <“NVWFM” MSUS + colon + filename>.</p> <p>When in Sequence Analyzer mode, and Include Source is Yes, an attempt to load a file to ARB memory will be rejected with an error.</p> <p>When Include Source is No and if there is insufficient free ARB memory to load the selected waveform, an error is generated. .</p> <p>If you specify a file over SCPI, but the file is not at the specified location, an error is generated.</p> <p>If you try to load a waveform file but the file contains less than 500 IQ samples, an error is generated.</p> <p>If you try to load a Signal Studio waveform “*.wfm” which contains invalid waveform header, an error is generated.</p> <p>If the ARB is ON when you load a file to ARB memory or delete a file from ARB memory, the playing waveform segment may not keep phase continuity during the ARB memory operation. The waveform will be replayed after the ARB operation is finished.</p> <p>ARB can be loaded into ARB memory even required licenses do not present on the instrument. In this</p> |

case, a GUI only warning message -800, "Operation complete; Loaded <filename> successfully, but no license <required licenses> installed". User can install required licenses according to <required licenses> string to license it, or multi-pack license it.

Initial S/W Revision A.05.00

Load All To ARB Memory

Allows you to load all the segment files within the currently selected directory into ARB memory. If a file of the same name already exists within ARB memory, it is overwritten. If you wish to load two segments of the same name, you must rename one of the segments before loading it into ARB memory. To rename a segment, you can either use Windows File Explorer, or the :MEMory:COPY command.

| | |
|-----------------------|---|
| Key Path | Source, Modulation Setup, ARB, Select Waveform, Segments on Hard Disk |
| Remote Command | :SOURce:RADio:ARB:LOAD:ALL <string> |
| Example | :SOUR:RAD:ARB:LOAD:ALL "D: varb" |
| Notes | <p><string> - specifies the directory on the HDD to load the files into ARB memory from.</p> <p>When in Sequence Analyzer mode, and Include Source is Yes, an attempt to load all files from a directory to ARB memory is rejected with an error.</p> <p>When Include Source is No and there is insufficient free ARB memory to load all the waveforms, when the ARB memory is full, the copy ceases, and an error is generated.</p> <p>If you specify a directory over SCPI, but the directory does not exist, an error is generated.</p> <p>If the ARB is ON, a user then loads or deletes file to ARB memory, the playing waveform segment may not keep phase continuity during the ARB memory operation. The waveform will be replayed after the ARB operation is finished.</p> |
| Initial S/W Revision | A.05.00 |

Change Directory...

Allows you to change the currently selected directory on the hard disk. Pressing this key opens a standard windows change directory dialog allowing you to select the new directory of interest.

The current directory is used for manually loading waveform segments into ARB memory for playback, and as a search location for waveform segments that are required to be loaded into ARB memory for playback of a waveform sequence or a list sequence.

| | |
|----------------------|--|
| Key Path | Source, Modulation Setup, ARB, Select Waveform, Segments on Hard Disk |
| Notes | No remote command, SCPIfront panel only. |
| Initial S/W Revision | A.05.00 |

Default Directory...

Allows you to change the default directory. It is used as a search location for waveform segments that are required to be loaded into ARB memory for playback of a waveform sequence, and as a search location for

selecting waveforms using SCPI.

| | |
|-----------------------------|---|
| Key Path | Source, Modulation Setup, ARB, Select Waveform, Segments on Hard Disk |
| Remote Command | :SOURce:RADio:ARB:DEFAult:DIRectory <string> :SOURce:RADio:ARB: DEFAult:DIRectory? |
| Example | :SOUR:RAD:ARB:DEF:DIR "D:\ArbFiles" :SOUR:RAD:ARB:DEF:DIR? |
| State Saved | Persistent, survives a power cycle and a preset but not saved in the instrument state |
| Initial S/W Revision | A.05.00 |

Segments in ARB Memory

Allows you access to the sub-menus for managing the files within ARB memory.

| | |
|-----------------------------|---|
| Key Path | Source, Modulation Setup, ARB, Select Waveform |
| Initial S/W Revision | A.05.00 |

Delete Segment From ARB Mem

Allows you to remove a segment from ARB playback memory.

| | |
|-----------------------------|---|
| Key Path | Source, Modulation Setup, ARB, Select Waveform, Segments in ARB Memory |
| Remote Command | :SOURce:RADio:ARB:DELete <string> |
| Example | :SOUR:RAD:ARB:DEL "testwaveform.bin" |
| Notes | <p><string> - specifies the waveform to be deleted from the ARB playback memory.</p> <p>When in Sequence Analyzer mode and Include Source is Yes, an attempt to delete a file from ARB memory is rejected with an error.</p> <p>When Include Source is No and you specify a file that does not exist within ARB memory, an error is generated.</p> <p>It is possible to delete files from within the ARB memory when the ARB is ON. However, if you attempt to delete the file that is currently playing an error is generated.</p> <p>It is possible to delete a file from within the ARB memory when the sequencer state is ON and the file is not being used by the List Sequencer. If you attempt to delete a file which is being used by the list sequencer, an error is generated.</p> <p>When sequencer state is On, even if ARB state is On, the selected waveform will not be played. In this case, if the selected waveform is not used in List Sequence, it can be deleted and the ARB state is turned Off.</p> <p>If the ARB is ON and you load a file to ARB memory or delete a file from ARB memory, the playing waveform segment may not keep phase continuity during the ARB memory operation. The waveform will be replayed after the ARB operation is finished.</p> |
| Initial S/W Revision | A.05.00 |

Delete All From ARB Memory

Allows you to remove all segments from ARB playback memory.

| | |
|----------------------|--|
| Key Path | Source, Modulation Setup, ARB, Select Waveform, Segments in ARB Memory |
| Remote Command | :SOURce:RADio:ARB:DELeTe:ALL |
| Example | :SOUR:RAD:ARB:DELeTe:ALL |
| Notes | <p>When in Sequence Analyzer mode and Include Source is Yes, an attempt to delete all files from ARB memory is rejected with an error.</p> <p>When Include Source is No and you attempt to delete all files from ARB memory when the ARB is currently playing a file, all files except the one playing are deleted and an error is generated.</p> <p>If you attempt to delete all files from ARB memory when there are waveform files used in "List Sequencer" on page 2585 and "Sequencer" on page 2586 state is ON, all files except the files currently being used in list sequencer are deleted, and an error is generated.</p> <p>If the ARB is ON and you load a file to ARB memory or delete a file from ARB memory, the playing waveform segment may not keep phase continuity during the ARB memory operation. The waveform will be replayed after the ARB operation is finished.</p> |
| Initial S/W Revision | A.05.00 |

Query ARB Memory File List (Remote Command Only)

Queries the test set for the list of waveform segments in the ARB memory.

NOTE

This command returns a string for waveform segment names in ARB memory. If you want a string list of waveform segments in the ARB memory, use "[Query ARB Memory Full File List \(Remote Command Only\)](#)" on page 2540.

| | |
|----------------------|--|
| Remote Command | :SOURce:RADio:ARB:CATalog? |
| Example | :SOUR:RAD:ARB:CATalog? |
| Notes | <p>The return data is in the following format:</p> <p><integer> - memory used</p> <p><integer> - memory free</p> <p><string> ... - comma separated list of waveform segments within ARB memory</p> |
| Initial S/W Revision | A.05.00 |

Query ARB Memory Full File List (Remote Command Only)

Queries the test set for the string list of waveform segments in the ARB memory. It returns a string list for waveform segment names in the ARB memory.

| | |
|----------------|---|
| Remote Command | :SOURce:RADio:ARB:FCATalog? |
| Example | :SOUR:RAD:ARB:FCATalog? |
| Notes | <p>The return data is in the following format:</p> <p><integer> - memory used</p> |

| | |
|----------------------|---|
| | <integer> - memory free <integer> - file count in ARB memory <string>, <string>, ... <string> - comma separated string list of waveform segments within ARB memory Example: SOUR:RAD:ARB:FCAT? EXT returns: 27499,2069653,3,"c2k.wfm","gsm.wfm","wcdma.wfm" |
| Initial S/W Revision | A.09.00 |

ARB Setup

Allows access to the ARB setup sub-menus.

| | |
|----------------------|--------------------------------------|
| Key Path | Source, Modulation Setup, ARB |
| Initial S/W Revision | A.05.00 |

Sample Rate

Allows you to set the ARB waveform playback sample rate.

| | |
|-----------------------|---|
| Key Path | Source, Modulation Setup, ARB, ARB Setup |
| Remote Command | :SOURce:RADio:ARB:SCLock:RATE <freq> :SOURce:RADio:ARB:SCLock:RATE? |
| Example | :SOUR:RAD:ARB:SCL:RATE 48.00 MHz |
| Notes | If there is a sample rate specified in the header of the waveform file, changing that sample rate is not recommended, as it may cause problems with burst timing. |
| Dependencies | When a new waveform is selected for playback the settings contained within the associated waveform header file are applied to the ARB. The sample rate is one of the values stored within the header file. If the newly selected waveform file has an associated header file, the sample rate is updated with the value from the header file. The sample rate will remain unchanged if the newly selected waveform does not have an associated header file. |
| Preset | 125.00 MHz |
| Min | 1.00 kHz |
| Max | 125.00 MHz |
| Initial S/W Revision | A.05.00 |

Run-Time Scaling

Allows you to adjust the run-time scaling value. The run-time scaling value is applied in real-time while the waveform is playing.

| | |
|----------|---|
| Key Path | Source, Modulation Setup, ARB, ARB Setup |
|----------|---|

| | |
|-----------------------------|--|
| Remote Command | :SOURce:RADio:ARB:RSCaling <real> :SOURce:RADio:ARB:RSCaling? |
| Example | :SOUR:RAD:ARB:RSC 100.00 |
| Dependencies | When a new waveform is selected for playback the settings contained within the associated waveform header file are applied to the ARB. The run-time scaling is one of the values stored within the header file. If the newly selected waveform file has an associated header file, the run-time scaling is updated with the value from the header file. The run-time scaling will remain unchanged if the newly selected waveform does not have an associated header file. |
| Preset | 70.00 % |
| Min | 1.00 % |
| Max | 100.00 % |
| Initial S/W Revision | A.05.00 |

Baseband Freq Offset

Allows you to adjust the value by which the baseband frequency is offset relative to the carrier.

| | |
|-----------------------------|---|
| Key Path | Source, Modulation Setup, ARB, ARB Setup |
| Remote Command | :SOURce:RADio:ARB:BASEband:FREQuency:OFFSet <freq> :SOURce:RADio:ARB:BASEband:FREQuency:OFFSet? |
| Example | :SOUR:RAD:ARB:BAS:FREQ:OFFS 0.00 Hz |
| Dependencies | When a new waveform is selected for playback the settings contained within the associated waveform header file are applied to the ARB. The baseband frequency offset is one of the values stored within the header file. If the newly selected waveform file has an associated header file, the baseband frequency offset is updated with the value from the header file. The baseband frequency offset will remain unchanged if the newly selected waveform does not have an associated header file. |
| Preset | 0.00 Hz |
| Min | -50.00 MHz |
| Max | 50.00 MHz |
| Initial S/W Revision | A.05.00 |

Edit RMS

Allows you to edit or calculate current RMS of selected waveform.

| | |
|-----------------------------|---|
| Key Path | Source, Modulation Setup, ARB, ARB Setup |
| Initial S/W Revision | A.14.50 |

Current RMS

Allows you to directly specify current RMS value used to playback currently selected waveform. Please note incorrect RMS value may cause inaccurate power output in E6640A that is sensitive to RMS value.

This setting is also updated by RMS in waveform header or updated when invoking RMS calculation operation.

This setting can be saved to the header of currently selected waveform by invoking ["Save Setup To Header" on page 2580](#) "Save Setup To Header".

| | |
|-----------------------------|---|
| Key Path | Source, Modulation Setup, ARB, ARB Setup, Edit RMS |
| Remote Command | :SOURce:RADio:ARB:RMS <float> :SOURce:RADio:ARB:RMS? |
| Example | :SOUR:RAD:ARB:HEAD:RMS 0.7 :SOUR:RAD:ARB:HEAD:RMS? |
| Notes | Valid range is 0 to 1.414, values outside the range will be clipped to the closest boundary. Note this value does not affect "List Sequencer" on page 2585 Source List Sequencer that always uses RMS value resides in each ARB header. If want this value to take effect in list sequencer, use "Save Setup To Header" on page 2580 "Save Setup to Header" to save current RMS value to header first, then play the ARB in source list sequencer. |
| Dependencies | When a new waveform is selected for playback, this setting is updated by the RMS value defined in associated waveform header file. If selected waveform has no associated header file or header file does not specify RMS value, then instrument will try to calculate out one automatically. Calculating RMS can also update this setting. |
| Preset | 0 |
| Range | 0 ~ 1.414 |
| Initial S/W Revision | A.14.50 |

RMS Calculation Mode

Allows you to specify the mode to calculate the current RMS.

| | |
|-----------------------------|--|
| Key Path | Source, Modulation Setup, ARB, ARB Setup, Edit RMS |
| Remote Command | :SOURce:RADio:ARB:RMS:CALCulation:MODE AUTO M1 M2 M3 M4 :SOURce:RADio:ARB:RMS:CALCulation:MODE? |
| Example | :SOUR:RAD:ARB:RMS:CALC:MODE AUTO |
| Notes | If no waveform is selected, or selected waveform is waveform sequence, the key will grey out. |
| Preset | AUTO |
| Range | AUTO M1 M2 M3 M4 |
| Initial S/W Revision | A.14.50 |

Auto

RMS will be calculated based on the whole sample range of current selected waveform.

| | |
|----------------------|--|
| Key Path | Source, Modulation Setup, ARB, ARB Setup, Edit RMS, Calculate RMS, RMS Calculation Mode |
| Example | :SOUR:RAD:ARB:RMS:CALC:MODE AUTO |
| Initial S/W Revision | A.14.50 |

Marker 1

Selects marker 1 to designate sample range used for RMS calculation.

| | |
|----------------------|---|
| Key Path | Source, Modulation Setup, ARB, ARB Setup, Edit RMS, Calculate RMS, RMS Calculation Mode , Marker |
| Example | :SOUR:RAD:ARB:RMS:CALC:MODE M1 |
| Initial S/W Revision | A.14.50 |

Marker 2

Selects marker 2 to designate sample range used for RMS calculation.

| | |
|----------------------|---|
| Key Path | Source, Modulation Setup, ARB, ARB Setup, Edit RMS, Calculate RMS, RMS Calculation Mode , Marker |
| Example | :SOUR:RAD:ARB:RMS:CALC:MODE M2 |
| Initial S/W Revision | A.14.50 |

Marker 3

Selects marker 3 to designate sample range used for RMS calculation.

| | |
|----------------------|---|
| Key Path | Source, Modulation Setup, ARB, ARB Setup, Edit RMS, Calculate RMS, RMS Calculation Mode , Marker |
| Example | :SOUR:RAD:ARB:RMS:CALC:MODE M3 |
| Initial S/W Revision | A.14.50 |

Marker 4

Selects marker 4 to designate sample range used for RMS calculation.

| | |
|----------------------|---|
| Key Path | Source, Modulation Setup, ARB, ARB Setup, Edit RMS, Calculate RMS, RMS Calculation Mode , Marker |
| Example | :SOUR:RAD:ARB:RMS:CALC:MODE M4 |
| Initial S/W Revision | A.14.50 |

Calculate RMS

Allows you to calculate current RMS based on mode selected. This will update ["Current RMS" on page 2543](#) Current RMS setting.

| | |
|----------------------|--|
| Key Path | Source, Modulation Setup, ARB, ARB Setup, Edit RMS, Calculate RMS |
| Remote Command | :SOURce:RADio:ARB:RMS:CALCulate |
| Example | :SOUR:RAD:ARB:RMS:CALC |
| Notes | <p>If no waveform is selected, invoking this operation will get error “-221 Setting conflict; No waveform is selected for RMS operation”.</p> <p>If no waveform is selected, or selected waveform is waveform sequence, the key will grey out.</p> <p>If selected waveform does not contain marker data, but "RMS Calculation Mode" on page 2543 “RMS Calculation Mode” is set to marker, under this circumstance, invoking calculation operation will get error “-221 Setting conflict; There is no marker for currently selected waveform, auto RMS calculation mode is used instead”, and "RMS Calculation Mode" on page 2543 “RMS Calculation Mode” will be coupled to “Auto” mode automatically.</p> <p>RMS calculation does not suit for waveform sequence. If selected waveform is waveform sequence file, invoking this operation will get error “-221 Setting conflict; RMS calculation does not apply to waveform sequence”. But users can still edit current RMS as play parameter, and can save current RMS to waveform sequence header for later use.</p> |
| Initial S/W Revision | A.14.50 |

Use Header RMS

Allows you to quickly set RMS in ARB header to ["Current RMS" on page 2543](#) Current RMS setting.

| | |
|----------------------|---|
| Key Path | Source, Modulation Setup, ARB, ARB Setup, Edit RMS, |
| Notes | <p>No remote command, front panel only.</p> <p>If no waveform is selected, the key will grey out.</p> <p>If no waveform is selected, invoking this operation will get error “-221 Setting conflict; No waveform is selected for RMS operation”.</p> |
| Initial S/W Revision | A.14.50 |

Real-Time AWGN Setup

The source allows you to apply additive white Gaussian noise (AWGN) to a carrier in real time while the modulating waveform plays in the dual ARB player. Pressing this key allows access to the real time AWGN sub-menus and changes the central display area to show the AWGN Setup view.

This feature is controlled by E6650A-AW1 option

| | |
|----------------------|--|
| Key Path | Source, Modulation Setup, ARB, ARB Setup |
| Notes | This menu only appears and related SCPIs are only available when E6650A-AW1 option presents. |
| Initial S/W Revision | A.16.00 |

Real-Time AWGN

Allows you to enable or disable adding real-time AWGN to the carrier modulated by the waveform currently being played by the dual ARB.

| | |
|-----------------------------|--|
| Key Path | Source, Modulation Setup, ARB, ARB Setup, Real-Time AWGN Setup |
| Remote Command | :SOURce:RADio:ARB:NOISe[:STATe] ON OFF 1 0 :SOURce:RADio:ARB:NOISe[:STATe]? |
| Example | :SOUR:RAD:ARB:NOIS OFF |
| Dependencies | When a new waveform is selected for playback the settings contained within the associated waveform header file are applied to the ARB. The AWGN state is one of the values stored within the header file. If the newly selected waveform file has an associated header file, the AWGN state is updated with the value from the header file. The AWGN state will remain unchanged if the newly selected waveform does not have an associated header file. |
| Couplings | If this setting is On and "ARB" on page 2535 ARB State is On, "RF Power" on page 2500 RF Power will be adjusted to the value to maintain the AWGN power relationship defined by "Power Control Mode" on page 2547 Power Control Mode and other noise settings |
| Preset | Off |
| Range | On Off |
| Initial S/W Revision | A.16.00 |

Carrier To Noise Ratio

Allows you to specify the carrier to noise ratio (C/N) in dB. The carrier power is defined as the total modulated signal power without noise power added. The noise power is applied over the specified bandwidth of the carrier signal.

| | |
|-----------------------------|--|
| Key Path | Source, Modulation Setup, ARB, ARB Setup, Real-Time AWGN Setup |
| Remote Command | :SOURce:RADio:ARB:NOISe:CN <ampl> :SOURce:RADio:ARB:NOISe:CN? |
| Example | :SOUR:RAD:ARB:NOIS:CN 0.00 dB |
| Dependencies | When a new waveform is selected for playback the settings contained within the associated waveform header file are applied to the ARB. The AWGN C/N ratio is one of the values stored within the header file. If the newly selected waveform file has an associated header file, the AWGN C/N ratio is updated with the value from the header file. The AWGN C/N ratio will remain unchanged if the newly selected waveform does not have an associated header file. |
| Preset | 0.00 dB |
| Min | -100.00 dB |
| Max | 100.00 dB |
| Initial S/W Revision | A.16.00 |

Carrier Bandwidth

Allows you to specify the bandwidth over which the AWGN is applied. The carrier RMS power and the noise power are integrated over the selected carrier bandwidth for the purpose of calculating carrier to noise ratio (C/N).

| | |
|-----------------------------|--|
| Key Path | Source, Modulation Setup, ARB, ARB Setup, Real-Time AWGN Setup |
| Remote Command | :SOURce:RADio:ARB:NOISe:CBWidth <freq> :SOURce:RADio:ARB:NOISe:CBWidth? |
| Example | :SOUR:RAD:ARB:NOIS:CBW 1.00 Hz |
| Dependencies | When a new waveform is selected for playback the settings contained within the associated waveform header file are applied to the ARB. The AWGN carrier bandwidth is one of the values stored within the header file. If the newly selected waveform file has an associated header file, the AWGN carrier bandwidth is updated with the value from the header file. The AWGN carrier bandwidth will remain unchanged if the newly selected waveform does not have an associated header file. |
| Min | 1.00 Hz |
| Max | 200.00 MHz |
| Initial S/W Revision | A.16.00 |

Noise Bandwidth

Allows you to specify the flat noise bandwidth of the real-time noise for an ARB waveform.

| | |
|-----------------------------|--|
| Key Path | Source, Modulation Setup, ARB, ARB Setup, Real-Time AWGN Setup |
| Remote Command | :SOURce:RADio:ARB:NOISe:BANDwidth <freq> :SOURce:RADio:ARB:NOISe:BANDwidth? |
| Example | :SOUR:RAD:ARB:NOIS:BAND 1.00 Hz |
| Notes | Generally, flat noise bandwidth should be set slightly wider than the carrier bandwidth (typically 1.6 times wider) |
| Notes | Max Noise Bandwidth equals $0.8 * \text{Maximum ARB Sample Rate}$ reported in HW capability |
| Dependencies | When a new waveform is selected for playback the settings contained within the associated waveform header file are applied to the ARB. The AWGN carrier bandwidth is one of the values stored within the header file. If the newly selected waveform file has an associated header file, the AWGN carrier bandwidth is updated with the value from the header file. The AWGN carrier bandwidth will remain unchanged if the newly selected waveform does not have an associated header file. |
| Preset | 1.00 Hz |
| Min | 1.00 Hz |
| Max | 160.00 MHz |
| Initial S/W Revision | A.16.00 |

Power Control Mode

This setting offers four ways to control the RF output power when adding AWGN to a signal.

| | |
|----------------------|---|
| Key Path | Source, Modulation Setup, ARB, ARB Setup, Real-Time AWGN Setup |
| Remote Command | :SOURce:RADio:ARB:NOISe:POWer:CONTRol[:MODE] TOTal CARRier NOISe NCHannel :SOURce:RADio:ARB:NOISe: POWer:CONTRol[:MODE]? |
| Example | :SOUR:RAD:ARB:NOIS:POW:CONT NCHannel :SOUR:RAD:ARB:NOIS:POW:CONT? |
| Preset | TOTal |
| Range | Total Power Carrier Power Total Noise Power Noise Power in Channel |
| Initial S/W Revision | A.16.00 |

Total

Set the power control mode as total power.

| | |
|----------------------|---|
| Key Path | Source, Modulation Setup, ARB, ARB Setup, Real-Time AWGN Setup, Power Control Mode |
| Example | :SOUR:RAD:ARB:NOIS:POW:CONT TOTal |
| Couplings | Set to this value will make Carrier Power Carrier Power, Total Noise Power Total Noise Power, and Channel Noise Power Channel Noise Power buttons invisible on menu. Selecting Total as the power control mode makes the total power and C/N independent variables while making the carrier power and total noise power dependent variables. The dependent variables carrier power and total noise power are set by the total power, C/N, and the rest of the Noise settings. The carrier power and total noise power change as any noise parameter is adjusted to keep the total power and the C/N at their last specified values. |
| Initial S/W Revision | A.16.00 |

Carrier

Set the power control mode as carrier power.

| | |
|----------------------|---|
| Key Path | Source, Modulation Setup, ARB, ARB Setup, Real-Time AWGN Setup, Power Control Mode |
| Example | :SOUR:RAD:ARB:NOIS:POW:CONT CARRier |
| Couplings | Set to this value will make Carrier Power Carrier Power button visible, while Total Noise Power Total Noise Power and Channel Noise Power Channel Noise Power buttons invisible from menu. Selecting Carrier as the power control mode makes the carrier power and C/N independent variables while making the total power and total noise power dependent variables. The dependent variables total power and total noise power are set by the carrier power, C/N, and the rest of the Noise settings. The total power and total noise power change as any noise parameter is adjusted to keep the carrier power and the C/N at their last specified values. |
| Initial S/W Revision | A.16.00 |

Total Noise

Set the power control mode as total noise power.

| | |
|----------------------|---|
| Key Path | Source, Modulation Setup, ARB, ARB Setup, Real-Time AWGN Setup, Power Control Mode |
| Example | :SOUR:RAD:ARB:NOIS:POW:CONT NOISe |
| Couplings | Set to this value will make Total Noise Power Total Noise Power button visible, while Carrier Power Carrier Power and Channel Noise Power Channel Noise Power buttons invisible from menu. Selecting Total Noise as the power control mode makes the total noise power and C/N independent variables while making the total power and carrier power dependent variables. The dependent variables total power and carrier power are set by the total noise power, C/N, and the rest of the Noise settings. The total power and carrier power change as any noise parameter is adjusted to keep the total noise power and the C/N at their last specified values. |
| Initial S/W Revision | A.16.00 |

Channel Noise

Set the power control mode as channel noise power.

| | |
|----------------------|--|
| Key Path | Source, Modulation Setup, ARB, ARB Setup, Real-Time AWGN Setup, Power Control Mode |
| Example | :SOUR:RAD:ARB:NOIS:POW:CONT NCHannel |
| Couplings | Set to this value will make Channel Noise Power Channel Noise Power button visible, while Total Noise Power Total Noise Power and Carrier Power Carrier Power buttons invisible from menu. Selecting Channel Noise as the power control mode makes the noise power in channel and C/N independent variables while making the carrier power and total noise power dependent variables. The dependent variables carrier power and total noise power are set by the channel noise power, C/N, and the rest of the Noise settings. The carrier power and total noise power change as any noise parameter is adjusted to keep the channel noise power and the C/N at their last specified values. |
| Initial S/W Revision | A.16.00 |

Trigger Type

Allows access to the trigger type sub-menus. The setting for trigger type determines the behavior of the waveform when it plays.

| | |
|----------------------|--|
| Key Path | Source, Modulation Setup, ARB |
| Remote Command | :SOURce:RADio:ARB:TRIGger:TYPE CONTInuous SINGLE SADVance :SOURce:RADio:ARB:TRIGger:TYPE? |
| Example | :SOUR:RAD:ARB:TRIG:TYPE CONT :SOUR:RAD:ARB:TRIG:TYPE? |
| Notes | Gated trigger type will be implemented at a later release |
| Preset | CONTInuous |
| Range | Continuous Single Seg Adv |
| Initial S/W Revision | A.05.00 |

Continuous

Sets the active trigger type to Continuous. If Continuous is already selected as the active trigger type, pressing this key allows access to the continuous trigger type setup menu. In Continuous trigger mode, the waveform repeats continuously.

| | |
|-----------------------------|--|
| Key Path | Source, Modulation Setup, ARB, Trigger Type |
| Remote Command | :SOURce:RADio:ARB:TRIGger:TYPE:CONTinuous[:TYPE] FREE TRIGger RESet :SOURce:RADio:ARB:TRIGger:TYPE:CONTinuous[:TYPE]? |
| Example | :SOUR:RAD:ARB:TRIG:TYPE:CONT FREE |
| Preset | FREE |
| Range | Free Run Trigger + Run Reset + Run |
| Initial S/W Revision | A.05.00 |

Free Run

Selects Free Run as the trigger response for the continuous trigger type. Free Run sets the waveform generator to play a waveform sequence or segment continuously, without waiting for a trigger. In this mode, the waveform generator does not respond to triggers.

| | |
|-----------------------------|--|
| Key Path | Source, Modulation Setup, ARB, Trigger Type, Continuous |
| Example | :SOUR:RAD:ARB:TRIG:TYPE:CONT FREE |
| Initial S/W Revision | A.05.00 |

Trigger + Run

Sets Trigger and Run as the trigger response for the continuous trigger type. Trigger and Run sets the waveform generator to play a waveform sequence or segment continuously when the first trigger is received, and to ignore any subsequent triggers.

| | |
|-----------------------------|--|
| Key Path | Source, Modulation Setup, ARB, Trigger Type, Continuous |
| Example | :SOUR:RAD:ARB:TRIG:TYPE:CONT TRIG |
| Initial S/W Revision | A.05.00 |

Reset + Run

Sets Reset and Run as the trigger response for the continuous trigger type. Reset and Run sets the waveform generator to play a waveform sequence or segment continuously when the first trigger is received. Subsequent triggers reset the waveform sequence or segment to the start, and then play it continuously.

| | |
|-----------------------------|--|
| Key Path | Source, Modulation Setup, ARB, Trigger Type, Continuous |
| Example | :SOUR:RAD:ARB:TRIG:TYPE:CONT RES |
| Initial S/W Revision | A.05.00 |

Single

Sets the active trigger type to Single. If Single is already selected as the active trigger type, pressing this key allows access to the single trigger type setup menu. In Single trigger mode, the waveform plays once.

| | |
|-----------------------------|--|
| Key Path | Source, Modulation Setup, ARB, Trigger Type |
| Remote Command | :SOURce:RADio:ARB:RETRigger ON OFF IMMediate :SOURce:RADio:ARB:RETRigger? |
| Example | :SOUR:RAD:ARB:RETR OFF |
| Notes | ON: Buffered Trigger OFF: No Retrigger Immediate: Restart on Trigger This is defined as an enumerated SCPI command, with ON OFF being considered as enumerated types rather than Boolean. This means the query will return OFF instead of 0, and ON instead of 1. |
| Preset | ON |
| Range | No Retrigger Buffered Trigger Restart on Trigger |
| Initial S/W Revision | A.05.00 |

No Retrigger

Selects No Retrigger as the trigger response for single trigger type. No Retrigger sets the waveform generator to play a waveform sequence or segment once when a trigger is received. Any triggers then received during playback are ignored.

| | |
|-----------------------------|--|
| Key Path | Source, Modulation Setup, ARB, Trigger Type, Single |
| Example | :SOUR:RAD:ARB:RETR OFF |
| Initial S/W Revision | A.05.00 |

Buffered Trigger

Selects Buffered Trigger as the trigger response for single trigger type. Buffered Trigger sets the waveform generator to play a waveform sequence or segment once when a trigger is received. If a trigger is received during playback, the waveform generator plays the sequence or segment to the end, then plays the sequence or segment once more.

| | |
|-----------------------------|--|
| Key Path | Source, Modulation Setup, ARB, Trigger Type, Single |
| Example | :SOUR:RAD:ARB:RETR ON |
| Initial S/W Revision | A.05.00 |

Restart on Trigger

Selects Restart on Trigger as the trigger response for single trigger type. Restart on Trigger sets the waveform generator to play a waveform sequence or segment once when a trigger is received. If a trigger is received during playback, the waveform generator resets and plays the sequence or segment from the start.

| | |
|----------------------|--|
| Key Path | Source, Modulation Setup, ARB, Trigger Type, Single |
| Example | :SOUR:RAD:ARB:RETR IMM |
| Initial S/W Revision | A.05.00 |

Segment Advance

Sets the active trigger type to Segment Advance. If Segment Advance is already selected as the active trigger type, pressing this key allows access to the segment advance trigger type setup menu.

Segment Advance triggering allows you to control the playback of waveform segments within a waveform sequence. When a trigger is received the ARB advances to the next waveform segment within the waveform sequence. This type of triggering ignores the repetition count for the waveform segment within the waveform sequence. For example, if a waveform segment has a repetition count of 10 and you select single segment advance triggering mode, the waveform segment will only play once.

Segment Advance triggering can also be used for waveform segments only. In this situation the same waveform segment is played again when a trigger is received.

| | |
|-----------------------|--|
| Key Path | Source, Modulation Setup, ARB, Trigger Type |
| Remote Command | :SOURce:RADio:ARB:TRIGger:TYPE:SADVance[:TYPE] SINGLE CONTInuous :SOURce:RADio:ARB:TRIGger:TYPE:SADVance[:TYPE] ? |
| Example | :SOUR:RAD:ARB:TRIG:TYPE:SADV SING |
| Preset | CONTInuous |
| Range | Single Continuous |
| Initial S/W Revision | A.05.00 |

Single

Selects Single as the trigger response for Segment Advance trigger type. With single selected, once a trigger is received a segment is played once. If a trigger is received during playback of a segment, the segment plays to completion and the next segment is played once.

| | |
|----------------------|---|
| Key Path | Source, Modulation Setup, ARB, Trigger Type, Segment Advance |
| Example | :SOUR:RAD:ARB:TRIG:TYPE:SADV SING |
| Initial S/W Revision | A.05.00 |

Continuous

Selects Continuous as the trigger response for Segment Advance trigger type. With continuous selected, once a trigger is received a segment is played continuously. When subsequent triggers are received, the currently playing segment plays to completion and then the next segment is played continuously.

| | |
|----------------------|---|
| Key Path | Source, Modulation Setup, ARB, Trigger Type, Segment Advance |
| Example | :SOUR:RAD:ARB:TRIG:TYPE:SADV CONT |
| Initial S/W Revision | A.05.00 |

Trigger Source

The trigger source setting determines how the source receives the trigger that starts the waveform playing. Therefore, this key is grayed out if the trigger type is free run, since free run triggers immediately with no trigger source required.

| | |
|-----------------------|---|
| Key Path | Source, Modulation Setup, ARB |
| Remote Command | :SOURce:RADio:ARB:TRIGger[:SOURce] KEY BUS EXTernal2 :SOURce:RADio:ARB:TRIGger[:SOURce]? |
| Example | :SOUR:RAD:ARB:TRIGger KEY |
| Dependencies | This key is grayed out if the current trigger type is Continuous, Free Run. |
| Preset | EXTernal2 |
| Range | Trigger Key Bus External 2 |
| Initial S/W Revision | A.05.00 |

Trigger Key

Sets the current trigger source to the front panel Trigger key. When Trigger Key is selected, the waveform is triggered when you press the front panel Trigger key.

| | |
|----------------------|--|
| Key Path | Source, Modulation Setup, ARB, Trigger Source |
| Example | :SOUR:RAD:ARB:TRIGger KEY |
| Initial S/W Revision | A.05.00 |

Bus

Sets the current trigger source to Bus. Selecting Bus trigger source enables triggering over GPIB, LAN, or USB using the :SOURce:RADio:ARB:TRIGger:INITiate command.

| | |
|----------------------|--|
| Key Path | Source, Modulation Setup, ARB, Trigger Source |
| Example | :SOUR:RAD:ARB:TRIGger BUS |
| Initial S/W Revision | A.05.00 |

External 2

Sets the current trigger source to External 2. Selecting External 2 enables triggering a waveform by an externally applied signal.

| | |
|----------------------|--|
| Key Path | Source, Modulation Setup, ARB, Trigger Source |
| Example | :SOUR:RAD:ARB:TRIGger EXT2 |
| Notes | Note: When on E6640A, trigger 2 is a bi-directional trigger port. So when trigger 2 has been configured as OUTPUT type, choosing External 2 as the input trigger for the current step will generate error. |
| Initial S/W Revision | A.05.00 |

Trigger Initiate

Used to initiate an immediate trigger event if the trigger source is set to Trigger Key.

| | |
|----------------------|---|
| Key Path | Source, Modulation Setup, ARB |
| Notes | No remote command, SCPI front panel only. |
| Initial S/W Revision | A.05.00 |

Waveform Sequences

Allows access to the waveform sequence sub-menus. Pressing this key changes the central view area to display the Waveform Sequence List view.

| | |
|----------------------|---|
| Key Path | Source, Modulation Setup, ARB |
| Notes | No remote command, SCPI front panel only. |
| Initial S/W Revision | A.05.00 |

Build New Sequence

Allows access to the sub-menus for creating a new waveform sequence. Pressing this key changes the central view area to display the Waveform Sequence Creation and Editing view.

| | |
|----------------------|--|
| Key Path | Source, Modulation Setup, ARB, Waveform Sequences |
| Notes | No remote command, SCPI front panel only. |
| Initial S/W Revision | A.05.00 |

Current Segment

Specifies the selected sequence segment that will be affected by the menu functions.

| | |
|----------------------|---|
| Key Path | Source, Modulation Setup , ARB, Waveform Sequences, Build New Sequence |
| Notes | No remote command, SCPI front panel only. This key is grayed out and unavailable if the sequence is currently empty. |
| Initial S/W Revision | A.05.00 |

Insert New Waveform

Allows you access to the sub-menu for inserting a new waveform segment or sequence. Pressing this key also changes the central display to show the Waveform File Selection View.

| | |
|----------------------|---|
| Key Path | Source, Modulation Setup, ARB, Waveform Sequences, Build New Sequence |
| Notes | No remote command, SCPI front panel only. Waveform segment name string length upper limit is 128 chars. Please do NOT insert waveform which name string exceeds 128 chars. |
| Initial S/W Revision | A.05.00 |

Insert Waveform

Inserts the currently highlighted waveform to the end of the waveform sequence. Pressing this key also returns you to the menus for creating or editing a sequence, and returns the central view to the sequence creation view.

| | |
|----------------------|---|
| Key Path | Source, Modulation Setup, ARB, Waveform Sequences, Build New Sequence, Insert New Waveform |
| Notes | No remote command, SCPI front panel only. Waveform segment name string length upper limit is 128 chars. Please do NOT insert waveform which name string exceeds 128 chars. |
| Initial S/W Revision | A.05.00 |

Segments on Hard Disk

Allows you access to the sub-menus for loading waveform segments from the hard disk into ARB memory. The default directory is: D: varb.

Pressing this key changes the current view to the Waveform Management View.

| | |
|----------------------|---|
| Key Path | Source, Modulation Setup, ARB, Select Waveform |
| Initial S/W Revision | A.05.00 |

Load Segment To ARB Memory

Allows you to load the selected file into ARB memory. On the front panel you select the file for loading to the ARB memory by highlighting the desired file in the list. Using the SCPI command, you specify the file name on the HDD.

“NVWFM” (none-volatile storage) MSUS (Mass Storage Unit Specifier) is supported in the memory subsystem because the ARB memory cannot be accessed directly. Therefore, files must be downloaded to the instrument hard disk and then loaded into the ARB memory. “NVWFM” MSUS will be mapped to the default directory D: VARB. The SCPI command supports using either “NVWFM” MSUS or specifying a full path. For more information, see [Memory Subsystem \(Remote Command Only\)](#).

If a file of the same name already exists within ARB memory, it is overwritten. If you wish to load two segments of the same name, you must rename one of the segments before loading it into ARB memory. To rename a segment, you can either use Windows File Explorer, or the :MMEMory:COPI command.

| | |
|-----------------------------|--|
| Key Path | Source, Modulation Setup, ARB, Select Waveform, Segments on Hard Disk |
| Remote Command | :SOURce:RADio:ARB:LOAD <string> |
| Example | :SOUR:RAD:ARB:LOAD "D: VARB\testwaveform.bin" or :SOUR:RAD:ARB:LOAD "NVWFM:testwaveform.bin" |
| Notes | <p>Because loading the file involves a delay of unpredictable length, this command should be followed by the query *OPC?, which holds off subsequent commands until the loading operating is complete.</p> <p><string> – specifies the path name of the file to load from the HDD into ARB memory. It could be a <full path + filename>, or <“NVWFM” MSUS + colon + filename>.</p> <p>When in Sequence Analyzer mode, and Include Source is Yes, an attempt to load a file to ARB memory will be rejected with an error.</p> <p>When Include Source is No and if there is insufficient free ARB memory to load the selected waveform, an error is generated. .</p> <p>If you specify a file over SCPI, but the file is not at the specified location, an error is generated.</p> <p>If you try to load a waveform file but the file contains less than 500 IQ samples, an error is generated.</p> <p>If you try to load a Signal Studio waveform “*.wfm” which contains invalid waveform header, an error is generated.</p> <p>If the ARB is ON when you load a file to ARB memory or delete a file from ARB memory, the playing waveform segment may not keep phase continuity during the ARB memory operation. The waveform will be replayed after the ARB operation is finished.</p> <p>ARB can be loaded into ARB memory even required licenses do not present on the instrument. In this case, a GUI only warning message -800, “Operation complete; Loaded <filename> successfully, but no license <required licenses> installed”. User can install required licenses according to <required licenses> string to license it, or multi-pack license it.</p> |
| Initial S/W Revision | A.05.00 |

Load All To ARB Memory

Allows you to load all the segment files within the currently selected directory into ARB memory. If a file of the same name already exists within ARB memory, it is overwritten. If you wish to load two segments of the

same name, you must rename one of the segments before loading it into ARB memory. To rename a segment, you can either use Windows File Explorer, or the :MEMory:COpy command.

| | |
|-----------------------------|---|
| Key Path | Source, Modulation Setup, ARB, Select Waveform, Segments on Hard Disk |
| Remote Command | :SOURce:RADio:ARB:LOAD:ALL <string> |
| Example | :SOUR:RAD:ARB:LOAD:ALL "D: varb" |
| Notes | <p><string> - specifies the directory on the HDD to load the files into ARB memory from.</p> <p>When in Sequence Analyzer mode, and Include Source is Yes, an attempt to load all files from a directory to ARB memory is rejected with an error.</p> <p>When Include Source is No and there is insufficient free ARB memory to load all the waveforms, when the ARB memory is full, the copy ceases, and an error is generated.</p> <p>If you specify a directory over SCPI, but the directory does not exist, an error is generated.</p> <p>If the ARB is ON, a user then loads or deletes file to ARB memory, the playing waveform segment may not keep phase continuity during the ARB memory operation. The waveform will be replayed after the ARB operation is finished.</p> |
| Initial S/W Revision | A.05.00 |

Change Directory...

Allows you to change the currently selected directory on the hard disk. Pressing this key opens a standard windows change directory dialog allowing you to select the new directory of interest.

The current directory is used for manually loading waveform segments into ARB memory for playback, and as a search location for waveform segments that are required to be loaded into ARB memory for playback of a waveform sequence or a list sequence.

| | |
|-----------------------------|--|
| Key Path | Source, Modulation Setup, ARB, Select Waveform, Segments on Hard Disk |
| Notes | No remote command, SCPIfront panel only. |
| Initial S/W Revision | A.05.00 |

Default Directory...

Allows you to change the default directory. It is used as a search location for waveform segments that are required to be loaded into ARB memory for playback of a waveform sequence, and as a search location for selecting waveforms using SCPI.

| | |
|-----------------------------|---|
| Key Path | Source, Modulation Setup, ARB, Select Waveform, Segments on Hard Disk |
| Remote Command | :SOURce:RADio:ARB:DEFault:DIRectory <string> :SOURce:RADio:ARB: DEFault:DIRectory? |
| Example | :SOUR:RAD:ARB:DEF:DIR "D:\ArbFiles" :SOUR:RAD:ARB:DEF:DIR? |
| State Saved | Persistent, survives a power cycle and a preset but not saved in the instrument state |
| Initial S/W Revision | A.05.00 |

Segments in ARB Memory

Allows you access to the sub-menus for managing the files within ARB memory.

| | |
|----------------------|---|
| Key Path | Source, Modulation Setup, ARB, Select Waveform |
| Initial S/W Revision | A.05.00 |

Delete Segment From ARB Mem

Allows you to remove a segment from ARB playback memory.

| | |
|-----------------------|---|
| Key Path | Source, Modulation Setup, ARB, Select Waveform, Segments in ARB Memory |
| Remote Command | :SOURce:RADio:ARB:DELeTe <string> |
| Example | :SOUR:RAD:ARB:DEL "testwaveform.bin" |
| Notes | <p><string> - specifies the waveform to be deleted from the ARB playback memory.</p> <p>When in Sequence Analyzer mode and Include Source is Yes, an attempt to delete a file from ARB memory is rejected with an error.</p> <p>When Include Source is No and you specify a file that does not exist within ARB memory, an error is generated.</p> <p>It is possible to delete files from within the ARB memory when the ARB is ON. However, if you attempt to delete the file that is currently playing an error is generated.</p> <p>It is possible to delete a file from within the ARB memory when the sequencer state is ON and the file is not being used by the List Sequencer. If you attempt to delete a file which is being used by the list sequencer, an error is generated.</p> <p>When sequencer state is On, even if ARB state is On, the selected waveform will not be played. In this case, if the selected waveform is not used in List Sequence, it can be deleted and the ARB state is turned Off.</p> <p>If the ARB is ON and you load a file to ARB memory or delete a file from ARB memory, the playing waveform segment may not keep phase continuity during the ARB memory operation. The waveform will be replayed after the ARB operation is finished.</p> |
| Initial S/W Revision | A.05.00 |

Delete All From ARB Memory

Allows you to remove all segments from ARB playback memory.

| | |
|-----------------------|---|
| Key Path | Source, Modulation Setup, ARB, Select Waveform, Segments in ARB Memory |
| Remote Command | :SOURce:RADio:ARB:DELeTe:ALL |
| Example | :SOUR:RAD:ARB:DELeTe:ALL |
| Notes | <p>When in Sequence Analyzer mode and Include Source is Yes, an attempt to delete all files from ARB memory is rejected with an error.</p> <p>When Include Source is No and you attempt to delete all files from ARB memory when the ARB is currently playing a file, all files except the one playing are deleted and an error is generated.</p> <p>If you attempt to delete all files from ARB memory when there are waveform files used in "List</p> |

["Sequencer" on page 2585](#) and ["Sequencer" on page 2586](#) state is ON, all files except the files currently being used in list sequencer are deleted, and an error is generated.

If the ARB is ON and you load a file to ARB memory or delete a file from ARB memory, the playing waveform segment may not keep phase continuity during the ARB memory operation. The waveform will be replayed after the ARB operation is finished.

|----------------------|------------------|

Edit Selected Waveform

Allows access to the sub-menus for editing the details of the currently selected waveform segment.

| | |
|----------------------|--|
| Key Path | Source, Modulation Setup, ARB, Waveform Sequences, Build New Sequence |
| Notes | No remote command, front panel only. |
| Initial S/W Revision | A.05.00 |

Repetitions

Allows you to specify the number of times the currently selected waveform is played within the sequence.

| | |
|----------------------|--|
| Key Path | Source, Modulation Setup, ARB, Waveform Sequences, Build New Sequence, Edit Selected Waveform |
| Notes | No remote command, SCPI front panel only. |
| Preset | 1 |
| Min | 1 |
| Max | 65535 |
| Initial S/W Revision | A.05.00 |

Marker 1

Allows you to enable or disable marker 1 for the currently selected waveform. For a waveform sequence, you can enable and disable markers on a per-segment basis, allowing you to output markers from some waveform segments within the sequence, but not for others.

| | |
|----------------------|--|
| Key Path | Source, Modulation Setup, ARB, Waveform Sequences, Build New Sequence, Edit Selected Waveform |
| Notes | No remote command, front panel only. |
| Preset | Enabled |
| Range | Enabled Disabled |
| Initial S/W Revision | A.05.00 |

Marker 2

Allows you to enable or disable marker 2 for the currently selected waveform. For a waveform sequence, you can enable and disable markers on a per-segment basis, allowing you to output markers from some waveform segments within the sequence, but not for others.

| | |
|----------------------|--|
| Key Path | Source, Modulation Setup, ARB, Waveform Sequences, Build New Sequence, Edit Selected Waveform |
| Notes | No remote command, front panel only. |
| Preset | Enabled |
| Range | Enabled Disabled |
| Initial S/W Revision | A.05.00 |

Marker 3

Allows you to enable or disable marker 3 for the currently selected waveform. For a waveform sequence, you can enable and disable markers on a per-segment basis, allowing you to output markers from some waveform segments within the sequence, but not for others.

| | |
|----------------------|--|
| Key Path | Source, Modulation Setup, ARB, Waveform Sequences, Build New Sequence, Edit Selected Waveform |
| Notes | No remote command, front panel only. |
| Preset | Enabled |
| Range | Enabled Disabled |
| Initial S/W Revision | A.05.00 |

Marker 4

Allows you to enable or disable marker 4 for the currently selected waveform. For a waveform sequence, you can enable and disable markers on a per-segment basis, allowing you to output markers from some waveform segments within the sequence, but not for others.

| | |
|----------------------|--|
| Key Path | Source, Modulation Setup, ARB, Waveform Sequences, Build New Sequence, Edit Selected Waveform |
| Notes | No remote command, front panel only. |
| Preset | Enabled |
| Range | Enabled Disabled |
| Initial S/W Revision | A.05.00 |

Delete Segment

Allows you to delete the selected segment from the waveform sequence.

| | |
|----------------------|--|
| Key Path | Source, Modulation Setup, ARB, Waveform Sequences, Build New Sequence |
| Notes | No remote command, front panel only. |
| Initial S/W Revision | A.05.00 |

Save Sequence...

Pressing this key displays the “Save As” dialog. The sequence name is passed to the save as dialog to use as the filename for saving, and the directory the save as dialog will open into is the default waveform directory.

| | |
|----------------------|--|
| Key Path | Source, Modulation Setup, ARB, Waveform Sequences, Build New Sequence |
| Initial S/W Revision | A.05.00 |

Build New Sequence (Remote Command Only)

This command is the SCPI equivalent of the waveform sequence creation features described in ["Build New Sequence" on page 2554](#).

This command writes a waveform sequence file to the hard disk. You must specify the waveform sequence file path and filename which will be saved on the hard disk, and the waveform segment file path and name which will be nested into the waveform sequence file. You can utilize mass storage unit specifier (MSUS) "NVWFM" or use a real full path representation. See the example below. MSUS "NVWFM" is mapped to D:VARB directory on test set hard disk.

Any number of segments, up to a segment count limit of 64, can be used to create a sequence. Repeated segments are included in the count limit.

Each waveform segment name string length upper limit is 128 chars. Please do NOT insert waveform which name string exceeds 128 chars.

The internal source does not support nesting one waveform sequence file into another waveform sequence file.

Remote Command :SOURCE:RADio:ARB:SEQuence[:MWAveform] <filename>, <waveform1>, <reps>, NONE | M1 | M2 | M3 | M4 | M1M2 | M1M3 | M1M4 | M2M3 | M2M4 | M3M4 | M1M2M3 | M1M2M4 | M1M3M4 | M2M3M4 | M1M2M3M4 | ALL, {<waveform2>, <reps>, NONE | M1 | M2 | M3 | M4 | M1M2 | M1M3 | M1M4 | M2M3 | M2M4 | M3M4 | M1M2M3 | M1M2M4 | M1M3M4 | M2M3M4 | M1M2M3M4 | ALL, } ...

(For additional description of each item, see Notes below ["For Setup SCPI" on page 2018](#) "For Setup SCPI".)

 :SOURCE:RADio:ARB:SEQuence[:MWAveform]? <filename>

(For additional description of each item, see Notes ["For Query SCPI" on page 2019](#) below.)

Example For setup:

```
>:SOUR:RAD:ARB:SEQ "NVWFM:testSeq1.seq", "NVWFM:wfmSegment1.wfm", 10, M2M3M4, "NVWFM:wfmSegment2.wfm", 20, M1 M3
```

Or

```
>:SOUR:RAD:ARB:SEQ "D: VARB\testSeq1.seq", " D: VARB\wfmSegment1.wfm", 10, M2M3M4, " D: VARB\wfmSegment2.wfm", 20, M1 M3
```

For query, must specify which waveform sequence file to query.

```
>:SOUR:RAD:ARB:SEQ? "NVWFM:testSeq1.seq"
```

Or

```
>:SOUR:RAD:ARB:SEQ? "D: VARB\testSeq1.seq",
```

Notes For Setup SCPI

For the Setup SCPI command, the parameters are:

<filename> - String Type

This variable specifies the path and name for the waveform sequence file. The path supports MSUS (NVWFM) or a real full path representation. See example.

<waveform1> - String Type

This variable specifies the path and name of the first existing waveform segment. The path supports

MSUS (NVWFM) or a real full path representation. See example.

The segment file must reside within ARB playback memory before it can be played by the ARB player.

<reps> - Integer Type

This variable specifies the number of times a segment or sequence plays before moving on to the next segment or sequence.

<marker> - Enum Type

NONE – This choice disables all four markers for the waveform. Disabling markers means that the waveform sequence ignores the segments or sequence marker settings.

M1, M2, M3, M4 – these choices, either individually or a combination of them, enable the markers for the waveform segment or sequence. Markers not specified are ignored for that segment or sequence.

ALL – This choice enables all four markers in the waveform segment or sequence.

<waveform2> - String type.

This variable specifies the name of a second existing waveform segment. The path supports MSUS (NVWFM) and real full path representation both. See example.

The segment file must reside within ARB playback memory before it can be played by the ARB player.

<reps> same as above, for the 2nd waveform segment.

<marker> same as above, for the 2nd waveform segment.

You can insert several waveform segments into a waveform sequence file. Just repeat inserting waveform segments as described above.

Error Checks for Setup SCPI command:

If you do not specify a filename, or you use an unsupported MSUS (that is, not NVWFM), or have an error in the waveform sequence file path, an error is generated.

Notes

Error Checks for Query SCPI command: (Continued)

If the specified waveform sequence file name suffix is not “.seq”, error is generated.

If you use an unsupported MSUS (that is, not NVWFM), or have an error in the waveform segment file path, an error is generated.

If the first specified waveform file cannot be found, an error is generated.

If you nest one waveform sequence file into another waveform sequence file, an error is generated.

If the specified repetition value is larger than 65535 or smaller than 1, an error is generated.

If the specified marker type is unrecognized, an error is generated.

For Query SCPI

For the Query the parameters are:

<filename> - String type.

This variable specifies the path and name of the waveform sequence file being queried. The path supports MSUS (NVWFM) or a real full path representation. See example.

The return value is a <string>, which includes each waveform segment file name, repetitions, and marker type. For example:

```
>:SOUR:RAD:ARB:SEQ? "NVWFM:testSeq1.seq",
```

```
<"wfmSegment1. wfm, 10, ALL, wfmSegment2.wfm, 20, M1M3",
```

Error Checks for Query SCPI command:

If you do not specify a filename, an error is generated.
If the waveform sequence file name is empty, an error is generated.
If the specified waveform sequence file cannot be found, an error is generated.

|----------------------|---------|

Edit Selected Sequence

Allows access to the sub-menus for editing the sequence currently selected within the Waveform Sequence List view. Pressing this key changes the central view area to display the Waveform Sequence Creation and Editing view.

| | |
|----------|--|
| Key Path | Source, Modulation Setup, ARB, Waveform Sequences |
|----------|--|

| | |
|-------|--------------------------------------|
| Notes | No remote command, front panel only. |
|-------|--------------------------------------|

| | |
|----------------------|---------|
| Initial S/W Revision | A.05.00 |
|----------------------|---------|

Current Directory...

Allows you to change the currently selected directory on the hard disk. Pressing this key opens a standard windows change directory dialog and allows you to select the new directory of interest.

| | |
|----------|--|
| Key Path | Source, Modulation Setup, ARB, Waveform Sequences |
|----------|--|

| | |
|-------|--------------------------------------|
| Notes | No remote command, front panel only. |
|-------|--------------------------------------|

| | |
|----------------------|---------|
| Initial S/W Revision | A.05.00 |
|----------------------|---------|

Waveform Utilities

Allows you access to the waveform utilities sub-menus.

| | |
|----------|--------------------------------------|
| Key Path | Source, Modulation Setup, ARB |
|----------|--------------------------------------|

| | |
|----------------------|---------|
| Initial S/W Revision | A.05.00 |
|----------------------|---------|

Multi-Pack Licenses

Allows you access to the Multi - Pack License sub-menus. Pressing this key also changes the central view area to display the Multi -Pack License Management view.

On modular instrument like E6630A or E6640A, multi-pack license operations are only allowed on the default module, i.e. "Left" module for E6630A or "TRX1" module for E6640A.

| | |
|----------|--|
| Key Path | Source, Modulation Setup, ARB, Waveform Utilities |
|----------|--|

| | |
|--------------|---|
| Dependencies | This key is only available if there is at least one Multi-pack license installed on the instrument. |
|--------------|---|

| | |
|----------------------|---------|
| Initial S/W Revision | A.05.00 |
|----------------------|---------|

Add Waveform

Pressing this key accesses the Add Waveform sub-menu. It also changes the central display area to display the Multi-Pack License Waveform Add view.

| | |
|----------------------|--|
| Key Path | Source, Modulation Setup, ARB, Waveform Utilities, Multi-Pack Licenses |
| Dependencies | This key is only available if there is at least one slot available within at least one multi-pack license. |
| Initial S/W Revision | A.05.00 |

Add Waveform

Allows you to add the currently selected waveform segment to a multi-pack license. The new waveform is added to the next available slot regardless of which slot was selected on the Multi-Pack License Management view.

| | |
|-----------------------|---|
| Key Path | Source, Modulation Setup, ARB, Waveform Utilities, Multi-Pack Licenses, Add Waveform |
| Remote Command | :SYSTem:LKEY:WAVEform:ADD <string> or :SYSTem:LIcense[:FPACK]:WAVEform:ADD <string> |
| Example | SYST:LKEY:WAV:ADD "mywaveform.wfm" or SYST:LIC:WAV:ADD "mywaveform.wfm" |
| Notes | The second SCPI :SYSTem:LIcense[:FPACK]:WAVEform:ADD is provided to be consistent with the style of Keysight signal sources. You can use either one of them. Since adding a waveform segment to a Multi-Pack license causes the license slot to enter the trial period of only 48 hours, pressing this key causes a confirmation dialog to be displayed to ensure you do want to add the waveform segment to the Multi-Pack. If you attempt to license a waveform that is already licensed using another slot an error is generated. . |
| Dependencies | This key is only available if the currently selected file is a secure waveform requiring a license, and there is at least one slot available within at least one multi-pack license. If the waveform highlighted is a secure waveform, but is already licensed, this key will be unavailable. |
| Initial S/W Revision | A.05.00 |

Segments on Hard Disk

Allows you access to the sub-menus for loading waveform segments from the hard disk into ARB memory. The default directory is: D: varb.

Pressing this key changes the current view to the Waveform Management View.

| | |
|----------------------|---|
| Key Path | Source, Modulation Setup, ARB, Select Waveform |
| Initial S/W Revision | A.05.00 |

Load Segment To ARB Memory

Allows you to load the selected file into ARB memory. On the front panel you select the file for loading to the ARB memory by highlighting the desired file in the list. Using the SCPI command, you specify the file name on the HDD.

“NVWFM” (none-volatile storage) MSUS (Mass Storage Unit Specifier) is supported in the memory subsystem because the ARB memory cannot be accessed directly. Therefore, files must be downloaded to the instrument hard disk and then loaded into the ARB memory. “NVWFM” MSUS will be mapped to the default directory D: VARB. The SCPI command supports using either “NVWFM” MSUS or specifying a full path. For more information, see [Memory Subsystem \(Remote Command Only\)](#).

If a file of the same name already exists within ARB memory, it is overwritten. If you wish to load two segments of the same name, you must rename one of the segments before loading it into ARB memory. To rename a segment, you can either use Windows File Explorer, or the :MMEMory:COpy command.

| Key Path | Source, Modulation Setup, ARB, Select Waveform, Segments on Hard Disk |
|-----------------------------|--|
| Remote Command | :SOURce:RADio:ARB:LOAD <string> |
| Example | :SOUR:RAD:ARB:LOAD "D: VARB\testwaveform.bin" or :SOUR:RAD:ARB:LOAD "NVWFM:testwaveform.bin" |
| Notes | <p>Because loading the file involves a delay of unpredictable length, this command should be followed by the query *OPC?, which holds off subsequent commands until the loading operating is complete.</p> <p><string> – specifies the path name of the file to load from the HDD into ARB memory. It could be a <full path + filename>, or <“NVWFM” MSUS + colon + filename>.</p> <p>When in Sequence Analyzer mode, and Include Source is Yes, an attempt to load a file to ARB memory will be rejected with an error.</p> <p>When Include Source is No and if there is insufficient free ARB memory to load the selected waveform, an error is generated. .</p> <p>If you specify a file over SCPI, but the file is not at the specified location, an error is generated.</p> <p>If you try to load a waveform file but the file contains less than 500 IQ samples, an error is generated.</p> <p>If you try to load a Signal Studio waveform “*.wfm” which contains invalid waveform header, an error is generated.</p> <p>If the ARB is ON when you load a file to ARB memory or delete a file from ARB memory, the playing waveform segment may not keep phase continuity during the ARB memory operation. The waveform will be replayed after the ARB operation is finished.</p> <p>ARB can be loaded into ARB memory even required licenses do not present on the instrument. In this case, a GUI only warning message -800, “Operation complete; Loaded <filename> successfully, but no license <required licenses> installed”. User can install required licenses according to <required licenses> string to license it, or multi-pack license it.</p> |
| Initial S/W Revision | A.05.00 |

Load All To ARB Memory

Allows you to load all the segment files within the currently selected directory into ARB memory. If a file of the same name already exists within ARB memory, it is overwritten. If you wish to load two segments of the same name, you must rename one of the segments before loading it into ARB memory. To rename a segment, you can either use Windows File Explorer, or the :MEMory:COpy command.

| | |
|-----------------------------|---|
| Key Path | Source, Modulation Setup, ARB, Select Waveform, Segments on Hard Disk |
| Remote Command | :SOURce:RADio:ARB:LOAD:ALL <string> |
| Example | :SOUR:RAD:ARB:LOAD:ALL "D: varb" |
| Notes | <p><string> - specifies the directory on the HDD to load the files into ARB memory from.</p> <p>When in Sequence Analyzer mode, and Include Source is Yes, an attempt to load all files from a directory to ARB memory is rejected with an error.</p> <p>When Include Source is No and there is insufficient free ARB memory to load all the waveforms, when the ARB memory is full, the copy ceases, and an error is generated.</p> <p>If you specify a directory over SCPI, but the directory does not exist, an error is generated.</p> <p>If the ARB is ON, a user then loads or deletes file to ARB memory, the playing waveform segment may not keep phase continuity during the ARB memory operation. The waveform will be replayed after the ARB operation is finished.</p> |
| Initial S/W Revision | A.05.00 |

Change Directory...

Allows you to change the currently selected directory on the hard disk. Pressing this key opens a standard windows change directory dialog allowing you to select the new directory of interest.

The current directory is used for manually loading waveform segments into ARB memory for playback, and as a search location for waveform segments that are required to be loaded into ARB memory for playback of a waveform sequence or a list sequence.

| | |
|-----------------------------|--|
| Key Path | Source, Modulation Setup, ARB, Select Waveform, Segments on Hard Disk |
| Notes | No remote command, SCPIfront panel only. |
| Initial S/W Revision | A.05.00 |

Default Directory...

Allows you to change the default directory. It is used as a search location for waveform segments that are required to be loaded into ARB memory for playback of a waveform sequence, and as a search location for selecting waveforms using SCPI.

| | |
|-----------------------|---|
| Key Path | Source, Modulation Setup, ARB, Select Waveform, Segments on Hard Disk |
| Remote Command | :SOURce:RADio:ARB:DEFault:DIRectory <string> :SOURce:RADio:ARB: DEFault:DIRectory? |
| Example | :SOUR:RAD:ARB:DEF:DIR "D:\ArbFiles" |

| | |
|----------------------|---|
| | :SOUR:RAD:ARB:DEF:DIR? |
| State Saved | Persistent, survives a power cycle and a preset but not saved in the instrument state |
| Initial S/W Revision | A.05.00 |

Segments on Hard Disk

| | |
|----------------------|--|
| Key Path | Source, Modulation Setup, ARB, Waveform Utilities, Multi-Pack Licenses, Replace Waveform, Segment on Hard Drive |
| Initial S/W Revision | Prior to A.09.00 |

Clear Waveform from Slot

Allows you to clear the waveform from the selected slot.

| | |
|----------------|--|
| Key Path | Source, Modulation Setup, ARB, Waveform Utilities, Multi-Pack Licenses |
| Remote Command | :SYSTem:LKEY:WAVeform:CLEar <int> or :SYSTem:LICense[:FPACK]:WAVeform:CLEar <int> |
| Example | SYST:LKEY:WAV:CLE 1 or :SYST:LIC:WAV:CLE 1 |
| Notes | The second SCPI :SYSTem:LICense[:FPACK]:WAVeform:CLEar is provided to be consistent with the style of Keysight signal sources. You can use either one of them. |

Waveform slot number <int> is positive. If you attempt to input a slot number less than or equals 0, an error is generated.

| | |
|----------------------|--|
| Dependencies | This key is only available if the currently selected slot is in the trial state. |
| Initial S/W Revision | A.05.00 |

Lock Waveform in Slot

If the selected slot is in the trial state or the lock required state, the waveform that occupies the slot is locked and permanently licensed.

| | |
|----------------------|--|
| Key Path | Source, Modulation Setup, ARB, Waveform Utilities, Multi-Pack Licenses |
| Remote Command | :SYSTem:LKEY:WAVeform:LOCK <int> or :SYSTem:LICense[:FPACK]:WAVeform:LOCK <int> |
| Example | SYST:LKEY:WAV:LOCK 1 or SYST:LIC:WAV:LOCK 1 |
| Notes | The second SCPI :SYSTem:LICense[:FPACK]:WAVeform:LOCK is provided to be consistent with the style of Keysight signal sources. You can use either one of them. Waveform slot number <int> is positive. If you attempt to input a slot number less than or equals 0, an error is generated. |
| Dependencies | This key is only available if the currently selected slot is in the trial state or the lock required state. |
| Initial S/W Revision | A.05.00 |

Slot Status Query (Remote Command Only)

Returns the status of the specified slot.

| | |
|----------------|--|
| Remote Command | :SYSTem:LKEY:WAVeform:STATus? <int> or :SYSTem:LICense[:FPACK]:WAVeform:STATus? <int> |
| Example | :SYST:LKEY:WAV:STAT? 1 <"Locked" or :SYST:LIC:WAV:STAT? 1 <"Locked" |
| Notes | The second SCPI :SYSTem:LICense[:FPACK]:WAVeform:STATus is provided to be consistent with the style of Keysight signal sources. You can use either one of them. Waveform slot number <int> is positive. If you attempt to input a slot number less than or equals 0, an |

| | |
|----------------------|--|
| | error is generated. Result type is string. If input slot number exceeds total available slot number, "Nonexistent" is returned. |
| Range | "Locked" "Available" "Trail" "LockRequired" "Nonexistent" |
| Initial S/W Revision | A.05.00 |

Slots Free Query (Remote Command Only)

Returns the number of license slots free.

| | |
|-----------------------|---|
| Remote Command | :SYSTem:LKEY:WAVeform:FREE? or :SYSTem:LIcense[:FPACK]:WAVeform:FREE? |
| Example | :SYST:LKEY:WAV:FREE? or :SYST:LIC:WAV:FREE? |
| Notes | The second SCPI :SYSTem:LIcense[:FPACK]:WAVeform:FREE is provided to be consistent with the style of Keysight signal sources. You can use either one of them. |
| Initial S/W Revision | A.05.00 |

Slot Used Query (Remote Command Only)

Returns the number of license slots used.

| | |
|-----------------------|---|
| Remote Command | :SYSTem:LKEY:WAVeform:USED? or :SYSTem:LIcense[:FPACK]:WAVeform:USED? |
| Example | :SYST:LKEY:WAV:USED? or :SYST:LIC:WAV:USED? |
| Notes | The second SCPI :SYSTem:LIcense[:FPACK]:WAVeform:USED is provided to be consistent with the style of Keysight signal sources. You can use either one of them. |
| Initial S/W Revision | A.05.00 |

Slot Waveform Name Query (Remote Command Only)

Returns the waveform name of the specified slot

| | |
|-----------------------|---|
| Remote Command | :SYSTem:LKEY:WAVeform:NAME? <int> or :SYSTem:LIcense[:FPACK]:WAVeform:NAME? <int> |
|-----------------------|---|

| | |
|-----------------------------|---|
| Example | :SYST:LKEY:WAV:NAME? 1 <"CDMA2K_22.wfm" or :SYST:LIC:WAV:NAME? 1 <"CDMA2K_22.wfm" |
| Notes | Waveform slot number <int> is positive. If you attempt to input a slot number less than or equals 0, an error is generated. Result type is string. If input slot number exceeds total available slot number, "Nonexistent" is returned. If no waveform stored in the specified slot, then empty string is returned. |
| Initial S/W Revision | A.12.00 |

Slot Waveform Unique ID Query (Remote Command Only)

Returns the waveform unique ID of the specified slot

| | |
|-----------------------------|---|
| Remote Command | :SYSTem:LKEY:WAVeform:UID? <int> or :SYSTem:LICense[:FPACK]:WAVeform:UID? <int> |
| Example | :SYST:LKEY:WAV:UID? 2 <"1346752140" or :SYST:LIC:WAV:UID? 2 <"1346752140" |
| Notes | Waveform slot number <int> is positive. If you attempt to input a slot number less than or equals 0, an error is generated. Result type is string. If input slot number exceeds total available slot number, "Nonexistent" is returned. If no waveform stored in the specified slot, then "0" is returned |
| Initial S/W Revision | A.12.00 |

Locked Waveform Name List Query (Remote Command Only)

Returns the waveform name list of locked.

| | |
|-----------------------------|---|
| Remote Command | :SOURce:RADio:ARB:MPLicensed:NAME:LOCKed? |
| Example | SOUR:RAD:ARB:MPL:NAME:LOCKed? <"CDMA2K_27.wfm", "GSM_MCS1.WFM", "c2kWfm.wfm" |
| Initial S/W Revision | A.11.00 |

Locked Waveform Unique ID List Query (Remote Command Only)

Returns the waveform unique id list of locked.

| | |
|-----------------------------|---|
| Remote Command | :SOURce:RADio:ARB:MPLicensed:UID:LOCKed? |
| Example | SOUR:RAD:ARB:MPL:UID:LOCKed? <"2996927136","3812603511","3710986266"> |
| Notes | Each Signal Studio waveform has a unique id recorded in header. So if the unique ids are same, that means they are same one waveform. So besides SCPI to query locked waveform name list, also provide a SCPI to query locked waveform unique id list |
| Initial S/W Revision | A.11.00 |

Marker Utilities

Allows access to the marker utilities sub-menus.

| | |
|-----------------------------|--------------------------------------|
| Key Path | Source, Modulation Setup, ARB |
| Initial S/W Revision | A.05.00 |

Marker Polarity

Allows access to the marker polarity sub-menu, which allows you to specify the polarity for the four markers. For a positive polarity, the marker signal is high during the marker points. For a negative marker polarity, the marker signal is high during the period of no marker points.

| | |
|-----------------------------|--|
| Key Path | Source, Modulation Setup, ARB, Marker Utilities |
| Initial S/W Revision | A.05.00 |

Mkr 1 Polarity

Allows you to set the polarity of marker 1.

| | |
|-----------------------------|---|
| Key Path | Source, Modulation Setup, ARB, Marker Utilities, Marker Polarity |
| Remote Command | :SOURce:RADio:ARB:MPOLarity:MARKer1 POSitive NEGative :SOURce:RADio:ARB:MPOLarity:MARKer1? |
| Example | :SOUR:RAD:ARB:MPOL:MARK1 NEG |
| Dependencies | When a new waveform is selected for playback the settings contained within the associated waveform header file are applied to the ARB. The marker polarity is one of the values stored within the header file. If the newly selected waveform file has an associated header file, the marker polarity is updated with the value from the header file. The marker polarity will remain unchanged if the newly selected waveform does not have an associated header file. |
| Preset | Pos |
| Range | Neg Pos |
| Initial S/W Revision | A.05.00 |

Mkr 2 Polarity

Allows you to set the polarity of marker 2.

| | |
|-----------------------------|---|
| Key Path | Source, Modulation Setup, ARB, Marker Utilities, Marker Polarity |
| Remote Command | :SOURce:RADio:ARB:MPOLarity:MARKer2 POSitive NEGative :SOURce:RADio:ARB:MPOLarity:MARKer2? |
| Example | :SOUR:RAD:ARB:MPOL:MARK2 NEG |
| Dependencies | When a new waveform is selected for playback the settings contained within the associated waveform header file are applied to the ARB. The marker polarity is one of the values stored within the header file. If the newly selected waveform file has an associated header file, the marker polarity is updated with the value from the header file. The marker polarity will remain unchanged if the newly selected waveform does not have an associated header file. |
| Preset | Pos |
| Range | Neg Pos |
| Initial S/W Revision | A.05.00 |

Mkr 3 Polarity

Allows you to set the polarity of marker 3.

| | |
|-----------------------------|---|
| Key Path | Source, Modulation Setup, ARB, Marker Utilities, Marker Polarity |
| Remote Command | :SOURce:RADio:ARB:MPOLarity:MARKer3 POSitive NEGative :SOURce:RADio:ARB:MPOLarity:MARKer3? |
| Example | :SOUR:RAD:ARB:MPOL:MARK3 NEG |
| Dependencies | When a new waveform is selected for playback the settings contained within the associated waveform header file are applied to the ARB. The marker polarity is one of the values stored within the header file. If the newly selected waveform file has an associated header file, the marker polarity is updated with the value from the header file. The marker polarity will remain unchanged if the newly selected waveform does not have an associated header file. |
| Preset | Pos |
| Range | Neg Pos |
| Initial S/W Revision | A.05.00 |

Mkr 4 Polarity

Allows you to set the polarity of marker 4.

| | |
|-----------------------|---|
| Key Path | Source, Modulation Setup, ARB, Marker Utilities, Marker Polarity |
| Remote Command | :SOURce:RADio:ARB:MPOLarity:MARKer4 POSitive NEGative :SOURce:RADio:ARB:MPOLarity:MARKer4? |

| | |
|-----------------------------|---|
| Example | :SOUR:RAD:ARB:MPOL:MARK4 NEG |
| Dependencies | When a new waveform is selected for playback the settings contained within the associated waveform header file are applied to the ARB. The marker polarity is one of the values stored within the header file. If the newly selected waveform file has an associated header file, the marker polarity is updated with the value from the header file. The marker polarity will remain unchanged if the newly selected waveform does not have an associated header file. |
| Preset | Pos |
| Range | Neg Pos |
| Initial S/W Revision | A.05.00 |

Marker Routing

Allows access to the marker routing sub-menus, which allow you to specify where the marker events are routed. It should be noted that the markers can also be routed to Trigger 1 Out and Trigger 2 Out, however this must be set up using the menus accessed by pressing the “Trigger” hard key.

| | |
|-----------------------------|--|
| Key Path | Source, Modulation Setup, ARB, Marker Utilities |
| Initial S/W Revision | A.05.00 |

Pulse/RF Blank

Allows you to select which marker is used for the pulse/RF blanking function. The pulse/RF blanking function blanks the RF when the marker signal goes low. The marker polarity determines when the marker signal is high. For a positive polarity, this is during the marker points. For a negative polarity, this is when there are no marker points.

Marker points should be set before using this function. Enabling this function without setting maker points may create a continuous low or high signal, dependant on the marker polarity. This causes either no RF output, or a continuous RF output.

| | |
|-----------------------------|---|
| Key Path | Source, Modulation Setup, ARB, Marker Utilities, Marker Routing |
| Remote Command | :SOURce:RADio:ARB:MDEStination:PULSe NONE M1 M2 M3 M4 :SOURce:RADio:ARB:MDEStination:PULSe? |
| Example | :SOUR:RAD:ARB:MDES:PULS NONE |
| Dependencies | When a new waveform is selected for playback the settings contained within the associated waveform header file are applied to the ARB. The pulse/RF blanking setting is one of the values stored within the header file. If the newly selected waveform file has an associated header file, the pulse/RF blanking setting is updated with the value from the header file. The pulse/RF blanking setting will remain unchanged if the newly selected waveform does not have an associated header file. |
| Range | None M1 M2 M3 M4 |
| Initial S/W Revision | A.05.00 |

None

Sets no marker to be used for the pulse/RF blanking function, essentially turning the RF blanking function off.

| | |
|----------------------|--|
| Key Path | Source, Modulation Setup, ARB, Marker Utilities, Marker Routing, Pulse/RF Blank |
| Example | :SOUR:RAD:ARB:MDES:PULS NONE |
| Initial S/W Revision | A.05.00 |

Marker 1

Sets marker 1 to be used for the pulse/RF blanking function.

| | |
|----------------------|--|
| Key Path | Source, Modulation Setup, ARB, Marker Utilities, Marker Routing, Pulse/RF Blank |
| Example | :SOUR:RAD:ARB:MDES:PULS M1 |
| Initial S/W Revision | A.05.00 |

Marker 2

Sets marker 2 to be used for the pulse/RF blanking function.

| | |
|----------------------|--|
| Key Path | Source, Modulation Setup, ARB, Marker Utilities, Marker Routing, Pulse/RF Blank |
| Example | :SOUR:RAD:ARB:MDES:PULS M2 |
| Initial S/W Revision | A.05.00 |

Marker 3

Sets marker 3 to be used for the pulse/RF blanking function.

| | |
|----------------------|--|
| Key Path | Source, Modulation Setup, ARB, Marker Utilities, Marker Routing, Pulse/RF Blank |
| Example | :SOUR:RAD:ARB:MDES:PULS M3 |
| Initial S/W Revision | A.05.00 |

Marker 4

Sets marker 4 to be used for the pulse/RF blanking function.

| | |
|----------------------|--|
| Key Path | Source, Modulation Setup, ARB, Marker Utilities, Marker Routing, Pulse/RF Blank |
| Example | :SOUR:RAD:ARB:MDES:PULS M4 |
| Initial S/W Revision | A.05.00 |

ALC Hold

Allows you to specify which marker is routed for use within the ALC hold function. The ALC hold marker function holds the ALC circuitry at the average value of the sample points set by the marker.

The ALC hold function operates during the low periods of the marker signal. The marker polarity determines when the marker signal is high. For positive polarity, this is during the marker points. For a negative polarity, this is when there are no marker points.

| | |
|-----------------------------|--|
| Key Path | Source, Modulation Setup, ARB, Marker Utilities, Marker Routing |
| Remote Command | :SOURce:RADio:ARB:MDEStination:ALCHold NONE M1 M2 M3 M4 :SOURce:RADio:ARB:MDEStination:ALCHold? |
| Example | :SOUR:RAD:ARB:MDES:ALCH NONE |
| Dependencies | When a new waveform is selected for playback the settings contained within the associated waveform header file are applied to the ARB. The ALC hold setting is one of the values stored within the header file. If the newly selected waveform file has an associated header file, the ALC hold setting is updated with the value from the header file. The ALC hold setting will remain unchanged if the newly selected waveform does not have an associated header file. |
| Range | None M1 M2 M3 M4 |
| Initial S/W Revision | A.05.00 |

None

Sets no marker to be used for the ALC hold function, essentially turning the ALC hold function off.

| | |
|-----------------------------|--|
| Key Path | Source, Modulation Setup, ARB, Marker Utilities, Marker Routing, ALC Hold |
| Example | :SOUR:RAD:ARB:MDES:PULS NONE |
| Initial S/W Revision | A.05.00 |

Marker 1

Sets marker 1 to be used for the ALC hold function.

| | |
|-----------------------------|--|
| Key Path | Source, Modulation Setup, ARB, Marker Utilities, Marker Routing, ALC Hold |
| Example | :SOUR:RAD:ARB:MDES:PULS M1 |
| Initial S/W Revision | A.05.00 |

Marker 2

Sets marker 2 to be used for the ALC hold function.

| | |
|-----------------------------|--|
| Key Path | Source, Modulation Setup, ARB, Marker Utilities, Marker Routing, ALC Hold |
| Example | :SOUR:RAD:ARB:MDES:PULS M2 |
| Initial S/W Revision | A.05.00 |

Marker 3

Sets marker 3 to be used for the ALC hold function.

| | |
|----------------------|--|
| Key Path | Source, Modulation Setup, ARB, Marker Utilities, Marker Routing, ALC Hold |
| Example | :SOUR:RAD:ARB:MDES:PULS M3 |
| Initial S/W Revision | A.05.00 |

Marker 4

Sets marker 4 to be used for the ALC hold function.

| | |
|----------------------|--|
| Key Path | Source, Modulation Setup, ARB, Marker Utilities, Marker Routing, ALC Hold |
| Example | :SOUR:RAD:ARB:MDES:PULS M4 |
| Initial S/W Revision | A.05.00 |

Header Utilities

Allows access to the header utilities sub-menu. Pressing this key also causes the central display area to change to display the File Header Information view.

| | |
|----------------------|---|
| Key Path | Source, Modulation Setup, ARB |
| Dependencies | This key is only available if there is currently a waveform selected for playback. If no waveform is selected, the key is grayed out. |
| Initial S/W Revision | A.05.00 |

Clear Header

Allows you to clear the header information from the file header associated with the currently selected waveform.

| | |
|-----------------------|--|
| Key Path | Source, Modulation Setup, ARB, Header Utilities |
| Remote Command | :SOURce:RADio:ARB:HEADer:CLEar |
| Example | :SOUR:RAD:ARB:HEAD:CLE |
| Notes | Attempting to clear the header details via SCPI when no waveform was selected for playback will generate an error. |
| Initial S/W Revision | A.05.00 |

Save Setup To Header

Allows you to save new file header information details to the file.

| | |
|--------------------------|---|
| Key Path | Source, Modulation Setup, ARB, Header Utilities |
| Remote Command | :SOURce:RADio:ARB:HEADer:SAVE |
| Example | :SOUR:RAD:ARB:HEAD:SAVE |
| Notes | Attempting to save the header details via SCPI when no waveform was selected for playback will generate an error. |
| Initial S/W Revision | A.05.00 |
| Modified at S/W Revision | A.16.00 (AWGN settings will be saved to header as well) |

Query Waveform Unique ID (Remote Command Only)

Each Signal Studio waveform contains a unique waveform ID, which recorded in the header. This command allows you to query the unique waveform ID from the header. This is a SCPI only command. User can also check [Error! Reference source not found.](#) for waveform unique ID display.

| | |
|----------------------|--|
| Remote Command | :MMEMory:HEADer:ID? "<file name>" |
| Example | :MMEM:HEAD:ID? "test.wfm" (query the waveform already loaded into the ARB memory) :MMEM:HEAD:ID? "D: VARB\test.wfm" (query the waveform on the hard disk by absolute path) :MMEM:HEAD:ID? "NVWFM:test.wfm" (query the waveform on the hard disk by MSUS) |
| Notes | SCPI query only. The queried waveform file can be in ARB memory, or on hard disk. If want to query ARB in ARB memory, then give out the file name directly. If want to query ARB on the hard disk, then absolute file path or MSUS should be given along with the file name. The valid MSUS is "NVWFM" which is mapped to D: VARB on hard disk. If the file cannot be found in ARB memory or on hard disk, an error is generated.and value -1 is returned |
| Initial S/W Revision | A.09.00 |

Bus Trigger Command (Remote Command Only)

Used to initiate an immediate trigger event if the trigger source is set to Bus.

| | |
|----------------------|------------------------------------|
| Remote Command | :SOURce:RADio:ARB:TRIGger:INITiate |
| Example | :SOUR:RAD:ARB:TRIG:INIT |
| Initial S/W Revision | A.05.00 |

AM

Allows access to the menu for configuring the Amplitude Modulation.

| | |
|----------------------|---------------------------------|
| Key Path | Source, Modulation Setup |
| Initial S/W Revision | A.05.00 |

AM

Enables or disables the amplitude modulation.

Turning AM on when another modulation format is already on results in the previous modulation format being turned off and the generation of an error.

| | |
|-----------------------|---------------------------------------|
| Key Path | Source, Modulation Setup, AM |
| Remote Command | :SOURce:AM:STATe :SOURce:AM:STATe? |
| Example | :SOUR:AM:STAT OFF |
| Preset | Off |
| Range | On Off |
| Initial S/W Revision | A.05.00 |

AM Depth

Allows you to set the amplitude modulation depth in percent.

| | |
|-----------------------|---|
| Key Path | Source, Modulation Setup, AM |
| Remote Command | :SOURce:AM[:DEPTh] [:LINear] :SOURce:AM[:DEPTh] [:LINear]? |
| Example | :SOUR:AM 0.1 |
| Preset | 0.1 % |
| Min | 0.1 % |
| Max | 95.0 % |
| Initial S/W Revision | A.05.00 |

AM Rate

Allows you to set the internal amplitude modulation rate.

| | |
|-----------------------|---|
| Key Path | Source, Modulation Setup, AM |
| Remote Command | :SOURce:AM:INTernal:FREQuency :SOURce:AM:INTernal:FREQuency? |
| Example | :SOUR:AM:INT:FREQ 40.0 Hz |

| | |
|----------------------|----------|
| Preset | 400.0 Hz |
| Min | 10 Hz |
| Max | 40 kHz |
| Initial S/W Revision | A.05.00 |

FM

Allows access to the menu for configuring the frequency modulation.

| | |
|----------------------|---------------------------------|
| Key Path | Source, Modulation Setup |
| Initial S/W Revision | A.05.00 |

FM

Enables or disables the frequency modulation.

Turning FM on when another modulation format is already on results in the previous modulation format being turned off and the generation of an error.

| | |
|-----------------------|---------------------------------------|
| Key Path | Source, Modulation Setup, FM |
| Remote Command | :SOURce:FM:STATe :SOURce:FM:STATe? |
| Example | :SOUR:FM:STAT OFF |
| Preset | Off |
| Range | On Off |
| Initial S/W Revision | A.05.00 |

FM Deviation

Allows you to set the frequency modulation deviation.

| | |
|-----------------------|---|
| Key Path | Source, Modulation Setup, FM |
| Remote Command | :SOURce:FM[:DEViation] :SOURce:FM[:DEViation]? |
| Example | :SOUR:FM 1.00 kHz |
| Preset | 1.00 Hz |
| Min | 1.00 Hz |
| Max | 100.00 kHz |
| Initial S/W Revision | A.05.00 |

FM Rate

Allows you to set the internal frequency modulation rate.

| | |
|-----------------------------|---|
| Key Path | Source, Modulation Setup, FM |
| Remote Command | :SOURce:FM:INTernal:FREQuency :SOURce:FM:INTernal:FREQuency? |
| Example | :SOUR:FM:INT:FREQ 40.0 Hz |
| Preset | 400.0 Hz |
| Min | 10 Hz |
| Max | 40 kHz |
| Initial S/W Revision | A.05.00 |

PM

Allows access to the menu for configuring the phase modulation.

| | |
|-----------------------------|---------------------------------|
| Key Path | Source, Modulation Setup |
| Initial S/W Revision | A.05.00 |

PM

Enables or disables the phase modulation.

Turning PM on when another modulation format is already on results in the previous modulation format being turned off and the generation of an error.

| | |
|-----------------------------|---------------------------------------|
| Key Path | Source, Modulation Setup, PM |
| Remote Command | :SOURce:PM:STATe :SOURce:PM:STATe? |
| Example | :SOUR:PM:STAT OFF |
| Preset | Off |
| Range | On Off |
| Initial S/W Revision | A.05.00 |

PM Deviation

Allows you to set the phase modulation deviation.

| | |
|-----------------------|---|
| Key Path | Source, Modulation Setup, PM |
| Remote Command | :SOURce:PM[:DEVIation] :SOURce:PM[:DEVIation]? |

| | |
|----------------------|-------------------|
| Example | :SOUR:PM 1.00 rad |
| Preset | 0.1 rad |
| Min | 0.1 rad |
| Max | 20.0 rad |
| Initial S/W Revision | A.05.00 |

PM Rate

Allows you to set the internal phase modulation rate.

| | |
|-----------------------|---|
| Key Path | Source, Modulation Setup, PM |
| Remote Command | :SOURce:PM:INTernal:FREQuency :SOURce:PM:INTernal:FREQuency? |
| Example | :SOUR:PM:INT:FREQ 40.0 Hz |
| Preset | 400.0 Hz |
| Min | 10 Hz |
| Max | 40 kHz |
| Initial S/W Revision | A.05.00 |

List Sequencer

Allows you access to the sub-menus for configuring the list sequencer.

List sequences allows you to enter frequencies and amplitudes at unequal intervals in nonlinear ascending, descending or random order. Each step within the list can also include its own waveform file for playback, step duration, trigger event and trigger output.

The complexities involved in configuring the list sequencer do not lend itself to manual configuration; hence the manual configuration for this feature is limited. For easier configuration of the list sequencer, it is recommended that you use either SCPI or load a tab delimited file containing the setup parameters in a tabular form. The details of the SCPI for configuring the list sequencer can be found in ["Step Configuration \(Remote Command Only\)" on page 2619](#).

Once the List Sequencer has been configured using the front panel, SCPI, or loading in a tab delimited file, the sequence must be initiated using the front panel Initiate Sequence key or the corresponding SCPI command.

| | |
|----------------------|---------------|
| Key Path | Source |
| Initial S/W Revision | A.05.00 |

Sequencer

Allows you to set the state of the list sequencer. When the list sequencer is on, the source is outputting the sequence defined by the sequencer. When the list sequencer is off, the source outputs a single waveform segment or sequence (independent mode) at a single frequency and amplitude.

| Key Path | Source, List Sequencer |
|-----------------------------|---|
| Remote Command | :SOURce:LIST[:STATe] ON OFF 1 0 :SOURce:LIST[:STATe]? |
| Example | :SOUR:LIST OFF |
| Notes | When the sequencer is set to ON, the list sequencer controls the output of the source. |
| Couplings | When in Sequence Analyzer mode and the list sequencer state is Off, Include Source is forced to No, and the Include Source key is grayed out. When in Sequence Analyzer mode and the list sequencer state is On, Include Source is available to set. And, an ARB memory related operation, like load or delete will be rejected. |
| Preset | Off |
| Range | On Off |
| Initial S/W Revision | A.05.00 |

Initiate Sequence

Pressing this key arms the sequence for single execution. Once the sequence is armed the source begins the sequence as soon as the trigger is received. If the trigger is set to Free Run, the sequence starts immediately.

| Key Path | Source, List Sequencer |
|-----------------------------|---|
| Remote Command | :SOURce:LIST:TRIGger[:IMMediate] |
| Example | :SOUR:LIST:TRIG |
| Notes | When in Sequence Analyzer mode and Include Source is Yes, the Initiate list sequencer operation is rejected, and the key is grayed out, since source list sequence request is sent to physics via Parallel batch by sequence analyzer. If the file needed by the sequencer is not already in ARB memory, the sequence cannot be initiated and an error will be generated. There is a blocking SCPI query which can be used to query if source list sequence being initiated successfully or not. (see " Query List Sequence Initiation Armed Status (Remote Command Only) " on page 2630 Query Source List Sequence Armed Status) |
| Dependencies | Under the Sequence Analyzer Mode, if Meas Setup->Include Source is set to YES, Source->List Sequencer->Initiate Sequence is disabled. |
| Initial S/W Revision | A.05.00 |

List Sequencer Setup

Allows you access to the list sequencer setup menus.

| | |
|----------|-------------------------------|
| Key Path | Source, List Sequencer |
|----------|-------------------------------|

Number of Steps

Allows you to specify the number of steps within the list sequence.

| | |
|----------------------|--|
| Key Path | Source, List Sequencer, List Sequencer Setup |
| Remote Command | :SOURCE:LIST:NUMBER:STEPS <integer> :SOURCE:LIST:NUMBER:STEPS? |
| Example | :SOUR:LIST:NUMB:STEP 1 |
| Notes | Increasing the number of steps creates additional steps at the end of the list, with all the settings within the steps set to their default values. Decreasing the number of steps removes steps from the end of the list. The settings within the removed steps are not reset. This means that increasing the number of steps again would allow you to retrieve these steps. |
| Dependencies | The Step Count parameter is increased or decreased when you insert or delete a point from within the GUI interface to the sequencer. |
| Preset | 1 |
| Min | 1 |
| Max | 1000 |
| Initial S/W Revision | A.05.00 |

Current Step

Allows you to select the step number you wish to view or edit.

| | |
|----------------------|---|
| Key Path | Source, List Sequencer, List Sequencer Setup |
| Notes | No remote command, front panel only. |
| Preset | 1 |
| Min | 1 |
| Max | Step Count |
| Initial S/W Revision | A.05.00 |

Insert Step Before

Allows you to insert a new step, containing default values, before the currently selected step. Inserting a step will automatically increase the Step Count parameter by 1. If sequence already reaches upper limit of

1000 steps, then insert more step will be rejected and popup error –221, “Setting Conflict; Cannot insert more steps, maximum number of steps reached”

| | |
|----------------------|---|
| Key Path | Source, List Sequencer, List Sequencer Setup |
| Notes | No remote command, front panel only. If the list already contains the maximum limit of 1000 steps, no operation will be made after pressing this key. |
| Initial S/W Revision | A.05.00 |

Delete Step

Allows you to delete the current step. Deleting a step will automatically decrease the Step Count parameter by 1. If sequence only has one step left, delete step will be rejected and popup error –221, “Setting conflict; Cannot delete current step, minimum number of steps reached”

| | |
|----------------------|---|
| Key Path | Source, List Sequencer, List Sequencer Setup |
| Notes | No remote command, Front Panel key only. If the list already contains the minimum limit of 1 step, no operation will be made after pressing this key |
| Initial S/W Revision | A.05.00 |

Clear List

Allows you to clear the list. Clearing the list sets the number of steps to the default value of 1 and sets the parameters for the only step to their default values.

| | |
|----------------------|---|
| Key Path | Source, List Sequencer, List Sequencer Setup |
| Initial S/W Revision | A.05.00 |

Step Trigger

Allows access to the sub-menu for selecting the trigger input for the current step.

| | |
|-----------------------|---|
| Key Path | Source, List Sequencer, List Sequencer Setup |
| Remote Command | :SOURce:LIST:STEP[1] 2 3...1000:SETup:INPut:TRIGger IMMEDIATE INTernal EXTernal2 KEY BUS EXTernal4 :SOURce:LIST:STEP[1] 2 3...1000:SETup:INPut:TRIGger? |
| Example | :SOUR:LIST:STEP2:SET:INP:TRIG BUS :SOUR:LIST:STEP2:SET:INP:TRIG? |
| Notes | SCPI is supported after A.09.40 |
| Preset | Free Run |
| Range | Free Run Internal Manual (Trigger Key) Bus External 2 EXTernal4 |
| Initial S/W Revision | A.05.00 |

Free Run

Sets the trigger input for the current step to Free Run.

| | |
|-----------------------------|---|
| Key Path | Source, List Sequencer, List Sequencer Setup, Step Trigger |
| Example | :SOUR:LIST:STEP2:SET:INP:TRIG IMM |
| Notes | SCPI is supported after A.09.40 |
| Initial S/W Revision | A.05.00 |

Internal

Sets the trigger input for the current step to Internal.

| | |
|-----------------------------|---|
| Key Path | Source, List Sequencer, List Sequencer Setup, Step Trigger |
| Example | :SOUR:LIST:STEP2:SET:INP:TRIG INT |
| Notes | SCPI is supported after A.09.40 |
| Initial S/W Revision | A.05.00 |

Manual (Trigger Key)

Sets the trigger input for the current step to Manual (Trigger Key). Any step in the sequence set to Manual will cause the sequence execution to stop until the manual trigger key is pressed. Sending the Bus Trigger SCPI command will have no effect. At any point in the sequence where the list sequencer is paused waiting for a software trigger, a pop up dialog is displayed until the trigger event occurs.

| | |
|-----------------------------|---|
| Key Path | Source, List Sequencer, List Sequencer Setup, Step Trigger |
| Example | :SOUR:LIST:STEP2:SET:INP:TRIG KEY |
| Notes | SCPI is supported after A.09.40 |
| Initial S/W Revision | A.05.00 |

Bus

Sets the trigger input for the current step to Bus. Any step in the sequence set to Bus will cause the sequence execution to stop until the Bus Trigger SCPI command is sent. Pressing the manual trigger key has no effect. At any point in the sequence where the list sequencer is paused waiting for a software trigger, a pop up dialog is displayed until the trigger event occurs.

| | |
|-----------------------------|---|
| Key Path | Source, List Sequencer, List Sequencer Setup, Step Trigger |
| Example | :SOUR:LIST:STEP2:SET:INP:TRIG BUS |
| Notes | SCPI is supported after A.09.40 |
| Initial S/W Revision | A.05.00 |

External 2

Sets the trigger input for the current step to External 2.

| | |
|-----------------------------|--|
| Key Path | Source, List Sequencer, List Sequencer Setup, Step Trigger |
| Example | :SOUR:LIST:STEP2:SET:INP:TRIG EXT2 |
| Notes | SCPI is supported after A.09.40 |
| Notes | Note: When on E6640A, trigger 2 is a bi-directional trigger port. So when trigger 2 has been configured as OUTPUT type, choosing External 2 as the input trigger for the current step will generate error. |
| Initial S/W Revision | A.05.00 |

Transition Time

Allows you to specify the transition time for the current step.

The transition time is the amount of time allowed for the source to settle at the current frequency or amplitude value.

Transition Time should not be taken as additional time before or inside the Step Duration. You can set a value for the settling time to allow the source output frequency or amplitude to become stable. Make sure that during this period of time, you do not use the source output signal.

The following table lists recommended values for appropriate settling times to allow for changes within the source.

| Value Changed | Recommended Transition Time |
|---------------|---|
| Frequency | 500 μ s |
| Amplitude | 100 μ s to within 0.1 dB 20 μ s to within 1.0 dB |

If the Transition Time value is shorter than the time necessary for the hardware to settle and a List Sequence is initiated, a **warning** is generated.

If the Transition Time value is longer than the Step Duration, an error is generated when initiating a source list sequence. For source list sequence, transition time is included in the step duration length. If the Transition Time value is longer than the Step Duration Time, the real step duration length is extended to equal the transition time and cause a timing shift.

| | |
|-----------------------|--|
| Key Path | Source, List Sequencer, List Sequencer Setup |
| Remote Command | :SOURce:LIST:STEP[1] 2 3...1000:SETup:TRANSition:TIME <time> :SOURce:LIST:STEP[1] 2 3...1000:SETup:TRANSition:TIME? |
| Example | :SOUR:LIST:STEP2:SET:TRAN:TIME 1ms :SOUR:LIST:STEP2:SET:TRAN:TIME? |

| | |
|----------------------|---------------------------------|
| Notes | SCPI is supported after A.09.40 |
| Preset | 1.0 ms |
| Min | 0.0 ms |
| Max | 4.0 ks |
| Initial S/W Revision | A.05.00 |

Radio Setup

Allows you access to the sub-menus for setting up the radio standard, band, and radio band link direction for the current step.

| | |
|----------------------|---|
| Key Path | Source, List Sequencer, List Sequencer Setup |
| Notes | No remote command, front panel only. |
| Initial S/W Revision | A.05.00 |

Radio Standard

Allows access to the sub-menus for selecting the radio standard and the associated radio band for use in the current step.

| | |
|-----------------------|--|
| Key Path | Source, List Sequencer, List Sequencer Setup, Radio Setup |
| Remote Command | :SOURce:LIST:STEP[1] 2 3...1000:SETup:RADio:BAND NONE PGSM EGSM RGSM DCS1800 PCS1900 TGSM810 GSM450 GSM480 GSM700 GSM850 BANDI BANDII BANDIII BANDIV BANDV BANDVI BANDVII BANDVIII BANDIX BANDX BANDXI BANDXII BANDXIII BANDXIV BANDXIX USCELL USPCS JAPAN KOREAN NMT IMT2K UPPER SECOND PAMR400 PAMR800 IMTEXT PCS1DOT9G AWS US2DOT5G PUBLIC LOWER NONE BAND1 BAND2 BAND3 BAND4 BAND5 BAND6 BAND7 BAND8 BAND10 BAND11 BAND12 BAND13 BAND14 BAND17 BAND18 BAND19 BAND20 BAND21 BAND24 BAND25 BAND26 BAND27 BAND28 BAND29 BAND30 BAND31 BAND33 BAND34 BAND35 BAND36 BAND37 BAND38 BAND39 BAND40 BAND41 BAND42 BAND43 BAND44 BANDA BANDB BANDC BANDD BANDE BANDF :SOURce:LIST:STEP[1] 2 3...1000:SETup: RADio:BAND? |
| Example | :SOUR:LIST:STEP2:SET:RAD:BAND PGSM :SOUR:LIST:STEP2:SET:RAD:BAND? |
| Notes | SCPI is supported after A.09.40 |
| Initial S/W Revision | A.05.00 |

None

Selects no radio standard for use on the current step.

| | |
|----------------------|--|
| Key Path | Source, List Sequencer, List Sequencer Setup, Radio Setup, Radio Standard |
| Example | :SOUR:LIST:STEP2:SET:RAD:BAND NONE |
| Notes | SCPI is supported after A.09.40 |
| Initial S/W Revision | A.05.00 |

GSM/EDGE

Pressing this key once selects GSM/EDGE as the radio standard and the current GSM/EDGE band as the active channel band. Pressing this key again allows access to the sub-menus for selecting a different GSM/EDGE band.

| | |
|----------------------|--|
| Key Path | Source, List Sequencer, List Sequencer Setup, Radio Setup, Radio Standard |
| Initial S/W Revision | A.05.00 |

P-GSM

Selects P-GSM as the band for the current step.

| | |
|----------------------|--|
| Key Path | Source, List Sequencer, List Sequencer Setup, Radio Setup, Radio Standard, GSM/EDGE |
| Initial S/W Revision | A.05.00 |

E-GSM

Selects E-GSM as the band for the current step.

| | |
|----------------------|--|
| Key Path | Source, List Sequencer, List Sequencer Setup, Radio Setup, Radio Standard, GSM/EDGE |
| Initial S/W Revision | A.05.00 |

R-GSM

Selects R-GSM as the band for the current step.

| | |
|----------------------|--|
| Key Path | Source, List Sequencer, List Sequencer Setup, Radio Setup, Radio Standard, GSM/EDGE |
| Initial S/W Revision | A.05.00 |

DCS 1800

Selects DCS 1800 as the band for the current step.

| | |
|----------------------|--|
| Key Path | Source, List Sequencer, List Sequencer Setup, Radio Setup, Radio Standard, GSM/EDGE |
| Initial S/W Revision | A.05.00 |

PCS 1900

Selects PCS 1900 as the band for the current step.

| | |
|----------------------|--|
| Key Path | Source, List Sequencer, List Sequencer Setup, Radio Setup, Radio Standard, GSM/EDGE |
| Initial S/W Revision | A.05.00 |

GSM 450

Selects GSM 450 as the band for the current step.

| | |
|----------------------|--|
| Key Path | Source, List Sequencer, List Sequencer Setup, Radio Setup, Radio Standard, GSM/EDGE |
| Initial S/W Revision | A.05.00 |

GSM 480

Selects GSM 480 as the band for the current step.

| | |
|----------------------|--|
| Key Path | Source, List Sequencer, List Sequencer Setup, Radio Setup, Radio Standard, GSM/EDGE |
| Initial S/W Revision | A.05.00 |

GSM 850

Selects GSM 850 as the band for the current step.

| | |
|----------------------|--|
| Key Path | Source, List Sequencer, List Sequencer Setup, Radio Setup, Radio Standard, GSM/EDGE |
| Initial S/W Revision | A.05.00 |

GSM 700

Selects GSM 700 as the band for the current step.

| | |
|----------------------|--|
| Key Path | Source, List Sequencer, List Sequencer Setup, Radio Setup, Radio Standard, GSM/EDGE |
| Initial S/W Revision | A.05.00 |

T-GSM 810

Selects T-GSM 810 as the band for the current step.

| | |
|----------------------|--|
| Key Path | Source, List Sequencer, List Sequencer Setup, Radio Setup, Radio Standard, GSM/EDGE |
| Initial S/W Revision | A.05.00 |

WCDMA

Pressing this key once selects WCDMA as the radio standard and the current WCDMA band as the active channel band. Pressing this key again allows access to the sub-menus for selecting a different WCDMA band.

| | |
|----------------------|--|
| Key Path | Source, List Sequencer, List Sequencer Setup, Radio Setup, Radio Standard |
| Initial S/W Revision | A.05.00 |

Band I

Selects Band I as the band for the current step.

| | |
|----------------------|---|
| Key Path | Source, List Sequencer, List Sequencer Setup, Radio Setup, Radio Standard, WCDMA |
| Initial S/W Revision | A.05.00 |

Band II

Selects Band II as the band for the current step.

| | |
|----------------------|---|
| Key Path | Source, List Sequencer, List Sequencer Setup, Radio Setup, Radio Standard, WCDMA |
| Initial S/W Revision | A.05.00 |

Band III

Selects Band III as the band for the current step.

| | |
|----------------------|---|
| Key Path | Source, List Sequencer, List Sequencer Setup, Radio Setup, Radio Standard, WCDMA |
| Initial S/W Revision | A.05.00 |

Band IV

Selects Band IV as the band for the current step.

| | |
|----------------------|---|
| Key Path | Source, List Sequencer, List Sequencer Setup, Radio Setup, Radio Standard, WCDMA |
| Initial S/W Revision | A.05.00 |

Band V

Selects Band V as the band for the current step.

| | |
|----------------------|---|
| Key Path | Source, List Sequencer, List Sequencer Setup, Radio Setup, Radio Standard, WCDMA |
| Initial S/W Revision | A.05.00 |

Band VI

Selects Band VI as the band for the current step.

| | |
|----------------------|---|
| Key Path | Source, List Sequencer, List Sequencer Setup, Radio Setup, Radio Standard, WCDMA |
| Initial S/W Revision | A.05.00 |

Band VII

Selects Band VII as the band for the current step.

| | |
|----------------------|---|
| Key Path | Source, List Sequencer, List Sequencer Setup, Radio Setup, Radio Standard, WCDMA |
| Initial S/W Revision | A.05.00 |

Band VIII

Selects Band VIII as the band for the current step.

| | |
|----------------------|---|
| Key Path | Source, List Sequencer, List Sequencer Setup, Radio Setup, Radio Standard, WCDMA |
| Initial S/W Revision | A.05.00 |

Band IX

Selects Band IX as the band for the current step.

| | |
|----------------------|---|
| Key Path | Source, List Sequencer, List Sequencer Setup, Radio Setup, Radio Standard, WCDMA |
| Initial S/W Revision | A.05.00 |

Band X

Selects Band X as the band for the current step.

| | |
|----------------------|---|
| Key Path | Source, List Sequencer, List Sequencer Setup, Radio Setup, Radio Standard, WCDMA |
| Initial S/W Revision | A.05.00 |

Band XI

Selects Band XI as the band for the current step.

| | |
|----------------------|---|
| Key Path | Source, List Sequencer, List Sequencer Setup, Radio Setup, Radio Standard, WCDMA |
| Initial S/W Revision | A.05.00 |

Band XII

Selects Band XII as the band for the current step.

| | |
|----------------------|---|
| Key Path | Source, List Sequencer, List Sequencer Setup, Radio Setup, Radio Standard, WCDMA |
| Initial S/W Revision | A.05.00 |

Band XIII

Selects Band XIII as the band for the current step.

| | |
|----------------------|---|
| Key Path | Source, List Sequencer, List Sequencer Setup, Radio Setup, Radio Standard, WCDMA |
| Initial S/W Revision | A.05.00 |

Band XIV

Selects Band XIV as the band for the current step.

| | |
|----------------------|---|
| Key Path | Source, List Sequencer, List Sequencer Setup, Radio Setup, Radio Standard, WCDMA |
| Initial S/W Revision | A.05.00 |

CDMA 2000 / 1xEVDO

Pressing this key once selects CDMA 2000/1xEVDO as the radio standard and the current CDMA 2000/1xEVDO band as the active channel band. Pressing this key again allows access to the sub-menus for selecting a different CDMA 2000/1xEVDO band.

| | |
|----------------------|--|
| Key Path | Source, List Sequencer, List Sequencer Setup, Radio Setup, Radio Standard |
| Initial S/W Revision | A.05.00 |

US CELL

Selects US Cell as the band for the current step.

| | |
|----------------------|--|
| Key Path | Source, List Sequencer, List Sequencer Setup, Radio Setup, Radio Standard, CDMA 2000 / 1xEVDO |
| Initial S/W Revision | A.05.00 |

US PCS

Selects US PCS as the band for the current step.

| | |
|----------------------|--|
| Key Path | Source, List Sequencer, List Sequencer Setup, Radio Setup, Radio Standard, CDMA 2000 / 1xEVDO |
| Initial S/W Revision | A.05.00 |

Japan Cell

Selects Japan Cell as the band for the current step.

| | |
|----------------------|--|
| Key Path | Source, List Sequencer, List Sequencer Setup, Radio Setup, Radio Standard, CDMA 2000 / 1xEVDO |
| Initial S/W Revision | A.05.00 |

Korean PCS

Selects Korean PCS as the band for the current step.

| | |
|----------------------|--|
| Key Path | Source, List Sequencer, List Sequencer Setup, Radio Setup, Radio Standard, CDMA 2000 / 1xEVDO |
| Initial S/W Revision | A.05.00 |

NMT 450

Selects NMT 450 as the band for the current step.

| | |
|----------------------|--|
| Key Path | Source, List Sequencer, List Sequencer Setup, Radio Setup, Radio Standard, CDMA 2000 / 1xEVDO |
| Initial S/W Revision | A.05.00 |

IMT 2000

Selects IMT 2000 as the band for the current step.

| | |
|----------------------|--|
| Key Path | Source, List Sequencer, List Sequencer Setup, Radio Setup, Radio Standard, CDMA 2000 / 1xEVDO |
| Initial S/W Revision | A.05.00 |

Upper 700

Selects Upper 700 as the band for the current step.

| | |
|----------------------|--|
| Key Path | Source, List Sequencer, List Sequencer Setup, Radio Setup, Radio Standard, CDMA 2000 / 1xEVDO |
| Initial S/W Revision | A.05.00 |

Secondary 800

Selects Secondary 800 as the band for the current step.

| | |
|----------------------|--|
| Key Path | Source, List Sequencer, List Sequencer Setup, Radio Setup, Radio Standard, CDMA 2000 / 1xEVDO |
| Initial S/W Revision | A.05.00 |

400 Euro PAMR

Selects 400 Euro PAMR as the band for the current step.

| | |
|----------------------|--|
| Key Path | Source, List Sequencer, List Sequencer Setup, Radio Setup, Radio Standard, CDMA 2000 / 1xEVDO |
| Initial S/W Revision | A.05.00 |

800 PAMR

Selects 800 PAMR as the band for the current step.

| | |
|----------------------|--|
| Key Path | Source, List Sequencer, List Sequencer Setup, Radio Setup, Radio Standard, CDMA 2000 / 1xEVDO |
| Initial S/W Revision | A.05.00 |

2.5GHz IMT EXT

Selects 2.5 GHz IMT EXT as the band for the current step.

| | |
|----------------------|--|
| Key Path | Source, List Sequencer, List Sequencer Setup, Radio Setup, Radio Standard, CDMA 2000 / 1xEVDO |
| Initial S/W Revision | A.05.00 |

US PCS 1.9GHz

Selects US PCS 1.9 GHz as the band for the current step.

| | |
|----------------------|--|
| Key Path | Source, List Sequencer, List Sequencer Setup, Radio Setup, Radio Standard, CDMA 2000 / 1xEVDO |
| Initial S/W Revision | A.05.00 |

AWS

Selects AWS as the band for the current step.

| | |
|----------------------|--|
| Key Path | Source, List Sequencer, List Sequencer Setup, Radio Setup, Radio Standard, CDMA 2000 / 1xEVDO |
| Initial S/W Revision | A.05.00 |

US 2.5GHz

Selects US 2.5 GHz as the band for the current step.

| | |
|----------------------|--|
| Key Path | Source, List Sequencer, List Sequencer Setup, Radio Setup, Radio Standard, CDMA 2000 / 1xEVDO |
| Initial S/W Revision | A.05.00 |

700 Public Safety

Selects 700 Public Safety as the band for the current step.

| | |
|----------------------|--|
| Key Path | Source, List Sequencer, List Sequencer Setup, Radio Setup, Radio Standard, CDMA 2000 / 1xEVDO |
| Initial S/W Revision | A.05.00 |

C2K Lower 700

Selects C2K Lower 700 as the band for the current step.

| | |
|----------------------|--|
| Key Path | Source, List Sequencer, List Sequencer Setup, Radio Setup, Radio Standard, CDMA 2000 / 1xEVDO |
| Initial S/W Revision | A.05.00 |

LTE

Pressing this key once selects LTE FDD as the radio standard and the current LTE FDD band as the active channel band. Pressing this key again allows access to the sub-menus for selecting a different LTE FDD band.

| | |
|----------------------|--|
| Key Path | Source, List Sequencer, List Sequencer Setup, Radio Setup, Radio Standard |
| Initial S/W Revision | A.09.50 |

BAND 1

Selects BAND 1 as the band for the current step.

| | |
|----------------------|---|
| Key Path | Source, List Sequencer, List Sequencer Setup, Radio Setup, Radio Standard, LTE |
| Initial S/W Revision | A.09.50 |

BAND 2

Selects BAND 2 as the band for the current step.

| | |
|----------------------|---|
| Key Path | Source, List Sequencer, List Sequencer Setup, Radio Setup, Radio Standard, LTE |
| Initial S/W Revision | A.09.50 |

BAND 3

Selects BAND 3 as the band for the current step.

| | |
|----------------------|---|
| Key Path | Source, List Sequencer, List Sequencer Setup, Radio Setup, Radio Standard, LTE |
| Initial S/W Revision | A.09.50 |

BAND 4

Selects BAND 4 as the band for the current step.

| | |
|----------------------|---|
| Key Path | Source, List Sequencer, List Sequencer Setup, Radio Setup, Radio Standard, LTE |
| Initial S/W Revision | A.09.50 |

BAND 5

Selects BAND 5 as the band for the current step.

| | |
|----------------------|---|
| Key Path | Source, List Sequencer, List Sequencer Setup, Radio Setup, Radio Standard, LTE |
| Initial S/W Revision | A.09.50 |

BAND 6

Selects BAND 6 as the band for the current step.

| | |
|----------------------|---|
| Key Path | Source, List Sequencer, List Sequencer Setup, Radio Setup, Radio Standard, LTE |
| Initial S/W Revision | A.09.50 |

BAND 7

Selects BAND 7 as the band for the current step.

| | |
|----------------------|---|
| Key Path | Source, List Sequencer, List Sequencer Setup, Radio Setup, Radio Standard, LTE |
| Initial S/W Revision | A.09.50 |

BAND 8

Selects BAND 8 as the band for the current step.

| | |
|----------------------|---|
| Key Path | Source, List Sequencer, List Sequencer Setup, Radio Setup, Radio Standard, LTE |
| Initial S/W Revision | A.09.50 |

BAND 9

Selects BAND 9 as the band for the current step.

| | |
|----------------------|---|
| Key Path | Source, List Sequencer, List Sequencer Setup, Radio Setup, Radio Standard, LTE |
| Initial S/W Revision | A.09.50 |

BAND 10

Selects BAND 10 as the band for the current step.

| | |
|----------------------|---|
| Key Path | Source, List Sequencer, List Sequencer Setup, Radio Setup, Radio Standard, LTE |
| Initial S/W Revision | A.09.50 |

BAND 11

Selects BAND 11 as the band for the current step.

| | |
|----------------------|---|
| Key Path | Source, List Sequencer, List Sequencer Setup, Radio Setup, Radio Standard, LTE |
| Initial S/W Revision | A.09.50 |

BAND 12

Selects BAND 12 as the band for the current step.

| | |
|----------------------|---|
| Key Path | Source, List Sequencer, List Sequencer Setup, Radio Setup, Radio Standard, LTE |
| Initial S/W Revision | A.09.50 |

BAND 13

Selects BAND 13 as the band for the current step.

| | |
|----------------------|---|
| Key Path | Source, List Sequencer, List Sequencer Setup, Radio Setup, Radio Standard, LTE |
| Initial S/W Revision | A.09.50 |

BAND 14

Selects BAND 14 as the band for the current step.

| | |
|----------------------|---|
| Key Path | Source, List Sequencer, List Sequencer Setup, Radio Setup, Radio Standard, LTE |
| Initial S/W Revision | A.09.50 |

BAND 17

Selects BAND 17 as the band for the current step.

| | |
|----------------------|---|
| Key Path | Source, List Sequencer, List Sequencer Setup, Radio Setup, Radio Standard, LTE |
| Initial S/W Revision | A.09.50 |

BAND 18

Selects BAND 18 as the band for the current step.

| | |
|----------------------|---|
| Key Path | Source, List Sequencer, List Sequencer Setup, Radio Setup, Radio Standard, LTE |
| Initial S/W Revision | A.09.50 |

BAND 19

Selects BAND 19 as the band for the current step.

| | |
|----------------------|---|
| Key Path | Source, List Sequencer, List Sequencer Setup, Radio Setup, Radio Standard, LTE |
| Initial S/W Revision | A.09.50 |

BAND 20

Selects BAND 20 as the band for the current step.

| | |
|----------------------|---|
| Key Path | Source, List Sequencer, List Sequencer Setup, Radio Setup, Radio Standard, LTE |
| Initial S/W Revision | A.09.50 |

BAND 21

Selects BAND 21 as the band for the current step.

| | |
|----------------------|---|
| Key Path | Source, List Sequencer, List Sequencer Setup, Radio Setup, Radio Standard, LTE |
| Initial S/W Revision | A.09.50 |

BAND 24

Selects BAND 24 as the band for the current step.

| | |
|----------------------|---|
| Key Path | Source, List Sequencer, List Sequencer Setup, Radio Setup, Radio Standard, LTE |
| Initial S/W Revision | A.09.50 |

BAND 25

Selects BAND 25 as the band for the current step.

| | |
|----------------------|---|
| Key Path | Source, List Sequencer, List Sequencer Setup, Radio Setup, Radio Standard, LTE |
| Initial S/W Revision | A.09.50 |

BAND 26

Selects BAND 26 as the band for the current step.

| | |
|----------------------|---|
| Key Path | Source, List Sequencer, List Sequencer Setup, Radio Setup, Radio Standard, LTE |
| Initial S/W Revision | A.12.53 |

BAND 27

Selects BAND 27 as the band for the current step.

| | |
|----------------------|---|
| Key Path | Source, List Sequencer, List Sequencer Setup, Radio Setup, Radio Standard, LTE |
| Initial S/W Revision | A.14.00 |

BAND 28

Selects BAND 28 as the band for the current step.

| | |
|----------------------|---|
| Key Path | Source, List Sequencer, List Sequencer Setup, Radio Setup, Radio Standard, LTE |
| Initial S/W Revision | A.14.00 |

BAND 31

Selects BAND 31 as the band for the current step.

| | |
|----------------------|---|
| Key Path | Source, List Sequencer, List Sequencer Setup, Radio Setup, Radio Standard, LTE |
| Initial S/W Revision | A.14.00 |

LTE TDD

Sets LTE TDD as the radio standard for use and accesses the LTE TDD specific channel band sub-menus..

| | |
|----------------------|---|
| Key Path | Source, Frequency, Radio Setup, Radio Standard |
| Initial S/W Revision | A.11.50 |

BAND 33

Selects BAND 33 as the band for the current step.

| | |
|----------------------|--|
| Key Path | Source, Frequency, Radio Setup, Radio Standard, LTE TDD |
| Example | :SOUR:FREQ:CHAN:BAND BAND33 |
| Initial S/W Revision | A.11.50 |

BAND 34

Selects BAND 34 as the band for the current step.

| | |
|----------------------|--|
| Key Path | Source, Frequency, Radio Setup, Radio Standard, LTE TDD |
| Example | :SOUR:FREQ:CHAN:BAND BAND34 |
| Initial S/W Revision | A.11.50 |

BAND 35

Selects BAND 35 as the band for the current step.

| | |
|----------------------|--|
| Key Path | Source, Frequency, Radio Setup, Radio Standard, LTE TDD |
| Example | :SOUR:FREQ:CHAN:BAND BAND35 |
| Initial S/W Revision | A.11.50 |

BAND 36

Selects BAND 36 as the band for the current step.

| | |
|----------------------|--|
| Key Path | Source, Frequency, Radio Setup, Radio Standard, LTE TDD |
| Example | :SOUR:FREQ:CHAN:BAND BAND36 |
| Initial S/W Revision | A.11.50 |

BAND 37

Selects BAND 37 as the band for the current step.

| | |
|----------------------|--|
| Key Path | Source, Frequency, Radio Setup, Radio Standard, LTE TDD |
| Example | :SOUR:FREQ:CHAN:BAND BAND37 |
| Initial S/W Revision | A.11.50 |

BAND 38

Selects BAND 38 as the band for the current step.

| | |
|----------------------|--|
| Key Path | Source, Frequency, Radio Setup, Radio Standard, LTE TDD |
| Example | :SOUR:FREQ:CHAN:BAND BAND38 |
| Initial S/W Revision | A.11.50 |

BAND 39

Selects BAND 39 as the band for the current step.

| | |
|----------------------|--|
| Key Path | Source, Frequency, Radio Setup, Radio Standard, LTE TDD |
| Example | :SOUR:FREQ:CHAN:BAND BAND39 |
| Initial S/W Revision | A.11.50 |

BAND 40

Selects BAND 40 as the band for the current step.

| | |
|----------------------|--|
| Key Path | Source, Frequency, Radio Setup, Radio Standard, LTE TDD |
| Example | :SOUR:FREQ:CHAN:BAND BAND40 |
| Initial S/W Revision | A.11.50 |

BAND 41

Selects BAND 41 as the band for the current step.

| | |
|----------------------|--|
| Key Path | Source, Frequency, Radio Setup, Radio Standard, LTE TDD |
| Example | :SOUR:FREQ:CHAN:BAND BAND41 |
| Initial S/W Revision | A.11.50 |

BAND 42

Selects BAND 42 as the band for the current step.

| | |
|----------------------|--|
| Key Path | Source, Frequency, Radio Setup, Radio Standard, LTE TDD |
| Example | :SOUR:FREQ:CHAN:BAND BAND42 |
| Initial S/W Revision | A.11.50 |

BAND 43

Selects BAND 43 as the band for the current step.

| | |
|----------------------|--|
| Key Path | Source, Frequency, Radio Setup, Radio Standard, LTE TDD |
| Example | :SOUR:FREQ:CHAN:BAND BAND43 |
| Initial S/W Revision | A.11.50 |

BAND 44

Selects BAND 44 as the band for the current step.

| | |
|----------------------|---|
| Key Path | Source, List Sequencer, List Sequencer Setup, Radio Setup, Radio Standard, LTE TDD |
| Initial S/W Revision | A.14.00 |

TDSCDMA

Sets TDSCDMA as the radio standard for use and accesses the TDSCDMA specific channel band sub-menus..

| | |
|----------------------|---|
| Key Path | Source, Frequency, Radio Setup, Radio Standard |
| Initial S/W Revision | A.11.50 |

BAND A

Selects BAND A as the band for the current step.

| | |
|----------------------|--|
| Key Path | Source, Frequency, Radio Setup, Radio Standard, TDSCDMA |
| Example | :SOUR:FREQ:CHAN:BAND BANDA |
| Initial S/W Revision | A.11.50 |

BAND B

Selects BAND B as the band for the current step.

| | |
|----------------------|--|
| Key Path | Source, Frequency, Radio Setup, Radio Standard, TDSCDMA |
| Example | :SOUR:FREQ:CHAN:BAND BANDB |
| Initial S/W Revision | A.11.50 |

BAND C

Selects BAND C as the band for the current step.

| | |
|----------------------|--|
| Key Path | Source, Frequency, Radio Setup, Radio Standard, TDSCDMA |
| Example | :SOUR:FREQ:CHAN:BAND BANDC |
| Initial S/W Revision | A.11.50 |

BAND D

Selects BAND D as the band for the current step.

| | |
|----------------------|--|
| Key Path | Source, Frequency, Radio Setup, Radio Standard, TDSCDMA |
| Example | :SOUR:FREQ:CHAN:BAND BANDD |
| Initial S/W Revision | A.11.50 |

BAND E

Selects BAND E as the band for the current step.

| | |
|----------------------|--|
| Key Path | Source, Frequency, Radio Setup, Radio Standard, TDSCDMA |
| Example | :SOUR:FREQ:CHAN:BAND BANDE |
| Initial S/W Revision | A.11.50 |

BAND F

Selects BAND F as the band for the current step.

| | |
|----------------------|--|
| Key Path | Source, Frequency, Radio Setup, Radio Standard, TDSCDMA |
| Example | :SOUR:FREQ:CHAN:BAND BANDF |
| Initial S/W Revision | A.11.50 |

Radio Band Link

Allows you to specify the radio band link direction for the steps within the list sequence. The link is used in conjunction with the channel band and channel number to determine the output frequency.

When set to “Uplink”, the source will calculate the uplink frequency according to an uplink formula together with selected channel band and channel number. When set to “Downlink”, the source will calculate the downlink frequency according to a downlink formula together with selected channel band and channel number.

| | |
|-----------------------|---|
| Key Path | Source, List Sequencer, List Sequencer Setup, Radio Setup |
| Remote Command | :SOURce:LIST:STEP[1] 2 3...1000:SETup:RADio:BAND:LINK DOWN UP :SOURce:LIST:STEP[1] 2 3...1000:SETup:RADio:BAND:LINK? |

| | |
|----------------------|--|
| Example | :SOUR:LIST:STEP2:SET:RAD:BAND:LINK UP :SOUR:LIST:STEP2:SET:RAD:BAND:LINK? |
| Notes | SCPI is supported after A.09.40 |
| Preset | DOWN |
| Range | DOWN UP |
| Initial S/W Revision | A.05.00 |

Channel

Allows you to specify the frequency of the current step via a channel number.

| Key Path | Source, List Sequencer, List Sequencer Setup |
|-----------------------|---|
| Remote Command | :SOURce:LIST:STEP[1] 2 3...1000:SETup:CNFRfrequency <double> :SOURce:LIST:STEP[1] 2 3...1000:SETup:CNFRfrequency? |
| Example | :SOUR:LIST:STEP2:SET:CNFR 124 :SOUR:LIST:STEP2:SET:CNFR? |
| Notes | SCPI is supported after A.09.40. This SCPI is used to setup channel number or frequency setting, according to current Radio Band setting. If Radio Band is "NONE", then it's frequency. If Radio Band is not "NONE", then it's channel number. |
| Couplings | The channel number is coupled to the step frequency value. When the step frequency value is changed, the channel number will increase or decrease to match the new step frequency. If the step frequency is not at an exact match for a channel number, the nearest channel number is displayed, along with a greater than, or less than sign to indicate the frequency is above or below the channel number. |
| Preset | 1 |
| Min | 0 (Please refer to for valid ranges.) |
| Max | 10838 (Please refer to for valid ranges.) |
| Initial S/W Revision | A.05.00 |

Frequency

Allows you to specify a frequency value for the current step.

| Key Path | Source, List Sequencer, List Sequencer Setup |
|-----------------------|--|
| Remote Command | :SOURce:LIST:STEP[1] 2 3...1000:SETup:CNFRfrequency <double> :SOURce:LIST:STEP[1] 2 3...1000:SETup:CNFRfrequency? |
| Example | :SOUR:LIST:STEP2:SET:CNFR 1GHz :SOUR:LIST:STEP2:SET:CNFR? |
| Notes | SCPI is supported after A.09.40. |

| | |
|----------------------|--|
| | This SCPI is used to setup channel number or frequency setting, according to current Radio Band setting. If Radio Band is "NONE", then it's frequency. If Radio Band is not "NONE", then it's channel number. |
| Couplings | The frequency value is coupled to the channel band and number for the step, such that updates to the radio band and channel number will update the frequency value to the corresponding absolute frequency. The reverse is also true, changing the frequency value causes the value of the channel number to be updated. |
| Preset | 1.00 GHz |
| Min | 10.00 MHz |
| Max | Hardware Dependant: Option 503 = 3.6 GHz Option 504 = 3.9 GHz Option 506 = 6.00 GHz |
| Initial S/W Revision | A.05.00 |

Power

Allows you to specify a power value for the current step.

| | |
|----------------|--|
| Key Path | Source, List Sequencer, List Sequencer Setup |
| Remote Command | :SOURce:LIST:STEP[1] 2 3...1000:SETup:AMPLitude <double> :SOURce:LIST:STEP[1] 2 3...1000:SETup:AMPLitude? |
| Example | :SOUR:LIST:STEP2:SET:AMPL -50dBm :SOUR:LIST:STEP2:SET:AMPL? |
| Notes | SCPI is supported after A.09.40 |
| Notes | Amplitude corrections can be specified for use with the source. In the event of amplitude corrections being applied, the valid ranges for the RF power do not change dependant on the current amplitude correction setting. Instead, if the combination of RF power + amplitude correction is higher or lower than the source output range, the Source Unleveled bit is set and the "Source Unleveled" indicator will appear on status panel to indicate that the source cannot maintain the output power that has been requested. The multiport adapter RFIO TX ports and GPS ports cannot ensure power accuracy when power setting is lower than -130dBm, this power setting value is defined by the sum of RF Power setting and related amplitude correction value. But user settable value could be lower than this limit. When application detected there exists power setting lower than -130dBm on MPA RFIO TX ports, then popup warning message . When application detected there exists power setting lower than -130dBm on MPA GPS ports, then popup warning message . These are only warning messages, and check is performed when RF is ON. |
| Notes | The Min and Max value here defined UI settable amplitude range. This range is larger than actual amplitude range with level accuracy defined in spec. |
| Dependencies | The RF power is dependent on the RF output port and frequency, such that the current frequency and selected output port determine the valid range of power values. |
| Preset | -100 dBm |

| | |
|----------------------|--|
| Min | The range of values depends on the current frequency and selected RF output port. Please refer to "RF Power" on page 2500 and the table RF Power Range for the valid ranges. |
| Max | The range of values depends on the current frequency and selected RF output port. Please refer to "RF Power" on page 2500 and the table RF Power Range for the valid ranges. |
| Initial S/W Revision | A.05.00 |

Waveform

Allows you access to the sub-menus for selecting the waveform to be played back during the current step. Pressing this key also changes the central display area to show the Waveform File Selection view.

| | |
|----------------------|--|
| Key Path | Source, List Sequencer, List Sequencer Setup |
| Remote Command | :SOURce:LIST:STEP[1] 2 3...1000:SETup:WAVeform <string> :SOURce:LIST:STEP[1] 2 3...1000:SETup:WAVeform? |
| Example | :SOUR:LIST:STEP2:SET:WAV "CW" :SOUR:LIST:STEP2:SET:WAV? |
| Notes | SCPI is supported after A.09.40 |
| Remote Command Notes | String type, takes "Off" "CW" "Cont" "waveform name" |
| Preset | CW |
| Range | Waveform Continue Previous CW Off |
| Initial S/W Revision | A.05.00 |

CW

Sets the current step to output a CW tone.

| | |
|----------------------|---|
| Key Path | Source, List Sequencer, List Sequencer Setup, Waveform |
| Example | :SOUR:LIST:STEP2:SET:WAV "CW" |
| Notes | SCPI is supported after A.09.40 |
| Initial S/W Revision | A.05.00 |

Selected Waveform

Inserts the currently selected waveform in the waveform selection view as the waveform for playback during the current step.

| | |
|----------|---|
| Key Path | Source, List Sequencer, List Sequencer Setup, Waveform |
| Example | :SOUR:LIST:STEP2:SET:WAV "waveform name" |
| Notes | SCPI is supported after A.09.40 If the selected waveform contains header (which contains ARB play parameters), source list |

sequence will automatically apply header settings of the selected waveform in that step.

| | |
|----------------------|---------|
| Initial S/W Revision | A.05.00 |
|----------------------|---------|

Continue Previous

Sets the current step to continue with playback of the waveform from the previous step. When continuing the previous waveform, the ARB playback will not pause while the source retunes to the new frequency or amplitude that may be defined for the new step.

| | |
|----------|---|
| Key Path | Source, List Sequencer, List Sequencer Setup, Waveform |
|----------|---|

| | |

Segments on Hard Disk

Allows you access to the sub-menus for loading waveform segments from the hard disk into ARB memory. The default directory is: D: varb.

Pressing this key changes the current view to the Waveform Management View.

| | |
|----------|---|
| Key Path | Source, Modulation Setup, ARB, Select Waveform |
|----------|---|

| | |
|----------------------|---------|
| Initial S/W Revision | A.05.00 |
|----------------------|---------|

Load Segment To ARB Memory

Allows you to load the selected file into ARB memory. On the front panel you select the file for loading to the ARB memory by highlighting the desired file in the list. Using the SCPI command, you specify the file name on the HDD.

"NVWFM" (none-volatile storage) MSUS (Mass Storage Unit Specifier) is supported in the memory subsystem because the ARB memory cannot be accessed directly. Therefore, files must be downloaded to the instrument hard disk and then loaded into the ARB memory. "NVWFM" MSUS will be mapped to the

default directory D: VARB. The SCPI command supports using either “NVWFM” MSUS or specifying a full path. For more information, see [Memory Subsystem \(Remote Command Only\)](#).

If a file of the same name already exists within ARB memory, it is overwritten. If you wish to load two segments of the same name, you must rename one of the segments before loading it into ARB memory. To rename a segment, you can either use Windows File Explorer, or the :MMEMory:COPY command.

| | |
|-----------------------|--|
| Key Path | Source, Modulation Setup, ARB, Select Waveform, Segments on Hard Disk |
| Remote Command | :SOURce:RADio:ARB:LOAD <string> |
| Example | :SOUR:RAD:ARB:LOAD “D: VARB\testwaveform.bin” or :SOUR:RAD:ARB:LOAD “NVWFM:testwaveform.bin” |
| Notes | <p>Because loading the file involves a delay of unpredictable length, this command should be followed by the query *OPC?, which holds off subsequent commands until the loading operating is complete.</p> <p><string> – specifies the path name of the file to load from the HDD into ARB memory. It could be a <full path + filename>, or <“NVWFM” MSUS + colon + filename>.</p> <p>When in Sequence Analyzer mode, and Include Source is Yes, an attempt to load a file to ARB memory will be rejected with an error.</p> <p>When Include Source is No and if there is insufficient free ARB memory to load the selected waveform, an error is generated. .</p> <p>If you specify a file over SCPI, but the file is not at the specified location, an error is generated.</p> <p>If you try to load a waveform file but the file contains less than 500 IQ samples, an error is generated.</p> <p>If you try to load a Signal Studio waveform “*.wfm” which contains invalid waveform header, an error is generated.</p> <p>If the ARB is ON when you load a file to ARB memory or delete a file from ARB memory, the playing waveform segment may not keep phase continuity during the ARB memory operation. The waveform will be replayed after the ARB operation is finished.</p> <p>ARB can be loaded into ARB memory even required licenses do not present on the instrument. In this case, a GUI only warning message –800, “Operation complete; Loaded <filename> successfully, but no license <required licenses> installed”. User can install required licenses according to <required licenses> string to license it, or multi-pack license it.</p> |
| Initial S/W Revision | A.05.00 |

Load All To ARB Memory

Allows you to load all the segment files within the currently selected directory into ARB memory. If a file of the same name already exists within ARB memory, it is overwritten. If you wish to load two segments of the same name, you must rename one of the segments before loading it into ARB memory. To rename a segment, you can either use Windows File Explorer, or the :MEMory:COPY command.

| | |
|-----------------------|--|
| Key Path | Source, Modulation Setup, ARB, Select Waveform, Segments on Hard Disk |
| Remote Command | :SOURce:RADio:ARB:LOAD:ALL <string> |
| Example | :SOUR:RAD:ARB:LOAD:ALL “D: varb” |
| Notes | <p><string> - specifies the directory on the HDD to load the files into ARB memory from.</p> <p>When in Sequence Analyzer mode, and Include Source is Yes, an attempt to load all files from a</p> |

directory to ARB memory is rejected with an error.
 When Include Source is No and there is insufficient free ARB memory to load all the waveforms, when the ARB memory is full, the copy ceases, and an error is generated.
 If you specify a directory over SCPI, but the directory does not exist, an error is generated.
 If the ARB is ON, a user then loads or deletes file to ARB memory, the playing waveform segment may not keep phase continuity during the ARB memory operation. The waveform will be replayed after the ARB operation is finished.

Initial S/W Revision A.05.00

Change Directory...

Allows you to change the currently selected directory on the hard disk. Pressing this key opens a standard windows change directory dialog allowing you to select the new directory of interest.

The current directory is used for manually loading waveform segments into ARB memory for playback, and as a search location for waveform segments that are required to be loaded into ARB memory for playback of a waveform sequence or a list sequence.

Key Path **Source, Modulation Setup, ARB, Select Waveform, Segments on Hard Disk**

Notes No remote command, SCPIfront panel only.

Initial S/W Revision A.05.00

Default Directory...

Allows you to change the default directory. It is used as a search location for waveform segments that are required to be loaded into ARB memory for playback of a waveform sequence, and as a search location for selecting waveforms using SCPI.

Key Path **Source, Modulation Setup, ARB, Select Waveform, Segments on Hard Disk**

Remote Command :SOURce:RADio:ARB:DEFault:DIRectory <string>
 :SOURce:RADio:ARB: DEFault:DIRectory?

Example :SOUR:RAD:ARB:DEF:DIR "D:\ArbFiles"
 :SOUR:RAD:ARB:DEF:DIR?

State Saved Persistent, survives a power cycle and a preset but not saved in the instrument state

Initial S/W Revision A.05.00

Segments in ARB Memory

Allows you access to the sub-menus for managing the files within ARB memory.

Key Path **Source, Modulation Setup, ARB, Select Waveform**

Initial S/W Revision A.05.00

Delete Segment From ARB Mem

Allows you to remove a segment from ARB playback memory.

| | |
|-----------------------|---|
| Key Path | Source, Modulation Setup, ARB, Select Waveform, Segments in ARB Memory |
| Remote Command | :SOURce:RADio:ARB:DELeTe <string> |
| Example | :SOUR:RAD:ARB:DEL "testwaveform.bin" |
| Notes | <p><string> - specifies the waveform to be deleted from the ARB playback memory.</p> <p>When in Sequence Analyzer mode and Include Source is Yes, an attempt to delete a file from ARB memory is rejected with an error.</p> <p>When Include Source is No and you specify a file that does not exist within ARB memory, an error is generated.</p> <p>It is possible to delete files from within the ARB memory when the ARB is ON. However, if you attempt to delete the file that is currently playing an error is generated.</p> <p>It is possible to delete a file from within the ARB memory when the sequencer state is ON and the file is not being used by the List Sequencer. If you attempt to delete a file which is being used by the list sequencer, an error is generated.</p> <p>When sequencer state is On, even if ARB state is On, the selected waveform will not be played. In this case, if the selected waveform is not used in List Sequence, it can be deleted and the ARB state is turned Off.</p> <p>If the ARB is ON and you load a file to ARB memory or delete a file from ARB memory, the playing waveform segment may not keep phase continuity during the ARB memory operation. The waveform will be replayed after the ARB operation is finished.</p> |
| Initial S/W Revision | A.05.00 |

Delete All From ARB Memory

Allows you to remove all segments from ARB playback memory.

| | |
|-----------------------|--|
| Key Path | Source, Modulation Setup, ARB, Select Waveform, Segments in ARB Memory |
| Remote Command | :SOURce:RADio:ARB:DELeTe:ALL |
| Example | :SOUR:RAD:ARB:DELeTe:ALL |
| Notes | <p>When in Sequence Analyzer mode and Include Source is Yes, an attempt to delete all files from ARB memory is rejected with an error.</p> <p>When Include Source is No and you attempt to delete all files from ARB memory when the ARB is currently playing a file, all files except the one playing are deleted and an error is generated.</p> <p>If you attempt to delete all files from ARB memory when there are waveform files used in "List Sequencer" on page 2585 and "Sequencer" on page 2586 state is ON, all files except the files currently being used in list sequencer are deleted, and an error is generated.</p> <p>If the ARB is ON and you load a file to ARB memory or delete a file from ARB memory, the playing waveform segment may not keep phase continuity during the ARB memory operation. The waveform will be replayed after the ARB operation is finished.</p> |

| Key Path | Source, List Sequencer, List Sequencer Setup, Waveform, Segments in ARB Memory, Segment in ARB Memory |
| Initial S/W Revision | Prior to A.09.00 |

Step Duration

Allows access to the sub-menus for setting up the duration of play for the current step.

The duration can be set to be either the number of times for the ARB file associated with the sequence to play, or a specific time value, or continuous. If the step is set to play a CW tone, the step duration cannot be set to a play count.

| | |
|----------------------|---|
| Key Path | Source, List Sequencer, List Sequencer Setup |
| Remote Command | :SOURce:LIST:STEP[1] 2 3...1000:SETup:DURation:TYPE TIME COUNT CONTInuous CABort :SOURce:LIST:STEP[1] 2 3...1000:SETup:DURation:TYPE? |
| Example | :SOUR:LIST:STEP2:SET:DUR:TYPE TIME :SOUR:LIST:STEP2:SET:DUR:TYPE? |
| Notes | SCPI is supported after A.09.40 |
| Notes | If "Step Duration" is set to "Time" or "Play Count" for the last step, the last step of ARB keeps playing as if set to "Continuous", until the set "Time" has expired or until the "Play Count" setting is reached. However, you can query Error! Reference source not found. Source Sweeping Condition Message to find out if the current list sequence is complete or not. |
| Range | Time Play Count Continuous Continuous Abort |
| Initial S/W Revision | A.05.00 |

Time

Sets the duration of the current step to be a time value for the length of time the step will play. Pressing this key again opens another menu which allows you to set the time value for the step duration.

| | |
|----------------------|--|
| Key Path | Source, List Sequencer, List Sequencer Setup, Step Duration |
| Example | :SOUR:LIST:STEP2:SET:DUR:TYPE TIME |
| Notes | SCPI is supported after A.09.40 |
| Initial S/W Revision | A.05.00 |

Duration Time

Allows you to specify the length of time the current step will play.

When Step Duration is **Continuous Abort** this parameter specifies the maximum duration that the waveform will continue to play after a step trigger is received before the transition to the next waveform will occur. Duration is limited to a maximum of 20 seconds.

If the Transition Time value is longer than the Step Duration Time, an error is generated when initiating a source list sequence. For source list sequence, transition time is included in the step duration length (not occupy additional time). If the Transition Time value is longer than the Step Duration Time, the real step duration length is extended to equal the transition time and cause a timing shift. This check is also described in section **Error! Reference source not found.** List Sequence Step Validation.

| | |
|----------------------|--|
| Key Path | Source, List Sequencer, List Sequencer Setup, Step Duration, Time |
| Remote Command | :SOURce:LIST:STEP[1] 2 3...1000:SETup:DURation:TCOut <double> :SOURce:LIST:STEP[1] 2 3...1000:SETup:DURation:TCOut? |
| Example | :SOUR:LIST:STEP2:SET:DUR:TCO 1s :SOUR:LIST:STEP2:SET:DUR:TCO? |
| Notes | SCPI is supported after A.09.40 This SCPI is reused by "Play Count", "Duration Time" and "Continuous Abort" according to current Duration Type setting is "Play Count" or "Duration Time" or "Continuous Abort". If current "Duration Type" is "Continuous", then popup error -221, "Settings conflict; Cannot accept time or count input when step duration type is Continuous on step #" |
| Notes | If "Duration Time" is set for the last step, the last step of ARB keeps playing as if set to "Continuous" after set time expires. However, you can query Source Sweeping Condition Message (:STAT:OPER:COND?) to find out if the current list sequence is complete or not. |
| Preset | 1.00 ms |
| Min | 100 µs |
| Max | 1800 s |
| Initial S/W Revision | A.05.00 |

Play Count

Sets the duration of the current step to be an integer value for the number of times (play count) the ARB file is selected for playback during this step. For example, a 5 second ARB will be set to play 5 times during the step.

| | |
|----------------------|---|
| Key Path | Source, List Sequencer, List Sequencer Setup, Step Duration |
| Example | :SOUR:LIST:STEP2:SET:DUR:TYPE COUN |
| Notes | SCPI is supported after A.09.40 This key is unavailable and is grayed out if the current step is configured to CW tone rather than an ARB waveform. |
| Initial S/W Revision | A.05.00 |

Header Utilities

Allows access to the header utilities sub-menu. Pressing this key also causes the central display area to change to display the File Header Information view.

| | |
|----------------------|---|
| Key Path | Source, Modulation Setup, ARB |
| Dependencies | This key is only available if there is currently a waveform selected for playback. If no waveform is selected, the key is grayed out. |
| Initial S/W Revision | A.05.00 |

Continuous

Sets the current step to be played continuously until the next step starts. The waveform will always play completely before transitioning to the next step.

| | |
|----------------------|--|
| Key Path | Source, List Sequencer, List Sequencer Setup, Step Duration |
| Example | :SOUR:LIST:STEP2:SET:DUR:TYPE CONT |
| Notes | SCPI is supported after A.09.40 |
| Initial S/W Revision | A.05.00 |

Output Trigger

Allows you to specify the trigger output for the current step. The trigger output signal is sent at the start of the step.

When select “On”, trigger event will occur on both Internal and External2 paths. Select “Off” will turn off trigger output.

| | |
|-----------------------|---|
| Key Path | Source, List Sequencer, List Sequencer Setup |
| Remote Command | :SOURce:LIST:STEP[1] 2 3...1000:SETup:OUTPut:TRIGger ON OFF 1 0 :SOURce:LIST:STEP[1] 2 3...1000:SETup:OUTPut:TRIGger |
| Example | :SOUR:LIST:STEP2:SET:OUTP:TRIG ON :SOUR:LIST:STEP2:SET:OUTP:TRIG? |
| Notes | SCPI is supported after A.09.40 |
| Preset | Off |

| | |
|----------------------|---------|
| Range | On Off |
| Initial S/W Revision | A.05.00 |

Step Configuration (Remote Command Only)

This SCPI command is used to configure the List Sequencer and is detailed in the table below. The command is defined such that you send one command per step, with the step number being specified as a subopcode of the SCPI command. Each command includes all the parameter settings for the step. As a step is setup, the values entered are run through several levels of validation.

| | |
|-----------------------|---|
| Remote Command | <pre>:SOURce:LIST:STEP[1] 2 ... 4..1000:SETup IMMEDIATE INTERNAL KEY BUS EXTERNAL2, <time>, NONE PGSM EGSM RGSM DCS1800 PCS1900 TGSM810 GSM450 GSM480 GSM700 GSM850 BANDI BANDII BANDIII BANDIV BANDV BANDVI BANDVII BANDVIII BANDIX BANDX BANDXI BANDXII BANDXIII BANDXIV BANDXIX USCELL USPCS JAPAN KOREAN NMT IMT2K UPPER SECOND PAMR400 PAMR800 IMTEXT PCS1DOT9G AWS US2DOT5G PUBLIC LOWER NONE BAND1 BAND2 BAND3 BAND4 BAND5 BAND6 BAND7 BAND8 BAND10 BAND11 BAND12 BAND13 BAND14 BAND17 BAND18 BAND19 BAND20 BAND21 BAND24 BAND25 BAND26 BAND33 BAND34 BAND35 BAND36 BAND37 BAND38 BAND39 BAND40 BAND41 BAND42 BAND43 BANDA BANDB BANDC BANDD BANDE BANDF, DOWN UP, <freq>, <ampl>, <string>, TIME COUNT CONTinuous, <time>, ON OFF 1 0, [<int>], :SOURce:LIST:STEP[1] 2 ... 4..1000:SETup?</pre> |
| Example | :SOUR:LIST:STEP1:SET INT, 1ms, PGSM, DOWN, 10, -25 dBm, "GSM_Test1.bin", TIME, 10ms, OFF, 255 |
| Notes | <p>The parameters are: (There is a total of 11 items in each step, the following is a list of the items in the order they must appear in the remote command.)</p> <ol style="list-style-type: none"> 1. Step Trigger <enum> – specifies the input trigger for the step. For details of the valid types of step trigger see "Step Trigger" on page 2588. 2. Transition Time <time> – specifies the transition time for the step in seconds. For details of the valid ranges for the transition time see "Transition Time" on page 2590. 3. Radio Band <enum> – specifies the radio band for the step. For details of the valid radio bands see "Radio Setup" on page 2591. 4. Radio Band Link <enum> – specifies the radio band link direction for the step. For details of the valid link types, see "Radio Band Link" on page 2607. 5. Frequency/Channel Number <freq>/<chan num> – specifies the frequency in Hz or the channel number for the step. The channel number and frequency are combined as one parameter that represents the frequency or channel number depending on the radio band setting. If the radio band is set to NONE, this value is interpreted as a frequency value in Hz. If the radio band is set to a valid band, this value is interpreted as a channel number. For details of the valid ranges for frequency and channel numbers, see "Channel" on page 2608 and "Frequency" on page 2608. 6. Power <ampl> – specifies the output power for the step in dBm. For details of the valid ranges see "Power" on page 2609. 7. Waveform <string> – specifies the waveform for playback during the step. The step can output either a new ARB waveform, continue playback of the previous waveform, or output a CW tone. The |

options for specifying these are:

<filename> - plays the specified waveform from the start. The filename value is the name of the file within ARB playback memory, it does not include the windows path to the file on the HDD. If you enter a filename for a waveform that does not reside within ARB playback memory, an error is generated.

CONT - continues playback of the ARB file from the previous step

CW - outputs a CW tone

OFF - disable RF output

8. Step Duration <enum> - specifies the duration of the step. The duration can be specified to be either time, or play count of the ARB file associated with the step, or continuous. If Waveform is set to "CW", this value cannot be set to Play Count and an error will be generated. If continuous is selected, the following Time or Count value is ignored. For further details of this setting, see "[Step Duration](#)" on page 2616.

9. Time or Count <time/int> - specifies time duration in seconds or play count of the ARB file associated with the step. For further details of this setting, including the valid ranges for the time or play count setting, "[Time](#)" on page 2616 and "[Play Count](#)" on page 2617.

10. Output Trigger <Boolean> - specifies the output trigger for the step. For details of the ranges for this setting see "[Output Trigger](#)" on page 2618.

| | |
|----------------------|--|
| Dependencies | The range of subopcode values is 1 to 1000 and the value you enter is determined by the number of steps you have configured. For details see " Number of Steps " on page 2587. If you attempt to remotely set or query a subopcode that is out of range, an error is generated. |
| Initial S/W Revision | A.05.00 |

Step Configuration of Step Trigger parameter list (Remote Command Only)

This SCPI command is to configure "Step Trigger" parameter array of the whole List Sequencer at one time. The number of array is same as step number defined in "[Number of Steps](#)" on page 2587 Number of Steps. As a step is setup, the value entered run through several levels of validation.

| | |
|-----------------------------|--|
| Remote Command | :SOURce:LIST:SETup:INPut:TRIGger <enum>, <enum>, <enum>, ... :SOURce:LIST:SETup:INPut:TRIGger? |
| Example | :SOUR:LIST:SET:INP:TRIG IMM,INT,EXT2 :SOUR:LIST:SET:INP:TRIG? |
| Notes | The command is to setup below parameter array of whole list sequence. Step Trigger <enum> - specifies the input trigger for the step. For details of the valid types of step trigger see " Step Trigger " on page 2588. If input parameter number exceeds the step number defined by " Number of Steps " on page 2587 Number of Steps then generate error ", and only those parametes whose index number falls in number of steps will be updated. |
| Remote Command Notes | IMMediate INTernal KEY BUS EXTernal2 |
| Dependencies | The range is 1 to 1000 which is determined by the number of steps you have configured. For details see " Number of Steps " on page 2587. |
| Initial S/W Revision | A.09.40 |

Step Configuration of Transition Time parameter list (Remote Command Only)

This SCPI command is to configure “Transition Time” parameter array of the whole List Sequencer at one time. The number of array is same as step number defined in ["Number of Steps" on page 2587](#) Number of Steps. As a step is setup, the value entered run through several levels of validation.

| | |
|-----------------------------|--|
| Remote Command | :SOURce:LIST:SETup:TRANSition:TIME <time>, <time>, <time>, ... :SOURce:LIST:SETup:TRANSition:TIME? |
| Example | :SOUR:LIST:SET:TRAN:TIME 1ms,1ms,1ms :SOUR:LIST:SET:TRAN:TIME? |
| Notes | The command is to setup below parameter array of whole list sequence. Transition Time <time> – specifies the transition time for the step in seconds. For details of the valid ranges for the transition time see "Transition Time" on page 2590 If input parameter number exceeds the step number defined by "Number of Steps" on page 2587 Number of Steps then generate error ", and only those parameters whose index number falls in number of steps will be updated. |
| Dependencies | The range is 1 to 1000 which is determined by the number of steps you have configured. For details see "Number of Steps" on page 2587 . |
| Initial S/W Revision | A.09.40 |

Step Configuration of Radio Band parameter list (Remote Command Only)

This SCPI command is to configure “Radio Band” parameter array of the whole List Sequencer at one time. The number of array is same as step number defined in ["Number of Steps" on page 2587](#) Number of Steps. As a step is setup, the value entered run through several levels of validation.

Step Configuration of Radio Band Link parameter list (Remote Command Only)

This SCPI command is to configure “Radio Band Link” parameter array of the whole List Sequencer at one time. The number of array is same as step number defined in ["Number of Steps" on page 2587](#) Number of Steps. As a step is setup, the value entered run through several levels of validation.

| | |
|-----------------------------|---|
| Remote Command | :SOURce:LIST:SETup:RADio:BAND:LINK <enum>, <enum>, <enum>, ... :SOURce:LIST:SETup:RADio:BAND:LINK? |
| Example | :SOUR:LIST:SET:RAD:BAND:LINK DOWN,UP,UP :SOUR:LIST:SET:RAD:BAND:LINK? |
| Notes | The command is to setup below parameter array of whole list sequence. Radio Band Link <enum> – specifies the radio band link direction for the step. For details of the valid link types, see "Radio Band Link" on page 2607 . If input parameter number exceeds the step number defined by "Number of Steps" on page 2587 Number of Steps then generate error ", and only those parametes whose index number falls in number of steps will be updated. |
| Remote Command Notes | DOWN UP |
| Dependencies | The range is 1 to 1000 which is determined by the number of steps you have configured. For details see "Number of Steps" on page 2587 . |
| Initial S/W Revision | A.09.40 |

Step Configuration of Frequency/Channel Number parameter list (Remote Command Only)

This SCPI command is to configure “Frequency” or “Channel Number” parameter array of the whole List Sequencer at one time. The number of array is same as step number defined in ["Number of Steps" on page 2587](#) Number of Steps. As a step is setup, the value entered run through several levels of validation.

| | |
|-----------------------|--|
| Remote Command | :SOURce:LIST:SETup:CNFfrequency <double>, <double>, <double>, ... :SOURce:LIST:SETup:CNFfrequency? |
| Example | :SOUR:LIST:SET:CNFR 1GHz,100MHz,100MHz :SOUR:LIST:SET:CNFR? SOUR:LIST:SET:CNFR 124,124,124 :SOUR:LIST:SET:CNFR? |

| | |
|----------------------|--|
| Notes | <p>The command is to setup below parameter array of whole list sequence.</p> <p>Frequency/Channel Number <freq>/<chan num> – specifies the frequency in Hz or the channel number for the step. The channel number and frequency are combined as one parameter that represents the frequency or channel number depending on the radio band setting. If the radio band is set to NONE, this value is interpreted as a frequency value in Hz. If the radio band is set to a valid band, this value is interpreted as a channel number. For details of the valid ranges for frequency and channel numbers, see "Channel" on page 2608 and "Frequency" on page 2608</p> <p>This SCPI is used to setup/query channel number or frequency setting, according to current Radio Band setting of that step. If Radio Band is “NONE”, then it’s frequency. If Radio Band is not “NONE”, then it’s channel number</p> <p>If input parameter number exceeds the step number defined by "Number of Steps" on page 2587 Number of Steps then generate error ", and only those parametes whose index number falls in legal step number will be updated.</p> |
| Dependencies | <p>The range is 1 to 1000 which is determined by the number of steps you have configured. For details see "Number of Steps" on page 2587.</p> |
| Initial S/W Revision | A.09.40 |

Step Configuration of Power parameter list (Remote Command Only)

This SCPI command is to configure “Power” parameter array of the whole List Sequencer at one time. The number of array is same as step number defined in ["Number of Steps" on page 2587](#) Number of Steps. As a step is setup, the value entered run through several levels of validation.

| | |
|-----------------------|---|
| Remote Command | <pre>:SOURce:LIST:SETup:AMPLitude <ampl>, <ampl>, <ampl>, ... :SOURce:LIST:SETup:AMPLitude?</pre> |
| Example | <pre>:SOUR:LIST:SET:AMPL -50dBm,-40dBm,-30dBm :SOUR:LIST:SET:AMPL?</pre> |
| Notes | <p>The command is to setup below parameter array of whole list sequence.</p> <p>Power <ampl> – specifies the output power for the step in dBm. For details of the valid ranges see "Power" on page 2609.</p> <p>If input parameter number exceeds the step number defined by "Number of Steps" on page 2587 Number of Steps then generate error ", and only those parametes whose index number falls in legal step number will be updated.</p> |
| Dependencies | <p>The range is 1 to 1000 which is determined by the number of steps you have configured. For details see "Number of Steps" on page 2587.</p> |
| Initial S/W Revision | A.09.40 |

Step Configuration of Waveform parameter list (Remote Command Only)

This SCPI command is to configure “Waveform” parameter array of the whole List Sequencer at one time. The number of array is same as step number defined in ["Number of Steps" on page 2587](#) Number of Steps. As a step is setup, the value entered run through several levels of validation.

| | |
|-----------------------|--|
| Remote Command | <pre>:SOURce:LIST:SETup:WAVEform <string>, <string>, <string>, ...</pre> |
|-----------------------|--|

| | |
|-----------------------------|--|
| | :SOURce:LIST:SETup:WAVeform? |
| Example | :SOUR:LIST:SET:WAV "CW","Off","CONT" :SOUR:LIST:SET:WAV? |
| Notes | <p>The command is to setup below parameter array of whole list sequence.</p> <p>Waveform <string> – specifies the waveform for playback during the step. The step can output either a new ARB waveform, continue playback of the previous waveform, or output a CW tone. The options for specifying these are:</p> <p><filename> - plays the specified waveform from the start. The filename value is the name of the file within ARB playback memory, it is does not include the windows path to the file on the HDD. If you enter a filename for a waveform that does not reside within ARB playback memory, an error is generated.</p> <p>CONT – continues playback of the ARB file from the previous step</p> <p>CW – outputs a CW tone</p> <p>OFF – disable RF output</p> <p>If input parameter number exceeds the step number defined by "Number of Steps" on page 2587 Number of Steps then generate error ", and only those parametes whose index number falls in number of steps will be updated.</p> |
| Dependencies | The range is 1 to 1000 which is determined by the number of steps you have configured. For details see "Number of Steps" on page 2587. |
| Range | "filename" "CW" "Off" "CONT" |
| Initial S/W Revision | A.09.40 |

Step Configuration of Step Duration parameter list (Remote Command Only)

This SCPI command is to configure "Step Duration" parameter array of the whole List Sequencer at one time. The number of array is same as step number defined in "Number of Steps" on page 2587 Number of Steps. As a step is setup, the value entered run through several levels of validation.

| | |
|-----------------------------|---|
| Remote Command | :SOURce:LIST:SETup:DURation:TYPE <enum>, <enum>, <enum>, ... :SOURce:LIST:SETup:DURation:TYPE? |
| Example | :SOUR:LIST:SET:DUR:TYPE COUN,TIME,CONT :SOUR:LIST:SET:DUR:TYPE? |
| Notes | <p>The command is to setup below parameter array of whole list sequence.</p> <p>Step Duration <enum> – specifies the duration of the step. The duration can be specified to be either time, or play count of the ARB file associated with the step, or continuous. If Waveform is set to "CW", this value cannot be set to Play Count and an error will be generated. If continuous is selected, the following Time or Count value is ignored. For further details of this setting, see "Step Duration" on page 2616.</p> <p>If input parameter number exceeds the step number defined by "Number of Steps" on page 2587 Number of Steps then generate error ", and only those parametes whose index number falls in number of steps will be updated.</p> |
| Remote Command Notes | TIME COUNT CONTInuous |
| Dependencies | The range is 1 to 1000 which is determined by the number of steps you have configured. For details |

| | |
|----------------------|--|
| | see "Number of Steps" on page 2587 . |
| Initial S/W Revision | A.09.40 |

Step Configuration of Duration Time or Play Count parameter list (Remote Command Only)

This SCPI command is to configure “Duration Time” or “Play Count” parameter array of the whole List Sequencer at one time. The number of array is same as step number defined in ["Number of Steps" on page 2587](#) Number of Steps. As a step is setup, the value entered run through several levels of validation.

| | |
|-----------------------|--|
| Remote Command | :SOURce:LIST:SETup:TOCount <time/int>, <time/int>, <time/int>, ... :SOURce:LIST:SETup:TOCount? |
| Example | :SOUR:LIST:SET:TOC 1s,2s,3s :SOUR:LIST:SET:TOC? :SOUR:LIST:SET:TOC 5,6,7 :SOUR:LIST:SET:TOC? |
| Notes | The command is to setup below parameter array of whole list sequence. Time or Count <time/int> – specifies time duration in seconds or play count of the ARB file associated with the step. For further details of this setting, including the valid ranges for the time or play count setting, "Time" on page 2616 and "Play Count" on page 2617 . If input parameter number exceeds the step number defined by "Number of Steps" on page 2587 Number of Steps then generate error ", and only those parametes whose index number falls in number of steps will be updated. If current "Step Duration" on page 2616 is “Continuous”, then generate error -221, "Settings conflict;Cannot accept time or count input when step duration type is Continuous on step #" |
| Dependencies | The range is 1 to 1000 which is determined by the number of steps you have configured. For details see "Number of Steps" on page 2587 . |
| Initial S/W Revision | A.09.40 |

Step Configuration of Output Trigger parameter list (Remote Command Only)

This SCPI command is to configure “Output Trigger” parameter array of the whole List Sequencer at one time. The number of array is same as step number defined in ["Number of Steps" on page 2587](#) Number of Steps. As a step is setup, the value entered run through several levels of validation.

| | |
|-----------------------|--|
| Remote Command | :SOURce:LIST:SETup:OUTPut:TRIGger <bool>, <bool>, <bool>, ... :SOURce:LIST:SETup:OUTPut:TRIGger ? |
| Example | :SOUR:LIST:SET:OUTP:TRIG ON,OFF,ON :SOUR:LIST:SET:OUTP:TRIG? |
| Notes | The command is to setup below parameter array of whole list sequence. Output Trigger <Boolean> – specifies the output trigger for the step. For details of the ranges for this setting see "Output Trigger" on page 2618 . If input parameter number exceeds the step number defined by "Number of Steps" on page 2587 Number of Steps then generate error ", and only those parametes whose index number falls in |

| | |
|----------------------|--|
| | legal step number will be updated. |
| Remote Command Notes | ON OFF 1 0 |
| Dependencies | The range is 1 to 1000 which is determined by the number of steps you have configured. For details see " Number of Steps " on page 2587. |
| Initial S/W Revision | A.09.40 |

Clear List (Remote Command Only)

This command is the SCPI equivalent of the Clear List UI feature described in.

| | |
|-----------------------|--------------------------|
| Remote Command | :SOURce:LIST:SETup:CLEar |
| Example | :SOUR:LIST:SETup:CLE |
| Initial S/W Revision | A.05.00 |

Trigger Type

Allows access to the sub-menu for selecting the output trigger type for the list sequencer globally. It cannot be changed between different sequence steps.

| | |
|-----------------------|---|
| Key Path | Source, List Sequencer |
| Remote Command | :SOURce:LIST:TRIGgerout:TYPE BEGinningofstep DATamarker |
| Example | :SOUR:LIST:TRIG:TYP BEG :SOUR:LIST:TRIG:TYP? |
| Notes | SCPI is supported after A.14.00 This an alias SCPI of :SOURce:LIST:TRIGger:OUTPut:TYPE STEP MARKer Recommend to use : SOURce:LIST:TRIGger:OUTPut:TYPE STEP MARKer |
| Preset | BEGinningofstep |
| Range | BEGinningofstep DATamarker |
| Initial S/W Revision | A.14.00 |

BeginningOfStep

Sets the output trigger type as BeginningOfStep for the whole source sequence.

| | |
|-----------------|---|
| Key Path | Source, List Sequencer, Trigger Type |
| Example | :SOUR:LIST:TRIG:TYP BEG |
| Notes | SCPI is supported after A.14.00 This an alias SCPI of :SOURce:LIST:TRIGger:OUTPut:TYPE STEP Recommend to use : SOURce:LIST:TRIGger:OUTPut:TYPE STEP |

| | |
|----------------------|---------|
| Initial S/W Revision | A.14.00 |
|----------------------|---------|

DataMarker

Sets the output trigger type as DataMarker for the whole source sequence. When DataMarker is selected, which marker to route is also needed to be set.

| | |
|-----------------|---|
| Key Path | Source, List Sequencer, Trigger Type |
| Example | :SOUR:LIST:TRIG:TYP DAT |
| Notes | SCPI is supported after A.14.00 This an alias SCPI of :SOURce:LIST:TRIGger:OUTPut:TYPE MARKer Recommend to use : SOURce:LIST:TRIGger:OUTPut:TYPE MARKer |

| | |
|----------------------|---------|
| Initial S/W Revision | A.14.00 |
|----------------------|---------|

Marker 1

Sets the output trigger maker routing to Marker 1 for DataMarker in the whole source sequence.

| | |
|-----------------|--|
| Key Path | Source, List Sequencer, Trigger Type, DataMarker |
| Example | :SOUR:LIST:TRIG:TYPE:MARK M1 |
| Notes | SCPI is supported after A.14.00 This an alias SCPI of :SOURce:LIST:TRIGger:OUTPut:TYPE:MARKer M1 Recommend to use :SOURce:LIST:TRIGger:OUTPut:TYPE:MARKer M1 |

| | |
|----------------------|---------|
| Initial S/W Revision | A.14.00 |
|----------------------|---------|

Marker 2

Sets the output trigger maker routing to Marker 2 for DataMarker in the whole source sequence.

| | |
|-----------------|--|
| Key Path | Source, List Sequencer, Trigger Type, DataMarker |
| Example | :SOUR:LIST:TRIG:TYPE:MARK M2 |
| Notes | SCPI is supported after A.14.00 This an alias SCPI of :SOURce:LIST:TRIGger:OUTPut:TYPE:MARKer M2 Recommend to use :SOURce:LIST:TRIGger:OUTPut:TYPE:MARKer M2 |

| | |
|----------------------|---------|
| Initial S/W Revision | A.14.00 |
|----------------------|---------|

Marker 3

Sets the output trigger maker routing to Marker 3 for DataMarker in the whole source sequence.

| | |
|-----------------------------|--|
| Key Path | Source, List Sequencer, Trigger Type, DataMarker |
| Example | :SOUR:LIST:TRIG:TYPE:MARK M3 |
| Notes | SCPI is supported after A.14.00 This an alias SCPI of :SOURce:LIST:TRIGger:OUTPut:TYPE:MARKer M3 Recommend to use :SOURce:LIST:TRIGger:OUTPut:TYPE:MARKer M3 |
| Initial S/W Revision | A.14.00 |

Marker 4

Sets the output trigger maker routing to Marker 4 for DataMarker in the whole source sequence.

| | |
|-----------------------------|--|
| Key Path | Source, List Sequencer, Trigger Type, DataMarker |
| Example | :SOUR:LIST:TRIG:TYPE:MARK M4 |
| Notes | SCPI is supported after A.14.00 This an alias SCPI of :SOURce:LIST:TRIGger:OUTPut:TYPE:MARKer M4 Recommend to use :SOURce:LIST:TRIGger:OUTPut:TYPE:MARKer M4 |
| Initial S/W Revision | A.14.00 |

Manual Trigger Now

Pressing this key provides a software trigger event to the list sequencer. During execution of sequence, if the sequencer is halted on any step that has been configured with a “Manual” step trigger, then this key press will cause the sequencer to continue and execute the step.

| | |
|-----------------------------|--------------------------------------|
| Key Path | Source, List Sequencer |
| Remote Command | No remote command, front panel only. |
| Initial S/W Revision | A.05.00 |

Remote Software Trigger (Remote command Only)

During execution of a list sequence, the sequence will halt and wait at any step that has Step Trigger set to “Bus”. Sending this command will trigger the step and continue the sequence.

| | |
|-----------------------------|---|
| Remote Command | :SOURce:LIST:TRIGger:INITiate[:IMMediate] |
| Example | :SOUR:LIST:TRIG:INIT |
| Initial S/W Revision | A.05.00 |

Query List Sequence Initiation Armed Status (Remote Command Only)

This is a blocking SCPI query to determine if source list sequence being initiated successfully or not.

| | |
|-----------------------|--|
| Remote Command | :SOURce:LIST:INITiation:ARMed? |
| Example | :SOUR:LIST:INIT:ARMed? |
| Notes | The return data is in the following format: Integer |
| Notes | Query only SCPI. Returning "1" if list sequence has been initiated successfully, returning "0" if not. Once get "0", you can use :SYST:ERR? to query what error happened. Just like "*OPC?", this command can be blocked until event/status "IsSourceSweeping" happens, and then returns. Doing so can help user's script query armed status only once during the time interval of the initiation. As an ancillary SCPI of existing SCPI ":SOUR:LIST:TRIGger[:IMMediate]" (see "Initiate Sequence" on page 2586 Initiate Sequence), the right usage of this command is to use it after ":SOUR:LIST:TRIG". If not, this command will return "1" immediately. |
| Notes | There is an alias SCPI ":SOURce:LIST:TRIGger:INITiation:ARMed?". |
| Initial S/W Revision | A.09.40 |

Source Preset

Allows you to preset the source settings to their default values.

| | |
|-----------------------|----------------|
| Key Path | Source |
| Remote Command | :SOURce:PRESet |
| Example | :SOUR:PRES |

SPAN X Scale

Accesses the SPAN/X Scale menu that allows you to set the desired horizontal scale settings.

| Key Path | Front-panel key |
|----------------------|-----------------|
| Initial S/W Revision | A.10.01 |

Sweep/Control

Accesses a menu that allows you to select parameters that affect the sweep of the displayed measurement signal.

Only the Pause/Resume key is available.

See "[Sweep/Control](#)" on [page 2634](#) for more information.

| | |
|----------------------|------------------------|
| Key Path | Front-panel key |
| Initial S/W Revision | A.10.01 |

Pause/Resume

Pauses a measurement after the current data acquisition is complete.

When Paused, the label on the key changes to Resume. Pressing Resume un-pauses the measurement. When you are Paused, pressing **Restart**, **Single** or **Cont** does a Resume.

| | |
|-----------------------|--|
| Key Path | Sweep/Control |
| Remote Command | :INITiate:PAUSE |
| Dependencies | Grayed out in Measurements that do not support Pausing. Blanked in Modes that do not support Pausing. |
| Initial S/W Revision | Prior to A.02.00 |

| | |
|-----------------------|--|
| Key Path | Sweep/Control |
| Remote Command | :INITiate:RESume |
| Dependencies | Grayed out in Measurements that do not support Pausing. Blanked in Modes that do not support Pausing. |
| Initial S/W Revision | Prior to A.02.00 |

System

See ["System" on page 278](#)

Trace/Detector

There is no 'Trace/Detector' functionality supported in Modulation Analysis so this front-panel key will display a blank softkey when pressed.

| | |
|----------------------|------------------------|
| Key Path | Front-panel key |
| Initial S/W Revision | A.10.01 |

User Preset

Accesses a menu that gives you the following three choices:

- **User Preset** – recalls a state previously saved using the Save User Preset function.
- **User Preset All Modes** – presets all of the modes in the analyzer
- **Save User Preset**– saves the current state for the current mode

| Key Path | Front-panel key |
|-------------------------------|--|
| Backwards Compatibility Notes | <p>User Preset is actually loading a state, and in legacy analyzers, it was possible to load a state without affecting the trace data, limit lines or correction data. Similarly it was possible to do a User Preset without affecting the trace data, limit lines or correction data.</p> <p>In the X-Series, “state” always includes all of this data; so whenever state is loaded, or User Preset is executed, all of the traces, limit lines and corrections are affected. Although this differs from previous behavior, it is desirable behavior, and should not cause adverse issues for users.</p> <p>On ESA and PSA, User Preset affected the entire instrument’s state. In the X-Series, User Preset only recalls the state for the active mode. There is a User Preset file for each mode. User Preset can never cause a mode switch as it can in legacy analyzers. If you want to recall all modes to their user preset file state, you will need to do a User Preset after mode switching into each mode.</p> <p>User Preset recalls mode state which can now include data like traces; whereas on ESA and PSA, User Preset did not affect data.</p> |
| Initial S/W Revision | Prior to A.02.00 |

User Preset

User Preset sets the state of the currently active mode back to the state that was previously saved for this mode using the Save User Preset menu key or the SCPI command, `SYST:PRES:USER:SAV`. It not only recalls the Mode Preset settings, but it also recalls all of the mode persistent settings, and the Input/Output system setting that existed at the time Save User Preset was executed.

If a Save User Preset has not been done at any time, User Preset recalls the default user preset file for the currently active mode. The default user preset files are created if, at power-on, a mode detects there is no user preset file. There will never be a scenario when there is no user preset file to restore. For each mode, the default user preset state is the same state that would be saved if a Save User Preset is performed in each mode right after doing a Restore Mode Default and after a Restore Input/Output Defaults.

The User Preset function does the following:

- Aborts the currently running measurement.
- Sets the mode State to the values defined by Save User Preset.
- Makes the saved measurement for the currently running mode the active measurement.
- Brings up the saved menu for the power-on mode.
- Clears the input and output buffers.
- Sets the Status Byte to 0.

| | |
|-----------------------------|--|
| Key Path | User Preset |
| Remote Command | :SYSTem:PRESet:USER |
| Example | :SYST:PRES:USER:SAVE:SYST:PRES:USER |
| Notes | :SYST:PRES:USER:SAVE is used to save the current state as the user preset state. Clears all pending OPC bits. The Status Byte is set to 0. Pressing the User Preset front-panel key while already in the User Preset menu will cause the User Preset to get executed |
| Couplings | A user preset will cause the currently running measurement to be aborted and cause the saved measurement to be active. Recalling a User Preset file has the same issues that recalling a Save State file has. Some settings may need to be limited and therefore re-coupled, since the capabilities of the mode may have changes when the User Preset file was last saved. |
| Initial S/W Revision | Prior to A.02.00 |

User Preset All Modes

Recalls all of the User Preset files for each mode, switches to the power-on mode, and activates the saved measurement from the power-on mode User Preset file.

NOTE

When the instrument is secured, all of the user preset files are converted back to their default user preset files.

The User Preset function does the following:

- Aborts the currently running measurement.
- Switches the Mode to the power-on mode.
- Restores the User Preset files for each mode.
- Makes the saved measurement for the power-on mode the active measurement.
- Brings up the saved menu for the power-on mode.
- Clears the input and output buffers.
- Sets the Status Byte to 0.

| | |
|-----------------------|--|
| Key Path | User Preset |
| Remote Command | :SYSTem:PRESet:USER:ALL |
| Example | :SYST:PRES:USER:SAVE:SYST:PRES:USER:ALL |
| Notes | Clears all pending OPC bits. The Status Byte is set to 0. :SYST:PRES:USER:SAVE is used to save the current state as the user preset state. |
| Couplings | A user preset will cause the currently running measurement to be aborted, cause a mode switch to the power-on mode, and cause the saved measurement to be active in the power-on mode. Recalling a User Preset file has the same issues that recalling a Save State file has. Some settings may need to be limited and therefore re-coupled, since the capabilities of the mode may have changes when the User Preset file was last saved. |

| | |
|----------------------|------------------|
| Initial S/W Revision | Prior to A.02.00 |
|----------------------|------------------|

Save User Preset

Saves the currently active mode and its State. You can recall this User Preset file by pressing the User Preset menu key or sending the SYST:PRES:USER remote command. This same state is also saved by the Save State function.

| | |
|-----------------------|---|
| Key Path | User Preset |
| Remote Command | :SYSTem:PRESet:USER:SAVE |
| Example | :SYST:PRES:USER:SAVE |
| Notes | :SYST:PRES:SAVE creates the same file as if the user requested a *SAV or a MMEM:STOR:STAT, except User Preset Save does not allow the user to specify the filename or the location of the file. |
| Initial S/W Revision | Prior to A.02.00 |

View/Display

Accesses a menu that allows you to select from the following measurement view and display settings.

| Key Path | Front-panel key |
|----------------------|-----------------|
| Initial S/W Revision | A.10.01 |

This topic contains the following sections:

["Understanding Front Panel Results to Use Remote Commands" on page 2096](#)

["Front Panel Results" on page 2096](#)

["View Selection by Name" on page 2097](#)

["View Selection by number \(SCPI Only\)" on page 2098](#)

NOTE

The view setting options depend on the measurement view that is active.

Understanding Front Panel Results to Use Remote Commands

WLAN Modulation Analysis measurement has 7 views. They can be selected both by the front-panel and remotely (SCPI commands). View # and Window # in the table below are also used as subops of :DISPlay subsets, for example:

:DISPlay:EVM:VIEW2:WINDow3:TRACe:X:SCALE:PDIVision?

Denotes X Scale/Div value query of EVM trace (View # = 2, Window # = 3).

Front Panel Results

| View # | View | Number of Windows | Window # | Window |
|--------|--------------------------|-------------------|----------|---------------------------|
| [1] | I/Q Measured Polar Graph | 2 | [1] | Numeric Results |
| | | | 2 | I/Q Measured Polar Vector |
| 2 | I/Q Error (Quad View) | 4 | [1] | Magnitude Error |
| | | | 2 | Phase Error |
| | | | 3 | EVM |
| | | | 4 | Numeric Results |

- POLar(1): I/Q Measured Polar Graph – Provides a combination view of an I/Q Measured Polar Vector graph and the Numeric Results data.
- IQERror(2): I/Q Error(Quad View) – Provides a combination view of a Magnitude Error, Phase Error, EVM window and Numeric Results for Direct Spread Freq Modulation
- OFDM(3): OFDM EVM (Quad View) – Provides a combination view of a RMS EVM vs. Subcarrier graph, RMS EVM vs. Symbol graph, I/Q Measured Polar Vector graph, and Numeric Results graph.
- DBITs(4): – Provides a window of demod bits
- NRESults(5): Result Metrics – Provides a summary for the measurement result and information
- BHTSiginfo (6): Burst Info Graph and HT-Sig Info Graph. Provides a summary view on Burst Info , HT-Sig Info and L-Sig Info.
- PFERror(7): Provides a Preamble Freq Error vs. Time graph, shows the total frequency error in Hz during the preamble part of the burst.
- IQIMpair (8): IQ Impairments (Triple View) – Provides a combination view of a IQ Gain Imbalance vs. Carrier graph IQ Quadrature Skew vs. Carrier graph and IQ Time Skew vs. Carrier graph.

| Max | 8 |
| Initial S/W Revision | A.10.01 |

Display

The Display menu is common to most measurements, and is used for configuring items on the display. Some Display menu settings apply to all the measurements in a mode, and some only to the current measurement. Those under the **System Display Settings** key apply to all measurements in all modes.

| | |
|----------------------|---------------------|
| Key Path | Display |
| Key Path | View/Display |
| Initial S/W Revision | Prior to A.02.00 |

Annotation

Turns on and off various parts of the display annotation. The annotation is divided up into four categories:

1. Meas Bar: This is the measurement bar at the top of the screen. It does not include the settings panel or the Active Function. Turning off the Meas Bar turns off the settings panel and the Active Function. When the Meas Bar is off, the graticule area expands to fill the area formerly occupied by the Meas Bar.
2. Screen Annotation: this is the annotation and annunciation around the graticule, including any annotation on lines (such as the display line, the threshold line, etc.) This does NOT include the marker number or the N dB result. When off, the graticule expands to fill the entire graticule area.
3. Trace annotation: these are the labels on the traces, showing their detector (or their math mode).
4. Active Function annotation: this is the active function display in the meas bar, and all of the active function values displayed on softkeys.

See the figure below. Each type of annotation can be turned on and off individually.

13 WLAN Modulation Analysis measurement
View/Display

| | |
|----------------------|-----------------------|
| Key Path | View/Display, Display |
| Initial S/W Revision | Prior to A.02.00 |

Meas Bar On/Off

This function turns the Measurement Bar on and off, including the settings panel. When off, the graticule area expands to fill the area formerly occupied by the Measurement Bar.

| | |
|----------------|---|
| Key Path | View/Display, Display, Annotation |
| Remote Command | :DISPlay:ANNOtation:MBAR[:STATe] OFF ON 0 1 :DISPlay:ANNOtation:MBAR[:STATe]? |
| Example | DISP:ANN:MBAR OFF |
| Dependencies | Grayed out and forced to OFF when System Display Settings, Annotation is set to Off. |
| Preset | On This should remain Off through a Preset when System DisplaySettings, Annotation is set to Off. |

| | |
|----------------------|----------------------------|
| State Saved | Saved in instrument state. |
| Initial S/W Revision | Prior to A.02.00 |

Screen

This controls the display of the annunciation and annotation around the graticule, including any annotation on lines (such as the display line, the threshold line, etc.) and the y-axis annotation. This does NOT include marker annotation (or the N dB result). When off, the graticule expands to fill the entire graticule area, leaving only the 1.5% gap above the graticule as described in the Trace/Detector chapter.

| | |
|-----------------------|--|
| Key Path | View/Display, Display, Annotation |
| Remote Command | :DISPlay:ANNotation:SCReen[:STATe] OFF ON 0 1 :DISPlay:ANNotation:SCReen[:STATe]? |
| Example | DISP:ANN:SCR OFF |
| Dependencies | Grayed-out and forced to OFF when System Display Settings, Annotation is set to Off. |
| Preset | On This should remain Off through a Preset when System DisplaySettings, Annotation is set to Off |
| State Saved | Saved in instrument state. |
| Initial S/W Revision | Prior to A.02.00 |

Active Function Values On/Off

Turns on and off the active function display in the Meas Bar, and all of the active function values displayed on the softkeys.

Note that all of the softkeys that have active functions have these numeric values blanked when this function is on. This is a security feature..

13 WLAN Modulation Analysis measurement
View/Display

| | |
|----------------------|--|
| Key Path | View/Display, Display, Annotation |
| Remote Command | :DISPlay:ACTivefunc[:STATE] ON OFF 1 0 :DISPlay:ACTivefunc[:STATE] ? |
| Example | DISP:ACT OFF |
| Dependencies | Grayed out and forced to OFF when System Display Settings, Annotation is set to Off. |
| Preset | On This should remain Off through a Preset when System DisplaySettings, Annotation is set to Off |
| State Saved | Saved in instrument state. |
| Initial S/W Revision | Prior to A.02.00 |

Title

Displays menu keys that enable you to change or clear a title on your display.

| | |
|----------------------|-----------------------|
| Key Path | View/Display, Display |
| Initial S/W Revision | Prior to A.02.00 |

Change Title

Writes a title into the "measurement name" field in the banner, for example, "Swept SA".

Press Change Title to enter a new title through the alpha editor. Press Enter or Return to complete the entry. Press ESC to cancel the entry and preserve your existing title.

The display title will replace the measurement name. It remains for this measurement until you press **Change Title** again, or you recall a state, or a Preset is performed. A title can also be cleared by pressing **Title, Clear Title**.

NOTE

Notice the inclusion of the <measurement> parameter in the command below. Because each measurement remembers the Display Title, the command must be qualified with the measurement name. For the Swept SA measurement this is not the case; no <measurement> parameter is used when changing the Display Title for the Swept SA measurement.

| | |
|----------------------|---|
| Key Path | View/Display, Display, Title |
| Mode | All |
| Remote Command | :DISPlay:<measurement>:ANNotation:TITLe:DATA <string> :DISPlay:<measurement>:ANNotation:TITLe:DATA? |
| Example | DISP:ANN:TITL:DATA "This Is My Title" This example is for the Swept SA measurement in the Spectrum Analyzer mode. The SANalyzer <measurement> name is not used. DISP:ACP:ANN:TITL:DATA "This Is My Title" This example is for Measurements other than Swept SA. Both set the title to: This Is My Title |
| Notes | Pressing this key cancels any active function. When a title is edited the previous title remains intact (it is not cleared) and the cursor goes at the end so that characters can be added or BKSP can be used to go back over previous characters. |
| Preset | No title (measurement name instead) |
| State Saved | Saved in instrument state. |
| Initial S/W Revision | Prior to A.02.00 |

Clear Title

Clears a title from the front-panel display. Once cleared, the title cannot be retrieved. After the title is cleared, the current Measurement Name replaces it in the title bar.

| | |
|----------|---|
| Key Path | View/Display, Display, Title |
| Example | The following commands clear the title and restore the measurement's original title: DISP:ANN:TITL:DATA "" This example is for the Swept SA measurement in the Spectrum Analyzer mode. The SANalyzer <measurement> name is not used. DISP:ACP:ANN:TITL:DATA "" This example is for ACP; in measurements other than Swept SA the measurement name is required. |
| Notes | Uses the :DISPlay:<measurement>:ANNotation:TITLe:DATA <string> command with an empty string (in the Swept SA, the <measurement> is omitted). |

| | |
|----------------------|----------------------|
| Preset | Performed on Preset. |
| Initial S/W Revision | Prior to A.02.00 |

Graticule

Pressing Graticule turns the display graticule On or Off. It also turns the graticule y-axis annotation on and off.

| | |
|----------------------|--|
| Key Path | View/Display, Display |
| Remote Command | :DISPlay:WINDow[1]:TRACe:GRATicule:GRID[:STATe] OFF ON 0 1 :DISPlay:WINDow[1]:TRACe:GRATicule:GRID[:STATe]? |
| Example | DISP:WIND:TRAC:GRAT:GRID OFF |
| Notes | The graticule is the set of horizontal and vertical lines that make up the grid/divisions for the x-axis and y-axis. |
| Preset | On |
| State Saved | Saved in instrument state |
| Initial S/W Revision | Prior to A.02.00 |

System Display Settings

These settings are "Mode Global" – they affect all modes and measurements and are reset only by **Restore Misc Defaults** or **Restore System Defaults** under System.

| | |
|----------------------|------------------------------|
| Key Path | View/Display, Display |
| Initial S/W Revision | Prior to A.02.00 |

Annotation Local Settings

This is a Mode Global override of the meas local annotation settings. When it is **All Off**, it forces **ScreenAnnotation, Meas Bar, Trace, and Active Function Values** settings to be **OFF** for all measurements in all modes. This provides the security based "annotation off" function of previous analyzers; hence it uses the legacy SCPI command.

When it is **All Off**, the **Screen, Meas Bar, Trace, and Active Function Values** keys under the **Display, Annotation** menu are grayed out and forced to **Off**. When **Local Settings** is selected, you are able to set the local annotation settings on a measurement by measurement basis.

| | |
|----------------|--|
| Key Path | View/Display, Display, System Display Settings |
| Remote Command | :DISPlay:WINDow[1]:ANNotation[:ALL] OFF ON 0 1 :DISPlay:WINDow[1]:ANNotation[:ALL]? |
| Example | :DISP:WIND:ANN OFF |

| | |
|-------------------------------|---|
| Preset | On (Set by Restore Misc Defaults) |
| State Saved | Not saved in instrument state. |
| Backwards Compatibility Notes | The WINDow parameter and optional subopcode is included for backwards compatibility but ignored – all windows are equally affected. |
| Initial S/W Revision | Prior to A.02.00 |

Themes

Accesses a menu of functions that enable you to choose the theme to be used when saving the screen image.

The **Themes** option is the same as the **Themes** option under the **Display** and **Page Setup** dialogs. It allows you to choose between themes to be used when saving the screen image.

| | |
|-------------------------------|---|
| Key Path | Save, Screen Image |
| Remote Command | :MMEMory:STORe:SCReen:THEMe TDColor TDMonochrome FCOLOR FMONochrome :MMEMory:STORe:SCReen:THEMe? |
| Example | :MMEM:STOR:SCR:THEM TDM |
| Preset | 3D Color; Is not part of Preset, but is reset by Restore Misc Defaults or Restore System Defaults All and survives subsequent running of the modes. |
| Readback | 3D Color 3D Mono Flat Color Flat Mono |
| Backwards Compatibility Notes | In ESA and PSA we offer the choice of "Reverse Bitmap" or "Reverse Metafile" when saving screen images. This is much like the "Flat Color" theme available in X-Series. Also, if you selected Reverse Bitmap AND a black & white screen image, that would be much like "Flat Monochrome". In other words, each of the X-Series themes has a similar screen image type in ESA/PSA. But they are not identical. |
| Initial S/W Revision | Prior to A.02.00 |

3D Color

Selects a standard color theme with each object filled, shaded and colored as designed.

| | |
|----------------------|-----------------------------------|
| Key Path | Save, Screen Image, Themes |
| Example | MMEM:STOR:SCR:THEM TDC |
| Readback | 3D Color |
| Initial S/W Revision | Prior to A.02.00 |

3D Monochrome

Selects a format that is like 3D color but shades of gray are used instead of colors.

| | |
|----------------------|-----------------------------------|
| Key Path | Save, Screen Image, Themes |
| Example | MMEM:STOR:SCR:THEM TDM |
| Readback | 3D Mono |
| Initial S/W Revision | Prior to A.02.00 |

Flat Color

Selects a format that is best when the screen is to be printed on an ink printer.

| | |
|----------------------|-----------------------------------|
| Key Path | Save, Screen Image, Themes |
| Example | MMEM:STOR:SCR:THEM FCOL |
| Readback | Flat Color |
| Initial S/W Revision | Prior to A.02.00 |

Flat Monochrome

Selects a format that is like Flat Color. But only black is used (no colors, not even gray), and no fill.

| | |
|----------------------|-----------------------------------|
| Key Path | Save, Screen Image, Themes |
| Example | MMEM:STOR:SCR:THEM FMON |
| Readback | Flat Mono |
| Initial S/W Revision | Prior to A.02.00 |

IQ Measured Polar Vector

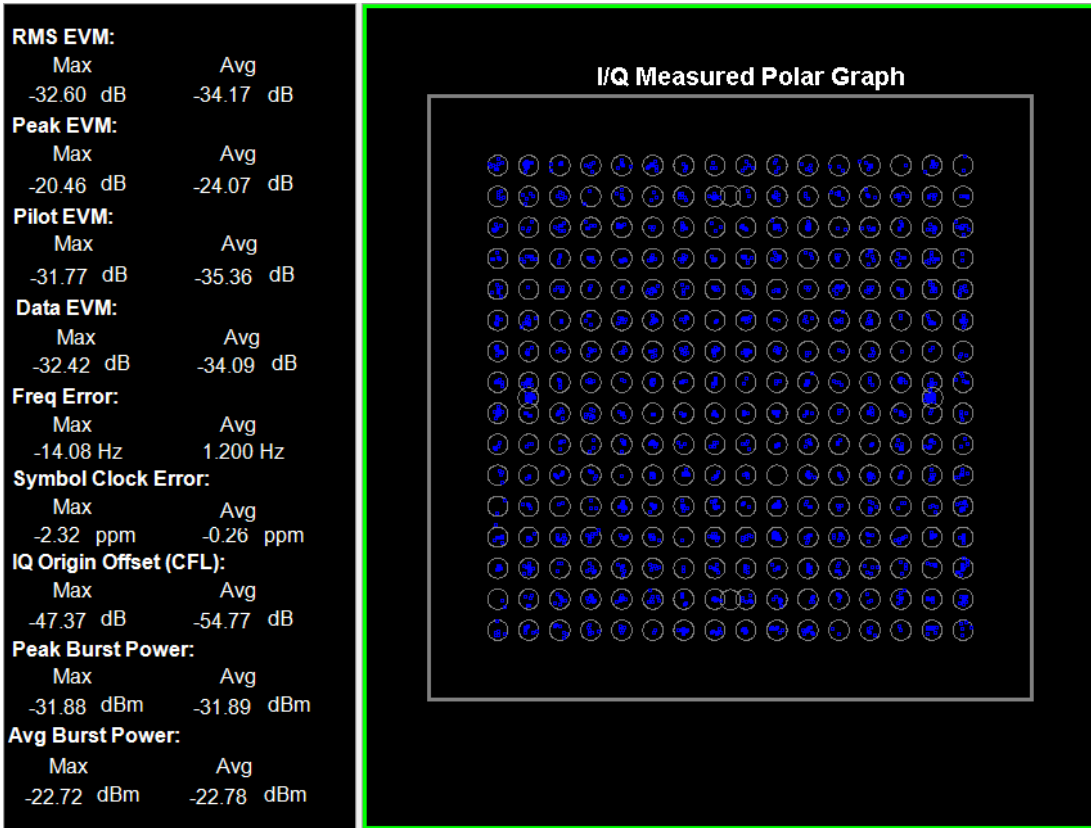

The following figure shows I/Q Measured Polar Vector view image. The window 2 (left window) shows metrics summary and the window 1 (right) shows I/Q measured polar vector graph.

The view consists of the following windows:

["I/Q Polar Vec/ConstIn" on page 2111](#)

["I/Q Symbol Constellation Window" on page 2108](#)

If Radio Standard is 802.11a/g/j/p (OFDM), 801.11g (DSSS-OFDM), 802.11n , 802.11ac or 802.11ah:

If Radio Standard is 802.11b/g:

Numeric Results Window

“Avg” means the average of the individual measurements when averaging is on.
 “Max” means the maximum of the individual measurements when averaging is on.
 “Min” means the minimum of the individual measurements when averaging is on.

I/Q Symbol Constellation Window

| | |
|---------------------|---|
| Marker Operation | Yes [Symbol or Chip - (X,Y)] |
| Corresponding Trace | Corrected measured trace (n=7) This trace is affected by I/Q Meas Polar view setting parameters. |

When Radio Std is 802.11a/g/j/p (OFDM), 801.11g (DSSS-OFDM), 802.11n, 802.11ac or 802.11ah

| Name | Corresponding Results | Description | Unit | Format |

I/Q Polar Vec/ConstIn

Specifies the format of the Polar Vector graph display. You can select one of the following formats:

- Vec ConstIn (Vector and Constellation)
- Vector (Vector only)
- Constellation (Constellation only)

| | |
|-----------------------|---|
| Key Path | View/Display, I/Q Measured Polar Graph |
| Mode | WLAN |
| Remote Command | :DISPlay:EVM:VIEW[1]:WINDow[1]:TRACe:POLar VC VECTor CONSTIn :DISPlay:EVM:VIEW[1]:WINDow[1]:TRACe:POLar? |
| Example | DISP:EVM:VIEW:WIND:TRAC:POL CONS DISP:EVM:VIEW:WIND:TRAC:POL? |
| Notes | Default Value is coupled with Radio Std |
| Dependencies | If Radio Std is 802.11a/g/j/p (OFDM), 801.11g (DSSS-OFDM), 802.11n, 802.11ac or 802.11ah: |

| | |
|----------------------|--|
| | ,Vec&Constln and Vector keys are gray out Forceful message “-224 Illegal parameter, Vect&Constn is not available for current Radio Setting”, “-224 Illegal parameter, Vector is not available for current Radio Setting” |
| Preset | If Radio Std is 802.11a/g/j/p (OFDM), 801.11g (DSSS-OFDM), 802.11n, 802.11ac or 802.11ah: CONS If Radio Std is 802.11b/g (DSSS/CCK/PBCC): VC |
| State Saved | Saved in instrument state. |
| Range | Vec & Constln Vector Constellation |
| Initial S/W Revision | A.10.01 |

I/Q Points

Specifies the number of I/Q Points displayed for the I/Q measured polar graph.

| | |
|----------------------|---|
| Key Path | View/Display, I/Q Measured Polar Graph |
| Mode | WLAN |
| Remote Command | :DISPlay:EVM:VIEW[1]:WINDow[1]:TRACe:IQPoints <integer> :DISPlay:EVM:VIEW[1]:WINDow[1]:TRACe:IQPoints? |
| Example | DISP:EVM:VIEW:WIND:TRAC:IQP 10 DISP:EVM:VIEW:WIND:TRAC:IQP? |
| Notes | Default, Max values are coupled with Radio Std and Meas Interval |
| Couplings | Change the Meas Interval will set the I/Q Points as the same number as Meas Interval when Meas Interval is no bigger than 24564, otherwise, it will be clipped to 24564 |
| Preset | If Radio Std is 802.11a/g/j/p (OFDM), 801.11g (DSSS-OFDM), 802.11n, 802.11ac or 802.11ah: 60 symbols If Raideo Std is 802.11b/g (DSSS/CCK/PBCC): 2794 chips |
| State Saved | Saved in instrument state. |
| Min | 1 |
| Max | Meas Interval, when Meas Interval <= 24564 24564, when Meas Interval > 24564 |
| Initial S/W Revision | A.10.01 |

I/Q Points Offset

Specifies the number of points offset from the first one in the Meas Interval.

| | |
|----------------|---|
| Key Path | View/Display, I/Q Measured Polar Graph |
| Mode | WLAN |
| Remote Command | :DISPlay:EVM:VIEW[1]:WINDow[1]:TRACe:IQOffset <integer> |

| | |
|----------------------|--|
| | :DISPlay:EVM:VIEW[1]:WINDow[1]:TRACe:IQOffset? |
| Example | DISP:EVM:VIEW:WIND:TRAC:IQOF 10 DISP:EVM:VIEW:WIND:TRAC:IQOF? |
| Notes | Max Value is coupled with Meas Interval and I/Q Points |
| Couplings | Change of Meas Interval will set the I/Q Points Offset to be 0 |
| Preset | 0 |
| State Saved | Saved in instrument state. |
| Min | 0 |
| Max | Meas Interval - I/Q Points |
| Initial S/W Revision | A.10.01 |

I/Q Rotation

Toggles the display rotation function between On and Off. If set to On, the I/Q polar vector or I/Q polar constellation graph is rotated from 0 to 359.5 degrees.

| | |
|-----------------------|--|

Full Vector

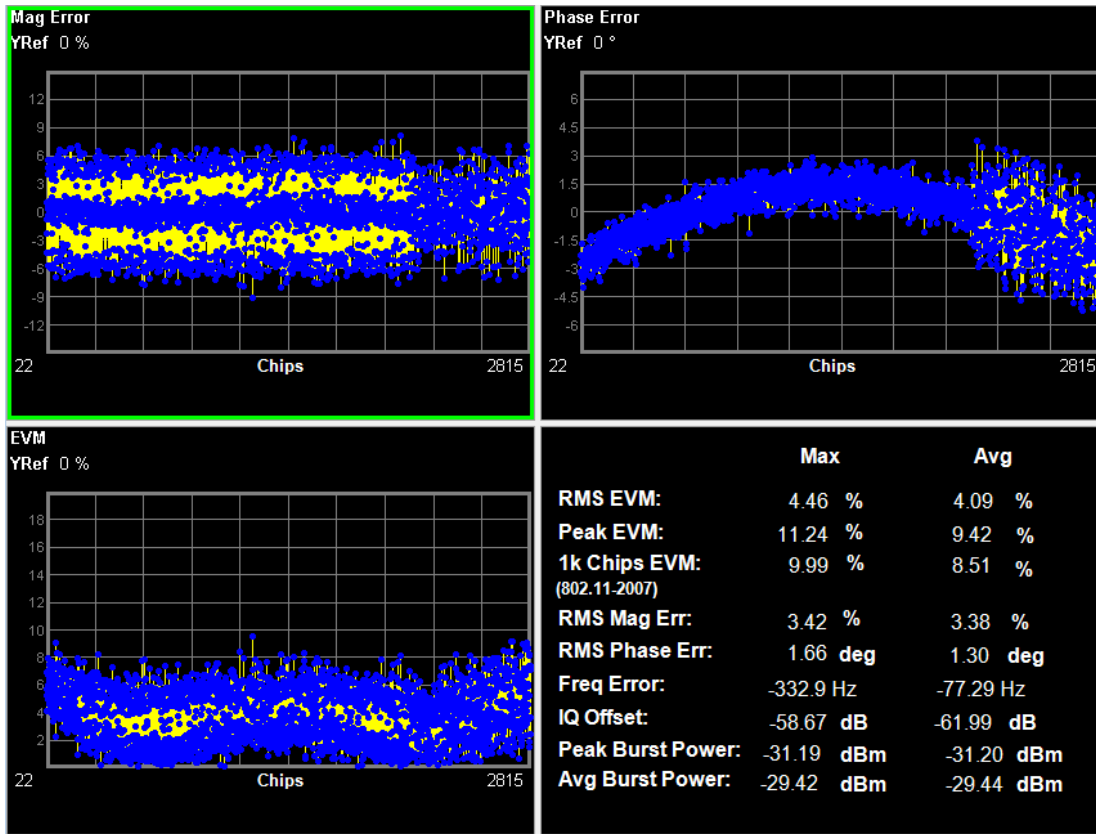

Toggles the full vector display function between On and Off. If set to On, the full vector traces, that are shown in gray, are displayed in the background of the polar vector solid traces, which are shown in yellow. Both traces can be interpolated by using the Interpolation key.

I/Q Error

Selects the I/Q Error view.

There are four windows in this view:

- 1 "MER/EVM vs. Sub-carrier/Frequency Window" on page 2117 (top left)
- 2 "Logical Channel Window" on page 2118 (top right)
- 3 "Polar Graph Window" on page 2118 (bottom left)
- 4 "Result Metrics Window" on page 2118 (bottom right)

The Reference Value, Units per Division, and Reference Position of X or Y Axis in the trace graph can be adjusted by selecting SPAN X Scale or AMPTD Y Scale.

Figure - I/Q Error View of Modulation Accuracy Measurement

MER/EVM vs. Sub-carrier/Frequency Window

This window provides MER/EVM vs. Sub-carrier/Frequency results. It comprises the MER/EVM value of each sub-carrier/frequency in order to give the users a panorama of MER/EVM results. There are 3077 points in 8MHz mode.

| | |
|----------------------------|---|
| Marker Trace | Yes |
| Corresponding Trace | MER/EVM vs. Sub-carrier/Frequency trace (n=3) |

The top left window will be changed by Y Scale Type and X Scale Type.

If Y Scale Type is MER and X Scale Type is Carrier,

If Y Scale Type is EVM and X Scale Type is Carrier,

If Y Scale Type is MER and X Scale Type is Freq,

If Y Scale Type is EVM and X Scale Type is Freq,

Logical Channel Window

This window provides Logical Channel graph. It gives the TSO decoding results.

| Name | Corresponding Results | Format |
|--------|--|--|
| LCH | Physical Logical Channel (PLCH) type and index. PLCH includes one Control Logical Channel (CLCH) and multiple Service Logical Channels (SLCH). | |
| Range | Start timeslot and end timeslot for corresponding PLCH | |
| Mod | Modulation format for corresponding PLCH | BPSK, QPSK, 16QAM |
| RS | RS code rate for corresponding PLCH | (240, 240), (240, 224), (240,192), (240, 176) |
| LDPC | LDPC code rate for corresponding PLCH | ½, ¾ |
| Intlv | Byte interleaving type for corresponding PLCH | Mode 1, Mode 2, Mode 3 |
| Scramb | Scrambling type for corresponding PLCH | Mode 0, Mode 1, Mode 2, Mode 3, Mode 4, Mode 5, Mode 6, Mode 7 |

Polar Graph Window

This window provides Polar Graph.

| Name | Corresponding Trace | Format |
|---------------|--|---------------|
| Constellation | The I/Q polar trace of measured input data. The length displayed is defined by I/Q Points.(n=2) | Constellation |

Result Metrics Window

This window provides Modulation Accuracy result metrics.

| Name | Corresponding Results | Format |
|----------|--|---------|
| EVM | n=1 1st EVM of the current symbols | 99.99 % |
| Peak EVM | n=1 2nd Peak EVM of the current symbols | 99.99 % |

| Name | Corresponding Results | Format |
|------------------|--|---------------|
| MER | n=1 4th MER of the current symbols | 99.99 dB |
| Peak MER | n=1 5th Peak MER of the current symbols | 99.99 dB |
| Mag Error | n=1 7th Mag Error of the current symbols | 99.99 % |
| Peak Mag Error | n=1 8th Peak Mag Error of the current symbols | 99.99 % |
| Phase Error | n=1 10th Phase Error of the current symbols | 99.99 deg |
| Peak Phase Error | n=1 11th Peak Phase Error of the current symbols | 99.99 deg |
| Amptd Imbalance | n=1 14th Amplitude imbalance of the current symbols | 99.9999 dB |
| Quad Err | n=1 15th Quadrature error of the current symbols | 99.9999 deg |
| Timing Skew | n=1 16th Timing skew of the current symbols | 9.9999E9 s |

| | | | |
|------------|---|------|------|
| | BCC: 0 Unknown indicates invalid data. | | |
| ShortGI | Y N Unknown indicates invalid data. | None | None |
| ExtStreams | Indicates the Number of extension spatial streams (). | None | None |
| CRC | Its format is HEX. | None | None |
| Tail | Used to terminate the trellis of the convolution coder. Its format is HEX. | None | None |

L-Sig Content

| Rate | Data Rate. | MBits/s | ## MBits/s |
|----------|---|---------|------------|
| Reserved | 1 or 0. | None | None |
| Len | It indicates the number of octets in the PSDU. | None | None |
| Parity | Its format is Hex. | | |
| Tail | Used to terminate the trellis of the convolution coder. The PLCP tail bit field shall be produced by replacing six scrambled "zero" bits following the message end with six no scrambled "zero" bits. Its format is Hex. | | |

Preamble Freq Error vs. Time

Frequency error is the difference between the measured center frequency of the transmitted signal and the setting center frequency. This trace shows how the measured center frequency drifts during the preamble part of the burst. The units of this trace are in Hz. This includes the constant frequency error in addition to any time-varying frequency error.

Preamble Frequency Error is sampled at 64 times the subcarrier spacing for 802.11 a/g/j/p (OFDM), 801.11g (DSSS-OFDM), 802.11n (20 MHz), and 128 times the subcarrier spacing for 802.11n (40 MHz).

The view will be looked like below:

For 802.11a/g (OFDM) signal, the trace length is coupled with Sync Training Sequence. When Sync Training Sequence is set to Short, Preamble Frequency Error covers both the short training sequence and the long training sequence(channel estimation sequence), the length will be 16us. When the Sync type parameter is set to Long (Channel Estimation Sequence), Preamble Frequency Error covers only the channel estimation sequence, the length will be 8us.

For 802.11g (DSSS-OFDM), it can only use Long Sync Training Sequence, since it does not contain the short training sequence

For 802.11n signal, the trace length is auto determined by signals.

For HT-mixed signals, the Preamble Frequency Error covers only the Legacy Short Training Field (L-STF) and Legacy Long Training Field (L-LTF) parts of the preamble. This is the initial 16 us of the burst.

For HT-greenfield signals, the Preamble Frequency Error covers only the Legacy Short Training Field (L-STF) and the First High Throughput Long Training Field (HT-LTF1) parts of the preamble. This is the initial 16 us of the burst.

Segment Number

This is a new section. It should be added as section 2.26.3 Segment Number.

Select Segment 1 or Segment 2 for 802.11ac 80+80MHz signals.

Segment Number is used to specify which channel results should be displayed in views or queried by SCPI. If Segm1 is selected, the contents both in views and queried by SCPI are the results of the first Segment ; If Segm2 is selected, the contents both in views and queried by SCPI are the results of the second Segment.

This section includes the following topics:

"Measurement Commands for MIMO Modulation Analysis" on page
2132

"Remote Command Results for MIMO Modulation Analysis
Measurement " on page 2133

Measurement Commands for MIMO Modulation Analysis

The following commands are used to retrieve the measurement results:

- :CONFigure:EVMMimo
- :CONFigure:EVMMimo:NDEFault
- :INITiate:EVMMimo
- :FETCh:EVMMimo[n]?
- :READ:EVMMimo[n]?
- :MEASure:EVMMimo[n]?

Remote Command Results for MIMO Modulation Analysis Measurement

| Index: n <Mnemonic> | Results Returned |
|------------------------|---|
| 0 | <p>Returns unprocessed I/Q trace data of Capture Interval, as a series of trace point values for Channel m. Channel index m can be set and queried through EVMM:RESult:CHAN command. See 2.15.4 MIMO Result Channel Index for details.</p> <p>The I values are listed first in each pair, using the 0 through even-indexed values. The Q values are the odd-indexed values.</p> |
| 1 (or not specified) | <p>Returns the comma-separated EVM results by stream. The EVM scalar results for each stream are in the following order:</p> <ol style="list-style-type: none"> 1. RMS EVM Max (dB) 2. RMS EVM Avg (dB) 3. Peak EVM Max (dB) 4. Peak EVM Avg (dB) 5. Pilot EVM Max (dB) 6. Pilot EVM Avg (dB) 7. Data EVM Max (dB) 8. Data EVM Avg (dB) 9. CPE EVM Max (dB) 10. CPE EVM Avg (dB) <p>When MIMO Type is 2X2, this result gives stream 1 EVM scalar results first, then stream 2 EVM scalar results. When MIMO Type is 3X3, stream 1, 2 and 3 EVM scalar results are provided in order. When MIMO Type is 4X4, returns 40 comma-separated EVM scalar results are provided in stream order.</p> |
| 2 | <p>Returns a value of the pass/fail (0.0 = passed, or 1.0 = failed) results determined by testing the result of RMS EVM. Only when all the stream RMS EVM Average results are passed, will this value be passed.</p> |
| 3 | <p>Returns series of floating point numbers that alternately represent I and Q pairs of the corrected measured trace for STRM m. Stream index m can be set and queried through EVMM:RESult:STReam command. See 2.15.3 MIMO Result Stream Index for details.</p> <p>The magnitude of each I and Q pair are normalized to 1.0, when the IQ Normalize is turned on. The first number is the in-phase (I) sample and the second is the quadrature-phase (Q) sample.</p> |
| 4 | <p>Returns series of floating point numbers (in dB) that represent each sample in the Stream EVM vs. Carrier trace of Capture Interval for STRM m. Stream index m can be set and queried through EVMM:RESult:STReam command. See 2.15.3 MIMO Result Stream Index for details.</p> |
| 5 | <p>Returns series of floating point numbers (in dB) that represent each sample in the Stream EVM vs. Symbol trace of Capture Interval for STRM m. The first number is the symbol 0 decision point. Stream index m can be set and queried through EVMM:RESult:STReam command. See 2.15.3 MIMO Result Stream Index for details.</p> |
| 6 | <p>Returns series of floating point numbers that represent each sample in the Channel Response for STRM m CH k. Stream index m can be set and queried through EVMM:RESult:STReam command. See 2.15.3 MIMO Result Stream Index for details. Channel index k can be set and queried through EVMM:RESult:CHAN command. See 2.15.4 MIMO Result Channel Index for details.</p> |
| 7 | <p>Returns comma-separated EVM scalar results by channel. The EVM scalar results for each channel are in the following order:</p> |

-
1. RMS EVM Max (dB)
 2. RMS EVM Avg (dB)
 3. Peak EVM Max (dB)
 4. Peak EVM Avg (dB)
 5. Pilot EVM Max (dB)
 6. Pilot EVM Avg (dB)
 7. Data EVM Max (dB)
 8. Data EVM Avg (dB)
 9. Freq Error Max (Hz)
 10. Freq Error Avg (Hz)
 11. Freq Error Ppm Max (ppm)
 12. Freq Error Ppm Avg (ppm)
 13. Sym Clock Error Max (ppm)
 14. Sym Click Error Avg (ppm)
 15. IQ Gain Imb Max (dB)
 16. IQ Gain Imb Avg (dB)
 17. IQ Offset Max (dB)
 18. IQ Offset Avg (dB)
 19. IQ Quad Error Max (degree)
 20. IQ Quad Error Avg (degree)
 21. IQ Timing Skew Max (s)
 22. IQ Timing Skew Avg (s)
 23. Cross Pwr Max (dB)
 24. Cross Pwr Avg (db)
 25. Sync Corr Max
 26. Sync Corr Avg
 27. Avg Burst Power Max (dBm)
 28. Avg Burst Power Avg (dBm)
 29. Peak Burst Power Max (dBm)
 30. Peak Burst Power Avg (dBm)
- When MIMO Type is 2X2, 60 comma-separated scalar results are returned;
 When MIMO Type is 3X3, 90 comma-separated scalar results are returned;
 When MIMO Type is 4X4, 120 comma-separated scalar results are returned.
-

| | |
|----|--|
| 8 | Return the Channel Matrix results |
| 9 | Return the decode bits of HT-SIG Signal. |
| 10 | Returns series of floating point numbers (in dB) that represent each sample in the Equalizer Impulse Response for STRM m CH k. Stream index m can be set and queried through EVMM:RESult:STReam command. See 2.15.3 MIMO Result Stream Index for details. Channel index k can be set and queried through EVMM:RESult:CHAN command. See 2.15.4 MIMO Result Channel Index for details. |
| 11 | Returns comma-separated floating point numbers of spectral flatness trace for STRM m CH k. Stream index m can be set and queried through EVMM:RESult:STReam command. See 2.15.3 MIMO Result |

| | |
|----|---|
| | Stream Index for details. Channel index k can be set and queried through EVMM:RESult:CHAN command. See 2.15.4 MIMO Result Channel Index for details. |
| 12 | Returns Data Rate (in Mbps) for MIMO input signals |
| 13 | Returns the FFT SEM trace consisting of 5001 points if SEM is activated for Ch k. Chan index k can be set and queried through through EVMM:RESult:CHAN command. See 2.15.4 MIMO Result Channel Index for details. |
| 14 | Returns the SEM failed information consisting of (2(DeltaFreq,DeltaAmplitude) x 6(OffsetA Lower, OffsetA Upper, OffsetB Lower, OffsetB Upper, Offset C Lower, Offset C Upper)=12 values in upper and lower bands of three offsets for Ch k. Chan index k can be set and queried through through EVMM:RESult:CHAN command. See 2.15.4 MIMO Result Channel Index for details. |

Selects the MIMO Modulation Analysis measurement.

| Key Path | Meas |
|----------------------|---------|
| Initial S/W Revision | A.14.00 |

AMPTD Y Scale

Accesses the AMPTD Y Scale menu that allows you to set desired vertical scale settings.

| | |
|----------------------|------------------------|
| Key Path | Front-panel key |
| Initial S/W Revision | A.14.00 |

Range

The Range menu allows setting amplitude controls of the instrument.

| | |
|----------------------|----------------------|
| Key Path | AMPTD Y Scale |
| Scope | Meas Global |
| Initial S/W Revision | A.12.50 |

Range

Represents the amplitude of the largest sinusoidal signal that could be present within the IF without being clipped by the ADC. For signals with high peak-to-average ratios, the range may need to exceed the rms signal power by a fair amount to avoid clipping.

| | |
|-----------------------------|---|
| Key Path | Range |
| Mode | BASIC |
| Remote Command | <code>[:SENSe] :POWer [:RF] :RANGe <real></code> <code>[:SENSe] :POWer [:RF] :RANGe?</code> |
| Example | <code>:POW:RANG 10.0</code> <code>:POW:RANG?</code> |
| Notes | The MIN and MAX values are affected by the External Gain parameters, and by the Center Frequency. (The hardware compensates for frequency response and alters the Range setting.) |
| Preset | 0 |
| State Saved | Saved in instrument state. |
| Min | -100 |
| Max | 100 |
| Initial S/W Revision | A.12.50 |

Adjust Range For Min Clip

Sets the combination of attenuation and gain based on the current measured signal level so that clipping will be at a minimum.

This is an "immediate action" function, that is, it executes once, when the key is pressed.

This key is grayed out in measurements that do not support this functionality.

| | |
|--------------------------|---|
| Key Path | AMPTD Y Scale, Attenuation |
| Remote Command | <code>[:SENSe] :POWer [:RF] :RANGe :OPTimize IMMEDIATE</code> |
| Initial S/W Revision | Prior to A.02.00 |
| Modified at S/W Revision | A.03.00 |

Pre-Adjust for Min Clip

If this function is on, it does the adjustment described under Adjust Range For Min Clip each time a measurement restarts. Therefore, in Continuous measurement mode, it only executes before the first measurement.

| | |
|--------------------------|---|
| Key Path | AMPTD Y Scale, Attenuation |
| Remote Command | <code>[:SENSe] :POWer [:RF] :RANGe :OPTimize :ATTenuation OFF ON ELECTrical COMBined</code> <code>[:SENSe] :POWer [:RF] :RANGe :OPTimize :ATTenuation?</code> |
| Notes | This parameter is shared with old XA platform which uses AutoAtten. To keep the backward compatibility, ELECTrical and COMBined still can be used. Then, upon receiving ELECTrical and COMBined, these enums will be interpreted as aliases of ON. Then, when queried, ON will be returned. |
| Preset | OFF for Swept SA measurement; ON for all other measurements that support Pre-Adjust for Min Clip |
| State Saved | Saved in instrument state |
| Initial S/W Revision | Prior to A.02.00 |
| Modified at S/W Revision | A.03.00 |

Peak to Average

The Peak to Average Ratio is used with the Range setting to optimize the level control in the instrument. The value is the ratio, in dB, of the peak power to the average power of the signal to be measured. A ratio of 0 should be used for sinusoidal signals; for 802.11g OFDM signals use 9 dB.

All Applications (Modes) will show the current value of Peak to Average ratio on the softkey. However, some applications will not permit changing the value. In these situations the softkey will be grayed-out.

| | |
|----------------|--|
| Key Path | AMPTD Y Scale, Range |
| Remote Command | <code>[:SENSe] :POWer [:RF] :RANGe :PARatio <real></code> <code>[:SENSe] :POWer [:RF] :RANGe :PARatio?</code> |
| Example | POW:RANG:PAR 12 dB |
| Notes | In some Applications (Modes) this parameter will be read-only; meaning the value will appear on the softkey and query via SCPI, but not changeable. In such applications the softkey will be grayed-out. Attempting to change the value via SCPI will be ignored and no error message will be generated. |

| | |
|----------------------|---------------------------|
| Preset | 10 dB |
| State Saved | Saved in instrument state |
| Min | 0 dB |
| Max | 20 dB |
| Initial S/W Revision | A.13.00 |

Mixer Level Offset

Mixer level offset is an advanced setting to adjust target Range at the input mixer which in turn affects the signal level in the instrument's IF. This setting can be used when additional optimization is needed after setting Peak to Average ratio. Positive values of offset optimize noise performance over distortion, negative values optimize distortion performance over noise.

| | |
|-----------------------|--|
| Key Path | AMPTD Y Scale, Range |
| Remote Command | [:SENSe] :POWer [:RF] :RANGe :MIXer :OFFSet <real> [:SENSe] :POWer [:RF] :RANGe :MIXer :OFFSet? |
| Example | POW:RANG:MIX:OFFS -5 dB |
| Preset | 0 dB |
| State Saved | Saved in instrument state |
| Min | -35 dB |
| Max | 30 dB |
| Initial S/W Revision | A.13.00 |

Auto Couple

The Auto Couple feature provides a quick and convenient way to automatically couple multiple instrument settings. This helps ensure accurate measurements and optimum dynamic range. When the Auto Couple feature is activated, either from the front panel or remotely, all parameters of the current measurement that have an Auto/Manual mode are set to Auto mode and all measurement settings dependent on (or coupled to) the Auto/Man parameters are automatically adjusted for optimal performance.

However, the Auto Couple key actions are confined to the current measurement only. It does not affect other measurements in the mode, and it does not affect markers, marker functions, or trace or display attributes.

See "[More Information](#)" on page 2139

| | |
|-----------------------------|--|
| Key Path | Front-panel key |
| Remote Command | :COUPle ALL NONE |
| Example | :COUP ALL |
| Notes | :COUPle ALL puts all Auto/Man parameters in Auto mode (equivalent to pressing the Auto Couple key). :COUPLE NONE puts all Auto/Man parameters in manual mode. It decouples all the coupled instrument parameters and is not recommended for making measurements. |
| Initial S/W Revision | Prior to A.02.00 |

More Information

There are two types of functions that have Auto/Manual modes.

Auto/Man Active Function keys

An Auto/Man toggle key controls the binary state associated with an instrument parameter by toggling between **Auto** (where the parameter is automatically coupled to the other parameters it is dependent upon) and **Man** (where the parameter is controlled independent of the other parameters), as well as making the parameter the active function. The current mode is indicated on the softkey with either **Auto** or **Man** underlined as illustrated below.

vsd07

Auto/Man 1-of-N keys

An Auto/Man 1-of-N key allows you to manually pick from a list of parameter values, or place the function in Auto, in which case the value is automatically selected (and indicated) as shown below. If in Auto, Auto is underlined on the calling key. If in manual operation, manual is indicated on the calling key. But the calling key does not actually toggle the function, it simply opens the menu.

BW

Accesses a menu that allows you to control bandwidth settings.

| | |
|----------------------|------------------------|
| Key Path | Front-panel key |
| Initial S/W Revision | A.10.01 |

Info BW

Activates the **Info BW** active function, which allows you to manually set the information bandwidth (Info BW) of the analyzer.

| | |
|-------------------------------------|--|
| Key Path | BW |
| Mode | WLAN |
| Remote Command | [:SENSE] :EVM: BANDwidth [:RESolution] <bandwidth> [:SENSE] :EVM: BANDwidth [:RESolution] ? |
| Example | EVM: BAND 20e6 EVM: BAND ? |
| Couplings | Info BW is coupled with Subcarrier Spacing |
| Preset | Info BW is limited by hardware capability if Radio Std is 802.11a/b/g = 25MHz if Radio Std is 802.11n-20M = 25MHz if Radio Std is 802.11n-40M = 40MHz if Radio Std is 802.11ac-20M = 25MHz if Radio Std is 802.11ac-40M = 40MHz if Radio Std is 802.11ac-80M / 80M+ 80M = 80MHz if Radio Std is 802.11ac-160M = 160MHz if Radio Std is 802.11ah-1MHz : 3MHz if Radio Std is 802.11ah-2M = 3MHz if Radio Std is 802.11ah-4M = 4MHz if Radio Std is 802.11ah-8M = 8MHz if Radio Std is 802.11ah-16M = 16MHz (25MHz if only B25 option installed) if Radio Std is 802.11j/p-10M = 10MHz if Radio Std is 802.11p-5M = 5MHz |
| State Saved | Saved in instrument state. |
| Min | 1 kHz |
| Max | Hardware Dependent: B25 = 25 MHz WB (40 MHz or wider) = Hardware Option Limit |
| Backwards Compatibility SCPI | [:SENSE] :EVM: I FBW |

| | |
|----------------------|---------|
| Initial S/W Revision | A.10.01 |
|----------------------|---------|

Cont (Continuous Measurement/Sweep)

Sets the analyzer for Continuous measurement operation. The single/continuous state is Meas Global so the setting will affect all measurements. If you are Paused, pressing **Cont** does a Resume.

| | |
|-------------------------------|--|
| Key Path | Front-panel key |
| Remote Command | :INITiate:CONTinuous OFF ON 0 1 :INITiate:CONTinuous? |
| Example | :INIT:CONT 0 puts analyzer in Single measurement operation. :INIT:CONT 1 puts analyzer in Continuous measurement operation |
| Preset | ON (Note that SYST:PRESet sets INIT:CONT to ON but *RST sets INIT:CONT to OFF) |
| State Saved | Saved in instrument state |
| Backwards Compatibility Notes | For Spectrum Analysis mode in ESA and PSA, there is no Cont hardkey, instead there is a Sweep Single/Cont key. In these analyzers, switching the Sweep Single/Cont key from Single to Cont restarts averages (displayed average count reset to 1), but does not restart Max Hold and Min Hold . The X-Series has Single and Cont keys in place of the SweepSingleCont key. In the X-Series, if in single measurement, the Cont key (and INIT:CONT ON) switches to continuous measurement, but never restarts a measurement and never resets a sweep. |
| Initial S/W Revision | Prior to A.02.00 |

In Swept SA Measurement (Spectrum Analysis Mode):

The analyzer takes repetitive sweeps, averages, measurements, etc., when in Continuous mode. When the average count reaches the Average/Hold Number the count stops incrementing, but the analyzer keeps sweeping. See the Trace/Detector section for the averaging formula used both before and after the Average/Hold Number is reached. The trigger condition must be met prior to each sweep. The type of trace processing for multiple sweeps, is set under the Trace/Detector key, with choices of **Trace Average**, **Max Hold**, or **Min Hold**.

In Other Measurements/Modes:

With **Avg/Hold Num** (in the **Meas Setup** menu) set to **Off** or set to **On** with a value of 1, a sweep is taken after the trigger condition is met; and the analyzer continues to take new sweeps after the current sweep has completed and the trigger condition is again met. However, with **Avg/Hold Num** set to On with a value >1, multiple sweeps (data acquisitions) are taken for the measurement. The trigger condition must be met prior to each sweep. The sweep is not stopped when the average count k equals the number N set for Avg/Hold Num is reached, but the number k stops incrementing. A measurement average usually applies to all traces, marker results, and numeric results. But sometimes it only applies to the numeric results.

If the analyzer is in Single measurement, pressing the **Cont** key does not change k and does not cause the sweep to be reset; the only action is to put the analyzer into Continuous measurement operation.

If it is already in continuous sweep:

the INIT:CONT 1 command has no effect

the INIT:CONT 0 command will place the analyzer in Single Sweep but will have no effect on the current sequence until $k = N$, at which point the current sequence will stop and the instrument will go to the idle state.

File

See "File" on page 272

FREQ Channel

Accesses a menu of keys that allow you to control the Frequency and Channel parameters of the instrument.

Some features in the Frequency menu are the same for all measurements – they do not change as you change measurements. Settings like these are called “Meas Global” and are unaffected by Meas Preset. For example, the Center Freq setting is the same for all measurements - it does not change as you change measurements.

| Key Path | Front-panel key |
|----------------------|------------------|
| Initial S/W Revision | Prior to A.02.00 |

Center Freq

Sets the frequency that corresponds to the horizontal center of the graticule (when frequency Scale Type is set to linear). While adjusting the Center Frequency the Span is held constant, which means that both Start Frequency and Stop Frequency will change.

Pressing Center Freq also sets the frequency entry mode to Center/Span. In Center/Span mode, the center frequency and span values are displayed below the graticule, and the default active function in the Frequency menu is **Center Freq**.

The center frequency setting is the same for all measurements within a mode, that is, it is Meas Global. Some modes are also able to share a Mode Global center frequency value. If this is the case, the Mode will have a **Global Settings** key in its **Mode Setup** menu.

The **Center Freq** function sets (and queries) the Center Frequency for the currently selected input. If your analyzer has multiple inputs, and you select another input, the Center Freq changes to the value for that input. SCPI commands are available to directly set the Center Freq for a specific input.

Center Freq is remembered as you go from input to input. Thus you can set a Center Freq of 10 GHz with the RF Input selected, change to BBIQ and set a Center Freq of 20 MHz, then switch to External Mixing and set a Center Freq of 60 GHz, and when you go back to the RF Input the Center Freq will go back to 10 GHz; back to BBIQ and it is 20 MHz; back to External Mixing and it is 60 GHz.

See ["RF Center Freq" on page 2149](#)

See [Ext Mix Center Freq](#)

See ["I/Q Center Freq" on page 2151](#)

See ["Center Frequency Presets" on page 2147](#)

| Key Path | FREQ Channel |
|----------------|--|
| Scope | Meas Global |
| Remote Command | [:SENSe] :FREQuency:CENTer <freq> [:SENSe] :FREQuency:CENTer? |
| Example | FREQ:CENT 50 MHz |

| | |
|----------------------|--|
| | FREQ:CENT UP changes the center frequency to 150 MHz if you use FREQ:CENT:STEP 100 MHz to set the center frequency step size to 100 MHz FREQ:CENT? |
| Notes | This command sets either the RF or I/Q Center Frequency depending on the selected input. For RF input it is equivalent to FREQ:RF:CENT For I/Q input it is equivalent to FREQ:IQ:CENT Preset and Max values are dependent on Hardware Options (5xx) If no terminator (e.g. MHz) is sent the terminator Hz is used. If a terminator with unit other than Frequency is used, an invalid suffix error message is generated. |
| Dependencies | The Center Frequency can be limited by Start or Stop Freq limits, if the Span is so large that Start or Stop reach their limit. |
| Couplings | When operating in "swept span", any value of the Center Frequency or Span that is within the frequency range of the analyzer is allowed when the value is being set through the front panel numeric key pad or the SCPI command. The other parameter is forced to a different value if needed, to keep the Start and the Stop Frequencies within the analyzer's frequency range |
| Preset | Depends on instrument maximum frequency, mode, measurement, and selected input. See "Center Frequency Presets" on page 2147 and "RF Center Freq" on page 2149 and Ext Mix Center Freq and "I/Q Center Freq" on page 2151. |
| State Saved | Saved in instrument state |
| Min | Depends on instrument maximum frequency, mode, measurement, and selected input.. See "Center Frequency Presets" on page 2147 and "RF Center Freq" on page 2149 and "I/Q Center Freq" on page 2151. |
| Max | Depends on instrument maximum frequency, mode, measurement, and selected input.. See "Center Frequency Presets" on page 2147 and "RF Center Freq" on page 2149 and "I/Q Center Freq" on page 2151. |
| Default Unit | Hz |
| Status Bits/OPC | Non-overlapped |
| Dependencies | |
| Initial S/W Revision | Prior to A.02.00 |

Center Frequency Presets

The following table provides the Center Frequency Presets for the Spectrum Analyzer mode, and the Max Freq, for the various frequency options:

| Freq Option | CF after Mode Preset | Stop Freq after Mode Preset | Max Freq (can't tune above) |
|-------------|-------------------------|--------------------------------|--------------------------------------|
| | | | |

| | | | |
|---------------------------------------|------------|----------|--------------|
| 503 (all but N9000A) | 1.805 GHz | 3.6 GHz | 3.7 GHz |
| 503 (N9000A) | 1.505 GHz | 3.0 GHz | 3.08 GHz |
| 507 (all but N9000A) | 3.505 GHz | 7.0 GHz | 7.1 GHz |
| 507 (N9000A) | 3.755 GHz | 7.5 GHz | 7.58 GHz |
| 508 (all but N9038A) | 1.805 GHz | 3.6 GHz | 8.5 GHz |
| 508 (N9038A) | 4.205 GHz | 8.4 GHz | 8.5 GHz |
| 513 | 6.805 GHz | 13.6 GHz | 13.8 GHz |
| 526 (all but N9000A and N9038A) | 13.255 GHz | 26.5 GHz | 27.0 GHz |
| 526 (N9000A) | 13.255 GHz | 26.5 GHz | 26.55 GHz |
| 526 (N9038A) | 1.805 GHz | 3.6 GHz | 27.0 GHz |
| 532 | 16.005 GHz | 32.0 GHz | 32.5 GHz |
| 543 | 21.505 GHz | 43.0 GHz | TBD |
| 544 | 22.005 GHz | 44.0 GHz | 44.5 GHz |
| 550 | 25.005 GHz | 50.0 GHz | 51 GHz |

Input 2:

| Model | CF after Mode Preset | Stop Freq after Mode Preset | Max Freq (can't tune above) |
|----------------|----------------------------|-----------------------------------|-----------------------------------|
| N9000A opt C75 | 0.7505GHz | 1.5 GHz | 1.58 GHz |
| N9038A | 505 MHz | 1 GHz | 1.000025 GHz |

Tracking Generator Frequency Limits (N9000A only):

| Tracking Generator Option | Min Freq (clips to this freq when turn TG on and can't tune below | If above this Freq, Stop Freq clipped to this Freq when TG turned on | Max Freq (can't tune above) while TG on |
|---------------------------------|--|---|--|
| | | | |

| | while TG on) | | |
|-----|--------------|---------|----------|
| T03 | 9 kHz | 3.0 GHz | 3.08 GHz |
| T06 | 9 kHz | 6.0 GHz | 6.05 GHz |

The following table shows the Center Frequency Presets for modes other than Spectrum Analyzer:

| Mode | CF Preset for RF |
|-------------|------------------|
| WCDMA | 1 GHz |
| WIMAXOFDMA, | 1 GHz |
| BASIC | 1 GHz |
| ADEMOD | 1 GHz |
| VSA | 1 GHz |
| TDSCDMA | 1 GHz |
| PNOISE | 1 GHz |
| LTE | 1 GHz |
| LTETDD | 1 GHz |
| MSR | 1 GHz |
| GSM | 935.2 MHz |
| NFIGURE | 1.505 GHz |

RF Center Freq

SCPI command for specifying the RF Center Frequency. This command will set the Center Frequency to be used when the RF input is selected, even if the RF input is not the input that is selected at the time the command is sent. Note that the **Center Freq** function in the **Frequency** menu on the front panel always applies to the currently selected input.

| | |
|-----------------------|--|
| Scope | Meas Global |
| Remote Command | <code>[:SENSe] :FREQuency:RF:CENTer <freq></code> <code>[:SENSe] :FREQuency:RF:CENTer?</code> |
| Example | FREQ:RF:CENT 30 MHz |
| Notes | This command is the same in all modes, but the parameter is Measurement Global. So the value is independent in each mode and common across all the measurements in the mode. |
| Dependencies | If the electronic/soft attenuator is enabled, any attempt to set Center Frequency such that the Stop Frequency would be >3.6 GHz fails and results in an advisory message. If the equivalent SCPI command is sent, this same message is generated as part of a “-221, Settings conflict” warning. If Source Mode is set to Tracking, and the Max or Min Center Freq is therefore limited by the limits of the source, a warning message is generated, “Data out of range;clipped to source max/min” if these limits are exceeded. Note that for an external source, these limits can be affected by the settings of Source Numerator, Source Denominator and Power Sweep. |

| | |
|--------------------------|--|
| Preset | See table above |
| State Saved | Saved in instrument state. |
| Min | -79.999995 MHz, unless Source Mode is set to Tracking, in which case it is limited by the minimum frequency of the Source |
| Max | See table above. Basically instrument maximum frequency - 5 Hz. Note that, if the Source Mode is set to Tracking, the effective instrument maximum frequency may be limited by the source maximum frequency. If the knob or step keys are being used, also depends on the value of the other three interdependent parameters Span, Start Frequency and Stop Frequency |
| Initial S/W Revision | Prior to A.02.00 |
| Modified at S/W Revision | A.03.00 |

Ext Mix Center Freq

SCPI command for specifying the External Mixer Center Frequency. This command will set the Center Frequency to be used when the External Mixer is selected, even if the External Mixer input is not the input which is selected at the time the command is sent. Note that the **Center Freq** function in the **Frequency** menu on the front panel always applies to the currently selected input.

| | |
|----------------|---|
| Scope | Meas Global |
| Remote Command | <code>[:SENSe] :FREQuency:EMIXer:CENTer <freq></code> <code>[:SENSe] :FREQuency:EMIXer:CENTer?</code> |
| Example | <code>:FREQ:EMIX:CENt 60 GHz</code> <code>:FREQ:EMIX:CENt?</code> |
| Notes | This command is the same in all modes, but the parameter is Measurement Global. So the value is independent in each mode and common across all the measurements in the mode. |
| Couplings | When returning to External Mixing after having been switched to one of the other inputs (e.g., RF), you will come back into the settings that you had when you left External Mixing. So you will come back to the band you were in with the Center Frequency that you had. However, Span is not an input-dependent parameter, therefore you will bring the span over from the other input. Therefore, the analyzer comes back with the span from the previous input, limited as necessary by the current mixer setup. |
| Preset | When a Mode Preset is performed while in External Mixing, the Start frequency of the current Mode is set to the nominal Min Freq of the lowest harmonic range in the Harmonic Table for the current mixer setup. Similarly, the Stop frequency of the current Mode is set to the nominal Max Freq of the highest harmonic range in the Harmonic Table. The Center Freq thus presets to the point arithmetically equidistant from these two frequencies. If the current measurement has a limited Span available to it, and cannot achieve the Span shown in the table (Span=Stop Freq - Start Freq), the analyzer uses the maximum Span the measurement allows, and still sets the Center Freq to the midpoint of the Start and Stop Freq values in the Harmonic Table. When Restore Input/Output Defaults is performed, the mixer presets to the 11970A, whose Start and Stop frequencies are 26.5 and 40 GHz respectively. The center of these two frequencies is |

| | |
|----------------------|---|
| | 33.25 GHz. Therefore, after a Restore Input/Output Defaults, if you go into External Mixing and do a Mode Preset while in the Spectrum Analyzer Mode, the resulting Center Freq is 33.25 GHz. |
| State Saved | Saved in instrument state. |
| Min | The minimum frequency in the currently selected mixer band + 5 Hz |
| Max | The maximum frequency in the currently selected mixer band – 5 Hz If the knob or step keys are being used, also depends on the value of the other three interdependent parameters Span, Start Frequency and Stop Frequency |
| Initial S/W Revision | A.08.01 |

I/Q Center Freq

SCPI command for specifying the I/Q Center Frequency. This command will set the Center Frequency to be used when the I/Q input is selected, even if the I/Q input is not the input which is selected at the time the command is sent. Note that the **Center Freq** function in the **Frequency** menu on the front panel always applies to the currently selected input.

| | |
|-----------------------|--|
| Scope | Meas Global |
| Remote Command | [:SENSe] :FREQuency:IQ:CENTer <freq> [:SENSe] :FREQuency:IQ:CENTer? |
| Example | FREQ:IQ:CENT: 30 MHz |
| Notes | This command is the same in all modes, but the parameter is Measurement Global. So the value is independent in each mode and common across all the measurements in the mode. |
| Preset | 0 Hz |
| State Saved | Saved in instrument state. |
| Min | -40.049995 MHz |
| Max | 40.049995 MHz |
| Initial S/W Revision | Prior to A.02.00 |

CF Step

Changes the step size for the center frequency and start and stop frequency functions. Once a step size has been selected and the center frequency function is active, the step keys (and the UP|DOWN parameters for Center Frequency from remote commands) change the center frequency by the step-size value. The step size function is useful for finding harmonics and sidebands beyond the current frequency span of the analyzer.

Note that the start and stop frequencies also step by the CF Step value.

| | |
|-----------------------|---|
| Key Path | FREQ Channel |
| Remote Command | [:SENSe] :FREQuency:CENTer:STEP [:INCRement] <freq> |

| | |
|------------------------------|--|
| | [:SENSe]:FREQuency:CENTer:STEP[:INCRement]? |
| | [:SENSe]:FREQuency:CENTer:STEP:AUTO OFF ON 0 1 |
| | [:SENSe]:FREQuency:CENTer:STEP:AUTO? |
| Example | FREQ:CENT:STEP:AUTO ON FREQ:CENT:STEP 500 MHz FREQ:CENT UP increases the current center frequency value by 500 MHz FREQ:CENT:STEP? FREQ:CENT:STEP:AUTO? |
| Notes | Preset and Max values are depending on Hardware Options (503, 507, 508, 513, 526) |
| Notes | Preset and Max values are dependent on Hardware Options (5xx) |
| Dependencies | Freq Offset is not available in External Mixing. In this case the Freq Offset key is grayed out and shows a value of zero. It will once again be available, and show the previously set value, when you return to the RF Input. |
| Dependencies | Span, RBW, Center frequency If the electronic/soft attenuator is enabled, any attempt to change the value of the center frequency >3.6 GHz by pressing the Up-arrow key, fails and results in an advisory message. If the equivalent SCPI command is sent, this same message is generated as part of a “-221, Settings conflict” warning. |
| Couplings | When auto-coupled in a non-zero span, the center frequency step size is set to 10% of the span. When auto-coupled in zero span, the center frequency step size is set to the equivalent -3 dB RBW value. |
| Preset | Auto ADEM0D: 1 MHz ON |
| State Saved | Saved in instrument state |
| Min | - (the maximum frequency of the instrument). That is, 27 GHz max freq instrument has a CF step range of +/- 27 GHz. Note that this is the maximum frequency given the current settings of the instrument, so in External Mixing, for example, it is the maximum frequency of the current mixer band. |
| Max | The maximum frequency of the instrument. That is, 27 GHz max freq instrument has a CF step range of +/- 27 GHz. Note that this is the maximum frequency given the current settings of the instrument, so in External Mixing, for example, it is the maximum frequency of the current mixer band. |
| Default Unit | Hz |
| Status Bits/OPC dependencies | non-overlapped |

Complex Spectrum Measurement

The complex spectrum measurement provides spectrum analysis capability for the instrument. The control of the measurement was designed to be familiar to those who are accustomed to using swept spectrum analyzers. For more details about this measurement, see the section "[Complex Spectrum Measurement Description](#)" on page 2158 below.

This topic contains the following sections:

["Measurement Commands for Complex Spectrum"](#) on page 2157

["Remote Command Results for Complex Spectrum"](#) on page 2157

Measurement Commands for Complex Spectrum

The general functionality of CONFIGure, INITiate, FETCh, MEASure, and READ are described in the section "[Remote Measurement Functions](#)" on page 2430. See the SENSE subsystem commands for more measurement related commands.

```
:CONFigure:SPECTrum
:CONFigure:SPECTrum:NDEFault
:INITiate:SPECTrum
:FETCh:SPECTrum[n]?
:MEASure:SPECTrum[n]?
:READ:SPECTrum[n]?
```

Remote Command Results for Complex Spectrum

The following table shows the returned results of the FETCh|MEASure|READ queries.

| n | Results Returned |
|----------------------|---|
| 0 | Returns unprocessed I/Q trace data, as a series of trace point values, in volts. The I values are listed first in each pair, using the 0 through even-indexed values. The Q values are the odd-indexed values. |
| not specified or n=1 | Returns the following comma-separated scalar results: <ol style="list-style-type: none"> 1. FFT peak is the FFT peak amplitude. 2. FFT frequency is the FFT frequency of the peak amplitude. 3. FFT points is the Number of points in the FFT spectrum. 4. First FFT frequency is the frequency of the first FFT point of the spectrum. 5. FFT spacing is the frequency spacing between the FFT points of the spectrum. 6. Time domain points is the number of points in the time domain trace used for the FFT. The number of points doubles if the data is complex instead of real. See the time domain scalar description below. 7. First time point is the time of the first time domain point, where time zero is the trigger event. 8. Time spacing is the time spacing between the time domain points. The time spacing value doubles if the data is complex instead of real. See the time domain scaler description below. 9. Time domain returns a 1 if time domain is complex (I/Q) and complex data will be returned. It returns a 0 if the data is real. (raw ADC samples) When this value is 1 rather than 0 (complex vs. real data), the time domain points and the time spacing scalars both increase by a factor of two. 10. Scan time is the total scan time of the time domain trace used for the FFT. The total scan time = (time spacing) x (time domain points – 1) 11. Current average count is the current number of data measurements that have already been combined, in the averaging calculation. |
| 2 | Returns the trace data of the log-magnitude versus time. (That is, the RF envelope.) |
| 3 | Returns the I and Q trace data. It is represented by I and Q pairs (in volts) versus time. |
| 4 | Returns spectrum trace data. That is, the trace of log-magnitude versus frequency. (The trace is computed using a FFT.) |
| 5 | Returns the averaged trace data of log-magnitude versus time. (That is, the RF envelope.) |
| 6 | Not used. |
| 7 | Returns the averaged spectrum trace data. That is, the trace of the averaged log-magnitude versus frequency. |

| n | Results Returned |
|----|--|
| 8 | Not used. |
| 9 | Returns a trace containing the shape of the FFT window. |
| 10 | Returns trace data of the phase of the FFT versus frequency. |
| 11 | Returns comma-separated linear spectrum trace data in Volts RMS. |
| 12 | Returns comma-separated averaged linear spectrum trace data in Volts RMS. |
| 13 | Returns the following comma-separated scalar results: <ol style="list-style-type: none"> 1. I/Q Magnitude and Phase Delta Results available (0 = not available, 1 = available). Results are available when the last measurement was made with I/Q Magnitude and Phase Delta Results enabled (SPEC:IQD:ENAB ON) and the setup was valid for generating the results (invalid setup when input is I/Q, I/Q Path is I+jQ, and Center Frequency is not 0 Hz) 2. Delta magnitude and phase trace (results 14 - 17) start frequency (0 when I/Q Magnitude and Phase Delta Results not available) 3. Delta magnitude and phase trace (results 14 - 17) number of points (1 when I/Q Magnitude and Phase Delta Results not available) 4. Delta magnitude and phase trace (results 14 - 17) frequency spacing between points (0 when I/Q Magnitude and Phase Delta Results not available) 5. Current average count (1 when I/Q Magnitude and Phase Delta Results not available) 6. Frequency of the FFT trace (result 4) peak magnitude in Hz (0 when I/Q Magnitude and Phase Delta Results not available) 7. Delta magnitude at the FFT trace peak magnitude frequency in dB (-999 when I/Q Magnitude and Phase Delta Results not available) 8. Delta phase at the FFT trace peak magnitude frequency in radians (-999 when I/Q Magnitude and Phase Delta Results not available) 9. Delta phase at the FFT trace peak magnitude frequency in degrees (-999 when I/Q Magnitude and Phase Delta Results not available or invalid setup) 10. Frequency of the averaged FFT trace (result 7) peak magnitude in Hz (0 when I/Q Magnitude and Phase Delta Results not available) 11. Averaged delta magnitude at the averaged FFT trace peak magnitude frequency in dB (-999 when I/Q Magnitude and Phase Delta Results not available) 12. Averaged delta phase at the averaged FFT trace peak magnitude frequency in radians (-999 when I/Q Magnitude and Phase Delta Results not available) 13. Averaged delta phase at the averaged FFT trace peak magnitude frequency in degrees (-999 when I/Q Magnitude and Phase Delta Results not available) |
| 14 | Current delta magnitude trace in dB (-999 when I/Q Magnitude and Phase Delta Results not available) |
| 15 | Current delta phase trace in radians (-999 when I/Q Magnitude and Phase Delta Results not available) |
| 16 | Averaged delta magnitude trace in dB (-999 when I/Q Magnitude and Phase Delta Results not available) |
| 17 | Averaged delta phase trace in radians (-999 when I/Q Magnitude and Phase Delta Results not available) |

Complex Spectrum Measurement Description

This measurement is FFT (Fast Fourier Transform) based. The FFT-specific parameters are located in the advanced menu. Also available under basic mode spectrum measurements is an I/Q window, which shows

the I and Q signal waveforms in parameters of voltage versus time. The advantage of having an I/Q view available while in the spectrum measurement is that it allows you to view complex components of the same signal without changing settings or measurements.

| | |
|----------------------|------------------------|
| Key Path | Front-panel key |
| Initial S/W Revision | Prior to A.02.00 |

Couple Markers

Toggles the state of the markers to be coupled On or Off. When this function is true (On), moving any marker causes an “equal X Axis movement” of every other marker which is active. By “equal X Axis movement” we mean that we preserve the difference between each marker’s X Axis value (in the fundamental x-axis units of the trace that marker is on) and the X Axis value of the marker being moved (in the same fundamental x-axis units).

This may result in markers going offscreen.

| | |
|-----------------------|--|
| Key Path | Marker |

Meas

The information in this section is common to all measurements. For key and remote command information for a specific measurement, refer to the section that describes the measurement of interest.

Measurements available under the Meas key are specific to the current Mode.

When viewing Help for measurements, note the following:

NOTE

Operation for some keys differs between measurements. The information displayed in Help pertains to the current measurement. To see how a key operates in a different measurement, exit Help (press the Cancel Esc key), select the measurement, then reenter Help (press the Help key) and press that key.

| Key Path | Front-panel key |

|----------------------|------------------|

Measurement Group of Commands

Measure Commands:

:MEASure:<measurement>[n]?

This is a fast single-command way to make a measurement using the factory default instrument settings. These are the settings and units that conform to the Mode Setup settings (e.g. radio standard) that you have currently selected.

- Stops the current measurement (if any) and sets up the instrument for the specified measurement using the factory defaults
- Initiates the data acquisition for the measurement
- Blocks other SCPI communication, waiting until the measurement is complete before returning results.
- If the function does averaging, it is turned on and the number of averages is set to 10.
- After the data is valid it returns the scalar results, or the trace data, for the specified measurement. The type of data returned may be defined by an [n] value that is sent with the command.
- The scalar measurement results will be returned if the optional [n] value is not included, or is set to 1. If the [n] value is set to a value other than 1, the selected trace data results will be returned. See each command for details of what types of scalar results or trace data results are available.
- ASCII is the default format for the data output. (Older versions of Spectrum Analysis and Phase Noise mode measurements only use ASCII.) The binary data formats should be used for handling large blocks of data since they are smaller and faster than the ASCII format. Refer to the FORMat:DATA command for more information.

If you need to change some of the measurement parameters from the factory default settings you can set up the measurement with the CONFigure command. Use the commands in the SENSe:<measurement> and CALCulate:<measurement> subsystems to change the settings. Then you can use the READ? command to initiate the measurement and query the results.

If you need to repeatedly make a given measurement with settings other than the factory defaults, you can use the commands in the SENSe:<measurement> and CALCulate:<measurement> subsystems to set up the measurement. Then use the READ? command to initiate the measurement and query results.

Measurement settings persist if you initiate a different measurement and then return to a previous one. Use READ:<measurement>? if you want to use those persistent settings. If you want to go back to the default settings, use MEASure:<measurement>?.

Configure Commands:

:CONFigure:<measurement>

This command stops the current measurement (if any) and sets up the instrument for the specified measurement using

the factory default instrument settings. It does not initiate the taking of measurement data unless INIT:CONTinuous is ON. If you change any measurement settings after using the CONFigure command, the READ command can be used to initiate a measurement without changing the settings back to their defaults.

In the Swept SA measurement in Spectrum Analyzer mode the CONFigure command also turns the averaging function on and sets the number of averages to 10 for all measurements.

:CONFigure: <measurement>: NDEFault stops the current measurement and changes to the specified measurement. It does not change the settings to the defaults. It does not initiate the taking of measurement data unless INIT:CONTinuous is ON.

The CONFigure? query returns the current measurement name.

The CONFigure:CATalog? query returns a quoted string of all licensed measurement names in the current mode. For example, "SAN, CHP, OBW, ACP, PST, TXP, SPUR, SEM, LIST".

Fetch Commands:

:FETCh:<measurement>[n]?

This command puts selected data from the most recent measurement into the output buffer. Use FETCh if you have already made a good measurement and you want to return several types of data (different [n] values, for example, both scalars and trace data) from a single measurement. FETCh saves you the time of re-making the measurement. You can only FETCh results from the measurement that is currently active, it will not change to a different measurement. An error message is reported if a measurement other than the current one is specified.

If you need to get new measurement data, use the READ command, which is equivalent to an INITiate followed by a FETCh.

The scalar measurement results will be returned if the optional [n] value is not included, or is set to 1. If the [n] value is set to a value other than 1, the selected trace data results will be returned. See each command for details of what types of scalar results or trace data results are available. The binary data formats should be used for handling large blocks of data since they are smaller and transfer faster than the ASCII format. (FORMat:DATA)

FETCh may be used to return results other than those specified with the original READ or MEASure command that you sent.

INITiate Commands:

:INITiate:<measurement>

This command is not available for measurements in all the instrument modes:

- Initiates a trigger cycle for the specified measurement, but does not output any data. You must then use the FETCh<meas> command to return data. If a measurement other than the current one is specified, the instrument will switch to that measurement and then initiate it.
 - For example, suppose you have previously initiated the ACP measurement, but now you are running the channel power measurement. If you send INIT:ACP? it will change from channel power to ACP and will initiate an ACP measurement.
 - Does not change any of the measurement settings. For example, if you have previously started the ACP measurement and you send INIT:ACP? it will initiate a new ACP measurement using the same instrument settings as the last time ACP was run.
 - If your selected measurement is currently active (in the idle state) it triggers the measurement, assuming the trigger conditions are met. Then it completes one trigger cycle. Depending upon the measurement and the number of averages, there may be multiple data acquisitions, with multiple trigger events, for one full trigger cycle. It also holds off additional commands on GPIB until the acquisition is complete.
-

READ Commands:

:READ:<measurement>[n]?

- Does not preset the measurement to the factory default settings. For example, if you have previously initiated the ACP
-

measurement and you send READ:ACP? it will initiate a new measurement using the same instrument settings.

- Initiates the measurement and puts valid data into the output buffer. If a measurement other than the current one is specified, the instrument will switch to that measurement before it initiates the measurement and returns results.
 - For example, suppose you have previously initiated the ACP measurement, but now you are running the channel power measurement. Then you send READ:ACP? It will change from channel power back to ACP and, using the previous ACP settings, will initiate the measurement and return results.
 - Blocks other SCPI communication, waiting until the measurement is complete before returning the results
 - If the optional [n] value is not included, or is set to 1, the scalar measurement results will be returned. If the [n] value is set to a value other than 1, the selected trace data results will be returned. See each command for details of what types of scalar results or trace data results are available. The binary data formats should be used when handling large blocks of data since they are smaller and faster than the ASCII format. (FORMat:DATA)
-

| | |
|----------------------|------------------|
| Initial S/W Revision | Prior to A.02.00 |
|----------------------|------------------|

Current Measurement Query (Remote Command Only)

This command returns the name of the measurement that is currently running.

| | |
|-----------------------|-------------|
| Remote Command | :CONFigure? |
|-----------------------|-------------|

| | |
|----------------|-------|
| Example | CONF? |
|----------------|-------|

| | |
|----------------------|------------------|
| Initial S/W Revision | Prior to A.02.00 |
|----------------------|------------------|

Limit Test Current Results (Remote Command Only)

Queries the status of the current measurement limit testing. It returns a 0 if the measured results pass when compared with the current limits. It returns a 1 if the measured results fail any limit tests.

| | |
|-----------------------|--------------------------|
| Remote Command | :CALCulate:CLIMits:FAIL? |
|-----------------------|--------------------------|

| | |
|----------------|--|
| Example | CALC:CLIM:FAIL? queries the current measurement to see if it fails the defined limits. Returns a 0 or 1: 0 it passes, 1 it fails. |
|----------------|--|

| | |
|----------------------|------------------|
| Initial S/W Revision | Prior to A.02.00 |
|----------------------|------------------|

Data Query (Remote Command Only)

Returns the designated measurement data for the currently selected measurement and subopcode.

n = any valid subopcode for the current measurement. See the measurement command results table for your current measurement, for information about what data is returned for the subopcodes.

This command uses the data setting specified by the FORMat:BORDER and FORMat:DATA commands and can return real or ASCII data. (See the format command descriptions under Input/Output in the Analyzer Setup section.)

| | |
|-----------------------------|---|
| Remote Command | :CALCulate:DATA[n]? |
| Notes | The return trace depends on the measurement. In CALCulate:<meas>:DATA[n], n is any valid subopcode for the current measurement. It returns the same data as the FETCH:<measurement>? query where <measurement> is the current measurement. |
| Initial S/W Revision | Prior to A.02.00 |

Calculate/Compress Trace Data Query (Remote Command Only)

Returns compressed data for the currently selected measurement and sub-opcode [n].

n = any valid sub-opcode for that measurement. See the MEASure:<measurement>? command description of your specific measurement for information on the data that can be returned.

The data is returned in the current Y Axis Unit of the analyzer. The command is used with a sub-opcode <n> (default=1) to specify the trace. With trace queries, it is best if the analyzer is not sweeping during the query. Therefore, it is generally advisable to be in Single Sweep, or Update=Off.

This command is used to compress or decimate a long trace to extract and return only the desired data. A typical example would be to acquire N frames of GSM data and return the mean power of the first burst in each frame. The command can also be used to identify the best curve fit for the data.

| | |
|-----------------------------|---|
| Remote Command | :CALCulate:DATA<n>:COMPRESS? BLOCK CFIT MAXimum MINimum MEAN DMEan RMS RMSCubed SAMPLE SDEVIation PPHase [,<soffset> [,<length>[,<roffset>[,<rlimit>]]]] |
| Example | To query the mean power of a set of GSM bursts: Supply a signal that is a set of GSM bursts. Select the IQ Waveform measurement (in IQ Analyzer Mode). Set the sweep time to acquire at least one burst. Set the triggers such that acquisition happens at a known position relative to a burst. Then query the mean burst levels using, CALC:DATA2:COMP? MEAN, 24e-6, 526e-6 (These parameter values correspond to GSM signals, where 526e-6 is the length of the burst in the slot and you just want 1 burst.) |
| Notes | The command supports 5 parameters. Note that the last 4 (<soffset>, <length>, <roffset>, <rlimit>) are optional. But these optional parameters must be entered in the specified order. For example, if you want to specify <length>, then you must also specify <soffset>. See details below for a definition of each of these parameters. This command uses the data in the format specified by FORMat:DATA, returning either binary or ASCII data. |
| Initial S/W Revision | Prior to A.02.00 |

- BLOCK or block data - returns all the data points from the region of the trace data that you specify. For example, it could be used to return the data points of an input signal over several timeslots, excluding the portions of the trace data that you do not want. (This is x,y pairs for trace data and I,Q pairs for complex data.)

- CFIT or curve fit - applies curve fitting routines to the data. <soffset> and <length> are required to define the data that you want. <roffset> is an optional parameter for the desired order of the curve equation. The query will return the following values: the x-offset (in seconds) and the curve coefficients ((order + 1) values).

MIN, MAX, MEAN, DME, RMS, RMSC, SAMP, SDEV and PPH return one data value for each specified region (or <length>) of trace data, for as many regions as possible until you run out of trace data (using <roffset> to specify regions). Or they return the number of regions you specify (using <rlimit>) ignoring any data beyond that.

- MINimum - returns the minimum data point (y value) for the specified region(s) of trace data. For I/Q trace data, the minimum magnitude of the I/Q pairs is returned.
- MAXimum - returns the maximum data point (y value) for the specified region(s) of trace data. For I/Q trace data, the maximum magnitude of the I/Q pairs is returned.
- MEAN - returns a single value that is the arithmetic mean of the data point values (in dB/ dBm) for the specified region(s) of trace data. For I/Q trace data, the mean of the magnitudes of the I/Q pairs is returned. See the following equations.

-

NOTE

If the original trace data is in dB, this function returns the arithmetic mean of those log values, not log of the mean power which is a more useful value. The mean of the log is the better measurement technique when measuring CW signals in the presence of noise. The mean of the power, expressed in dB, is useful in power measurements such as Channel Power. To achieve the mean of the power, use the RMS option.

Equation 1

Mean Value of Data Points for Specified Region(s)

$$\text{MEAN} = \frac{1}{n} \sum_{X_i \in \text{region}(s)} X_i$$

where X_i is a data point value, and n is the number of data points in the specified region(s).

Equation 2

Mean Value of I/Q Data Pairs for Specified Region(s)

$$\text{MEAN} = \frac{1}{n} \sum_{X_i \in \text{region}(s)} |X_i|$$

where $|X_i|$ is the magnitude of an I/Q pair, and n is the number of I/Q pairs in the specified region(s).

- DMEan - returns a single value that is the mean power (in dB/ dBm) of the data point values for the specified region(s) of trace data. See the following equation:

Equation 3

DMEan Value of Data Points for Specified Region(s)

$$\text{DME} = 10 \times \log_{10} \left(\frac{1}{n} \sum_{X_i \in \text{region}(s)} 10^{\frac{X_i}{10}} \right)$$

- RMS - returns a single value that is the average power on a root-mean-squared voltage scale (arithmetic rms) of the data point values for the specified region(s) of trace data. See the following equation.

NOTE

For I/Q trace data, the rms of the magnitudes of the I/Q pairs is returned. See the following equation. This function is very useful for I/Q trace data. However, if the original trace data is in dB, this function returns the rms of the log values which is not usually needed.

Equation 4

RMS Value of Data Points for Specified Region(s)

$$\text{RMS} = \sqrt{\frac{1}{n} \sum_{X_i \in \text{region}(s)} X_i^2}$$

where X_i is a data point value, and n is the number of data points in the specified region(s).

Equation 5

RMS Value of I/Q Data Pairs for Specified Region(s)

$$\text{RMS} = \sqrt{\frac{1}{n} \sum_{X_i \in \text{region}(s)} X_i X_i^*}$$

where X_i is the complex value representation of an I/Q pair, X_i^* its conjugate complex number, and n is the number of I/Q pairs in the specified region(s).

Once you have the rms value for a region of trace data (linear or I/Q), you may want to calculate the mean power. You must convert this rms value (peak volts) to power in dBm:

$$10 \times \log[10 \times (\text{rms value})^2]$$

- SAMPlE - returns the first data value (x,y pair) for the specified region(s) of trace data. For I/Q trace data, the first I/Q pair is returned.
- SDEViation - returns a single value that is the arithmetic standard deviation for the data point values for the specified region(s) of trace data. See the following equation.
- For I/Q trace data, the standard deviation of the magnitudes of the I/Q pairs is returned. See the following equation.

Equation 6

Standard Deviation of Data Point Values for Specified Region(s)

$$\text{SDEV} = \sqrt{\frac{1}{n} \sum_{X_i \in \text{region}(s)} (X_i - \bar{X})^2}$$

where X_i is a data point value, \bar{X} is the arithmetic mean of the data point values for the specified region (s), and n is the number of data points in the specified region(s).

$$\text{SDEV} = \sqrt{\frac{1}{n} \sum_{X_i \in \text{region}(s)} (|X_i| - \bar{X})^2}$$

where $|X_i|$ is the magnitude of an I/Q pair, \bar{X} is the mean of the magnitudes for the specified region(s), and n is the number of data points in the specified region(s).

- PPHase - returns the x,y pairs of both rms power (dBm) and arithmetic mean phase (radian) for every specified region and frequency offset (Hz). The number of pairs is defined by the specified number of regions. This parameter can be used for I/Q vector (n=0) in Waveform (time domain) measurement and all parameters are specified by data point in PPHase.

The rms power of the specified region may be expressed as:

$$\text{Power} = 10 \times \log [10 \times (\text{RMS I/Q value})] + 10.$$

The RMS I/Q value (peak volts) is:

$$\sqrt{\frac{1}{n} \sum_{X_i \in \text{region}} X_i X_i^*}$$

where X_i is the complex value representation of an I/Q pair, X_i^* its conjugate complex number, and n is the number of I/Q pairs in the specified region.

The arithmetic mean phase of the specified region may be expressed as:

$$\frac{1}{n} \sum_{Y_i \in \text{region}} Y_i$$

where Y_i is the unwrapped phase of I/Q pair with applying frequency correction and n is the number of I/Q pairs in the specified region.

The frequency correction is made by the frequency offset calculated by the arithmetic mean of every specified region's frequency offset. Each frequency offset is calculated by the least square method against the unwrapped phase of I/Q pair.

Sample Trace Data - Constant Envelope

(See below for explanation of variables.)

Sample Trace Data - Not Constant Envelope

(See below for explanation of variables.)

<soffset> - start offset is an optional real number. (It is in seconds for time-domain traces, and is a dimensionless index 0 to Npoints - 1, for frequency-domain traces). It specifies the amount of data at the beginning of the trace that will be ignored before the decimation process starts. It is the time or frequency change from the start of the trace to the point where you want to start using the data. The default value is zero.

<length> - is an optional real number. (It is in seconds for time-domain traces, and is a dimensionless index 0 to Npoints - 1, for frequency-domain traces). It defines how much data will be compressed into one value. This parameter has a default value equal to the current trace length.

<roffset> - repeat offset is an optional real number. (It is in seconds for time-domain traces, and is a dimensionless index 0 to Npoints - 1, for frequency-domain traces). It defines the beginning of the next field of trace elements to be compressed. This is relative to the beginning of the previous field. This parameter has a default value equal to the <length> variable. Note that this parameter is used for a completely different purpose when curve fitting (see CFIT above).

<rlimit> - repeat limit is an optional integer. It specifies the number of data items that you want returned. It will ignore any additional items beyond that number. You can use the Start offset and the Repeat limit to pick out exactly what part of the data you want to use. The default value is all the data.

Calculate Peaks of Trace Data (Remote Command Only)

Returns a list of all the peaks for the currently selected measurement and sub-opcode [n]. The peaks must meet the requirements of the peak threshold and excursion values.

n = any valid sub-opcode for the current measurement. See the MEASure:<measurement> command description of your specific measurement for information on the data that can be returned.

The command can only be used with specific sub-opcodes with measurement results that are trace data. Both real and complex traces can be searched, but complex traces are converted to magnitude in dBm. In many measurements the sub-opcode n=0, is the raw trace data which cannot be searched for peaks. And Sub-opcode n=1, is often calculated results values which also cannot be searched for peaks.

This command uses the data setting specified by the FORMat:BORDER and FORMat:DATA commands and can return real or ASCII data. If the format is set to INT,32, it returns REAL,32 data.

The command has four types of parameters:

- Threshold (in dBm)
- Excursion (in dB)
- Sorting order (amplitude, frequency, time)
- Optional in some measurements: Display line use (all, > display line, < display line)

| | |
|-----------------------|---|
| Remote Command | <p>For Swept SA measurement:</p> <pre>:CALCulate:DATA[1] 2 ... 6:PEAKs? <threshold>,<excursion>[,AMPLitude FREQuency TIME[,ALL GTDLLine LTDLine]]</pre> <p>For most other measurements:</p> <pre>:CALCulate:DATA[1] 2 ... 6:PEAKs? <threshold>,<excursion>[,AMPLitude FREQuency TIME]</pre> |
|-----------------------|---|

| | |
|----------------|---|
| Example | <p>Example for Swept SA measurement in Spectrum Analyzer Mode:</p> <p>CALC:DATA4:PEAK? -40, 10, FREQ, GTDL This will identify the peaks of trace 4 that are above -40 dBm, with excursions of at least 10 dB. The peaks are returned in order of increasing frequency, starting with the lowest frequency. Only the peaks that are above the display line are returned.</p> <p>Query Results 1:</p> <p>With FORMat:DATA REAL, 32 selected, it returns a list of floating-point numbers. The first value in the list is the number of peak points that are in the following list. A peak point consists of two values: a peak amplitude followed by its corresponding frequency (or time).</p> <p>If no peaks are found the peak list will consist of only the number of peaks, (0).</p> |
|----------------|---|

| | |
|--------------|---|
| Notes | <p><n> - is the trace that will be used</p> <p><threshold> - is the level below which trace data peaks are ignored. Note that the threshold value is required and is always used as a peak criterion. To effectively disable the threshold criterion for this command, provide a substantially low threshold value such as -200 dBm. Also note that the threshold value used in this command is independent of and has no effect on the threshold value stored under the Peak Criteria menu.</p> <p><excursion> - is the minimum amplitude variation (rise and fall) required for a signal to be identified as peak. Note that the excursion value is required and is always used as a peak criterion. To effectively disable the excursion criterion for this command, provide the minimum value of 0.0 dB. Also note that the excursion value used in this command is independent of and has no effect on the</p> |
|--------------|---|

excursion value stored under the Peak Criteria menu.

Values must be provided for threshold and excursion. The sorting and display line parameters are optional (defaults are AMPLitude and ALL).

Note that there is always a Y-axis value for the display line, regardless of whether the display line state is on or off. It is the current Y-axis value of the display line which is used by this command to determine whether a peak should be reported

Sorting order:

AMPLitude - lists the peaks in order of descending amplitude, with the highest peak first (default if optional parameter not sent)

FREQuency - lists the peaks in order of occurrence, left to right across the x-axis.

TIME - lists the peaks in order of occurrence, left to right across the x-axis.

Peaks vs. Display Line:

ALL - lists all of the peaks found (default if optional parameter not sent).

GTDLine (greater than display line) - lists all of the peaks found above the display line.

LTDLine (less than display line) - lists all of the peaks found below the display line.

| | |
|----------------------|------------------|
| Initial S/W Revision | Prior to A.02.00 |
|----------------------|------------------|

Hardware-Accelerated Fast Power Measurement (Remote Command Only)

The Fast Power option (FP2) enables very fast channel power measurements for instruments with the prerequisite hardware (DP2 and/or B40). It accomplishes this by performing real-time overlapped FFTs at the hardware layer, using software for basic post-processing before returning the result to the user. The upshot of this approach is improved throughput for user applications that require many sequential power measurements.

The analysis bandwidth of FP2 is limited by the licenses in the instrument, but its maximum overall analysis bandwidth per acquisition is 40 MHz.

FP2 is remote-only, which means the instrument does not switch to any particular mode or measurement. FP2 commands can be sent while another application is in use on the front panel.

Each Fast Power measurement can be predefined using an array index, and up to 1,000 measurements can be stored. In the following documentation, instances of [1,2,...,999] can be substituted with a particular measurement index, e.g. CALC:FPOW:POW1?, CALC:FPOW:POW2?, CALC:FPOW:POW134?. In this way, power measurements can be defined one time in a batch, and then executed multiple times without having to redefine them, similar to “list mode” on other measurements.

In addition to basic channel power measurements, there are a number of other measurement “functions” for each channel, including peak power, peak frequency, and power spectral density. See the Function parameter for more information.

Reset Fast Power Measurement (Remote Command Only)

Resets the measurement configuration to the defaults.

| | |
|-----------------------|---|
| Mode | All |
| Remote Command | :CALCulate:FPOWer:POWer [1, 2, ..., 999] :RESet |
| Example | :CALC:FPOW:POW1:RES |

| | |
|----------------------|-------------------------|
| Notes | Option FP2 is required. |
| Initial S/W Revision | A.14.00 |

Define Fast Power Measurement (Remote Command Only)

Fast Power acquisitions are configured using the DEFine command. This command accepts a comma-delimited string of configuration parameters and their appropriate values, which are all specified in the subsection below.

| | |
|-----------------------|--|
| Mode | All |
| Remote Command | :CALCulate:FPOWer:POWer[1,2,...,999]:DEFine "configuration string" |
| Example | :CALC:FPOW:POW1:DEF "CenterFrequency=2e9, AcquisitionTime=0.005" |
| Notes | See below for a list of measurement variables that can be defined in the configuration string. |
| Initial S/W Revision | A.14.00 |

Acquisition Time

| | |
|----------------------|--|
| Example | CALC:FPOW:POW1:DEF "AcquisitionTime=0.002" |
| Notes | The acquisition time parameter sets the time in which the entire spectrum is measured. An increase in the acquisition time yields an improvement in measurement repeatability. |
| Preset | 0.001 s |
| Range | 0 s to 1 s |
| Default Unit | Time (s) |
| Initial S/W Revision | A.14.00 |

Center Frequency

| | |
|----------------------|--|
| Example | CALC:FPOW:POW1:DEF "CenterFrequency=2e9" |
| Notes | The center frequency parameter sets the frequency in which the measurement is centered around. The OffsetFrequency parameter is calculated relative to the center frequency. |
| Preset | 1 GHz |
| Range | 0 Hz to maximum instrument frequency |
| Default Unit | Frequency (Hz) |
| Initial S/W Revision | A.14.00 |

DC Coupled

| | |
|----------------------|---|
| Example | CALC:FPOW:POW1:DEF "DCCoupled=True" |
| Notes | The DC coupled parameter allows the user to specify whether the DC blocking capacitor is utilized. Set parameter to true when measuring frequencies below 10 MHz. |
| Preset | False |
| Range | True (DC Coupled) or False (AC Coupled) |
| Default Unit | Boolean |
| Initial S/W Revision | A.14.00 |

DetectorType

| | |
|----------------------|--|
| Example | CALC:FPOW:POW1:DEF "DetectorType=Peak" |
| Notes | Option FP2 is required. The detector type parameter allows the user to choose whether a RMS average or peak value is used during the measurement. |
| Preset | RmsAverage |
| Range | RmsAverage, Peak |
| Initial S/W Revision | A.14.00 |

Do Noise Correction

| | |
|----------------------|--|
| Example | CALC:FPOW:POW1:DEF "DoNoiseCorrection=True" |
| Notes | When noise correction is enabled, the linear noise power contributed by the analyzer is subtracted from all measurements. This effectively lowers the noise floor of the analyzer. When noise correction is enabled, the first measurement for a given set of input parameters will take extra time. This is because the analyzer takes an extra acquisition with the RF input disconnected from the analyzer's front end to measure the noise of just the analyzer. The measured noise floor is stored in a cache so the noise acquisition will occur only once for the same state settings. In other words, if noise correction was turned on and the analyzer made an acquisition at frequency A, then frequency B, and back again to frequency A, the hidden initial noise floor acquisition would only occur for the first acquisition at frequency A and the cached noise floor would be used the second time frequency A was measured. |
| Preset | False |
| Range | True (enable noise correction) or False (disable noise correction) |
| Default Unit | Boolean |
| Initial S/W Revision | A.14.00 |

Do Spur Suppression

| | |
|----------------------|---|
| Example | CALC:FPOW:POW1:DEF "DoSpurSuppression=True" |
| Notes | <p>When measuring very low level signals, or when large out-of-band inputs are input into the analyzer, sometimes unwanted spurs and residuals can appear in the measured spectrum. Spur suppression is a method to help minimize the levels of these internally generated spurs and residuals.</p> <p>When spur suppression is enabled, the analyzer will automatically take two acquisitions using two different internal analog LO frequencies. The FFT spectrums from both acquisitions are combined by taking the minimum power between both traces on a per FFT bin basis. External signals will have the same amplitude for both traces and therefore will return the expected amplitudes. However, low level spurs and residuals generated internally to the analyzer tend to move to different FFT bins depending on the internal analog LO frequency used, and therefore tend to be suppressed using this spur suppression method.</p> <p>Because two acquisitions, rather than a single acquisition, are made when spur suppression is enabled, the measurement time will always be slower when spur suppression is enabled.</p> |
| Preset | False |
| Range | True (enable spur suppression) or False (disable spur suppression) |
| Default Unit | Boolean |
| Initial S/W Revision | A.14.00 |

Electronic Attenuator Bypass

| | |
|----------------------|--|
| Example | CALC:FPOW:POW1:DEF "ElecAttBypass =False" |
| Notes | The electronic attenuation bypass parameter allows the user to either utilize or bypass the electronic attenuator. The electronic attenuator is only available for frequencies up to 3.6 GHz. Set parameter to true when using frequencies above 3.6 GHz and set the parameter to false when using the preamp. |
| Preset | True |
| Range | True (bypass electronic attenuator) or False (use electronic attenuator) |
| Default Unit | Boolean |
| Initial S/W Revision | A.14.00 |

Electronic Attenuation

| | |
|---------|---|
| Example | CALC:FPOW:POW1:DEF "ElecAttenuation=10" |
| Notes | <p>Option EA3 is required.</p> <p>The electronic attenuation value parameter sets the amount of electrical attenuation from 0 to 24 dB (1 dB steps).</p> <p>Set "ElecAttBypass=False" to make sure the electronic attenuator path is enabled.</p> |
| Preset | 0 dB |
| Range | 0 - 24 dB (1 dB steps) |

| | |
|----------------------|---------|
| Default Unit | dB |
| Initial S/W Revision | A.14.00 |

IF Gain

| | |
|----------------------|--|
| Example | CALC:FPOW:POW1:DEF "IFGain=10" |
| Notes | The IF gain parameter allows the user to specify the gain at the IF stage anywhere from -6 to 16 dB (1 dB steps). This is an advanced feature, and for most cases this should remain at its default value of 0 dB. |
| Preset | 0 dB |
| Range | -6 - 16 dB (1 dB steps) |
| Default Unit | dB |
| Initial S/W Revision | A.14.00 |

IF Type

| | |
|----------------------|---|
| Example | CALC:FPOW:POW1:DEF "IFType=B25M" |
| Notes | The IF type parameter allows the user to select between different IF paths. For example, if the signal is less than 25 MHz wide, then the user can select the B25M path to take advantage of additional filtering on this analog IF path. |
| Preset | B40M |
| Range | B10M, B25M, B40M |
| Initial S/W Revision | A.14.00 |

Include Power Spectrum

| | |
|----------------------|---|
| Example | CALC:FPOW:POW1:DEF "IncludePowerSpectrum=True" |
| Notes | The power spectrum parameter allows the user to read data on the entire spectrum for diagnostic purposes. It is not recommended for production use. See CALC:FPOW:POW[n]:READ2? for details on the binary format of the response. |
| Preset | False |
| Range | True (return both channel power and full power spectrum) or False (returns only channel power) |
| Default Unit | Boolean |
| Initial S/W Revision | A.14.00 |

Mechanical Attenuation

| | |
|----------------------|---|
| Example | CALC:FPOW:POW1:DEF "MechAttenuation=10" |
| Notes | The mechanical attenuation value parameter sets the amount of mechanical attenuation anywhere from 0 to 70 dB (2 dB steps). |
| Preset | 0 dB |
| Range | 0 – 70 dB (2 dB steps) |
| Default Unit | dB |
| Initial S/W Revision | A.14.00 |

Preamp Mode

| | |
|----------------------|--|
| Example | CALC:FPOW:POW1:DEF "PreAmpMode=Low" |
| Notes | The license for the appropriate preamp is required. The preamp mode parameter specifies whether the preamps are being utilized. Low allows any preamps up to 3.6 GHz, and Full allows all licensed preamps. Set "ElecAttBypass=True" in order to utilize any preamps. |
| Preset | Off |
| Range | Off, Low, Full |
| Initial S/W Revision | A.14.00 |

Resolution Bandwidth Mode

| | |
|----------------------|--|
| Example | CALC:FPOW:POW1:DEF "PreAmpMode=Low" |
| Notes | The resolution bandwidth mode parameter allows the user to choose whether the RBW filter is automatically or manually set. The BestSpeed value minimizes measurement time, while the Narrowest value minimizes RBW size (minimum of two FFT bins per RBW). To manually specify an RBW, set this parameter to Explicit, and set the ResolutionBW parameter to the desired value. |
| Preset | BestSpeed |
| Range | BestSpeed, Narrowest, Explicit |
| Initial S/W Revision | A.14.00 |

Resolution Bandwidth

| | |
|---------|--|
| Example | CALC:FPOW:POW1:DEF "ResolutionBW=25e3" |
| Notes | The resolution bandwidth parameter sets the 3-dB bandwidth of the RBW filter. The ResolutionBWMode parameter must be set to Explicit in order to manually set the RBW. |

| | |
|----------------------|---------|
| Preset | 0 Hz |
| Default Unit | Hz |
| Initial S/W Revision | A.14.00 |

Trigger Delay

| | |
|----------------------|---|
| Example | CALC:FPOW:POW1:DEF "TriggerDelay=0.025" |
| Notes | The trigger delay parameter sets the time after an external trigger is detected until the measurement is performed. |
| Preset | 0 s |
| Range | 0 - 1 s |
| Default Unit | Seconds |
| Initial S/W Revision | A.14.00 |

Trigger Level

| | |
|----------------------|--|
| Example | CALC:FPOW:POW1:DEF "TriggerLevel=2" |
| Notes | The trigger level parameter sets the voltage value at which an external trigger is detected. |
| Preset | 1.2 V |
| Range | -5 to 5 V |
| Default Unit | Volts |
| Initial S/W Revision | A.14.00 |

Trigger Slope

| | |
|----------------------|--|
| Example | CALC:FPOW:POW1:DEF "TriggerSlope=Negative" |
| Notes | The trigger slope parameter indicates the direction of the edge trigger voltage for detection. |
| Preset | Positive |
| Range | Positive, Negative |
| Initial S/W Revision | A.14.00 |

Trigger Source

| | |
|-------------------------|---|
| Example | CALC:FPOW:POW1:DEF "TriggerSource=Ext1" |
| Notes | The trigger source parameter allows the user to choose between measurement's triggering freely or controlled by an external input. Ext1 and Ext2 correspond to Trigger 1 In and Trigger 2 In, respectively. |
| Preset | Free |
| Range | Free, Ext1, Ext2 |
| Initial S/W Revision | A.14.00 |

Trigger Timeout

| | |
|-------------------------|--|
| Example | CALC:FPOW:POW1:DEF "TriggerTimeout=0.1" |
| Notes | The trigger timeout parameter sets the time in which the analyzer will wait for a trigger before automatically performing the measurement. |
| Preset | 1 s |
| Range | 0 - 1 s |
| Default Unit | Seconds |
| Initial S/W Revision | A.14.00 |

Signal Input

| | |
|-------------------------|--|
| Example | CALC:FPOW:POW1:DEF "SignalInput=Fp50MHzCW" |
| Notes | The signal input parameter allows the user to select between using the main RF input or the internal analyzer reference CW signal of 50 MHz. |
| Preset | FpMainRf |
| Range | FpMainRf, Fp50MHzCW |
| Initial S/W Revision | A.14.00 |

Use Preselector

| | |
|---------|--|
| Example | CALC:FPOW:POW1:DEF "UsePreSelector=True" |
| Notes | The preselector parameter allows the user to either utilize or bypass the front end tunable filter at frequencies above 3.6 GHz. For frequencies below 3.6 GHz, the preselector is automatically bypassed, so you do not need to set this parameter to False in those cases. |
| Preset | False |
| Range | True (use preselector above 3.6 GHz), or False (preselector bypassed) |

| | |
|----------------------|---------|
| Default Unit | Boolean |
| Initial S/W Revision | A.14.00 |

Channel Bandwidth Array

| | |
|----------------------|---|
| Example | CALC:FPOW:POW1:DEF "Bandwidth=[3.84e6, 5e6, 3.84e6]" |
| Notes | The bandwidth parameter array defines the bandwidth of each channel that will be measured. All array parameters should have the same number of elements. Alternatively, if all the elements are the same value, a single number with no square brackets can be used to define the parameter. |
| Preset | [1e6] |
| Range | 0 to 40 MHz |
| Default Unit | Hz |
| Initial S/W Revision | A.14.00 |

Channel Filter Type Array

| | |
|----------------------|--|
| Example | CALC:FPOW:POW1:DEF "FilterType=[RRC, IBW, RRC]" |
| Notes | The filter type parameter allows the user to choose between an integration bandwidth (IBW) filter or a root-raised-cosine (RRC) filter. The integration bandwidth filter weighs all frequencies within the bandwidth equally. The root-raised-cosine filter has an associated shape parameter, defined by the FilterAlpha parameter. All array parameters should have the same number of elements. Alternatively, if all the elements are the same value, a single value with no square brackets can be used to define the parameter. |
| Preset | [IBW] |
| Range | IBW, RRC |
| Initial S/W Revision | A.14.00 |

Channel Filter Alpha Array

| | |
|---------|---|
| Example | CALC:FPOW:POW1:DEF "FilterAlpha=[0.5, 0.0, 0.5]" |
| Notes | The filter alpha parameter allows the user to adjust the alpha value associated with the root-raised-cosine (RRC) filter type. Set FilterType to RRC in order to utilize this parameter. All array parameters should have the same number of elements. Alternatively, if all the elements are the same value, a single number with no square brackets can be used to define the parameter. |
| Preset | [0.22] |
| Range | 0.0 - 1.0 |

| | |
|-------------------------|---------|
| Initial S/W Revision | A.14.00 |
|-------------------------|---------|

Channel Measurement Function Array

| | |
|-------------------------|---|
| Example | CALC:FPOW:POW1:DEF "Function=[BandPower, PeakPower, BandPower]" |
| Notes | <p>This parameter array defines what measurement is being made for each individually-specified channel:</p> <p>BandPower: Total power within the specified bandwidth of the channel (dBm)</p> <p>BandDensity: Total power density within the specified bandwidth of the channel (dBm/Hz)</p> <p>PeakPower: The peak power value within the specified bandwidth of the channel (dBm)</p> <p>PeakFrequency: The frequency which corresponds to the peak power value within the specified bandwidth of the channel. This frequency is relative to the center frequency (Hz)</p> <p>XdBBandwidth: The half power (-3.01 dB) bandwidth of the highest amplitude signal that resides within the channel (Hz), dB is configurable using XdBBandwidth parameter</p> <p>OccupiedBandwidth: The bandwidth at which 99% of the total power resides within the channel (Hz), percentage configurable using OccupiedBandwidthPercent parameter</p> <p>All array parameters should have the same number of elements. Alternatively, if all the elements are the same value, a single value with no square brackets can be used to define the parameter.</p> |
| Preset | [BandPower] |
| Range | BandPower, BandDensity, PeakPower, PeakFrequency, XdBBandwidth, OccupiedBandwidth |
| Initial S/W Revision | A.14.00 |

Channel Offset Frequency Array

| | |
|-------------------------|---|
| Example | CALC:FPOW:POW1:DEF "OffsetFrequency=[-5e6, 0, 5e6]" |
| Notes | <p>The offset frequency parameter array defines the difference between the center frequency to the center frequency of each channel.</p> <p>All array parameters should have the same number of elements.</p> |
| Preset | [0] |
| Range | 0 to 20 MHz |
| Default Unit | Hz |
| Initial S/W Revision | A.14.00 |

Channel Occupied Bandwidth Percent Array

| | |
|---------|---|
| Example | CALC:FPOW:POW1:DEF "OccupiedBandwidthPercent =[0.95, 0.95, 0.95]" |
| Notes | This parameter only applies for channels whose Function is set to OccupiedBandwidth. The occupied |

| | |
|-------------------------|--|
| | bandwidth percent parameter specifies the percent of total power in these channels. The valid range for this parameter is 0.0 to 1.0, where 1.0 represents 100%. The default for this parameter is 0.99, which will return the bandwidth that contains 99% of the total channel power. |
| Preset | [0.99] |
| Range | 0 - 1.0 |
| Initial S/W Revision | A.14.00 |

Channel x-dB Bandwidth Array

| | |
|-------------------------|---|
| Example | CALC:FPOW:POW1:DEF " XdBBandwidth =[-6.02, -3.01, -1.0]" |
| Notes | This parameter only applies for channels whose Function is set to XdBBandwidth. The X dB bandwidth parameter is used to specify the power relative to the peak channel power over which the bandwidth is calculated. The parameter value must be a negative number. |
| Preset | [-3.01] |
| Range | -200 to 0 dB |
| Default Unit | dB |
| Initial S/W Revision | A.14.00 |

Define Fast Power Measurement Query (Remote Command Only)

The DEFine? command is used to retrieve a list of all defined parameters in an ASCII string format

| | |

Configure Fast Power Measurement (Remote Command Only)

The configure command begins hardware setup and returns immediately, with no acquisition made. This can be used in parallel with other hardware operations to effectively hide the hardware setup time.

| | |
|-----------------------|--|
| Mode | All |
| Remote Command | :CALCulate:FPOWER:POWER[1,2,...,999]:CONFigure |
| Example | :CALC:FPOW:POW1:CONF |
| Notes | Option FP2 is required. |
| Initial S/W Revision | A.14.00 |

Initiate Fast Power Measurement (Remote Command Only)

The INITiate command begins an acquisition and returns immediately. The results of the measurement can be retrieved using FETCh.

| | |
|-----------------------|---|
| Mode | All |
| Remote Command | :CALCulate:FPOWER:POWER[1,2,...,999]:INITiate |
| Example | :CALC:FPOW:POW1:INIT |
| Notes | Option FP2 is required. |
| Initial S/W Revision | A.14.00 |

Fetch Fast Power Measurement (Remote Command Only)

The FETCh command query is used to retrieve the results of an acquisition initiated by the INIT command. The returned results are in ASCII string format. The string begins and ends with quotation marks.

| | |
|-----------------------|--|
| Mode | All |
| Remote Command | :CALCulate:FPOWER:POWER[1,2,...,999]:FETCh? |
| Example | :CALC:FPOW:POW1:FETC? |
| Notes | Option FP2 is required. Returns m comma-separated ASCII values, where m corresponds to the number of bandwidths defined. 1. Declared function return in the 1st specified channel 2. Declared function return in the 2nd specified channel ... m. Declared function return in the last specified channel The INIT and FETC? command sequence performs the same functionality of a single CALC:FPOW:POW[n]? query. Units of the returned values are dependent on the Function parameter for each channel. |
| Initial S/W Revision | A.14.00 |

Execute Fast Power Measurement (Remote Command Only)

This command query is used as shorthand for an INIT command immediately followed by a FETC? command. The returned results are in ASCII string format. The string begins and ends with quotation marks.

| | |
|-----------------------|---------------------------------------|
| Mode | All |
| Remote Command | :CALCulate:FPOWER:POWER[1,2,...,999]? |
| Example | :CALC:FPOW:POW1? |

| | |
|----------------------|--|
| Notes | Option FP2 is required. See notes for Fast Power Fetch for return format. |
| Initial S/W Revision | A.14.00 |

Binary Read Fast Power Measurement (Remote Command Only)

This command query is used as shorthand for an INIT command immediately followed by a FETC? command. The returned results are in a binary format.

| | |
|-----------------------|--|
| Mode | All |
| Remote Command | :CALCulate:FPOWER:POWER[1,2,...,999]:READ? :CALCulate:FPOWER:POWER[1,2,...,999]:READ1? |
| Example | :CALC:FPOW:POW1:READ? :CALC:FPOW:POW1:READ1? |
| Notes | Option FP2 is required. Returns m 4 byte floating point binary values (Little-Endian), where m corresponds to the number of bandwidths defined. |
| Initial S/W Revision | A.14.00 |

Diagnostic Binary Read Fast Power Measurement (Remote Command Only)

This command query is used as shorthand for an INIT command immediately followed by a FETC? command. The returned results are in a binary format. This command is used primarily for diagnostic purposes to test for ADC overloads and to visibly inspect the spectrum.

| | |
|-----------------------|---|
| Mode | All |
| Remote Command | :CALCulate:FPOWER:POWER[1,2,...,999]:READ2? |
| Example | :CALC:FPOW:POW1:READ2? |
| Notes | Option FP2 is required. Note: Spectrum data is only returned if the IncludePowerSpectrum parameter is set to True. If IncludePowerSpectrum is False, the number of spectrum points will be zero (0). Units of the returned values are dependent on the Function parameter per channel (e.g. dBm for BandPower, Hz for PeakFrequency). Returns binary data (Little-Endian) that contains information on m amount of channels, along with ADC over range and full spectrum data. The following is the binary format of the response. Bandwidth Return Value 1. Number of channels specified, m [4 byte int] 2. Declared function result for the 1st specified channel [4 byte float] |

| | |
|--|---|
| | 3. Declared function result for the 2nd specified channel [4 byte float] |
| | ... |
| | (m + 1). Declared function result for the last (mth) specified channel [4 byte float] |
| | ADC Over Range |
| | 1. ADC over-range occurred (1: true, 0: false) [2 byte short] |
| | Spectrum Data |
| | 1. Number of points in the spectrum data, k [4 byte int] |
| | 2. Start frequency of spectrum data (Hz) [8 byte double] |
| | 3. Step frequency of spectrum data (Hz) [8 byte double] |
| | 4. FFT bin at 1st point (dBm) [4 byte float] |
| | 5. FFT bin at 2nd point (dBm) [4 byte float] |
| | ... |
| | (k + 3). FFT bin at last (kth) point (dBm) [4 byte float] |

| | |
|-------------------------|---------|
| Initial S/W Revision | A.14.00 |
|-------------------------|---------|

Format Data: Numeric Data (Remote Command Only)

This command specifies the format of the trace data input and output. It specifies the formats used for trace data during data transfer across any remote port. It affects only the data format for setting and querying trace data for the :TRACe[:DATA], TRACe[:DATA]?, :CALCulate:DATA[n]? and FETCh:SANalyzer [n]? commands and queries.

| | |
|--------------------------------|---|
| Remote Command | :FORMat [:TRACe] [:DATA] ASCii INTeger, 32 REAL, 32 REAL, 64 :FORMat [:TRACe] [:DATA] ? |
| Notes | The query response is: ASCii: ASC,8 REAL,32: REAL,32 REAL,64: REAL,64 INTeger,32: INT,32 When the numeric data format is REAL or ASCii, data is output in the current Y Axis unit. When the data format is INTeger, data is output in units of m dBm (.001 dBm). The INT,32 format returns binary 32-bit integer values in internal units (m dBm), in a definite length block. |
| Dependencies | Sending a data format spec with an invalid number (for example, INT,48) generates no error. The analyzer simply uses the default (8 for ASCii, 32 for INTeger, 32 for REAL). Sending data to the analyzer which does not conform to the current FORMat specified, results in an error. Sending ASCII data when a definite block is expected generates message -161 "Invalid Block Data" and sending a definite block when ASCII data is expected generates message -121 "Invalid Character in Number". |
| Preset | ASCii |
| Backwards Compatibility | Note that the INT,32 format is only applicable to the command, TRACe:DATA. This preserves |

| | |
|----------------------|--|
| Notes | backwards compatibility for the Swept SA measurement. For all other commands/queries which honor FORMat:DATA, if INT,32 is sent the analyzer will behave as though it were set to REAL,32. |
| Initial S/W Revision | Prior to A.02.00 |

The specs for each output type follow:

ASCIi - Amplitude values are in ASCII, in the current Y Axis Unit, one ASCII character per digit, values separated by commas, each value in the form:

SX.YYYYYEsZZ

Where:

S = sign (+ or -)

X = one digit to left of decimal point

Y = 5 digits to right of decimal point

E = E, exponent header

s = sign of exponent (+ or -)

ZZ = two digit exponent

REAL,32 - Binary 32-bit real values in the current Y Axis Unit, in a definite length block.

REAL,64 - Binary 64-bit real values in the current Y Axis Unit, in a definite length block.

Format Data: Byte Order (Remote Command Only)

This command selects the binary data byte order for data transfer and other queries. It controls whether binary data is transferred in normal or swapped mode. This command affects only the byte order for setting and querying trace data for the :TRACe[:DATA], TRACe[:DATA]? , :CALCulate:DATA[n]? and FETCh:SANalyzer[n]? commands and queries.

By definition any command that says it uses FORMat:DATA uses any format supported by FORMat:DATA.

The NORMal order is a byte sequence that begins with the most significant byte (MSB) first, and ends with the least significant byte (LSB) last in the sequence: 1|2|3|4. SWAPped order is when the byte sequence begins with the LSB first, and ends with the MSB last in the sequence: 4|3|2|1.

| | |
|-----------------------|--|
| Remote Command | :FORMat:BORDER NORMal SWAPped :FORMat:BORDER? |
| Preset | NORMal |
| Initial S/W Revision | Prior to A.02.00 |

Meas Setup

Accesses the measurement setup menu for the current measurement.

| Key Path | Front-panel key |
|----------|-----------------|
|----------|-----------------|

Avg/Burst Number

Used to specify the number of data acquisitions that are averaged. After the specified number of average counts, the averaging mode (termination control) setting determines the averaging action.

Avg number is the number of bursts, is NOT the number of data acquisition. If search length is large enough to include all the bursts, acquisition will only execute once (single mode). If the bursts number include in one capture is smaller than average number, multi capture and measurement is necessary.

- On – Sets measurement averaging on.
- Off – Sets measurement averaging off.

| Key Path | Meas Setup |
|----------------------|---|
| Mode | WLAN |
| Remote Command | [:SENSe]:EVM:AVERage:COUNT <integer> [:SENSe]:EVM:AVERage:COUNT? [:SENSe]:EVM:AVERage[:STATe] OFF ON 0 1 [:SENSe]:EVM:AVERage[:STATe]? |
| Example | EVM:AVER:COUN 1 EVM:AVER:COUN? EVM:AVER OFF EVM:AVER? |
| Preset | 10 ON |
| State Saved | Saved in instrument state. |
| Min | 1 |
| Max | 10000 |
| Initial S/W Revision | A.10.01 |

Avg Mode

Selects the type of termination control used for the averaging function. This determines the averaging action after the specified number of data acquisitions (average count) is reached.

| | |
|------------------|--|
| KEY:Exponential | After the average count is reached, each successive data acquisition is exponentially weighted and combined with the existing average. |
| SCPI:EXPonential | |

| | |
|-------------|--|
| KEY:Repeat | After reaching the average count, the averaging is reset and a new average is started. |
| SCPI:REPeat | The default value is Exp. |

| | |
|-----------------------|--|
| Key Path | Meas Setup |
| Mode | WLAN |
| Remote Command | [:SENSe] :EVM:AVERAge:TCONtrol EXPonential REPeat [:SENSe] :EVM:AVERAge:TCONtrol? |
| Example | EVM:AVER:TCON REP EVM:AVER:TCON? |
| Preset | EXP |
| State Saved | Saved in instrument state. |
| Range | Exp Repeat |
| Initial S/W Revision | A.10.01 |

Meas Time

Accesses the meas time menu for the current measurement.

| | |
|----------------------|-------------------|
| Key Path | Meas Setup |
| Initial S/W Revision | A.10.01 |

Search Length

Sets the length of time to acquire the input signal. This defines the length of time that the burst search is performed.

The analyzer searches within the specified search length, find all burst positions within this search length, and demodulates burst one by one if average state is on and average number is still not reached. If one acquisition does not include total required bursts, multi capture is needed. So if want to get results for continues bursts, make sure search length is large enough to include all the bursts. Otherwise multi acquisitions will be performed.

| | |
|-----------------------|--|
| Key Path | Meas Setup, Meas Time |
| Mode | WLAN |
| Remote Command | [:SENSe] :EVM:TIME:SLENgth <time> [:SENSe] :EVM:TIME:SLENgth? [:SENSe] :EVM:TIME:SEARchlength <real> [:SENSe] :EVM:TIME:SEARchlength? |

| Min | <p>If Radio Std is 802.11a/g/j/p (OFDM) or 801.11g (DSSS-OFDM) If Result Length is set to Man, Min Value will be: $1.17 * (\text{Result Length} + 9) * (1 + \text{Guard Interval}) / \text{Subcarrier Spacing}$ If Result Length is set to Auto, Min Value will be: $1.17 * (\text{Max Result Length} + 9) * (1 + \text{Guard Interval}) / \text{Subcarrier Spacing}$</p> <p>If Radio Std is 802.11n (20 MHz)/(40 MHz): If Result Length is set to Man, Min Value will be: $1.17 * (\text{Result Length} + 13) * (1 + \text{Guard Interval}) / \text{Subcarrier Spacing}$ If Result Length is set to Auto, Min Value will be: $1.17 * (\text{Max Result Length} + 13) * (1 + \text{Guard Interval}) / \text{Subcarrier Spacing}$</p> <p>If Radio Std is 802.11ac or 802.11ah If Result Length is set to Man, Min Value will be: $1.17 * (\text{Result Length} + 13) * (1 + \text{Guard Interval}) / \text{Subcarrier Spacing}$ If Result Length is set to Auto, Min Value will be: $1.17 * (\text{Max Result Length} + 13) * (1 + \text{Guard Interval}) / \text{Subcarrier Spacing}$</p> <p>If Radio Std is 802.11b/g (DSSS/CCK/PBCC): If Result Length is set to Man, Min Value will be: Ceil (Result Length/Chip Rate) usec If Result Length is set to Auto, Min Value will be: Ceil (Max Result Length/Chip Rate) usec</p> |
| Max | <p>Hardware Dependent: 4000000 / Sampling Rate B25: Sampling Rate = 45M (when info BW is 25MHz); WB (B40 or Wider): Sampling Rate = Info BW * 1.25</p> |
| Backwards Compatibility SCPI | [:SENSe] :EVM:TIME:SEARChlength |
| Initial S/W Revision | A.10.01 |

Meas Interval

For standard 802.11a/g/j/p (OFDM), 801.11g (DSSS-OFDM), 802.11n , 802.11ac, or 802.11ah:

This parameter specifies the measurement interval (length), in symbol times, of the portion of the OFDM burst that will be analyzed. This analyzed portion of the OFDM burst starts at a measurement offset specified by Meas Offset.

| Key Path | Meas Setup, Meas Time |
|-----------------------|---|
| Mode | WLAN |
| Remote Command | <code>[:SENSe] :EVM:TIME:INTerval <integer></code> <code>[:SENSe] :EVM:TIME:INTerval?</code> |
| Example | EVM:TIME:INT 15 EVM:TIME:INT? |
| Couplings | Default value, Min/Max value, will be coupled with Radio Std |
| Preset | 802.11a/g/j/p (OFDM), 801.11g (DSSS-OFDM), 802.11n , 802.11ac, and 802.11ah: 60 symbols 802.11b/g (DSSS/CCK/PBCC): 2794 chips |
| State Saved | Saved in instrument state. |
| Min | 802.11a/g/j/p (OFDM), 801.11g (DSSS-OFDM), 802.11n , 802.11ac, and 802.11ah: 1 symbols 802.11b/g (DSSS/CCK/PBCC): 1 chips |
| Max | 802.11a/g/j/p (OFDM), 801.11g (DSSS-OFDM): 1367 symbols 802.11n , 802.11ac, and 802.11ah: 21848 symbols 802.11b/g (DSSS/CCK/PBCC): 96360 chips Max value is also limited by Hardware capability. |
| Initial S/W Revision | A.10.01 |

Meas Offset

802.11a/g/j/p (OFDM), 801.11g (DSSS-OFDM), 802.11n, 802.11ac or 802.11ah:

This parameter specifies the measurement offset, in symbol times, of the portion of the OFDM burst that will be analyzed. The length of this analyzed portion of the OFDM burst is specified by Meas Interval.

802.11b/g (DSSS/CCK/PBCC):

Used to set the measurement offset, in chips, of the portion of the WLAN burst that will be analyzed. The length of this analyzed portion of the WLAN burst is specified by Meas Interval. If the specified measurement offset is less than zero, a value of zero is used instead.

The measurement interval and offset are relative to the ideal starting point of the PLCP preamble portion of the burst. For a signal that uses the long PLCP format, the ideal starting point of the PLCP preamble is exactly 128 symbol times (128*11 chip times) before the start of the SFD sync pattern. For a signal that uses the short PLCP format, the ideal starting point of the PLCP preamble is exactly 56 symbol times (56*11 chip times) before the start of the SFD sync pattern.

| Key Path | Meas Setup, Meas Time |
|-----------------------|---|
| Mode | WLAN |
| Remote Command | <code>[:SENSe] :EVM:TIME:OFFSet <integer></code> <code>[:SENSe] :EVM:TIME:OFFSet?</code> |

| | |
|-----------------------------|---|
| Example | EVM:TIME:OFFS 15 EVM:TIME:OFFS? |
| Couplings | Default value, Min/Max value, will be coupled with Radio Std and Result Length |
| Preset | 802.11a/g/j/p (OFDM), 801.11g (DSSS-OFDM), 802.11n , 802.11ac, and 802.11ah: 0 symbols 802.11b/g (DSSS/CCK/PBCC): 22 chips |
| State Saved | Saved in instrument state. |
| Min | 802.11a/g/j/p (OFDM), 801.11g (DSSS-OFDM), 802.11n , 802.11ac, and 802.11ah: 0 symbols 802.11b/g (DSSS/CCK/PBCC): 0 chips |
| Max | If Result Length is Auto, then the specified measurement offset will be clipped to be less than or equal to the value of Max Result Length – Meas Interval. If Result Length is Man, then the specified measurement offset will be clipped to be less than or equal to the value of Result Length – Meas Interval. |
| Initial S/W Revision | A.10.01 |

Result Length

For 802.11a/g/j/p (OFDM) and 801.11g (DSSS-OFDM), when Result Length is Auto, the length of the burst is auto-detected. The result length is determined from the decoded SIGNAL symbol. The value of Max Result Length specifies the maximum result length for the burst; any burst longer than that will be treated as though that were the length of the burst.

When Result Length is Man, you can specify the result length of the burst regardless of the actual length of the burst.

- For 802.11n, if From HT-Sig is On:

The result length is detected from the High Throughput Signal Field. It compares the decode length information to the Max Result Length parameter and uses the smaller value as the measurement result length.

- For 802.11n, if From HT-Sig is Off:

When Result Length is Auto, the analyzer automatically determines the measurement result length by burst search. It compares the detected result length to the Max Result Length parameter and uses the smaller value as the measurement result length.

When Result Length is Man, it compares the input result length to the Result Length parameter and uses the smaller value as the measurement.

| | |
|-----------------------|---|
| Key Path | Meas Setup, Meas Time |
| Mode | WLAN |
| Remote Command | [:SENSe] :EVM:TIME:RESult:LENGth <integer> [:SENSe] :EVM:TIME:RESult:LENGth? [:SENSe] :EVM:TIME:RESult [:STATe] :AUTO OFF ON 0 1 [:SENSe] :EVM:TIME:RESult [:STATe] :AUTO? |

| | |
|----------------------|--|
| Example | EVM:TIME:RES:LENG 10 EVM:TIME:RES:LENG? EVM:TIME:RES:AUTO ON EVM:TIME:RES:AUTO? |
| Couplings | Default value, Min/Max value, will be coupled with Radio Std |
| Preset | 802.11a/g/j/p (OFDM), 801.11g (DSSS-OFDM), 802.11n , 802.11ac, and 802.11ah: 60 symbols 802.11b/g (DSSS/CCK/PBCC): 2816 chips ON |
| State Saved | Saved in instrument state. |
| Min | 802.11a/g/j/p (OFDM), 801.11g (DSSS-OFDM), 802.11n , 802.11ac, and 802.11ah: 2 symbols 802.11b/g (DSSS/CCK/PBCC): 150 chips |
| Max | 802.11a/g/j/p (OFDM), 801.11g (DSSS-OFDM): 1367 symbols 802.11n , 802.11ac, and 802.11ah: 21848 symbols 802.11b/g (DSSS/CCK/PBCC): 96360 chips Max value is also limited by Hardware capability |
| Initial S/W Revision | A.10.01 |

Max Result Length

Max Result Length specifies a maximum result length.

If the auto-detected length is greater than the specified maximum result length, the maximum result length is used instead.

The actual results returned will be for a subset of this maximum, as specified by the Meas Interval and Meas Offset, and will be further limited to the auto-detected result length if that is shorter than the maximum result length.

| | |
|-----------------------|--|
| Key Path | Meas Setup, Meas Time |
| Mode | WLAN |
| Remote Command | [:SENSe] :EVM:TIME:RESult:MAX <integer> [:SENSe] :EVM:TIME:RESult:MAX? |

| Initial S/W Revision | A.10.01 |

From SIG Symbols

- For 802.11n, if From SIG Syms is On:

The result length is detected from the High Throughput Signal Field. It compares the decoded length information to the Max Result Length parameter and uses the smaller value as the measurement result length.

- For 802.11n, if From SIG Syms Off:

When Result Length is Auto, the analyzer automatically determines the measurement result length by burst search. It compares the detected result length to Max Result Length parameter and uses the smaller value as the measurement result length.

When Result Length is Man, it compares the input result length to the Result Length parameter and uses the smaller value as the measurement.

| | |
|-----------------------|--|
| Key Path | Meas Setup, Meas Time |
| Mode | WLAN |
| Remote Command | [:SENSe] :EVM:TIME:RESult:SIG OFF ON 0 1 [:SENSe] :EVM:TIME:RESult:SIG? |
| Example | EVM:TIME:RES:SIG ON EVM:TIME:RES:SIG? |
| Notes | If Radio Std is not 802.11n, 802.11ac or 802.11ah, it will be grayed out. The result length is determined by decoding the HT-SIG symbols and using the HT Length field. The value of Max Result Length specifies a maximum result length for the pulse; any pulse longer than that will be treated as though that were the length of the pulse. |
| Dependencies | The key is NOT available when Radio Std is 802.11b/g (DSSS/CCK/PBCC). |
| Preset | OFF |
| State Saved | Saved in instrument state. |
| Range | On Off |
| Initial S/W Revision | A.10.01 |

Subcarrier

This parameter specifies whether the demodulation results are for all subcarriers in the signal, or for a single subcarrier, or for just the pilot subcarriers.

| Key Path | Meas Setup |
|-----------------------|---|
| Mode | WLAN |
| Remote Command | :CALCulate:EVM:SUBCarrier ALL PILOt SINGle :CALCulate:EVM:SUBCarrier? |
| Example | CALC:EVM:SUBC ALL CALC:EVM:SUBC? |
| Notes | Only effective in OFDM demodulation, if Radio Std is 802.11b/g (DSSS/CCK/PBCC), this key will be NOT available. |
| Preset | ALL |
| State Saved | Saved in instrument state. |
| Range | All Pilot Single |
| Readback Text | All Pilot subcarrier number (in integer format, like "Subcarrier 2") |
| Initial S/W Revision | A.10.01 |

Subcarrier Number

This parameter specifies the demodulation results are for which subcarrier. When Subcarrier selects "Single", this number will indicate which subcarrier is used to do demodulation.

| Key Path | Meas Setup |
|-----------------------|--|
| Mode | WLAN |
| Remote Command | :CALCulate:EVM:SUBCarrier:COUNT <integer> :CALCulate:EVM:SUBCarrier:COUNT |
| Example | CALC:EVM:SUBC:COUN 2 CALC:EVM:SUBC:COUN? |
| Notes | Only be available as in OFDM demodulation and Subcarrier is selected as Single, otherwise this key will be grayed out. For Radio Std 802.11a/g/j/p (OFDM), 801.11g (DSSS-OFDM), 802.11n (20 MHz), 802.11ac (20 MHz), 802.11ah(1MHz), and 802.11ah (2 MHz) if the value was set to 0, it will change to 1. For Radio Std 802.11n (40MHz), 802.11ac (40MHz), 802.11ac (80MHz) or 802.11ac (80 + 80MHz), 802.11ah (4MHz), 802.11ah(8MHz), if the value was set to 0, it will be change to 2. For Radio Std 802.11ac (160MHz), and 802.11ah (16MHz), if the value was set to 0, it will be change to 6. |
| Dependencies | Only effective in OFDM demodulation, if Radio Std is 802.11b/g (DSSS/CCK/PBCC), this key will be NOT available. |
| Couplings | Valid only when Subcarrier selects "Single". Min and Max Value is coupled with Radio Std. |
| Preset | Radio Std 802.11ac (160MHz): 6 |

| | |

| Initial S/W Revision | A.10.01 |

Subcarrier I/Q Estimation

This parameter allows turn On or Off the estimation for IQ Gain Imbalance vs. subcarrier, IQ Quadrature Error vs. subcarrier in the input signal.

| | |
|----------------|---|
| Key Path | Meas Setup, Advanced |
| Mode | WLAN |
| Remote Command | :CALCulate:EVM:IQEstimation OFF ON 0 1 :CALCulate:EVM:IQEstimation? |
| Example | CALC:EVM: IQES ON CALC:EVM: IQES? |
| Notes | The accuracy of the IQ gain imbalance and quadrature error estimation is affected by the receiver's ability to determine the correct ideal reference constellation points for each symbol in the modulated signal. Large IQ impairments may result in incorrect determination of reference points, which will lead to incorrect estimates for the IQ errors. Generally, the receiver can provide correct IQ estimation with greater levels of IQ impairment for lower-order modulation such as QPSK than for higher-order modulation such as 64QAM. |

| | |
|----------------------|----------------------------|
| Preset | OFF |
| State Saved | Saved in instrument state. |
| Range | On Off |
| Initial S/W Revision | A.14.01 |

Limits

| Initial S/W Revision | A.10.01 |

Advanced

Accesses advanced features. These features are recommended for use only by advanced users.

| | |
|----------------------|-------------------|
| Key Path | Meas Setup |
| Initial S/W Revision | A.10.01 |

Pilot Tracking

802.11 OFDM performs demodulation relative to the data in pilot carriers embedded in the signal. These pilot carriers replace data-carrying elements of the signal and allow some kinds of impairments to be removed or “tracked out”.

Many impairments will be common to all pilot carriers and can be measured and displayed as “common pilot error”.

In addition, several specific tracking functions can be individually switched on and off in the demodulation performed by this measurement. This is a very useful troubleshooting approach, since modulation errors can be examined with and without the benefit of particular types of pilot tracking.

| | |
|----------------------|-----------------------------|
| Key Path | Meas Setup, Advanced |
| Initial S/W Revision | A.10.01 |

Track Amplitude

Track Amplitude specifies whether the analyzer tracks amplitude changes in the pilot subcarriers. When Track Amplitude is selected, the analyzer applies pilot subcarrier amplitude error correction to the pilot and data subcarriers. This is in addition to Track Phase and Track Timing error correction, if selected.

| | |
|-------------------------------------|---|
| Key Path | Meas Setup, Advanced, Pilot Track |
| Mode | WLAN |
| Remote Command | :CALCulate:EVM:PIlot:TRACk:AMPLitude OFF ON 0 1 :CALCulate:EVM:PIlot:TRACk:AMPLitude? |
| Example | CALC:EVM:PIL:TRAC:AMPL 1 CALC:EVM:PIL:TRAC:AMPL? |
| Notes | Only used in 802.11a/g/j/p (OFDM), 801.11g (DSSS-OFDM), 802.11n, 802.11ac or 802.11ah measurement |
| Preset | OFF |
| State Saved | Saved in instrument state. |
| Range | On Off |
| Backwards Compatibility SCPI | [:SENSe] :EVM:TRACk:AMP OFF ON 0 1 [:SENSe] :EVM:TRACk:AMP? |
| Initial S/W Revision | A.10.01 |

Track Phase

The Track Phase parameter specifies whether the analyzer tracks phase changes in the pilot subcarriers. When Track Phase is selected, the analyzer applies pilot subcarrier phase error correction to the pilot and data subcarriers. This is in addition to Track Amplitude and Track Timing error correction if selected.

| | |
|-----------------------|---|
| Key Path | Meas Setup, Advanced, Pilot Track |
| Mode | WLAN |
| Remote Command | :CALCulate:EVM:PILot:TRACk:PHASe OFF ON 0 1 :CALCulate:EVM:PILot:TRACk:PHASe? |
| Example | CALC:EVM:PIL:TRAC:PHAS 0 CALC:EVM:PIL:TRAC:PHAS? |
| Notes | Only used in 802.11a/g/j/p (OFDM), 801.11g (DSSS-OFDM), 802.11n, 802.11ac or 802.11ah measurement |
| Preset | ON |
| State Saved | Saved in instrument state. |
| Range | On Off |
| Initial S/W Revision | A.10.01 |

Track Timing

The Track Timing parameter specifies whether the analyzer tracks timing changes in the pilot subcarriers. When Track Timing is selected the analyzer applies pilot subcarrier timing error correction (frequency offset correction) to the pilot and data subcarriers. This is in addition to Track Amplitude and Track Phase error correction if selected.

| | |
|-------------------------------------|---|
| Key Path | Meas Setup, Advanced, Pilot Track |

| Example | CALC:EVM:PIL:TRAC:TIM 1 CALC:EVM:PIL:TRAC:TIM? |
| Notes | Only used in 802.11a/g/j/p (OFDM), 801.11g (DSSS-OFDM), 802.11n, 802.11ac or 802.11ah measurement |
| Preset | OFF |
| State Saved | Saved in instrument state. |
| Range | On Off |
| Backwards Compatibility SCPI | [:SENSe] :EVM:TRACk:TIMing |
| Initial S/W Revision | A.10.01 |

Sync Training Sequence

This parameter specifies synchronization method to use when synchronizing to the start of the OFDM burst.

A value of Short means to search for and synchronize to an 802.11a/g/j/p (OFDM) preamble short symbol sequence.

A value of Long means to search for and synchronize to an 802.11a/g (OFDM) preamble long symbol sequence (also called the channel estimation sequence).

| | |
|-------------------------------------|--|
| Key Path | Meas Setup, More, Advanced |
| Mode | WLAN |
| Remote Command | [:SENSe] :EVM:STSequence LONG SHORt [:SENSe] :EVM:STSequence? |

| Notes | Only used in 802.11a/g/j/p (OFDM), 801.11g (DSSS-OFDM) measurement, otherwise it will be grayed out. Forceful message “-221 Setting Conflict, Sync Training Sequence is not available for current Radio Setting” |
| Preset | SHORt |
| State Saved | Saved in instrument state. |
| Backwards Compatibility SCPI | [:SENSe] :EVM:SYNCseq LONG SHORt [:SENSe] :EVM:SYNCseq? |
| Initial S/W Revision | A.10.01 |

Equalizer Training

This specifies how the equalizer is initialized, or “trained”. The valid values are Channel Estimation Seq Only and Channel Estimation Seq & Data. The value Channel Estimation Seq Only, which is the default, specifies that the equalizer is trained using only the channel estimation sequence (also called the “long sync”) portion of the burst preamble. The 802.11a/g/n standards imply that the equalizer should be implemented this way when measuring EVM, and this matches how a real receiver would probably implement an equalizer.

The value and Channel Estimation Seq & Data specifies that the equalizer should be trained using both the channel estimation sequence and the entire data portion of the burst. This usually gives a more accurate estimate of the equalizer response. It also typically lowers the EVM by between one and three dB.

| | |

| Backwards Compatibility SCPI | [:SENSe] :EVM:IQNorm OFF ON 0 1 [:SENSe] :EVM:IQNorm? |
| Initial S/W Revision | A.10.01 |

I/Q Compensation

This parameter allows to turn On or Off the compensation for IQ Gain Imbalance, IQ Quadrature Error, and IQ Timing Skew found in the input signal.

| | |
|-----------------------|--|
| Key Path | Meas Setup, Advanced, More |
| Mode | WLAN |
| Remote Command | [:SENSe] :EVM:COMPensate OFF ON 0 1 [:SENSe] :EVM:COMPensate? |
| Example | EVM:COMP ON EVM:COMP? |
| Notes | If the Radio Std is not 802.11n, it will be grayed out .Forceful message “-221 Setting confict, IQ |

| | |
|----------------------|--|
| | Compensation is not available for current Radio Setting" |
| Preset | Off |
| State Saved | Saved in instrument state. |
| Range | On Off |
| Initial S/W Revision | A.10.01 |

Spectrum

Sets a spectrum to either normal or to inverted for demodulation related measurements. If set to INVert, the upper and lower spectrums are swapped.

The invert function conjugates the spectrum, which is equivalent to taking the negative of the quadrature component in demodulation. The correct setting (Normal or Invert) depends on whether the signal at the input of the instrument has a high or a low side mix.

| | |
|-------------------------------------|--|

| Preset | FOURier |

| | |
|----------------------|----------------------------|
| State Saved | Saved in instrument state. |
| Range | Direct Fourier |
| Initial S/W Revision | A.14.00 |

MIMO Type

This parameter specifies the MIMO Type.

| | |
|-----------------------|---|
| Key Path | Meas Setup |
| Mode | WLAN |
| Remote Command | [:SENSe] :EVMMimo:TYPe M2M2 M3M3M4M4 [:SENSe] :EVMMimo:TYPe? |
| Example | EVMM:TYP M3M3 EVMM:TYP? |
| Notes | There are constraints on remote analyzer configuration for selected MIMO type in E6640A. If it's MIMO 2x2, then valid remote analyzer connection is TRX1 (Master) + TRX2 (Slave) or TRX3 (Master) + TRX4 (Slave) 2-channel configuration. If it's MIMO 3x3, then valid remote analyzer connection is TRX1 (Master) + TRX2 (Slave) + TRX3 (Slave) 3-Channel configuration. If it's MIMO 4x4, then valid remote analyzer connection is TRX1 (Master) + TRX2 (Slave) + TRX3 (Slave) + TRX4 (Slave) 4-Channel configuration. This check is imposed when doing MIMO EVM measurement. If invalid remote configuration for current MIMO type is detected, then popup error "Setting Conflict; Invalid remote configuration for current MIMO type". |
| Preset | M2M2 |
| State Saved | Saved in instrument state. |
| Range | M2M2 M3M3 M4M4 |
| Initial S/W Revision | A.14.00 |

Meas Preset

Returns parameters for the current measurement to those set by the factory.

| | |
|-----------------------|-------------------------|
| Key Path | Meas Setup, More |
| Mode | WLAN |
| Remote Command | :CONFigure:EVM |
| Example | CONF:EVM |
| Initial S/W Revision | A.10.01 |

Mode

See "[Mode](#)" on page 204

Mode Preset

Returns the active mode to a known state.

Mode Preset does the following for the currently active mode:

- Aborts the currently running measurement.
- Brings up the default menu for the mode, with no active function.
- Sets measurement Global settings to their preset values for the active mode only.
- Activates the default measurement.
- Brings up the default menu for the mode.
- Clears the input and output buffers.
- Sets Status Byte to 0.

Mode Preset does not:

- Cause a mode switch
- Affect mode persistent settings
- Affect system settings
- See "[How-To Preset](#)" on page 2212 for more information.

| | |
|--------------------------------------|---|
| Key Path | Front-panel key |
| Remote Command | :SYSTem:PRESet |
| Example | :SYST:PRES |
| Notes | *RST is preferred over :SYST:PRES for remote operation. *RST does a Mode Preset, as done by the :SYST:PRES command, and it sets the measurement mode to Single measurement rather than Continuous for optimal remote control throughput. Clears all pending OPC bits. The Status Byte is set to 0. |
| Couplings | A Mode Preset aborts the currently running measurement, activates the default measurement, and gets the mode to a consistent state with all of the default couplings set. |
| Backwards Compatibility Notes | In the X-Series, the legacy "Factory Preset" has been replaced with Mode Preset, which only presets the currently active mode, not the entire instrument. In the X-Series, the way to preset the entire instrument is by using System, Restore System Defaults All, which behaves essentially the same way as restore System Defaults does on ESA and PSA. There is also no "Preset Type" as there is on the PSA. There is a green Mode Preset front-panel key that does a Mode Preset and a white-with-green-letters User Preset front-panel key that does a User Preset. The old PRESet:TYPE command is ignored (without generating an error), and SYST:PRES without a parameter does a Mode Preset, which should cover most backward code compatibility issues. The settings and correction data under the Input/Output front-panel key (examples: Input Z Corr, Ext Amp Gain, etc.) are no longer part of any Mode, so they will not be preset by a Mode Preset. They are preset using Restore Input/Output Defaults, Restore System Defaults All. Note that because User Preset does a Recall State, and all of these settings are saved in State, they ARE recalled when using |

| | |
|----------------------|------------------|
| | User Preset. |
| Initial S/W Revision | Prior to A.02.00 |

How-To Preset

The table below shows all possible presets, their corresponding SCPI commands and front-panel access (key paths). Instrument settings depend on the current measurement context. Some settings are local to the current measurement, some are global (common) across all the measurements in the current mode, and some are global to all the available modes. In a similar way, restoring the settings to their preset state can be done within the different contexts.

Auto Couple - is a measurement local key. It sets all Auto/Man parameter couplings in the measurement to Auto. Any Auto/Man selection that is local to other measurements in the mode will not be affected.

Meas Preset - is a measurement local key. Meas Preset resets all the variables local to the current measurement except the persistent ones.

Mode Preset - resets all the current mode's measurement local and measurement global variables except the persistent ones.

Restore Mode Defaults - resets ALL the Mode variables (and all the Meas global and Meas local variables), including the persistent ones.

| Type Of Preset | SCPI Command | Front Panel Access |
|--------------------------------|--|--|
| Auto Couple | :COUPle ALL | Auto Couple front-panel key |
| Meas Preset | :CONFigure:<Measurement> | Meas Setup Menu |
| Mode Preset | :SYSTem:PRESet | Mode Preset (green key) |
| Restore Mode Defaults | :INSTrument:DEFault | Mode Setup Menu |
| Restore All Mode Defaults | :SYSTem:DEFault MODEs | System Menu; Restore System Default Menu |

| Power On Last State | :SYSTEM:PON:TYPE LAST | System Menu |

Mode Setup

See "[Mode Setup](#)" on page 221

Peak Search

Displays the Peak Search menu and places the selected marker on the trace point with the maximum y-axis value for that marker's trace.

| | |
|-----------------------------|--|
| Key Path | Peak Search |
| Mode | WIMAXOFDMA |
| Remote Command | :CALCulate:EVM:MARKer[1] 2 ...12:MAXimum |
| Example | CALC:EVM:MARK2:MAX |
| Initial S/W Revision | Prior to A.02.00 |

Next Peak

Moves the selected marker to the peak that has the next highest amplitude that is less than the marker's current value.

| | |
|-----------------------------|---|
| Key Path | Peak Search |
| Mode | WIMAXOFDMA |
| Remote Command | :CALCulate:EVM:MARKer[1] 2 ...12:MAXimum:NEXT |
| Example | CALC:EVM:MARK2:MAX:NEXT |
| Initial S/W Revision | Prior to A.02.00 |

Next Pk Right

Moves the selected marker to the next peak to the right of the current marker.

| | |
|-----------------------------|--|
| Key Path | Peak Search |
| Mode | WIMAXOFDMA |
| Remote Command | :CALCulate:EVM:MARKer[1] 2 ...12:MAXimum:RIGHT |
| Example | CALC:EVM:MARK2:MAX:RIGH |
| Initial S/W Revision | Prior to A.02.00 |

Next Pk Left

Moves the selected marker to the next peak to the left of the current marker.

| | |
|-----------------------|---|
| Key Path | Peak Search |
| Mode | WIMAXOFDMA |
| Remote Command | :CALCulate:EVM:MARKer[1] 2 ...12:MAXimum:LEFT |

| | |
|----------------------|-------------------------|
| Example | CALC:EVM:MARK2:MAX:LEFT |
| Initial S/W Revision | Prior to A.02.00 |

Marker Delta

Performs the same function as the Delta 1-of-N selection key in the Marker menu. This sets the control mode for the selected marker to Delta mode. The softkey enables you to conveniently perform a peak search and change the marker's control mode to Delta without having to access two separate menus.

| | |
|----------------------|--------------------|
| Key Path | Peak Search |
| Initial S/W Revision | Prior to A.02.00 |

Pk-Pk Search

Finds and displays the amplitude and frequency (or time, if in zero span) differences between the highest and lowest y-axis value.

| | |
|-----------------------|--|
| Key Path | Peak Search, More |
| Mode | WIMAXOFDMA |
| Remote Command | :CALCulate:EVM:MARKer[1] 2 ...12:PTPeak |
| Example | CALC:EVM:MARK:PTP |
| Notes | Turns on the Marker Δ active function. |
| Dependencies | This key is not available when Coupled Markers is on. |
| Initial S/W Revision | Prior to A.02.00 |

Min Search

Moves the selected marker to the minimum y-axis value of the current trace.

| | |
|-----------------------|--|
| Key Path | Peak Search, More |
| Mode | WIMAXOFDMA |
| Remote Command | :CALCulate:EVM:MARKer[1] 2 ...12:MINimum |
| Example | CALC:EVM:MARK:MIN |
| Initial S/W Revision | Prior to A.02.00 |

Print

See "Print " on page 277

Quick Save

The Quick Save front-panel key repeats the most recent save that was performed from the Save menu, with the following exceptions:

- Register saves are not remembered as Saves for the purpose of the Quick Save function
- If the current measurement does not support the last non-register save that was performed, an informational message is generated, “File type not supported for this measurement”

Quick Save repeats the last type of qualified save (that is, a save qualified by the above criteria) in the last save directory by creating a unique filename using the Auto File Naming algorithm described below.

If Quick Save is pressed after startup and before any qualified Save has been performed, the Quick Save function performs a Screen Image save using the current settings for Screen Image saves (current theme, current directory), which then becomes the “last save” for the purpose of subsequent Quick Saves.

The Auto File Naming feature automatically generates a file name for use when saving a file. The filename consists of a prefix and suffix separated by a dot, as is standard for the Windows® file system. A default prefix exists for each of the available file types:

| Type | Default Prefix | Menu |
|-----------------------|----------------|-----------------|
| State | State_ | (Save/Recall) |
| Trace + State | State_ | (Save/Recall) |
| Screen | Screen_ | (Save/Recall) |
| Amplitude Corrections | Ampcor_ | (Import/Export) |
| Traces | Trace_ | (Import/Export) |
| Limit Lines | LLine_ | (Import/Export) |
| Measurement Result | MeasR_ | (Import/Export) |
| Capture Buffer | CapBuf_ | (Import/Export) |

A four digit number is appended to the prefix to create a unique file name. The numbering sequence starts at 0000 within each Mode for each file type and updates incrementally to 9999, then wraps to 0000 again. It remembers where it was through a Mode Preset and when leaving and returning to the Mode. It is reset by Restore Misc Defaults and Restore System Defaults and subsequent running of the instrument application. So, for example, the first auto file name generated for State files is State_0000.state. The next is State_0001, and so forth.

One of the key features of Auto File Name is that we guarantee that the Auto File Name will never conflict with an existing file. The algorithm looks for the next available number. If it gets to 9999, then it looks for holes. If it find no holes, that is no more numbers are available, it gives an error.

For example, if when we get to State_0010.state there is already a State_0010.state file in the current directory, it advances the counter to State_0011.state to ensure that no conflict will exist (and then it verifies that State_0011.state also does not exist in the current directory and advances again if it does, and so forth).

If you enter a file name for a given file type, then the prefix becomes the filename you entered instead of the default prefix, followed by an underscore. The last four letters (the suffix) are the 4-digit number.

For example, if you save a measurement results file as “fred.csv”, then the next auto file name chosen for a measurement results save will be fred_0000.csv.

NOTE

Although 0000 is used in the example above, the number that is used is actually the current number in the Meas Results sequence, that is, the number that would have been used if you had not entered your own file name.

NOTE

If the filename you entered ends with _dddd, where d=any number, making it look just like an auto file name, then the next auto file name picks up where you left off with the suffix being dddd + 1.

| | |
|----------------------|--|
| Key Path | Front-panel key |
| Notes | No remote command for this key specifically. |
| Initial S/W Revision | Prior to A.02.00 |

Recall

The **Recall** menu lets you choose what you want to recall, and where you want to recall it from. Among the types of files you can recall are **States and Traces**. In addition, an **Import (Data)** option lets you recall a number of data types stored in CSV files (as used by Excel and other spreadsheet programs).

The default paths for Recall are data type dependent and are the same as for the Save key.

| Key Path | Front-panel key |
|-------------------------------|--|
| Notes | <p>No remote command for this key specifically, but the :MMEM:LOAD command is available for specific file types. An example is :MMEM:LOAD:STATE <filename>.</p> <p>If you try to recall a State file for a mode that is not licensed or not available in the instrument, an error message will occur and the state will not change.</p> |
| Backwards Compatibility Notes | <p>In legacy analyzers, it was possible to load a state without affecting the trace data, limit lines or correction data. Similarly (since User Preset is actually loading a state), it was possible to do a User Preset without affecting the trace data, limit lines or correction data.</p> <p>In the X-Series, “state” always includes all of this data; so whenever state is loaded, all of the traces, limit lines and corrections are affected. Although this differs from previous behavior, it is desirable behavior, and should not cause adverse issues for users.</p> |
| Backwards Compatibility Notes | <p>Recall for the X-Series supports backward compatibility in the sense that you can recall a state file from any X-Series model number and any version of X-Series software. This is only possible if part of the recalling process goes through a limiting step after recalling the mode settings, at least for settings that may vary with version number, model number, option and license differences. If you try to recall a state file onto an instrument with less capability than what was available on the instrument during the save, the recall will ignore the state it doesn't support and it will limit the recalled setting to what it allows.</p> <p>Example: if the saved state includes preamp ON, but the recalling instrument does not have a preamp; the preamp is limited to OFF. Conversely, if you save a state without a preamp, the preamp is OFF in the state file. When this saved file is recalled on an instrument with a licensed preamp, the preamp is changed to OFF. Another example is if the saved state has center frequency set to 20 GHz, but the instrument recalling the saved state is a different model and only supports 13.5 GHz. In this case, the center frequency is limited along with any other frequency based settings. Since the center frequency can't be preserved in this case, the recall limiting tries to at least preserve span to keep the measurement setup as intact as possible.</p> <p>It may be appropriate to issue a warning if the state is limited on the recall; warnings do not go out to SCPI so this would only affect the manual user.</p> <p>Note that there is no state file compatibility outside of the X-Series. For example, you cannot recall a state file from ESA or PSA.</p> |
| Initial S/W Revision | Prior to A.02.00 |

State

The **Recall State** menu lets you choose a register or file from which to recall the state.

The content of a state file includes all of the settings and data required to return the analyzer as closely as possible to the Mode it was in, with the exact settings that were in place, when the save occurred. The Mode settings in each state file include the settings that are affected by Mode Preset, as well as the

additional settings affected by Restore Mode Defaults; all of the Mode’s settings. In addition, all of the settings of the **Input/Output** system are included, even though they are outside of the Mode’s state, because they are needed to restore the complete setup. Persistent System settings (for example, GPIB address) are not affected by either a Mode Preset or Restore Mode Defaults, nor are they included in a saved State file.

Since each state file is only for one Mode, the settings for other Modes are unaffected when it is loaded. **Recall State** will cause a mode switch if the state being recalled is not from the current active mode.

After the recall completes, the message "File <filename> recalled" or “Recalled State Register <register number>” is displayed.

For rapid recalls, the State menu lists 16 registers that you can choose from to recall. Pressing a Register key initiates the recall. You can also select a file from which to recall.

The default path for all State Files is:

My Documents\<<mode name>\state

where <mode name> is the parameter used to select the mode with the INST:SEL command (for example, SA for the Spectrum Analyzer).

See "[More Information](#)" on page 2222.

| Key Path | Recall |
|-----------------------|--|
| Mode | All |
| Remote Command | :MMEMory:LOAD:STATe <filename> |
| Example | :MMEM:LOAD:STAT "myState.state" This recalls the file myState.state on the default path |
| Example | MMEM:LOAD:STAT "MyStateFile.state" This loads the state file data (on the default file directory path) into the instrument state. |
| Notes | <p>When you pick a file to recall, the analyzer first verifies that the file is recallable in the current instrument by checking the software version and model number of the instrument. If everything matches, a full recall proceeds by aborting the currently running measurement, clearing any pending operations, and then loading the State from the saved state file. You can open state files from any mode, so recalling a State file switches to the mode that was active when the save occurred. After switching to the mode of the saved state file, mode settings and data (if any for the mode) are loaded with values from the saved file. The saved measurement of the mode becomes the newly active measurement and the data relevant to the measurement (if there is any) is recalled.</p> <ul style="list-style-type: none"> • If there is a mismatch between file version or model number or instrument version or model number, the recall function tries to recall as much as possible and returns a warning message. It may limit settings that differ based on model number, licensing or version number. <p>After recalling the state, the Recall State function does the following:</p> <ul style="list-style-type: none"> • Makes the saved measurement for the mode the active measurement. • Clears the input and output buffers. • Status Byte is set to 0. • Executes a *CLS <p>If the file specified is empty an error is generated. If the specified file does not exist, another error is generated. If there is a mismatch between the file and the proper file type, an error is generated. If</p> |

| | |
|-------------------------------------|---|
| | there is a mismatch between file version or model number or instrument version or model number, a warning is displayed. Then it returns to the State menu and File Open dialog goes away. After the Recall, the analyzer exits the Recall menu and returns to the previous menu. |
| Backwards Compatibility SCPI | :MMEMory:LOAD:STATe 1,<filename> For backwards compatibility, the above syntax is supported. The "1" is simply ignored. |
| Initial S/W Revision | Prior to A.02.00 |

More Information

In measurements that support saving Traces, for example, Swept SA, the Trace data is saved along with the State in the State file. When recalling the State, the Trace data is recalled as well. Traces are recalled exactly as they were stored, including the writing mode and update and display modes. If a Trace was updating and visible when the State was saved, it will come back updating and visible, and its data will be rewritten right away. When you use State to save and recall traces, any trace whose data must be preserved should be placed in View or Blank mode before saving.

The following table describes the Trace Save and Recall possibilities:

| | | |
|---|--|--|
| You want to recall state and one trace's data, leaving other traces unaffected. | Save Trace+State from 1 trace. Make sure that no other traces are updating (they should all be in View or Blank mode) when the save is performed. | On Recall, specify the trace you want to load the one trace's data into. This trace will load in View. All other traces' data will be unaffected, although their trace mode will be as it was when the state save was performed. |
| You want to recall all traces | Save Trace+State from ALL traces. | On Recall, all traces will come back in View (or Blank if they were in Blank or Background when saved) |
| You want all traces to load exactly as they were when saved. | Save State | On recall, all traces' mode and data will be exactly as they were when saved. Any traces that were updating will have their data immediately overwritten. |

From File...

When you press "From File", the analyzer brings up a Windows dialog and a menu entitled "File Open." This menu allows you to navigate to the various fields in the Windows dialog without using a keyboard or mouse. The **Tab** and **Arrow** keys can also be used for dialog navigation.

Listed below are the functions of the various fields in the dialog, and the corresponding softkeys:

Open

Performs the recall of the specified file. While the recall is being performed, the floppy icon appears briefly in the Meas bar.

File/Folder List

Enables you to navigate to the center of the dialog that contains the list of files and folders. Once here you can get information about the file and use the tab keys to navigate to the other fields in the dialog, such as Look In.

Look In

The **Look In** field shows the path from which the file will be recalled and allows you to change the path using the up and down arrow keys to navigate to other paths; the Enter key to open a directory; and the Backspace key to go back one directory. The **Look In field** first uses the last path from the Save As dialog **Save In:** path for that same file type. There is no softkey for directly navigating to the Look In field, but you can use the left tab to get here from the File/Folder List.

User specified paths are remembered when you leave and return to a Mode and are reset back to the default using **Restore Mode Defaults**.

Sort

Accesses a menu that enables you to sort the files within the File Open dialog. Only one sorting type can be selected at a time and the sorting happens immediately. The sorting types are **By Date**, **By Name**, **By extension**, and **By Size**.

Files of Type

This field shows the file suffix for the type of file you have selected to recall. For example, if you navigated here while recalling State, "Mode state (*.state)" is in the field. If you navigated here while recalling Trace, ""Mode state (*.trace)" is in the field. If you navigated here while importing a trace data file, "Trace Data (*.csv)" is in the field. For some file types, there is more than one choice in the dropdown menu, which you can select by using the up and down arrow keys and Enter.

Up One Level

This key corresponds to the icon of a folder with the up arrow that is in the tool bar of the dialog. When pressed, it causes the file and folder list to navigate up one level in the directory structure. The Backspace key does the same thing.

Cancel

This key corresponds to the **Cancel** selection in the dialog. It causes the current **Open** request to be cancelled. The ESC key does the same thing.

| Key Path | Recall, State |
|----------------------|---|
| Notes | Brings up the Open dialog for recalling a State Save Type |
| Initial S/W Revision | Prior to A.02.00 |

Edit Register Names

You may enter a custom name on any of the Register keys, to help you remember what you are using that state to save. To do this, press the **Edit Register Names** key, choose the register whose name you wish to edit, and then enter the desired label using the Alpha Editor or an external PC keyboard.

The maximum number of characters that can be added is 30. In most cases, 30 characters will fit on two lines of the key.

For more information and the SCPI command, see Edit Register Names under the **Save, State** function.

| Key Path | Recall, State |
|----------------------|---|
| Mode | All |
| Dependencies | N9060A-7FP or N9060B-2FP license required to edit the register names. When the feature is not licensed, sending the SCPI command generates an error, -221, "Settings conflict;Option not available" |
| Initial S/W Revision | A.11.00 |

Register 1 thru Register 16

Selecting any one of these register keys causes the State of the mode from the specified Register to be recalled. Each of the register keys annotates whether it is empty or at what date and time it was last

modified. In addition, you can use the **Edit Register Names** key under **Save, State** to enter custom names for each register.

Registers are shared by all modes, so recalling from any one of the registers will cause a mode switch to the mode that was active when the save to the Register occurred.

Although these 16 registers are the only registers available from the front panel, there are 128 state registers available in the instrument. Registers 17–128 are only available from the SCPI interface, using the *RCL command.

After the recall completes, the message "Register <register number> recalled" appears in the message bar. If you are in the Spectrum Analyzer Mode, and you are recalling a register that was saved in the Spectrum Analyzer Mode, then after the recall, you will still be in the Recall Register menu. If the Recall causes you to switch modes, then after the Recall, you will be in the Frequency menu.

If a requested register is empty an error is generated.

| Key Path | Recall, State |
|--------------------------|---|
| Example | *RCL 1 |
| Range | 1–16 from front panel, 1–128 from SCPI |
| Readback | Date and time with seconds resolution are displayed on the key OR A custom name of up to 30 characters entered using the Save, State, Edit Register Names key OR “(empty)” if no prior save operation has been performed to this register. |
| Initial S/W Revision | Prior to A.02.00 |
| Modified at S/W Revision | Prior to A.11.00 |

Register 1 thru Register 16

Selecting any one of these register keys causes the State of the mode from the specified Register to be recalled. Each of the register keys annotates whether it is empty or at what date and time it was last modified. In addition, you can use the **Edit Register Names** key under **Save, State** to enter custom names for each register.

Registers are shared by all modes, so recalling from any one of the registers will cause a mode switch to the mode that was active when the save to the Register occurred.

Although these 16 registers are the only registers available from the front panel, there are 128 state registers available in the instrument. Registers 17–128 are only available from the SCPI interface, using the *RCL command.

After the recall completes, the message "Register <register number> recalled" appears in the message bar. If you are in the Spectrum Analyzer Mode, and you are recalling a register that was saved in the Spectrum Analyzer Mode, then after the recall, you will still be in the Recall Register menu. If the Recall causes you to switch modes, then after the Recall, you will be in the Frequency menu.

If a requested register is empty an error is generated.

| | |
|--------------------------|---|
| Key Path | Recall, State |
| Example | *RCL 1 |
| Range | 1–16 from front panel, 1–128 from SCPI |
| Readback | Date and time with seconds resolution are displayed on the key OR A custom name of up to 30 characters entered using the Save, State, Edit Register Names key OR "(empty)" if no prior save operation has been performed to this register. |
| Initial S/W Revision | Prior to A.02.00 |
| Modified at S/W Revision | Prior to A.11.00 |

Sequences

These keys allow you to import a Tab separated or .txt file that will automatically setup all the parameters required for building a Sequence. The parameters will automatically be loaded into the Stated Sequencer.

Once selected, in order to import the selected Sequence Type you must select the Open key in the Source Sequence menu.

| | |
|-----------------------|--|
| Key Path | Recall, Sequences |
| Mode | All |
| Remote Command | :MMEMory:LOAD:SEquences: SLIS ALIS SAALIS "MySequence.txt" |
| Example | :MMEM:LOAD:SEQ:SLIS "MySequence.txt" |
| Notes | Available file types are: –CSV (Comma delimited) (*.csv) –Text (Tab delimited) (*.txt) |
| Initial S/W Revision | A.05.00 |

Source Sequence

The list of parameters, that configure steps, that makes up a sequence for the Source.

The Source sequence is a sequence of flexible configurable steps that can be set anywhere in the instruments frequency range.

| | |
|----------------------|--------------------------------------|
| Key Path | Recall, Sequences |
| Example | :MMEM:LOAD:SEQ:SLIS "MySequence.txt" |
| Dependencies | Only available in XOBT |
| Initial S/W Revision | A.05.00 |

Open...

When you press "Open", the analyzer brings up a Windows dialog and a menu entitled "**File Open.**" This menu allows you to navigate to the various fields in the Windows dialog without using a keyboard or mouse. The **Tab** and **Arrow** keys can also be used for dialog navigation.

See "[From File...](#)" on page 2473 in **Recall, State**, for a full description of this dialog and menu.

| Key Path | Recall, Data |
|----------------------|--|
| Notes | The key location is mode-dependent and will vary. Brings up Open dialog for recalling a <mode specific> Save Type |
| Initial S/W Revision | Prior to A.02.00 |

Data (Import)

Importing a data file loads data that was previously saved from the current measurement or from other measurements and/or modes that produce compatible data files. The Import Menu only contains Data Types that are supported by the current measurement.

Since the commonly exported data files are in .csv format, the data can be edited by the user prior to importing. This allows you to export a data file, manipulate the data in Excel (the most common PC Application for manipulating .csv files) and then import it.

Importing Data loads measurement data from the specified file into the specified or default destination, depending on the data type selected. Selecting an Import Data menu key will not actually cause the importing to occur, since the analyzer still needs to know from where to get the data. Pressing the Open key in this menu brings up the Open dialog and Open menu that provides you with the options from where to recall the data. Once a filename has been selected or entered in the Open menu, the recall occurs as soon as the Open button is pressed.

| Key Path | Recall |
|----------------------|--|
| Mode | All |
| Notes | The menu is built from whatever data types are available for the mode. Some keys will be missing completely, so the key locations in the sub-menu will vary. No SCPI command directly controls the Data Type that this key controls. The Data Type is included in the MMEM:LOAD commands. |
| Dependencies | If a file type is not used by a certain measurement, it is grayed out for that measurement. The key for a file type will not show at all if there are no measurements in the Mode that support it. |
| Preset | Is not affected by Preset or shutdown, but is reset during Restore Mode Defaults |
| Readback | The data type that is currently selected |
| Initial S/W Revision | Prior to A.02.00 |

Masks

This key enables you to recall a preset mask file from the list. It is only available in SEM measurement under the Data menu: Limit Mask. Limit Mask enables setting a preset limit mask for 802.11p 5MHz and 10MHz system.

You cannot change or create the preset mask file since it is a binary file. This key is valid for the Spectrum Emission Mask measurement.

File location: "My Documents\WLAN\data.masks"

Note that "**My Documents**" is an alias to a directory and its location depends on which user is logged in. At XSA start up, all of the limit mask files in the current user's "My Documents\WLAN\data.masks" directory are overwritten.

File type: Binary

Filename:

11p_5MHz_A.mask

11p_5MHz_B.mask

11p_5MHz_C.mask

11p_5MHz_D.mask

11p_10MHz_A.mask

11p_10MHz_B.mask

11p_10MHz_C.mask

11p_10MHz_D.mask

File extension: .mask

Selecting OPEN under the Import Data menu, opens the above directory enabling you to select a mask file.

Example:

File Location: My Documents/WLAN/data/masks

File Name: 11p_5MHz_A.mask

| | |
|--------------------------|----------------------------------|
| parameter_table_23.52557 | 52.93253 |
| Key Path | Recall, Data |
| Mode | WLAN |
| Remote Command | MMEMoRY:LOAD:MASK <string> |
| Example | MMEM:LOAD:MASK "11p_5MHz_A.mask" |
| Initial S/W Revision | A.11.00 |
| Help Map ID | 45559 |

Capture Buffer

Capture buffer functionality is only available when measurement is Mod Accuracy and radio standard is not 802.11ac 80+80MHz. The captured data is raw data which is not processed.

| | |
|--------------------------|---|
| parameter_table_23.52557 | 52.93253 |
| Key Path | Recall, Data |
| Mode | WLAN |
| Example | MMEM:LOAD:CAPT "MyCaptureData.bin" This loads the file of capture data (on the default file directory path) into the instrument. |
| Dependencies | Capture buffer data is only available when measurement is Mod Accuracy and radio standard is not 802.11ac 80+80MHz. In other situation, this key is grayed out. |
| Initial S/W Revision | A.11.00 |
| Help Map ID | 45560 |

Open...

When you press "Open", the analyzer brings up a Windows dialog and a menu entitled "**File Open.**" This menu allows you to navigate to the various fields in the Windows dialog without using a keyboard or mouse. The **Tab** and **Arrow** keys can also be used for dialog navigation.

See "[From File...](#)" on page 2473 in **Recall, State**, for a full description of this dialog and menu.

| | |
|----------------------|--|
| Key Path | Recall, Data |
| Notes | The key location is mode-dependent and will vary. Brings up Open dialog for recalling a <mode specific> Save Type |
| Initial S/W Revision | Prior to A.02.00 |

Restart

The Restart function restarts the current sweep, or measurement, or set of averaged/held sweeps or measurements. If you are Paused, pressing Restart does a Resume.

The Restart function is accessed in several ways:

- Pressing the Restart key
- Sending the remote command INIT:IMMEDIATE
- Sending the remote command INIT:RESTART

See "[More Information](#)" on page 2230

| Key Path | Front-panel key |
|--------------------------------------|--|
| Remote Command | :INITiate[:IMMEDIATE] :INITiate:RESTART |
| Example | :INIT:IMM :INIT:REST |
| Notes | :INITiate:RESTART and :INITiate:IMMEDIATE perform exactly the same function. |
| Couplings | Resets average/hold count k. For the first sweep overwrites all active (update=on) traces with new current data. For application modes, it resets other parameters as required by the measurement. |
| Status Bits/OPC dependencies | This is an Overlapped command. The STATus:OPERation register bits 0 through 8 are cleared. The STATus:QUESTionable register bit 9 (INTegrity sum) is cleared. The SWEEPING bit is set. The MEASURING bit is set. |
| Backwards Compatibility Notes | For Spectrum Analysis mode in ESA and PSA, the Restart hardkey and the INITiate:RESTART command restart trace averages (displayed average count reset to 1) for a trace in Clear Write , but did not restart Max Hold and Min Hold . In the X-Series, the Restart hardkey and the INITiate:RESTART command restart not only Trace Average , but MaxHold and MinHold traces as well. For wireless comms modes in ESA and PSA, the Restart hardkey and the INITiate:RESTART command restart every measurement, which includes all traces and numeric results. There is no change to this operation. |
| Initial S/W Revision | Prior to A.02.00 |

More Information

The **Restart** function first aborts the current sweep/measurement as quickly as possible. It then resets the sweep and trigger systems, sets up the measurement and initiates a new data measurement sequence with a new data acquisition (sweep) taken once the trigger condition is met.

If the analyzer is in the process of aligning when **Restart** is executed, the alignment finishes before the restart function is performed.

Even when set for Single operation, multiple sweeps may be taken when Restart is pressed (for example, when averaging/holding is on). Thus when we say that **Restart** "restarts a measurement," we may mean:

- It restarts the current sweep
- It restarts the current measurement
- It restarts the current set of sweeps if any trace is in Trace Average, Max Hold or Min Hold
- It restarts the current set of measurements if Averaging, or Max Hold, or Min Hold is on for the measurement
- depending on the current settings.

With **Average/Hold Number** (in **Meas Setup** menu) set to 1, or Averaging off, or no trace in Trace Average or Hold, a single sweep is equivalent to a single measurement. A single sweep is taken after the trigger condition is met; and the analyzer stops sweeping once that sweep has completed. However, with **Average/Hold Number** >1 and at least one trace set to **Trace Average, Max Hold, or Min Hold (SA Measurement)** or **Averaging on (most other measurements)**, multiple sweeps/data acquisitions are taken for a single measurement. The trigger condition must be met prior to each sweep. The sweep is stopped when the average count k equals the number N set for **Average/Hold Number**. A measurement average usually applies to all traces, marker results, and numeric results; but sometimes it only applies to the numeric results.

Once the full set of sweeps has been taken, the analyzer will go to idle state. To take one more sweep without resetting the average count, increment the average count by 1, by pressing the step up key while **Average/Hold Number** is the active function, or sending the remote command `CALC:AVER:TCON UP`.

Save

The **Save** menu lets you choose what you want to save and where you want to save it. Among the types of files you can save are **States**, **Traces**, and **Screen Images**. In addition, an **Export (Data)** option lets you save a number of data types as CSV files for easy import into Excel and other spreadsheet programs.

| | |
|-----------------------------|---|
| Key Path | Front-panel key |
| Mode | All |
| Notes | No remote command for this key specifically, but the :MMEM:STORe command is available for specific file types. An example is :MMEM:STOR:STATe <filename>. |
| Initial S/W Revision | Prior to A.02.00 |

State

The Save State menu lets you choose a register or file for saving the state.

The content of a state file includes all of the settings and data required to return the analyzer as closely as possible to the Mode it was in, with the exact settings which were in place, when the save occurred. The Mode settings in each state file include the settings that are affected by Mode Preset, as well as the additional settings affected by Restore Mode Defaults; all of the Mode's settings. In addition, all of the settings of the **Input/Output** system are included, even though they are outside of the Mode's state, because they are needed to restore the complete setup. Persistent **System** settings (for example, Verbose SCPI) are not affected by either Mode Preset or Restore Mode Defaults, nor are they included in a saved State file.

After the save completes, the message "File <filename> saved" or "State Register <register number> saved" is displayed.

For rapid saving, the State menu lists 16 registers to save to. Pressing a Register key initiates the save. You can also select a file to save to.

The default path for all State Files is:

My Documents\<<mode name>\state

where <mode name> is the parameter used to select the mode with the INST:SEL command (for example, SA for the Spectrum Analyzer).

| | |
|-----------------------|---|
| Key Path | Save |
| Mode | All |
| Remote Command | :MMEMory:STORe:STATe <filename> |
| Example | MMEM:STOR:STATe "MyStateFile.state" This stores the current instrument state data in the file MyStateFile.state in the default directory. |
| Notes | Both single and double quotes are supported for any filename parameter over remote. After saving to a register, that register's menu key is updated with the date the time, unless a custom label has been entered for that key. After saving to a register, you remain in the Save State menu, so that you can see the Register key |

update. After saving to a file, the analyzer automatically returns to the previous menu and any Save As dialog goes away.

| | |
|-------------------------------------|-----------------------------------|
| Backwards Compatibility SCPI | :MMEMoRY:STORe:STATe 1,<filename> |
| Initial S/W Revision | Prior to A.02.00 |

To File . . .

When you press “To File”, the analyzer brings up a Windows dialog and a menu entitled “**Save As.**” This menu allows you to navigate to the various fields in the Windows dialog without using a keyboard or mouse. The **Tab** and **Arrow** keys can also be used for dialog navigation.

The Listed below

are the functions of the various fields in the dialog, and the corresponding softkeys:

Save

Performs the save to the specified file of the selected type. If the file already exists, a dialog will appear that allows you to replace the existing file by selecting **OK**, or you can **Cancel** the request. If you select **OK**, the file will be overwritten. Using the C: drive is strongly discouraged, since it runs the risk of being overwritten during an instrument software upgrade.

While the save is being performed, the floppy icon appears briefly in the Meas bar.

File/Folder List

Enables you to navigate to the center of the dialog that contains the list of files and folders. Once here you can get information about the file and use the tab keys to navigate to the other fields in the dialog, such as Save In.

Save In

The Save In field shows the path to which the file will be saved and allows you to change the path using the up and down arrow keys to navigate to other paths; the Enter key to open a directory; and the Backspace key to go back one directory. The **Save In field** defaults to the default path for this type of file and remembers the last path you used to save this type of file. There is no softkey for directly navigating to the Save In field but you can use left tab to get here from the File/Folder List.

User specified paths are remembered when you leave and return to a Mode and are reset back to the default using **Restore Mode Defaults**.

File Name

The **File Name** field is initially loaded with an automatically generated filename specific to the appropriate Save Type. The automatically generated filename is guaranteed not to conflict with any filename currently in the directory. You may replace or modify this filename using the File Name key. See the ["Quick Save " on page 2469](#) documentation for more on the automatic file naming algorithm.

When you press the **File Name** key the analyzer displays the Alpha Editor. Use the knob to choose the letter to add and the front-panel Enter key to add the letter to the file name. The BK character moves you back and the FW character moves you forward in the filename. The Select key on the front panel generates a space character. When you are done entering the filename press the **Done** softkey. This returns back to the **File Open** dialog and menu, but does not cause the save to occur.

Save As Type

This field shows the file suffix for the type of file you have selected to save. For example, if you navigated here while saving State, "Mode state (*.state)" is in the field. If you navigated here from saving Trace, ""Mode state (*.trace)" is in the field. If you navigated here while exporting a trace data file, "Trace Data (*.csv)" is in the field. For some file types, there is more than one choice in the dropdown, which you can select by using the up and down arrow keys and Enter.

Up One Level

This key corresponds to the icon of a folder with the up arrow that is in the tool bar of the dialog. When pressed, it causes the file and folder list to navigate up one level in the directory structure. The Backspace key does the same thing.

Create New Folder

This key corresponds to the icon of a folder with the "*" that is in the tool bar of the dialog. When pressed, a new folder is created in the current directory with the name **New Folder** and you can enter a new folder name using the Alpha Editor.

Cancel

This key corresponds to the **Cancel** selection in the dialog. It causes the current **Save As** request to be cancelled. The ESC key does the same thing.

| | |
|----------------------|---|
| Key Path | Save, State |
| Mode | All |
| Notes | Brings up Save As dialog for saving a State Save Type |
| Initial S/W Revision | Prior to A.02.00 |

Edit Register Names

You may enter a custom name on any of the Register keys, to help you remember what you are using that state to save. To do this, press the **Edit Register Names** key, choose the register whose name you wish to edit, and then enter the desired label using the Alpha Editor or an external PC keyboard.

The maximum number of characters that can be added is 30. In most cases, 30 characters will fit on two lines of the key.

See "[More Information](#)" on page 2235

| | |
|-----------------------|--|
| Key Path | Save, State |
| Mode | All |
| Remote Command | :MMEMory:REGister:STATe:LABel <reg number>,"label" :MMEMory:REGister:STATe:LABel? <reg number> |
| Example | :MMEM:REG:STAT:LAB 1,"my label" |
| Notes | <reg number> is an integer from 1 to 16. If the SCPI specifies an invalid register number an error message is generated, -222,"Data out of range;Invalid register label number" "label" is a string from 0 to 30 characters in length. If a label exceeds 30 characters, an error message is generated, -150,"String data error;Label clipped to 30 characters" "label" of length 0 erases the custom label and restores the default (time and date) label. E.g.: :MMEM:REG:STAT:LAB 1,"" |
| Dependencies | N9060A-7FP or N9060B-2FP license required to edit the register names. When the feature is not licensed, sending this command generates an error, -221,"Settings conflict;Option not available" |
| Preset | The names are unaffected by Preset or power cycle but are set to the default label (time and date) on a "Restore System Defaults->Misc" |
| Initial S/W Revision | A.11.00 |

More Information

When you edit one of the register names, the time and date field will be replaced by the custom name.

If you delete all the characters in the custom name, it restores the default (time and date).

The register names are stored within the state files, but they are not part of the instrument state; that is, once you have edited a register name, loading a new state will not change that register name. Another consequence of this is that the names will be persistent through a power cycle. Also, if a named state file is transferred to another analyzer, it will bring its custom name along with it.

If you try to edit the name of an empty register, the analyzer will first save the state to have a file to put the name in. If you load a named state file into an analyzer with older firmware it will ignore the metadata.

The *SAV and *RCL commands will not be affected by the custom register names, nor will the MMEM commands.

Register 1 thru Register 16

Selecting any one of these register menu keys causes the State of the currently active mode to be saved to the specified Register. The registers are provided for rapid saving and recalling, since you do not need to specify a filename or navigate to a file. Each of the register menu keys annotates whether it is empty or at what date and time it was last modified. In addition, you can use the **Edit Register Names** key to enter custom names for each register.

Although these 16 registers are the only registers available from the front panel, there are 128 state registers available in the instrument. Registers 17–128 are only available from the SCPI interface, using the *SAV command.

There is one set of 128 state registers in the instrument, not one set for each Mode. When a state is saved, the Mode it was saved from is saved with it; then when it is recalled, the instrument switches to that Mode.

After the save completes, the corresponding register menu key annotation is updated with the date and time and the message "Register <register number> saved" is displayed.

| | |
|--------------------------|--|
| Key Path | Save, State |
| Mode | All |
| Example | *SAV 1 |
| Range | 1–16 from front panel, 1–128 from SCPI |
| Readback | Date and time with seconds resolution are displayed on the key OR A custom name of up to 30 characters entered using the Edit Register Names key OR “(empty)” if no prior save operation has been performed to this register. |
| Initial S/W Revision | Prior to A.02.00 |
| Modified at S/W Revision | A.11.00 |

Register 1 thru Register 16

Selecting any one of these register menu keys causes the State of the currently active mode to be saved to the specified Register. The registers are provided for rapid saving and recalling, since you do not need to specify a filename or navigate to a file. Each of the register menu keys annotates whether it is empty or at what date and time it was last modified. In addition, you can use the **Edit Register Names** key to enter custom names for each register.

Although these 16 registers are the only registers available from the front panel, there are 128 state registers available in the instrument. Registers 17–128 are only available from the SCPI interface, using the *SAV command.

There is one set of 128 state registers in the instrument, not one set for each Mode. When a state is saved, the Mode it was saved from is saved with it; then when it is recalled, the instrument switches to that Mode.

After the save completes, the corresponding register menu key annotation is updated with the date and time and the message "Register <register number> saved" is displayed.

| | |
|--------------------------|--|
| Key Path | Save, State |
| Mode | All |
| Example | *SAV 1 |
| Range | 1–16 from front panel, 1–128 from SCPI |
| Readback | Date and time with seconds resolution are displayed on the key OR A custom name of up to 30 characters entered using the Edit Register Names key OR “(empty)” if no prior save operation has been performed to this register. |
| Initial S/W Revision | Prior to A.02.00 |
| Modified at S/W Revision | A.11.00 |

Mass Storage Catalog (Remote Command Only)

| | |
|-----------------------|---|
| Key path | SCPI Only |
| Remote Command | :MMEMory:CATalog? [<directory_name>] |
| Notes | The string must be a valid logical path. Queries disk usage information (drive capacity, free space available) and obtains a list of files and directories in a specified directory in the following format: <numeric_value>,<numeric_value>,{<file_entry>} It returns two numeric parameters and as many strings as there are files and directories. The first parameter indicates the total amount of storage currently used in bytes. The second parameter indicates the total amount of storage available, also in bytes. The <file_entry> is a string. Each <file_entry> indicates the name, type, and size of one file in the directory list: <file_name>,<file_type>,<file_size> As the windows file system has an extension that indicates file type, <file_type> is always empty. <file_size> provides the size of the file in bytes. For directories, <file_entry> is surrounded by square brackets and both <file_type> and <file_size> are empty |
| Initial S/W Revision | Prior to A.02.00 |

Mass Storage Change Directory (Remote Command Only)

| | |
|-----------------------|--|
| Key path | SCPI Only |
| Remote Command | :MMEMory:CDIRectory [<directory_name>] :MMEMory:CDIRectory? |

| | |
|----------------------|---|
| Notes | <p>The string must be a valid logical path.</p> <p>Changes the default directory for a mass memory file system. The <directory_name> parameter is a string. If no parameter is specified, the directory is set to the *RST value.</p> <p>At *RST, this value is set to the default user data storage area, that is defined as System.Environment.SpecialFolder.Personal.</p> <p>Query returns full path of the default directory.</p> |
| Initial S/W Revision | Prior to A.02.00 |

Mass Storage Copy (Remote Command Only)

| | |
|-----------------------|--|
| Key path | SCPI Only |
| Remote Command | :MMEMory:COpy <string>,<string>[,<string>,<string>] |
| Notes | <p>The string must be a valid logical path.</p> <p>Copies an existing file to a new file or an existing directory to a new directory.</p> <p>Two forms of parameters are allowed. The first form has two parameters. In this form, the first parameter specifies the source, and the second parameter specifies the destination.</p> <p>The second form has four parameters. In this form, the first and third parameters specify the source. The second and fourth parameters specify the directories. The first pair of parameters specifies the source. The second pair specifies the destination. An error is generated if the source doesn't exist or the destination file already exists.</p> <p>This command will generate an "access denied" error if the destination is a restricted folder (e.g., C:\Windows) and the current user does not have Power User or Administrator privileges.</p> |

Mass Storage Device Copy (Remote Command Only)

This command transfers data to/from a file and a peripheral device.

| | |
|-----------------------|---|
| Key path | SCPI Only |
| Remote Command | :MMEMory:COpy:DEvice <source_string>,<dest_string> |
| Notes | <p>The strings must be a valid logical path or a valid device keyword. If the dest_string is a device keyword, the data is copied from the source file to the device. If the source_string is a device keyword, the data is copied to the source file from the device.</p> <p>Valid device keywords are:</p> <p>SNS (smart noise source)</p> <p>An error is generated if the file or device is not found.</p> |

Mass Storage Delete (Remote Command Only)

| | |
|-----------------------|--|
| Key path | SCPI Only |
| Remote Command | :MMEMory:DElete <file_name>[,<directory_name>] |

| | |
|----------------------|---|
| Notes | The string must be a valid logical path. Removes a file from the specified directory. The <file_name> parameter specifies the file name to be removed. This command will generate an “access denied” error if the file is in a restricted folder (e.g., C:\Windows) and the current user does not have Power User or Administrator privileges. |
| Initial S/W Revision | Prior to A.02.00 |

Mass Storage Data (Remote Command Only)

Creates a file containing the specified data OR queries the data from an existing file.

| | |
|-----------------------|--|
| Key path | SCPI Only |
| Remote Command | :MMEMory:DATA <file_name>, <data> :MMEMory:DATA? <file_name> |
| Notes | The string must be a valid logical path. The command form is MMEMory:DATA <file_name>,<data>. It loads <data> into the file <file_name>. <data> is in 488.2 block format. <file_name> is string data. The query form is MMEMory:DATA? <file_name> with the response being the associated <data> in block format. |
| Initial S/W Revision | Prior to A.02.00 |

Mass Storage Make Directory (Remote Command Only)

| | |
|-----------------------|---|
| Key path | SCPI Only |
| Remote Command | :MMEMory:MDIRectory <directory_name> |
| Notes | The string must be a valid logical path. Creates a new directory. The <directory_name> parameter specifies the name to be created. This command will generate an “access denied” error if the new directory would be in a restricted folder (e.g., C:\Windows) and the current user does not have Power User or Administrator privileges. |
| Initial S/W Revision | Prior to A.02.00 |

Mass Storage Move (Remote Command Only)

| | |
|-----------------------|---|
| Key path | SCPI Only |
| Remote Command | :MMEMory:MOVE <string>,<string>[,<string>,<string>] |
| Notes | The string must be a valid logical path. Moves an existing file to a new file or an existing directory to a new directory. Two forms of parameters are allowed. The first form has two parameters. In this form, the first parameter specifies the source, and the second parameter specifies the destination. The second form has four parameters. In this form, the first and third parameters specify the source. |

| | |
|----------------------|---|
| | <p>The second and fourth parameters specify the directories. The first pair of parameters specifies the source. The second pair specifies the destination. An error is generated if the source doesn't exist or the destination file already exists.</p> <p>This command will generate an "access denied" error if the destination is a restricted folder (e.g., C:\Windows) and the current user does not have Power User or Administrator privileges.</p> |
| Initial S/W Revision | Prior to A.02.00 |

Mass Storage Remove Directory (Remote Command Only)

| | |
|-----------------------|--|
| Key path | SCPI Only |
| Remote Command | :MMEMory:RDIrectory <directory_name> |
| Notes | <p>The string must be a valid logical path.</p> <p>Removes a directory. The <directory_name> parameter specifies the directory name to be removed. All files and directories under the specified directory shall also be removed.</p> <p>This command will generate an "access denied" error if the folder is a restricted folder (e.g., C:\Windows) or is in a restricted folder and the current user does not have Power User or Administrator privileges.</p> |
| Initial S/W Revision | Prior to A.02.00 |

Sequences

These keys allow you to save a Tab separated or CSV file of the setup parameters required to build a Sequence.

In order to save you must select the Save As button and choose a destination folder.

| | |
|-----------------------|--|
| Key Path | Save, Sequences |
| Mode | All |
| Remote Command | :MMEM:STOR:SEquences: SLISt ALISt SAALISt SSTep "MySequence.txt" |
| Example | :MMEM:STOR:SEQ:SLISt "MySequence.txt" |
| Notes | <p>Available file types are:</p> <ul style="list-style-type: none"> -CSV (Comma delimited) (*.csv) -Text (Tab delimited) (*.txt) |
| Initial S/W Revision | A.05.00 |

Source Sequence

The list of parameters, that configure steps, that makes up a sequence for the Source.

The Source sequence is a sequence of flexible configurable steps that can be set anywhere in the instruments frequency range.

| | |
|----------------------|--------------------------------------|
| Key Path | Save, Sequences |
| Example | :MMEM:STOR:SEQ:SLIS "MySequence.txt" |
| Dependencies | Only available in XOBT |
| Initial S/W Revision | A.05.00 |

Save As . . .

This menu lets you select the location where you can save the Sequence. This menu is a standard Windows® dialog with Save As menu keys. The "File Name" field in the Save As dialog is initially loaded with an automatically generated filename specific to the appropriate Save Type. The automatically generated filename is guaranteed not to conflict with any filename currently in the directory. You may replace or modify this filename using the File Name softkey. See the Quick Save key documentation for more on the automatic file naming algorithm.

The default path for all Sequence Files is:

My Documents\Sequences

| | |
|----------------------|--|
| Key Path | Save, Sequences |
| Mode | All |
| Notes | Brings up Save As dialog for saving a Sequence Save Type |
| Initial S/W Revision | A.05.00 |

Data (Export)

Exporting a data file stores data from the current measurement to mass storage files. The Export Menu only contains data types that are supported by the current measurement.

Since the commonly exported data files are in .csv format, the data can be edited by you prior to importing. This allows you to export a data file, manipulate the data in Excel (the most common PC Application for manipulating .csv files) and then import it.

Selecting an Export Data menu key will not actually cause the exporting to occur, since the analyzer still needs to know where you wish to save the data. Pressing the Save As key in this menu brings up the Save As dialog and Save As menu that allows you to specify the destination file and directory. Once a filename has been selected or entered in the Open menu, the export will occur as soon as the Save key is pressed.

| | |
|----------|--|
| Key Path | Save |
| Mode | All |
| Notes | The menu is built from whatever data types are available for the mode. So the key locations in the sub menu will vary. No SCPI command directly controls the Data Type that this key controls. The Data Type is included in |

| | |
|----------------------|---|
| | the MMEM:STOR commands. |
| Dependencies | If a file type is not used by a certain measurement, that type is grayed out for that measurement. The key for a file type will not show at all if there are no measurements in the Mode that support it. |
| Preset | Is not affected by a Preset or shutdown, but is reset during Restore Mode Defaults |
| Readback | The data type that is currently selected |
| Initial S/W Revision | Prior to A.02.00 |

Meas Results

| | |
|--------------------------|---|
| parameter_table_23.52557 | 52.93253 |
| Key Path | Save, Data |
| Mode | WLAN |
| Example | MMEM:STOR:RES "MyResultsFile.csv" This stores the measurement results data in the file MyResultsFile.xml in the default directory. |
| Initial S/W Revision | A.11.00 |
| Help Map ID | 45561 |

Capture Buffer

Capture buffer functionality is only available when measurement is Mod Accuracy and radio standard is not 802.11ac 80+80MHz. The captured data is raw data which is not processed.

| | |
|--------------------------|--|
| parameter_table_23.52557 | 52.93253 |
| Key Path | Save, Data |
| Mode | WLAN |
| Example | MMEM:STOR:CAPT "MyCaptureData.bin" This stores the capture data in the file MyCaptureData.bin in the default directory. |
| Dependencies | Capture buffer data is only available when measurement is Mod Accuracy and radio standard is not 802.11ac 80+80MHz. In other measurements, this key is grayed out. |
| Initial S/W Revision | A.11.00 |
| Help Map ID | 45562 |

Save As . . .

When you press "Save As", the analyzer brings up a Windows dialog and a menu entitled "**Save As.**" This menu allows you to navigate to the various fields in the Windows dialog without using a keyboard or mouse. The **Tab** and **Arrow** keys can also be used for dialog navigation.

See "To File . . ." on page 2484 in **Save, State** for a full description of this dialog and menu.

The default path for saving files is:

For all of the Trace Data Files:

My Documents\<<mode name>\data\traces

For all of the Limit Data Files:

My Documents\<<mode name>\data\limits

For all of the Measurement Results Data Files:

My Documents\<<mode name>\data\<<measurement name>\results

For all of the Capture Buffer Data Files:

My Documents\<<mode name>\data\captureBuffer

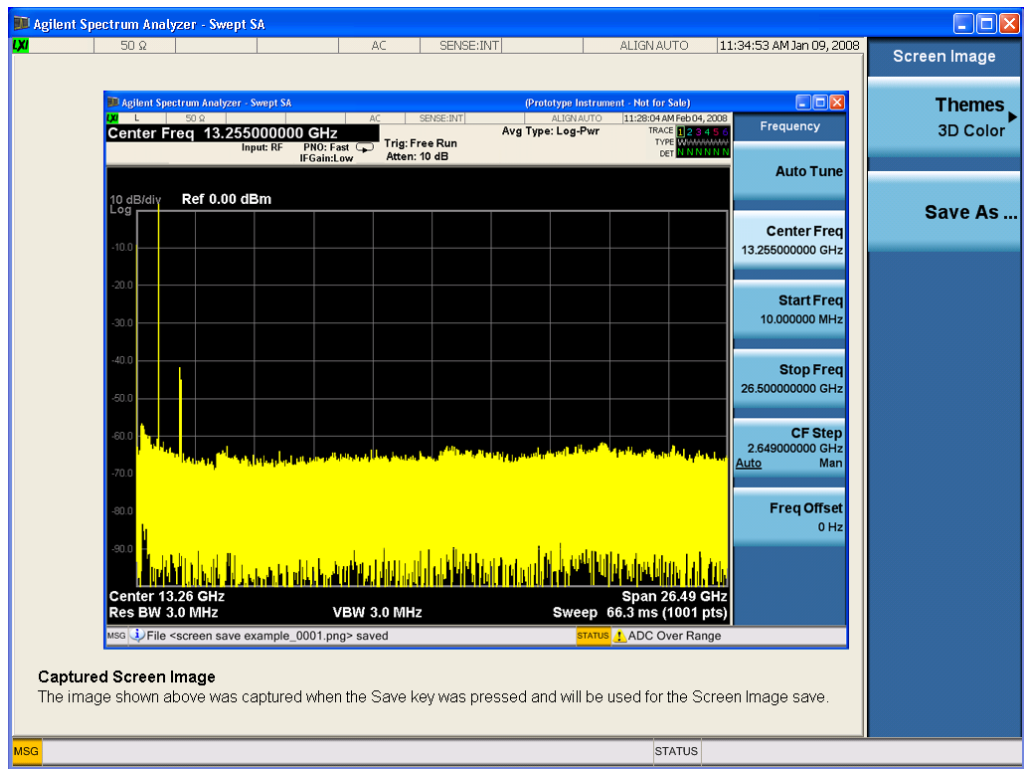

| Key Path | Save, Data |
|----------------------|--|
| Mode | All |
| Notes | The key location is mode-dependent and will vary. Brings up the Save As dialog for saving a <mode specific> Save Type. The save is performed immediately and does not wait until the measurement is complete. |
| Initial S/W Revision | Prior to A.02.00 |

Screen Image

Pressing Screen Image accesses a menu of functions that enable you to specify a format and location for the saved screen image. It brings up a menu that allows you to specify the color scheme of the Screen Image (Themes) or navigate to the Save As dialog to perform the actual save.

Screen Image files contain an exact representation of the analyzer display. They cannot be loaded back onto the analyzer, but they can be loaded into your PC for use in many popular applications.

The image to be saved is actually captured when the **Save** front panel key is pressed, and kept in temporary storage to be used if you ask for a Screen Image save. When the Screen Image key is pressed, a "thumbnail" of the captured image is displayed, as shown below:

When you continue on into the **Save As** menu and complete the Screen Image save, the image depicted in the thumbnail is the one that gets saved, showing the menus that were on the screen before going into the **Save** menus. The save is performed immediately and does not wait until the measurement is complete.

After you have completed the save, the **Quick Save** front-panel key lets you quickly repeat the last save performed, using an auto-named file, with the current screen data.

NOTE For versions previous to A.01.55, if you initiate a screen image save by navigating through the Save menus, the image that is saved will contain the Save menu softkeys, not the menus and the active function that were on the screen when you first pressed the Save front panel key.

| | |
|----------------------|--|
| Key Path | Save |
| Mode | All |
| Remote Command | :MMEMory:STORe:SCReem <filename> |
| Example | :MMEM:STOR:SCR "myScreen.png" This stores the current screen image in the file MyScreenFile.png in the default directory. |
| Initial S/W Revision | Prior to A.02.00 |

Themes

Accesses a menu of functions that enable you to choose the theme to be used when saving the screen image.

The **Themes** option is the same as the **Themes** option under the **Display** and **Page Setup** dialogs. It allows you to choose between themes to be used when saving the screen image.

| | |
|--------------------------------------|---|
| Key Path | Save, Screen Image |
| Remote Command | :MMEMory:STORe:SCReen:THEMe TDColor TDMonochrome FCOLOR FMONochrome :MMEMory:STORe:SCReen:THEMe? |
| Example | :MMEM:STOR:SCR:THEM TDM |
| Preset | 3D Color; Is not part of Preset, but is reset by Restore Misc Defaults or Restore System Defaults All and survives subsequent running of the modes. |
| Readback | 3D Color 3D Mono Flat Color Flat Mono |
| Backwards Compatibility Notes | In ESA and PSA we offer the choice of "Reverse Bitmap" or "Reverse Metafile" when saving screen images. This is much like the "Flat Color" theme available in X-Series. Also, if you selected Reverse Bitmap AND a black & white screen image, that would be much like "Flat Monochrome". In other words, each of the X-Series themes has a similar screen image type in ESA/PSA. But they are not identical. |
| Initial S/W Revision | Prior to A.02.00 |

3D Color

Selects a standard color theme with each object filled, shaded and colored as designed.

| | |
|-----------------------------|-----------------------------------|
| Key Path | Save, Screen Image, Themes |
| Example | MMEM:STOR:SCR:THEM TDC |
| Readback | 3D Color |
| Initial S/W Revision | Prior to A.02.00 |

3D Monochrome

Selects a format that is like 3D color but shades of gray are used instead of colors.

| | |
|-----------------------------|-----------------------------------|
| Key Path | Save, Screen Image, Themes |
| Example | MMEM:STOR:SCR:THEM TDM |
| Readback | 3D Mono |
| Initial S/W Revision | Prior to A.02.00 |

Flat Color

Selects a format that is best when the screen is to be printed on an ink printer.

| | |
|-----------------|-----------------------------------|
| Key Path | Save, Screen Image, Themes |
|-----------------|-----------------------------------|

| | |
|----------------------|-------------------------|
| Example | MMEM:STOR:SCR:THEM FCOL |
| Readback | Flat Color |
| Initial S/W Revision | Prior to A.02.00 |

Flat Monochrome

Selects a format that is like Flat Color. But only black is used (no colors, not even gray), and no fill.

| | |
|----------------------|-----------------------------------|
| Key Path | Save, Screen Image, Themes |
| Example | MMEM:STOR:SCR:THEM FMON |
| Readback | Flat Mono |
| Initial S/W Revision | Prior to A.02.00 |

Save As...

When you press "Save As", the analyzer brings up a Windows dialog and a menu entitled "**Save As.**" This menu allows you to navigate to the various fields in the Windows dialog without using a keyboard or mouse. The **Tab** and **Arrow** keys can also be used for dialog navigation.

See "[To File . . .](#)" on page 2484 in **Save, State** for a full description of this dialog and menu.

The default path for Screen Images is

My Documents\`<mode name>`\screen.

where `<mode name>` is the parameter used to select the mode with the INST:SEL command (for example, SA for the Spectrum Analyzer).

| | |
|----------------------|--|
| Key Path | Save, Screen Image |
| Notes | Brings up Save As dialog for saving a Screen Image Save Type |
| Initial S/W Revision | Prior to A.02.00 |

Single (Single Measurement/Sweep)

Sets the analyzer for Single measurement operation. The single/continuous state is Meas Global, so the setting will affect all the measurements. If you are Paused, pressing **Single** does a Resume.

See "[More Information](#)" on page 2247

| | |
|-------------------------------|--|
| Key Path | Front-panel key |
| Example | :INIT:CONT OFF |
| Notes | See Cont key description. |
| Backwards Compatibility Notes | <p>For Spectrum Analysis mode in ESA and PSA, the Single hardkey and the INITiate:IMM switched from continuous measurement to single measurement and restarted sweeps and averages (displayed average count reset to 1), but did not restart Max Hold and Min Hold. In the X-Series, the Single hardkey and the INITiate:IMM command initiate a sweep/ measurement/ average sequence/hold sequence including MaxHold and MinHold.</p> <p>For Spectrum Analysis mode in ESA and PSA, the Single hardkey restarted the sweep regardless of whether or not you were in an active sweep or sweep sequence. In the X-Series, Restart does this but Single only restarts the sweep or sweep sequence if you are in the idle state.</p> <p>INIT[:IMM] in ESA & PSA Spectrum Analysis Mode does an implied ABORt. In some other PSA Modes, INIT[:IMM] is ignored if not in the idle state. . The X-Series follows the ESA/PSA SA Mode model, which may cause some Modes to have compatibility problems.</p> |
| Initial S/W Revision | Prior to A.02.00 |

More Information

See "[Restart](#)" on page 2481 for details on the INIT:IMMediate (Restart) function.

If you are already in single sweep, the INIT:CONT OFF command has no effect.

If you are already in Single Sweep, then pressing the **Single** key in the middle of a sweep does not restart the sweep or sequence. Similarly, pressing the **Single** key does not restart the sweep or sequence if the sweep is not in the idle state (for example, if you are taking a very slow sweep, or the analyzer is waiting for a trigger). Instead, it results in a message. "Already in Single, press Restart to initiate a new sweep or sequence". Even though pressing the **Single** key in the middle of a sweep does not restart the sweep, sending INIT:IMMediate does reset it.

To take one more sweep without resetting the average count, increment the average count by 1, by pressing the step up key while **Average/Hold Number** is the active function, or sending the remote command CALC:AVER:TCON UP.

Source

Opens a menu of keys that access various source configuration menus and settings. In the test set, pressing this key also causes the central view area to change and display the Source Control Main view.

| Key Path | Front-panel key |
|----------|-----------------|
|----------|-----------------|

RF Output

This parameter sets the source RF power output state.

| Key Path | Source |
|-----------------------------|---|
| Remote Command | :OUTPut[:EXTErnal][:STATe] ON OFF 1 0 :OUTPut[:EXTErnal][:STATe]? |
| Example | OUTP OFF OUTP? |
| Notes | <p>The EXTErnal node is shown in RD text so the SCPI remains the same between internal and external source control. However, for EXT we do not wish to document this node to the customer since we are controlling the internal source rather than the external source.</p> <p>This setting is for the independent mode and has no effect on the "List Sequencer" on page 2585. If the "Sequencer" on page 2586 is set to ON, the list sequencer controls the source output and this key will be grayed-out. And this setting will be none-forceful grey out on front panel to indicate out-of-scope. Non-forceful means user still can change this setting by SCPI but cannot change on front panel. When set to OFF will make source leave list sequencer and this setting will be black out and take effect immediately.</p> <p>When the RF Output is ON, an "RF" annunciator is displayed in the system settings panel. When the RF Output is turned Off, the RF annunciator is cleared. If the "Sequencer" on page 2586 is set to ON, the "RF" annunciator will be replaced by "SEQ" in the system settings panel, indicating that the output is controlled by the list sequencer.</p> |
| Preset | Off |
| Range | On Off |
| Initial S/W Revision | A.05.00 |

Amplitude

Allows you to access the Amplitude sub-menu.

| Key Path | Source |
|-----------------------------|--|
| Notes | <p>The sub-menu under this button is for independent mode and has no effect on "List Sequencer" on page 2585. If the "Sequencer" on page 2586 is set to ON, the list sequencer controls the source output and this key will be grayed-out on front panel to indicate out-of-scope. When you set "Sequencer" on page 2586 to Off will make source leave list sequencer and this button will be black out.</p> |
| Initial S/W Revision | A.05.00 |

RF Power

Allows you to adjust the power level of the source using the numeric keypad, step keys, or RPG. Pressing any digit, 0 through 9, on the numeric keypad brings up the unit terminator.

Please refer to the ["RF Power Range " on page 2250](#) table below for the valid ranges.

| Key Path | Source, Amplitude |
|-----------------------|--|
| Remote Command | :SOURce:POWer[:LEVel][:IMMediate][:AMPLitude] <ampl> :SOURce:POWer[:LEVel][:IMMediate][:AMPLitude]? |
| Example | :SOUR:POW -100 dBm |
| Notes | <p>Amplitude corrections can be specified for use with the source. In the event of amplitude corrections being applied, the valid ranges for the RF power do not change dependant on the current amplitude correction setting. If the combination of RF power + amplitude correction is higher or lower than the source output range, the Source Unleveled bit is set and the "Source Unleveled" indicator will appear on status panel to indicate that the source cannot maintain the output power that has been requested.</p> <p>When signal generator is unable to maintain the requested output level, the "Source Unleveled" indicator will appear on status panel. When the source output setting is restored to the normal range, the "Source Unleveled" is removed from status panel.</p> <p>Internal source has list sequence mode, which comprises of several steps which contain separate output power, frequency and waveform etc. When the source list sequence playing is complete, the last step keeps playing, and user can use this command to change the list sequence last step's output power.</p> <p>The multiport adapter RFIO TX ports and GPS ports cannot ensure power accuracy when power setting is lower than -130dBm, this power setting value is defined by the sum of RF Power setting and related amplitude correction value. But user settable value could be lower than this limit. When application detected there exists power setting lower than -130dBm on MPA RFIO TX ports, then popup warning message . When application detected there exists power setting lower than -130dBm on MPA GPS ports, then popup warning message . This is only warning message, and check is performed when RF is ON.</p> |
| Notes | The Min and Max value here defined UI settable amplitude range. This range is larger than actual amplitude range with level accuracy defined in spec. |
| Dependencies | The RF power is dependent on the RF output port and frequency, such that the current frequency and selected output port determine the valid range of power values. |
| Couplings | If "Real-Time AWGN" on page 2546 AWGN State is On and "ARB" on page 2535 ARB State is On, this setting will be adjusted to the value to maintain the AWGN power relationship defined by "Power Control Mode" on page 2547 Power Control Mode and other noise settings |
| Preset | -100 dBm |
| Min | The range of values depends on the current frequency and selected RF output port. Please refer to the "RF Power Range " on page 2250 table below for the valid ranges. |
| Max | The range of values depends on the current frequency and selected RF output port. Please refer to the "RF Power Range " on page 2250 table below for the valid ranges. |

| | |
|--------------------------|---|
| Initial S/W Revision | A.05.00 |
| Modified at S/W Revision | A.16.00 (Add couplings with AWGN state) |

RF Power Range

| RF Output Port | Frequency Range | Min Output Power | Max Output Power |
|-------------------|--------------------|------------------|------------------|
| High Power RF Out | 10 MHz ≤ f ≤ 6 GHz | -150 dBm | 20 dBm |
| RFIO 1 & RFIO 2 | 10 MHz ≤ f ≤ 6 GHz | -150 dBm | 0 dBm |
| GPS (Note2) | 10 MHz ≤ f ≤ 6 GHz | -150 dBm | 0 dBm |

Note: This is the UI power range, it's larger than actual spec.

Note2: GPS port is on the multiport adapter, or E6607C which has embedded MPA.

Set Reference Power

This key allows you to set the power reference. Pressing this key turns the power reference state to ON, sets the reference power value to the current RF output power, maintains this power at the RF output, and sets the displayed power to 0.00 dB. All subsequent RF power values entered under Source>Amplitude>RF Power are interpreted as being relative to this reference power.

When you use a power reference, the signal generator outputs an RF power that is set relative to the reference power by the value entered under Source>Amplitude>RF Power as follows:

$$\text{Output power} = \text{reference power} - \text{entered power}$$

Where:

reference power equals the original RF Power entered under Source>Amplitude>RF Power and set as the reference power

entered power equals a new value entered under Source>Amplitude>Amptd Offset

In addition, the displayed power value is the same as a new value entered under Source>Amplitude>RF Power.

NOTE

If Power Ref is set to ON with a reference value set, entering a value under Source>Amplitude>RF Power and pressing Set Reference Power will add that value to the existing Power Ref value.

If you wish to change the reference power value to a new value entered under Source>Amplitude>RF Power, first you must set Power Ref to OFF and then press Set Reference Power.

| | |
|----------------------|---|
| Key Path | Source, Amplitude |
| Dependencies | This key is unavailable, and is grayed out when the "List Sequencer" on page 2585 is turned ON. |
| Initial S/W Revision | A.05.00 |

Power Ref

This key allows you to toggle the state of the power reference.

When you use a power reference, the signal generator outputs an RF power that is set relative to the reference power by the value entered under Source>Amplitude>RF Power as follows:

Output power = reference power + entered power

Where:

reference power equals the original RF Power entered under Source>Amplitude>RF Power and set as the reference power

entered power equals a new value entered under Source>Amplitude>Amptd Offset

For more information on Reference Frequency refer to ["Set Reference Power " on page 2501](#)

| Key Path | Source, Amplitude |
|-----------------------|--|
| Remote Command | :SOURce:POWer:REFeRence <ampl> :SOURce:POWer:REFeRence? :SOURce:POWer:REFeRence:STATe OFF ON 0 1 :SOURce:POWer:REFeRence:STATe? |
| Example | :SOUR:POW:REF 0.00 dBm :SOUR:POW:REF:STATe ON |
| Dependencies | This setting is unavailable and is grayed out when the "List Sequencer" on page 2585 is turned ON. |
| Couplings | This value is coupled to the "Set Reference Power " on page 2501 key such that pressing the Set Reference Power key updates the reference power with the current output power. |
| Preset | 0.00 dBm OFF |
| Min | -125.00 dBm |
| Max | 10.00 dBm |
| Initial S/W Revision | A.05.00 |

Amptd Offset

Allows you to specify the RF output power offset value.

When the amplitude offset is set to zero (0) and you set a new offset value (positive or negative), the displayed amplitude value will change as follows and the RF output power will not change:

Displayed value = output power + offset value

Where:

output power equals the original RF Power entered under Source>Amplitude>RF Power

offset value equals the value entered under Source>Amplitude>Amptd Offset

When the amplitude offset is set to a value other than zero (0) and you enter a new RF power value under Source>Amplitude>RF Power, the displayed power will be the same as the value entered and the RF output power will be equal to the value entered minus the offset value as follows:

Output power = entered power – offset power

Displayed Power = output power + offset power

Displayed power = entered power

Where:

entered power equals the amplitude entered under Source>Amplitude>RF Power

offset power equals the value previously entered and set under Source>Amplitude>Amptd Offset

| Key Path | Source, Amplitude |
|-----------------------------|--|
| Remote Command | :SOURce:POWer[:LEVel][:IMMediate]:OFFSet <rel_amp1> :SOURce:POWer[:LEVel][:IMMediate]:OFFSet? |
| Example | :SOUR:POW:OFFS 0.00 dB |
| Dependencies | This setting is unavailable, and is grayed out when the List Sequencer is turned ON. |
| Preset | 0.00 dB |
| Min | -200.00 dB |
| Max | 200.00 dB |
| Initial S/W Revision | A.05.00 |

Modulation

Allows you to toggle the state of the modulation.

| Key Path | Source |
|-----------------------------|--|
| Remote Command | :OUTPut:MODulation[:STATe] ON OFF 1 0 :OUTPut:MODulation[:STATe]? |
| Example | :OUTP:MOD OFF |
| Notes | This setting is for independent mode and has no effect on "List Sequencer" on page 2585 . If the "Sequencer" on page 2586 is set to ON, the list sequencer controls the source output and this key will be grayed-out. And this setting will be none-forceful grey out on front panel to indicate out-of-scope. Non-forceful means user still can change this setting by SCPI but cannot change manually on front panel. When set to Off will make source leave list sequencer and this setting will be black out and take effect immediately. When the Modulation is ON, the "MOD" annunciator is displayed in the system settings panel. When the Modulation is turned Off, the "MOD" annunciator is cleared. If the "Sequencer" on page 2586 is set to ON, the "MOD" annunciator will be replaced by "SEQ" in the system settings panel indicating that the output is controlled by list sequencer. |
| Preset | Off |
| Range | On Off |
| Initial S/W Revision | A.05.00 |

Frequency

Allows you to access the Frequency sub-menu.

| Key Path | Source |
|----------------------|---|
| Notes | The sub-menu under this button is for independent mode and has no effect on "List Sequencer" on page 2585 . If the "Sequencer" on page 2586 is set to ON, the list sequencer controls the source output and this key will be grayed-out. And this button will be grey out on front panel to indicate out-of-scope. When set to Off will make source leave list sequencer and this button will be black out. |
| Initial S/W Revision | A.05.00 |

Frequency

Allows you to set the RF Output Frequency. You can adjust the frequency of the source using the numeric keypad, step keys, or RPG. Pressing any digit, 0 through 9, on the numeric keypad brings up the unit terminator.

| Key Path | Source, Frequency |
|-----------------------|---|
| Remote Command | :SOURce:FREQuency[:CW] <freq> :SOURce:FREQuency[:CW] ? |
| Example | :SOUR:FREQ 1.00 GHz |
| Notes | Internal source has list sequence mode, which comprises of several steps which contain separate output power, frequency and waveform etc. When the source list sequence playing is complete, the last step keeps playing, and user can use this command to change the list sequence last step's output frequency. |
| Couplings | The frequency value is coupled to the current channel band and number, such that updates to the band and number will update the frequency value to the corresponding absolute frequency. |
| Preset | 1.00 GHz |
| Min | 10.00 MHz |
| Max | Hardware Dependant: Option 503 = 3.6 GHz Option 504 = 3.8 GHz Option 506 = 6.00 GHz |
| Initial S/W Revision | A.05.00 |

Channel

The frequency of the source can be specified by a channel number of a given frequency band. This key allows you to specify the current channel number. For the appropriate range of channel numbers for a given frequency band, refer to the following tables: ["GSM/EDGE Channel Number Ranges" on page 2254](#),

"W-CDMA Channel Number Ranges" on page 2255, "CDMA 2000 / 1xEVDO Channel Number Ranges" on page 2256, and "LTE FDD Channel Number Ranges" on page 2258.

| | |
|-----------------------------|---|
| Key Path | Source, Frequency |
| Remote Command | :SOURce:FREQuency:CHANnels:NUMBer <int> :SOURce:FREQuency:CHANnels:NUMBer? |
| Example | :SOUR:FREQ:CHAN:NUMB 1 |
| Notes | This key is grayed out when the "Radio Standard" on page 2513 is set to NONE. This key is grayed out on E6630A. |
| Dependencies | This key is grayed out when the "Radio Standard" on page 2513 is set to NONE. This key is grayed out on E6630A. |
| Couplings | The channel number is coupled to the frequency value when the "Radio Standard" on page 2513 is not set to NONE. When the frequency value is changed, the channel number will increase or decrease to match the new frequency. If the frequency is not at an exact match for a channel number, the nearest channel number is displayed along with a greater than or less than sign to indicate the frequency is above or below the channel number. |
| Preset | 1 |
| Min | Please refer to the tables below for the valid ranges. |
| Max | Please refer to the tables below for the valid ranges. |
| Initial S/W Revision | A.05.00 |

GSM/EDGE Channel Number Ranges

| Band | Link (Device) | Range | Frequency (MHz) |
|-------------|----------------------|------------------------|---------------------------|
| P-GSM | Uplink (MS) | $1 \leq n \leq 124$ | $890.0 + 0.2*n$ |
| | Downlink (BS) | $1 \leq n \leq 124$ | $935.0 + 0.2*n$ |
| E-GSM | Uplink (MS) | $0 \leq n \leq 124$ | $890.0 + 0.2*n$ |
| | | $975 \leq n \leq 1023$ | $890.0 + 0.2*(n-1024)$ |
| | Downlink (BS) | $0 \leq n \leq 124$ | $935.0 + 0.2*n$ |
| | | $975 \leq n \leq 1023$ | $935.0 + 0.2*(n-1024)$ |
| DCS 1800 | Uplink (MS) | $512 \leq n \leq 885$ | $1710.200 + 0.20*(n-512)$ |
| | Downlink (BS) | $512 \leq n \leq 885$ | $1805.200 + 0.20*(n-512)$ |
| PCS 1900 | Uplink (MS) | $512 \leq n \leq 810$ | $1850.200 + 0.2*(n-512)$ |
| | Downlink (BS) | $512 \leq n \leq 810$ | $1930.200 + 0.2*(n-512)$ |

LTE FDD Channel Number Ranges

The carrier frequency in the uplink and downlink is designated by the E-UTRA Absolute Radio Frequency Channel Number (EARFCN) in the range 0 – 65535. The relation between EARFCN and the carrier

frequency in MHz for the downlink is given by the following equation, where FDL_low and NOffs-DL are given in table 5.4.4-1 and NDL is the downlink EARFCN.

$$FDL = FDL_low + 0.1(NDL - NOffs-DL)$$

The relation between EARFCN and the carrier frequency in MHz for the uplink is given by the following equation where FUL_low and NOffs-UL are given in table 5.4.4-1 and NUL is the uplink EARFCN.

$$FUL = FUL_low + 0.1(NUL - NOffs-UL)$$

| Band | Downlink | | Uplink | | | |
|------|---------------|----------|--------------|---------------|----------|---------------|
| | FDL_low (MHz) | NOffs-DL | Range of NDL | FUL_low (MHz) | NOffs-UL | Range of NUL |
| 1 | | 2110 | 0 | 0 - 599 | 1920 | 18000 - 18599 |
| 2 | | 1930 | 600 | 600 - 1199 | 1850 | 18600 - 19199 |
| 3 | | 1805 | 1200 | 1200 - 1949 | 1710 | 19200 - 19949 |
| 4 | | 2110 | 1950 | 1950 - 2399 | 1710 | 19950 - 20399 |
| 5 | | 869 | 2400 | 2400 - 2649 | 824 | 20400 - 20649 |

| ... | | | | | | |

Note: The channel numbers that designate carrier frequencies so close to the operating band edges that the carrier extends beyond the operating band edge shall not be used. This implies that the first 7, 15, 25, 50, 75 and 100 channel numbers at the lower operating band edge and the last 6, 14, 24, 49, 74 and 99 channel numbers at the upper operating band edge shall not be used for channel bandwidths of 1.4, 3, 5, 10, 15 and 20 MHz respectively.

LTE TDD Channel Number Ranges

The carrier frequency in the uplink and downlink is designated by the E-UTRA Absolute Radio Frequency Channel Number (EARFCN) in the range 0 – 65535. The relation between EARFCN and the carrier frequency in MHz for the downlink is given by the following equation, where FDL_low and NOffs-DL are given in table 5.4.4–1 and NDL is the downlink EARFCN.

$$FDL = FDL_low + 0.1(NDL - NOffs-DL)$$

The relation between EARFCN and the carrier frequency in MHz for the uplink is given by the following equation where FUL_low and NOffs-UL are given in table 5.4.4–1 and NUL is the uplink EARFCN.

$$FUL = FUL_low + 0.1(NUL - NOffs-UL)$$

| Band | Downlink | Uplink | | | | |
|---------------|----------|--------------|---------------|----------|--------------|---------------|

| 42 | 3400 | 41590 | 41590 - 43589 | 3400 | 41590 | 41590 - 43589 |
| 43 | 3600 | 43590 | 43590 - 45589 | 3600 | 43590 | 43590 - 45589 |

Note: The channel numbers that designate carrier frequencies so close to the operating band edges that the carrier extends beyond the operating band edge shall not be used. This implies that the first 7, 15, 25, 50, 75 and 100 channel numbers at the lower operating band edge and the last 6, 14, 24, 49, 74 and 99 channel numbers at the upper operating band edge shall not be used for channel bandwidths of 1.4, 3, 5, 10, 15 and 20 MHz respectively.

TDSCDMA Channel Number Ranges

1.28 Mcps TDD Option

No TX-RX frequency separation is required as Time Division Duplex (TDD) is employed. Each subframe consists of 7 main timeslots where all main timeslots (at least the first one) before the single switching point are allocated DL and all main timeslots (at least the last one) after the single switching point are allocated UL.

The nominal channel spacing is 1.6 MHz, but this can be adjusted to optimise performance in a particular deployment scenario.

The carrier frequency is designated by the UTRA absolute radio frequency channel number (UARFCN). The value of the UARFCN in the IMT2000 band is defined in the general case as follows:

$$N_t = 5 * F \quad 0.0 \text{ MHz} \leq F \leq 3276.6 \text{ MHz}$$

where F is the carrier frequency in MHz

Additional channels applicable to operation in the frequency band defined in sub-clause 5.2(d) are defined via the following UARFCN definition:

$$N_t = 5 * (F - 2150.1 \text{ MHz}) \quad 2572.5 \text{ MHz} \leq F \leq 2617.5 \text{ MHz}$$

UARFCN

1.28 Mcps TDD Option

The following UARFCN range shall be supported for each band:

Table: UTRA Absolute Radio Frequency Channel Number 1.28 Mcps TDD Option

| Frequency Band | Frequency Range | UARFCN Uplink and Downlink transmission |
|---|-----------------|---|
| For operation in frequency band as defined in subclause 5.2 (a) | 1900-1920 MHz | 9504 to 9596 |
| | 2010-2025 MHz | 10054 to 10121 |
| For operation in frequency band as defined in subclause 5.2 (b) | 1850-1910 MHz | 9254 to 9546 |
| | 1930-1990 MHz | 9654 to 9946 |
| For operation in frequency band as defined in subclause 5.2 (c) | 1910-1930 MHz | 9554 to 9646 |
| For operation in frequency band as defined in subclause 5.2 (d) | 2570-2620 MHz | 12854 to 13096 |
| For operation in frequency band as defined in subclause 5.2 (e) | 2300-2400 MHz | 11504 to 11996 |
| For operation in frequency band as defined in subclause 5.2 (f) | 1880-1920 MHz | 9404 to 9596 |

Radio Setup

Allows access to the sub-menus for selecting the radio standard and associated radio band. You can also set a frequency reference and offset.

This menu is greyed out when on E6630A. Radio band settings for GSM, cdma2000, and so on -- most of which are not actually supported in E6630A, which has three narrow frequency bands. So band settings are grayed out.

| Key Path | Source, Frequency |
|----------------------|-------------------|
| Initial S/W Revision | A.05.00 |

Radio Standard

Allows access to the channel band sub-menus to select the desired radio standard. When you have selected the radio standard, you can then set an active channel band. The radio standard and the active channel band allow you to use channel numbers to set frequency automatically.

| Key Path | Source, Frequency, Radio Setup |
|-----------------------|---|
| Remote Command | :SOURCE:FREQUENCY:CHANNELS:BAND NONE PGSM EGSM RGSM DCS1800 PCS1900 TGSM810 GSM450 GSM480 GSM700 GSM850 BANDI BANDII BANDIII BANDIV BANDV BANDVI BANDVII BANDVIII BANDIX BANDX BANDXI BANDXII BANDXIII BANDXIV BANDXIX USCELL USPCS JAPAN KOREAN NMT IMT2K UPPER SECOND PAMR400 PAMR800 IMTEXT PCS1DOT9G AWS US2DOT5G PUBLIC LOWER BAND1 BAND2 BAND3 BAND4 BAND5 BAND6 BAND7 BAND8 BAND10 |

:SOURce:FREQuency:CHANnels:BAND?

| | |
|----------------------|---|
| Example | :SOUR:FREQ:CHAN:BAND PGSM |
| Notes | Set this setting to "NONE" will grey out "Channel" on page 2504 Channel |
| Initial S/W Revision | A.05.00 |

None

Selects no radio standard for use. When you have selected the radio standard to NONE, you cannot use channel numbers to set frequency automatically. You will need to set the frequency manually.

| | |
|----------------------|---|
| Key Path | Source, Frequency, Radio Setup, Radio Standard |
| Initial S/W Revision | A.05.00 |

GSM/EDGE

Sets GSM/EDGE as the radio standard for use and accesses the GSM/EDGE specific channel band sub-menu.

| | |
|----------------------|---|
| Key Path | Source, Frequency, Radio Setup, Radio Standard |
| Initial S/W Revision | A.05.00 |

P-GSM

Selects P-GSM as the active channel band.

| | |
|----------------------|---|
| Key Path | Source, Frequency, Radio Setup, Radio Standard, GSM/EDGE |
| Example | :SOUR:FREQ:CHAN:BAND PGSM |
| Initial S/W Revision | A.05.00 |

E-GSM

Selects E-GSM as the active channel band.

| | |
|----------------------|---|
| Key Path | Source, Frequency, Radio Setup, Radio Standard, GSM/EDGE |
| Example | :SOUR:FREQ:CHAN:BAND EGSM |
| Initial S/W Revision | A.05.00 |

R-GSM

Selects R-GSM as the active channel band.

| | |
|----------------------|---|
| Key Path | Source, Frequency, Radio Setup, Radio Standard, GSM/EDGE |
| Example | :SOUR:FREQ:CHAN:BAND RGSM |
| Initial S/W Revision | A.05.00 |

DCS 1800

Selects DCS 1800 as the active channel band.

| | |
|----------------------|---|
| Key Path | Source, Frequency, Radio Setup, Radio Standard, GSM/EDGE |
| Example | :SOUR:FREQ:CHAN:BAND DCS1800 |
| Initial S/W Revision | A.05.00 |

PCS 1900

Selects PCS 1900 as the active channel band.

| | |
|----------------------|---|
| Key Path | Source, Frequency, Radio Setup, Radio Standard, GSM/EDGE |
| Example | :SOUR:FREQ:CHAN:BAND PCS1900 |
| Initial S/W Revision | A.05.00 |

GSM 450

Selects GSM 450 as the active channel band.

| | |
|----------------------|---|
| Key Path | Source, Frequency, Radio Setup, Radio Standard, GSM/EDGE |
| Example | :SOUR:FREQ:CHAN:BAND GSM450 |
| Initial S/W Revision | A.05.00 |

GSM 480

Selects GSM 480 as the active channel band.

| | |
|----------------------|---|
| Key Path | Source, Frequency, Radio Setup, Radio Standard, GSM/EDGE |
| Example | :SOUR:FREQ:CHAN:BAND GSM480 |
| Initial S/W Revision | A.05.00 |

GSM 850

Selects GSM 850 as the active channel band.

| | |
|----------------------|---|
| Key Path | Source, Frequency, Radio Setup, Radio Standard, GSM/EDGE |
| Example | :SOUR:FREQ:CHAN:BAND GSM850 |
| Initial S/W Revision | A.05.00 |

GSM 700

Selects GSM 700 as the active channel band.

| | |
|----------------------|---|
| Key Path | Source, Frequency, Radio Setup, Radio Standard, GSM/EDGE |
| Example | :SOUR:FREQ:CHAN:BAND GSM700 |
| Initial S/W Revision | A.05.00 |

T-GSM 810

Selects T-GSM 810 as the active channel band.

| | |
|----------------------|---|
| Key Path | Source, Frequency, Radio Setup, Radio Standard, GSM/EDGE |
| Example | :SOUR:FREQ:CHAN:BAND T-GSM810 |
| Initial S/W Revision | A.05.00 |

WCDMA

Sets WCDMA as the radio standard for use and accesses the W-CDMA specific channel band sub-menus.

| | |
|----------------------|---|
| Key Path | Source, Frequency, Radio Setup, Radio Standard |
| Initial S/W Revision | A.05.00 |

Band I

Selects Band I as the active channel band.

| | |
|----------------------|--|
| Key Path | Source, Frequency, Radio Setup, Radio Standard, WCDMA |
| Example | :SOUR:FREQ:CHAN:BAND BANDI |
| Initial S/W Revision | A.05.00 |

Band II

Selects Band II as the active channel band.

| | |
|----------------------|--|
| Key Path | Source, Frequency, Radio Setup, Radio Standard, WCDMA |
| Example | :SOUR:FREQ:CHAN:BAND BANDII |
| Initial S/W Revision | A.05.00 |

Band III

Selects Band III as the active channel band.

| | |
|----------------------|--|
| Key Path | Source, Frequency, Radio Setup, Radio Standard, WCDMA |
| Example | :SOUR:FREQ:CHAN:BAND BANDIII |
| Initial S/W Revision | A.05.00 |

Band IV

Selects Band IV as the active channel band.

| | |
|----------------------|--|
| Key Path | Source, Frequency, Radio Setup, Radio Standard, WCDMA |
| Example | :SOUR:FREQ:CHAN:BAND BANDIV |
| Initial S/W Revision | A.05.00 |

Band V

Selects Band V as the active channel band.

| | |
|----------------------|--|
| Key Path | Source, Frequency, Radio Setup, Radio Standard, WCDMA |
| Example | :SOUR:FREQ:CHAN:BAND BANDV |
| Initial S/W Revision | A.05.00 |

Band VI

Selects Band VI as the active channel band.

| | |
|----------------------|--|
| Key Path | Source, Frequency, Radio Setup, Radio Standard, WCDMA |
| Example | :SOUR:FREQ:CHAN:BAND BANDVI |
| Initial S/W Revision | A.05.00 |

Band VII

Selects Band VII as the active channel band.

| | |
|----------------------|--|
| Key Path | Source, Frequency, Radio Setup, Radio Standard, WCDMA |
| Example | :SOUR:FREQ:CHAN:BAND BANDVII |
| Initial S/W Revision | A.05.00 |

Band VIII

Selects Band VIII as the active channel band.

| | |
|----------------------|--|
| Key Path | Source, Frequency, Radio Setup, Radio Standard, WCDMA |
| Example | :SOUR:FREQ:CHAN:BAND BANDVIII |
| Initial S/W Revision | A.05.00 |

Band IX

Selects Band IX as the active channel band.

| | |
|----------------------|--|
| Key Path | Source, Frequency, Radio Setup, Radio Standard, WCDMA |
| Example | :SOUR:FREQ:CHAN:BAND BANDIX |
| Initial S/W Revision | A.05.00 |

Band X

Selects Band X as the active channel band.

| | |
|----------------------|--|
| Key Path | Source, Frequency, Radio Setup, Radio Standard, WCDMA |
| Example | :SOUR:FREQ:CHAN:BAND BANDX |
| Initial S/W Revision | A.05.00 |

Band XI

Selects Band XI as the active channel band.

| | |
|----------------------|--|
| Key Path | Source, Frequency, Radio Setup, Radio Standard, WCDMA |
| Example | :SOUR:FREQ:CHAN:BAND BANDXI |
| Initial S/W Revision | A.05.00 |

Band XII

Selects Band XII as the active channel band.

| | |
|----------------------|--|
| Key Path | Source, Frequency, Radio Setup, Radio Standard, WCDMA |
| Example | :SOUR:FREQ:CHAN:BAND BANDXII |
| Initial S/W Revision | A.05.00 |

Band XIII

Selects band XIII as the active channel band.

| | |
|----------------------|--|
| Key Path | Source, Frequency, Radio Setup, Radio Standard, WCDMA |
| Example | :SOUR:FREQ:CHAN:BAND BANDXIII |
| Initial S/W Revision | A.05.00 |

Band XIV

Selects Band XIV as the active channel band.

| | |
|----------------------|--|
| Key Path | Source, Frequency, Radio Setup, Radio Standard, WCDMA |
| Example | :SOUR:FREQ:CHAN:BAND BANDXIV |
| Initial S/W Revision | A.05.00 |

CDMA 2000 / 1xEVDO

Sets CDMA 2000 / 1xEVDO as the radio standard for use and accesses the CDMA 2000/1xEVDO specific channel band sub-menus.

| | |
|----------------------|---|
| Key Path | Source, Frequency, Radio Setup, Radio Standard |
| Initial S/W Revision | A.05.00 |

US CELL

Selects US Cell as the active channel band.

| | |
|----------------------|---|
| Key Path | Source, Frequency, Radio Setup, Radio Standard, CDMA 2000 / 1xEVDO |
| Example | :SOUR:FREQ:CHAN:BAND USCELL |
| Initial S/W Revision | A.05.00 |

US PCS

Selects US PCS as the active channel band.

| | |
|----------------------|---|
| Key Path | Source, Frequency, Radio Setup, Radio Standard, CDMA 2000 / 1xEVDO |
| Example | :SOUR:FREQ:CHAN:BAND PCS |
| Initial S/W Revision | A.05.00 |

Japan Cell

Selects Japan Cell as the active channel band.

| | |
|----------------------|---|
| Key Path | Source, Frequency, Radio Setup, Radio Standard, CDMA 2000 / 1xEVDO |
| Example | :SOUR:FREQ:CHAN:BAND JAPAN |
| Initial S/W Revision | A.05.00 |

Korean PCS

Selects Korean PCS as the active channel band.

| | |
|----------------------|---|
| Key Path | Source, Frequency, Radio Setup, Radio Standard, CDMA 2000 / 1xEVDO |
| Example | :SOUR:FREQ:CHAN:BAND KOREAN |
| Initial S/W Revision | A.05.00 |

NMT 450

Selects NMT 450 as the active channel band.

| | |
|----------------------|---|
| Key Path | Source, Frequency, Radio Setup, Radio Standard, CDMA 2000 / 1xEVDO |
| Example | :SOUR:FREQ:CHAN:BAND NMT |
| Initial S/W Revision | A.05.00 |

IMT 2000

Selects IMT 2000 as the active channel band.

| | |
|----------------------|---|
| Key Path | Source, Frequency, Radio Setup, Radio Standard, CDMA 2000 / 1xEVDO |
| Example | :SOUR:FREQ:CHAN:BAND IMT2K |
| Initial S/W Revision | A.05.00 |

Upper 700

Selects Upper 700 as the active channel band.

| | |
|----------------------|---|
| Key Path | Source, Frequency, Radio Setup, Radio Standard, CDMA 2000 / 1xEVDO |
| Example | :SOUR:FREQ:CHAN:BAND UPPER |
| Initial S/W Revision | A.05.00 |

Secondary 800

Selects Secondary 800 as the active channel band.

| | |
|----------------------|---|
| Key Path | Source, Frequency, Radio Setup, Radio Standard, CDMA 2000 / 1xEVDO |
| Example | :SOUR:FREQ:CHAN:BAND SECOND |
| Initial S/W Revision | A.05.00 |

400 Euro PAMR

Selects 400 Euro PAMR as the active channel band.

| | |
|----------------------|---|
| Key Path | Source, Frequency, Radio Setup, Radio Standard, CDMA 2000 / 1xEVDO |
| Example | :SOUR:FREQ:CHAN:BAND PAMR400 |
| Initial S/W Revision | A.05.00 |

800 PAMR

Selects 800 PAMR as the active channel band.

| | |
|----------------------|---|
| Key Path | Source, Frequency, Radio Setup, Radio Standard, CDMA 2000 / 1xEVDO |
| Example | :SOUR:FREQ:CHAN:BAND PAMR800 |
| Initial S/W Revision | A.05.00 |

2.5GHz IMT EXT

Selects 2.5 GHz IMT EXT as the active channel band.

| | |
|----------------------|---|
| Key Path | Source, Frequency, Radio Setup, Radio Standard, CDMA 2000 / 1xEVDO |
| Example | :SOUR:FREQ:CHAN:BAND IMTEXT |
| Initial S/W Revision | A.05.00 |

US PCS 1.9GHz

Selects US PCS 1.9 GHz as the active channel band.

| | |
|----------------------|---|
| Key Path | Source, Frequency, Radio Setup, Radio Standard, CDMA 2000 / 1xEVDO |
| Example | :SOUR:FREQ:CHAN:BAND PCS1DOT9G |
| Initial S/W Revision | A.05.00 |

AWS

Selects AWS as the active channel band.

| | |
|----------------------|---|
| Key Path | Source, Frequency, Radio Setup, Radio Standard, CDMA 2000 / 1xEVDO |
| Example | :SOUR:FREQ:CHAN:BAND AWS |
| Initial S/W Revision | A.05.00 |

US 2.5GHz

Selects US 2.5 GHz as the active channel band.

| | |
|----------------------|---|
| Key Path | Source, Frequency, Radio Setup, Radio Standard, CDMA 2000 / 1xEVDO |
| Example | :SOUR:FREQ:CHAN:BAND US2DOT5G |
| Initial S/W Revision | A.05.00 |

700 Public Safety

Selects 700 Public Safety as the active channel band.

| | |
|----------------------|---|
| Key Path | Source, Frequency, Radio Setup, Radio Standard, CDMA 2000 / 1xEVDO |
| Example | :SOUR:FREQ:CHAN:BAND PUBLIC |
| Initial S/W Revision | A.05.00 |

C2K Lower 700

Selects C2K Lower 700 as the active channel band.

| | |
|----------------------|---|
| Key Path | Source, Frequency, Radio Setup, Radio Standard, CDMA 2000 / 1xEVDO |
| Example | :SOUR:FREQ:CHAN:BAND LOWER |
| Initial S/W Revision | A.05.00 |

LTE

Sets LTE FDD as the radio standard for use and accesses the LTE FDD specific channel band sub-menus..

| | |
|----------------------|---|
| Key Path | Source, Frequency, Radio Setup, Radio Standard |
| Initial S/W Revision | A.09.50 |

BAND 1

Selects BAND 1 as the band for the current step.

| | |
|----------------------|--|
| Key Path | Source, Frequency, Radio Setup, Radio Standard, LTE |
| Example | :SOUR:FREQ:CHAN:BAND BAND1 |
| Initial S/W Revision | A.09.50 |

BAND 2

Selects BAND 2 as the band for the current step.

| | |
|----------------------|--|
| Key Path | Source, Frequency, Radio Setup, Radio Standard, LTE |
| Example | :SOUR:FREQ:CHAN:BAND BAND2 |
| Initial S/W Revision | A.09.50 |

BAND 3

Selects BAND 3 as the band for the current step.

| | |
|----------------------|--|
| Key Path | Source, Frequency, Radio Setup, Radio Standard, LTE |
| Example | :SOUR:FREQ:CHAN:BAND BAND3 |
| Initial S/W Revision | A.09.50 |

BAND 4

Selects BAND 4 as the band for the current step.

| | |
|----------------------|--|
| Key Path | Source, Frequency, Radio Setup, Radio Standard, LTE |
| Example | :SOUR:FREQ:CHAN:BAND BAND4 |
| Initial S/W Revision | A.09.50 |

BAND 5

Selects BAND 5 as the band for the current step.

| | |
|----------|--|
| Key Path | Source, Frequency, Radio Setup, Radio Standard, LTE |
|----------|--|

| | |
|----------------------|----------------------------|
| Example | :SOUR:FREQ:CHAN:BAND BAND5 |
| Initial S/W Revision | A.09.50 |

BAND 6

Selects BAND 6 as the band for the current step.

| | |
|----------------------|--|
| Key Path | Source, Frequency, Radio Setup, Radio Standard, LTE |
| Example | :SOUR:FREQ:CHAN:BAND BAND6 |
| Initial S/W Revision | A.09.50 |

BAND 7

Selects BAND 7 as the band for the current step.

| | |
|----------------------|--|
| Key Path | Source, Frequency, Radio Setup, Radio Standard, LTE |
| Example | :SOUR:FREQ:CHAN:BAND BAND7 |
| Initial S/W Revision | A.09.50 |

BAND 8

Selects BAND 8 as the band for the current step.

| | |
|----------------------|--|
| Key Path | Source, Frequency, Radio Setup, Radio Standard, LTE |
| Example | :SOUR:FREQ:CHAN:BAND BAND8 |
| Initial S/W Revision | A.09.50 |

BAND 9

Selects BAND 9 as the band for the current step.

| | |
|----------------------|--|
| Key Path | Source, Frequency, Radio Setup, Radio Standard, LTE |
| Example | :SOUR:FREQ:CHAN:BAND BAND9 |
| Initial S/W Revision | A.09.50 |

BAND 10

Selects BAND 10 as the band for the current step.

| | |
|-----------------|--|
| Key Path | Source, Frequency, Radio Setup, Radio Standard, LTE |
|-----------------|--|

| | |
|----------------------|-----------------------------|
| Example | :SOUR:FREQ:CHAN:BAND BAND10 |
| Initial S/W Revision | A.09.50 |

BAND 11

Selects BAND 11 as the band for the current step.

| | |
|----------------------|--|
| Key Path | Source, Frequency, Radio Setup, Radio Standard, LTE |
| Example | :SOUR:FREQ:CHAN:BAND BAND11 |
| Initial S/W Revision | A.09.50 |

BAND 12

Selects BAND 12 as the band for the current step.

| | |
|----------------------|--|
| Key Path | Source, Frequency, Radio Setup, Radio Standard, LTE |
| Example | :SOUR:FREQ:CHAN:BAND BAND12 |
| Initial S/W Revision | A.09.50 |

BAND 13

Selects BAND 13 as the band for the current step.

| | |
|----------------------|--|
| Key Path | Source, Frequency, Radio Setup, Radio Standard, LTE |
| Example | :SOUR:FREQ:CHAN:BAND BAND13 |
| Initial S/W Revision | A.09.50 |

BAND 14

Selects BAND 14 as the band for the current step.

| | |
|----------------------|--|
| Key Path | Source, Frequency, Radio Setup, Radio Standard, LTE |
| Example | :SOUR:FREQ:CHAN:BAND BAND14 |
| Initial S/W Revision | A.09.50 |

BAND 17

Selects BAND 17 as the band for the current step.

| | |
|----------|--|
| Key Path | Source, Frequency, Radio Setup, Radio Standard, LTE |
|----------|--|

| | |
|----------------------|-----------------------------|
| Example | :SOUR:FREQ:CHAN:BAND BAND17 |
| Initial S/W Revision | A.09.50 |

BAND 18

Selects BAND 18 as the band for the current step.

| | |
|----------------------|--|
| Key Path | Source, Frequency, Radio Setup, Radio Standard, LTE |
| Example | :SOUR:FREQ:CHAN:BAND BAND18 |
| Initial S/W Revision | A.09.50 |

BAND 19

Selects BAND 19 as the band for the current step.

| | |
|----------------------|--|
| Key Path | Source, Frequency, Radio Setup, Radio Standard, LTE |
| Example | :SOUR:FREQ:CHAN:BAND BAND19 |
| Initial S/W Revision | A.09.50 |

BAND 20

Selects BAND 20 as the band for the current step.

| | |
|----------------------|--|
| Key Path | Source, Frequency, Radio Setup, Radio Standard, LTE |
| Example | :SOUR:FREQ:CHAN:BAND BAND20 |
| Initial S/W Revision | A.09.50 |

BAND 21

Selects BAND 21 as the band for the current step.

| | |
|----------------------|--|
| Key Path | Source, Frequency, Radio Setup, Radio Standard, LTE |
| Example | :SOUR:FREQ:CHAN:BAND BAND21 |
| Initial S/W Revision | A.09.50 |

BAND 24

Selects BAND 24 as the band for the current step.

| | |
|-----------------|--|
| Key Path | Source, Frequency, Radio Setup, Radio Standard, LTE |
|-----------------|--|

| | |
|----------------------|-----------------------------|
| Example | :SOUR:FREQ:CHAN:BAND BAND24 |
| Initial S/W Revision | A.09.50 |

BAND 25

Selects BAND 25 as the band for the current step.

| | |
|----------------------|--|
| Key Path | Source, Frequency, Radio Setup, Radio Standard, LTE |
| Example | :SOUR:FREQ:CHAN:BAND BAND25 |
| Initial S/W Revision | A.09.50 |

BAND 26

Selects BAND 26 as the band for the current step.

| | |
|----------------------|--|
| Key Path | Source, Frequency, Radio Setup, Radio Standard, LTE |
| Example | :SOUR:FREQ:CHAN:BAND BAND26 |
| Initial S/W Revision | A.12.53 |

BAND 27

Selects BAND 27 as the band for the current step.

| | |
|----------------------|--|
| Key Path | Source, Frequency, Radio Setup, Radio Standard, LTE |
| Example | :SOUR:FREQ:CHAN:BAND BAND27 |
| Initial S/W Revision | A.14.00 |

BAND 28

Selects BAND 28 as the band for the current step.

| | |
|----------------------|--|
| Key Path | Source, Frequency, Radio Setup, Radio Standard, LTE |
| Example | :SOUR:FREQ:CHAN:BAND BAND28 |
| Initial S/W Revision | A.14.00 |

BAND 31

Selects BAND 31 as the band for the current step.

| | |
|----------|--|
| Key Path | Source, Frequency, Radio Setup, Radio Standard, LTE |
|----------|--|

| | |
|----------------------|-----------------------------|
| Example | :SOUR:FREQ:CHAN:BAND BAND31 |
| Initial S/W Revision | A.14.00 |

LTE TDD

Sets LTE TDD as the radio standard for use and accesses the LTE TDD specific channel band sub-menus..

| | |
|----------------------|---|
| Key Path | Source, Frequency, Radio Setup, Radio Standard |
| Initial S/W Revision | A.11.50 |

BAND 33

Selects BAND 33 as the band for the current step.

| | |
|----------------------|--|
| Key Path | Source, Frequency, Radio Setup, Radio Standard, LTE TDD |
| Example | :SOUR:FREQ:CHAN:BAND BAND33 |
| Initial S/W Revision | A.11.50 |

BAND 34

Selects BAND 34 as the band for the current step.

| | |
|----------------------|--|
| Key Path | Source, Frequency, Radio Setup, Radio Standard, LTE TDD |
| Example | :SOUR:FREQ:CHAN:BAND BAND34 |
| Initial S/W Revision | A.11.50 |

BAND 35

Selects BAND 35 as the band for the current step.

| | |
|----------------------|--|
| Key Path | Source, Frequency, Radio Setup, Radio Standard, LTE TDD |
| Example | :SOUR:FREQ:CHAN:BAND BAND35 |
| Initial S/W Revision | A.11.50 |

BAND 36

Selects BAND 36 as the band for the current step.

| | |
|----------------------|--|
| Key Path | Source, Frequency, Radio Setup, Radio Standard, LTE TDD |
| Example | :SOUR:FREQ:CHAN:BAND BAND36 |
| Initial S/W Revision | A.11.50 |

BAND 37

Selects BAND 37 as the band for the current step.

| | |
|----------------------|--|
| Key Path | Source, Frequency, Radio Setup, Radio Standard, LTE TDD |
| Example | :SOUR:FREQ:CHAN:BAND BAND37 |
| Initial S/W Revision | A.11.50 |

BAND 38

Selects BAND 38 as the band for the current step.

| | |
|----------------------|--|
| Key Path | Source, Frequency, Radio Setup, Radio Standard, LTE TDD |
| Example | :SOUR:FREQ:CHAN:BAND BAND38 |
| Initial S/W Revision | A.11.50 |

BAND 39

Selects BAND 39 as the band for the current step.

| | |
|----------------------|--|
| Key Path | Source, Frequency, Radio Setup, Radio Standard, LTE TDD |
| Example | :SOUR:FREQ:CHAN:BAND BAND39 |
| Initial S/W Revision | A.11.50 |

BAND 40

Selects BAND 40 as the band for the current step.

| | |
|----------------------|--|
| Key Path | Source, Frequency, Radio Setup, Radio Standard, LTE TDD |
| Example | :SOUR:FREQ:CHAN:BAND BAND40 |
| Initial S/W Revision | A.11.50 |

BAND 41

Selects BAND 41 as the band for the current step.

| | |
|----------------------|--|
| Key Path | Source, Frequency, Radio Setup, Radio Standard, LTE TDD |
| Example | :SOUR:FREQ:CHAN:BAND BAND41 |
| Initial S/W Revision | A.11.50 |

BAND 42

Selects BAND 42 as the band for the current step.

| | |
|----------------------|--|
| Key Path | Source, Frequency, Radio Setup, Radio Standard, LTE TDD |
| Example | :SOUR:FREQ:CHAN:BAND BAND42 |
| Initial S/W Revision | A.11.50 |

BAND 43

Selects BAND 43 as the band for the current step.

| | |
|----------------------|--|
| Key Path | Source, Frequency, Radio Setup, Radio Standard, LTE TDD |
| Example | :SOUR:FREQ:CHAN:BAND BAND43 |
| Initial S/W Revision | A.11.50 |

BAND 44

Selects BAND 44 as the band for the current step.

| | |
|----------------------|--|
| Key Path | Source, Frequency, Radio Setup, Radio Standard, LTE TDD |
| Example | :SOUR:FREQ:CHAN:BAND BAND44 |
| Initial S/W Revision | A.14.00 |

TDSCDMA

Sets TDSCDMA as the radio standard for use and accesses the TDSCDMA specific channel band sub-menus..

| | |
|----------------------|---|
| Key Path | Source, Frequency, Radio Setup, Radio Standard |
| Initial S/W Revision | A.11.50 |

BAND A

Selects BAND A as the band for the current step.

| | |
|----------------------|--|
| Key Path | Source, Frequency, Radio Setup, Radio Standard, TDSCDMA |
| Example | :SOUR:FREQ:CHAN:BAND BANDA |
| Initial S/W Revision | A.11.50 |

BAND B

Selects BAND B as the band for the current step.

| | |
|----------------------|--|
| Key Path | Source, Frequency, Radio Setup, Radio Standard, TDSCDMA |
| Example | :SOUR:FREQ:CHAN:BAND BANDB |
| Initial S/W Revision | A.11.50 |

BAND C

Selects BAND C as the band for the current step.

| | |
|----------------------|--|
| Key Path | Source, Frequency, Radio Setup, Radio Standard, TDSCDMA |
| Example | :SOUR:FREQ:CHAN:BAND BANDC |
| Initial S/W Revision | A.11.50 |

BAND D

Selects BAND D as the band for the current step.

| | |
|----------------------|--|
| Key Path | Source, Frequency, Radio Setup, Radio Standard, TDSCDMA |
| Example | :SOUR:FREQ:CHAN:BAND BANDD |
| Initial S/W Revision | A.11.50 |

BAND E

Selects BAND E as the band for the current step.

| | |
|----------------------|--|
| Key Path | Source, Frequency, Radio Setup, Radio Standard, TDSCDMA |
| Example | :SOUR:FREQ:CHAN:BAND BANDE |
| Initial S/W Revision | A.11.50 |

BAND F

Selects BAND F as the band for the current step.

| | |
|----------------------|--|
| Key Path | Source, Frequency, Radio Setup, Radio Standard, TDSCDMA |
| Example | :SOUR:FREQ:CHAN:BAND BANDF |
| Initial S/W Revision | A.11.50 |

Radio Band Link

Allows you to specify the channel band type as either uplink or downlink link direction. This value is used in conjunction with the channel band and channel number to determine the absolute frequency output by the

source. When set to “Uplink”, the source will calculate the uplink frequency using an uplink formula together with the selected channel band and channel number . When set to “Downlink”, the source will calculate the downlink frequency using a downlink formula together with the selected channel band and channel number.

| | |
|--------------------------------------|---|
| Key Path | Source, Frequency, Radio Setup |
| Remote Command | :SOURce:RADio:BAND:LINK DOWN UP :SOURce:RADio:BAND:LINK? |
| Example | :SOUR:RAD:BAND:LINK UP |
| Preset | DOWN |
| Range | DOWN UP |
| Backwards Compatibility SCPI | :SOURce:RADio:DEVIce BTS MS :SOURce:RADio:DEVIce? |
| Backwards Compatibility Notes | BTS maps to the Downlink frequency MS maps to the Uplink frequency |
| Initial S/W Revision | A.05.00 |

Set Reference Frequency

This key allows you to set the frequency reference. Pressing this key turns the frequency reference state to ON, sets the reference frequency value to the current frequency, maintains this frequency at the RF output, and sets the displayed frequency to 0.00 Hz. All subsequent frequencies entered under Source>Frequency>Frequency are interpreted as being relative to this reference frequency.

When you use a frequency reference, the signal generator outputs a frequency that is set relative to the reference frequency by the value entered under Source>Frequency>Frequency as follows:

$$\text{Output frequency} = \text{reference frequency} - \text{entered frequency}$$

Where:

reference frequency equals the original RF frequency entered under Source>Frequency>Frequency and set as the reference frequency

entered frequency equals a new value entered under Source>Frequency>Frequency

In addition, the displayed frequency value will be the same as the value entered under Source>Frequency>Frequency.

NOTE

If Freq Reference is set to ON with a reference value set, entering a value under Source>Frequency>Frequency and pressing Set Frequency Reference will add that value to the existing Freq Reference value.

If you wish to change the reference frequency value to the new value entered under Source>Frequency>Frequency, first you must set Freq Reference to OFF and then press Set Frequency Reference.

| | |
|-----------------|--------------------------|
| Key Path | Source, Frequency |
|-----------------|--------------------------|

| | |
|-----------------------------|--|
| Remote Command | :SOURce:FREQuency:REFerence:SET |
| Example | :SOUR:FREQ:REF:SET |
| Dependencies | This setting is unavailable, and is grayed out when the List Sequencer is turned ON. |
| Initial S/W Revision | A.05.00 |

Freq Reference

This key allows you to toggle the state of the frequency reference. When the frequency reference state is ON, an annunciator is displayed on the main source view to indicate this state to the user.

When you use a frequency reference, the signal generator outputs a frequency that is set relative to the reference frequency by the value entered under Source > Frequency > Frequency as follows:

Output frequency = reference frequency + entered frequency

Where:

reference frequency equals the original RF frequency entered under Source > Frequency > Frequency and set as the reference frequency

entered frequency equals a new value entered under Source > Frequency > Frequency

For more information on Reference Frequency refer to ["Set Reference Frequency" on page 2532](#)

| Key Path | Source, Frequency |
|-----------------------------|--|
| Remote Command | :SOURce:FREQuency:REFerence <freq> :SOURce:FREQuency:REFerence? :SOURce:FREQuency:REFerence:STATe OFF ON 0 1 :SOURce:FREQuency:REFerence:STATe? |
| Example | :SOUR:FREQ:REF 0.00 Hz :SOUR:FREQ:REF:STATe ON |
| Dependencies | This setting is unavailable, and is grayed out when the List Sequencer is turned ON. |
| Couplings | The frequency reference state is coupled to the frequency reference set immediate action. When the reference set immediate action key is pressed, or the SCPI command issued, it turns the frequency reference state ON. |
| Preset | 0.00 Hz OFF |
| Min | 0.00 Hz |
| Max | Hardware Dependant: Option 503 = 3.6 GHz Option 504 = 3.8 GHz Option 506 = 6.00 GHz |
| Initial S/W Revision | A.05.00 |

Freq Offset

Allows you to specify the frequency offset value. When the frequency offset state is ON, an annunciator is displayed on the main source view to indicate this state to the user.

When the frequency offset is set to zero (0) and you set a new offset value, the displayed frequency value will change as follows and the RF output frequency will not change:

Displayed value = output frequency + offset value

Where:

output frequency equals the original frequency entered under Source > Frequency > Frequency

offset value equals the value entered under Source > Frequency > Freq Offset

When the frequency offset is set to a value other than zero (0) and you enter a new frequency value under Source > Frequency > Frequency, the displayed frequency will be the same as the value entered and the RF output frequency will be equal to the value entered minus the offset value as follows:

Output frequency = entered frequency – offset frequency

Displayed frequency = output frequency + offset frequency

Displayed frequency = entered frequency

Where:

entered frequency equals the frequency entered under Source > Frequency > Frequency

offset frequency equals the value previously entered and set under Source > Frequency > Freq Offset

| Key Path | Source, Frequency |
|-----------------------|--|
| Remote Command | :SOURce:FREQuency:OFFSet <freq> :SOURce:FREQuency:OFFSet? |
| Example | :SOUR:FREQ:OFFS 0 Hz |
| Dependencies | This setting is unavailable, and is grayed out when the List Sequencer is turned ON. |
| Preset | 0 Hz |
| Min | -100.00 GHz |
| Max | 100.00 GHz |
| Initial S/W Revision | A.05.00 |

Modulation Setup

Allows access to the menus for setting up the available modulation types: "ARB" on page 2535, "AM" on page 2581, "FM" on page 2583, and "PM" on page 2584.

| Key Path | Source |
|----------------------|---------|
| Initial S/W Revision | A.05.00 |

ARB

Allows you access to the ARB sub-menus.

| | |
|----------------------|---------------------------------|
| Key Path | Source, Modulation Setup |
| Initial S/W Revision | A.05.00 |

ARB

Allows you to toggle the state of the ARB function. When the ARB is On, a “MOD” annunciator is displayed in the system settings panel. When the ARB is turned Off, the MOD annunciator is cleared

| | |
|--------------------------|---|
| Key Path | Source, Modulation Setup, ARB |
| Remote Command | :SOURce:RADio:ARB[:STATe] ON OFF 1 0 :SOURce:RADio:ARB[:STATe]? |
| Example | :SOUR:RAD:ARB OFF :SOUR:RAD:ARB? |
| Notes | If the ARB is ON, a user then loads or deletes another file to ARB memory, the playing waveform segment may not keep phase continuity during the ARB memory operation. The waveform will be replayed after the ARB operation is finished. |
| Dependencies | This setting is for independent mode and has no effect on 3.3.8 list sequencer mode. Setting "Sequencer" on page 2586 Sequencer to On will put source enter list sequencer mode, and even if ARB state is On, the ARB file will not be played. Setting "Sequencer" on page 2586 Sequencer to Off will make source leave list sequencer mode, and this setting will take effect immediately. The ARB can only be turned on when there is a waveform file selected for playback. On the GUI if no waveform is selected, this key is grayed out. If you send the SCPI command to turn the ARB on with no waveform selected for playback, the ARB state remains OFF and an error is generated. "- When you try to recall a certain set of states in which the selected waveform is not in ARB memory and the ARB state is On, errors are reported |
| Couplings | If "Real-Time AWGN" on page 2546 AWGN State is On and this setting is On, "RF Power" on page 2500 RF Power will be adjusted to the value to maintain the AWGN power relationship defined by "Power Control Mode" on page 2547 Power Control Mode and other noise settings |
| Preset | Off |
| Range | On Off |
| Initial S/W Revision | A.05.00 |
| Modified at S/W Revision | A.16.00 (Add couplings with AWGN state) |

Select Waveform

Allows you to access to the waveform selection sub-menus.

Pressing this key changes the central view area to show the Waveform File Selection view.

| | |
|----------------------|--------------------------------------|
| Key Path | Source, Modulation Setup, ARB |
| Initial S/W Revision | A.05.00 |

Select Waveform

Allows you to select a waveform sequence or segment for the dual ARB to play.

| | |
|----------------------|---|
| Key Path | Source, Modulation Setup, ARB, Select Waveform |
| Remote Command | :SOURce:RADio:ARB:WAVeform <string> :SOURce:RADio:ARB:WAVeform? |
| Example | :SOUR:RAD:ARB:WAV "test_waveform.bin" |
| Notes | <p>If intended waveform is not in the memory yet, then issuing this command by SCPI will invoke ARB loading operation first, which involves a delay of unpredictable length. So this command should be followed by the query *OPC?, which holds off subsequent commands until the loading operating is complete.</p> <p><string> - specifies the name of the waveform segment or waveform sequence to be played by the ARB.</p> <p>When in Sequence Analyzer mode, and Include Source is Yes, if the you attempt to play a waveform sequence but not all the required waveform segments are in the ARB playback memory, the application will reject the loading operation with an error is generated .</p> <p>When Include Source is No, if you attempt to play a waveform sequence but not all the required waveform segments are contained in the ARB playback memory, the application will attempt to load the required segments from either the default directory of the current directory. If the ARB memory does not have enough space for all the waveform segments to be loaded, an error is generated and none of the waveform segments is loaded.</p> <p>If the ARB is ON, and you attampt to play a waveform sequence but not all the waveform segments within the sequence could be found to be loaded into ARB memory, an error is generated. The selected waveform keeps the previous value and ARB state remains On.</p> <p>If you specify a waveform segment over SCPI but the waveform segment is not present within ARB playback memory and cannot be found for auto loading within the current directory or the default directory, an error is generatedand the file selection remains unchanged.</p> <p>If you select a waveform for playback and the waveform requires a license that is not installed on the instrument, an error is generated.error is generated.</p> <p>If the ARB is ON and you load a file to ARB memory or delete a file from ARB memory, the playing waveform segment may not keep phase continuity during the ARB memory operation. The waveform will be replayed after the ARB operation is finished.</p> |
| Initial S/W Revision | A.05.00 |

Segments on Hard Disk

Allows you access to the sub-menus for loading waveform segments from the hard disk into ARB memory. The default directory is: D: varb.

Pressing this key changes the current view to the Waveform Management View.

| | |
|-----------------------------|---|
| Key Path | Source, Modulation Setup, ARB, Select Waveform |
| Initial S/W Revision | A.05.00 |

Load Segment To ARB Memory

Allows you to load the selected file into ARB memory. On the front panel you select the file for loading to the ARB memory by highlighting the desired file in the list. Using the SCPI command, you specify the file name on the HDD.

“NVWFM” (none-volatile storage) MSUS (Mass Storage Unit Specifier) is supported in the memory subsystem because the ARB memory cannot be accessed directly. Therefore, files must be downloaded to the instrument hard disk and then loaded into the ARB memory. “NVWFM” MSUS will be mapped to the default directory D: VARB. The SCPI command supports using either “NVWFM” MSUS or specifying a full path. For more information, see [Memory Subsystem \(Remote Command Only\)](#).

If a file of the same name already exists within ARB memory, it is overwritten. If you wish to load two segments of the same name, you must rename one of the segments before loading it into ARB memory. To rename a segment, you can either use Windows File Explorer, or the :MMEMory:COPI command.

| | |
|-----------------------|---|
| Key Path | Source, Modulation Setup, ARB, Select Waveform, Segments on Hard Disk |
| Remote Command | :SOURce:RADio:ARB:LOAD <string> |
| Example | :SOUR:RAD:ARB:LOAD "D: VARB\testwaveform.bin" or :SOUR:RAD:ARB:LOAD "NVWFM:testwaveform.bin" |
| Notes | <p>Because loading the file involves a delay of unpredictable length, this command should be followed by the query *OPC?, which holds off subsequent commands until the loading operating is complete.</p> <p><string> - specifies the path name of the file to load from the HDD into ARB memory. It could be a <full path + filename>, or <"NVWFM" MSUS + colon + filename>.</p> <p>When in Sequence Analyzer mode, and Include Source is Yes, an attempt to load a file to ARB memory will be rejected with an error.</p> <p>When Include Source is No and if there is insufficient free ARB memory to load the selected waveform, an error is generated. .</p> <p>If you specify a file over SCPI, but the file is not at the specified location, an error is generated.</p> <p>If you try to load a waveform file but the file contains less than 500 IQ samples, an error is generated.</p> <p>If you try to load a Signal Studio waveform "*.wfm" which contains invalid waveform header, an error is generated.</p> <p>If the ARB is ON when you load a file to ARB memory or delete a file from ARB memory, the playing waveform segment may not keep phase continuity during the ARB memory operation. The waveform will be replayed after the ARB operation is finished.</p> <p>ARB can be loaded into ARB memory even required licenses do not present on the instrument. In this</p> |

case, a GUI only warning message -800, "Operation complete; Loaded <filename> successfully, but no license <required licenses> installed". User can install required licenses according to <required licenses> string to license it, or multi-pack license it.

Initial S/W Revision A.05.00

Load All To ARB Memory

Allows you to load all the segment files within the currently selected directory into ARB memory. If a file of the same name already exists within ARB memory, it is overwritten. If you wish to load two segments of the same name, you must rename one of the segments before loading it into ARB memory. To rename a segment, you can either use Windows File Explorer, or the :MEMory:COPY command.

| | |
|-----------------------|---|
| Key Path | Source, Modulation Setup, ARB, Select Waveform, Segments on Hard Disk |
| Remote Command | :SOURce:RADio:ARB:LOAD:ALL <string> |
| Example | :SOUR:RAD:ARB:LOAD:ALL "D: varb" |
| Notes | <p><string> - specifies the directory on the HDD to load the files into ARB memory from.</p> <p>When in Sequence Analyzer mode, and Include Source is Yes, an attempt to load all files from a directory to ARB memory is rejected with an error.</p> <p>When Include Source is No and there is insufficient free ARB memory to load all the waveforms, when the ARB memory is full, the copy ceases, and an error is generated.</p> <p>If you specify a directory over SCPI, but the directory does not exist, an error is generated.</p> <p>If the ARB is ON, a user then loads or deletes file to ARB memory, the playing waveform segment may not keep phase continuity during the ARB memory operation. The waveform will be replayed after the ARB operation is finished.</p> |
| Initial S/W Revision | A.05.00 |

Change Directory...

Allows you to change the currently selected directory on the hard disk. Pressing this key opens a standard windows change directory dialog allowing you to select the new directory of interest.

The current directory is used for manually loading waveform segments into ARB memory for playback, and as a search location for waveform segments that are required to be loaded into ARB memory for playback of a waveform sequence or a list sequence.

| | |
|----------------------|--|
| Key Path | Source, Modulation Setup, ARB, Select Waveform, Segments on Hard Disk |
| Notes | No remote command, SCPI front panel only. |
| Initial S/W Revision | A.05.00 |

Default Directory...

Allows you to change the default directory. It is used as a search location for waveform segments that are required to be loaded into ARB memory for playback of a waveform sequence, and as a search location for

selecting waveforms using SCPI.

| | |
|-----------------------------|---|
| Key Path | Source, Modulation Setup, ARB, Select Waveform, Segments on Hard Disk |
| Remote Command | :SOURce:RADio:ARB:DEFAult:DIRectory <string> :SOURce:RADio:ARB: DEFAult:DIRectory? |
| Example | :SOUR:RAD:ARB:DEF:DIR "D:\ArbFiles" :SOUR:RAD:ARB:DEF:DIR? |
| State Saved | Persistent, survives a power cycle and a preset but not saved in the instrument state |
| Initial S/W Revision | A.05.00 |

Segments in ARB Memory

Allows you access to the sub-menus for managing the files within ARB memory.

| | |
|-----------------------------|---|
| Key Path | Source, Modulation Setup, ARB, Select Waveform |
| Initial S/W Revision | A.05.00 |

Delete Segment From ARB Mem

Allows you to remove a segment from ARB playback memory.

| | |
|-----------------------------|---|
| Key Path | Source, Modulation Setup, ARB, Select Waveform, Segments in ARB Memory |
| Remote Command | :SOURce:RADio:ARB:DELeTe <string> |
| Example | :SOUR:RAD:ARB:DEL "testwaveform.bin" |
| Notes | <p><string> - specifies the waveform to be deleted from the ARB playback memory.</p> <p>When in Sequence Analyzer mode and Include Source is Yes, an attempt to delete a file from ARB memory is rejected with an error.</p> <p>When Include Source is No and you specify a file that does not exist within ARB memory, an error is generated.</p> <p>It is possible to delete files from within the ARB memory when the ARB is ON. However, if you attempt to delete the file that is currently playing an error is generated.</p> <p>It is possible to delete a file from within the ARB memory when the sequencer state is ON and the file is not being used by the List Sequencer. If you attempt to delete a file which is being used by the list sequencer, an error is generated.</p> <p>When sequencer state is On, even if ARB state is On, the selected waveform will not be played. In this case, if the selected waveform is not used in List Sequence, it can be deleted and the ARB state is turned Off.</p> <p>If the ARB is ON and you load a file to ARB memory or delete a file from ARB memory, the playing waveform segment may not keep phase continuity during the ARB memory operation. The waveform will be replayed after the ARB operation is finished.</p> |
| Initial S/W Revision | A.05.00 |

Delete All From ARB Memory

Allows you to remove all segments from ARB playback memory.

| | |
|----------------------|--|
| Key Path | Source, Modulation Setup, ARB, Select Waveform, Segments in ARB Memory |
| Remote Command | :SOURce:RADio:ARB:DELeTe:ALL |
| Example | :SOUR:RAD:ARB:DELeTe:ALL |
| Notes | <p>When in Sequence Analyzer mode and Include Source is Yes, an attempt to delete all files from ARB memory is rejected with an error.</p> <p>When Include Source is No and you attempt to delete all files from ARB memory when the ARB is currently playing a file, all files except the one playing are deleted and an error is generated.</p> <p>If you attempt to delete all files from ARB memory when there are waveform files used in "List Sequencer" on page 2585 and "Sequencer" on page 2586 state is ON, all files except the files currently being used in list sequencer are deleted, and an error is generated.</p> <p>If the ARB is ON and you load a file to ARB memory or delete a file from ARB memory, the playing waveform segment may not keep phase continuity during the ARB memory operation. The waveform will be replayed after the ARB operation is finished.</p> |
| Initial S/W Revision | A.05.00 |

Query ARB Memory File List (Remote Command Only)

Queries the test set for the list of waveform segments in the ARB memory.

NOTE

This command returns a string for waveform segment names in ARB memory. If you want a string list of waveform segments in the ARB memory, use "[Query ARB Memory Full File List \(Remote Command Only\)](#)" on page 2540.

| | |
|----------------------|--|
| Remote Command | :SOURce:RADio:ARB:CATalog? |
| Example | :SOUR:RAD:ARB:CATalog? |
| Notes | <p>The return data is in the following format:</p> <p><integer> - memory used</p> <p><integer> - memory free</p> <p><string> ... - comma separated list of waveform segments within ARB memory</p> |
| Initial S/W Revision | A.05.00 |

Query ARB Memory Full File List (Remote Command Only)

Queries the test set for the string list of waveform segments in the ARB memory. It returns a string list for waveform segment names in the ARB memory.

| | |
|----------------|---|
| Remote Command | :SOURce:RADio:ARB:FCATalog? |
| Example | :SOUR:RAD:ARB:FCATalog? |
| Notes | <p>The return data is in the following format:</p> <p><integer> - memory used</p> |

| | |
|----------------------|---|
| | <integer> - memory free <integer> - file count in ARB memory <string>, <string>, ... <string> - comma separated string list of waveform segments within ARB memory Example: SOUR:RAD:ARB:FCAT? EXT returns: 27499,2069653,3,"c2k.wfm","gsm.wfm","wcdma.wfm" |
| Initial S/W Revision | A.09.00 |

ARB Setup

Allows access to the ARB setup sub-menus.

| | |
|----------------------|--------------------------------------|
| Key Path | Source, Modulation Setup, ARB |
| Initial S/W Revision | A.05.00 |

Sample Rate

Allows you to set the ARB waveform playback sample rate.

| | |
|-----------------------|---|
| Key Path | Source, Modulation Setup, ARB, ARB Setup |
| Remote Command | :SOURce:RADio:ARB:SCLock:RATE <freq> :SOURce:RADio:ARB:SCLock:RATE? |
| Example | :SOUR:RAD:ARB:SCL:RATE 48.00 MHz |
| Notes | If there is a sample rate specified in the header of the waveform file, changing that sample rate is not recommended, as it may cause problems with burst timing. |
| Dependencies | When a new waveform is selected for playback the settings contained within the associated waveform header file are applied to the ARB. The sample rate is one of the values stored within the header file. If the newly selected waveform file has an associated header file, the sample rate is updated with the value from the header file. The sample rate will remain unchanged if the newly selected waveform does not have an associated header file. |
| Preset | 125.00 MHz |
| Min | 1.00 kHz |
| Max | 125.00 MHz |
| Initial S/W Revision | A.05.00 |

Run-Time Scaling

Allows you to adjust the run-time scaling value. The run-time scaling value is applied in real-time while the waveform is playing.

| | |
|----------|---|
| Key Path | Source, Modulation Setup, ARB, ARB Setup |
|----------|---|

| | |
|-----------------------------|--|
| Remote Command | :SOURce:RADio:ARB:RSCaling <real> :SOURce:RADio:ARB:RSCaling? |
| Example | :SOUR:RAD:ARB:RSC 100.00 |
| Dependencies | When a new waveform is selected for playback the settings contained within the associated waveform header file are applied to the ARB. The run-time scaling is one of the values stored within the header file. If the newly selected waveform file has an associated header file, the run-time scaling is updated with the value from the header file. The run-time scaling will remain unchanged if the newly selected waveform does not have an associated header file. |
| Preset | 70.00 % |
| Min | 1.00 % |
| Max | 100.00 % |
| Initial S/W Revision | A.05.00 |

Baseband Freq Offset

Allows you to adjust the value by which the baseband frequency is offset relative to the carrier.

| | |
|-----------------------------|---|
| Key Path | Source, Modulation Setup, ARB, ARB Setup |
| Remote Command | :SOURce:RADio:ARB:BASEband:FREQuency:OFFSet <freq> :SOURce:RADio:ARB:BASEband:FREQuency:OFFSet? |
| Example | :SOUR:RAD:ARB:BAS:FREQ:OFFS 0.00 Hz |
| Dependencies | When a new waveform is selected for playback the settings contained within the associated waveform header file are applied to the ARB. The baseband frequency offset is one of the values stored within the header file. If the newly selected waveform file has an associated header file, the baseband frequency offset is updated with the value from the header file. The baseband frequency offset will remain unchanged if the newly selected waveform does not have an associated header file. |
| Preset | 0.00 Hz |
| Min | -50.00 MHz |
| Max | 50.00 MHz |
| Initial S/W Revision | A.05.00 |

Edit RMS

Allows you to edit or calculate current RMS of selected waveform.

| | |
|-----------------------------|---|
| Key Path | Source, Modulation Setup, ARB, ARB Setup |
| Initial S/W Revision | A.14.50 |

Current RMS

Allows you to directly specify current RMS value used to playback currently selected waveform. Please note incorrect RMS value may cause inaccurate power output in E6640A that is sensitive to RMS value.

This setting is also updated by RMS in waveform header or updated when invoking RMS calculation operation.

This setting can be saved to the header of currently selected waveform by invoking ["Save Setup To Header" on page 2580](#) "Save Setup To Header".

| | |
|-----------------------------|---|
| Key Path | Source, Modulation Setup, ARB, ARB Setup, Edit RMS |
| Remote Command | :SOURce:RADio:ARB:RMS <float> :SOURce:RADio:ARB:RMS? |
| Example | :SOUR:RAD:ARB:HEAD:RMS 0.7 :SOUR:RAD:ARB:HEAD:RMS? |
| Notes | Valid range is 0 to 1.414, values outside the range will be clipped to the closest boundary. Note this value does not affect "List Sequencer" on page 2585 Source List Sequencer that always uses RMS value resides in each ARB header. If want this value to take effect in list sequencer, use "Save Setup To Header" on page 2580 "Save Setup to Header" to save current RMS value to header first, then play the ARB in source list sequencer. |
| Dependencies | When a new waveform is selected for playback, this setting is updated by the RMS value defined in associated waveform header file. If selected waveform has no associated header file or header file does not specify RMS value, then instrument will try to calculate out one automatically. Calculating RMS can also update this setting. |
| Preset | 0 |
| Range | 0 ~ 1.414 |
| Initial S/W Revision | A.14.50 |

RMS Calculation Mode

Allows you to specify the mode to calculate the current RMS.

| | |
|-----------------------------|--|
| Key Path | Source, Modulation Setup, ARB, ARB Setup, Edit RMS |
| Remote Command | :SOURce:RADio:ARB:RMS:CALCulation:MODE AUTO M1 M2 M3 M4 :SOURce:RADio:ARB:RMS:CALCulation:MODE? |
| Example | :SOUR:RAD:ARB:RMS:CALC:MODE AUTO |
| Notes | If no waveform is selected, or selected waveform is waveform sequence, the key will grey out. |
| Preset | AUTO |
| Range | AUTO M1 M2 M3 M4 |
| Initial S/W Revision | A.14.50 |

Auto

RMS will be calculated based on the whole sample range of current selected waveform.

| | |
|----------------------|--|
| Key Path | Source, Modulation Setup, ARB, ARB Setup, Edit RMS, Calculate RMS, RMS Calculation Mode |
| Example | :SOUR:RAD:ARB:RMS:CALC:MODE AUTO |
| Initial S/W Revision | A.14.50 |

Marker 1

Selects marker 1 to designate sample range used for RMS calculation.

| | |
|----------------------|---|
| Key Path | Source, Modulation Setup, ARB, ARB Setup, Edit RMS, Calculate RMS, RMS Calculation Mode , Marker |
| Example | :SOUR:RAD:ARB:RMS:CALC:MODE M1 |
| Initial S/W Revision | A.14.50 |

Marker 2

Selects marker 2 to designate sample range used for RMS calculation.

| | |
|----------------------|---|
| Key Path | Source, Modulation Setup, ARB, ARB Setup, Edit RMS, Calculate RMS, RMS Calculation Mode , Marker |
| Example | :SOUR:RAD:ARB:RMS:CALC:MODE M2 |
| Initial S/W Revision | A.14.50 |

Marker 3

Selects marker 3 to designate sample range used for RMS calculation.

| | |
|----------------------|---|
| Key Path | Source, Modulation Setup, ARB, ARB Setup, Edit RMS, Calculate RMS, RMS Calculation Mode , Marker |
| Example | :SOUR:RAD:ARB:RMS:CALC:MODE M3 |
| Initial S/W Revision | A.14.50 |

Marker 4

Selects marker 4 to designate sample range used for RMS calculation.

| | |
|----------------------|---|
| Key Path | Source, Modulation Setup, ARB, ARB Setup, Edit RMS, Calculate RMS, RMS Calculation Mode , Marker |
| Example | :SOUR:RAD:ARB:RMS:CALC:MODE M4 |
| Initial S/W Revision | A.14.50 |

Calculate RMS

Allows you to calculate current RMS based on mode selected. This will update ["Current RMS" on page 2543](#) Current RMS setting.

| | |
|----------------------|--|
| Key Path | Source, Modulation Setup, ARB, ARB Setup, Edit RMS, Calculate RMS |
| Remote Command | :SOURce:RADio:ARB:RMS:CALCulate |
| Example | :SOUR:RAD:ARB:RMS:CALC |
| Notes | <p>If no waveform is selected, invoking this operation will get error “-221 Setting conflict; No waveform is selected for RMS operation”.</p> <p>If no waveform is selected, or selected waveform is waveform sequence, the key will grey out.</p> <p>If selected waveform does not contain marker data, but "RMS Calculation Mode" on page 2543 “RMS Calculation Mode” is set to marker, under this circumstance, invoking calculation operation will get error “-221 Setting conflict; There is no marker for currently selected waveform, auto RMS calculation mode is used instead”, and "RMS Calculation Mode" on page 2543 “RMS Calculation Mode” will be coupled to “Auto” mode automatically.</p> <p>RMS calculation does not suit for waveform sequence. If selected waveform is waveform sequence file, invoking this operation will get error “-221 Setting conflict; RMS calculation does not apply to waveform sequence”. But users can still edit current RMS as play parameter, and can save current RMS to waveform sequence header for later use.</p> |
| Initial S/W Revision | A.14.50 |

Use Header RMS

Allows you to quickly set RMS in ARB header to ["Current RMS" on page 2543](#) Current RMS setting.

| | |
|----------------------|---|
| Key Path | Source, Modulation Setup, ARB, ARB Setup, Edit RMS, |
| Notes | <p>No remote command, front panel only.</p> <p>If no waveform is selected, the key will grey out.</p> <p>If no waveform is selected, invoking this operation will get error “-221 Setting conflict; No waveform is selected for RMS operation”.</p> |
| Initial S/W Revision | A.14.50 |

Real-Time AWGN Setup

The source allows you to apply additive white Gaussian noise (AWGN) to a carrier in real time while the modulating waveform plays in the dual ARB player. Pressing this key allows access to the real time AWGN sub-menus and changes the central display area to show the AWGN Setup view.

This feature is controlled by E6650A-AW1 option

| | |
|----------------------|--|
| Key Path | Source, Modulation Setup, ARB, ARB Setup |
| Notes | This menu only appears and related SCPIs are only available when E6650A-AW1 option presents. |
| Initial S/W Revision | A.16.00 |

Real-Time AWGN

Allows you to enable or disable adding real-time AWGN to the carrier modulated by the waveform currently being played by the dual ARB.

| | |
|-----------------------------|--|
| Key Path | Source, Modulation Setup, ARB, ARB Setup, Real-Time AWGN Setup |
| Remote Command | :SOURce:RADio:ARB:NOISe[:STATe] ON OFF 1 0 :SOURce:RADio:ARB:NOISe[:STATe]? |
| Example | :SOUR:RAD:ARB:NOIS OFF |
| Dependencies | When a new waveform is selected for playback the settings contained within the associated waveform header file are applied to the ARB. The AWGN state is one of the values stored within the header file. If the newly selected waveform file has an associated header file, the AWGN state is updated with the value from the header file. The AWGN state will remain unchanged if the newly selected waveform does not have an associated header file. |
| Couplings | If this setting is On and "ARB" on page 2535 ARB State is On, "RF Power" on page 2500 RF Power will be adjusted to the value to maintain the AWGN power relationship defined by "Power Control Mode" on page 2547 Power Control Mode and other noise settings |
| Preset | Off |
| Range | On Off |
| Initial S/W Revision | A.16.00 |

Carrier To Noise Ratio

Allows you to specify the carrier to noise ratio (C/N) in dB. The carrier power is defined as the total modulated signal power without noise power added. The noise power is applied over the specified bandwidth of the carrier signal.

| | |
|-----------------------------|--|
| Key Path | Source, Modulation Setup, ARB, ARB Setup, Real-Time AWGN Setup |
| Remote Command | :SOURce:RADio:ARB:NOISe:CN <ampl> :SOURce:RADio:ARB:NOISe:CN? |
| Example | :SOUR:RAD:ARB:NOIS:CN 0.00 dB |
| Dependencies | When a new waveform is selected for playback the settings contained within the associated waveform header file are applied to the ARB. The AWGN C/N ratio is one of the values stored within the header file. If the newly selected waveform file has an associated header file, the AWGN C/N ratio is updated with the value from the header file. The AWGN C/N ratio will remain unchanged if the newly selected waveform does not have an associated header file. |
| Preset | 0.00 dB |
| Min | -100.00 dB |
| Max | 100.00 dB |
| Initial S/W Revision | A.16.00 |

Carrier Bandwidth

Allows you to specify the bandwidth over which the AWGN is applied. The carrier RMS power and the noise power are integrated over the selected carrier bandwidth for the purpose of calculating carrier to noise ratio (C/N).

| | |
|-----------------------------|--|
| Key Path | Source, Modulation Setup, ARB, ARB Setup, Real-Time AWGN Setup |
| Remote Command | :SOURce:RADio:ARB:NOISe:CBWidth <freq> :SOURce:RADio:ARB:NOISe:CBWidth? |
| Example | :SOUR:RAD:ARB:NOIS:CBW 1.00 Hz |
| Dependencies | When a new waveform is selected for playback the settings contained within the associated waveform header file are applied to the ARB. The AWGN carrier bandwidth is one of the values stored within the header file. If the newly selected waveform file has an associated header file, the AWGN carrier bandwidth is updated with the value from the header file. The AWGN carrier bandwidth will remain unchanged if the newly selected waveform does not have an associated header file. |
| Min | 1.00 Hz |
| Max | 200.00 MHz |
| Initial S/W Revision | A.16.00 |

Noise Bandwidth

Allows you to specify the flat noise bandwidth of the real-time noise for an ARB waveform.

| | |
|-----------------------------|--|
| Key Path | Source, Modulation Setup, ARB, ARB Setup, Real-Time AWGN Setup |
| Remote Command | :SOURce:RADio:ARB:NOISe:BANDwidth <freq> :SOURce:RADio:ARB:NOISe:BANDwidth? |
| Example | :SOUR:RAD:ARB:NOIS:BAND 1.00 Hz |
| Notes | Generally, flat noise bandwidth should be set slightly wider than the carrier bandwidth (typically 1.6 times wider) |
| Notes | Max Noise Bandwidth equals $0.8 * \text{Maximum ARB Sample Rate}$ reported in HW capability |
| Dependencies | When a new waveform is selected for playback the settings contained within the associated waveform header file are applied to the ARB. The AWGN carrier bandwidth is one of the values stored within the header file. If the newly selected waveform file has an associated header file, the AWGN carrier bandwidth is updated with the value from the header file. The AWGN carrier bandwidth will remain unchanged if the newly selected waveform does not have an associated header file. |
| Preset | 1.00 Hz |
| Min | 1.00 Hz |
| Max | 160.00 MHz |
| Initial S/W Revision | A.16.00 |

Power Control Mode

This setting offers four ways to control the RF output power when adding AWGN to a signal.

| | |
|----------------------|---|
| Key Path | Source, Modulation Setup, ARB, ARB Setup, Real-Time AWGN Setup |
| Remote Command | :SOURce:RADio:ARB:NOISe:POWer:CONTrol[:MODE] TOTal CARRier NOISe NCHannel :SOURce:RADio:ARB:NOISe: POWer:CONTrol[:MODE]? |
| Example | :SOUR:RAD:ARB:NOIS:POW:CONT NCHannel :SOUR:RAD:ARB:NOIS:POW:CONT? |
| Preset | TOTal |
| Range | Total Power Carrier Power Total Noise Power Noise Power in Channel |
| Initial S/W Revision | A.16.00 |

Total

Set the power control mode as total power.

| | |
|----------------------|---|
| Key Path | Source, Modulation Setup, ARB, ARB Setup, Real-Time AWGN Setup, Power Control Mode |
| Example | :SOUR:RAD:ARB:NOIS:POW:CONT TOTal |
| Couplings | Set to this value will make Carrier Power Carrier Power, Total Noise Power Total Noise Power, and Channel Noise Power Channel Noise Power buttons invisible on menu. Selecting Total as the power control mode makes the total power and C/N independent variables while making the carrier power and total noise power dependent variables. The dependent variables carrier power and total noise power are set by the total power, C/N, and the rest of the Noise settings. The carrier power and total noise power change as any noise parameter is adjusted to keep the total power and the C/N at their last specified values. |
| Initial S/W Revision | A.16.00 |

Carrier

Set the power control mode as carrier power.

| | |
|----------------------|---|
| Key Path | Source, Modulation Setup, ARB, ARB Setup, Real-Time AWGN Setup, Power Control Mode |
| Example | :SOUR:RAD:ARB:NOIS:POW:CONT CARRier |
| Couplings | Set to this value will make Carrier Power Carrier Power button visible, while Total Noise Power Total Noise Power and Channel Noise Power Channel Noise Power buttons invisible from menu. Selecting Carrier as the power control mode makes the carrier power and C/N independent variables while making the total power and total noise power dependent variables. The dependent variables total power and total noise power are set by the carrier power, C/N, and the rest of the Noise settings. The total power and total noise power change as any noise parameter is adjusted to keep the carrier power and the C/N at their last specified values. |
| Initial S/W Revision | A.16.00 |

Total Noise

Set the power control mode as total noise power.

| | |
|-----------------------------|---|
| Key Path | Source, Modulation Setup, ARB, ARB Setup, Real-Time AWGN Setup, Power Control Mode |
| Example | :SOUR:RAD:ARB:NOIS:POW:CONT NOISe |
| Couplings | Set to this value will make Total Noise Power Total Noise Power button visible, while Carrier Power Carrier Power and Channel Noise Power Channel Noise Power buttons invisible from menu. Selecting Total Noise as the power control mode makes the total noise power and C/N independent variables while making the total power and carrier power dependent variables. The dependent variables total power and carrier power are set by the total noise power, C/N, and the rest of the Noise settings. The total power and carrier power change as any noise parameter is adjusted to keep the total noise power and the C/N at their last specified values. |
| Initial S/W Revision | A.16.00 |

Channel Noise

Set the power control mode as channel noise power.

| | |
|-----------------------------|--|
| Key Path | Source, Modulation Setup, ARB, ARB Setup, Real-Time AWGN Setup, Power Control Mode |
| Example | :SOUR:RAD:ARB:NOIS:POW:CONT NCHannel |
| Couplings | Set to this value will make Channel Noise Power Channel Noise Power button visible, while Total Noise Power Total Noise Power and Carrier Power Carrier Power buttons invisible from menu. Selecting Channel Noise as the power control mode makes the noise power in channel and C/N independent variables while making the carrier power and total noise power dependent variables. The dependent variables carrier power and total noise power are set by the channel noise power, C/N, and the rest of the Noise settings. The carrier power and total noise power change as any noise parameter is adjusted to keep the channel noise power and the C/N at their last specified values. |
| Initial S/W Revision | A.16.00 |

Trigger Type

Allows access to the trigger type sub-menus. The setting for trigger type determines the behavior of the waveform when it plays.

| | |
|-----------------------------|--|
| Key Path | Source, Modulation Setup, ARB |
| Remote Command | :SOURce:RADio:ARB:TRIGger:TYPE CONTInuous SINGle SADVance :SOURce:RADio:ARB:TRIGger:TYPE? |
| Example | :SOUR:RAD:ARB:TRIG:TYPE CONT :SOUR:RAD:ARB:TRIG:TYPE? |
| Notes | Gated trigger type will be implemented at a later release |
| Preset | CONTInuous |
| Range | Continuous Single Seg Adv |
| Initial S/W Revision | A.05.00 |

Continuous

Sets the active trigger type to Continuous. If Continuous is already selected as the active trigger type, pressing this key allows access to the continuous trigger type setup menu. In Continuous trigger mode, the waveform repeats continuously.

| | |
|-----------------------------|--|
| Key Path | Source, Modulation Setup, ARB, Trigger Type |
| Remote Command | :SOURce:RADio:ARB:TRIGger:TYPE:CONTinuous[:TYPE] FREE TRIGger RESet :SOURce:RADio:ARB:TRIGger:TYPE:CONTinuous[:TYPE]? |
| Example | :SOUR:RAD:ARB:TRIG:TYPE:CONT FREE |
| Preset | FREE |
| Range | Free Run Trigger + Run Reset + Run |
| Initial S/W Revision | A.05.00 |

Free Run

Selects Free Run as the trigger response for the continuous trigger type. Free Run sets the waveform generator to play a waveform sequence or segment continuously, without waiting for a trigger. In this mode, the waveform generator does not respond to triggers.

| | |
|-----------------------------|--|
| Key Path | Source, Modulation Setup, ARB, Trigger Type, Continuous |
| Example | :SOUR:RAD:ARB:TRIG:TYPE:CONT FREE |
| Initial S/W Revision | A.05.00 |

Trigger + Run

Sets Trigger and Run as the trigger response for the continuous trigger type. Trigger and Run sets the waveform generator to play a waveform sequence or segment continuously when the first trigger is received, and to ignore any subsequent triggers.

| | |
|-----------------------------|--|
| Key Path | Source, Modulation Setup, ARB, Trigger Type, Continuous |
| Example | :SOUR:RAD:ARB:TRIG:TYPE:CONT TRIG |
| Initial S/W Revision | A.05.00 |

Reset + Run

Sets Reset and Run as the trigger response for the continuous trigger type. Reset and Run sets the waveform generator to play a waveform sequence or segment continuously when the first trigger is received. Subsequent triggers reset the waveform sequence or segment to the start, and then play it continuously.

| | |
|-----------------------------|--|
| Key Path | Source, Modulation Setup, ARB, Trigger Type, Continuous |
| Example | :SOUR:RAD:ARB:TRIG:TYPE:CONT RES |
| Initial S/W Revision | A.05.00 |

Single

Sets the active trigger type to Single. If Single is already selected as the active trigger type, pressing this key allows access to the single trigger type setup menu. In Single trigger mode, the waveform plays once.

| | |
|-----------------------------|--|
| Key Path | Source, Modulation Setup, ARB, Trigger Type |
| Remote Command | :SOURce:RADio:ARB:RETRigger ON OFF IMMediate :SOURce:RADio:ARB:RETRigger? |
| Example | :SOUR:RAD:ARB:RETR OFF |
| Notes | ON: Buffered Trigger OFF: No Retrigger Immediate: Restart on Trigger This is defined as an enumerated SCPI command, with ON OFF being considered as enumerated types rather than Boolean. This means the query will return OFF instead of 0, and ON instead of 1. |
| Preset | ON |
| Range | No Retrigger Buffered Trigger Restart on Trigger |
| Initial S/W Revision | A.05.00 |

No Retrigger

Selects No Retrigger as the trigger response for single trigger type. No Retrigger sets the waveform generator to play a waveform sequence or segment once when a trigger is received. Any triggers then received during playback are ignored.

| | |
|-----------------------------|--|
| Key Path | Source, Modulation Setup, ARB, Trigger Type, Single |
| Example | :SOUR:RAD:ARB:RETR OFF |
| Initial S/W Revision | A.05.00 |

Buffered Trigger

Selects Buffered Trigger as the trigger response for single trigger type. Buffered Trigger sets the waveform generator to play a waveform sequence or segment once when a trigger is received. If a trigger is received during playback, the waveform generator plays the sequence or segment to the end, then plays the sequence or segment once more.

| | |
|-----------------------------|--|
| Key Path | Source, Modulation Setup, ARB, Trigger Type, Single |
| Example | :SOUR:RAD:ARB:RETR ON |
| Initial S/W Revision | A.05.00 |

Restart on Trigger

Selects Restart on Trigger as the trigger response for single trigger type. Restart on Trigger sets the waveform generator to play a waveform sequence or segment once when a trigger is received. If a trigger is received during playback, the waveform generator resets and plays the sequence or segment from the start.

| | |
|----------------------|--|
| Key Path | Source, Modulation Setup, ARB, Trigger Type, Single |
| Example | :SOUR:RAD:ARB:RETR IMM |
| Initial S/W Revision | A.05.00 |

Segment Advance

Sets the active trigger type to Segment Advance. If Segment Advance is already selected as the active trigger type, pressing this key allows access to the segment advance trigger type setup menu.

Segment Advance triggering allows you to control the playback of waveform segments within a waveform sequence. When a trigger is received the ARB advances to the next waveform segment within the waveform sequence. This type of triggering ignores the repetition count for the waveform segment within the waveform sequence. For example, if a waveform segment has a repetition count of 10 and you select single segment advance triggering mode, the waveform segment will only play once.

Segment Advance triggering can also be used for waveform segments only. In this situation the same waveform segment is played again when a trigger is received.

| | |
|-----------------------|--|
| Key Path | Source, Modulation Setup, ARB, Trigger Type |
| Remote Command | :SOURce:RADio:ARB:TRIGger:TYPE:SADVance[:TYPE] SINGLE CONTInuous :SOURce:RADio:ARB:TRIGger:TYPE:SADVance[:TYPE] ? |
| Example | :SOUR:RAD:ARB:TRIG:TYPE:SADV SING |
| Preset | CONTInuous |
| Range | Single Continuous |
| Initial S/W Revision | A.05.00 |

Single

Selects Single as the trigger response for Segment Advance trigger type. With single selected, once a trigger is received a segment is played once. If a trigger is received during playback of a segment, the segment plays to completion and the next segment is played once.

| | |
|----------------------|---|
| Key Path | Source, Modulation Setup, ARB, Trigger Type, Segment Advance |
| Example | :SOUR:RAD:ARB:TRIG:TYPE:SADV SING |
| Initial S/W Revision | A.05.00 |

Continuous

Selects Continuous as the trigger response for Segment Advance trigger type. With continuous selected, once a trigger is received a segment is played continuously. When subsequent triggers are received, the currently playing segment plays to completion and then the next segment is played continuously.

| | |
|----------------------|---|
| Key Path | Source, Modulation Setup, ARB, Trigger Type, Segment Advance |
| Example | :SOUR:RAD:ARB:TRIG:TYPE:SADV CONT |
| Initial S/W Revision | A.05.00 |

Trigger Source

The trigger source setting determines how the source receives the trigger that starts the waveform playing. Therefore, this key is grayed out if the trigger type is free run, since free run triggers immediately with no trigger source required.

| | |
|-----------------------|---|
| Key Path | Source, Modulation Setup, ARB |
| Remote Command | :SOURce:RADio:ARB:TRIGger[:SOURce] KEY BUS EXTernal2 :SOURce:RADio:ARB:TRIGger[:SOURce]? |
| Example | :SOUR:RAD:ARB:TRIGger KEY |
| Dependencies | This key is grayed out if the current trigger type is Continuous, Free Run. |
| Preset | EXTernal2 |
| Range | Trigger Key Bus External 2 |
| Initial S/W Revision | A.05.00 |

Trigger Key

Sets the current trigger source to the front panel Trigger key. When Trigger Key is selected, the waveform is triggered when you press the front panel Trigger key.

| | |
|----------------------|--|
| Key Path | Source, Modulation Setup, ARB, Trigger Source |
| Example | :SOUR:RAD:ARB:TRIGger KEY |
| Initial S/W Revision | A.05.00 |

Bus

Sets the current trigger source to Bus. Selecting Bus trigger source enables triggering over GPIB, LAN, or USB using the :SOURce:RADio:ARB:TRIGger:INITiate command.

| | |
|----------------------|--|
| Key Path | Source, Modulation Setup, ARB, Trigger Source |
| Example | :SOUR:RAD:ARB:TRIGger BUS |
| Initial S/W Revision | A.05.00 |

External 2

Sets the current trigger source to External 2. Selecting External 2 enables triggering a waveform by an externally applied signal.

| | |
|----------------------|--|
| Key Path | Source, Modulation Setup, ARB, Trigger Source |
| Example | :SOUR:RAD:ARB:TRIGger EXT2 |
| Notes | Note: When on E6640A, trigger 2 is a bi-directional trigger port. So when trigger 2 has been configured as OUTPUT type, choosing External 2 as the input trigger for the current step will generate error. |
| Initial S/W Revision | A.05.00 |

Trigger Initiate

Used to initiate an immediate trigger event if the trigger source is set to Trigger Key.

| | |
|----------------------|---|
| Key Path | Source, Modulation Setup, ARB |
| Notes | No remote command, SCPI front panel only. |
| Initial S/W Revision | A.05.00 |

Waveform Sequences

Allows access to the waveform sequence sub-menus. Pressing this key changes the central view area to display the Waveform Sequence List view.

| | |
|----------------------|---|
| Key Path | Source, Modulation Setup, ARB |
| Notes | No remote command, SCPI front panel only. |
| Initial S/W Revision | A.05.00 |

Build New Sequence

Allows access to the sub-menus for creating a new waveform sequence. Pressing this key changes the central view area to display the Waveform Sequence Creation and Editing view.

| | |
|----------------------|--|
| Key Path | Source, Modulation Setup, ARB, Waveform Sequences |
| Notes | No remote command, SCPI front panel only. |
| Initial S/W Revision | A.05.00 |

Current Segment

Specifies the selected sequence segment that will be affected by the menu functions.

| | |
|----------------------|---|
| Key Path | Source, Modulation Setup , ARB, Waveform Sequences, Build New Sequence |
| Notes | No remote command, SCPI front panel only. This key is grayed out and unavailable if the sequence is currently empty. |
| Initial S/W Revision | A.05.00 |

Insert New Waveform

Allows you access to the sub-menu for inserting a new waveform segment or sequence. Pressing this key also changes the central display to show the Waveform File Selection View.

| | |
|----------------------|---|
| Key Path | Source, Modulation Setup, ARB, Waveform Sequences, Build New Sequence |
| Notes | No remote command, SCPI front panel only. Waveform segment name string length upper limit is 128 chars. Please do NOT insert waveform which name string exceeds 128 chars. |
| Initial S/W Revision | A.05.00 |

Insert Waveform

Inserts the currently highlighted waveform to the end of the waveform sequence. Pressing this key also returns you to the menus for creating or editing a sequence, and returns the central view to the sequence creation view.

| | |
|----------------------|---|
| Key Path | Source, Modulation Setup, ARB, Waveform Sequences, Build New Sequence, Insert New Waveform |
| Notes | No remote command, SCPI front panel only. Waveform segment name string length upper limit is 128 chars. Please do NOT insert waveform which name string exceeds 128 chars. |
| Initial S/W Revision | A.05.00 |

Segments on Hard Disk

Allows you access to the sub-menus for loading waveform segments from the hard disk into ARB memory. The default directory is: D: varb.

Pressing this key changes the current view to the Waveform Management View.

| | |
|----------------------|---|
| Key Path | Source, Modulation Setup, ARB, Select Waveform |
| Initial S/W Revision | A.05.00 |

Load Segment To ARB Memory

Allows you to load the selected file into ARB memory. On the front panel you select the file for loading to the ARB memory by highlighting the desired file in the list. Using the SCPI command, you specify the file name on the HDD.

“NVWFM” (none-volatile storage) MSUS (Mass Storage Unit Specifier) is supported in the memory subsystem because the ARB memory cannot be accessed directly. Therefore, files must be downloaded to the instrument hard disk and then loaded into the ARB memory. “NVWFM” MSUS will be mapped to the default directory D: VARB. The SCPI command supports using either “NVWFM” MSUS or specifying a full path. For more information, see [Memory Subsystem \(Remote Command Only\)](#).

If a file of the same name already exists within ARB memory, it is overwritten. If you wish to load two segments of the same name, you must rename one of the segments before loading it into ARB memory. To rename a segment, you can either use Windows File Explorer, or the :MMEMory:COPI command.

| | |
|-----------------------------|--|
| Key Path | Source, Modulation Setup, ARB, Select Waveform, Segments on Hard Disk |
| Remote Command | :SOURce:RADio:ARB:LOAD <string> |
| Example | :SOUR:RAD:ARB:LOAD "D: VARB\testwaveform.bin" or :SOUR:RAD:ARB:LOAD "NVWFM:testwaveform.bin" |
| Notes | <p>Because loading the file involves a delay of unpredictable length, this command should be followed by the query *OPC?, which holds off subsequent commands until the loading operating is complete.</p> <p><string> – specifies the path name of the file to load from the HDD into ARB memory. It could be a <full path + filename>, or <“NVWFM” MSUS + colon + filename>.</p> <p>When in Sequence Analyzer mode, and Include Source is Yes, an attempt to load a file to ARB memory will be rejected with an error.</p> <p>When Include Source is No and if there is insufficient free ARB memory to load the selected waveform, an error is generated. .</p> <p>If you specify a file over SCPI, but the file is not at the specified location, an error is generated.</p> <p>If you try to load a waveform file but the file contains less than 500 IQ samples, an error is generated.</p> <p>If you try to load a Signal Studio waveform “*.wfm” which contains invalid waveform header, an error is generated.</p> <p>If the ARB is ON when you load a file to ARB memory or delete a file from ARB memory, the playing waveform segment may not keep phase continuity during the ARB memory operation. The waveform will be replayed after the ARB operation is finished.</p> <p>ARB can be loaded into ARB memory even required licenses do not present on the instrument. In this case, a GUI only warning message -800, “Operation complete; Loaded <filename> successfully, but no license <required licenses> installed”. User can install required licenses according to <required licenses> string to license it, or multi-pack license it.</p> |
| Initial S/W Revision | A.05.00 |

Load All To ARB Memory

Allows you to load all the segment files within the currently selected directory into ARB memory. If a file of the same name already exists within ARB memory, it is overwritten. If you wish to load two segments of the

same name, you must rename one of the segments before loading it into ARB memory. To rename a segment, you can either use Windows File Explorer, or the :MEMory:COpy command.

| | |
|-----------------------------|---|
| Key Path | Source, Modulation Setup, ARB, Select Waveform, Segments on Hard Disk |
| Remote Command | :SOURce:RADio:ARB:LOAD:ALL <string> |
| Example | :SOUR:RAD:ARB:LOAD:ALL "D: varb" |
| Notes | <p><string> - specifies the directory on the HDD to load the files into ARB memory from.</p> <p>When in Sequence Analyzer mode, and Include Source is Yes, an attempt to load all files from a directory to ARB memory is rejected with an error.</p> <p>When Include Source is No and there is insufficient free ARB memory to load all the waveforms, when the ARB memory is full, the copy ceases, and an error is generated.</p> <p>If you specify a directory over SCPI, but the directory does not exist, an error is generated.</p> <p>If the ARB is ON, a user then loads or deletes file to ARB memory, the playing waveform segment may not keep phase continuity during the ARB memory operation. The waveform will be replayed after the ARB operation is finished.</p> |
| Initial S/W Revision | A.05.00 |

Change Directory...

Allows you to change the currently selected directory on the hard disk. Pressing this key opens a standard windows change directory dialog allowing you to select the new directory of interest.

The current directory is used for manually loading waveform segments into ARB memory for playback, and as a search location for waveform segments that are required to be loaded into ARB memory for playback of a waveform sequence or a list sequence.

| | |
|-----------------------------|--|
| Key Path | Source, Modulation Setup, ARB, Select Waveform, Segments on Hard Disk |
| Notes | No remote command, SCPI front panel only. |
| Initial S/W Revision | A.05.00 |

Default Directory...

Allows you to change the default directory. It is used as a search location for waveform segments that are required to be loaded into ARB memory for playback of a waveform sequence, and as a search location for selecting waveforms using SCPI.

| | |
|-----------------------------|---|
| Key Path | Source, Modulation Setup, ARB, Select Waveform, Segments on Hard Disk |
| Remote Command | :SOURce:RADio:ARB:DEFault:DIRectory <string> :SOURce:RADio:ARB: DEFault:DIRectory? |
| Example | :SOUR:RAD:ARB:DEF:DIR "D:\ArbFiles" :SOUR:RAD:ARB:DEF:DIR? |
| State Saved | Persistent, survives a power cycle and a preset but not saved in the instrument state |
| Initial S/W Revision | A.05.00 |

Segments in ARB Memory

Allows you access to the sub-menus for managing the files within ARB memory.

| | |
|----------------------|---|
| Key Path | Source, Modulation Setup, ARB, Select Waveform |
| Initial S/W Revision | A.05.00 |

Delete Segment From ARB Mem

Allows you to remove a segment from ARB playback memory.

| | |
|-----------------------|---|
| Key Path | Source, Modulation Setup, ARB, Select Waveform, Segments in ARB Memory |
| Remote Command | :SOURce:RADio:ARB:DELeTe <string> |
| Example | :SOUR:RAD:ARB:DEL "testwaveform.bin" |
| Notes | <p><string> - specifies the waveform to be deleted from the ARB playback memory.</p> <p>When in Sequence Analyzer mode and Include Source is Yes, an attempt to delete a file from ARB memory is rejected with an error.</p> <p>When Include Source is No and you specify a file that does not exist within ARB memory, an error is generated.</p> <p>It is possible to delete files from within the ARB memory when the ARB is ON. However, if you attempt to delete the file that is currently playing an error is generated.</p> <p>It is possible to delete a file from within the ARB memory when the sequencer state is ON and the file is not being used by the List Sequencer. If you attempt to delete a file which is being used by the list sequencer, an error is generated.</p> <p>When sequencer state is On, even if ARB state is On, the selected waveform will not be played. In this case, if the selected waveform is not used in List Sequence, it can be deleted and the ARB state is turned Off.</p> <p>If the ARB is ON and you load a file to ARB memory or delete a file from ARB memory, the playing waveform segment may not keep phase continuity during the ARB memory operation. The waveform will be replayed after the ARB operation is finished.</p> |
| Initial S/W Revision | A.05.00 |

Delete All From ARB Memory

Allows you to remove all segments from ARB playback memory.

| | |
|-----------------------|---|
| Key Path | Source, Modulation Setup, ARB, Select Waveform, Segments in ARB Memory |
| Remote Command | :SOURce:RADio:ARB:DELeTe:ALL |
| Example | :SOUR:RAD:ARB:DELeTe:ALL |
| Notes | <p>When in Sequence Analyzer mode and Include Source is Yes, an attempt to delete all files from ARB memory is rejected with an error.</p> <p>When Include Source is No and you attempt to delete all files from ARB memory when the ARB is currently playing a file, all files except the one playing are deleted and an error is generated.</p> <p>If you attempt to delete all files from ARB memory when there are waveform files used in "List</p> |

["Sequencer" on page 2585](#) and ["Sequencer" on page 2586](#) state is ON, all files except the files currently being used in list sequencer are deleted, and an error is generated.

If the ARB is ON and you load a file to ARB memory or delete a file from ARB memory, the playing waveform segment may not keep phase continuity during the ARB memory operation. The waveform will be replayed after the ARB operation is finished.

Query ARB Memory File List (Remote Command Only)

This command functions the same as ["Query ARB Memory File List \(Remote Command Only\)" on page 2540.](#)

| | |
|----------------------|------------------|
| Initial S/W Revision | Prior to A.09.00 |
|----------------------|------------------|

Edit Selected Waveform

Allows access to the sub-menus for editing the details of the currently selected waveform segment.

| | |
|----------------------|--|
| Key Path | Source, Modulation Setup, ARB, Waveform Sequences, Build New Sequence |
| Notes | No remote command, front panel only. |
| Initial S/W Revision | A.05.00 |

Repetitions

Allows you to specify the number of times the currently selected waveform is played within the sequence.

| | |
|----------------------|--|
| Key Path | Source, Modulation Setup, ARB, Waveform Sequences, Build New Sequence, Edit Selected Waveform |
| Notes | No remote command, SCPI front panel only. |
| Preset | 1 |
| Min | 1 |
| Max | 65535 |
| Initial S/W Revision | A.05.00 |

Marker 1

Allows you to enable or disable marker 1 for the currently selected waveform. For a waveform sequence, you can enable and disable markers on a per-segment basis, allowing you to output markers from some waveform segments within the sequence, but not for others.

| | |
|----------------------|--|
| Key Path | Source, Modulation Setup, ARB, Waveform Sequences, Build New Sequence, Edit Selected Waveform |
| Notes | No remote command, front panel only. |
| Preset | Enabled |
| Range | Enabled Disabled |
| Initial S/W Revision | A.05.00 |

Marker 2

Allows you to enable or disable marker 2 for the currently selected waveform. For a waveform sequence, you can enable and disable markers on a per-segment basis, allowing you to output markers from some waveform segments within the sequence, but not for others.

| | |
|----------------------|--|
| Key Path | Source, Modulation Setup, ARB, Waveform Sequences, Build New Sequence, Edit Selected Waveform |
| Notes | No remote command, front panel only. |
| Preset | Enabled |
| Range | Enabled Disabled |
| Initial S/W Revision | A.05.00 |

Marker 3

Allows you to enable or disable marker 3 for the currently selected waveform. For a waveform sequence, you can enable and disable markers on a per-segment basis, allowing you to output markers from some waveform segments within the sequence, but not for others.

| | |
|----------------------|--|
| Key Path | Source, Modulation Setup, ARB, Waveform Sequences, Build New Sequence, Edit Selected Waveform |
| Notes | No remote command, front panel only. |
| Preset | Enabled |
| Range | Enabled Disabled |
| Initial S/W Revision | A.05.00 |

Marker 4

Allows you to enable or disable marker 4 for the currently selected waveform. For a waveform sequence, you can enable and disable markers on a per-segment basis, allowing you to output markers from some waveform segments within the sequence, but not for others.

| | |
|----------------------|--|
| Key Path | Source, Modulation Setup, ARB, Waveform Sequences, Build New Sequence, Edit Selected Waveform |
| Notes | No remote command, front panel only. |
| Preset | Enabled |
| Range | Enabled Disabled |
| Initial S/W Revision | A.05.00 |

Delete Segment

Allows you to delete the selected segment from the waveform sequence.

| | |
|----------------------|--|
| Key Path | Source, Modulation Setup, ARB, Waveform Sequences, Build New Sequence |
| Notes | No remote command, front panel only. |
| Initial S/W Revision | A.05.00 |

Save Sequence...

Pressing this key displays the “Save As” dialog. The sequence name is passed to the save as dialog to use as the filename for saving, and the directory the save as dialog will open into is the default waveform directory.

| | |
|----------------------|--|
| Key Path | Source, Modulation Setup, ARB, Waveform Sequences, Build New Sequence |
| Initial S/W Revision | A.05.00 |

Build New Sequence (Remote Command Only)

This command is the SCPI equivalent of the waveform sequence creation features described in ["Build New Sequence" on page 2554](#).

This command writes a waveform sequence file to the hard disk. You must specify the waveform sequence file path and filename which will be saved on the hard disk, and the waveform segment file path and name which will be nested into the waveform sequence file. You can utilize mass storage unit specifier (MSUS) "NVWFM" or use a real full path representation. See the example below. MSUS "NVWFM" is mapped to D:VARB directory on test set hard disk.

Any number of segments, up to a segment count limit of 64, can be used to create a sequence. Repeated segments are included in the count limit.

Each waveform segment name string length upper limit is 128 chars. Please do NOT insert waveform which name string exceeds 128 chars.

The internal source does not support nesting one waveform sequence file into another waveform sequence file.

Remote Command :SOURce:RADio:ARB:SEQuence[:MWAveform] <filename>, <waveform1>, <reps>, NONE | M1 | M2 | M3 | M4 | M1M2 | M1M3 | M1M4 | M2M3 | M2M4 | M3M4 | M1M2M3 | M1M2M4 | M1M3M4 | M2M3M4 | M1M2M3M4 | ALL, {<waveform2>, <reps>, NONE | M1 | M2 | M3 | M4 | M1M2 | M1M3 | M1M4 | M2M3 | M2M4 | M3M4 | M1M2M3 | M1M2M4 | M1M3M4 | M2M3M4 | M1M2M3M4 | ALL, } ...

(For additional description of each item, see Notes below ["For Setup SCPI" on page 2312](#) "For Setup SCPI".)

:SOURce:RADio:ARB:SEQuence[:MWAveform]? <filename>

(For additional description of each item, see Notes ["For Query SCPI" on page 2313](#) below.)

Example For setup:

```
>:SOUR:RAD:ARB:SEQ "NVWFM:testSeq1.seq", "NVWFM:wfmSegment1.wfm", 10, M2M3M4, "NVWFM:wfmSegment2.wfm", 20, M1 M3
```

Or

```
>:SOUR:RAD:ARB:SEQ "D: VARB\testSeq1.seq", " D: VARB\wfmSegment1.wfm", 10, M2M3M4, " D: VARB\wfmSegment2.wfm", 20, M1 M3
```

For query, must specify which waveform sequence file to query.

```
>:SOUR:RAD:ARB:SEQ? "NVWFM:testSeq1.seq"
```

Or

```
>:SOUR:RAD:ARB:SEQ? "D: VARB\testSeq1.seq",
```

Notes For Setup SCPI

For the Setup SCPI command, the parameters are:

<filename> - String Type

This variable specifies the path and name for the waveform sequence file. The path supports MSUS (NVWFM) or a real full path representation. See example.

<waveform1> - String Type

This variable specifies the path and name of the first existing waveform segment. The path supports

MSUS (NVWFM) or a real full path representation. See example.

The segment file must reside within ARB playback memory before it can be played by the ARB player.

<reps> - Integer Type

This variable specifies the number of times a segment or sequence plays before moving on to the next segment or sequence.

<marker> - Enum Type

NONE – This choice disables all four markers for the waveform. Disabling markers means that the waveform sequence ignores the segments or sequence marker settings.

M1, M2, M3, M4 – these choices, either individually or a combination of them, enable the markers for the waveform segment or sequence. Markers not specified are ignored for that segment or sequence.

ALL – This choice enables all four markers in the waveform segment or sequence.

<waveform2> - String type.

This variable specifies the name of a second existing waveform segment. The path supports MSUS (NVWFM) and real full path representation both. See example.

The segment file must reside within ARB playback memory before it can be played by the ARB player.

<reps> same as above, for the 2nd waveform segment.

<marker> same as above, for the 2nd waveform segment.

You can insert several waveform segments into a waveform sequence file. Just repeat inserting waveform segments as described above.

Error Checks for Setup SCPI command:

If you do not specify a filename, or you use an unsupported MSUS (that is, not NVWFM), or have an error in the waveform sequence file path, an error is generated.

Notes

Error Checks for Query SCPI command: (Continued)

If the specified waveform sequence file name suffix is not “.seq”, error is generated.

If you use an unsupported MSUS (that is, not NVWFM), or have an error in the waveform segment file path, an error is generated.

If the first specified waveform file cannot be found, an error is generated.

If you nest one waveform sequence file into another waveform sequence file, an error is generated.

If the specified repetition value is larger than 65535 or smaller than 1, an error is generated.

If the specified marker type is unrecognized, an error is generated.

For Query SCPI

For the Query the parameters are:

<filename> - String type.

This variable specifies the path and name of the waveform sequence file being queried. The path supports MSUS (NVWFM) or a real full path representation. See example.

The return value is a <string>, which includes each waveform segment file name, repetitions, and marker type. For example:

```
>:SOUR:RAD:ARB:SEQ? "NVWFM:testSeq1.seq",
```

```
<"wfmSegment1.wfm, 10, ALL, wfmSegment2.wfm, 20, M1M3",
```

Error Checks for Query SCPI command:

| | |
|----------------------|--|
| | If you do not specify a filename, an error is generated. If the waveform sequence file name is empty, an error is generated. If the specified waveform sequence file cannot be found, an error is generated. |
| Initial S/W Revision | A.05.00 |

Edit Selected Sequence

Allows access to the sub-menus for editing the sequence currently selected within the Waveform Sequence List view. Pressing this key changes the central view area to display the Waveform Sequence Creation and Editing view.

| | |
|----------------------|--|
| Key Path | Source, Modulation Setup, ARB, Waveform Sequences |
| Notes | No remote command, front panel only. |
| Initial S/W Revision | A.05.00 |

Current Directory...

Allows you to change the currently selected directory on the hard disk. Pressing this key opens a standard windows change directory dialog and allows you to select the new directory of interest.

| | |
|----------------------|--|
| Key Path | Source, Modulation Setup, ARB, Waveform Sequences |
| Notes | No remote command, front panel only. |
| Initial S/W Revision | A.05.00 |

Waveform Utilities

Allows you access to the waveform utilities sub-menus.

| | |
|----------------------|--------------------------------------|
| Key Path | Source, Modulation Setup, ARB |
| Initial S/W Revision | A.05.00 |

Multi-Pack Licenses

Allows you access to the Multi - Pack License sub-menus. Pressing this key also changes the central view area to display the Multi -Pack License Management view.

On modular instrument like E6630A or E6640A, multi-pack license operations are only allowed on the default module, i.e. "Left" module for E6630A or "TRX1" module for E6640A.

| | |
|----------------------|---|
| Key Path | Source, Modulation Setup, ARB, Waveform Utilities |
| Dependencies | This key is only available if there is at least one Multi-pack license installed on the instrument. |
| Initial S/W Revision | A.05.00 |

Add Waveform

Pressing this key accesses the Add Waveform sub-menu. It also changes the central display area to display the Multi-Pack License Waveform Add view.

| | |
|----------------------|--|
| Key Path | Source, Modulation Setup, ARB, Waveform Utilities, Multi-Pack Licenses |
| Dependencies | This key is only available if there is at least one slot available within at least one multi-pack license. |
| Initial S/W Revision | A.05.00 |

Add Waveform

Allows you to add the currently selected waveform segment to a multi-pack license. The new waveform is added to the next available slot regardless of which slot was selected on the Multi-Pack License Management view.

| | |
|----------------------|---|
| Key Path | Source, Modulation Setup, ARB, Waveform Utilities, Multi-Pack Licenses, Add Waveform |
| Remote Command | :SYSTem:LKEY:WAVeform:ADD <string> or :SYSTem:LIcense[:FPACK]:WAVeform:ADD <string> |
| Example | SYST:LKEY:WAV:ADD "mywaveform.wfm" or SYST:LIC:WAV:ADD "mywaveform.wfm" |
| Notes | The second SCPI :SYSTem:LIcense[:FPACK]:WAVeform:ADD is provided to be consistent with the style of Keysight signal sources. You can use either one of them. Since adding a waveform segment to a Multi-Pack license causes the license slot to enter the trial period of only 48 hours, pressing this key causes a confirmation dialog to be displayed to ensure you do want to add the waveform segment to the Multi-Pack. If you attempt to license a waveform that is already licensed using another slot an error is generated. . |
| Dependencies | This key is only available if the currently selected file is a secure waveform requiring a license, and there is at least one slot available within at least one multi-pack license. If the waveform highlighted is a secure waveform, but is already licensed, this key will be unavailable. |
| Initial S/W Revision | A.05.00 |

Segments on Hard Disk

Allows you access to the sub-menus for loading waveform segments from the hard disk into ARB memory. The default directory is: D: varb.

Pressing this key changes the current view to the Waveform Management View.

| | |
|----------------------|---|
| Key Path | Source, Modulation Setup, ARB, Select Waveform |
| Initial S/W Revision | A.05.00 |

Load Segment To ARB Memory

Allows you to load the selected file into ARB memory. On the front panel you select the file for loading to the ARB memory by highlighting the desired file in the list. Using the SCPI command, you specify the file name on the HDD.

“NVWFM” (none-volatile storage) MSUS (Mass Storage Unit Specifier) is supported in the memory subsystem because the ARB memory cannot be accessed directly. Therefore, files must be downloaded to the instrument hard disk and then loaded into the ARB memory. “NVWFM” MSUS will be mapped to the default directory D: VARB. The SCPI command supports using either “NVWFM” MSUS or specifying a full path. For more information, see [Memory Subsystem \(Remote Command Only\)](#).

If a file of the same name already exists within ARB memory, it is overwritten. If you wish to load two segments of the same name, you must rename one of the segments before loading it into ARB memory. To rename a segment, you can either use Windows File Explorer, or the :MMEMory:COpy command.

| | |
|-----------------------------|--|
| Key Path | Source, Modulation Setup, ARB, Select Waveform, Segments on Hard Disk |
| Remote Command | :SOURce:RADio:ARB:LOAD <string> |
| Example | :SOUR:RAD:ARB:LOAD "D: VARB\testwaveform.bin" or :SOUR:RAD:ARB:LOAD "NVWFM:testwaveform.bin" |
| Notes | <p>Because loading the file involves a delay of unpredictable length, this command should be followed by the query *OPC?, which holds off subsequent commands until the loading operating is complete.</p> <p><string> – specifies the path name of the file to load from the HDD into ARB memory. It could be a <full path + filename>, or <“NVWFM” MSUS + colon + filename>.</p> <p>When in Sequence Analyzer mode, and Include Source is Yes, an attempt to load a file to ARB memory will be rejected with an error.</p> <p>When Include Source is No and if there is insufficient free ARB memory to load the selected waveform, an error is generated. .</p> <p>If you specify a file over SCPI, but the file is not at the specified location, an error is generated.</p> <p>If you try to load a waveform file but the file contains less than 500 IQ samples, an error is generated.</p> <p>If you try to load a Signal Studio waveform “*.wfm” which contains invalid waveform header, an error is generated.</p> <p>If the ARB is ON when you load a file to ARB memory or delete a file from ARB memory, the playing waveform segment may not keep phase continuity during the ARB memory operation. The waveform will be replayed after the ARB operation is finished.</p> <p>ARB can be loaded into ARB memory even required licenses do not present on the instrument. In this case, a GUI only warning message -800, “Operation complete; Loaded <filename> successfully, but no license <required licenses> installed”. User can install required licenses according to <required licenses> string to license it, or multi-pack license it.</p> |
| Initial S/W Revision | A.05.00 |

Load All To ARB Memory

Allows you to load all the segment files within the currently selected directory into ARB memory. If a file of the same name already exists within ARB memory, it is overwritten. If you wish to load two segments of the same name, you must rename one of the segments before loading it into ARB memory. To rename a segment, you can either use Windows File Explorer, or the :MEMory:COpy command.

| | |
|-----------------------------|---|
| Key Path | Source, Modulation Setup, ARB, Select Waveform, Segments on Hard Disk |
| Remote Command | :SOURce:RADio:ARB:LOAD:ALL <string> |
| Example | :SOUR:RAD:ARB:LOAD:ALL "D: varb" |
| Notes | <p><string> - specifies the directory on the HDD to load the files into ARB memory from.</p> <p>When in Sequence Analyzer mode, and Include Source is Yes, an attempt to load all files from a directory to ARB memory is rejected with an error.</p> <p>When Include Source is No and there is insufficient free ARB memory to load all the waveforms, when the ARB memory is full, the copy ceases, and an error is generated.</p> <p>If you specify a directory over SCPI, but the directory does not exist, an error is generated.</p> <p>If the ARB is ON, a user then loads or deletes file to ARB memory, the playing waveform segment may not keep phase continuity during the ARB memory operation. The waveform will be replayed after the ARB operation is finished.</p> |
| Initial S/W Revision | A.05.00 |

Change Directory...

Allows you to change the currently selected directory on the hard disk. Pressing this key opens a standard windows change directory dialog allowing you to select the new directory of interest.

The current directory is used for manually loading waveform segments into ARB memory for playback, and as a search location for waveform segments that are required to be loaded into ARB memory for playback of a waveform sequence or a list sequence.

| | |
|-----------------------------|--|
| Key Path | Source, Modulation Setup, ARB, Select Waveform, Segments on Hard Disk |
| Notes | No remote command, SCPI front panel only. |
| Initial S/W Revision | A.05.00 |

Default Directory...

Allows you to change the default directory. It is used as a search location for waveform segments that are required to be loaded into ARB memory for playback of a waveform sequence, and as a search location for selecting waveforms using SCPI.

| | |
|-----------------------|---|
| Key Path | Source, Modulation Setup, ARB, Select Waveform, Segments on Hard Disk |
| Remote Command | :SOURce:RADio:ARB:DEFault:DIRectory <string> :SOURce:RADio:ARB: DEFault:DIRectory? |
| Example | :SOUR:RAD:ARB:DEF:DIR "D:\ArbFiles" |

| | |
|----------------------|---|
| | :SOUR:RAD:ARB:DEF:DIR? |
| State Saved | Persistent, survives a power cycle and a preset but not saved in the instrument state |
| Initial S/W Revision | A.05.00 |

Segments on Hard Disk

Replace Waveform

Pressing this key accesses the Replace Waveform submenu. It also changes the central display area to display the Multi-Pack License Waveform Add view.

| | |
|----------------------|--|
| Key Path | Source, Modulation Setup, ARB, Waveform Utilities, Multi-Pack Licenses |
| Dependencies | This key is only available if the currently selected slot is in the trial state. |
| Initial S/W Revision | A.05.00 |

Replace Waveform

Allows you to replace the waveform in the currently selected slot with the waveform currently selected in the Multi-Pack License Waveform Add view.

| | |
|----------------------|---|
| Key Path | Source, Modulation Setup, ARB, Waveform Utilities, Multi-Pack Licenses, Replace Waveform |
| Remote Command | :SYSTem:LKEY:WAVeform:REPLace <int>, <string> or :SYSTem:LIcense[:FPACK]:WAVeform:REPLace <int>, <string> |
| Example | SYST:LKEY:WAV:REPL 1, "myotherwaveform.wfm" or :SYST:LIC:WAV:REPL 1, "myotherwaveform.wfm" |
| Notes | The second SCPI :SYSTem:LIcense[:FPACK]:WAVeform:REPLace is provided to be consistent with the style of Keysight signal sources. You can use either one of them. If you attempt to license a waveform that is already licensed using another slot an error is generated. Waveform slot number <int> is positive. If you attempt to input a slot number less than or equals 0, an error is generated. |
| Initial S/W Revision | A.05.00 |

Segments on Hard Disk

This key functions the same as ["Segments on Hard Disk" on page 2611](#).

| | |
|----------------------|---|
| Key Path | Source, Modulation Setup, ARB, Waveform Utilities, Multi-Pack Licenses, Replace Waveform |
| Initial S/W Revision | Prior to A.09.00 |

Load Segment To ARB Memory

This key functions the same as ["Load Segment To ARB Memory" on page 2611](#).

| | |
|----------------------|--|
| Key Path | Source, Modulation Setup, ARB, Waveform Utilities, Multi-Pack Licenses, Replace Waveform, Segment on Hard Drive |
| Initial S/W Revision | Prior to A.09.00 |

Load All To ARB Memory

This key functions the same as ["Load All To ARB Memory" on page 2612](#).

| | |
|----------------------|--|
| Key Path | Source, Modulation Setup, ARB, Waveform Utilities, Multi-Pack Licenses, Replace Waveform, Segment on Hard Drive |
| Initial S/W Revision | Prior to A.09.00 |

Change Directory ...

This key functions the same as ["Change Directory..." on page 2613](#).

| | |
|----------------------|--|
| Key Path | Source, Modulation Setup, ARB, Waveform Utilities, Multi-Pack Licenses, Replace Waveform, Segment on Hard Drive |
| Initial S/W Revision | Prior to A.09.00 |

Default Directory ...

This key functions the same as ["Default Directory..." on page 2613](#)

| | |
|----------------------|--|
| Key Path | Source, Modulation Setup, ARB, Waveform Utilities, Multi-Pack Licenses, Replace Waveform, Segment on Hard Drive |
| Initial S/W Revision | Prior to A.09.00 |

Clear Waveform from Slot

Allows you to clear the waveform from the selected slot.

| | |
|----------------|--|
| Key Path | Source, Modulation Setup, ARB, Waveform Utilities, Multi-Pack Licenses |
| Remote Command | :SYSTem:LKEY:WAVeform:CLEar <int> or :SYSTem:LICense[:FPACK]:WAVeform:CLEar <int> |
| Example | SYST:LKEY:WAV:CLE 1 or :SYST:LIC:WAV:CLE 1 |
| Notes | The second SCPI :SYSTem:LICense[:FPACK]:WAVeform:CLEar is provided to be consistent with the style of Keysight signal sources. You can use either one of them. |

Waveform slot number <int> is positive. If you attempt to input a slot number less than or equals 0, an error is generated.

Dependencies This key is only available if the currently selected slot is in the trial state.

Initial S/W Revision A.05.00

Lock Waveform in Slot

If the selected slot is in the trial state or the lock required state, the waveform that occupies the slot is locked and permanently licensed.

Key Path Source, Modulation Setup, ARB, Waveform Utilities, Multi-Pack Licenses

Remote Command :SYSTem:LKEY:WAVeform:LOCK <int>
or
:SYSTem:LICense[:FPACK]:WAVeform:LOCK <int>

Example SYST:LKEY:WAV:LOCK 1
or
SYST:LIC:WAV:LOCK 1

Notes The second SCPI :SYSTem:LICense[:FPACK]:WAVeform:LOCK is provided to be consistent with the style of Keysight signal sources. You can use either one of them.
Waveform slot number <int> is positive. If you attempt to input a slot number less than or equals 0, an error is generated.

Dependencies This key is only available if the currently selected slot is in the trial state or the lock required state.

Initial S/W Revision A.05.00

Slot Status Query (Remote Command Only)

Returns the status of the specified slot.

Remote Command :SYSTem:LKEY:WAVeform:STATus? <int>
or
:SYSTem:LICense[:FPACK]:WAVeform:STATus? <int>

Example :SYST:LKEY:WAV:STAT? 1
<"Locked"
or
:SYST:LIC:WAV:STAT? 1
<"Locked"

Notes The second SCPI :SYSTem:LICense[:FPACK]:WAVeform:STATus is provided to be consistent with the style of Keysight signal sources. You can use either one of them.
Waveform slot number <int> is positive. If you attempt to input a slot number less than or equals 0, an

| | |
|----------------------|--|
| | error is generated. Result type is string. If input slot number exceeds total available slot number, "Nonexistent" is returned. |
| Range | "Locked" "Available" "Trail" "LockRequired" "Nonexistent" |
| Initial S/W Revision | A.05.00 |

Slots Free Query (Remote Command Only)

Returns the number of license slots free.

| | |
|-----------------------|---|
| Remote Command | :SYSTem:LKEY:WAVeform:FREE? or :SYSTem:LIcense[:FPACK]:WAVeform:FREE? |
| Example | :SYST:LKEY:WAV:FREE? or :SYST:LIC:WAV:FREE? |
| Notes | The second SCPI :SYSTem:LIcense[:FPACK]:WAVeform:FREE is provided to be consistent with the style of Keysight signal sources. You can use either one of them. |
| Initial S/W Revision | A.05.00 |

Slot Used Query (Remote Command Only)

Returns the number of license slots used.

| | |
|-----------------------|---|
| Remote Command | :SYSTem:LKEY:WAVeform:USED? or :SYSTem:LIcense[:FPACK]:WAVeform:USED? |
| Example | :SYST:LKEY:WAV:USED? or :SYST:LIC:WAV:USED? |
| Notes | The second SCPI :SYSTem:LIcense[:FPACK]:WAVeform:USED is provided to be consistent with the style of Keysight signal sources. You can use either one of them. |
| Initial S/W Revision | A.05.00 |

Slot Waveform Name Query (Remote Command Only)

Returns the waveform name of the specified slot

| | |
|-----------------------|---|
| Remote Command | :SYSTem:LKEY:WAVeform:NAME? <int> or :SYSTem:LIcense[:FPACK]:WAVeform:NAME? <int> |
|-----------------------|---|

| | |
|-----------------------------|---|
| Example | :SYST:LKEY:WAV:NAME? 1 <"CDMA2K_22.wfm" or :SYST:LIC:WAV:NAME? 1 <"CDMA2K_22.wfm" |
| Notes | Waveform slot number <int> is positive. If you attempt to input a slot number less than or equals 0, an error is generated. Result type is string. If input slot number exceeds total available slot number, "Nonexistent" is returned. If no waveform stored in the specified slot, then empty string is returned. |
| Initial S/W Revision | A.12.00 |

Slot Waveform Unique ID Query (Remote Command Only)

Returns the waveform unique ID of the specified slot

| | |
|-----------------------------|---|
| Remote Command | :SYSTem:LKEY:WAVeform:UID? <int> or :SYSTem:LICense[:FPACK]:WAVeform:UID? <int> |
| Example | :SYST:LKEY:WAV:UID? 2 <"1346752140" or :SYST:LIC:WAV:UID? 2 <"1346752140" |
| Notes | Waveform slot number <int> is positive. If you attempt to input a slot number less than or equals 0, an error is generated. Result type is string. If input slot number exceeds total available slot number, "Nonexistent" is returned. If no waveform stored in the specified slot, then "0" is returned |
| Initial S/W Revision | A.12.00 |

Locked Waveform Name List Query (Remote Command Only)

Returns the waveform name list of locked.

| | |
|-----------------------------|---|
| Remote Command | :SOURce:RADio:ARB:MPLicensed:NAME:LOCKed? |
| Example | SOUR:RAD:ARB:MPL:NAME:LOCKed? <"CDMA2K_27.wfm", "GSM_MCS1.WFM", "c2kWfm.wfm" |
| Initial S/W Revision | A.11.00 |

Locked Waveform Unique ID List Query (Remote Command Only)

Returns the waveform unique id list of locked.

| | |
|-----------------------------|---|
| Remote Command | :SOURce:RADio:ARB:MPLicensed:UID:LOCKed? |
| Example | SOUR:RAD:ARB:MPL:UID:LOCKed? <"2996927136","3812603511","3710986266"> |
| Notes | Each Signal Studio waveform has a unique id recorded in header. So if the unique ids are same, that means they are same one waveform. So besides SCPI to query locked waveform name list, also provide a SCPI to query locked waveform unique id list |
| Initial S/W Revision | A.11.00 |

Marker Utilities

Allows access to the marker utilities sub-menus.

| | |
|-----------------------------|--------------------------------------|
| Key Path | Source, Modulation Setup, ARB |
| Initial S/W Revision | A.05.00 |

Marker Polarity

Allows access to the marker polarity sub-menu, which allows you to specify the polarity for the four markers. For a positive polarity, the marker signal is high during the marker points. For a negative marker polarity, the marker signal is high during the period of no marker points.

| | |
|-----------------------------|--|
| Key Path | Source, Modulation Setup, ARB, Marker Utilities |
| Initial S/W Revision | A.05.00 |

Mkr 1 Polarity

Allows you to set the polarity of marker 1.

| | |
|-----------------------------|---|
| Key Path | Source, Modulation Setup, ARB, Marker Utilities, Marker Polarity |
| Remote Command | :SOURce:RADio:ARB:MPOLarity:MARKer1 POSitive NEGative :SOURce:RADio:ARB:MPOLarity:MARKer1? |
| Example | :SOUR:RAD:ARB:MPOL:MARK1 NEG |
| Dependencies | When a new waveform is selected for playback the settings contained within the associated waveform header file are applied to the ARB. The marker polarity is one of the values stored within the header file. If the newly selected waveform file has an associated header file, the marker polarity is updated with the value from the header file. The marker polarity will remain unchanged if the newly selected waveform does not have an associated header file. |
| Preset | Pos |
| Range | Neg Pos |
| Initial S/W Revision | A.05.00 |

Mkr 2 Polarity

Allows you to set the polarity of marker 2.

| | |
|-----------------------------|---|
| Key Path | Source, Modulation Setup, ARB, Marker Utilities, Marker Polarity |
| Remote Command | :SOURce:RADio:ARB:MPOLarity:MARKer2 POSitive NEGative :SOURce:RADio:ARB:MPOLarity:MARKer2? |
| Example | :SOUR:RAD:ARB:MPOL:MARK2 NEG |
| Dependencies | When a new waveform is selected for playback the settings contained within the associated waveform header file are applied to the ARB. The marker polarity is one of the values stored within the header file. If the newly selected waveform file has an associated header file, the marker polarity is updated with the value from the header file. The marker polarity will remain unchanged if the newly selected waveform does not have an associated header file. |
| Preset | Pos |
| Range | Neg Pos |
| Initial S/W Revision | A.05.00 |

Mkr 3 Polarity

Allows you to set the polarity of marker 3.

| | |
|-----------------------------|---|
| Key Path | Source, Modulation Setup, ARB, Marker Utilities, Marker Polarity |
| Remote Command | :SOURce:RADio:ARB:MPOLarity:MARKer3 POSitive NEGative :SOURce:RADio:ARB:MPOLarity:MARKer3? |
| Example | :SOUR:RAD:ARB:MPOL:MARK3 NEG |
| Dependencies | When a new waveform is selected for playback the settings contained within the associated waveform header file are applied to the ARB. The marker polarity is one of the values stored within the header file. If the newly selected waveform file has an associated header file, the marker polarity is updated with the value from the header file. The marker polarity will remain unchanged if the newly selected waveform does not have an associated header file. |
| Preset | Pos |
| Range | Neg Pos |
| Initial S/W Revision | A.05.00 |

Mkr 4 Polarity

Allows you to set the polarity of marker 4.

| | |
|-----------------------|---|
| Key Path | Source, Modulation Setup, ARB, Marker Utilities, Marker Polarity |
| Remote Command | :SOURce:RADio:ARB:MPOLarity:MARKer4 POSitive NEGative :SOURce:RADio:ARB:MPOLarity:MARKer4? |

| | |
|-----------------------------|---|
| Example | :SOUR:RAD:ARB:MPOL:MARK4 NEG |
| Dependencies | When a new waveform is selected for playback the settings contained within the associated waveform header file are applied to the ARB. The marker polarity is one of the values stored within the header file. If the newly selected waveform file has an associated header file, the marker polarity is updated with the value from the header file. The marker polarity will remain unchanged if the newly selected waveform does not have an associated header file. |
| Preset | Pos |
| Range | Neg Pos |
| Initial S/W Revision | A.05.00 |

Marker Routing

Allows access to the marker routing sub-menus, which allow you to specify where the marker events are routed. It should be noted that the markers can also be routed to Trigger 1 Out and Trigger 2 Out, however this must be set up using the menus accessed by pressing the “Trigger” hard key.

| | |
|-----------------------------|--|
| Key Path | Source, Modulation Setup, ARB, Marker Utilities |
| Initial S/W Revision | A.05.00 |

Pulse/RF Blank

Allows you to select which marker is used for the pulse/RF blanking function. The pulse/RF blanking function blanks the RF when the marker signal goes low. The marker polarity determines when the marker signal is high. For a positive polarity, this is during the marker points. For a negative polarity, this is when there are no marker points.

Marker points should be set before using this function. Enabling this function without setting maker points may create a continuous low or high signal, dependant on the marker polarity. This causes either no RF output, or a continuous RF output.

| | |
|-----------------------------|---|
| Key Path | Source, Modulation Setup, ARB, Marker Utilities, Marker Routing |
| Remote Command | :SOURce:RADio:ARB:MDEStination:PULSe NONE M1 M2 M3 M4 :SOURce:RADio:ARB:MDEStination:PULSe? |
| Example | :SOUR:RAD:ARB:MDES:PULS NONE |
| Dependencies | When a new waveform is selected for playback the settings contained within the associated waveform header file are applied to the ARB. The pulse/RF blanking setting is one of the values stored within the header file. If the newly selected waveform file has an associated header file, the pulse/RF blanking setting is updated with the value from the header file. The pulse/RF blanking setting will remain unchanged if the newly selected waveform does not have an associated header file. |
| Range | None M1 M2 M3 M4 |
| Initial S/W Revision | A.05.00 |

None

Sets no marker to be used for the pulse/RF blanking function, essentially turning the RF blanking function off.

| | |
|----------------------|--|
| Key Path | Source, Modulation Setup, ARB, Marker Utilities, Marker Routing, Pulse/RF Blank |
| Example | :SOUR:RAD:ARB:MDES:PULS NONE |
| Initial S/W Revision | A.05.00 |

Marker 1

Sets marker 1 to be used for the pulse/RF blanking function.

| | |
|----------------------|--|
| Key Path | Source, Modulation Setup, ARB, Marker Utilities, Marker Routing, Pulse/RF Blank |
| Example | :SOUR:RAD:ARB:MDES:PULS M1 |
| Initial S/W Revision | A.05.00 |

Marker 2

Sets marker 2 to be used for the pulse/RF blanking function.

| | |
|----------------------|--|
| Key Path | Source, Modulation Setup, ARB, Marker Utilities, Marker Routing, Pulse/RF Blank |
| Example | :SOUR:RAD:ARB:MDES:PULS M2 |
| Initial S/W Revision | A.05.00 |

Marker 3

Sets marker 3 to be used for the pulse/RF blanking function.

| | |
|----------------------|--|
| Key Path | Source, Modulation Setup, ARB, Marker Utilities, Marker Routing, Pulse/RF Blank |
| Example | :SOUR:RAD:ARB:MDES:PULS M3 |
| Initial S/W Revision | A.05.00 |

Marker 4

Sets marker 4 to be used for the pulse/RF blanking function.

| | |
|----------------------|--|
| Key Path | Source, Modulation Setup, ARB, Marker Utilities, Marker Routing, Pulse/RF Blank |
| Example | :SOUR:RAD:ARB:MDES:PULS M4 |
| Initial S/W Revision | A.05.00 |

ALC Hold

Allows you to specify which marker is routed for use within the ALC hold function. The ALC hold marker function holds the ALC circuitry at the average value of the sample points set by the marker.

The ALC hold function operates during the low periods of the marker signal. The marker polarity determines when the marker signal is high. For positive polarity, this is during the marker points. For a negative polarity, this is when there are no marker points.

| | |
|-----------------------------|--|
| Key Path | Source, Modulation Setup, ARB, Marker Utilities, Marker Routing |
| Remote Command | :SOURce:RADio:ARB:MDEStination:ALCHold NONE M1 M2 M3 M4 :SOURce:RADio:ARB:MDEStination:ALCHold? |
| Example | :SOUR:RAD:ARB:MDES:ALCH NONE |
| Dependencies | When a new waveform is selected for playback the settings contained within the associated waveform header file are applied to the ARB. The ALC hold setting is one of the values stored within the header file. If the newly selected waveform file has an associated header file, the ALC hold setting is updated with the value from the header file. The ALC hold setting will remain unchanged if the newly selected waveform does not have an associated header file. |
| Range | None M1 M2 M3 M4 |
| Initial S/W Revision | A.05.00 |

None

Sets no marker to be used for the ALC hold function, essentially turning the ALC hold function off.

| | |
|-----------------------------|--|
| Key Path | Source, Modulation Setup, ARB, Marker Utilities, Marker Routing, ALC Hold |
| Example | :SOUR:RAD:ARB:MDES:PULS NONE |
| Initial S/W Revision | A.05.00 |

Marker 1

Sets marker 1 to be used for the ALC hold function.

| | |
|-----------------------------|--|
| Key Path | Source, Modulation Setup, ARB, Marker Utilities, Marker Routing, ALC Hold |
| Example | :SOUR:RAD:ARB:MDES:PULS M1 |
| Initial S/W Revision | A.05.00 |

Marker 2

Sets marker 2 to be used for the ALC hold function.

| | |
|-----------------------------|--|
| Key Path | Source, Modulation Setup, ARB, Marker Utilities, Marker Routing, ALC Hold |
| Example | :SOUR:RAD:ARB:MDES:PULS M2 |
| Initial S/W Revision | A.05.00 |

Marker 3

Sets marker 3 to be used for the ALC hold function.

| | |
|----------------------|--|
| Key Path | Source, Modulation Setup, ARB, Marker Utilities, Marker Routing, ALC Hold |
| Example | :SOUR:RAD:ARB:MDES:PULS M3 |
| Initial S/W Revision | A.05.00 |

Marker 4

Sets marker 4 to be used for the ALC hold function.

| | |
|----------------------|--|
| Key Path | Source, Modulation Setup, ARB, Marker Utilities, Marker Routing, ALC Hold |
| Example | :SOUR:RAD:ARB:MDES:PULS M4 |
| Initial S/W Revision | A.05.00 |

Header Utilities

Allows access to the header utilities sub-menu. Pressing this key also causes the central display area to change to display the File Header Information view.

| | |
|----------------------|---|
| Key Path | Source, Modulation Setup, ARB |
| Dependencies | This key is only available if there is currently a waveform selected for playback. If no waveform is selected, the key is grayed out. |
| Initial S/W Revision | A.05.00 |

Clear Header

Allows you to clear the header information from the file header associated with the currently selected waveform.

| | |
|-----------------------|--|
| Key Path | Source, Modulation Setup, ARB, Header Utilities |
| Remote Command | :SOURce:RADio:ARB:HEADer:CLEar |
| Example | :SOUR:RAD:ARB:HEAD:CLE |
| Notes | Attempting to clear the header details via SCPI when no waveform was selected for playback will generate an error. |
| Initial S/W Revision | A.05.00 |

Save Setup To Header

Allows you to save new file header information details to the file.

| | |
|--------------------------|---|
| Key Path | Source, Modulation Setup, ARB, Header Utilities |
| Remote Command | :SOURce:RADio:ARB:HEADer:SAVE |
| Example | :SOUR:RAD:ARB:HEAD:SAVE |
| Notes | Attempting to save the header details via SCPI when no waveform was selected for playback will generate an error. |
| Initial S/W Revision | A.05.00 |
| Modified at S/W Revision | A.16.00 (AWGN settings will be saved to header as well) |

Query Waveform Unique ID (Remote Command Only)

Each Signal Studio waveform contains a unique waveform ID, which recorded in the header. This command allows you to query the unique waveform ID from the header. This is a SCPI only command. User can also check [Error! Reference source not found.](#) for waveform unique ID display.

| | |
|----------------------|--|
| Remote Command | :MMEMory:HEADer:ID? "<file name>" |
| Example | :MMEM:HEAD:ID? "test.wfm" (query the waveform already loaded into the ARB memory) :MMEM:HEAD:ID? "D: VARB\test.wfm" (query the waveform on the hard disk by absolute path) :MMEM:HEAD:ID? "NVWFM:test.wfm" (query the waveform on the hard disk by MSUS) |
| Notes | SCPI query only. The queried waveform file can be in ARB memory, or on hard disk. If want to query ARB in ARB memory, then give out the file name directly. If want to query ARB on the hard disk, then absolute file path or MSUS should be given along with the file name. The valid MSUS is "NVWFM" which is mapped to D: VARB on hard disk. If the file cannot be found in ARB memory or on hard disk, an error is generated and value -1 is returned |
| Initial S/W Revision | A.09.00 |

Bus Trigger Command (Remote Command Only)

Used to initiate an immediate trigger event if the trigger source is set to Bus.

| | |
|----------------------|------------------------------------|
| Remote Command | :SOURce:RADio:ARB:TRIGger:INITiate |
| Example | :SOUR:RAD:ARB:TRIG:INIT |
| Initial S/W Revision | A.05.00 |

AM

Allows access to the menu for configuring the Amplitude Modulation.

| | |
|----------------------|---------------------------------|
| Key Path | Source, Modulation Setup |
| Initial S/W Revision | A.05.00 |

AM

Enables or disables the amplitude modulation.

Turning AM on when another modulation format is already on results in the previous modulation format being turned off and the generation of an error.

| | |
|-----------------------|---------------------------------------|
| Key Path | Source, Modulation Setup, AM |
| Remote Command | :SOURce:AM:STATe :SOURce:AM:STATe? |
| Example | :SOUR:AM:STAT OFF |
| Preset | Off |
| Range | On Off |
| Initial S/W Revision | A.05.00 |

AM Depth

Allows you to set the amplitude modulation depth in percent.

| | |
|-----------------------|---|
| Key Path | Source, Modulation Setup, AM |
| Remote Command | :SOURce:AM[:DEPTh] [:LINear] :SOURce:AM[:DEPTh] [:LINear]? |
| Example | :SOUR:AM 0.1 |
| Preset | 0.1 % |
| Min | 0.1 % |
| Max | 95.0 % |
| Initial S/W Revision | A.05.00 |

AM Rate

Allows you to set the internal amplitude modulation rate.

| | |
|-----------------------|---|
| Key Path | Source, Modulation Setup, AM |
| Remote Command | :SOURce:AM:INTernal:FREQuency :SOURce:AM:INTernal:FREQuency? |
| Example | :SOUR:AM:INT:FREQ 40.0 Hz |

| | |
|----------------------|----------|
| Preset | 400.0 Hz |
| Min | 10 Hz |
| Max | 40 kHz |
| Initial S/W Revision | A.05.00 |

FM

Allows access to the menu for configuring the frequency modulation.

| | |
|----------------------|---------------------------------|
| Key Path | Source, Modulation Setup |
| Initial S/W Revision | A.05.00 |

FM

Enables or disables the frequency modulation.

Turning FM on when another modulation format is already on results in the previous modulation format being turned off and the generation of an error.

| | |
|-----------------------|---------------------------------------|
| Key Path | Source, Modulation Setup, FM |
| Remote Command | :SOURce:FM:STATe :SOURce:FM:STATe? |
| Example | :SOUR:FM:STAT OFF |
| Preset | Off |
| Range | On Off |
| Initial S/W Revision | A.05.00 |

FM Deviation

Allows you to set the frequency modulation deviation.

| | |
|-----------------------|---|
| Key Path | Source, Modulation Setup, FM |
| Remote Command | :SOURce:FM[:DEViation] :SOURce:FM[:DEViation]? |
| Example | :SOUR:FM 1.00 kHz |
| Preset | 1.00 Hz |
| Min | 1.00 Hz |
| Max | 100.00 kHz |
| Initial S/W Revision | A.05.00 |

FM Rate

Allows you to set the internal frequency modulation rate.

| | |
|-----------------------------|---|
| Key Path | Source, Modulation Setup, FM |
| Remote Command | :SOURce:FM:INTernal:FREQuency :SOURce:FM:INTernal:FREQuency? |
| Example | :SOUR:FM:INT:FREQ 40.0 Hz |
| Preset | 400.0 Hz |
| Min | 10 Hz |
| Max | 40 kHz |
| Initial S/W Revision | A.05.00 |

PM

Allows access to the menu for configuring the phase modulation.

| | |
|-----------------------------|---------------------------------|
| Key Path | Source, Modulation Setup |
| Initial S/W Revision | A.05.00 |

PM

Enables or disables the phase modulation.

Turning PM on when another modulation format is already on results in the previous modulation format being turned off and the generation of an error.

| | |
|-----------------------------|---------------------------------------|
| Key Path | Source, Modulation Setup, PM |
| Remote Command | :SOURce:PM:STATe :SOURce:PM:STATe? |
| Example | :SOUR:PM:STAT OFF |
| Preset | Off |
| Range | On Off |
| Initial S/W Revision | A.05.00 |

PM Deviation

Allows you to set the phase modulation deviation.

| | |
|-----------------------|---|
| Key Path | Source, Modulation Setup, PM |
| Remote Command | :SOURce:PM[:DEVIation] :SOURce:PM[:DEVIation]? |

| | |
|----------------------|-------------------|
| Example | :SOUR:PM 1.00 rad |
| Preset | 0.1 rad |
| Min | 0.1 rad |
| Max | 20.0 rad |
| Initial S/W Revision | A.05.00 |

PM Rate

Allows you to set the internal phase modulation rate.

| | |
|-----------------------|---|
| Key Path | Source, Modulation Setup, PM |
| Remote Command | :SOURce:PM:INTernal:FREQuency :SOURce:PM:INTernal:FREQuency? |
| Example | :SOUR:PM:INT:FREQ 40.0 Hz |
| Preset | 400.0 Hz |
| Min | 10 Hz |
| Max | 40 kHz |
| Initial S/W Revision | A.05.00 |

List Sequencer

Allows you access to the sub-menus for configuring the list sequencer.

List sequences allows you to enter frequencies and amplitudes at unequal intervals in nonlinear ascending, descending or random order. Each step within the list can also include its own waveform file for playback, step duration, trigger event and trigger output.

The complexities involved in configuring the list sequencer do not lend itself to manual configuration; hence the manual configuration for this feature is limited. For easier configuration of the list sequencer, it is recommended that you use either SCPI or load a tab delimited file containing the setup parameters in a tabular form. The details of the SCPI for configuring the list sequencer can be found in ["Step Configuration \(Remote Command Only\)" on page 2619](#).

Once the List Sequencer has been configured using the front panel, SCPI, or loading in a tab delimited file, the sequence must be initiated using the front panel Initiate Sequence key or the corresponding SCPI command.

| | |
|----------------------|---------------|
| Key Path | Source |
| Initial S/W Revision | A.05.00 |

Sequencer

Allows you to set the state of the list sequencer. When the list sequencer is on, the source is outputting the sequence defined by the sequencer. When the list sequencer is off, the source outputs a single waveform segment or sequence (independent mode) at a single frequency and amplitude.

| Key Path | Source, List Sequencer |
|-----------------------------|---|
| Remote Command | :SOURce:LIST[:STATe] ON OFF 1 0 :SOURce:LIST[:STATe]? |
| Example | :SOUR:LIST OFF |
| Notes | When the sequencer is set to ON, the list sequencer controls the output of the source. |
| Couplings | When in Sequence Analyzer mode and the list sequencer state is Off, Include Source is forced to No, and the Include Source key is grayed out. When in Sequence Analyzer mode and the list sequencer state is On, Include Source is available to set. And, an ARB memory related operation, like load or delete will be rejected. |
| Preset | Off |
| Range | On Off |
| Initial S/W Revision | A.05.00 |

Initiate Sequence

Pressing this key arms the sequence for single execution. Once the sequence is armed the source begins the sequence as soon as the trigger is received. If the trigger is set to Free Run, the sequence starts immediately.

| Key Path | Source, List Sequencer |
|-----------------------------|---|
| Remote Command | :SOURce:LIST:TRIGger[:IMMediate] |
| Example | :SOUR:LIST:TRIG |
| Notes | When in Sequence Analyzer mode and Include Source is Yes, the Initiate list sequencer operation is rejected, and the key is grayed out, since source list sequence request is sent to physics via Parallel batch by sequence analyzer. If the file needed by the sequencer is not already in ARB memory, the sequence cannot be initiated and an error will be generated. There is a blocking SCPI query which can be used to query if source list sequence being initiated successfully or not. (see " Query List Sequence Initiation Armed Status (Remote Command Only) " on page 2630 Query Source List Sequence Armed Status) |
| Dependencies | Under the Sequence Analyzer Mode, if Meas Setup->Include Source is set to YES, Source->List Sequencer->Initiate Sequence is disabled. |
| Initial S/W Revision | A.05.00 |

List Sequencer Setup

Allows you access to the list sequencer setup menus.

| | |
|----------|-------------------------------|
| Key Path | Source, List Sequencer |
|----------|-------------------------------|

Number of Steps

Allows you to specify the number of steps within the list sequence.

| | |
|-----------------------|--|
| Key Path | Source, List Sequencer, List Sequencer Setup |
| Remote Command | :SOURce:LIST:NUMBer:STEPs <integer> :SOURce:LIST:NUMBer:STEPs? |
| Example | :SOUR:LIST:NUMB:STEP 1 |
| Notes | Increasing the number of steps creates additional steps at the end of the list, with all the settings within the steps set to their default values. Decreasing the number of steps removes steps from the end of the list. The settings within the removed steps are not reset. This means that increasing the number of steps again would allow you to retrieve these steps. |
| Dependencies | The Step Count parameter is increased or decreased when you insert or delete a point from within the GUI interface to the sequencer. |
| Preset | 1 |
| Min | 1 |
| Max | 1000 |
| Initial S/W Revision | A.05.00 |

Current Step

Allows you to select the step number you wish to view or edit.

| | |
|----------------------|---|
| Key Path | Source, List Sequencer, List Sequencer Setup |
| Notes | No remote command, front panel only. |
| Preset | 1 |
| Min | 1 |
| Max | Step Count |
| Initial S/W Revision | A.05.00 |

Insert Step Before

Allows you to insert a new step, containing default values, before the currently selected step. Inserting a step will automatically increase the Step Count parameter by 1. If sequence already reaches upper limit of

1000 steps, then insert more step will be rejected and popup error –221, “Setting Conflict; Cannot insert more steps, maximum number of steps reached”

| Key Path | Source, List Sequencer, List Sequencer Setup |
|----------------------|---|
| Notes | No remote command, front panel only. If the list already contains the maximum limit of 1000 steps, no operation will be made after pressing this key. |
| Initial S/W Revision | A.05.00 |

Delete Step

Allows you to delete the current step. Deleting a step will automatically decrease the Step Count parameter by 1. If sequence only has one step left, delete step will be rejected and popup error –221, “Setting conflict; Cannot delete current step, minimum number of steps reached”

| Key Path | Source, List Sequencer, List Sequencer Setup |
|----------------------|---|
| Notes | No remote command, Front Panel key only. If the list already contains the minimum limit of 1 step, no operation will be made after pressing this key |
| Initial S/W Revision | A.05.00 |

Clear List

Allows you to clear the list. Clearing the list sets the number of steps to the default value of 1 and sets the parameters for the only step to their default values.

| Key Path | Source, List Sequencer, List Sequencer Setup |
|----------------------|--|
| Initial S/W Revision | A.05.00 |

Step Trigger

Allows access to the sub-menu for selecting the trigger input for the current step.

| Key Path | Source, List Sequencer, List Sequencer Setup |
|-----------------------|---|
| Remote Command | :SOURce:LIST:STEP[1] 2 3...1000:SETup:INPut:TRIGger IMMEDIATE INTERNAL EXTERNAL2 KEY BUS EXTERNAL4 :SOURce:LIST:STEP[1] 2 3...1000:SETup:INPut:TRIGger? |
| Example | :SOUR:LIST:STEP2:SET:INP:TRIG BUS :SOUR:LIST:STEP2:SET:INP:TRIG? |
| Notes | SCPI is supported after A.09.40 |
| Preset | Free Run |
| Range | Free Run Internal Manual (Trigger Key) Bus External 2 EXTERNAL4 |
| Initial S/W Revision | A.05.00 |

Free Run

Sets the trigger input for the current step to Free Run.

| | |
|-----------------------------|---|
| Key Path | Source, List Sequencer, List Sequencer Setup, Step Trigger |
| Example | :SOUR:LIST:STEP2:SET:INP:TRIG IMM |
| Notes | SCPI is supported after A.09.40 |
| Initial S/W Revision | A.05.00 |

Internal

Sets the trigger input for the current step to Internal.

| | |
|-----------------------------|---|
| Key Path | Source, List Sequencer, List Sequencer Setup, Step Trigger |
| Example | :SOUR:LIST:STEP2:SET:INP:TRIG INT |
| Notes | SCPI is supported after A.09.40 |
| Initial S/W Revision | A.05.00 |

Manual (Trigger Key)

Sets the trigger input for the current step to Manual (Trigger Key). Any step in the sequence set to Manual will cause the sequence execution to stop until the manual trigger key is pressed. Sending the Bus Trigger SCPI command will have no effect. At any point in the sequence where the list sequencer is paused waiting for a software trigger, a pop up dialog is displayed until the trigger event occurs.

| | |
|-----------------------------|---|
| Key Path | Source, List Sequencer, List Sequencer Setup, Step Trigger |
| Example | :SOUR:LIST:STEP2:SET:INP:TRIG KEY |
| Notes | SCPI is supported after A.09.40 |
| Initial S/W Revision | A.05.00 |

Bus

Sets the trigger input for the current step to Bus. Any step in the sequence set to Bus will cause the sequence execution to stop until the Bus Trigger SCPI command is sent. Pressing the manual trigger key has no effect. At any point in the sequence where the list sequencer is paused waiting for a software trigger, a pop up dialog is displayed until the trigger event occurs.

| | |
|-----------------------------|---|
| Key Path | Source, List Sequencer, List Sequencer Setup, Step Trigger |
| Example | :SOUR:LIST:STEP2:SET:INP:TRIG BUS |
| Notes | SCPI is supported after A.09.40 |
| Initial S/W Revision | A.05.00 |

External 2

Sets the trigger input for the current step to External 2.

| | |
|----------------------|--|
| Key Path | Source, List Sequencer, List Sequencer Setup, Step Trigger |
| Example | :SOUR:LIST:STEP2:SET:INP:TRIG EXT2 |
| Notes | SCPI is supported after A.09.40 |
| Notes | Note: When on E6640A, trigger 2 is a bi-directional trigger port. So when trigger 2 has been configured as OUTPUT type, choosing External 2 as the input trigger for the current step will generate error. |
| Initial S/W Revision | A.05.00 |

Transition Time

Allows you to specify the transition time for the current step.

The transition time is the amount of time allowed for the source to settle at the current frequency or amplitude value.

Transition Time should not be taken as additional time before or inside the Step Duration. You can set a value for the settling time to allow the source output frequency or amplitude to become stable. Make sure that during this period of time, you do not use the source output signal.

The following table lists recommended values for appropriate settling times to allow for changes within the source.

| Value Changed | Recommended Transition Time |
|---------------|---|
| Frequency | 500 μ s |
| Amplitude | 100 μ s to within 0.1 dB 20 μ s to within 1.0 dB |

If the Transition Time value is shorter than the time necessary for the hardware to settle and a List Sequence is initiated, a **warning** is generated.

If the Transition Time value is longer than the Step Duration, an error is generated when initiating a source list sequence. For source list sequence, transition time is included in the step duration length. If the Transition Time value is longer than the Step Duration Time, the real step duration length is extended to equal the transition time and cause a timing shift.

| | |
|----------------|--|
| Key Path | Source, List Sequencer, List Sequencer Setup |
| Remote Command | :SOURce:LIST:STEP[1] 2 3...1000:SETup:TRANSition:TIME <time> :SOURce:LIST:STEP[1] 2 3...1000:SETup:TRANSition:TIME? |
| Example | :SOUR:LIST:STEP2:SET:TRAN:TIME 1ms :SOUR:LIST:STEP2:SET:TRAN:TIME? |

| | |
|----------------------|---------------------------------|
| Notes | SCPI is supported after A.09.40 |
| Preset | 1.0 ms |
| Min | 0.0 ms |
| Max | 4.0 ks |
| Initial S/W Revision | A.05.00 |

Radio Setup

Allows you access to the sub-menus for setting up the radio standard, band, and radio band link direction for the current step.

| | |
|----------------------|---|
| Key Path | Source, List Sequencer, List Sequencer Setup |
| Notes | No remote command, front panel only. |
| Initial S/W Revision | A.05.00 |

Radio Standard

Allows access to the sub-menus for selecting the radio standard and the associated radio band for use in the current step.

| | |
|-----------------------|--|
| Key Path | Source, List Sequencer, List Sequencer Setup, Radio Setup |
| Remote Command | :SOURce:LIST:STEP[1] 2 3...1000:SETup:RADio:BAND NONE PGSM EGSM RGSM DCS1800 PCS1900 TGSM810 GSM450 GSM480 GSM700 GSM850 BANDI BANDII BANDIII BANDIV BANDV BANDVI BANDVII BANDVIII BANDIX BANDX BANDXI BANDXII BANDXIII BANDXIV BANDXIX USCELL USPCS JAPAN KOREAN NMT IMT2K UPPER SECOND PAMR400 PAMR800 IMTEXT PCS1DOT9G AWS US2DOT5G PUBLIC LOWER NONE BAND1 BAND2 BAND3 BAND4 BAND5 BAND6 BAND7 BAND8 BAND10 BAND11 BAND12 BAND13 BAND14 BAND17 BAND18 BAND19 BAND20 BAND21 BAND24 BAND25 BAND26 BAND27 BAND28 BAND29 BAND30 BAND31 BAND33 BAND34 BAND35 BAND36 BAND37 BAND38 BAND39 BAND40 BAND41 BAND42 BAND43 BAND44 BANDA BANDB BANDC BANDD BANDE BANDF :SOURce:LIST:STEP[1] 2 3...1000:SETup: RADio:BAND? |
| Example | :SOUR:LIST:STEP2:SET:RAD:BAND PGSM :SOUR:LIST:STEP2:SET:RAD:BAND? |
| Notes | SCPI is supported after A.09.40 |
| Initial S/W Revision | A.05.00 |

None

Selects no radio standard for use on the current step.

| | |
|----------------------|--|
| Key Path | Source, List Sequencer, List Sequencer Setup, Radio Setup, Radio Standard |
| Example | :SOUR:LIST:STEP2:SET:RAD:BAND NONE |
| Notes | SCPI is supported after A.09.40 |
| Initial S/W Revision | A.05.00 |

GSM/EDGE

Pressing this key once selects GSM/EDGE as the radio standard and the current GSM/EDGE band as the active channel band. Pressing this key again allows access to the sub-menus for selecting a different GSM/EDGE band.

| | |
|----------------------|--|
| Key Path | Source, List Sequencer, List Sequencer Setup, Radio Setup, Radio Standard |
| Initial S/W Revision | A.05.00 |

P-GSM

Selects P-GSM as the band for the current step.

| | |
|----------------------|--|
| Key Path | Source, List Sequencer, List Sequencer Setup, Radio Setup, Radio Standard, GSM/EDGE |
| Initial S/W Revision | A.05.00 |

E-GSM

Selects E-GSM as the band for the current step.

| | |
|----------------------|--|
| Key Path | Source, List Sequencer, List Sequencer Setup, Radio Setup, Radio Standard, GSM/EDGE |
| Initial S/W Revision | A.05.00 |

R-GSM

Selects R-GSM as the band for the current step.

| | |
|----------------------|--|
| Key Path | Source, List Sequencer, List Sequencer Setup, Radio Setup, Radio Standard, GSM/EDGE |
| Initial S/W Revision | A.05.00 |

DCS 1800

Selects DCS 1800 as the band for the current step.

| | |
|----------------------|--|
| Key Path | Source, List Sequencer, List Sequencer Setup, Radio Setup, Radio Standard, GSM/EDGE |
| Initial S/W Revision | A.05.00 |

PCS 1900

Selects PCS 1900 as the band for the current step.

| | |
|----------------------|--|
| Key Path | Source, List Sequencer, List Sequencer Setup, Radio Setup, Radio Standard, GSM/EDGE |
| Initial S/W Revision | A.05.00 |

GSM 450

Selects GSM 450 as the band for the current step.

| | |
|----------------------|--|
| Key Path | Source, List Sequencer, List Sequencer Setup, Radio Setup, Radio Standard, GSM/EDGE |
| Initial S/W Revision | A.05.00 |

GSM 480

Selects GSM 480 as the band for the current step.

| | |
|----------------------|--|
| Key Path | Source, List Sequencer, List Sequencer Setup, Radio Setup, Radio Standard, GSM/EDGE |
| Initial S/W Revision | A.05.00 |

GSM 850

Selects GSM 850 as the band for the current step.

| | |
|----------------------|--|
| Key Path | Source, List Sequencer, List Sequencer Setup, Radio Setup, Radio Standard, GSM/EDGE |
| Initial S/W Revision | A.05.00 |

GSM 700

Selects GSM 700 as the band for the current step.

| | |
|----------------------|--|
| Key Path | Source, List Sequencer, List Sequencer Setup, Radio Setup, Radio Standard, GSM/EDGE |
| Initial S/W Revision | A.05.00 |

T-GSM 810

Selects T-GSM 810 as the band for the current step.

| | |
|----------------------|--|
| Key Path | Source, List Sequencer, List Sequencer Setup, Radio Setup, Radio Standard, GSM/EDGE |
| Initial S/W Revision | A.05.00 |

WCDMA

Pressing this key once selects WCDMA as the radio standard and the current WCDMA band as the active channel band. Pressing this key again allows access to the sub-menus for selecting a different WCDMA band.

| | |
|----------------------|--|
| Key Path | Source, List Sequencer, List Sequencer Setup, Radio Setup, Radio Standard |
| Initial S/W Revision | A.05.00 |

Band I

Selects Band I as the band for the current step.

| | |
|----------------------|---|
| Key Path | Source, List Sequencer, List Sequencer Setup, Radio Setup, Radio Standard, WCDMA |
| Initial S/W Revision | A.05.00 |

Band II

Selects Band II as the band for the current step.

| | |
|----------------------|---|
| Key Path | Source, List Sequencer, List Sequencer Setup, Radio Setup, Radio Standard, WCDMA |
| Initial S/W Revision | A.05.00 |

Band III

Selects Band III as the band for the current step.

| | |
|----------------------|---|
| Key Path | Source, List Sequencer, List Sequencer Setup, Radio Setup, Radio Standard, WCDMA |
| Initial S/W Revision | A.05.00 |

Band IV

Selects Band IV as the band for the current step.

| | |
|----------------------|---|
| Key Path | Source, List Sequencer, List Sequencer Setup, Radio Setup, Radio Standard, WCDMA |
| Initial S/W Revision | A.05.00 |

Band V

Selects Band V as the band for the current step.

| | |
|----------------------|---|
| Key Path | Source, List Sequencer, List Sequencer Setup, Radio Setup, Radio Standard, WCDMA |
| Initial S/W Revision | A.05.00 |

Band VI

Selects Band VI as the band for the current step.

| | |
|----------------------|---|
| Key Path | Source, List Sequencer, List Sequencer Setup, Radio Setup, Radio Standard, WCDMA |
| Initial S/W Revision | A.05.00 |

Band VII

Selects Band VII as the band for the current step.

| | |
|----------------------|---|
| Key Path | Source, List Sequencer, List Sequencer Setup, Radio Setup, Radio Standard, WCDMA |
| Initial S/W Revision | A.05.00 |

Band VIII

Selects Band VIII as the band for the current step.

| | |
|----------------------|---|
| Key Path | Source, List Sequencer, List Sequencer Setup, Radio Setup, Radio Standard, WCDMA |
| Initial S/W Revision | A.05.00 |

Band IX

Selects Band IX as the band for the current step.

| | |
|----------------------|---|
| Key Path | Source, List Sequencer, List Sequencer Setup, Radio Setup, Radio Standard, WCDMA |
| Initial S/W Revision | A.05.00 |

Band X

Selects Band X as the band for the current step.

| | |
|----------------------|---|
| Key Path | Source, List Sequencer, List Sequencer Setup, Radio Setup, Radio Standard, WCDMA |
| Initial S/W Revision | A.05.00 |

Band XI

Selects Band XI as the band for the current step.

| | |
|----------------------|---|
| Key Path | Source, List Sequencer, List Sequencer Setup, Radio Setup, Radio Standard, WCDMA |
| Initial S/W Revision | A.05.00 |

Band XII

Selects Band XII as the band for the current step.

| | |
|----------------------|---|
| Key Path | Source, List Sequencer, List Sequencer Setup, Radio Setup, Radio Standard, WCDMA |
| Initial S/W Revision | A.05.00 |

Band XIII

Selects Band XIII as the band for the current step.

| | |
|----------------------|---|
| Key Path | Source, List Sequencer, List Sequencer Setup, Radio Setup, Radio Standard, WCDMA |
| Initial S/W Revision | A.05.00 |

Band XIV

Selects Band XIV as the band for the current step.

| | |
|----------------------|---|
| Key Path | Source, List Sequencer, List Sequencer Setup, Radio Setup, Radio Standard, WCDMA |
| Initial S/W Revision | A.05.00 |

CDMA 2000 / 1xEVDO

Pressing this key once selects CDMA 2000/1xEVDO as the radio standard and the current CDMA 2000/1xEVDO band as the active channel band. Pressing this key again allows access to the sub-menus for selecting a different CDMA 2000/1xEVDO band.

| | |
|----------------------|--|
| Key Path | Source, List Sequencer, List Sequencer Setup, Radio Setup, Radio Standard |
| Initial S/W Revision | A.05.00 |

US CELL

Selects US Cell as the band for the current step.

| | |
|----------------------|--|
| Key Path | Source, List Sequencer, List Sequencer Setup, Radio Setup, Radio Standard, CDMA 2000 / 1xEVDO |
| Initial S/W Revision | A.05.00 |

US PCS

Selects US PCS as the band for the current step.

| | |
|----------------------|--|
| Key Path | Source, List Sequencer, List Sequencer Setup, Radio Setup, Radio Standard, CDMA 2000 / 1xEVDO |
| Initial S/W Revision | A.05.00 |

Japan Cell

Selects Japan Cell as the band for the current step.

| | |
|----------------------|--|
| Key Path | Source, List Sequencer, List Sequencer Setup, Radio Setup, Radio Standard, CDMA 2000 / 1xEVDO |
| Initial S/W Revision | A.05.00 |

Korean PCS

Selects Korean PCS as the band for the current step.

| | |
|----------------------|--|
| Key Path | Source, List Sequencer, List Sequencer Setup, Radio Setup, Radio Standard, CDMA 2000 / 1xEVDO |
| Initial S/W Revision | A.05.00 |

NMT 450

Selects NMT 450 as the band for the current step.

| | |
|----------------------|--|
| Key Path | Source, List Sequencer, List Sequencer Setup, Radio Setup, Radio Standard, CDMA 2000 / 1xEVDO |
| Initial S/W Revision | A.05.00 |

IMT 2000

Selects IMT 2000 as the band for the current step.

| | |
|----------------------|--|
| Key Path | Source, List Sequencer, List Sequencer Setup, Radio Setup, Radio Standard, CDMA 2000 / 1xEVDO |
| Initial S/W Revision | A.05.00 |

Upper 700

Selects Upper 700 as the band for the current step.

| | |
|----------------------|--|
| Key Path | Source, List Sequencer, List Sequencer Setup, Radio Setup, Radio Standard, CDMA 2000 / 1xEVDO |
| Initial S/W Revision | A.05.00 |

Secondary 800

Selects Secondary 800 as the band for the current step.

| | |
|----------------------|--|
| Key Path | Source, List Sequencer, List Sequencer Setup, Radio Setup, Radio Standard, CDMA 2000 / 1xEVDO |
| Initial S/W Revision | A.05.00 |

400 Euro PAMR

Selects 400 Euro PAMR as the band for the current step.

| | |
|----------------------|--|
| Key Path | Source, List Sequencer, List Sequencer Setup, Radio Setup, Radio Standard, CDMA 2000 / 1xEVDO |
| Initial S/W Revision | A.05.00 |

800 PAMR

Selects 800 PAMR as the band for the current step.

| | |
|----------------------|--|
| Key Path | Source, List Sequencer, List Sequencer Setup, Radio Setup, Radio Standard, CDMA 2000 / 1xEVDO |
| Initial S/W Revision | A.05.00 |

2.5GHz IMT EXT

Selects 2.5 GHz IMT EXT as the band for the current step.

| | |
|----------------------|--|
| Key Path | Source, List Sequencer, List Sequencer Setup, Radio Setup, Radio Standard, CDMA 2000 / 1xEVDO |
| Initial S/W Revision | A.05.00 |

US PCS 1.9GHz

Selects US PCS 1.9 GHz as the band for the current step.

| | |
|----------------------|--|
| Key Path | Source, List Sequencer, List Sequencer Setup, Radio Setup, Radio Standard, CDMA 2000 / 1xEVDO |
| Initial S/W Revision | A.05.00 |

AWS

Selects AWS as the band for the current step.

| | |
|----------------------|--|
| Key Path | Source, List Sequencer, List Sequencer Setup, Radio Setup, Radio Standard, CDMA 2000 / 1xEVDO |
| Initial S/W Revision | A.05.00 |

US 2.5GHz

Selects US 2.5 GHz as the band for the current step.

| | |
|----------------------|--|
| Key Path | Source, List Sequencer, List Sequencer Setup, Radio Setup, Radio Standard, CDMA 2000 / 1xEVDO |
| Initial S/W Revision | A.05.00 |

700 Public Safety

Selects 700 Public Safety as the band for the current step.

| | |
|----------------------|--|
| Key Path | Source, List Sequencer, List Sequencer Setup, Radio Setup, Radio Standard, CDMA 2000 / 1xEVDO |
| Initial S/W Revision | A.05.00 |

C2K Lower 700

Selects C2K Lower 700 as the band for the current step.

| | |
|----------------------|--|
| Key Path | Source, List Sequencer, List Sequencer Setup, Radio Setup, Radio Standard, CDMA 2000 / 1xEVDO |
| Initial S/W Revision | A.05.00 |

LTE

Pressing this key once selects LTE FDD as the radio standard and the current LTE FDD band as the active channel band. Pressing this key again allows access to the sub-menus for selecting a different LTE FDD band.

| | |
|----------------------|--|
| Key Path | Source, List Sequencer, List Sequencer Setup, Radio Setup, Radio Standard |
| Initial S/W Revision | A.09.50 |

BAND 1

Selects BAND 1 as the band for the current step.

| | |
|----------------------|---|
| Key Path | Source, List Sequencer, List Sequencer Setup, Radio Setup, Radio Standard, LTE |
| Initial S/W Revision | A.09.50 |

BAND 2

Selects BAND 2 as the band for the current step.

| | |
|----------------------|---|
| Key Path | Source, List Sequencer, List Sequencer Setup, Radio Setup, Radio Standard, LTE |
| Initial S/W Revision | A.09.50 |

BAND 3

Selects BAND 3 as the band for the current step.

| | |
|----------------------|---|
| Key Path | Source, List Sequencer, List Sequencer Setup, Radio Setup, Radio Standard, LTE |
| Initial S/W Revision | A.09.50 |

BAND 4

Selects BAND 4 as the band for the current step.

| | |
|----------------------|---|
| Key Path | Source, List Sequencer, List Sequencer Setup, Radio Setup, Radio Standard, LTE |
| Initial S/W Revision | A.09.50 |

BAND 5

Selects BAND 5 as the band for the current step.

| | |
|----------------------|---|
| Key Path | Source, List Sequencer, List Sequencer Setup, Radio Setup, Radio Standard, LTE |
| Initial S/W Revision | A.09.50 |

BAND 6

Selects BAND 6 as the band for the current step.

| | |
|----------------------|---|
| Key Path | Source, List Sequencer, List Sequencer Setup, Radio Setup, Radio Standard, LTE |
| Initial S/W Revision | A.09.50 |

BAND 7

Selects BAND 7 as the band for the current step.

| | |
|----------------------|---|
| Key Path | Source, List Sequencer, List Sequencer Setup, Radio Setup, Radio Standard, LTE |
| Initial S/W Revision | A.09.50 |

BAND 8

Selects BAND 8 as the band for the current step.

| | |
|----------------------|---|
| Key Path | Source, List Sequencer, List Sequencer Setup, Radio Setup, Radio Standard, LTE |
| Initial S/W Revision | A.09.50 |

BAND 9

Selects BAND 9 as the band for the current step.

| | |
|----------------------|---|
| Key Path | Source, List Sequencer, List Sequencer Setup, Radio Setup, Radio Standard, LTE |
| Initial S/W Revision | A.09.50 |

BAND 10

Selects BAND 10 as the band for the current step.

| | |
|----------------------|---|
| Key Path | Source, List Sequencer, List Sequencer Setup, Radio Setup, Radio Standard, LTE |
| Initial S/W Revision | A.09.50 |

BAND 11

Selects BAND 11 as the band for the current step.

| | |
|----------------------|---|
| Key Path | Source, List Sequencer, List Sequencer Setup, Radio Setup, Radio Standard, LTE |
| Initial S/W Revision | A.09.50 |

BAND 12

Selects BAND 12 as the band for the current step.

| | |
|----------------------|---|
| Key Path | Source, List Sequencer, List Sequencer Setup, Radio Setup, Radio Standard, LTE |
| Initial S/W Revision | A.09.50 |

BAND 13

Selects BAND 13 as the band for the current step.

| | |
|----------------------|---|
| Key Path | Source, List Sequencer, List Sequencer Setup, Radio Setup, Radio Standard, LTE |
| Initial S/W Revision | A.09.50 |

BAND 14

Selects BAND 14 as the band for the current step.

| | |
|----------------------|---|
| Key Path | Source, List Sequencer, List Sequencer Setup, Radio Setup, Radio Standard, LTE |
| Initial S/W Revision | A.09.50 |

BAND 17

Selects BAND 17 as the band for the current step.

| | |
|----------------------|---|
| Key Path | Source, List Sequencer, List Sequencer Setup, Radio Setup, Radio Standard, LTE |
| Initial S/W Revision | A.09.50 |

BAND 18

Selects BAND 18 as the band for the current step.

| | |
|----------------------|---|
| Key Path | Source, List Sequencer, List Sequencer Setup, Radio Setup, Radio Standard, LTE |
| Initial S/W Revision | A.09.50 |

BAND 19

Selects BAND 19 as the band for the current step.

| | |
|----------------------|---|
| Key Path | Source, List Sequencer, List Sequencer Setup, Radio Setup, Radio Standard, LTE |
| Initial S/W Revision | A.09.50 |

BAND 20

Selects BAND 20 as the band for the current step.

| | |
|----------------------|---|
| Key Path | Source, List Sequencer, List Sequencer Setup, Radio Setup, Radio Standard, LTE |
| Initial S/W Revision | A.09.50 |

BAND 21

Selects BAND 21 as the band for the current step.

| | |
|----------------------|---|
| Key Path | Source, List Sequencer, List Sequencer Setup, Radio Setup, Radio Standard, LTE |
| Initial S/W Revision | A.09.50 |

BAND 24

Selects BAND 24 as the band for the current step.

| | |
|----------------------|---|
| Key Path | Source, List Sequencer, List Sequencer Setup, Radio Setup, Radio Standard, LTE |
| Initial S/W Revision | A.09.50 |

BAND 25

Selects BAND 25 as the band for the current step.

| | |
|----------------------|---|
| Key Path | Source, List Sequencer, List Sequencer Setup, Radio Setup, Radio Standard, LTE |
| Initial S/W Revision | A.09.50 |

BAND 26

Selects BAND 26 as the band for the current step.

| | |
|----------------------|---|
| Key Path | Source, List Sequencer, List Sequencer Setup, Radio Setup, Radio Standard, LTE |
| Initial S/W Revision | A.12.53 |

BAND 27

Selects BAND 27 as the band for the current step.

| | |
|----------------------|---|
| Key Path | Source, List Sequencer, List Sequencer Setup, Radio Setup, Radio Standard, LTE |
| Initial S/W Revision | A.14.00 |

BAND 28

Selects BAND 28 as the band for the current step.

| | |
|----------------------|---|
| Key Path | Source, List Sequencer, List Sequencer Setup, Radio Setup, Radio Standard, LTE |
| Initial S/W Revision | A.14.00 |

BAND 31

Selects BAND 31 as the band for the current step.

| | |
|----------------------|---|
| Key Path | Source, List Sequencer, List Sequencer Setup, Radio Setup, Radio Standard, LTE |
| Initial S/W Revision | A.14.00 |

LTE TDD

Sets LTE TDD as the radio standard for use and accesses the LTE TDD specific channel band sub-menus..

| | |
|----------------------|---|
| Key Path | Source, Frequency, Radio Setup, Radio Standard |
| Initial S/W Revision | A.11.50 |

BAND 33

Selects BAND 33 as the band for the current step.

| | |
|----------------------|--|
| Key Path | Source, Frequency, Radio Setup, Radio Standard, LTE TDD |
| Example | :SOUR:FREQ:CHAN:BAND BAND33 |
| Initial S/W Revision | A.11.50 |

BAND 34

Selects BAND 34 as the band for the current step.

| | |
|----------------------|--|
| Key Path | Source, Frequency, Radio Setup, Radio Standard, LTE TDD |
| Example | :SOUR:FREQ:CHAN:BAND BAND34 |
| Initial S/W Revision | A.11.50 |

BAND 35

Selects BAND 35 as the band for the current step.

| | |
|----------------------|--|
| Key Path | Source, Frequency, Radio Setup, Radio Standard, LTE TDD |
| Example | :SOUR:FREQ:CHAN:BAND BAND35 |
| Initial S/W Revision | A.11.50 |

BAND 36

Selects BAND 36 as the band for the current step.

| | |
|----------------------|--|
| Key Path | Source, Frequency, Radio Setup, Radio Standard, LTE TDD |
| Example | :SOUR:FREQ:CHAN:BAND BAND36 |
| Initial S/W Revision | A.11.50 |

BAND 37

Selects BAND 37 as the band for the current step.

| | |
|----------------------|--|
| Key Path | Source, Frequency, Radio Setup, Radio Standard, LTE TDD |
| Example | :SOUR:FREQ:CHAN:BAND BAND37 |
| Initial S/W Revision | A.11.50 |

BAND 38

Selects BAND 38 as the band for the current step.

| | |
|----------------------|--|
| Key Path | Source, Frequency, Radio Setup, Radio Standard, LTE TDD |
| Example | :SOUR:FREQ:CHAN:BAND BAND38 |
| Initial S/W Revision | A.11.50 |

BAND 39

Selects BAND 39 as the band for the current step.

| | |
|----------------------|--|
| Key Path | Source, Frequency, Radio Setup, Radio Standard, LTE TDD |
| Example | :SOUR:FREQ:CHAN:BAND BAND39 |
| Initial S/W Revision | A.11.50 |

BAND 40

Selects BAND 40 as the band for the current step.

| | |
|----------------------|--|
| Key Path | Source, Frequency, Radio Setup, Radio Standard, LTE TDD |
| Example | :SOUR:FREQ:CHAN:BAND BAND40 |
| Initial S/W Revision | A.11.50 |

BAND 41

Selects BAND 41 as the band for the current step.

| | |
|----------------------|--|
| Key Path | Source, Frequency, Radio Setup, Radio Standard, LTE TDD |
| Example | :SOUR:FREQ:CHAN:BAND BAND41 |
| Initial S/W Revision | A.11.50 |

BAND 42

Selects BAND 42 as the band for the current step.

| | |
|----------------------|--|
| Key Path | Source, Frequency, Radio Setup, Radio Standard, LTE TDD |
| Example | :SOUR:FREQ:CHAN:BAND BAND42 |
| Initial S/W Revision | A.11.50 |

BAND 43

Selects BAND 43 as the band for the current step.

| | |
|----------------------|--|
| Key Path | Source, Frequency, Radio Setup, Radio Standard, LTE TDD |
| Example | :SOUR:FREQ:CHAN:BAND BAND43 |
| Initial S/W Revision | A.11.50 |

BAND 44

Selects BAND 44 as the band for the current step.

| | |
|----------------------|---|
| Key Path | Source, List Sequencer, List Sequencer Setup, Radio Setup, Radio Standard, LTE TDD |
| Initial S/W Revision | A.14.00 |

TDSCDMA

Sets TDSCDMA as the radio standard for use and accesses the TDSCDMA specific channel band sub-menus..

| | |
|----------------------|---|
| Key Path | Source, Frequency, Radio Setup, Radio Standard |
| Initial S/W Revision | A.11.50 |

BAND A

Selects BAND A as the band for the current step.

| | |
|----------------------|--|
| Key Path | Source, Frequency, Radio Setup, Radio Standard, TDSCDMA |
| Example | :SOUR:FREQ:CHAN:BAND BANDA |
| Initial S/W Revision | A.11.50 |

BAND B

Selects BAND B as the band for the current step.

| | |
|----------------------|--|
| Key Path | Source, Frequency, Radio Setup, Radio Standard, TDSCDMA |
| Example | :SOUR:FREQ:CHAN:BAND BANDB |
| Initial S/W Revision | A.11.50 |

BAND C

Selects BAND C as the band for the current step.

| | |
|----------------------|--|
| Key Path | Source, Frequency, Radio Setup, Radio Standard, TDSCDMA |
| Example | :SOUR:FREQ:CHAN:BAND BANDC |
| Initial S/W Revision | A.11.50 |

BAND D

Selects BAND D as the band for the current step.

| | |
|----------------------|--|
| Key Path | Source, Frequency, Radio Setup, Radio Standard, TDSCDMA |
| Example | :SOUR:FREQ:CHAN:BAND BANDD |
| Initial S/W Revision | A.11.50 |

BAND E

Selects BAND E as the band for the current step.

| | |
|----------------------|--|
| Key Path | Source, Frequency, Radio Setup, Radio Standard, TDSCDMA |
| Example | :SOUR:FREQ:CHAN:BAND BANDE |
| Initial S/W Revision | A.11.50 |

BAND F

Selects BAND F as the band for the current step.

| | |
|----------------------|--|
| Key Path | Source, Frequency, Radio Setup, Radio Standard, TDSCDMA |
| Example | :SOUR:FREQ:CHAN:BAND BANDF |
| Initial S/W Revision | A.11.50 |

Radio Band Link

Allows you to specify the radio band link direction for the steps within the list sequence. The link is used in conjunction with the channel band and channel number to determine the output frequency.

When set to “Uplink”, the source will calculate the uplink frequency according to an uplink formula together with selected channel band and channel number. When set to “Downlink”, the source will calculate the downlink frequency according to a downlink formula together with selected channel band and channel number.

| | |
|-----------------------|---|
| Key Path | Source, List Sequencer, List Sequencer Setup, Radio Setup |
| Remote Command | :SOURce:LIST:STEP[1] 2 3...1000:SETup:RADio:BAND:LINK DOWN UP :SOURce:LIST:STEP[1] 2 3...1000:SETup:RADio:BAND:LINK? |

| | |
|----------------------|--|
| Example | :SOUR:LIST:STEP2:SET:RAD:BAND:LINK UP :SOUR:LIST:STEP2:SET:RAD:BAND:LINK? |
| Notes | SCPI is supported after A.09.40 |
| Preset | DOWN |
| Range | DOWN UP |
| Initial S/W Revision | A.05.00 |

Channel

Allows you to specify the frequency of the current step via a channel number.

| Key Path | Source, List Sequencer, List Sequencer Setup |
|-----------------------|---|
| Remote Command | :SOURce:LIST:STEP[1] 2 3...1000:SETup:CNFRfrequency <double> :SOURce:LIST:STEP[1] 2 3...1000:SETup:CNFRfrequency? |
| Example | :SOUR:LIST:STEP2:SET:CNFR 124 :SOUR:LIST:STEP2:SET:CNFR? |
| Notes | SCPI is supported after A.09.40. This SCPI is used to setup channel number or frequency setting, according to current Radio Band setting. If Radio Band is "NONE", then it's frequency. If Radio Band is not "NONE", then it's channel number. |
| Couplings | The channel number is coupled to the step frequency value. When the step frequency value is changed, the channel number will increase or decrease to match the new step frequency. If the step frequency is not at an exact match for a channel number, the nearest channel number is displayed, along with a greater than, or less than sign to indicate the frequency is above or below the channel number. |
| Preset | 1 |
| Min | 0 (Please refer to for valid ranges.) |
| Max | 10838 (Please refer to for valid ranges.) |
| Initial S/W Revision | A.05.00 |

Frequency

Allows you to specify a frequency value for the current step.

| Key Path | Source, List Sequencer, List Sequencer Setup |
|-----------------------|--|
| Remote Command | :SOURce:LIST:STEP[1] 2 3...1000:SETup:CNFRfrequency <double> :SOURce:LIST:STEP[1] 2 3...1000:SETup:CNFRfrequency? |
| Example | :SOUR:LIST:STEP2:SET:CNFR 1GHz :SOUR:LIST:STEP2:SET:CNFR? |
| Notes | SCPI is supported after A.09.40. |

| | |
|----------------------|--|
| | This SCPI is used to setup channel number or frequency setting, according to current Radio Band setting. If Radio Band is "NONE", then it's frequency. If Radio Band is not "NONE", then it's channel number. |
| Couplings | The frequency value is coupled to the channel band and number for the step, such that updates to the radio band and channel number will update the frequency value to the corresponding absolute frequency. The reverse is also true, changing the frequency value causes the value of the channel number to be updated. |
| Preset | 1.00 GHz |
| Min | 10.00 MHz |
| Max | Hardware Dependant: Option 503 = 3.6 GHz Option 504 = 3.9 GHz Option 506 = 6.00 GHz |
| Initial S/W Revision | A.05.00 |

Power

Allows you to specify a power value for the current step.

| | |
|----------------|--|
| Key Path | Source, List Sequencer, List Sequencer Setup |
| Remote Command | :SOURce:LIST:STEP[1] 2 3...1000:SETup:AMPLitude <double> :SOURce:LIST:STEP[1] 2 3...1000:SETup:AMPLitude? |
| Example | :SOUR:LIST:STEP2:SET:AMPL -50dBm :SOUR:LIST:STEP2:SET:AMPL? |
| Notes | SCPI is supported after A.09.40 |
| Notes | Amplitude corrections can be specified for use with the source. In the event of amplitude corrections being applied, the valid ranges for the RF power do not change dependant on the current amplitude correction setting. Instead, if the combination of RF power + amplitude correction is higher or lower than the source output range, the Source Unleveled bit is set and the "Source Unleveled" indicator will appear on status panel to indicate that the source cannot maintain the output power that has been requested. The multiport adapter RFIO TX ports and GPS ports cannot ensure power accuracy when power setting is lower than -130dBm, this power setting value is defined by the sum of RF Power setting and related amplitude correction value. But user settable value could be lower than this limit. When application detected there exists power setting lower than -130dBm on MPA RFIO TX ports, then popup warning message . When application detected there exists power setting lower than -130dBm on MPA GPS ports, then popup warning message . These are only warning messages, and check is performed when RF is ON. |
| Notes | The Min and Max value here defined UI settable amplitude range. This range is larger than actual amplitude range with level accuracy defined in spec. |
| Dependencies | The RF power is dependent on the RF output port and frequency, such that the current frequency and selected output port determine the valid range of power values. |
| Preset | -100 dBm |

| | |
|----------------------|--|
| Min | The range of values depends on the current frequency and selected RF output port. Please refer to "RF Power" on page 2500 and the table RF Power Range for the valid ranges. |
| Max | The range of values depends on the current frequency and selected RF output port. Please refer to "RF Power" on page 2500 and the table RF Power Range for the valid ranges. |
| Initial S/W Revision | A.05.00 |

Waveform

Allows you access to the sub-menus for selecting the waveform to be played back during the current step. Pressing this key also changes the central display area to show the Waveform File Selection view.

| | |
|----------------------|--|
| Key Path | Source, List Sequencer, List Sequencer Setup |
| Remote Command | :SOURce:LIST:STEP[1] 2 3...1000:SETup:WAVeform <string> :SOURce:LIST:STEP[1] 2 3...1000:SETup:WAVeform? |
| Example | :SOUR:LIST:STEP2:SET:WAV "CW" :SOUR:LIST:STEP2:SET:WAV? |
| Notes | SCPI is supported after A.09.40 |
| Remote Command Notes | String type, takes "Off" "CW" "Cont" "waveform name" |
| Preset | CW |
| Range | Waveform Continue Previous CW Off |
| Initial S/W Revision | A.05.00 |

CW

Sets the current step to output a CW tone.

| | |
|----------------------|---|
| Key Path | Source, List Sequencer, List Sequencer Setup, Waveform |
| Example | :SOUR:LIST:STEP2:SET:WAV "CW" |
| Notes | SCPI is supported after A.09.40 |
| Initial S/W Revision | A.05.00 |

Selected Waveform

Inserts the currently selected waveform in the waveform selection view as the waveform for playback during the current step.

| | |
|----------|---|
| Key Path | Source, List Sequencer, List Sequencer Setup, Waveform |
| Example | :SOUR:LIST:STEP2:SET:WAV "waveform name" |
| Notes | SCPI is supported after A.09.40 If the selected waveform contains header (which contains ARB play parameters), source list |

sequence will automatically apply header settings of the selected waveform in that step.

| | |
|----------------------|---------|
| Initial S/W Revision | A.05.00 |
|----------------------|---------|

Continue Previous

Sets the current step to continue with playback of the waveform from the previous step. When continuing the previous waveform, the ARB playback will not pause while the source retunes to the new frequency or amplitude that may be defined for the new step.

| | |
|----------|---|
| Key Path | Source, List Sequencer, List Sequencer Setup, Waveform |
|----------|---|

| | |
|----------------|---------------------------------|
| Example | :SOUR:LIST:STEP2:SET:WAV "Cont" |
|----------------|---------------------------------|

| | |
|-------|---------------------------------|
| Notes | SCPI is supported after A.09.40 |
|-------|---------------------------------|

| | |
|----------------------|---------|
| Initial S/W Revision | A.05.00 |
|----------------------|---------|

Off

Disable RF output of the current step.

| | |
|----------|---|
| Key Path | Source, List Sequencer, List Sequencer Setup, Waveform |
|----------|---|

| | |
|----------------|--------------------------------|
| Example | :SOUR:LIST:STEP2:SET:WAV "Off" |
|----------------|--------------------------------|

| | |
|-------|---------------------------------|
| Notes | SCPI is supported after A.09.40 |
|-------|---------------------------------|

| | |
|----------------------|---------|
| Initial S/W Revision | A.05.00 |
|----------------------|---------|

Segments on Hard Disk

Allows you access to the sub-menus for loading waveform segments from the hard disk into ARB memory. The default directory is: D: varb.

Pressing this key changes the current view to the Waveform Management View.

| | |
|----------|---|
| Key Path | Source, Modulation Setup, ARB, Select Waveform |
|----------|---|

| | |
|----------------------|---------|
| Initial S/W Revision | A.05.00 |
|----------------------|---------|

Load Segment To ARB Memory

Allows you to load the selected file into ARB memory. On the front panel you select the file for loading to the ARB memory by highlighting the desired file in the list. Using the SCPI command, you specify the file name on the HDD.

"NVWFM" (none-volatile storage) MSUS (Mass Storage Unit Specifier) is supported in the memory subsystem because the ARB memory cannot be accessed directly. Therefore, files must be downloaded to the instrument hard disk and then loaded into the ARB memory. "NVWFM" MSUS will be mapped to the

default directory D: VARB. The SCPI command supports using either “NVWFM” MSUS or specifying a full path. For more information, see [Memory Subsystem \(Remote Command Only\)](#).

If a file of the same name already exists within ARB memory, it is overwritten. If you wish to load two segments of the same name, you must rename one of the segments before loading it into ARB memory. To rename a segment, you can either use Windows File Explorer, or the :MMEMory:COPY command.

| | |
|-----------------------|--|
| Key Path | Source, Modulation Setup, ARB, Select Waveform, Segments on Hard Disk |
| Remote Command | :SOURce:RADio:ARB:LOAD <string> |
| Example | :SOUR:RAD:ARB:LOAD “D: VARB\testwaveform.bin” or :SOUR:RAD:ARB:LOAD “NVWFM:testwaveform.bin” |
| Notes | <p>Because loading the file involves a delay of unpredictable length, this command should be followed by the query *OPC?, which holds off subsequent commands until the loading operating is complete.</p> <p><string> – specifies the path name of the file to load from the HDD into ARB memory. It could be a <full path + filename>, or <“NVWFM” MSUS + colon + filename>.</p> <p>When in Sequence Analyzer mode, and Include Source is Yes, an attempt to load a file to ARB memory will be rejected with an error.</p> <p>When Include Source is No and if there is insufficient free ARB memory to load the selected waveform, an error is generated. .</p> <p>If you specify a file over SCPI, but the file is not at the specified location, an error is generated.</p> <p>If you try to load a waveform file but the file contains less than 500 IQ samples, an error is generated.</p> <p>If you try to load a Signal Studio waveform “*.wfm” which contains invalid waveform header, an error is generated.</p> <p>If the ARB is ON when you load a file to ARB memory or delete a file from ARB memory, the playing waveform segment may not keep phase continuity during the ARB memory operation. The waveform will be replayed after the ARB operation is finished.</p> <p>ARB can be loaded into ARB memory even required licenses do not present on the instrument. In this case, a GUI only warning message –800, “Operation complete; Loaded <filename> successfully, but no license <required licenses> installed”. User can install required licenses according to <required licenses> string to license it, or multi-pack license it.</p> |
| Initial S/W Revision | A.05.00 |

Load All To ARB Memory

Allows you to load all the segment files within the currently selected directory into ARB memory. If a file of the same name already exists within ARB memory, it is overwritten. If you wish to load two segments of the same name, you must rename one of the segments before loading it into ARB memory. To rename a segment, you can either use Windows File Explorer, or the :MEMory:COPY command.

| | |
|-----------------------|--|
| Key Path | Source, Modulation Setup, ARB, Select Waveform, Segments on Hard Disk |
| Remote Command | :SOURce:RADio:ARB:LOAD:ALL <string> |
| Example | :SOUR:RAD:ARB:LOAD:ALL “D: varb” |
| Notes | <p><string> – specifies the directory on the HDD to load the files into ARB memory from.</p> <p>When in Sequence Analyzer mode, and Include Source is Yes, an attempt to load all files from a</p> |

directory to ARB memory is rejected with an error.
 When Include Source is No and there is insufficient free ARB memory to load all the waveforms, when the ARB memory is full, the copy ceases, and an error is generated.
 If you specify a directory over SCPI, but the directory does not exist, an error is generated.
 If the ARB is ON, a user then loads or deletes file to ARB memory, the playing waveform segment may not keep phase continuity during the ARB memory operation. The waveform will be replayed after the ARB operation is finished.

Initial S/W Revision A.05.00

Change Directory...

Allows you to change the currently selected directory on the hard disk. Pressing this key opens a standard windows change directory dialog allowing you to select the new directory of interest.

The current directory is used for manually loading waveform segments into ARB memory for playback, and as a search location for waveform segments that are required to be loaded into ARB memory for playback of a waveform sequence or a list sequence.

Key Path **Source, Modulation Setup, ARB, Select Waveform, Segments on Hard Disk**

Notes No remote command, SCPI front panel only.

Initial S/W Revision A.05.00

Default Directory...

Allows you to change the default directory. It is used as a search location for waveform segments that are required to be loaded into ARB memory for playback of a waveform sequence, and as a search location for selecting waveforms using SCPI.

Key Path **Source, Modulation Setup, ARB, Select Waveform, Segments on Hard Disk**

Remote Command :SOURce:RADio:ARB:DEFault:DIRectory <string>
 :SOURce:RADio:ARB: DEFault:DIRectory?

Example :SOUR:RAD:ARB:DEF:DIR "D:\ArbFiles"
 :SOUR:RAD:ARB:DEF:DIR?

State Saved Persistent, survives a power cycle and a preset but not saved in the instrument state

Initial S/W Revision A.05.00

Segments in ARB Memory

Allows you access to the sub-menus for managing the files within ARB memory.

Key Path **Source, Modulation Setup, ARB, Select Waveform**

Initial S/W Revision A.05.00

Delete Segment From ARB Mem

Allows you to remove a segment from ARB playback memory.

| | |
|-----------------------------|---|
| Key Path | Source, Modulation Setup, ARB, Select Waveform, Segments in ARB Memory |
| Remote Command | :SOURce:RADio:ARB:DELeTe <string> |
| Example | :SOUR:RAD:ARB:DEL "testwaveform.bin" |
| Notes | <p><string> - specifies the waveform to be deleted from the ARB playback memory.</p> <p>When in Sequence Analyzer mode and Include Source is Yes, an attempt to delete a file from ARB memory is rejected with an error.</p> <p>When Include Source is No and you specify a file that does not exist within ARB memory, an error is generated.</p> <p>It is possible to delete files from within the ARB memory when the ARB is ON. However, if you attempt to delete the file that is currently playing an error is generated.</p> <p>It is possible to delete a file from within the ARB memory when the sequencer state is ON and the file is not being used by the List Sequencer. If you attempt to delete a file which is being used by the list sequencer, an error is generated.</p> <p>When sequencer state is On, even if ARB state is On, the selected waveform will not be played. In this case, if the selected waveform is not used in List Sequence, it can be deleted and the ARB state is turned Off.</p> <p>If the ARB is ON and you load a file to ARB memory or delete a file from ARB memory, the playing waveform segment may not keep phase continuity during the ARB memory operation. The waveform will be replayed after the ARB operation is finished.</p> |
| Initial S/W Revision | A.05.00 |

Delete All From ARB Memory

Allows you to remove all segments from ARB playback memory.

| | |
|-----------------------------|--|
| Key Path | Source, Modulation Setup, ARB, Select Waveform, Segments in ARB Memory |
| Remote Command | :SOURce:RADio:ARB:DELeTe:ALL |
| Example | :SOUR:RAD:ARB:DELeTe:ALL |
| Notes | <p>When in Sequence Analyzer mode and Include Source is Yes, an attempt to delete all files from ARB memory is rejected with an error.</p> <p>When Include Source is No and you attempt to delete all files from ARB memory when the ARB is currently playing a file, all files except the one playing are deleted and an error is generated.</p> <p>If you attempt to delete all files from ARB memory when there are waveform files used in "List Sequencer" on page 2585 and "Sequencer" on page 2586 state is ON, all files except the files currently being used in list sequencer are deleted, and an error is generated.</p> <p>If the ARB is ON and you load a file to ARB memory or delete a file from ARB memory, the playing waveform segment may not keep phase continuity during the ARB memory operation. The waveform will be replayed after the ARB operation is finished.</p> |
| Initial S/W Revision | A.05.00 |

| Initial S/W Revision | Prior to A.09.00 |

Step Duration

Allows access to the sub-menus for setting up the duration of play for the current step.

The duration can be set to be either the number of times for the ARB file associated with the sequence to play, or a specific time value, or continuous. If the step is set to play a CW tone, the step duration cannot be set to a play count.

| | |
|----------------------|---|
| Key Path | Source, List Sequencer, List Sequencer Setup |
| Remote Command | :SOURce:LIST:STEP[1] 2 3...1000:SETup:DURation:TYPE TIME COUNT CONTInuous CABort :SOURce:LIST:STEP[1] 2 3...1000:SETup:DURation:TYPE? |
| Example | :SOUR:LIST:STEP2:SET:DUR:TYPE TIME :SOUR:LIST:STEP2:SET:DUR:TYPE? |
| Notes | SCPI is supported after A.09.40 |
| Notes | If "Step Duration" is set to "Time" or "Play Count" for the last step, the last step of ARB keeps playing as if set to "Continuous", until the set "Time" has expired or until the "Play Count" setting is reached. However, you can query Error! Reference source not found. Source Sweeping Condition Message to find out if the current list sequence is complete or not. |
| Range | Time Play Count Continuous Continuous Abort |
| Initial S/W Revision | A.05.00 |

Time

Sets the duration of the current step to be a time value for the length of time the step will play. Pressing this key again opens another menu which allows you to set the time value for the step duration.

| | |
|-----------------------------|--|
| Key Path | Source, List Sequencer, List Sequencer Setup, Step Duration |
| Example | :SOUR:LIST:STEP2:SET:DUR:TYPE TIME |
| Notes | SCPI is supported after A.09.40 |
| Initial S/W Revision | A.05.00 |

Duration Time

Allows you to specify the length of time the current step will play.

When Step Duration is **Continuous Abort** this parameter specifies the maximum duration that the waveform will continue to play after a step trigger is received before the transition to the next waveform will occur. Duration is limited to a maximum of 20 seconds.

If the Transition Time value is longer than the Step Duration Time, an error is generated when initiating a source list sequence. For source list sequence, transition time is included in the step duration length (not occupy additional time). If the Transition Time value is longer than the Step Duration Time, the real step duration length is extended to equal the transition time and cause a timing shift. This check is also described in section **Error! Reference source not found.** List Sequence Step Validation.

| | |
|-----------------------------|--|
| Key Path | Source, List Sequencer, List Sequencer Setup, Step Duration, Time |
| Remote Command | :SOURce:LIST:STEP[1] 2 3...1000:SETup:DURation:TCOut <double> :SOURce:LIST:STEP[1] 2 3...1000:SETup:DURation:TCOut? |
| Example | :SOUR:LIST:STEP2:SET:DUR:TCO 1s :SOUR:LIST:STEP2:SET:DUR:TCO? |
| Notes | SCPI is supported after A.09.40 This SCPI is reused by "Play Count", "Duration Time" and "Continuous Abort" according to current Duration Type setting is "Play Count" or "Duration Time" or "Continuous Abort". If current "Duration Type" is "Continuous", then popup error -221, "Settings conflict; Cannot accept time or count input when step duration type is Continuous on step #" |
| Notes | If "Duration Time" is set for the last step, the last step of ARB keeps playing as if set to "Continuous" after set time expires. However, you can query Source Sweeping Condition Message (:STAT:OPER:COND?) to find out if the current list sequence is complete or not. |
| Preset | 1.00 ms |
| Min | 100 µs |
| Max | 1800 s |
| Initial S/W Revision | A.05.00 |

Play Count

Sets the duration of the current step to be an integer value for the number of times (play count) the ARB file is selected for playback during this step. For example, a 5 second ARB will be set to play 5 times during the step.

| | |
|----------------------|---|
| Key Path | Source, List Sequencer, List Sequencer Setup, Step Duration |
| Example | :SOUR:LIST:STEP2:SET:DUR:TYPE COUN |
| Notes | SCPI is supported after A.09.40 This key is unavailable and is grayed out if the current step is configured to CW tone rather than an ARB waveform. |
| Initial S/W Revision | A.05.00 |

Header Utilities

Allows access to the header utilities sub-menu. Pressing this key also causes the central display area to change to display the File Header Information view.

| | |
|----------------------|---|
| Key Path | Source, Modulation Setup, ARB |
| Dependencies | This key is only available if there is currently a waveform selected for playback. If no waveform is selected, the key is grayed out. |
| Initial S/W Revision | A.05.00 |

Continuous

Sets the current step to be played continuously until the next step starts. The waveform will always play completely before transitioning to the next step.

| | |
|----------------------|--|
| Key Path | Source, List Sequencer, List Sequencer Setup, Step Duration |
| Example | :SOUR:LIST:STEP2:SET:DUR:TYPE CONT |
| Notes | SCPI is supported after A.09.40 |
| Initial S/W Revision | A.05.00 |

Output Trigger

Allows you to specify the trigger output for the current step. The trigger output signal is sent at the start of the step.

When select “On”, trigger event will occur on both Internal and External2 paths. Select “Off” will turn off trigger output.

| | |
|-----------------------|---|
| Key Path | Source, List Sequencer, List Sequencer Setup |
| Remote Command | :SOURce:LIST:STEP[1] 2 3...1000:SETup:OUTPut:TRIGger ON OFF 1 0 :SOURce:LIST:STEP[1] 2 3...1000:SETup:OUTPut:TRIGger |
| Example | :SOUR:LIST:STEP2:SET:OUTP:TRIG ON :SOUR:LIST:STEP2:SET:OUTP:TRIG? |
| Notes | SCPI is supported after A.09.40 |
| Preset | Off |

| | |
|----------------------|---------|
| Range | On Off |
| Initial S/W Revision | A.05.00 |

Step Configuration (Remote Command Only)

This SCPI command is used to configure the List Sequencer and is detailed in the table below. The command is defined such that you send one command per step, with the step number being specified as a subopcode of the SCPI command. Each command includes all the parameter settings for the step. As a step is setup, the values entered are run through several levels of validation.

| | |
|-----------------------|--|
| Remote Command | <pre>:SOURce:LIST:STEP[1] 2 ... 4..1000:SETup IMMEDIATE INTERNAL KEY BUS EXTERNAL2, <time>, NONE PGSM EGSM RGSM DCS1800 PCS1900 TGSM810 GSM450 GSM480 GSM700 GSM850 BANDI BANDII BANDIII BANDIV BANDV BANDVI BANDVII BANDVIII BANDIX BANDX BANDXI BANDXII BANDXIII BANDXIV BANDXIX USCELL USPCS JAPAN KOREAN NMT IMT2K UPPER SECOND PAMR400 PAMR800 IMTEXT PCS1DOT9G AWS US2DOT5G PUBLIC LOWER NONE BAND1 BAND2 BAND3 BAND4 BAND5 BAND6 BAND7 BAND8 BAND10 BAND11 BAND12 BAND13 BAND14 BAND17 BAND18 BAND19 BAND20 BAND21 BAND24 BAND25 BAND26 BAND33 BAND34 BAND35 BAND36 BAND37 BAND38 BAND39 BAND40 BAND41 BAND42 BAND43 BANDA BANDB BANDC BANDD BANDE BANDF, DOWN UP, <freq>, <ampl>, <string>, TIME COUNT CONTinuous, <time>, ON OFF 1 0, [<int>], :SOURce:LIST:STEP[1] 2 ... 4..1000:SETup?</pre> |
| Example | :SOUR:LIST:STEP1:SET INT, 1ms, PGSM, DOWN, 10, -25 dBm, "GSM_Test1.bin", TIME, 10ms, OFF, 255 |
| Notes | <p>The parameters are:</p> <p>(There is a total of 11 items in each step, the following is a list of the items in the order they must appear in the remote command.)</p> <ol style="list-style-type: none"> 1. Step Trigger <enum> – specifies the input trigger for the step. For details of the valid types of step trigger see "Step Trigger" on page 2588. 2. Transition Time <time> – specifies the transition time for the step in seconds. For details of the valid ranges for the transition time see "Transition Time" on page 2590. 3. Radio Band <enum> – specifies the radio band for the step. For details of the valid radio bands see "Radio Setup" on page 2591. 4. Radio Band Link <enum> – specifies the radio band link direction for the step. For details of the valid link types, see "Radio Band Link" on page 2607. 5. Frequency/Channel Number <freq>/<chan num> – specifies the frequency in Hz or the channel number for the step. The channel number and frequency are combined as one parameter that represents the frequency or channel number depending on the radio band setting. If the radio band is set to NONE, this value is interpreted as a frequency value in Hz. If the radio band is set to a valid band, this value is interpreted as a channel number. For details of the valid ranges for frequency and channel numbers, see "Channel" on page 2608 and "Frequency" on page 2608. 6. Power <ampl> – specifies the output power for the step in dBm. For details of the valid ranges see "Power" on page 2609. 7. Waveform <string> – specifies the waveform for playback during the step. The step can output either a new ARB waveform, continue playback of the previous waveform, or output a CW tone. The |

options for specifying these are:

<filename> - plays the specified waveform from the start. The filename value is the name of the file within ARB playback memory, it does not include the windows path to the file on the HDD. If you enter a filename for a waveform that does not reside within ARB playback memory, an error is generated.

CONT - continues playback of the ARB file from the previous step

CW - outputs a CW tone

OFF - disable RF output

8. Step Duration <enum> - specifies the duration of the step. The duration can be specified to be either time, or play count of the ARB file associated with the step, or continuous. If Waveform is set to "CW", this value cannot be set to Play Count and an error will be generated. If continuous is selected, the following Time or Count value is ignored. For further details of this setting, see "[Step Duration](#)" on page 2616.

9. Time or Count <time/int> - specifies time duration in seconds or play count of the ARB file associated with the step. For further details of this setting, including the valid ranges for the time or play count setting, "[Time](#)" on page 2616 and "[Play Count](#)" on page 2617.

10. Output Trigger <Boolean> - specifies the output trigger for the step. For details of the ranges for this setting see "[Output Trigger](#)" on page 2618.

| | |
|----------------------|--|
| Dependencies | The range of subopcode values is 1 to 1000 and the value you enter is determined by the number of steps you have configured. For details see " Number of Steps " on page 2587. If you attempt to remotely set or query a subopcode that is out of range, an error is generated. |
| Initial S/W Revision | A.05.00 |

Step Configuration of Step Trigger parameter list (Remote Command Only)

This SCPI command is to configure "Step Trigger" parameter array of the whole List Sequencer at one time. The number of array is same as step number defined in "[Number of Steps](#)" on page 2587 Number of Steps. As a step is setup, the value entered run through several levels of validation.

| | |
|-----------------------------|--|
| Remote Command | :SOURce:LIST:SETup:INPut:TRIGger <enum>, <enum>, <enum>, ... :SOURce:LIST:SETup:INPut:TRIGger? |
| Example | :SOUR:LIST:SET:INP:TRIG IMM,INT,EXT2 :SOUR:LIST:SET:INP:TRIG? |
| Notes | The command is to setup below parameter array of whole list sequence. Step Trigger <enum> - specifies the input trigger for the step. For details of the valid types of step trigger see " Step Trigger " on page 2588. If input parameter number exceeds the step number defined by " Number of Steps " on page 2587 Number of Steps then generate error ", and only those parametes whose index number falls in number of steps will be updated. |
| Remote Command Notes | IMMediate INTernal KEY BUS EXTernal2 |
| Dependencies | The range is 1 to 1000 which is determined by the number of steps you have configured. For details see " Number of Steps " on page 2587. |
| Initial S/W Revision | A.09.40 |

Step Configuration of Transition Time parameter list (Remote Command Only)

This SCPI command is to configure “Transition Time” parameter array of the whole List Sequencer at one time. The number of array is same as step number defined in ["Number of Steps" on page 2587](#) Number of Steps. As a step is setup, the value entered run through several levels of validation.

| | |
|-----------------------------|--|
| Remote Command | :SOURce:LIST:SETup:TRANSition:TIME <time>, <time>, <time>, ... :SOURce:LIST:SETup:TRANSition:TIME? |
| Example | :SOUR:LIST:SET:TRAN:TIME 1ms,1ms,1ms :SOUR:LIST:SET:TRAN:TIME? |
| Notes | The command is to setup below parameter array of whole list sequence. Transition Time <time> – specifies the transition time for the step in seconds. For details of the valid ranges for the transition time see "Transition Time" on page 2590 If input parameter number exceeds the step number defined by "Number of Steps" on page 2587 Number of Steps then generate error ", and only those parameters whose index number falls in number of steps will be updated. |
| Dependencies | The range is 1 to 1000 which is determined by the number of steps you have configured. For details see "Number of Steps" on page 2587 . |
| Initial S/W Revision | A.09.40 |

Step Configuration of Radio Band parameter list (Remote Command Only)

This SCPI command is to configure “Radio Band” parameter array of the whole List Sequencer at one time. The number of array is same as step number defined in ["Number of Steps" on page 2587](#) Number of Steps. As a step is setup, the value entered run through several levels of validation.

Step Configuration of Radio Band Link parameter list (Remote Command Only)

This SCPI command is to configure “Radio Band Link” parameter array of the whole List Sequencer at one time. The number of array is same as step number defined in ["Number of Steps" on page 2587](#) Number of Steps. As a step is setup, the value entered run through several levels of validation.

| | |
|-----------------------------|---|
| Remote Command | :SOURce:LIST:SETup:RADio:BAND:LINK <enum>, <enum>, <enum>, ... :SOURce:LIST:SETup:RADio:BAND:LINK? |
| Example | :SOUR:LIST:SET:RAD:BAND:LINK DOWN,UP,UP :SOUR:LIST:SET:RAD:BAND:LINK? |
| Notes | The command is to setup below parameter array of whole list sequence. Radio Band Link <enum> – specifies the radio band link direction for the step. For details of the valid link types, see "Radio Band Link" on page 2607 . If input parameter number exceeds the step number defined by "Number of Steps" on page 2587 Number of Steps then generate error ", and only those parametes whose index number falls in number of steps will be updated. |
| Remote Command Notes | DOWN UP |
| Dependencies | The range is 1 to 1000 which is determined by the number of steps you have configured. For details see "Number of Steps" on page 2587 . |
| Initial S/W Revision | A.09.40 |

Step Configuration of Frequency/Channel Number parameter list (Remote Command Only)

This SCPI command is to configure “Frequency” or “Channel Number” parameter array of the whole List Sequencer at one time. The number of array is same as step number defined in ["Number of Steps" on page 2587](#) Number of Steps. As a step is setup, the value entered run through several levels of validation.

| | |
|-----------------------|--|
| Remote Command | :SOURce:LIST:SETup:CNFfrequency <double>, <double>, <double>, ... :SOURce:LIST:SETup:CNFfrequency? |
| Example | :SOUR:LIST:SET:CNFR 1GHz,100MHz,100MHz :SOUR:LIST:SET:CNFR? SOUR:LIST:SET:CNFR 124,124,124 :SOUR:LIST:SET:CNFR? |

| | |
|----------------------|--|
| Notes | <p>The command is to setup below parameter array of whole list sequence.</p> <p>Frequency/Channel Number <freq>/<chan num> – specifies the frequency in Hz or the channel number for the step. The channel number and frequency are combined as one parameter that represents the frequency or channel number depending on the radio band setting. If the radio band is set to NONE, this value is interpreted as a frequency value in Hz. If the radio band is set to a valid band, this value is interpreted as a channel number. For details of the valid ranges for frequency and channel numbers, see "Channel" on page 2608 and "Frequency" on page 2608</p> <p>This SCPI is used to setup/query channel number or frequency setting, according to current Radio Band setting of that step. If Radio Band is “NONE”, then it’s frequency. If Radio Band is not “NONE”, then it’s channel number</p> <p>If input parameter number exceeds the step number defined by "Number of Steps" on page 2587 Number of Steps then generate error ", and only those parametes whose index number falls in legal step number will be updated.</p> |
| Dependencies | The range is 1 to 1000 which is determined by the number of steps you have configured. For details see "Number of Steps" on page 2587 . |
| Initial S/W Revision | A.09.40 |

Step Configuration of Power parameter list (Remote Command Only)

This SCPI command is to configure “Power” parameter array of the whole List Sequencer at one time. The number of array is same as step number defined in ["Number of Steps" on page 2587](#) Number of Steps. As a step is setup, the value entered run through several levels of validation.

| | |
|-----------------------|---|
| Remote Command | <pre>:SOURce:LIST:SETup:AMPLitude <ampl>, <ampl>, <ampl>, ... :SOURce:LIST:SETup:AMPLitude?</pre> |
| Example | <pre>:SOUR:LIST:SET:AMPL -50dBm,-40dBm,-30dBm :SOUR:LIST:SET:AMPL?</pre> |
| Notes | <p>The command is to setup below parameter array of whole list sequence.</p> <p>Power <ampl> – specifies the output power for the step in dBm. For details of the valid ranges see "Power" on page 2609.</p> <p>If input parameter number exceeds the step number defined by "Number of Steps" on page 2587 Number of Steps then generate error ", and only those parametes whose index number falls in legal step number will be updated.</p> |
| Dependencies | The range is 1 to 1000 which is determined by the number of steps you have configured. For details see "Number of Steps" on page 2587 . |
| Initial S/W Revision | A.09.40 |

Step Configuration of Waveform parameter list (Remote Command Only)

This SCPI command is to configure “Waveform” parameter array of the whole List Sequencer at one time. The number of array is same as step number defined in ["Number of Steps" on page 2587](#) Number of Steps. As a step is setup, the value entered run through several levels of validation.

| | |
|-----------------------|--|
| Remote Command | <pre>:SOURce:LIST:SETup:WAVEform <string>, <string>, <string>, ...</pre> |
|-----------------------|--|

| | |
|-----------------------------|--|
| | :SOURce:LIST:SETup:WAVeform? |
| Example | :SOUR:LIST:SET:WAV "CW","Off","CONT" :SOUR:LIST:SET:WAV? |
| Notes | <p>The command is to setup below parameter array of whole list sequence.</p> <p>Waveform <string> – specifies the waveform for playback during the step. The step can output either a new ARB waveform, continue playback of the previous waveform, or output a CW tone. The options for specifying these are:</p> <p><filename> - plays the specified waveform from the start. The filename value is the name of the file within ARB playback memory, it is does not include the windows path to the file on the HDD. If you enter a filename for a waveform that does not reside within ARB playback memory, an error is generated.</p> <p>CONT – continues playback of the ARB file from the previous step</p> <p>CW – outputs a CW tone</p> <p>OFF – disable RF output</p> <p>If input parameter number exceeds the step number defined by "Number of Steps" on page 2587 Number of Steps then generate error ", and only those parametes whose index number falls in number of steps will be updated.</p> |
| Dependencies | The range is 1 to 1000 which is determined by the number of steps you have configured. For details see "Number of Steps" on page 2587. |
| Range | "filename" "CW" "Off" "CONT" |
| Initial S/W Revision | A.09.40 |

Step Configuration of Step Duration parameter list (Remote Command Only)

This SCPI command is to configure "Step Duration" parameter array of the whole List Sequencer at one time. The number of array is same as step number defined in "Number of Steps" on page 2587 Number of Steps. As a step is setup, the value entered run through several levels of validation.

| | |
|-----------------------------|--|
| Remote Command | :SOURce:LIST:SETup:DURation:TYPE <enum>, <enum>, <enum>, ... :SOURce:LIST:SETup:DURation:TYPE? |
| Example | :SOUR:LIST:SET:DUR:TYPE COUN,TIME,CONT :SOUR:LIST:SET:DUR:TYPE? |
| Notes | <p>The command is to setup below parameter array of whole list sequence.</p> <p>Step Duration <enum> – specifies the duration of the step. The duration can be specified to be either time, or play count of the ARB file associated with the step, or continuous. If Waveform is set to "CW", this value cannot be set to Play Count and an error will be generated. If continuous is selected, the following Time or Count value is ignored. For further details of this setting, see "Step Duration" on page 2616.</p> <p>If input parameter number exceeds the step number defined by "Number of Steps" on page 2587 Number of Steps then generate error ", and only those parametes whose index number falls in number of steps will be updated.</p> |
| Remote Command Notes | TIME COUNT CONTInuous |
| Dependencies | The range is 1 to 1000 which is determined by the number of steps you have configured. For details |

see ["Number of Steps" on page 2587](#).

Initial S/W Revision A.09.40

Step Configuration of Duration Time or Play Count parameter list (Remote Command Only)

This SCPI command is to configure “Duration Time” or “Play Count” parameter array of the whole List Sequencer at one time. The number of array is same as step number defined in ["Number of Steps" on page 2587](#) Number of Steps. As a step is setup, the value entered run through several levels of validation.

Remote Command :SOURce:LIST:SETup:TOCount <time/int>, <time/int>, <time/int>, ...
:SOURce:LIST:SETup:TOCount?

Example :SOUR:LIST:SET:TOC 1s,2s,3s
:SOUR:LIST:SET:TOC?
:SOUR:LIST:SET:TOC 5,6,7
:SOUR:LIST:SET:TOC?

Notes The command is to setup below parameter array of whole list sequence.
Time or Count <time/int> – specifies time duration in seconds or play count of the ARB file associated with the step. For further details of this setting, including the valid ranges for the time or play count setting, ["Time" on page 2616](#) and ["Play Count" on page 2617](#).
If input parameter number exceeds the step number defined by ["Number of Steps" on page 2587](#) Number of Steps then generate error ", and only those parametes whose index number falls in number of steps will be updated.
If current ["Step Duration" on page 2616](#) is “Continuous”, then generate error -221, "Settings conflict;Cannot accept time or count input when step duration type is Continuous on step #"

Dependencies The range is 1 to 1000 which is determined by the number of steps you have configured. For details see ["Number of Steps" on page 2587](#).

Initial S/W Revision A.09.40

Step Configuration of Output Trigger parameter list (Remote Command Only)

This SCPI command is to configure “Output Trigger” parameter array of the whole List Sequencer at one time. The number of array is same as step number defined in ["Number of Steps" on page 2587](#) Number of Steps. As a step is setup, the value entered run through several levels of validation.

Remote Command :SOURce:LIST:SETup:OUTPut:TRIGger <bool>, <bool>, <bool>, ...
:SOURce:LIST:SETup:OUTPut:TRIGger ?

Example :SOUR:LIST:SET:OUTP:TRIG ON,OFF,ON
:SOUR:LIST:SET:OUTP:TRIG?

Notes The command is to setup below parameter array of whole list sequence.
Output Trigger <Boolean> – specifies the output trigger for the step. For details of the ranges for this setting see ["Output Trigger" on page 2618](#).
If input parameter number exceeds the step number defined by ["Number of Steps" on page 2587](#) Number of Steps then generate error ", and only those parametes whose index number falls in

| | |
|----------------------|--|
| | legal step number will be updated. |
| Remote Command Notes | ON OFF 1 0 |
| Dependencies | The range is 1 to 1000 which is determined by the number of steps you have configured. For details see " Number of Steps " on page 2587. |
| Initial S/W Revision | A.09.40 |

Clear List (Remote Command Only)

This command is the SCPI equivalent of the Clear List UI feature described in.

| | |
|-----------------------|--------------------------|
| Remote Command | :SOURce:LIST:SETup:CLEar |
| Example | :SOUR:LIST:SETup:CLE |
| Initial S/W Revision | A.05.00 |

Trigger Type

Allows access to the sub-menu for selecting the output trigger type for the list sequencer globally. It cannot be changed between different sequence steps.

| | |
|-----------------------|---|
| Key Path | Source, List Sequencer |
| Remote Command | :SOURce:LIST:TRIGgerout:TYPE BEGinningofstep DATamarker |
| Example | :SOUR:LIST:TRIG:TYP BEG :SOUR:LIST:TRIG:TYP? |
| Notes | SCPI is supported after A.14.00 This an alias SCPI of :SOURce:LIST:TRIGger:OUTPut:TYPE STEP MARKer Recommend to use : SOURce:LIST:TRIGger:OUTPut:TYPE STEP MARKer |
| Preset | BEGinningofstep |
| Range | BEGinningofstep DATamarker |
| Initial S/W Revision | A.14.00 |

BeginningOfStep

Sets the output trigger type as BeginningOfStep for the whole source sequence.

| | |
|-----------------|---|
| Key Path | Source, List Sequencer, Trigger Type |
| Example | :SOUR:LIST:TRIG:TYP BEG |
| Notes | SCPI is supported after A.14.00 This an alias SCPI of :SOURce:LIST:TRIGger:OUTPut:TYPE STEP Recommend to use : SOURce:LIST:TRIGger:OUTPut:TYPE STEP |

| | |
|----------------------|---------|
| Initial S/W Revision | A.14.00 |
|----------------------|---------|

DataMarker

Sets the output trigger type as DataMarker for the whole source sequence. When DataMarker is selected, which marker to route is also needed to be set.

| | |
|-----------------|---|
| Key Path | Source, List Sequencer, Trigger Type |
| Example | :SOUR:LIST:TRIG:TYP DAT |
| Notes | SCPI is supported after A.14.00 This an alias SCPI of :SOURce:LIST:TRIGger:OUTPut:TYPE MARKer Recommend to use : SOURce:LIST:TRIGger:OUTPut:TYPE MARKer |

| | |
|----------------------|---------|
| Initial S/W Revision | A.14.00 |
|----------------------|---------|

Marker 1

Sets the output trigger maker routing to Marker 1 for DataMarker in the whole source sequence.

| | |
|-----------------|--|
| Key Path | Source, List Sequencer, Trigger Type, DataMarker |
| Example | :SOUR:LIST:TRIG:TYPE:MARK M1 |
| Notes | SCPI is supported after A.14.00 This an alias SCPI of :SOURce:LIST:TRIGger:OUTPut:TYPE:MARKer M1 Recommend to use :SOURce:LIST:TRIGger:OUTPut:TYPE:MARKer M1 |

| | |
|----------------------|---------|
| Initial S/W Revision | A.14.00 |
|----------------------|---------|

Marker 2

Sets the output trigger maker routing to Marker 2 for DataMarker in the whole source sequence.

| | |
|-----------------|--|
| Key Path | Source, List Sequencer, Trigger Type, DataMarker |
| Example | :SOUR:LIST:TRIG:TYPE:MARK M2 |
| Notes | SCPI is supported after A.14.00 This an alias SCPI of :SOURce:LIST:TRIGger:OUTPut:TYPE:MARKer M2 Recommend to use :SOURce:LIST:TRIGger:OUTPut:TYPE:MARKer M2 |

| | |
|----------------------|---------|
| Initial S/W Revision | A.14.00 |
|----------------------|---------|

Marker 3

Sets the output trigger maker routing to Marker 3 for DataMarker in the whole source sequence.

| | |
|-----------------------------|--|
| Key Path | Source, List Sequencer, Trigger Type, DataMarker |
| Example | :SOUR:LIST:TRIG:TYPE:MARK M3 |
| Notes | SCPI is supported after A.14.00 This an alias SCPI of :SOURce:LIST:TRIGger:OUTPut:TYPE:MARKer M3 Recommend to use :SOURce:LIST:TRIGger:OUTPut:TYPE:MARKer M3 |
| Initial S/W Revision | A.14.00 |

Marker 4

Sets the output trigger maker routing to Marker 4 for DataMarker in the whole source sequence.

| | |
|-----------------------------|--|
| Key Path | Source, List Sequencer, Trigger Type, DataMarker |
| Example | :SOUR:LIST:TRIG:TYPE:MARK M4 |
| Notes | SCPI is supported after A.14.00 This an alias SCPI of :SOURce:LIST:TRIGger:OUTPut:TYPE:MARKer M4 Recommend to use :SOURce:LIST:TRIGger:OUTPut:TYPE:MARKer M4 |
| Initial S/W Revision | A.14.00 |

Manual Trigger Now

Pressing this key provides a software trigger event to the list sequencer. During execution of sequence, if the sequencer is halted on any step that has been configured with a “Manual” step trigger, then this key press will cause the sequencer to continue and execute the step.

| | |
|-----------------------------|--------------------------------------|
| Key Path | Source, List Sequencer |
| Remote Command | No remote command, front panel only. |
| Initial S/W Revision | A.05.00 |

Remote Software Trigger (Remote command Only)

During execution of a list sequence, the sequence will halt and wait at any step that has Step Trigger set to “Bus”. Sending this command will trigger the step and continue the sequence.

| | |
|-----------------------------|---|
| Remote Command | :SOURce:LIST:TRIGger:INITiate[:IMMediate] |
| Example | :SOUR:LIST:TRIG:INIT |
| Initial S/W Revision | A.05.00 |

Query List Sequence Initiation Armed Status (Remote Command Only)

This is a blocking SCPI query to determine if source list sequence being initiated successfully or not.

| | |
|-----------------------------|--|
| Remote Command | :SOURce:LIST:INITiation:ARMed? |
| Example | :SOUR:LIST:INIT:ARMed? |
| Notes | The return data is in the following format: Integer |
| Notes | Query only SCPI. Returning "1" if list sequence has been initiated successfully, returning "0" if not. Once get "0", you can use :SYST:ERR? to query what error happened. Just like "*OPC?", this command can be blocked until event/status "IsSourceSweeping" happens, and then returns. Doing so can help user's script query armed status only once during the time interval of the initiation. As an ancillary SCPI of existing SCPI ":SOUR:LIST:TRIGger[:IMMediate]" (see "Initiate Sequence" on page 2586 Initiate Sequence), the right usage of this command is to use it after ":SOUR:LIST:TRIG". If not, this command will return "1" immediately. |
| Notes | There is an alias SCPI ":SOURce:LIST:TRIGger:INITiation:ARMed?". |
| Initial S/W Revision | A.09.40 |

Source Preset

Allows you to preset the source settings to their default values.

| | |
|-----------------------|----------------|
| Key Path | Source |
| Remote Command | :SOURce:PRESet |
| Example | :SOUR:PRES |

Sweep/Control

Accesses a menu that allows you to select parameters that affect the sweep of the displayed measurement signal.

Only the Pause/Resume key is available.

See "[Sweep/Control](#)" on page 2634 for more information.

| Key Path | Front-panel key |
|----------------------|-----------------|
| Initial S/W Revision | A.10.01 |

Pause/Resume

Pauses a measurement after the current data acquisition is complete.

When Paused, the label on the key changes to Resume. Pressing Resume un-pauses the measurement. When you are Paused, pressing **Restart**, **Single** or **Cont** does a Resume.

| Key Path | Sweep/Control |
|-----------------------|--|
| Remote Command | :INITiate:PAUSE |
| Dependencies | Grayed out in Measurements that do not support Pausing. Blanked in Modes that do not support Pausing. |
| Initial S/W Revision | Prior to A.02.00 |

| Key Path | Sweep/Control |
|-----------------------|--|
| Remote Command | :INITiate:RESume |
| Dependencies | Grayed out in Measurements that do not support Pausing. Blanked in Modes that do not support Pausing. |
| Initial S/W Revision | Prior to A.02.00 |

System

See "System" on page 278

Trace/Detector

To support 2X2, 3X3 and 4X4 MIMO, since more than 4 traces may occur in some measurement view, 3 new softkeys are added in the Trace/Detector menu for WLAN EVM MIMO measurement only.

| Key Path | Front-panel key |
|----------------------|-----------------|
| Initial S/W Revision | A.14.00 |

User Preset

Accesses a menu that gives you the following three choices:

- **User Preset** – recalls a state previously saved using the Save User Preset function.
- **User Preset All Modes** – presets all of the modes in the analyzer
- **Save User Preset**– saves the current state for the current mode

| Key Path | Front-panel key |
|-------------------------------|--|
| Backwards Compatibility Notes | <p>User Preset is actually loading a state, and in legacy analyzers, it was possible to load a state without affecting the trace data, limit lines or correction data. Similarly it was possible to do a User Preset without affecting the trace data, limit lines or correction data.</p> <p>In the X-Series, “state” always includes all of this data; so whenever state is loaded, or User Preset is executed, all of the traces, limit lines and corrections are affected. Although this differs from previous behavior, it is desirable behavior, and should not cause adverse issues for users.</p> <p>On ESA and PSA, User Preset affected the entire instrument’s state. In the X-Series, User Preset only recalls the state for the active mode. There is a User Preset file for each mode. User Preset can never cause a mode switch as it can in legacy analyzers. If you want to recall all modes to their user preset file state, you will need to do a User Preset after mode switching into each mode.</p> <p>User Preset recalls mode state which can now include data like traces; whereas on ESA and PSA, User Preset did not affect data.</p> |
| Initial S/W Revision | Prior to A.02.00 |

User Preset

User Preset sets the state of the currently active mode back to the state that was previously saved for this mode using the Save User Preset menu key or the SCPI command, `SYST:PRES:USER:SAV`. It not only recalls the Mode Preset settings, but it also recalls all of the mode persistent settings, and the Input/Output system setting that existed at the time Save User Preset was executed.

If a Save User Preset has not been done at any time, User Preset recalls the default user preset file for the currently active mode. The default user preset files are created if, at power-on, a mode detects there is no user preset file. There will never be a scenario when there is no user preset file to restore. For each mode, the default user preset state is the same state that would be saved if a Save User Preset is performed in each mode right after doing a Restore Mode Default and after a Restore Input/Output Defaults.

The User Preset function does the following:

- Aborts the currently running measurement.
- Sets the mode State to the values defined by Save User Preset.
- Makes the saved measurement for the currently running mode the active measurement.
- Brings up the saved menu for the power-on mode.
- Clears the input and output buffers.
- Sets the Status Byte to 0.

| | |
|-----------------------------|--|
| Key Path | User Preset |
| Remote Command | :SYSTem:PRESet:USER |
| Example | :SYST:PRES:USER:SAVE:SYST:PRES:USER |
| Notes | :SYST:PRES:USER:SAVE is used to save the current state as the user preset state. Clears all pending OPC bits. The Status Byte is set to 0. Pressing the User Preset front-panel key while already in the User Preset menu will cause the User Preset to get executed |
| Couplings | A user preset will cause the currently running measurement to be aborted and cause the saved measurement to be active. Recalling a User Preset file has the same issues that recalling a Save State file has. Some settings may need to be limited and therefore re-coupled, since the capabilities of the mode may have changes when the User Preset file was last saved. |
| Initial S/W Revision | Prior to A.02.00 |

User Preset All Modes

Recalls all of the User Preset files for each mode, switches to the power-on mode, and activates the saved measurement from the power-on mode User Preset file.

NOTE When the instrument is secured, all of the user preset files are converted back to their default user preset files.

The User Preset function does the following:

- Aborts the currently running measurement.
- Switches the Mode to the power-on mode.
- Restores the User Preset files for each mode.
- Makes the saved measurement for the power-on mode the active measurement.
- Brings up the saved menu for the power-on mode.
- Clears the input and output buffers.
- Sets the Status Byte to 0.

| | |
|-----------------------|--|
| Key Path | User Preset |
| Remote Command | :SYSTem:PRESet:USER:ALL |
| Example | :SYST:PRES:USER:SAVE:SYST:PRES:USER:ALL |
| Notes | Clears all pending OPC bits. The Status Byte is set to 0. :SYST:PRES:USER:SAVE is used to save the current state as the user preset state. |
| Couplings | A user preset will cause the currently running measurement to be aborted, cause a mode switch to the power-on mode, and cause the saved measurement to be active in the power-on mode. Recalling a User Preset file has the same issues that recalling a Save State file has. Some settings may need to be limited and therefore re-coupled, since the capabilities of the mode may have changes when the User Preset file was last saved. |

| | |
|----------------------|------------------|
| Initial S/W Revision | Prior to A.02.00 |
|----------------------|------------------|

Save User Preset

Saves the currently active mode and its State. You can recall this User Preset file by pressing the User Preset menu key or sending the SYST:PRES:USER remote command. This same state is also saved by the Save State function.

| | |
|-----------------------|---|
| Key Path | User Preset |
| Remote Command | :SYSTem:PRESet:USER:SAVE |
| Example | :SYST:PRES:USER:SAVE |
| Notes | :SYST:PRES:SAVE creates the same file as if the user requested a *SAV or a MMEM:STOR:STAT, except User Preset Save does not allow the user to specify the filename or the location of the file. |
| Initial S/W Revision | Prior to A.02.00 |

15 Waveform Measurement

The waveform measurement is a generic measurement for viewing the input signal waveforms in the time domain. This measurement represents how the instrument performs the zero span functionality found in traditional spectrum analyzers. For more details, see ["Waveform Measurement Description" on page 2392](#) below.

This topic contains the following sections:

["Measurement Commands for Waveform" on page 2390](#)

["Remote Command Results for the Waveform Measurement" on page 2391](#)

Measurement Commands for Waveform

The general functionality of CONFigure, INITiate, FETCh, MEASure, and READ are described at this section.

:CONFigure:WAVeform

:CONFigure:WAVeform:NDEFault

:INITiate:WAVeform

:FETCh:WAVeform[n]?

:MEASure:WAVeform[n]?

:READ:WAVeform[n]?

For more measurement related commands, see the SENSE subsystem, and the section "[Remote Measurement Functions](#)" on page 2430.

Remote Command Results for the Waveform Measurement

The following table denotes the returned results from the FETCh|MEASure|READ commands:

| n | Results Returned |
|---|--|
| 0 | Returns unprocessed I/Q trace data, as a series of trace point values, in volts. The I values are listed first in each pair, using the 0 through even-indexed values. The Q values are the odd-indexed values. |
| 1 | <p>Returns the following scalar results:</p> <ol style="list-style-type: none"> 1. Sample Time is a floating point number representing the time between samples when using the trace queries (n=0, 2, and so forth). 2. Mean Power is the mean power (in dBm). This is the power across the entire trace. If averaging is on, the power is for the latest acquisition. 3. Mean Power Averaged is the power (in dBm) for N averages, if averaging is on. This is the power across the entire trace. If averaging is on, the power is for the latest acquisition. If averaging is off, the value of the mean power averaged is the same as the value of the mean power. 4. Number of samples is the number of data points in the captured signal. This number is useful when performing a query on the signal (i.e. when n=0, 2, etc.). 5. Peak-to-mean ratio has units of dB. This is the ratio of the maximum signal level to the mean power. Valid values are only obtained with averaging turned off. If averaging is on, the peak-to-mean ratio is calculated using the highest peak value, rather than the displayed average peak value. 6. Maximum value is the maximum of the most recently acquired data (in dBm). 7. Minimum value is the minimum of the most recently acquired data (in dBm). |
| 2 | Returns trace point values of the entire captured signal envelope trace data. These data points are floating point numbers representing the power of the signal (in dBm). There are N data points, where N is the number of samples. The period between the samples is defined by the sample time. |

Waveform Measurement Description

Also available under the basic Waveform measurement is an I/Q window, which shows the I and Q signal waveforms in parameters of voltage versus time to disclose the voltages that comprise the complex modulated waveform of a digital signal.

The waveform measurement can also be used to perform general purpose power measurements to a high degree of accuracy.

| Key Path | Front-panel key |
|----------------------|------------------|
| Initial S/W Revision | Prior to A.02.00 |

AMPTD Y Scale

Accesses a menu of functions that enable you to set the vertical scale parameters.

| | |
|----------------------|------------------------|
| Key Path | Front-panel key |
| Initial S/W Revision | Prior to A.02.00 |

Ref Value (RF Envelope View)

Sets the Y Scale reference value (in dBm) when the RF Envelope View is active. By default, the measurement determines the reference value with Auto Scaling. Entering a reference value manually turns Auto Scaling off.

| | |
|--------------------------|---|
| Key Path | AMPTD Y Scale |
| Mode | BASIC, PNOISE, WCDMA, C2K, GSM, WIMAXOFDMA, TDSCDMA, 1XEVD0, DVB, DTMB, ISDBT, CMMB, LTE, LTETDD, DCATV, WLAN,LTEATDD, LTEAFDD |
| Remote Command | :DISPlay:WAVeform:VIEW[1]:WINDow[1]:TRACe:Y[:SCALE]:RLEVel <ampl> :DISPlay:WAVeform:VIEW[1]:WINDow[1]:TRACe:Y[:SCALE]:RLEVel? |
| Example | DISP:WAV:VIEW:WIND:TRAC:Y:RLEV -50 dBm DISP:WAV:VIEW:WIND:TRAC:Y:RLEV? |
| Notes | You must be in the mode that includes Waveform measurement to use this command. Use INSTRument:SElect to set the mode. |
| Couplings | When Auto Scaling is On, this value is automatically determined by the measurement result. When you set a value manually, Auto Scaling automatically changes to Off. |
| Preset | 10.00 dBm |
| State Saved | Saved in instrument state. |
| Range | -250.00 dBm to 250.00 dBm |
| Min | -250.00 dBm |
| Max | 250.00 dBm |
| Initial S/W Revision | Prior to A.02.00 |
| Modified at S/W Revision | A.03.00 |

Range

Represents the amplitude of the largest sinusoidal signal that could be present within the IF without being clipped by the ADC. For signals with high peak-to-average ratios, the range may need to exceed the rms signal power by a fair amount to avoid clipping.

| | |
|-----------------------|----------------------------------|
| Key Path | Range |
| Mode | BASIC |
| Remote Command | [:SENSe]:POWer[:RF]:RANGe <real> |

| | |
|-----------------------------|---|
| | <code>[:SENSe] :POWer [:RF] :RANGe?</code> |
| Example | <code>:POW:RANG 10.0</code> <code>:POW:RANG?</code> |
| Notes | The MIN and MAX values are affected by the External Gain parameters, and by the Center Frequency. (The hardware compensates for frequency response and alters the Range setting.) |
| Preset | 0 |
| State Saved | Saved in instrument state. |
| Min | -100 |
| Max | 100 |
| Initial S/W Revision | A.12.50 |

Adjust Range For Min Clip

Sets the combination of attenuation and gain based on the current measured signal level so that clipping will be at a minimum.

This is an "immediate action" function, that is, it executes once, when the key is pressed.

This key is grayed out in measurements that do not support this functionality.

| | |
|---------------------------------|--|
| Key Path | AMPTD Y Scale, Attenuation |
| Remote Command | <code>[:SENSe] :POWer [:RF] :RANGe:OPTimize IMMEDIATE</code> |
| Initial S/W Revision | Prior to A.02.00 |
| Modified at S/W Revision | A.03.00 |

Pre-Adjust for Min Clip

If this function is on, it does the adjustment described under Adjust Range For Min Clip each time a measurement restarts. Therefore, in Continuous measurement mode, it only executes before the first measurement.

| | |
|-----------------------|---|
| Key Path | AMPTD Y Scale, Attenuation |
| Remote Command | <code>[:SENSe] :POWer [:RF] :RANGe:OPTimize:ATTenuation OFF ON ELEctrical COMBined</code> <code>[:SENSe] :POWer [:RF] :RANGe:OPTimize:ATTenuation?</code> |
| Notes | This parameter is shared with old XA platform which uses AutoAtten. To keep the backward compatibility, ELEctrical and COMBined still can be used. Then, upon receiving ELEctrical and COMBined, these enums will be interpreted as aliases of ON. Then, when queried, ON will be returned. |
| Preset | OFF for Swept SA measurement; ON for all other measurements that support Pre-Adjust for Min Clip |
| State Saved | Saved in instrument state |

| | |
|--------------------------|------------------|
| Initial S/W Revision | Prior to A.02.00 |
| Modified at S/W Revision | A.03.00 |

Peak to Average

The Peak to Average Ratio is used with the Range setting to optimize the level control in the instrument. The value is the ratio, in dB, of the peak power to the average power of the signal to be measured. A ratio of 0 should be used for sinusoidal signals; for 802.11g OFDM signals use 9 dB.

All Applications (Modes) will show the current value of Peak to Average ratio on the softkey. However, some applications will not permit changing the value. In these situations the softkey will be grayed-out.

| | |
|-----------------------------|--|
| Key Path | AMPTD Y Scale, Range |
| Remote Command | <code>[:SENSe] :POWeR [:RF] :RANGe :PARatio <real></code> <code>[:SENSe] :POWeR [:RF] :RANGe :PARatio?</code> |
| Example | POW:RANG:PAR 12 dB |
| Notes | In some Applications (Modes) this parameter will be read-only; meaning the value will appear on the softkey and query via SCPI, but not changeable. In such applications the softkey will be grayed-out. Attempting to change the value via SCPI will be ignored and no error message will be generated. |
| Preset | 10 dB |
| State Saved | Saved in instrument state |
| Min | 0 dB |
| Max | 20 dB |
| Initial S/W Revision | A.13.00 |

Mixer Level Offset

Mixer level offset is an advanced setting to adjust target Range at the input mixer which in turn affects the signal level in the instrument's IF. This setting can be used when additional optimization is needed after setting Peak to Average ratio. Positive values of offset optimize noise performance over distortion, negative values optimize distortion performance over noise.

| | |
|-----------------------------|--|
| Key Path | AMPTD Y Scale, Range |
| Remote Command | <code>[:SENSe] :POWeR [:RF] :RANGe :MIXer :OFFSet <real></code> <code>[:SENSe] :POWeR [:RF] :RANGe :MIXer :OFFSet?</code> |
| Example | POW:RANG:MIX:OFFS -5 dB |
| Preset | 0 dB |
| State Saved | Saved in instrument state |
| Min | -35 dB |
| Max | 30 dB |
| Initial S/W Revision | A.13.00 |

Scale/Div (RF Envelope View)

Sets the scale per division for the RF Envelope result waveform (time domain) measurements in the graph window.

| | |
|---------------------------------|--|
| Key Path | AMPTD Y Scale |
| Mode | BASIC, PNOISE, WCDMA, C2K, GSM, WIMAXOFDMA, TDSCDMA, 1XEVD0, DVB, DTMB, ISDBT, CMMB, LTE, LTETDD, DCATV, WLAN,LTEATDD, LTEAFDD |
| Remote Command | :DISPlay:WAVeform:VIEW[1]:WINDow[1]:TRACe:Y[:SCALe]:PDIVision <rel_ ampl> :DISPlay:WAVeform:VIEW[1]:WINDow[1]:TRACe:Y[:SCALe]:PDIVision? |
| Example | DISP:WAV:VIEW:WIND:TRAC:Y:PDIV 5 DISP:WAV:VIEW:WIND:TRAC:Y:PDIV? |
| Notes | You must be in a mode that includes the Waveform measurement to use this command. Use INSTRument:SElect to set the mode. |
| Couplings | When Auto Scaling is On, this value is automatically determined by the measurement result. When you set a value manually, Auto Scaling automatically changes to Off. |
| Preset | 10.00 dB |
| State Saved | Saved in instrument state. |
| Range | 0.10 dB to 20.00 dB |
| Min | 0.10 dB |
| Max | 20.00 dB |
| Initial S/W Revision | Prior to A.02.00 |
| Modified at S/W Revision | A.03.00 |

Ref Position (RF Envelope View)

Positions the reference level at the top, center or bottom of the Y Scale display. Changing the reference position does not change the reference level value.

| | |
|-----------------------|---|
| Key Path | AMPTD Y Scale |
| Mode | BASIC, PNOISE, WCDMA, C2K, GSM, WIMAXOFDMA, TDSCDMA, 1XEVD0, DVB, DTMB, ISDBT, CMMB, LTE, LTETDD, DCATV, WLAN,LTEATDD, LTEAFDD |
| Remote Command | :DISPlay:WAVeform:VIEW[1]:WINDow[1]:TRACe:Y[:SCALe]:RPOSition TOP CENTer BOTTom :DISPlay:WAVeform:VIEW[1]:WINDow[1]:TRACe:Y[:SCALe]:RPOSition? |
| Example | DISP:WAV:VIEW:WIND:TRAC:Y:RPOS CENT DISP:WAV:VIEW:WIND:TRAC:Y:RPOS? |
| Notes | You must be in a mode that includes the Waveform measurement to use this command. Use INSTRument:SElect to set the mode. |

| | |
|--------------------------|----------------------------|
| Preset | TOP |
| State Saved | Saved in instrument state. |
| Range | Top Ctr Bot |
| Initial S/W Revision | Prior to A.02.00 |
| Modified at S/W Revision | A.03.00 |

Auto Scaling

Toggles the Auto Scaling function between On and Off. When the **Restart** front-panel key is pressed, this function automatically determines the scale per division and reference values based on the measurement results.

| Key Path | AMPTD Y Scale |
|--------------------------|---|
| Mode | BASIC, PNOISE, WCDMA, C2K, GSM, WIMAXOFDMA, TDSCDMA, 1XEVD0, DVB, DTMB, ISDBT, CMMB, LTE, LTETDD, DCATV, WLAN, LTEATDD, LTEAFDD |
| Remote Command | :DISPlay:WAVeform:VIEW[1] 2:WINDow[1]:TRACe:Y[:SCALe]:COUPle 0 1 OFF ON :DISPlay:WAVeform:VIEW[1] 2:WINDow[1]:TRACe:Y[:SCALe]:COUPle? |
| Example | DISP:WAV:VIEW:WIND:TRAC:Y:COUP OFF DISP:WAV:VIEW:WIND:TRAC:Y:COUP? |
| Notes | You must be in a mode that includes the Waveform measurement to use this command. Use INSTRument:SElect to set the mode. |
| Couplings | When Auto Scaling is On, upon pressing the Restart front-panel key, this function automatically switches the scale per division and reference values into the defaults. When you set a value to either Scale/Div or Ref Value manually, Auto Scaling automatically changes to Off. |
| Preset | OFF |
| State Saved | Saved in instrument state. |
| Range | On Off |
| Initial S/W Revision | Prior to A.02.00 |
| Modified at S/W Revision | A.03.00 |

Ref Value

Sets the absolute power reference value. However, since Auto Scaling is defaulted to On, this value is automatically determined by the measurement result. When you set a value manually, Auto Scaling automatically changes to Off.

This functionality depends on the selected view:

- ["Ref Value \(RF Envelope View\)" on page 2398](#)
- ["Ref Value \(I/Q Waveform View\)" on page 2398](#)

Ref Value (RF Envelope View)

Sets the Y Scale reference value (in dBm) when the RF Envelope View is active. By default, the measurement determines the reference value with Auto Scaling. Entering a reference value manually turns Auto Scaling off.

| | |
|---------------------------------|---|
| Key Path | AMPTD Y Scale |
| Mode | BASIC, PNOISE, WCDMA, C2K, GSM, WIMAXOFDMA, TDSCDMA, 1XEVD0, DVB, DTMB, ISDBT, CMMB, LTE, LTETDD, DCATV, WLAN,LTEATDD, LTEAFDD |
| Remote Command | :DISPlay:WAVeform:VIEW[1]:WINDow[1]:TRACe:Y[:SCALe]:RLEVel <ampl> :DISPlay:WAVeform:VIEW[1]:WINDow[1]:TRACe:Y[:SCALe]:RLEVel? |
| Example | DISP:WAV:VIEW:WIND:TRAC:Y:RLEV -50 dBm DISP:WAV:VIEW:WIND:TRAC:Y:RLEV? |
| Notes | You must be in the mode that includes Waveform measurement to use this command. Use INSTRument:SElect to set the mode. |
| Couplings | When Auto Scaling is On, this value is automatically determined by the measurement result. When you set a value manually, Auto Scaling automatically changes to Off. |
| Preset | 10.00 dBm |
| State Saved | Saved in instrument state. |
| Range | -250.00 dBm to 250.00 dBm |
| Min | -250.00 dBm |
| Max | 250.00 dBm |
| Initial S/W Revision | Prior to A.02.00 |
| Modified at S/W Revision | A.03.00 |

Ref Value (I/Q Waveform View)

Sets the Y Scale reference value (in volts) when the I/Q Waveform View is active. By default, the measurement determines the reference value with Auto Scaling. Entering a reference value manually turns Auto Scaling off.

| | |
|-----------------------|---|
| Key Path | AMPTD Y Scale |
| Mode | BASIC, PNOISE, WCDMA, C2K, GSM, WIMAXOFDMA, TDSCDMA, 1XEVD0, DVB, DTMB, ISDB-T, CMMB, LTE, LTETDD, DCATV, WLAN,LTEATDD, LTEAFDD |
| Remote Command | :DISPlay:WAVeform:VIEW2:WINDow[1]:TRACe:Y[:SCALe]:RLEVel <voltage> :DISPlay:WAVeform:VIEW2:WINDow[1]:TRACe:Y[:SCALe]:RLEVel? |
| Example | DISP:WAV:VIEW2:WIND:TRAC:Y:RLEV 25 V DISP:WAV:VIEW2:WIND:TRAC:Y:RLEV? |
| Notes | You must be in a mode that includes the Waveform measurement to use this command. Use INSTRument:SElect to set the mode. |
| Couplings | When Auto Scaling is On, this value is automatically determined by the measurement result. When you set a value manually, Auto Scaling automatically changes to Off. |

| | |
|--------------------------|----------------------------|
| Preset | 0 V |
| State Saved | Saved in instrument state. |
| Min | -250 V |
| Max | 250 V |
| Initial S/W Revision | Prior to A.02.00 |
| Modified at S/W Revision | A.03.00 |

Scale/Div

Sets the units per division of vertical scale in the logarithmic display. However, since Auto Scaling is defaulted to On, this value is automatically determined by the measurement result. When you set a value manually, Auto Scaling automatically changes to Off.

This functionality depends on the selected view:

- ["Scale/Div \(RF Envelope View\)" on page 2399](#)
- ["Scale/Div \(I/Q Waveform View\)" on page 2400](#)

Scale/Div (RF Envelope View)

Sets the scale per division for the RF Envelope result waveform (time domain) measurements in the graph window.

| | |
|--------------------------|---|
| Key Path | AMPTD Y Scale |
| Mode | BASIC, PNOISE, WCDMA, C2K, GSM, WIMAXOFDMA, TDSCDMA, 1XEVD0, DVB, DTMB, ISDBT, CMMB, LTE, LTETDD, DCATV, WLAN,LTEATDD, LTEAFDD |
| Remote Command | :DISPlay:WAVeform:VIEW[1]:WINDow[1]:TRACe:Y[:SCALe]:PDIVision <rel_ ampl> :DISPlay:WAVeform:VIEW[1]:WINDow[1]:TRACe:Y[:SCALe]:PDIVision? |
| Example | DISP:WAV:VIEW:WIND:TRAC:Y:PDIV 5 DISP:WAV:VIEW:WIND:TRAC:Y:PDIV? |
| Notes | You must be in a mode that includes the Waveform measurement to use this command. Use INSTRument:SElect to set the mode. |
| Couplings | When Auto Scaling is On, this value is automatically determined by the measurement result. When you set a value manually, Auto Scaling automatically changes to Off. |
| Preset | 10.00 dB |
| State Saved | Saved in instrument state. |
| Range | 0.10 dB to 20.00 dB |
| Min | 0.10 dB |
| Max | 20.00 dB |
| Initial S/W Revision | Prior to A.02.00 |
| Modified at S/W Revision | A.03.00 |

Scale/Div (I/Q Waveform View)

Sets the scale per division for the I/Q signal waveform graph.

| | |
|---------------------------------|---|
| Key Path | AMPTD Y Scale |
| Mode | BASIC, PNOISE, WCDMA, C2K, GSM, WIMAXOFDMA, TDSCDMA, 1XEVD0, DVB, DTMB, ISDBT, CMMB, LTE, LTETDD, DCATV, WLAN,LTEATDD, LTEAFDD |
| Remote Command | :DISPlay:WAVeform:VIEW2:WINDow[1]:TRACe:Y[:SCALe]:PDIVision <voltage> :DISPlay:WAVeform:VIEW2:WINDow[1]:TRACe:Y[:SCALe]:PDIVision? |
| Example | DISP:WAV:VIEW2:WIND:TRAC:Y:PDIV 25mV DISP:WAV:VIEW2:WIND:TRAC:Y:PDIV? |
| Notes | You must be in a mode that includes the Waveform measurement to use this command. Use INSTRument:SElect to set the mode. |
| Couplings | When Auto Scaling is On, this value is automatically determined by the measurement result. When you set a value manually, Auto Scaling automatically changes to Off. |
| Preset | 100.0 mV |
| State Saved | Saved in instrument state. |
| Min | 1.0 nV |
| Max | 20 V |
| Initial S/W Revision | Prior to A.02.00 |
| Modified at S/W Revision | A.03.00 |

Ref Position

Positions the reference level at the top, center or bottom of the Y Scale display. Changing the reference position does not change the reference level value.

This functionality depends on the selected view:

- ["Ref Position \(RF Envelope View\)" on page 2400](#)
- ["Ref Position \(I/Q Waveform View\)" on page 2401](#)

Ref Position (RF Envelope View)

Positions the reference level at the top, center or bottom of the Y Scale display. Changing the reference position does not change the reference level value.

| | |
|-----------------------|---|
| Key Path | AMPTD Y Scale |
| Mode | BASIC, PNOISE, WCDMA, C2K, GSM, WIMAXOFDMA, TDSCDMA, 1XEVD0, DVB, DTMB, ISDBT, CMMB, LTE, LTETDD, DCATV, WLAN,LTEATDD, LTEAFDD |
| Remote Command | :DISPlay:WAVeform:VIEW[1]:WINDow[1]:TRACe:Y[:SCALe]:RPOSition TOP CENTer BOTTom :DISPlay:WAVeform:VIEW[1]:WINDow[1]:TRACe:Y[:SCALe]:RPOSition? |

| Initial S/W Revision | Prior to A.02.00 |
| Modified at S/W Revision | A.03.00 |

Auto Couple

The Auto Couple feature provides a quick and convenient way to automatically couple multiple instrument settings. This helps ensure accurate measurements and optimum dynamic range. When the Auto Couple feature is activated, either from the front panel or remotely, all parameters of the current measurement that have an Auto/Manual mode are set to Auto mode and all measurement settings dependent on (or coupled to) the Auto/Man parameters are automatically adjusted for optimal performance.

However, the Auto Couple key actions are confined to the current measurement only. It does not affect other measurements in the mode, and it does not affect markers, marker functions, or trace or display attributes.

See ["More Information" on page 2402](#)

| | |
|-----------------------------|--|
| Key Path | Front-panel key |
| Remote Command | :COUPLe ALL NONE |
| Example | :COUP ALL |
| Notes | :COUPLe ALL puts all Auto/Man parameters in Auto mode (equivalent to pressing the Auto Couple key). :COUPLE NONE puts all Auto/Man parameters in manual mode. It decouples all the coupled instrument parameters and is not recommended for making measurements. |
| Initial S/W Revision | Prior to A.02.00 |

More Information

There are two types of functions that have Auto/Manual modes.

Auto/Man Active Function keys

An Auto/Man toggle key controls the binary state associated with an instrument parameter by toggling between **Auto** (where the parameter is automatically coupled to the other parameters it is dependent upon) and **Man** (where the parameter is controlled independent of the other parameters), as well as making the parameter the active function. The current mode is indicated on the softkey with either **Auto** or **Man** underlined as illustrated below.

vsd07

Auto/Man 1-of-N keys

An Auto/Man 1-of-N key allows you to manually pick from a list of parameter values, or place the function in Auto, in which case the value is automatically selected (and indicated) as shown below. If in Auto, Auto is underlined on the calling key. If in manual operation, manual is indicated on the calling key. But the calling key does not actually toggle the function, it simply opens the menu.

vsd08

BW

Accesses a menu that enables you to control the information bandwidth functions of the instrument. You can also select the filter type for the measurement.

| | |
|----------------------|------------------------|
| Key Path | Front-panel key |
| Initial S/W Revision | Prior to A.02.00 |

Digital IF BW

Enables you to set the Digital IF (formerly Info BW) bandwidth of the instrument.

| | |
|-----------------------------|--|
| Key Path | BW |
| Mode | BASIC, PNOISE, WCDMA, C2K, GSM, WIMAXOFDMA, TD-SCDMA, 1xEVDO, DVB, DTMB, ISDBT, CMMB, LTE, LTETDD, DCATV, WLAN, MSR,LTEATDD, LTEAFDD |
| Remote Command | [:SENSe] :WAVeform:DIF:BA NDwidth <freq> [:SENSe] :WAVeform:DIF:BA NDwidth? |
| Example | WAV:DIF:BA ND 1 kHz WAV:DIF:BA ND? |
| Remote Command Notes | You must be in a mode that includes the Waveform measurements to use this command. Use INSTRument:SElect to set the mode. |
| Dependencies | The maximum value is the maximum Digital IF BW available in the instrument. With Option B85 the maximum value is 85 MHz, with Option B1Y the maximum value is 160 MHz. |
| Preset | All except the following list: 100 kHz GSM/EDGE: 510 kHz TDSCDMA: 1.3 MHz 1xEVDO: 1.3 MHz DVB-T/H: 8.0 MHz DTMB (CTTB): 8.0 MHz ISDB-T: 6.0 MHz CMMB: 8.0 MHz Digital Cable TV: 8 MHz LTEAFDD, LTEATDD: 6 MHz LTETDD: 6 MHz LTE: 6 MHz WLAN: Hardware Dependent No option = 10 MHz Option B25 = 25 MHz Option B40: if Radio Std is 802.11a/b/g/n(20MHz) = 25 MHz |

| | |
|-------------------------------------|---|
| | if Radio Std is 802.11n(40MHz) = 40 MHz if Radio Std is 802.11ac(20MHz) = 25 MHz if Radio Std is 802.11ac(40MHz) = 40 MHz Option B1X: if Radio Std is 802.11ac(80MHz) = 80 MHz Option B1Y: if Radio Std is 802.11ac(160MHz) = 160 MHz |
| State Saved | Saved in instrument state. |
| Min | 10 Hz |
| Max | Hardware Dependent: RF Input: No Option = 10 MHz Option B25 = 25 MHz Option B40 = 40 MHz Option B85 = 85.0 MHz Option B1A = 125.0 MHz Option B1X = 140 MHz Option B1Y = 160 MHz |
| Backwards Compatibility SCPI | <code>[:SENSe] :WAVeform :BANDwidth [:RESolution]</code> <code>[:SENSe] :WAVeform :BWIDth [:RESolution]</code> |
| Initial S/W Revision | Prior to A.02.00 |
| Modified at S/W Revision | A.03.00, A.13.00 |

Filter Type

Selects the type of bandwidth filter that is used.

Besides the Gaussian filter shape, a variety of other filter types are available with variable alpha settings for maximum control over the filter shape..

| | |
|-----------------------|---|
| Key Path | BW |
| Mode | BASIC, PNOISE, WCDMA, C2K, GSM, WIMAXOFDMA, TDSCDMA, 1XEVD0, DVB, DTMB, ISDBT, CMMB, LTE, LTETDD, DCATV, WLAN, MSR,,LTEATDD, LTEAFDD |
| Remote Command | <code>[:SENSe] :WAVeform :DIF :FILTer :TYPE GAUSSian FLATtop</code> <code>[:SENSe] :WAVeform :DIF :FILTer :TYPE?</code> (With DIF40 and/or WBDIF) <code>[:SENSe] :WAVeform :DIF :FILTer :TYPE GAUSSian FLATtop SNYQuist RSNYquist RCOSine RRCosine</code> <code>[:SENSe] :WAVeform :DIF :FILTer :TYPE?</code> |
| Example | <code>WAV:DIF:FILT:TYPE GAUS</code> <code>WAV:DIF:FILT:TYPE?</code> |

| | |
|-------------------------------------|---|
| Remote Command Notes | You must be in a mode that includes the Waveform measurements to use this command. Use INSTRUMENT:SELEct to set the mode. |
| Dependencies | Gaussian and Flattop are available in all DIF configurations. For the other filter types, the filters are only available when Option DP2, B40, or wider IF Bandwidth option is installed. |
| Preset | BASIC with DP2, B40, or wider IF Bandwidth option: FLATtop All other apps: GAUSSian |
| State Saved | Saved in instrument state. |
| Range | Gaussian FlatTop When Option DP2, B40, or wider IF Bandwidth option is installed, the range is as follows. Gaussian FlatTop Short nyquist Root Short Nquist Raised Cosine Root RaisedCosine |
| Backwards Compatibility SCPI | [:SENSe] :WAVeform :BANDwidth :SHAPE [:SENSe] :WAVeform :BWIDth :SHAPE [:SENSe] :WAVeform :BANDwidth BWIDth [:RESolution] :TYPE |
| Initial S/W Revision | Prior to A.02.00 |
| Modified at S/W Revision | A.03.00, A.13.00 |

Filter BW

This feature is only available when Option DP2, B40, or wider IF Bandwidth option is installed.

| | |
|-----------------------|--|
| Key Path | BW |
| Mode | BASIC |
| Remote Command | [:SENSe] :WAVeform :DIF :FILTer :BANDwidth <freq> [:SENSe] :WAVeform :DIF :FILTer :BANDwidth? [:SENSe] :WAVeform :DIF :FILTer :BANDwidth :AUTO ON OFF 1 0 [:SENSe] :WAVeform :DIF :FILTer :BANDwidth :AUTO? |
| Example | WAV:DIF:FILT:BAND 1MHz WAV:DIF:FILT:BAND? WAV:DIF:FILT:BAND:AUTO 0 WAV:DIF:FILT:BAND:AUTO? |
| Notes | You must be in the IQ Analyzer (Basic) mode to use this command. Use INSTRUMENT:SELEct to set the mode. |
| Dependencies | This feature is only available when Option DP2, B40, or wider IF Bandwidth option is installed. |
| Couplings | Sets the same value as the current Digital IF BW value upon a preset or when Channel Filter Bandwidth Auto is ON. |
| Preset | Same value as Digital IF BW ON |
| State Saved | Saved in instrument state. |

| | |
|----------------------|---|
| Min | 10 Hz |
| Max | Clipped to the current Digital IF BW value. |
| Initial S/W Revision | A.04.00, A.13.00 |

Filter Alpha

Sets the filter alpha for the DIF filter. This feature is only available when Option DP2, B40, or wider IF Bandwidth option is installed.

| | |
|-------------------------------------|---|
| Key Path | BW |
| Mode | BASIC |
| Remote Command | [:SENSe] :WAVeform:DIF:FILTer:ALPHa <real> [:SENSe] :WAVeform:DIF:FILTer:ALPHa? |
| Example | WAV:DIF:FILT:ALPH 0.5 WAV:DIF:FILT:ALPH? |
| Notes | You must be in the IQ Analyzer (Basic) mode to use this command. Use INSTRument:SElect to set the mode. |
| Dependencies | This feature is only available when Option DP2, B40, or wider IF Bandwidth option is installed. |
| Preset | 0.2 |
| State Saved | Saved in instrument state. |
| Min | 0.01 |
| Max | 1.00 |
| Backwards Compatibility SCPI | [:SENSe] :WAVeform:WBIF:FILTer:ALPHa |
| Modified at S/W Revision | A.13.00 |

Cont (Continuous Measurement/Sweep)

Sets the analyzer for Continuous measurement operation. The single/continuous state is Meas Global so the setting will affect all measurements. If you are Paused, pressing **Cont** does a Resume.

| Key Path | Front-panel key |
|--------------------------------------|--|
| Remote Command | :INITiate:CONTinuous OFF ON 0 1 :INITiate:CONTinuous? |
| Example | :INIT:CONT 0 puts analyzer in Single measurement operation. :INIT:CONT 1 puts analyzer in Continuous measurement operation |
| Preset | ON (Note that SYST:PRESet sets INIT:CONT to ON but *RST sets INIT:CONT to OFF) |
| State Saved | Saved in instrument state |
| Backwards Compatibility Notes | For Spectrum Analysis mode in ESA and PSA, there is no Cont hardkey, instead there is a Sweep Single/Cont key. In these analyzers, switching the Sweep Single/Cont key from Single to Cont restarts averages (displayed average count reset to 1), but does not restart Max Hold and Min Hold . The X-Series has Single and Cont keys in place of the SweepSingleCont key. In the X-Series, if in single measurement, the Cont key (and INIT:CONT ON) switches to continuous measurement, but never restarts a measurement and never resets a sweep. |
| Initial S/W Revision | Prior to A.02.00 |

In Swept SA Measurement (Spectrum Analysis Mode):

The analyzer takes repetitive sweeps, averages, measurements, etc., when in Continuous mode. When the average count reaches the Average/Hold Number the count stops incrementing, but the analyzer keeps sweeping. See the Trace/Detector section for the averaging formula used both before and after the Average/Hold Number is reached. The trigger condition must be met prior to each sweep. The type of trace processing for multiple sweeps, is set under the Trace/Detector key, with choices of **Trace Average**, **Max Hold**, or **Min Hold**.

In Other Measurements/Modes:

With **Avg/Hold Num** (in the **Meas Setup** menu) set to **Off** or set to **On** with a value of 1, a sweep is taken after the trigger condition is met; and the analyzer continues to take new sweeps after the current sweep has completed and the trigger condition is again met. However, with **Avg/Hold Num** set to On with a value >1, multiple sweeps (data acquisitions) are taken for the measurement. The trigger condition must be met prior to each sweep. The sweep is not stopped when the average count k equals the number N set for Avg/Hold Num is reached, but the number k stops incrementing. A measurement average usually applies to all traces, marker results, and numeric results. But sometimes it only applies to the numeric results.

If the analyzer is in Single measurement, pressing the **Cont** key does not change k and does not cause the sweep to be reset; the only action is to put the analyzer into Continuous measurement operation.

If it is already in continuous sweep:

the INIT:CONT 1 command has no effect

the INIT:CONT 0 command will place the analyzer in Single Sweep but will have no effect on the current sequence until $k = N$, at which point the current sequence will stop and the instrument will go to the idle state.

15 Waveform Measurement
File

File

See ["File" on page 272](#)

FREQ Channel

Accesses a menu of keys that allow you to control the Frequency and Channel parameters of the instrument.

Some features in the Frequency menu are the same for all measurements – they do not change as you change measurements. Settings like these are called “Meas Global” and are unaffected by Meas Preset. For example, the Center Freq setting is the same for all measurements – it does not change as you change measurements.

| Key Path | Front-panel key |
|----------------------|------------------|
| Initial S/W Revision | Prior to A.02.00 |

Center Freq

Sets the frequency that corresponds to the horizontal center of the graticule (when frequency Scale Type is set to linear). While adjusting the Center Frequency the Span is held constant, which means that both Start Frequency and Stop Frequency will change.

Pressing Center Freq also sets the frequency entry mode to Center/Span. In Center/Span mode, the center frequency and span values are displayed below the graticule, and the default active function in the Frequency menu is **Center Freq**.

The center frequency setting is the same for all measurements within a mode, that is, it is Meas Global. Some modes are also able to share a Mode Global center frequency value. If this is the case, the Mode will have a **Global Settings** key in its **Mode Setup** menu.

The **Center Freq** function sets (and queries) the Center Frequency for the currently selected input. If your analyzer has multiple inputs, and you select another input, the Center Freq changes to the value for that input. SCPI commands are available to directly set the Center Freq for a specific input.

Center Freq is remembered as you go from input to input. Thus you can set a Center Freq of 10 GHz with the RF Input selected, change to BBIQ and set a Center Freq of 20 MHz, then switch to External Mixing and set a Center Freq of 60 GHz, and when you go back to the RF Input the Center Freq will go back to 10 GHz; back to BBIQ and it is 20 MHz; back to External Mixing and it is 60 GHz.

See ["RF Center Freq" on page 2414](#)

See [Ext Mix Center Freq](#)

See ["I/Q Center Freq" on page 2416](#)

See ["Center Frequency Presets" on page 2412](#)

| Key Path | FREQ Channel |
|----------------|--|
| Scope | Meas Global |
| Remote Command | [:SENSe] :FREQuency:CENTer <freq> [:SENSe] :FREQuency:CENTer? |
| Example | FREQ:CENT 50 MHz |

| | |
|----------------------|--|
| | FREQ:CENT UP changes the center frequency to 150 MHz if you use FREQ:CENT:STEP 100 MHz to set the center frequency step size to 100 MHz FREQ:CENT? |
| Notes | This command sets either the RF or I/Q Center Frequency depending on the selected input. For RF input it is equivalent to FREQ:RF:CENT For I/Q input it is equivalent to FREQ:IQ:CENT Preset and Max values are dependent on Hardware Options (5xx) If no terminator (e.g. MHz) is sent the terminator Hz is used. If a terminator with unit other than Frequency is used, an invalid suffix error message is generated. |
| Dependencies | The Center Frequency can be limited by Start or Stop Freq limits, if the Span is so large that Start or Stop reach their limit. |
| Couplings | When operating in "swept span", any value of the Center Frequency or Span that is within the frequency range of the analyzer is allowed when the value is being set through the front panel numeric key pad or the SCPI command. The other parameter is forced to a different value if needed, to keep the Start and the Stop Frequencies within the analyzer's frequency range |
| Preset | Depends on instrument maximum frequency, mode, measurement, and selected input. See "Center Frequency Presets" on page 2412 and "RF Center Freq" on page 2414 and Ext Mix Center Freq and "I/Q Center Freq" on page 2416 . |
| State Saved | Saved in instrument state |
| Min | Depends on instrument maximum frequency, mode, measurement, and selected input.. See "Center Frequency Presets" on page 2412 and "RF Center Freq" on page 2414 and "I/Q Center Freq" on page 2416 . |
| Max | Depends on instrument maximum frequency, mode, measurement, and selected input.. See "Center Frequency Presets" on page 2412 and "RF Center Freq" on page 2414 and "I/Q Center Freq" on page 2416 . |
| Default Unit | Hz |
| Status Bits/OPC | Non-overlapped |
| Dependencies | |
| Initial S/W Revision | Prior to A.02.00 |

Center Frequency Presets

The following table provides the Center Frequency Presets for the Spectrum Analyzer mode, and the Max Freq, for the various frequency options:

| Freq Option | CF after Mode Preset | Stop Freq after Mode Preset | Max Freq (can't tune above) |
|-------------|-------------------------|--------------------------------|--------------------------------------|
| | | | |

| | | | |
|---------------------------------------|------------|----------|--------------|
| 503 (all but N9000A) | 1.805 GHz | 3.6 GHz | 3.7 GHz |
| 503 (N9000A) | 1.505 GHz | 3.0 GHz | 3.08 GHz |
| 507 (all but N9000A) | 3.505 GHz | 7.0 GHz | 7.1 GHz |
| 507 (N9000A) | 3.755 GHz | 7.5 GHz | 7.58 GHz |
| 508 (all but N9038A) | 1.805 GHz | 3.6 GHz | 8.5 GHz |
| 508 (N9038A) | 4.205 GHz | 8.4 GHz | 8.5 GHz |
| 513 | 6.805 GHz | 13.6 GHz | 13.8 GHz |
| 526 (all but N9000A and N9038A) | 13.255 GHz | 26.5 GHz | 27.0 GHz |
| 526 (N9000A) | 13.255 GHz | 26.5 GHz | 26.55 GHz |
| 526 (N9038A) | 1.805 GHz | 3.6 GHz | 27.0 GHz |
| 532 | 16.005 GHz | 32.0 GHz | 32.5 GHz |
| 543 | 21.505 GHz | 43.0 GHz | TBD |
| 544 | 22.005 GHz | 44.0 GHz | 44.5 GHz |
| 550 | 25.005 GHz | 50.0 GHz | 51 GHz |

Input 2:

| Model | CF after Mode Preset | Stop Freq after Mode Preset | Max Freq (can't tune above) |
|----------------|----------------------------|-----------------------------------|-----------------------------------|
| N9000A opt C75 | 0.7505GHz | 1.5 GHz | 1.58 GHz |
| N9038A | 505 MHz | 1 GHz | 1.000025 GHz |

Tracking Generator Frequency Limits (N9000A only):

| Tracking Generator Option | Min Freq (clips to this freq when turn TG on and can't tune below | If above this Freq, Stop Freq clipped to this Freq when TG turned on | Max Freq (can't tune above) while TG on |
|---------------------------------|--|---|--|
| | | | |

| | while TG on) | | |
|-----|--------------|---------|----------|
| T03 | 9 kHz | 3.0 GHz | 3.08 GHz |
| T06 | 9 kHz | 6.0 GHz | 6.05 GHz |

The following table shows the Center Frequency Presets for modes other than Spectrum Analyzer:

| Mode | CF Preset for RF |
|-------------|------------------|
| WCDMA | 1 GHz |
| WIMAXOFDMA, | 1 GHz |
| BASIC | 1 GHz |
| ADEMOD | 1 GHz |
| VSA | 1 GHz |
| TDSCDMA | 1 GHz |
| PNOISE | 1 GHz |
| LTE | 1 GHz |
| LTETDD | 1 GHz |
| MSR | 1 GHz |
| GSM | 935.2 MHz |
| NFIGURE | 1.505 GHz |

RF Center Freq

SCPI command for specifying the RF Center Frequency. This command will set the Center Frequency to be used when the RF input is selected, even if the RF input is not the input that is selected at the time the command is sent. Note that the **Center Freq** function in the **Frequency** menu on the front panel always applies to the currently selected input.

| | |
|-----------------------|--|
| Scope | Meas Global |
| Remote Command | [:SENSe] :FREQuency:RF:CENTer <freq> [:SENSe] :FREQuency:RF:CENTer? |
| Example | FREQ:RF:CENT 30 MHz |
| Notes | This command is the same in all modes, but the parameter is Measurement Global. So the value is independent in each mode and common across all the measurements in the mode. |
| Dependencies | If the electronic/soft attenuator is enabled, any attempt to set Center Frequency such that the Stop Frequency would be >3.6 GHz fails and results in an advisory message. If the equivalent SCPI command is sent, this same message is generated as part of a “-221, Settings conflict” warning. If Source Mode is set to Tracking, and the Max or Min Center Freq is therefore limited by the limits of the source, a warning message is generated, “Data out of range;clipped to source max/min” if these limits are exceeded. Note that for an external source, these limits can be affected by the settings of Source Numerator, Source Denominator and Power Sweep. |

| | |
|--------------------------|--|
| Preset | See table above |
| State Saved | Saved in instrument state. |
| Min | -79.999995 MHz, unless Source Mode is set to Tracking, in which case it is limited by the minimum frequency of the Source |
| Max | See table above. Basically instrument maximum frequency - 5 Hz. Note that, if the Source Mode is set to Tracking, the effective instrument maximum frequency may be limited by the source maximum frequency. If the knob or step keys are being used, also depends on the value of the other three interdependent parameters Span, Start Frequency and Stop Frequency |
| Initial S/W Revision | Prior to A.02.00 |
| Modified at S/W Revision | A.03.00 |

Ext Mix Center Freq

SCPI command for specifying the External Mixer Center Frequency. This command will set the Center Frequency to be used when the External Mixer is selected, even if the External Mixer input is not the input which is selected at the time the command is sent. Note that the **Center Freq** function in the **Frequency** menu on the front panel always applies to the currently selected input.

| | |
|----------------|---|
| Scope | Meas Global |
| Remote Command | [:SENSe] :FREQuency:EMIXer:CENTer <freq> [:SENSe] :FREQuency:EMIXer:CENTer? |
| Example | :FREQ:EMIX:CENT 60 GHz :FREQ:EMIX:CENT? |
| Notes | This command is the same in all modes, but the parameter is Measurement Global. So the value is independent in each mode and common across all the measurements in the mode. |
| Couplings | When returning to External Mixing after having been switched to one of the other inputs (e.g., RF), you will come back into the settings that you had when you left External Mixing. So you will come back to the band you were in with the Center Frequency that you had. However, Span is not an input-dependent parameter, therefore you will bring the span over from the other input. Therefore, the analyzer comes back with the span from the previous input, limited as necessary by the current mixer setup. |
| Preset | When a Mode Preset is performed while in External Mixing, the Start frequency of the current Mode is set to the nominal Min Freq of the lowest harmonic range in the Harmonic Table for the current mixer setup. Similarly, the Stop frequency of the current Mode is set to the nominal Max Freq of the highest harmonic range in the Harmonic Table. The Center Freq thus presets to the point arithmetically equidistant from these two frequencies. If the current measurement has a limited Span available to it, and cannot achieve the Span shown in the table (Span=Stop Freq - Start Freq), the analyzer uses the maximum Span the measurement allows, and still sets the Center Freq to the midpoint of the Start and Stop Freq values in the Harmonic Table. When Restore Input/Output Defaults is performed, the mixer presets to the 11970A, whose Start and Stop frequencies are 26.5 and 40 GHz respectively. The center of these two frequencies is |

| | |
|----------------------|---|
| | 33.25 GHz. Therefore, after a Restore Input/Output Defaults, if you go into External Mixing and do a Mode Preset while in the Spectrum Analyzer Mode, the resulting Center Freq is 33.25 GHz. |
| State Saved | Saved in instrument state. |
| Min | The minimum frequency in the currently selected mixer band + 5 Hz |
| Max | The maximum frequency in the currently selected mixer band - 5 Hz If the knob or step keys are being used, also depends on the value of the other three interdependent parameters Span, Start Frequency and Stop Frequency |
| Initial S/W Revision | A.08.01 |

I/Q Center Freq

SCPI command for specifying the I/Q Center Frequency. This command will set the Center Frequency to be used when the I/Q input is selected, even if the I/Q input is not the input which is selected at the time the command is sent. Note that the **Center Freq** function in the **Frequency** menu on the front panel always applies to the currently selected input.

| | |
|----------------------|--|
| Scope | Meas Global |
| Remote Command | [:SENSe] :FREQuency:IQ:CENTer <freq> [:SENSe] :FREQuency:IQ:CENTer? |
| Example | FREQ:IQ:CENT: 30 MHz |
| Notes | This command is the same in all modes, but the parameter is Measurement Global. So the value is independent in each mode and common across all the measurements in the mode. |
| Preset | 0 Hz |
| State Saved | Saved in instrument state. |
| Min | -40.049995 MHz |
| Max | 40.049995 MHz |
| Initial S/W Revision | Prior to A.02.00 |

CF Step

Changes the step size for the center frequency and start and stop frequency functions. Once a step size has been selected and the center frequency function is active, the step keys (and the UP|DOWN parameters for Center Frequency from remote commands) change the center frequency by the step-size value. The step size function is useful for finding harmonics and sidebands beyond the current frequency span of the analyzer.

Note that the start and stop frequencies also step by the CF Step value.

| | |
|----------------|--|
| Key Path | FREQ Channel |
| Remote Command | [:SENSe] :FREQuency:CENTer:STEP[:INCRement] <freq> |

| | |
|------------------------------|--|
| | [:SENSe]:FREQuency:CENTer:STEP[:INCRement]? |
| | [:SENSe]:FREQuency:CENTer:STEP:AUTO OFF ON 0 1 |
| | [:SENSe]:FREQuency:CENTer:STEP:AUTO? |
| Example | <p>FREQ:CENT:STEP:AUTO ON</p> <p>FREQ:CENT:STEP 500 MHz</p> <p>FREQ:CENT UP increases the current center frequency value by 500 MHz</p> <p>FREQ:CENT:STEP?</p> <p>FREQ:CENT:STEP:AUTO?</p> |
| Notes | Preset and Max values are depending on Hardware Options (503, 507, 508, 513, 526) |
| Notes | Preset and Max values are dependent on Hardware Options (5xx) |
| Dependencies | Freq Offset is not available in External Mixing. In this case the Freq Offset key is grayed out and shows a value of zero. It will once again be available, and show the previously set value, when you return to the RF Input. |
| Dependencies | <p>Span, RBW, Center frequency</p> <p>If the electronic/soft attenuator is enabled, any attempt to change the value of the center frequency >3.6 GHz by pressing the Up-arrow key, fails and results in an advisory message. If the equivalent SCPI command is sent, this same message is generated as part of a “-221, Settings conflict” warning.</p> |
| Couplings | When auto-coupled in a non-zero span, the center frequency step size is set to 10% of the span. When auto-coupled in zero span, the center frequency step size is set to the equivalent -3 dB RBW value. |
| Preset | <p>Auto</p> <p>ADEM0D: 1 MHz</p> <p>ON</p> |
| State Saved | Saved in instrument state |
| Min | – (the maximum frequency of the instrument). That is, 27 GHz max freq instrument has a CF step range of +/- 27 GHz. Note that this is the maximum frequency given the current settings of the instrument, so in External Mixing, for example, it is the maximum frequency of the current mixer band. |
| Max | The maximum frequency of the instrument. That is, 27 GHz max freq instrument has a CF step range of +/- 27 GHz. Note that this is the maximum frequency given the current settings of the instrument, so in External Mixing, for example, it is the maximum frequency of the current mixer band. |
| Default Unit | Hz |
| Status Bits/OPC dependencies | non-overlapped |

| Modified at S/W Revision | A.03.00 |

15 Waveform Measurement
Input/Output

Input/Output

See ["Input/Output" on page 162](#)

Marker

Accesses a menu that enables you to select, set up and control the markers for the current measurement.

| | |
|----------------------|------------------------|
| Key Path | Front-panel key |
| Initial S/W Revision | Prior to A.02.00 |

Select Marker

Displays 12 markers available for selection.

| | |
|----------------------|------------------|
| Key Path | Marker |
| Initial S/W Revision | Prior to A.02.00 |

Marker Type

Sets the marker control mode to **Normal**, **Delta**, **Fixed** or **Off**. All interactions and dependencies detailed under the key description are enforced when the remote command is sent. If the selected marker is Off, pressing Marker sets it to Normal and places it at the center of the screen on the trace determined by the **Marker Trace** rules. At the same time, the Marker X Axis Value appears on the Active Function area.

The default active function is the active function for the currently selected marker control mode. If the current control mode is Off, there is no active function and the active function is turned off.

| | |
|----------------|--|
| Key Path | Marker |
| Mode | BASIC, PNOISE, WCDMA, C2K, GSM, WIMAXOFDMA, TDSCDMA, 1XEVD0, DVB, DTMB, ISDBT, CMMB, LTE, LTETDD, DCATV, WLAN,,LTEATDD, LTEAFDD |
| Remote Command | :CALCulate:WAVeform:MARKer[1] 2 ... 12:MODE POSition DELTa OFF :CALCulate:WAVeform:MARKer[1] 2 ... 12:MODE? |
| Example | CALC:WAV:MARK:MODE OFF CALC:WAV:MARK:MODE? |
| Notes | If the selected marker is Off, pressing Marker sets it to Normal and places it at the center of the screen on the trace determined by the Marker Trace rules. At the same time, Marker X Axis Value appears on the Active Function area. Default Active Function: the active function for the selected marker's current control mode. If the current control mode is Off, there is no active function and the active function is turned off. Active Function Display: the marker X axis value entered in the active function area displays the marker value to its full entered precision. You must be in a mode that includes the Waveform measurement to use this command. Use INSTRument:SElect to set the mode. |
| Preset | OFF |
| State Saved | Saved in instrument state. |

| | |
|--------------------------|------------------|
| Range | Normal Delta Off |
| Initial S/W Revision | Prior to A.02.00 |
| Modified at S/W Revision | A.03.00 |

Properties

Accesses the marker properties menu.

| | |
|----------------------|------------------|
| Key Path | Marker |
| Initial S/W Revision | Prior to A.02.00 |

Select Marker

Displays 12 markers available for selection.

| | |
|----------------------|------------------|
| Key Path | Marker |
| Initial S/W Revision | Prior to A.02.00 |

Relative To

Selects the marker that the selected marker is relative to (its *reference marker*).

| | |
|--------------------------|--|
| Key Path | Marker, Properties |
| Mode | BASIC, PNOISE, WCDMA, C2K, GSM, WIMAXOFDMA, TDSCDMA, 1XEVD0, DVB, DTMB, ISDBT, CMMB, LTE, LTETDD, DCATV, WLAN,,LTEATDD, LTEAFDD |
| Remote Command | :CALCulate:WAVEform:MARKer[1] 2 ... 12:REFerence <integer> :CALCulate:WAVEform:MARKer[1] 2 ... 12:REFerence? |
| Example | CALC:WAV:MARK:REF 8 CALC:WAV:MARK:REF? |
| Notes | A marker cannot be relative to itself so that choice is grayed out, and if sent from SCPI generates error -221: "Settings conflict; marker cannot be relative to itself." When queried a single value is returned (the specified marker numbers relative marker). You must be in a mode that includes the Waveform measurement to use this command. Use INSTRument:SElect to set the mode. |
| Preset | 2 3 4 5 6 7 8 9 10 11 12 1 |
| State Saved | Saved in instrument state. |
| Min | 1 |
| Max | 12 |
| Initial S/W Revision | Prior to A.02.00 |
| Modified at S/W Revision | A.03.00 |

Marker Trace

Assigns the specified marker to the designated trace.

| Key Path | Marker |
|--------------------------|--|
| Mode | BASIC, PNOISE, WCDMA, C2K, GSM, WIMAXOFDMA, TDSCDMA, 1XEVD0, DVB, DTMB, ISDBT, CM MB, LTE, LTETDD, DCATV, WLAN,,LTEATDD, LTEAFDD |
| Remote Command | :CALCulate:WAVeform:MARKer[1] 2 ... 12:TRACe RFENvelope I Q IQ :CALCulate:WAVeform:MARKer[1] 2 ... 12:TRACe? |
| Example | CALC:WAV:MARK:TRAC RFEN CALC:WAV:MARK:TRAC? |
| Notes | Assigns the specified marker to the designated trace. The IQ selection is for backward compatibility purposes. It is recommended that the users use the I and/or Q selection instead. You must be in a mode that includes the Waveform measurement to use this command. Use INSTRument:SElect to set the mode. |
| Preset | RFEN |
| State Saved | Saved in instrument state. |
| Range | RF Envelope I Q IQ |
| Initial S/W Revision | Prior to A.02.00 |
| Modified at S/W Revision | A.03.00 |

Couple Markers

Toggles the state of the markers to be coupled On or Off. When this function is true (On), moving any marker causes an equal X-axis movement of every other marker which is not Off. “Equal X-axis movement” refers to the difference between each marker’s X-Axis value (in the fundamental x-axis units of the trace that marker is on) and the X-Axis value of the marker being moved (in the same fundamental x-axis units) are preserved.

| Key Path | Marker |
|----------------|--|
| Mode | BASIC, PNOISE, WCDMA, C2K, GSM, WIMAXOFDMA, TDSCDMA, 1XEVD0, DVB, DTMB, ISDBT, CM MB, LTE, LTETDD, DCATV, WLAN,,LTEATDD, LTEAFDD |
| Remote Command | :CALCulate:WAVeform:MARKer:COUPle[:STATe] ON OFF 1 0 :CALCulate:WAVeform:MARKer:COUPle[:STATe]? |
| Example | CALC:WAV:MARK:COUP ON CALC:WAV:MARK:COUP ON |
| Notes | You must be in a mode that includes the Waveform measurement to use this command. Use INSTRument:SElect to set the mode. |
| Preset | OFF |

| | |
|--------------------------|----------------------------|
| State Saved | Saved in instrument state. |
| Range | On Off |
| Initial S/W Revision | Prior to A.02.00 |
| Modified at S/W Revision | A.03.00 |

All Markers Off

Turns off all markers.

| Key Path | Marker |
|--------------------------|--|
| Mode | BASIC, PNOISE, WCDMA, C2K, GSM, WIMAXOFDMA, TDSCDMA, 1XEVD0, DVB, DTMB, ISDBT, CMMB, LTE, LTETDD, DCATV, WLAN,LTEATDD, LTEAFDD |
| Remote Command | :CALCulate:WAVeform:MARKer:AOff |
| Example | CALC:WAV:MARK:AOff |
| Notes | You must be in a mode that includes the Waveform measurement to use this command. Use INSTRument:SElect to set the mode. |
| Initial S/W Revision | Prior to A.02.00 |
| Modified at S/W Revision | A.03.00 |

Marker X Axis Value (Remote Command Only)

Sets the marker X Axis value in the current marker X Axis Scale unit. It has no effect if the control mode is Off, but is the SCPI equivalent of entering an X value if the control mode is Normal or Delta.

| | |
|----------------|--|
| Mode | BASIC, PNOISE, WCDMA, C2K, GSM, WIMAXOFDMA, TDSCDMA, 1XEVD0, DVB, DTMB, ISDBT, CMMB, LTE, LTETDD, DCATV, WLAN,,LTEATDD, LTEAFDD |
| Remote Command | :CALCulate:WAVeform:MARKer[1 2 ... 12]:X <time> :CALCulate:WAVeform:MARKer[1 2 ... 12]:X? |
| Example | CALC:WAV:MARK:X 50 ms CALC:WAV:MARK:X? |
| Notes | If no suffix is sent, uses the fundamental units for the current marker X Axis Scale. If a suffix is sent that does not match the current marker X Axis Scale unit, an error "Invalid suffix" is generated. If the specified marker is Fixed and a Marker Function is on, error -221 "Settings conflict; cannot adjust Fixed marker while Marker Function is on" is generated. The query returns the marker's absolute X Axis value if the control mode is Normal , or the offset from the marker's reference marker if the control mode is Delta . The query is returned in the fundamental units for the current marker X Axis scale: Hz for Frequency and Inverse Time , seconds for Period and Time . If the marker is Off the response is not a number. You must be in a mode that includes the Waveform measurement to use this command. Use INSTRument:SElect to set the mode. |
| Preset | 0 |

| | |
|--------------------------|--|
| Preset | After a preset, all markers are turned OFF, so Marker X Axis Value query returns a not a number (NAN). |
| State Saved | No |
| Min | (9.9E+37 |
| Max | 9.9E+37 |
| Initial S/W Revision | Prior to A.02.00 |
| Modified at S/W Revision | A.03.00 |

Marker X Axis Position (Remote Command Only)

Sets the marker X position in trace points. It has no effect if the control mode is Off, but is the SCPI equivalent of entering a value if the control mode is Normal or Delta. The entered value is immediately translated into the current X Axis Scale units for setting the value of the marker.

| | |
|--------------------------|--|
| Mode | BASIC, PNOISE, WCDMA, C2K, GSM, WIMAXOFDMA, TDSCDMA, 1XEVD0, DVB, DTMB, ISDBT, CMMB, LTE, LTETDD, DCATV, WLAN,,LTEATDD, LTEAFDD |
| Remote Command | :CALCulate:WAVEform:MARKer[1] 2 ... 12:X:POSition <real> :CALCulate:WAVEform:MARKer[1] 2 ... 12:X:POSition? |
| Example | CALC:WAV:MARK:X:POS 500 CALC:WAV:MARK:X:POS? |
| Notes | The query returns the marker's absolute X Axis value in trace points if the control mode is Normal or the offset from the marker's reference marker in trace points if the control mode is Delta . The value is returned as a real number, not an integer, corresponding to the translation from X Axis Scale units to trace points. You must be in a mode that includes the Waveform measurement to use this command. Use INSTRument:SElect to set the mode. |
| Preset | 0 |
| Preset | After a preset, all markers are turned OFF, so Marker X Axis Value query returns a not a number (NAN). |
| State Saved | No |
| Min | (9.9E+37 |
| Max | 9.9E+37 |
| Initial S/W Revision | Prior to A.02.00 |
| Modified at S/W Revision | A.03.00 |

Marker Y Axis Value (Remote Command Only)

Queries the marker Y Axis value in the current marker Y Axis unit.

| | |
|------|---|
| Mode | BASIC, PNOISE, WCDMA, C2K, GSM, WIMAXOFDMA, TDSCDMA, 1XEVD0, DVB, DTMB, ISDBT, CMMB, LTE, LTETDD, DCATV, WLAN,,LTEATDD, LTEAFDD |
|------|---|

| | |
|-------------------------------------|--|
| Remote Command | :CALCulate:WAVeform:MARKer[1 2 ... 12:Y? |
| Example | CALC:WAV:MARK11:Y? |
| Notes | <p>When the marker is on, IQ waveform returns I and Q values.</p> <p>Case #1 - Trace RF, I or Q: returns a single double value. >:CALC:WAV:MARK1:Y? -2.402406506109E+001</p> <p>Case #2 - Trace IQ: returns a double array of two values, the first is I, and the second is Q. >:CALC:WAV:MARK1:Y? -3.006944493834E-003,+9.9870666467354E-004</p> <p>The IQ selection is for backward compatibility purposes. It is recommended that the users use the I and/or Q selection instead.</p> <p>You must be in a mode that includes the Waveform measurement to use this command. Use INSTRument:SElect to set the mode.</p> |
| Preset | Result dependent on the marker setup and signal source. |
| State Saved | No |
| Backwards Compatibility SCPI | :CALCulate:WAVeform:MARKer[1 2 ... 12:FUNction:RESult? |
| Initial S/W Revision | Prior to A.02.00 |
| Modified at S/W Revision | A.03.00 |

Marker ->

There is no 'Marker ->' functionality supported in Waveform measurements. The front-panel key displays a blank menu when pressed.

| Key Path | Front-panel key |
|----------------------|------------------|
| Initial S/W Revision | Prior to A.02.00 |

Marker Function

Accesses a menu of marker functions that perform post-processing operations on markers based on the measurement specifications. Marker functions are distinct from measurement functions, which automatically perform complex sequences of setup, data acquisition, and display operations in order to measure specified signal characteristics. Marker Functions are specified for each individual marker and may be turned on individually for each marker.

The Marker Function menu controls which marker functions are turned on and allows you to adjust the setup parameters for each function. These parameters include the following, but only one parameter can be assigned to a given marker:

- Marker Noise
- BandInterval Power
- Band/Interval Density
- Marker Function Off

| Key Path | Front-panel key |
|----------------------|------------------|
| Initial S/W Revision | Prior to A.02.00 |

Select Marker

Displays 12 markers available for selection.

| Key Path | Marker |
|----------------------|------------------|
| Initial S/W Revision | Prior to A.02.00 |

Marker Function Type

Sets the marker control function type to, Marker Noise, Band/Interval Power, Band Interval Density, or Marker Function Off

| Key Path | Marker Function |
|----------------|---|
| Mode | BASIC, PNOISE, WCDMA, C2K, GSM, WIMAXOFDMA, TDSCDMA, 1XEVD0, DVB, DTMB, ISDBT, CMMB, LTE, LTETDD, DCATV, WLAN,,LTEATDD, LTEAFDD |
| Remote Command | :CALCulate:WAVEform:MARKer[1] 2 ... 12:FUNction BPOWER BDENSITY OFF :CALCulate:WAVEform:MARKer[1] 2 ... 12:FUNction? |
| Example | CALC:WAV:MARK:FUNC BPOW CALC:WAV:MARK:FUNC? |
| Notes | You must be in a mode that includes the Waveform measurement to use this command. Use INSTRument:SElect to set the mode. |
| Preset | OFF |

| | |
|--------------------------|---|
| State Saved | Saved in instrument state. |
| Range | Band/Interval Power Band Interval Density Marker Function Off |
| Initial S/W Revision | Prior to A.02.00 |
| Modified at S/W Revision | A.03.00 |

Band Adjust

Accesses a menu that enables you to set the frequency span width and the left and right edge, or time values, for the band or interval of the selected marker.

| Key Path | Marker Function |
|----------------------|------------------|
| Initial S/W Revision | Prior to A.02.00 |

Band/Interval Span for Time Domain

Sets the width of the frequency span for the selected marker.

| Key Path | Marker Function |
|-------------------------------------|--|
| Mode | BASIC, PNOISE, WCDMA, C2K, GSM, WIMAXOFDMA, TDSCDMA, 1XEVDO, DVB, DTMB, ISDBT, CMMB, LTE, LTETDD, DCATV, WLAN,LTEATDD, LTEAFDD |
| Remote Command | :CALCulate:WAVEform:MARKer[1] 2 ... 12:FUNCTION:BAND:SPAN <time> :CALCulate:WAVEform:MARKer[1] 2 ... 12:FUNCTION:BAND:SPAN? |
| Example | CALC:WAV:MARK:FUNC:BAND:SPAN 20 ms CALC:WAV:MARK:FUNC:BAND:SPAN? |
| Notes | You must be in a mode that includes the Waveform measurement to use this command. Use INSTRUMENT:SElect to set the mode. |
| Couplings | Changing the Band/Interval Span necessarily changes the Band/Interval Left and Band/Interval Right values |
| Preset | 0 |
| Preset | 10% of Meas Time |
| State Saved | Saved in instrument state. |
| Min | 0 |
| Max | 100 s |
| Backwards Compatibility SCPI | :CALCulate:WAVEform:MARKer[1] 2 ... 4:X:SPAN |
| Initial S/W Revision | Prior to A.02.00 |
| Modified at S/W Revision | A.03.00 |

Band/Interval Left for Time Domain

Sets the left edge frequency or time value for the band of the selected marker.

| Key Path | Marker Function |
|--------------------------|---|
| Mode | BASIC, PNOISE, WCDMA, C2K, GSM, WIMAXOFDMA, TDSCDMA, 1XEVD0, DVB, DTMB, ISDBT, CMMB, LTE, LTETDD, DCATV, WLAN,,LTEATDD, LTEAFDD |
| Remote Command | :CALCulate:WAVeform:MARKer[1] 2 ... 12:FUNcTion:BAND:LEFT <time> :CALCulate:WAVeform:MARKer[1] 2 ... 12:FUNcTion:BAND:LEFT? |
| Example | CALC:WAV:MARK12:FUNC:BAND:LEFT 1 s CALC:WAV:MARK12:FUNC:BAND:LEFT? |
| Notes | You must be in a mode that includes the Waveform measurement to use this command. Use INSTRument:SElect to set the mode. |
| Couplings | Changing the Band/Interval Left necessarily changes the Band/Interval Span and Band/Interval Right values |
| Preset | 0 |
| Preset | 5% of Meas Time |
| State Saved | Saved in instrument state. |
| Min | 0 |
| Max | 100 s |
| Initial S/W Revision | Prior to A.02.00 |
| Modified at S/W Revision | A.03.00 |

Band/Interval Right for Time Domain

Sets the right edge frequency or time value for the band of the selected marker.

| Key Path | Marker Function |
|-----------------------|--|
| Mode | BASIC, PNOISE, WCDMA, C2K, GSM, WIMAXOFDMA, TDSCDMA, 1XEVD0, DVB, DTMB, ISDBT, CMMB, LTE, LTETDD, DCATV, WLAN,,LTEATDD, LTEAFDD |
| Remote Command | :CALCulate:WAVeform:MARKer[1] 2 ... 12:FUNcTion:BAND:RIGHT <time> :CALCulate:WAVeform:MARKer[1] 2 ... 12:FUNcTion:BAND:RIGHT? |

| Modified at S/W Revision | A.03.00 |

Meas

The information in this section is common to all measurements. For key and remote command information for a specific measurement, refer to the section that describes the measurement of interest.

Measurements available under the Meas key are specific to the current Mode.

When viewing Help for measurements, note the following:

NOTE

Operation for some keys differs between measurements. The information displayed in Help pertains to the current measurement. To see how a key operates in a different measurement, exit Help (press the Cancel Esc key), select the measurement, then reenter Help (press the Help key) and press that key.

| Key Path | Front-panel key |

Measurement Group of Commands

Measure Commands:

:MEASure:<measurement>[n]?

This is a fast single-command way to make a measurement using the factory default instrument settings. These are the settings and units that conform to the Mode Setup settings (e.g. radio standard) that you have currently selected.

- Stops the current measurement (if any) and sets up the instrument for the specified measurement using the factory defaults
- Initiates the data acquisition for the measurement
- Blocks other SCPI communication, waiting until the measurement is complete before returning results.
- If the function does averaging, it is turned on and the number of averages is set to 10.
- After the data is valid it returns the scalar results, or the trace data, for the specified measurement. The type of data returned may be defined by an [n] value that is sent with the command.
- The scalar measurement results will be returned if the optional [n] value is not included, or is set to 1. If the [n] value is set to a value other than 1, the selected trace data results will be returned. See each command for details of what types of scalar results or trace data results are available.
- ASCII is the default format for the data output. (Older versions of Spectrum Analysis and Phase Noise mode measurements only use ASCII.) The binary data formats should be used for handling large blocks of data since they are smaller and faster than the ASCII format. Refer to the FORMat:DATA command for more information.

If you need to change some of the measurement parameters from the factory default settings you can set up the measurement with the CONFigure command. Use the commands in the SENSe:<measurement> and CALCulate:<measurement> subsystems to change the settings. Then you can use the READ? command to initiate the measurement and query the results.

If you need to repeatedly make a given measurement with settings other than the factory defaults, you can use the commands in the SENSe:<measurement> and CALCulate:<measurement> subsystems to set up the measurement. Then use the READ? command to initiate the measurement and query results.

Measurement settings persist if you initiate a different measurement and then return to a previous one. Use READ:<measurement>? if you want to use those persistent settings. If you want to go back to the default settings, use MEASure:<measurement>?.

Configure Commands:

:CONFigure:<measurement>

This command stops the current measurement (if any) and sets up the instrument for the specified measurement using

the factory default instrument settings. It does not initiate the taking of measurement data unless INIT:CONTinuous is ON. If you change any measurement settings after using the CONFigure command, the READ command can be used to initiate a measurement without changing the settings back to their defaults.

In the Swept SA measurement in Spectrum Analyzer mode the CONFigure command also turns the averaging function on and sets the number of averages to 10 for all measurements.

:CONFigure: <measurement>: NDEFault stops the current measurement and changes to the specified measurement. It does not change the settings to the defaults. It does not initiate the taking of measurement data unless INIT:CONTinuous is ON.

The CONFigure? query returns the current measurement name.

The CONFigure:CATalog? query returns a quoted string of all licensed measurement names in the current mode. For example, "SAN, CHP, OBW, ACP, PST, TXP, SPUR, SEM, LIST".

Fetch Commands:

:FETCh:<measurement>[n]?

This command puts selected data from the most recent measurement into the output buffer. Use FETCh if you have already made a good measurement and you want to return several types of data (different [n] values, for example, both scalars and trace data) from a single measurement. FETCh saves you the time of re-making the measurement. You can only FETCh results from the measurement that is currently active, it will not change to a different measurement. An error message is reported if a measurement other than the current one is specified.

If you need to get new measurement data, use the READ command, which is equivalent to an INITiate followed by a FETCh.

The scalar measurement results will be returned if the optional [n] value is not included, or is set to 1. If the [n] value is set to a value other than 1, the selected trace data results will be returned. See each command for details of what types of scalar results or trace data results are available. The binary data formats should be used for handling large blocks of data since they are smaller and transfer faster than the ASCII format. (FORMat:DATA)

FETCh may be used to return results other than those specified with the original READ or MEASure command that you sent.

INITiate Commands:

:INITiate:<measurement>

This command is not available for measurements in all the instrument modes:

- Initiates a trigger cycle for the specified measurement, but does not output any data. You must then use the FETCh<meas> command to return data. If a measurement other than the current one is specified, the instrument will switch to that measurement and then initiate it.
 - For example, suppose you have previously initiated the ACP measurement, but now you are running the channel power measurement. If you send INIT:ACP? it will change from channel power to ACP and will initiate an ACP measurement.
 - Does not change any of the measurement settings. For example, if you have previously started the ACP measurement and you send INIT:ACP? it will initiate a new ACP measurement using the same instrument settings as the last time ACP was run.
 - If your selected measurement is currently active (in the idle state) it triggers the measurement, assuming the trigger conditions are met. Then it completes one trigger cycle. Depending upon the measurement and the number of averages, there may be multiple data acquisitions, with multiple trigger events, for one full trigger cycle. It also holds off additional commands on GPIB until the acquisition is complete.
-

READ Commands:

:READ:<measurement>[n]?

- Does not preset the measurement to the factory default settings. For example, if you have previously initiated the ACP
-

measurement and you send READ:ACP? it will initiate a new measurement using the same instrument settings.

- Initiates the measurement and puts valid data into the output buffer. If a measurement other than the current one is specified, the instrument will switch to that measurement before it initiates the measurement and returns results.
 - For example, suppose you have previously initiated the ACP measurement, but now you are running the channel power measurement. Then you send READ:ACP? It will change from channel power back to ACP and, using the previous ACP settings, will initiate the measurement and return results.
 - Blocks other SCPI communication, waiting until the measurement is complete before returning the results
 - If the optional [n] value is not included, or is set to 1, the scalar measurement results will be returned. If the [n] value is set to a value other than 1, the selected trace data results will be returned. See each command for details of what types of scalar results or trace data results are available. The binary data formats should be used when handling large blocks of data since they are smaller and faster than the ASCII format. (FORMat:DATA)
-

| | |
|----------------------|------------------|
| Initial S/W Revision | Prior to A.02.00 |
|----------------------|------------------|

Current Measurement Query (Remote Command Only)

This command returns the name of the measurement that is currently running.

| | |
|-----------------------|-------------|
| Remote Command | :CONFigure? |
|-----------------------|-------------|

| | |
|----------------|-------|
| Example | CONF? |
|----------------|-------|

| | |
|----------------------|------------------|
| Initial S/W Revision | Prior to A.02.00 |
|----------------------|------------------|

Limit Test Current Results (Remote Command Only)

Queries the status of the current measurement limit testing. It returns a 0 if the measured results pass when compared with the current limits. It returns a 1 if the measured results fail any limit tests.

| | |
|-----------------------|--------------------------|
| Remote Command | :CALCulate:CLIMits:FAIL? |
|-----------------------|--------------------------|

| | |
|----------------|--|
| Example | CALC:CLIM:FAIL? queries the current measurement to see if it fails the defined limits. Returns a 0 or 1: 0 it passes, 1 it fails. |
|----------------|--|

| | |
|----------------------|------------------|
| Initial S/W Revision | Prior to A.02.00 |
|----------------------|------------------|

Data Query (Remote Command Only)

Returns the designated measurement data for the currently selected measurement and subopcode.

n = any valid subopcode for the current measurement. See the measurement command results table for your current measurement, for information about what data is returned for the subopcodes.

This command uses the data setting specified by the FORMat:BORDER and FORMat:DATA commands and can return real or ASCII data. (See the format command descriptions under Input/Output in the Analyzer Setup section.)

| | |
|-----------------------------|---|
| Remote Command | :CALCulate:DATA[n]? |
| Notes | The return trace depends on the measurement. In CALCulate:<meas>:DATA[n], n is any valid subopcode for the current measurement. It returns the same data as the FETCH:<measurement>? query where <measurement> is the current measurement. |
| Initial S/W Revision | Prior to A.02.00 |

Calculate/Compress Trace Data Query (Remote Command Only)

Returns compressed data for the currently selected measurement and sub-opcode [n].

n = any valid sub-opcode for that measurement. See the MEASure:<measurement>? command description of your specific measurement for information on the data that can be returned.

The data is returned in the current Y Axis Unit of the analyzer. The command is used with a sub-opcode <n> (default=1) to specify the trace. With trace queries, it is best if the analyzer is not sweeping during the query. Therefore, it is generally advisable to be in Single Sweep, or Update=Off.

This command is used to compress or decimate a long trace to extract and return only the desired data. A typical example would be to acquire N frames of GSM data and return the mean power of the first burst in each frame. The command can also be used to identify the best curve fit for the data.

| | |
|-----------------------------|---|
| Remote Command | :CALCulate:DATA<n>:COMPRESS? BLOCK CFIT MAXimum MINimum MEAN DMEan RMS RMSCubed SAMPLE SDEVIation PPHase [,<soffset> [,<length>[,<roffset>[,<rlimit>]]]] |
| Example | To query the mean power of a set of GSM bursts: Supply a signal that is a set of GSM bursts. Select the IQ Waveform measurement (in IQ Analyzer Mode). Set the sweep time to acquire at least one burst. Set the triggers such that acquisition happens at a known position relative to a burst. Then query the mean burst levels using, CALC:DATA2:COMP? MEAN, 24e-6, 526e-6 (These parameter values correspond to GSM signals, where 526e-6 is the length of the burst in the slot and you just want 1 burst.) |
| Notes | The command supports 5 parameters. Note that the last 4 (<soffset>, <length>, <roffset>, <rlimit>) are optional. But these optional parameters must be entered in the specified order. For example, if you want to specify <length>, then you must also specify <soffset>. See details below for a definition of each of these parameters. This command uses the data in the format specified by FORMat:DATA, returning either binary or ASCII data. |
| Initial S/W Revision | Prior to A.02.00 |

- BLOCK or block data - returns all the data points from the region of the trace data that you specify. For example, it could be used to return the data points of an input signal over several timeslots, excluding the portions of the trace data that you do not want. (This is x,y pairs for trace data and I,Q pairs for complex data.)

- CFIT or curve fit - applies curve fitting routines to the data. <soffset> and <length> are required to define the data that you want. <roffset> is an optional parameter for the desired order of the curve equation. The query will return the following values: the x-offset (in seconds) and the curve coefficients ((order + 1) values).

MIN, MAX, MEAN, DME, RMS, RMSC, SAMP, SDEV and PPH return one data value for each specified region (or <length>) of trace data, for as many regions as possible until you run out of trace data (using <roffset> to specify regions). Or they return the number of regions you specify (using <rlimit>) ignoring any data beyond that.

- MINimum - returns the minimum data point (y value) for the specified region(s) of trace data. For I/Q trace data, the minimum magnitude of the I/Q pairs is returned.
- MAXimum - returns the maximum data point (y value) for the specified region(s) of trace data. For I/Q trace data, the maximum magnitude of the I/Q pairs is returned.
- MEAN - returns a single value that is the arithmetic mean of the data point values (in dB/ dBm) for the specified region(s) of trace data. For I/Q trace data, the mean of the magnitudes of the I/Q pairs is returned. See the following equations.

-

NOTE

If the original trace data is in dB, this function returns the arithmetic mean of those log values, not log of the mean power which is a more useful value. The mean of the log is the better measurement technique when measuring CW signals in the presence of noise. The mean of the power, expressed in dB, is useful in power measurements such as Channel Power. To achieve the mean of the power, use the RMS option.

Equation 1

Mean Value of Data Points for Specified Region(s)

$$\text{MEAN} = \frac{1}{n} \sum_{X_i \in \text{region}(s)} X_i$$

where X_i is a data point value, and n is the number of data points in the specified region(s).

Equation 2

Mean Value of I/Q Data Pairs for Specified Region(s)

$$\text{MEAN} = \frac{1}{n} \sum_{X_i \in \text{region}(s)} |X_i|$$

where $|X_i|$ is the magnitude of an I/Q pair, and n is the number of I/Q pairs in the specified region(s).

- DMEan - returns a single value that is the mean power (in dB/ dBm) of the data point values for the specified region(s) of trace data. See the following equation:

Equation 3

DMEan Value of Data Points for Specified Region(s)

$$\text{DME} = 10 \times \log_{10} \left(\frac{1}{n} \sum_{X_i \in \text{region}(s)} 10^{\frac{X_i}{10}} \right)$$

- RMS - returns a single value that is the average power on a root-mean-squared voltage scale (arithmetic rms) of the data point values for the specified region(s) of trace data. See the following equation.

NOTE For I/Q trace data, the rms of the magnitudes of the I/Q pairs is returned. See the following equation. This function is very useful for I/Q trace data. However, if the original trace data is in dB, this function returns the rms of the log values which is not usually needed.

Equation 4

RMS Value of Data Points for Specified Region(s)

$$\text{RMS} = \sqrt{\frac{1}{n} \sum_{X_i \in \text{region}(s)} X_i^2}$$

where X_i is a data point value, and n is the number of data points in the specified region(s).

Equation 5

RMS Value of I/Q Data Pairs for Specified Region(s)

$$\text{RMS} = \sqrt{\frac{1}{n} \sum_{X_i \in \text{region}(s)} X_i X_i^*}$$

where X_i is the complex value representation of an I/Q pair, X_i^* its conjugate complex number, and n is the number of I/Q pairs in the specified region(s).

Once you have the rms value for a region of trace data (linear or I/Q), you may want to calculate the mean power. You must convert this rms value (peak volts) to power in dBm:

$$10 \times \log[10 \times (\text{rms value})^2]$$

- SAMPlE - returns the first data value (x,y pair) for the specified region(s) of trace data. For I/Q trace data, the first I/Q pair is returned.
- SDEVIation - returns a single value that is the arithmetic standard deviation for the data point values for the specified region(s) of trace data. See the following equation.
- For I/Q trace data, the standard deviation of the magnitudes of the I/Q pairs is returned. See the following equation.

Equation 6

Standard Deviation of Data Point Values for Specified Region(s)

$$\text{SDEV} = \sqrt{\frac{1}{n} \sum_{X_i \in \text{region}(s)} (X_i - \bar{X})^2}$$

where X_i is a data point value, \bar{X} is the arithmetic mean of the data point values for the specified region (s), and n is the number of data points in the specified region(s).

$$\text{SDEV} = \sqrt{\frac{1}{n} \sum_{X_i \in \text{region}(s)} (|X_i| - \bar{X})^2}$$

where $|X_i|$ is the magnitude of an I/Q pair, \bar{X} is the mean of the magnitudes for the specified region(s), and n is the number of data points in the specified region(s).

- PPHase - returns the x,y pairs of both rms power (dBm) and arithmetic mean phase (radian) for every specified region and frequency offset (Hz). The number of pairs is defined by the specified number of regions. This parameter can be used for I/Q vector (n=0) in Waveform (time domain) measurement and all parameters are specified by data point in PPHase.

The rms power of the specified region may be expressed as:

$$\text{Power} = 10 \times \log [10 \times (\text{RMS I/Q value})] + 10.$$

The RMS I/Q value (peak volts) is:

$$\sqrt{\frac{1}{n} \sum_{X_i \in \text{region}} X_i X_i^*}$$

where X_i is the complex value representation of an I/Q pair, X_i^* its conjugate complex number, and n is the number of I/Q pairs in the specified region.

The arithmetic mean phase of the specified region may be expressed as:

$$\frac{1}{n} \sum_{Y_i \in \text{region}} Y_i$$

where Y_i is the unwrapped phase of I/Q pair with applying frequency correction and n is the number of I/Q pairs in the specified region.

The frequency correction is made by the frequency offset calculated by the arithmetic mean of every specified region's frequency offset. Each frequency offset is calculated by the least square method against the unwrapped phase of I/Q pair.

Sample Trace Data - Constant Envelope

(See below for explanation of variables.)

Sample Trace Data - Not Constant Envelope

(See below for explanation of variables.)

<soffset> - start offset is an optional real number. (It is in seconds for time-domain traces, and is a dimensionless index 0 to Npoints - 1, for frequency-domain traces). It specifies the amount of data at the beginning of the trace that will be ignored before the decimation process starts. It is the time or frequency change from the start of the trace to the point where you want to start using the data. The default value is zero.

<length> - is an optional real number. (It is in seconds for time-domain traces, and is a dimensionless index 0 to Npoints - 1, for frequency-domain traces). It defines how much data will be compressed into one value. This parameter has a default value equal to the current trace length.

<roffset> - repeat offset is an optional real number. (It is in seconds for time-domain traces, and is a dimensionless index 0 to Npoints - 1, for frequency-domain traces). It defines the beginning of the next field of trace elements to be compressed. This is relative to the beginning of the previous field. This parameter has a default value equal to the <length> variable. Note that this parameter is used for a completely different purpose when curve fitting (see CFIT above).

<rlimit> - repeat limit is an optional integer. It specifies the number of data items that you want returned. It will ignore any additional items beyond that number. You can use the Start offset and the Repeat limit to pick out exactly what part of the data you want to use. The default value is all the data.

Calculate Peaks of Trace Data (Remote Command Only)

Returns a list of all the peaks for the currently selected measurement and sub-opcode [n]. The peaks must meet the requirements of the peak threshold and excursion values.

n = any valid sub-opcode for the current measurement. See the MEASure:<measurement> command description of your specific measurement for information on the data that can be returned.

The command can only be used with specific sub-opcodes with measurement results that are trace data. Both real and complex traces can be searched, but complex traces are converted to magnitude in dBm. In many measurements the sub-opcode n=0, is the raw trace data which cannot be searched for peaks. And Sub-opcode n=1, is often calculated results values which also cannot be searched for peaks.

This command uses the data setting specified by the FORMat:BORDER and FORMat:DATA commands and can return real or ASCII data. If the format is set to INT,32, it returns REAL,32 data.

The command has four types of parameters:

- Threshold (in dBm)
- Excursion (in dB)
- Sorting order (amplitude, frequency, time)
- Optional in some measurements: Display line use (all, > display line, < display line)

| | |
|-----------------------|---|
| Remote Command | <p>For Swept SA measurement:</p> <pre>:CALCulate:DATA[1] 2 ... 6:PEAKs? <threshold>,<excursion>[,AMPLitude FREQuency TIME[,ALL GTDLline LTDLine]]</pre> <p>For most other measurements:</p> <pre>:CALCulate:DATA[1] 2 ... 6:PEAKs? <threshold>,<excursion>[,AMPLitude FREQuency TIME]</pre> |
|-----------------------|---|

| | |
|----------------|---|
| Example | <p>Example for Swept SA measurement in Spectrum Analyzer Mode:</p> <p>CALC:DATA4:PEAK? -40, 10, FREQ, GTDL This will identify the peaks of trace 4 that are above -40 dBm, with excursions of at least 10 dB. The peaks are returned in order of increasing frequency, starting with the lowest frequency. Only the peaks that are above the display line are returned.</p> <p>Query Results 1:</p> <p>With FORMat:DATA REAL, 32 selected, it returns a list of floating-point numbers. The first value in the list is the number of peak points that are in the following list. A peak point consists of two values: a peak amplitude followed by its corresponding frequency (or time).</p> <p>If no peaks are found the peak list will consist of only the number of peaks, (0).</p> |
|----------------|---|

| | |
|--------------|---|
| Notes | <p><n> - is the trace that will be used</p> <p><threshold> - is the level below which trace data peaks are ignored. Note that the threshold value is required and is always used as a peak criterion. To effectively disable the threshold criterion for this command, provide a substantially low threshold value such as -200 dBm. Also note that the threshold value used in this command is independent of and has no effect on the threshold value stored under the Peak Criteria menu.</p> <p><excursion> - is the minimum amplitude variation (rise and fall) required for a signal to be identified as peak. Note that the excursion value is required and is always used as a peak criterion. To effectively disable the excursion criterion for this command, provide the minimum value of 0.0 dB. Also note that the excursion value used in this command is independent of and has no effect on the</p> |
|--------------|---|

excursion value stored under the Peak Criteria menu.

Values must be provided for threshold and excursion. The sorting and display line parameters are optional (defaults are AMPLitude and ALL).

Note that there is always a Y-axis value for the display line, regardless of whether the display line state is on or off. It is the current Y-axis value of the display line which is used by this command to determine whether a peak should be reported
Sorting order:

AMPLitude - lists the peaks in order of descending amplitude, with the highest peak first (default if optional parameter not sent)

FREQuency - lists the peaks in order of occurrence, left to right across the x-axis.

TIME - lists the peaks in order of occurrence, left to right across the x-axis.

Peaks vs. Display Line:

ALL - lists all of the peaks found (default if optional parameter not sent).

GTDLine (greater than display line) - lists all of the peaks found above the display line.

LTDLine (less than display line) - lists all of the peaks found below the display line.

| | |
|----------------------|------------------|
| Initial S/W Revision | Prior to A.02.00 |
|----------------------|------------------|

Hardware-Accelerated Fast Power Measurement (Remote Command Only)

The Fast Power option (FP2) enables very fast channel power measurements for instruments with the prerequisite hardware (DP2 and/or B40). It accomplishes this by performing real-time overlapped FFTs at the hardware layer, using software for basic post-processing before returning the result to the user. The upshot of this approach is improved throughput for user applications that require many sequential power measurements.

The analysis bandwidth of FP2 is limited by the licenses in the instrument, but its maximum overall analysis bandwidth per acquisition is 40 MHz.

FP2 is remote-only, which means the instrument does not switch to any particular mode or measurement. FP2 commands can be sent while another application is in use on the front panel.

Each Fast Power measurement can be predefined using an array index, and up to 1,000 measurements can be stored. In the following documentation, instances of [1,2,...,999] can be substituted with a particular measurement index, e.g. CALC:FPOW:POW1?, CALC:FPOW:POW2?, CALC:FPOW:POW134?. In this way, power measurements can be defined one time in a batch, and then executed multiple times without having to redefine them, similar to “list mode” on other measurements.

In addition to basic channel power measurements, there are a number of other measurement “functions” for each channel, including peak power, peak frequency, and power spectral density. See the Function parameter for more information.

Reset Fast Power Measurement (Remote Command Only)

Resets the measurement configuration to the defaults.

| | |
|-----------------------|---|
| Mode | All |
| Remote Command | :CALCulate:FPOWer:POWer [1, 2, ..., 999] :RESet |
| Example | :CALC:FPOW:POW1:RES |

| | |
|----------------------|-------------------------|
| Notes | Option FP2 is required. |
| Initial S/W Revision | A.14.00 |

Define Fast Power Measurement (Remote Command Only)

Fast Power acquisitions are configured using the DEFine command. This command accepts a comma-delimited string of configuration parameters and their appropriate values, which are all specified in the subsection below.

| | |
|-----------------------|--|
| Mode | All |
| Remote Command | :CALCulate:FPOWer:POWer[1,2,...,999]:DEFine "configuration string" |
| Example | :CALC:FPOW:POW1:DEF "CenterFrequency=2e9, AcquisitionTime=0.005" |
| Notes | See below for a list of measurement variables that can be defined in the configuration string. |
| Initial S/W Revision | A.14.00 |

Acquisition Time

| | |
|----------------------|--|
| Example | CALC:FPOW:POW1:DEF "AcquisitionTime=0.002" |
| Notes | The acquisition time parameter sets the time in which the entire spectrum is measured. An increase in the acquisition time yields an improvement in measurement repeatability. |
| Preset | 0.001 s |
| Range | 0 s to 1 s |
| Default Unit | Time (s) |
| Initial S/W Revision | A.14.00 |

Center Frequency

| | |
|----------------------|--|
| Example | CALC:FPOW:POW1:DEF "CenterFrequency=2e9" |
| Notes | The center frequency parameter sets the frequency in which the measurement is centered around. The OffsetFrequency parameter is calculated relative to the center frequency. |
| Preset | 1 GHz |
| Range | 0 Hz to maximum instrument frequency |
| Default Unit | Frequency (Hz) |
| Initial S/W Revision | A.14.00 |

DC Coupled

| | |
|----------------------|---|
| Example | CALC:FPOW:POW1:DEF "DCCoupled=True" |
| Notes | The DC coupled parameter allows the user to specify whether the DC blocking capacitor is utilized. Set parameter to true when measuring frequencies below 10 MHz. |
| Preset | False |
| Range | True (DC Coupled) or False (AC Coupled) |
| Default Unit | Boolean |
| Initial S/W Revision | A.14.00 |

DetectorType

| | |
|----------------------|--|
| Example | CALC:FPOW:POW1:DEF "DetectorType=Peak" |
| Notes | Option FP2 is required. The detector type parameter allows the user to choose whether a RMS average or peak value is used during the measurement. |
| Preset | RmsAverage |
| Range | RmsAverage, Peak |
| Initial S/W Revision | A.14.00 |

Do Noise Correction

| | |
|----------------------|--|
| Example | CALC:FPOW:POW1:DEF "DoNoiseCorrection=True" |
| Notes | When noise correction is enabled, the linear noise power contributed by the analyzer is subtracted from all measurements. This effectively lowers the noise floor of the analyzer. When noise correction is enabled, the first measurement for a given set of input parameters will take extra time. This is because the analyzer takes an extra acquisition with the RF input disconnected from the analyzer's front end to measure the noise of just the analyzer. The measured noise floor is stored in a cache so the noise acquisition will occur only once for the same state settings. In other words, if noise correction was turned on and the analyzer made an acquisition at frequency A, then frequency B, and back again to frequency A, the hidden initial noise floor acquisition would only occur for the first acquisition at frequency A and the cached noise floor would be used the second time frequency A was measured. |
| Preset | False |
| Range | True (enable noise correction) or False (disable noise correction) |
| Default Unit | Boolean |
| Initial S/W Revision | A.14.00 |

Do Spur Suppression

| | |
|----------------------|---|
| Example | CALC:FPOW:POW1:DEF "DoSpurSuppression=True" |
| Notes | <p>When measuring very low level signals, or when large out-of-band inputs are input into the analyzer, sometimes unwanted spurs and residuals can appear in the measured spectrum. Spur suppression is a method to help minimize the levels of these internally generated spurs and residuals.</p> <p>When spur suppression is enabled, the analyzer will automatically take two acquisitions using two different internal analog LO frequencies. The FFT spectrums from both acquisitions are combined by taking the minimum power between both traces on a per FFT bin basis. External signals will have the same amplitude for both traces and therefore will return the expected amplitudes. However, low level spurs and residuals generated internally to the analyzer tend to move to different FFT bins depending on the internal analog LO frequency used, and therefore tend to be suppressed using this spur suppression method.</p> <p>Because two acquisitions, rather than a single acquisition, are made when spur suppression is enabled, the measurement time will always be slower when spur suppression is enabled.</p> |
| Preset | False |
| Range | True (enable spur suppression) or False (disable spur suppression) |
| Default Unit | Boolean |
| Initial S/W Revision | A.14.00 |

Electronic Attenuator Bypass

| | |
|----------------------|--|
| Example | CALC:FPOW:POW1:DEF "ElecAttBypass =False" |
| Notes | The electronic attenuation bypass parameter allows the user to either utilize or bypass the electronic attenuator. The electronic attenuator is only available for frequencies up to 3.6 GHz. Set parameter to true when using frequencies above 3.6 GHz and set the parameter to false when using the preamp. |
| Preset | True |
| Range | True (bypass electronic attenuator) or False (use electronic attenuator) |
| Default Unit | Boolean |
| Initial S/W Revision | A.14.00 |

Electronic Attenuation

| | |
|---------|---|
| Example | CALC:FPOW:POW1:DEF "ElecAttenuation=10" |
| Notes | <p>Option EA3 is required.</p> <p>The electronic attenuation value parameter sets the amount of electrical attenuation from 0 to 24 dB (1 dB steps).</p> <p>Set "ElecAttBypass=False" to make sure the electronic attenuator path is enabled.</p> |
| Preset | 0 dB |
| Range | 0 - 24 dB (1 dB steps) |

| | |
|-------------------------|---------|
| Default Unit | dB |
| Initial S/W Revision | A.14.00 |

IF Gain

| | |
|-------------------------|--|
| Example | CALC:FPOW:POW1:DEF "IFGain=10" |
| Notes | The IF gain parameter allows the user to specify the gain at the IF stage anywhere from -6 to 16 dB (1 dB steps). This is an advanced feature, and for most cases this should remain at its default value of 0 dB. |
| Preset | 0 dB |
| Range | -6 - 16 dB (1 dB steps) |
| Default Unit | dB |
| Initial S/W Revision | A.14.00 |

IF Type

| | |
|-------------------------|---|
| Example | CALC:FPOW:POW1:DEF "IFType=B25M" |
| Notes | The IF type parameter allows the user to select between different IF paths. For example, if the signal is less than 25 MHz wide, then the user can select the B25M path to take advantage of additional filtering on this analog IF path. |
| Preset | B40M |
| Range | B10M, B25M, B40M |
| Initial S/W Revision | A.14.00 |

Include Power Spectrum

| | |
|-------------------------|---|
| Example | CALC:FPOW:POW1:DEF "IncludePowerSpectrum=True" |
| Notes | The power spectrum parameter allows the user to read data on the entire spectrum for diagnostic purposes. It is not recommended for production use. See CALC:FPOW:POW[n]:READ2? for details on the binary format of the response. |
| Preset | False |
| Range | True (return both channel power and full power spectrum) or False (returns only channel power) |
| Default Unit | Boolean |
| Initial S/W Revision | A.14.00 |

Mechanical Attenuation

| | |
|----------------------|---|
| Example | CALC:FPOW:POW1:DEF "MechAttenuation=10" |
| Notes | The mechanical attenuation value parameter sets the amount of mechanical attenuation anywhere from 0 to 70 dB (2 dB steps). |
| Preset | 0 dB |
| Range | 0 – 70 dB (2 dB steps) |
| Default Unit | dB |
| Initial S/W Revision | A.14.00 |

Preamp Mode

| | |
|----------------------|--|
| Example | CALC:FPOW:POW1:DEF "PreAmpMode=Low" |
| Notes | The license for the appropriate preamp is required. The preamp mode parameter specifies whether the preamps are being utilized. Low allows any preamps up to 3.6 GHz, and Full allows all licensed preamps. Set "ElecAttBypass=True" in order to utilize any preamps. |
| Preset | Off |
| Range | Off, Low, Full |
| Initial S/W Revision | A.14.00 |

Resolution Bandwidth Mode

| | |
|----------------------|--|
| Example | CALC:FPOW:POW1:DEF "PreAmpMode=Low" |
| Notes | The resolution bandwidth mode parameter allows the user to choose whether the RBW filter is automatically or manually set. The BestSpeed value minimizes measurement time, while the Narrowest value minimizes RBW size (minimum of two FFT bins per RBW). To manually specify an RBW, set this parameter to Explicit, and set the ResolutionBW parameter to the desired value. |
| Preset | BestSpeed |
| Range | BestSpeed, Narrowest, Explicit |
| Initial S/W Revision | A.14.00 |

Resolution Bandwidth

| | |
|---------|--|
| Example | CALC:FPOW:POW1:DEF "ResolutionBW=25e3" |
| Notes | The resolution bandwidth parameter sets the 3-dB bandwidth of the RBW filter. The ResolutionBWMode parameter must be set to Explicit in order to manually set the RBW. |

| | |
|----------------------|---------|
| Preset | 0 Hz |
| Default Unit | Hz |
| Initial S/W Revision | A.14.00 |

Trigger Delay

| | |
|----------------------|---|
| Example | CALC:FPOW:POW1:DEF "TriggerDelay=0.025" |
| Notes | The trigger delay parameter sets the time after an external trigger is detected until the measurement is performed. |
| Preset | 0 s |
| Range | 0 - 1 s |
| Default Unit | Seconds |
| Initial S/W Revision | A.14.00 |

Trigger Level

| | |
|----------------------|--|
| Example | CALC:FPOW:POW1:DEF "TriggerLevel=2" |
| Notes | The trigger level parameter sets the voltage value at which an external trigger is detected. |
| Preset | 1.2 V |
| Range | -5 to 5 V |
| Default Unit | Volts |
| Initial S/W Revision | A.14.00 |

Trigger Slope

| | |
|----------------------|--|
| Example | CALC:FPOW:POW1:DEF "TriggerSlope=Negative" |
| Notes | The trigger slope parameter indicates the direction of the edge trigger voltage for detection. |
| Preset | Positive |
| Range | Positive, Negative |
| Initial S/W Revision | A.14.00 |

Trigger Source

| | |
|-------------------------|---|
| Example | CALC:FPOW:POW1:DEF "TriggerSource=Ext1" |
| Notes | The trigger source parameter allows the user to choose between measurement's triggering freely or controlled by an external input. Ext1 and Ext2 correspond to Trigger 1 In and Trigger 2 In, respectively. |
| Preset | Free |
| Range | Free, Ext1, Ext2 |
| Initial S/W Revision | A.14.00 |

Trigger Timeout

| | |
|-------------------------|--|
| Example | CALC:FPOW:POW1:DEF "TriggerTimeout=0.1" |
| Notes | The trigger timeout parameter sets the time in which the analyzer will wait for a trigger before automatically performing the measurement. |
| Preset | 1 s |
| Range | 0 - 1 s |
| Default Unit | Seconds |
| Initial S/W Revision | A.14.00 |

Signal Input

| | |
|-------------------------|--|
| Example | CALC:FPOW:POW1:DEF "SignalInput=Fp50MHzCW" |
| Notes | The signal input parameter allows the user to select between using the main RF input or the internal analyzer reference CW signal of 50 MHz. |
| Preset | FpMainRf |
| Range | FpMainRf, Fp50MHzCW |
| Initial S/W Revision | A.14.00 |

Use Preselector

| | |
|---------|--|
| Example | CALC:FPOW:POW1:DEF "UsePreSelector=True" |
| Notes | The preselector parameter allows the user to either utilize or bypass the front end tunable filter at frequencies above 3.6 GHz. For frequencies below 3.6 GHz, the preselector is automatically bypassed, so you do not need to set this parameter to False in those cases. |
| Preset | False |
| Range | True (use preselector above 3.6 GHz), or False (preselector bypassed) |

| | |
|----------------------|---------|
| Default Unit | Boolean |
| Initial S/W Revision | A.14.00 |

Channel Bandwidth Array

| | |
|----------------------|---|
| Example | CALC:FPOW:POW1:DEF "Bandwidth=[3.84e6, 5e6, 3.84e6]" |
| Notes | The bandwidth parameter array defines the bandwidth of each channel that will be measured. All array parameters should have the same number of elements. Alternatively, if all the elements are the same value, a single number with no square brackets can be used to define the parameter. |
| Preset | [1e6] |
| Range | 0 to 40 MHz |
| Default Unit | Hz |
| Initial S/W Revision | A.14.00 |

Channel Filter Type Array

| | |
|----------------------|--|
| Example | CALC:FPOW:POW1:DEF "FilterType=[RRC, IBW, RRC]" |
| Notes | The filter type parameter allows the user to choose between an integration bandwidth (IBW) filter or a root-raised-cosine (RRC) filter. The integration bandwidth filter weighs all frequencies within the bandwidth equally. The root-raised-cosine filter has an associated shape parameter, defined by the FilterAlpha parameter. All array parameters should have the same number of elements. Alternatively, if all the elements are the same value, a single value with no square brackets can be used to define the parameter. |
| Preset | [IBW] |
| Range | IBW, RRC |
| Initial S/W Revision | A.14.00 |

Channel Filter Alpha Array

| | |
|---------|---|
| Example | CALC:FPOW:POW1:DEF "FilterAlpha=[0.5, 0.0, 0.5]" |
| Notes | The filter alpha parameter allows the user to adjust the alpha value associated with the root-raised-cosine (RRC) filter type. Set FilterType to RRC in order to utilize this parameter. All array parameters should have the same number of elements. Alternatively, if all the elements are the same value, a single number with no square brackets can be used to define the parameter. |
| Preset | [0.22] |
| Range | 0.0 - 1.0 |

| | |
|-------------------------|---------|
| Initial S/W Revision | A.14.00 |
|-------------------------|---------|

Channel Measurement Function Array

| | |
|-------------------------|---|
| Example | CALC:FPOW:POW1:DEF "Function=[BandPower, PeakPower, BandPower]" |
| Notes | <p>This parameter array defines what measurement is being made for each individually-specified channel:</p> <p>BandPower: Total power within the specified bandwidth of the channel (dBm)</p> <p>BandDensity: Total power density within the specified bandwidth of the channel (dBm/Hz)</p> <p>PeakPower: The peak power value within the specified bandwidth of the channel (dBm)</p> <p>PeakFrequency: The frequency which corresponds to the peak power value within the specified bandwidth of the channel. This frequency is relative to the center frequency (Hz)</p> <p>XdBBandwidth: The half power (-3.01 dB) bandwidth of the highest amplitude signal that resides within the channel (Hz), dB is configurable using XdBBandwidth parameter</p> <p>OccupiedBandwidth: The bandwidth at which 99% of the total power resides within the channel (Hz), percentage configurable using OccupiedBandwidthPercent parameter</p> <p>All array parameters should have the same number of elements. Alternatively, if all the elements are the same value, a single value with no square brackets can be used to define the parameter.</p> |
| Preset | [BandPower] |
| Range | BandPower, BandDensity, PeakPower, PeakFrequency, XdBBandwidth, OccupiedBandwidth |
| Initial S/W Revision | A.14.00 |

Channel Offset Frequency Array

| | |
|-------------------------|---|
| Example | CALC:FPOW:POW1:DEF "OffsetFrequency=[-5e6, 0, 5e6]" |
| Notes | <p>The offset frequency parameter array defines the difference between the center frequency to the center frequency of each channel.</p> <p>All array parameters should have the same number of elements.</p> |
| Preset | [0] |
| Range | 0 to 20 MHz |
| Default Unit | Hz |
| Initial S/W Revision | A.14.00 |

Channel Occupied Bandwidth Percent Array

| | |
|---------|---|
| Example | CALC:FPOW:POW1:DEF "OccupiedBandwidthPercent =[0.95, 0.95, 0.95]" |
| Notes | This parameter only applies for channels whose Function is set to OccupiedBandwidth. The occupied |

| | |
|-------------------------|--|
| | bandwidth percent parameter specifies the percent of total power in these channels. The valid range for this parameter is 0.0 to 1.0, where 1.0 represents 100%. The default for this parameter is 0.99, which will return the bandwidth that contains 99% of the total channel power. |
| Preset | [0.99] |
| Range | 0 - 1.0 |
| Initial S/W Revision | A.14.00 |

Channel x-dB Bandwidth Array

| | |
|-------------------------|---|
| Example | CALC:FPOW:POW1:DEF " XdBBandwidth =[-6.02, -3.01, -1.0]" |
| Notes | This parameter only applies for channels whose Function is set to XdBBandwidth. The X dB bandwidth parameter is used to specify the power relative to the peak channel power over which the bandwidth is calculated. The parameter value must be a negative number. |
| Preset | [-3.01] |
| Range | -200 to 0 dB |
| Default Unit | dB |
| Initial S/W Revision | A.14.00 |

Define Fast Power Measurement Query (Remote Command Only)

The DEFine? command is used to retrieve a list of all defined parameters in an ASCII string format

```

M All
o
d
e
-----
R :CALCulate:FPOWer:POWer[1,2,...,999]:DEFine?
e
m
o

Configure Fast Power Measurement (Remote Command Only)

The configure command begins hardware setup and returns immediately, with no acquisition made. This can be used in parallel with other hardware operations to effectively hide the hardware setup time.

| | |
|-----------------------|--|
| Mode | All |
| Remote Command | :CALCulate:FPOWER:POWer[1,2,...,999]:CONFigure |
| Example | :CALC:FPOW:POW1:CONF |
| Notes | Option FP2 is required. |
| Initial S/W Revision | A.14.00 |

Initiate Fast Power Measurement (Remote Command Only)

The INITiate command begins an acquisition and returns immediately. The results of the measurement can be retrieved using FETCh.

| | |
|-----------------------|---|
| Mode | All |
| Remote Command | :CALCulate:FPOWER:POWER[1,2,...,999]:INITiate |
| Example | :CALC:FPOW:POW1:INIT |
| Notes | Option FP2 is required. |
| Initial S/W Revision | A.14.00 |

Fetch Fast Power Measurement (Remote Command Only)

The FETCh command query is used to retrieve the results of an acquisition initiated by the INIT command. The returned results are in ASCII string format. The string begins and ends with quotation marks.

| | |
|-----------------------|--|
| Mode | All |
| Remote Command | :CALCulate:FPOWER:POWER[1,2,...,999]:FETCh? |
| Example | :CALC:FPOW:POW1:FETC? |
| Notes | Option FP2 is required. Returns m comma-separated ASCII values, where m corresponds to the number of bandwidths defined. 1. Declared function return in the 1st specified channel 2. Declared function return in the 2nd specified channel ... m. Declared function return in the last specified channel The INIT and FETC? command sequence performs the same functionality of a single CALC:FPOW:POW[n]? query. Units of the returned values are dependent on the Function parameter for each channel. |
| Initial S/W Revision | A.14.00 |

Execute Fast Power Measurement (Remote Command Only)

This command query is used as shorthand for an INIT command immediately followed by a FETC? command. The returned results are in ASCII string format. The string begins and ends with quotation marks.

| | |
|-----------------------|---------------------------------------|
| Mode | All |
| Remote Command | :CALCulate:FPOWER:POWER[1,2,...,999]? |
| Example | :CALC:FPOW:POW1? |

| | |
|----------------------|--|
| Notes | Option FP2 is required. See notes for Fast Power Fetch for return format. |
| Initial S/W Revision | A.14.00 |

Binary Read Fast Power Measurement (Remote Command Only)

This command query is used as shorthand for an INIT command immediately followed by a FETC? command. The returned results are in a binary format.

| | |
|-----------------------|--|
| Mode | All |
| Remote Command | :CALCulate:FPOWER:POWER[1,2,...,999]:READ? :CALCulate:FPOWER:POWER[1,2,...,999]:READ1? |
| Example | :CALC:FPOW:POW1:READ? :CALC:FPOW:POW1:READ1? |
| Notes | Option FP2 is required. Returns m 4 byte floating point binary values (Little-Endian), where m corresponds to the number of bandwidths defined. |
| Initial S/W Revision | A.14.00 |

Diagnostic Binary Read Fast Power Measurement (Remote Command Only)

This command query is used as shorthand for an INIT command immediately followed by a FETC? command. The returned results are in a binary format. This command is used primarily for diagnostic purposes to test for ADC overloads and to visibly inspect the spectrum.

| | |
|-----------------------|---|
| Mode | All |
| Remote Command | :CALCulate:FPOWER:POWER[1,2,...,999]:READ2? |
| Example | :CALC:FPOW:POW1:READ2? |
| Notes | Option FP2 is required. Note: Spectrum data is only returned if the IncludePowerSpectrum parameter is set to True. If IncludePowerSpectrum is False, the number of spectrum points will be zero (0). Units of the returned values are dependent on the Function parameter per channel (e.g. dBm for BandPower, Hz for PeakFrequency). Returns binary data (Little-Endian) that contains information on m amount of channels, along with ADC over range and full spectrum data. The following is the binary format of the response. Bandwidth Return Value 1. Number of channels specified, m [4 byte int] 2. Declared function result for the 1st specified channel [4 byte float] |

| | |
|--|---|
| | 3. Declared function result for the 2nd specified channel [4 byte float] |
| | ... |
| | (m + 1). Declared function result for the last (mth) specified channel [4 byte float] |
| | ADC Over Range |
| | 1. ADC over-range occurred (1: true, 0: false) [2 byte short] |
| | Spectrum Data |
| | 1. Number of points in the spectrum data, k [4 byte int] |
| | 2. Start frequency of spectrum data (Hz) [8 byte double] |
| | 3. Step frequency of spectrum data (Hz) [8 byte double] |
| | 4. FFT bin at 1st point (dBm) [4 byte float] |
| | 5. FFT bin at 2nd point (dBm) [4 byte float] |
| | ... |
| | (k + 3). FFT bin at last (kth) point (dBm) [4 byte float] |

| | |
|-------------|---------|
| Initial S/W | A.14.00 |
| Revision | |

Format Data: Numeric Data (Remote Command Only)

This command specifies the format of the trace data input and output. It specifies the formats used for trace data during data transfer across any remote port. It affects only the data format for setting and querying trace data for the :TRACe[:DATA], TRACe[:DATA]?, :CALCulate:DATA[n]? and FETCh:SANalyzer [n]? commands and queries.

| | |
|--------------------------------|---|
| Remote Command | :FORMat [:TRACe] [:DATA] ASCii INTeger, 32 REAL, 32 REAL, 64 :FORMat [:TRACe] [:DATA] ? |
| Notes | The query response is: ASCii: ASC,8 REAL,32: REAL,32 REAL,64: REAL,64 INTeger,32: INT,32 When the numeric data format is REAL or ASCii, data is output in the current Y Axis unit. When the data format is INTeger, data is output in units of m dBm (.001 dBm). The INT,32 format returns binary 32-bit integer values in internal units (m dBm), in a definite length block. |
| Dependencies | Sending a data format spec with an invalid number (for example, INT,48) generates no error. The analyzer simply uses the default (8 for ASCii, 32 for INTeger, 32 for REAL). Sending data to the analyzer which does not conform to the current FORMat specified, results in an error. Sending ASCII data when a definite block is expected generates message -161 "Invalid Block Data" and sending a definite block when ASCII data is expected generates message -121 "Invalid Character in Number". |
| Preset | ASCii |
| Backwards Compatibility | Note that the INT,32 format is only applicable to the command, TRACe:DATA. This preserves |

| | |
|----------------------|--|
| Notes | backwards compatibility for the Swept SA measurement. For all other commands/queries which honor FORMat:DATA, if INT,32 is sent the analyzer will behave as though it were set to REAL,32. |
| Initial S/W Revision | Prior to A.02.00 |

The specs for each output type follow:

ASCIi - Amplitude values are in ASCII, in the current Y Axis Unit, one ASCII character per digit, values separated by commas, each value in the form:

SX.YYYYYEsZZ

Where:

S = sign (+ or -)

X = one digit to left of decimal point

Y = 5 digits to right of decimal point

E = E, exponent header

s = sign of exponent (+ or -)

ZZ = two digit exponent

REAL,32 - Binary 32-bit real values in the current Y Axis Unit, in a definite length block.

REAL,64 - Binary 64-bit real values in the current Y Axis Unit, in a definite length block.

Format Data: Byte Order (Remote Command Only)

This command selects the binary data byte order for data transfer and other queries. It controls whether binary data is transferred in normal or swapped mode. This command affects only the byte order for setting and querying trace data for the :TRACe[:DATA], TRACe[:DATA]? , :CALCulate:DATA[n]? and FETCh:SANalyzer[n]? commands and queries.

By definition any command that says it uses FORMat:DATA uses any format supported by FORMat:DATA.

The NORMal order is a byte sequence that begins with the most significant byte (MSB) first, and ends with the least significant byte (LSB) last in the sequence: 1|2|3|4. SWAPped order is when the byte sequence begins with the LSB first, and ends with the MSB last in the sequence: 4|3|2|1.

| | |
|-----------------------|--|
| Remote Command | :FORMat:BORDER NORMal SWAPped :FORMat:BORDER? |
| Preset | NORMal |
| Initial S/W Revision | Prior to A.02.00 |

Meas Setup

Displays the setup menu keys that enable you to control the parameters for the current measurement.

| Key Path | Front-panel key |
|----------------------|------------------|
| Initial S/W Revision | Prior to A.02.00 |

Average/Hold Num

Sets the number of sweeps (average counts) that are averaged. After the specified number of sweeps, the averaging mode (terminal control) setting determines the averaging action.

| Key Path | Meas Setup |
|--------------------------|--|
| Mode | BASIC, PNOISE, WCDMA, C2K, GSM, WIMAXOFDMA, TDSCDMA, 1XEVD0, DVB, DTMB, ISDBT, CMMB, LTE, LTETDD, DCATV, WLAN, MSR,LTEATDD, LTEAFDD |
| Remote Command | [:SENSe] :WAVeform:AVErAge:COUNt <integer> [:SENSe] :WAVeform:AVErAge:COUNt? [:SENSe] :WAVeform:AVErAge [:STATe] OFF ON 0 1 [:SENSe] :WAVeform:AVErAge [:STATe] ? |
| Example | WAV:AVER:COUN 1001 WAV:AVER:COUN? WAV:AVER ON WAV:AVER? |
| Notes | You must be in a mode that includes the Waveform measurement to use this command. Use INSTRument:SElect to set the mode. |
| Preset | 10 OFF |
| State Saved | Saved in instrument state. |
| Min | 1 |
| Max | 20001 |
| Initial S/W Revision | Prior to A.02.00 |
| Modified at S/W Revision | A.03.00 |

Avg Mode

Enables you to set the averaging mode.

- When set to Exponential (Exp) the measurement averaging continues using the specified number of averages to compute each averaged value. The average is displayed at the end of each sweep.
- When set to Repeat, the measurement resets the average counter each time the specified number of averages is reached.

| Key Path | Meas Setup |
|--------------------------|---|
| Mode | BASIC, PNOISE, WCDMA, C2K, GSM, WIMAXOFDMA, TDSCDMA, 1XEVD0, DVB, DTMB, ISDBT, CMMB, LTE, LTETDD, DCATV, WLAN, MSR,LTEATDD, LTEAFDD |
| Remote Command | [:SENSe]:WAVeform:AVERAge:TCONtrol EXPonential REPeat [:SENSe]:WAVeform:AVERAge:TCONtrol? |
| Example | WAV:AVER:TCON REP WAV:AVER:TCON? |
| Notes | You must be in a mode that includes the Waveform measurement to use this command. Use INSTRument:SElect to set the mode. |
| Preset | EXPonential |
| State Saved | Saved in instrument state. |
| Range | Exp Repeat |
| Initial S/W Revision | Prior to A.02.00 |
| Modified at S/W Revision | A.03.00 |

Avg Type

Selects the type of averaging.

| Key Path | Meas Setup |
|--------------------------|---|
| Mode | BASIC, PNOISE, WCDMA, C2K, GSM, WIMAXOFDMA, TDSCDMA, 1XEVD0, DVB, DTMB, ISDBT, CMMB, LTE, LTETDD, DCATV, WLAN, MSR,LTEATDD, LTEAFDD |
| Remote Command | [:SENSe]:WAVeform:AVERAge:TYPE LOG RMS SCALar [:SENSe]:WAVeform:AVERAge:TYPE? |
| Example | WAV:AVER:TYPE RMS WAV:AVER:TYPE? |
| Preset | RMS |
| State Saved | Saved in instrument state. |
| Range | Pwr Avg(RMS) Log-Pwr Avg(Video) Voltage Avg |
| Initial S/W Revision | Prior to A.02.00 |
| Modified at S/W Revision | A.03.00 |

Avg Type Auto

When **Auto** is selected, the analyzer chooses the type of averaging. When one of the average types is selected manually, the analyzer uses that type regardless of other analyzer settings, and shows Man on the **Average Type** softkey.

| | |
|---------------------------------|---|
| Key Path | Meas Setup, Avg Type |
| Remote Command | [:SENSe] :WAVeform:AVERage:TYPE:AUTO [:STATe] ON OFF 1 0 [:SENSe] :WAVeform:AVERage:TYPE:AUTO [:STATe] ? |
| Example | WAV:AVER:TYPE:AUTO 0 WAV:AVER:TYPE:AUTO? |
| Couplings | Auto selects Power (RMS) averaging if a Marker Function (Marker Noise, Band/Intvl Power) is on. |
| Preset | ON |
| State Saved | Saved in instrument state. |
| Range | Auto Man |
| Modified at S/W Revision | A.14.00 |

Meas Time

Sets how long the measurement is performed. X Scale only changes the representation of the display.

| | |
|---------------------------------|--|
| Key Path | Meas Setup |
| Mode | BASIC, PNOISE, WCDMA, C2K, GSM, WIMAXOFDMA, TDSCDMA, 1XEVD0, DVB, DTMB, ISDBT, CMMB, LTE, LTETDD, DCATV, WLAN, MSR,LTEATDD, LTEAFDD |
| Remote Command | [:SENSe] :WAVeform:SWEep:TIME <time> [:SENSe] :WAVeform:SWEep:TIME? |
| Example | WAV:SWE:TIME 50 ms WAV:SWE:TIME? |
| Notes | Specifies and returns how long the measurement is performed. It is the time record length of the measurement waveform. The Max time may be reduced when the sample frequency is high due to the memory limitation. You must be in a mode that includes the Waveform measurement to use this command. Use INSTRument:SElect to set the mode. |
| Preset | All except the following list: 2.000000 ms LTEAFDD, LTEATDD: 10 ms LTETDD: 10 ms LTE: 10 ms |
| State Saved | Saved in instrument state. |
| Range | 1.000 (s to 100.00 s) |
| Min | 1.000 us |
| Max | 3200 s |
| Initial S/W Revision | Prior to A.02.00 |
| Modified at S/W Revision | A.03.00, A.14.00 |

Sample Rate

Enables you to set an arbitrary sample rate for the acquired data to be processed.

| Key Path | Meas Setup |
|--------------------------|---|
| Mode | BASIC |
| Remote Command | <code>[:SENSe] :WAVeform:SRATe <freq></code> <code>[:SENSe] :WAVeform:SRATe?</code> |
| Example | WAV:SRAT 1.3636 MHz |
| Notes | Command and query available when Option DP2, B40, or wider IF Bandwidth option is installed. For other configuration, only query is available. |
| Couplings | The coupling between Sample Rate and IF BW depends on Physics implementation. |
| Preset | 125.0 kHz |
| Min | 12.5 Hz |
| Max | <ul style="list-style-type: none"> • (For Option DP2, B40 or wider IF Bandwidth option) • Digital IF 10 MHz path: 12.5 MHz • Digital IF 25 MHz path: 31.25 MHz • Digital IF 40 MHz path: 50 MHz • Option B85 85 MHz path: 106.25 MHz • Option B1A 125 MHz path: 156.25 MHz • Option B1X 140 MHz path: 175 MHz • Option B1Y 160 MHz path: 200 MHz • Option B2X 140 MHz path: 300 MHz • Option B5X 160 MHz path: 300 MHz • (For all other configuration) • 10 MHz path: 15 MHz • Option B25 25 MHz path: 45 MHz |
| Modified at S/W Revision | 13.00 |

Meas Preset

Restores all the measurement parameters to their default values.

| Key Path | Meas Setup |
|-----------------------|---|
| Mode | BASIC, PNOISE, WCDMA, C2K, GSM, WIMAXOFDMA, TDSCDMA, 1XEVD0, DVB, DTMB, ISDBT, CMMB, LTE, LTEATDD, DCATV, WLAN, MSR, LTEATDD, LTEAFDD |
| Remote Command | <code>:CONFigure:WAVeform</code> |
| Example | CONF:WAV |
| Notes | Restore default values of all parameters. You must be in a mode that includes the Waveform measurement to use this command. Use INSTRument:SElect to set the mode. |

| | |
|--------------------------|------------------|
| Initial S/W Revision | Prior to A.02.00 |
| Modified at S/W Revision | A.03.00 |

Sample Period (Aperture) Setting (Remote Command Only)

Returns the time between samples (sample period or aperture).

| | |
|-----------------------|--|
| Mode | BASIC |
| Remote Command | [:SENSE] :WAVEform:APERture? |
| Example | WAV:APER? |
| Notes | Query only. |
| Couplings | Coupled to Sample Rate by the following equation. Sample Period = 1/(Sample Rate) |
| Preset | 1/(Sample Rate Default) |
| Min | 1/(Max Sample Rate) |
| Max | 1/(Min Sample Rate) |

Mode

See "Mode" on page 204

Mode Preset

Returns the active mode to a known state.

Mode Preset does the following for the currently active mode:

- Aborts the currently running measurement.
- Brings up the default menu for the mode, with no active function.
- Sets measurement Global settings to their preset values for the active mode only.
- Activates the default measurement.
- Brings up the default menu for the mode.
- Clears the input and output buffers.
- Sets Status Byte to 0.

Mode Preset does not:

- Cause a mode switch
- Affect mode persistent settings
- Affect system settings
- See "[How-To Preset](#)" on page 2463 for more information.

| Key Path | Front-panel key |
|--------------------------------------|---|
| Remote Command | :SYSTem:PRESet |
| Example | :SYST:PRES |
| Notes | *RST is preferred over :SYST : PRES for remote operation. *RST does a Mode Preset, as done by the :SYST:PRES command, and it sets the measurement mode to Single measurement rather than Continuous for optimal remote control throughput. Clears all pending OPC bits. The Status Byte is set to 0. |
| Couplings | A Mode Preset aborts the currently running measurement, activates the default measurement, and gets the mode to a consistent state with all of the default couplings set. |
| Backwards Compatibility Notes | In the X-Series, the legacy "Factory Preset" has been replaced with Mode Preset, which only presets the currently active mode, not the entire instrument. In the X-Series, the way to preset the entire instrument is by using System, Restore System Defaults All, which behaves essentially the same way as restore System Defaults does on ESA and PSA. There is also no "Preset Type" as there is on the PSA. There is a green Mode Preset front-panel key that does a Mode Preset and a white-with-green-letters User Preset front-panel key that does a User Preset. The old PRESet:TYPE command is ignored (without generating an error), and SYST:PRES without a parameter does a Mode Preset, which should cover most backward code compatibility issues. The settings and correction data under the Input/Output front-panel key (examples: Input Z Corr, Ext Amp Gain, etc.) are no longer part of any Mode, so they will not be preset by a Mode Preset. They are preset using Restore Input/Output Defaults, Restore System Defaults All. Note that because User Preset does a Recall State, and all of these settings are saved in State, they ARE recalled when using |

| | |
|----------------------|------------------|
| | User Preset. |
| Initial S/W Revision | Prior to A.02.00 |

How-To Preset

The table below shows all possible presets, their corresponding SCPI commands and front-panel access (key paths). Instrument settings depend on the current measurement context. Some settings are local to the current measurement, some are global (common) across all the measurements in the current mode, and some are global to all the available modes. In a similar way, restoring the settings to their preset state can be done within the different contexts.

Auto Couple - is a measurement local key. It sets all Auto/Man parameter couplings in the measurement to Auto. Any Auto/Man selection that is local to other measurements in the mode will not be affected.

Meas Preset - is a measurement local key. Meas Preset resets all the variables local to the current measurement except the persistent ones.

Mode Preset - resets all the current mode's measurement local and measurement global variables except the persistent ones.

Restore Mode Defaults - resets ALL the Mode variables (and all the Meas global and Meas local variables), including the persistent ones.

| Type Of Preset | SCPI Command | Front Panel Access |
|--------------------------------|--|--|
| Auto Couple | :COUPlE ALL | Auto Couple front-panel key |
| Meas Preset | :CONFIgure:<Measurement> | Meas Setup Menu |
| Mode Preset | :SYSTem:PRESet | Mode Preset (green key) |
| Restore Mode Defaults | :INSTRument:DEFault | Mode Setup Menu |
| Restore All Mode Defaults | :SYSTem:DEFault MODEs | System Menu; Restore System Default Menu |
| *RST | *RST | not possible (Mode Preset with Single) |
| Restore Input/Output Defaults | :SYSTem:DEFault INPut | System Menu; Restore System Default Menu |
| Restore Power On Defaults | :SYSTem:DEFault PON | System Menu; Restore System Default Menu |
| Restore Alignment Defaults | :SYSTem:DEFault ALIGn | System Menu; Restore System Default Menu |
| Restore Miscellaneous Defaults | :SYSTem:DEFault MISC | System Menu; Restore System Default Menu |
| Restore All System Defaults | :SYSTem:DEFault [ALL] :SYSTem:PRESet:PERSistent | System Menu; Restore System Default Menu |
| User Preset | :SYSTem:PRESet:USER | User Preset Menu |
| User Preset All Modes | :SYSTem:PRESet:USER:ALL | User Preset Menu |

Peak Search

Places the selected marker on the trace point with the maximum y-axis value for that marker's trace and accesses a menu that enables you to select to do a next peak or minimum peak search.

| Key Path | Front-panel key |
|--------------------------|--|
| Mode | BASIC, PNOISE, WCDMA, C2K, GSM, WIMAXOFDMA, TDSCDMA, 1XEVD0, DVB, DTMB, ISDBT, CM MB, LTE, LTETDD, DCATV, WLAN, MSR,LTEATDD, LTEAFDD |
| Remote Command | :CALCulate:WAVEform:MARKer[1] 2 ... 12:MAXimum |
| Example | CALC:WAV:MARK2:MAX |
| Notes | You must be in a mode that includes the Waveform measurement to use this command. Use INSTRument:SElect to set the mode. |
| Initial S/W Revision | Prior to A.02.00 |
| Modified at S/W Revision | A.03.00 |

Next Peak

Moves the selected marker to the next highest local maximum with a value less than that of the current marker.

| Key Path | Peak Search |
|--------------------------|--|
| Mode | BASIC, PNOISE, WCDMA, C2K, GSM, WIMAXOFDMA, TDSCDMA, 1XEVD0, DVB, DTMB, ISDBT, CM MB, LTE, LTETDD, DCATV, WLAN, MSR,LTEATDD, LTEAFDD |
| Remote Command | :CALCulate:WAVEform:MARKer[1] 2 ... 12:MAXimum:NEXT |
| Example | CALC:WAV:MARK:MAX:NEXT |
| Notes | You must be in a mode that includes the Waveform measurement to use this command. Use INSTRument:SElect to set the mode. |
| Initial S/W Revision | Prior to A.02.00 |
| Modified at S/W Revision | A.03.00 |

Min Search

Moves the selected marker to the minimum y-axis value on the current trace.

| Key Path | Peak Search |
|----------------|--|
| Mode | BASIC, PNOISE, WCDMA, C2K, GSM, WIMAXOFDMA, TDSCDMA, 1XEVD0, DVB, DTMB, ISDBT, CM MB, LTE, LTETDD, DCATV, WLAN, MSR,LTEATDD, LTEAFDD |
| Remote Command | :CALCulate:WAVEform:MARKer[1] 2 ... 12:MINimum |
| Example | CALC:WAV:MARK:MIN |
| Notes | You must be in a mode that includes the Waveform measurement to use this command. Use INSTRument:SElect to set the mode. |

15 Waveform Measurement
Print

Print

See ["Print " on page 277](#)

Quick Save

The Quick Save front-panel key repeats the most recent save that was performed from the Save menu, with the following exceptions:

- Register saves are not remembered as Saves for the purpose of the Quick Save function
- If the current measurement does not support the last non-register save that was performed, an informational message is generated, “File type not supported for this measurement”

Quick Save repeats the last type of qualified save (that is, a save qualified by the above criteria) in the last save directory by creating a unique filename using the Auto File Naming algorithm described below.

If Quick Save is pressed after startup and before any qualified Save has been performed, the Quick Save function performs a Screen Image save using the current settings for Screen Image saves (current theme, current directory), which then becomes the “last save” for the purpose of subsequent Quick Saves.

The Auto File Naming feature automatically generates a file name for use when saving a file. The filename consists of a prefix and suffix separated by a dot, as is standard for the Windows® file system. A default prefix exists for each of the available file types:

| Type | Default Prefix | Menu |
|-----------------------|----------------|-----------------|
| State | State_ | (Save/Recall) |
| Trace + State | State_ | (Save/Recall) |
| Screen | Screen_ | (Save/Recall) |
| Amplitude Corrections | Ampcor_ | (Import/Export) |
| Traces | Trace_ | (Import/Export) |
| Limit Lines | LLine_ | (Import/Export) |
| Measurement Result | MeasR_ | (Import/Export) |
| Capture Buffer | CapBuf_ | (Import/Export) |

A four digit number is appended to the prefix to create a unique file name. The numbering sequence starts at 0000 within each Mode for each file type and updates incrementally to 9999, then wraps to 0000 again. It remembers where it was through a Mode Preset and when leaving and returning to the Mode. It is reset by Restore Misc Defaults and Restore System Defaults and subsequent running of the instrument application. So, for example, the first auto file name generated for State files is State_0000.state. The next is State_0001, and so forth.

One of the key features of Auto File Name is that we guarantee that the Auto File Name will never conflict with an existing file. The algorithm looks for the next available number. If it gets to 9999, then it looks for holes. If it find no holes, that is no more numbers are available, it gives an error.

For example, if when we get to State_0010.state there is already a State_0010.state file in the current directory, it advances the counter to State_0011.state to ensure that no conflict will exist (and then it verifies that State_0011.state also does not exist in the current directory and advances again if it does, and so forth).

If you enter a file name for a given file type, then the prefix becomes the filename you entered instead of the default prefix, followed by an underscore. The last four letters (the suffix) are the 4-digit number.

For example, if you save a measurement results file as “fred.csv”, then the next auto file name chosen for a measurement results save will be fred_0000.csv.

NOTE

Although 0000 is used in the example above, the number that is used is actually the current number in the Meas Results sequence, that is, the number that would have been used if you had not entered your own file name.

NOTE

If the filename you entered ends with _dddd, where d=any number, making it look just like an auto file name, then the next auto file name picks up where you left off with the suffix being dddd + 1.

| | |
|----------------------|--|
| Key Path | Front-panel key |
| Notes | No remote command for this key specifically. |
| Initial S/W Revision | Prior to A.02.00 |

Recall

The **Recall** menu lets you choose what you want to recall, and where you want to recall it from. Among the types of files you can recall are **States and Traces**. In addition, an **Import (Data)** option lets you recall a number of data types stored in CSV files (as used by Excel and other spreadsheet programs).

The default paths for Recall are data type dependent and are the same as for the Save key.

| Key Path | Front-panel key |
|-------------------------------|--|
| Notes | <p>No remote command for this key specifically, but the :MMEM:LOAD command is available for specific file types. An example is :MMEM:LOAD:STATe <filename>.</p> <p>If you try to recall a State file for a mode that is not licensed or not available in the instrument, an error message will occur and the state will not change.</p> |
| Backwards Compatibility Notes | <p>In legacy analyzers, it was possible to load a state without affecting the trace data, limit lines or correction data. Similarly (since User Preset is actually loading a state), it was possible to do a User Preset without affecting the trace data, limit lines or correction data.</p> <p>In the X-Series, “state” always includes all of this data; so whenever state is loaded, all of the traces, limit lines and corrections are affected. Although this differs from previous behavior, it is desirable behavior, and should not cause adverse issues for users.</p> |
| Backwards Compatibility Notes | <p>Recall for the X-Series supports backward compatibility in the sense that you can recall a state file from any X-Series model number and any version of X-Series software. This is only possible if part of the recalling process goes through a limiting step after recalling the mode settings, at least for settings that may vary with version number, model number, option and license differences. If you try to recall a state file onto an instrument with less capability than what was available on the instrument during the save, the recall will ignore the state it doesn't support and it will limit the recalled setting to what it allows.</p> <p>Example: if the saved state includes preamp ON, but the recalling instrument does not have a preamp; the preamp is limited to OFF. Conversely, if you save a state without a preamp, the preamp is OFF in the state file. When this saved file is recalled on an instrument with a licensed preamp, the preamp is changed to OFF. Another example is if the saved state has center frequency set to 20 GHz, but the instrument recalling the saved state is a different model and only supports 13.5 GHz. In this case, the center frequency is limited along with any other frequency based settings. Since the center frequency can't be preserved in this case, the recall limiting tries to at least preserve span to keep the measurement setup as intact as possible.</p> <p>It may be appropriate to issue a warning if the state is limited on the recall; warnings do not go out to SCPI so this would only affect the manual user.</p> <p>Note that there is no state file compatibility outside of the X-Series. For example, you cannot recall a state file from ESA or PSA.</p> |
| Initial S/W Revision | Prior to A.02.00 |

State

The **Recall State** menu lets you choose a register or file from which to recall the state.

The content of a state file includes all of the settings and data required to return the analyzer as closely as possible to the Mode it was in, with the exact settings that were in place, when the save occurred. The Mode settings in each state file include the settings that are affected by Mode Preset, as well as the

additional settings affected by Restore Mode Defaults; all of the Mode's settings. In addition, all of the settings of the **Input/Output** system are included, even though they are outside of the Mode's state, because they are needed to restore the complete setup. Persistent System settings (for example, GPIB address) are not affected by either a Mode Preset or Restore Mode Defaults, nor are they included in a saved State file.

Since each state file is only for one Mode, the settings for other Modes are unaffected when it is loaded. **Recall State** will cause a mode switch if the state being recalled is not from the current active mode.

After the recall completes, the message "File <filename> recalled" or "Recalled State Register <register number>" is displayed.

For rapid recalls, the State menu lists 16 registers that you can choose from to recall. Pressing a Register key initiates the recall. You can also select a file from which to recall.

The default path for all State Files is:

My Documents\<mode name>\state

where <mode name> is the parameter used to select the mode with the INST:SEL command (for example, SA for the Spectrum Analyzer).

See "[More Information](#)" on page 2473.

| Key Path | Recall |
|----------------|--|
| Mode | All |
| Remote Command | :MMEMory:LOAD:STATe <filename> |
| Example | :MMEM:LOAD:STAT "myState.state" This recalls the file myState.state on the default path |
| Example | MMEM:LOAD:STAT "MyStateFile.state" This loads the state file data (on the default file directory path) into the instrument state. |
| Notes | <p>When you pick a file to recall, the analyzer first verifies that the file is recallable in the current instrument by checking the software version and model number of the instrument. If everything matches, a full recall proceeds by aborting the currently running measurement, clearing any pending operations, and then loading the State from the saved state file. You can open state files from any mode, so recalling a State file switches to the mode that was active when the save occurred. After switching to the mode of the saved state file, mode settings and data (if any for the mode) are loaded with values from the saved file. The saved measurement of the mode becomes the newly active measurement and the data relevant to the measurement (if there is any) is recalled.</p> <ul style="list-style-type: none"> • If there is a mismatch between file version or model number or instrument version or model number, the recall function tries to recall as much as possible and returns a warning message. It may limit settings that differ based on model number, licensing or version number. <p>After recalling the state, the Recall State function does the following:</p> <ul style="list-style-type: none"> • Makes the saved measurement for the mode the active measurement. • Clears the input and output buffers. • Status Byte is set to 0. • Executes a *CLS <p>If the file specified is empty an error is generated. If the specified file does not exist, another error is generated. If there is a mismatch between the file and the proper file type, an error is generated. If</p> |

| | |
|-------------------------------------|---|
| | there is a mismatch between file version or model number or instrument version or model number, a warning is displayed. Then it returns to the State menu and File Open dialog goes away. After the Recall, the analyzer exits the Recall menu and returns to the previous menu. |
| Backwards Compatibility SCPI | :MMEMory:LOAD:STATe 1,<filename> For backwards compatibility, the above syntax is supported. The "1" is simply ignored. |
| Initial S/W Revision | Prior to A.02.00 |

More Information

In measurements that support saving Traces, for example, Swept SA, the Trace data is saved along with the State in the State file. When recalling the State, the Trace data is recalled as well. Traces are recalled exactly as they were stored, including the writing mode and update and display modes. If a Trace was updating and visible when the State was saved, it will come back updating and visible, and its data will be rewritten right away. When you use State to save and recall traces, any trace whose data must be preserved should be placed in View or Blank mode before saving.

The following table describes the Trace Save and Recall possibilities:

| | | |
|---|--|--|
| You want to recall state and one trace's data, leaving other traces unaffected. | Save Trace+State from 1 trace. Make sure that no other traces are updating (they should all be in View or Blank mode) when the save is performed. | On Recall, specify the trace you want to load the one trace's data into. This trace will load in View. All other traces' data will be unaffected, although their trace mode will be as it was when the state save was performed. |
| You want to recall all traces | Save Trace+State from ALL traces. | On Recall, all traces will come back in View (or Blank if they were in Blank or Background when saved) |
| You want all traces to load exactly as they were when saved. | Save State | On recall, all traces' mode and data will be exactly as they were when saved. Any traces that were updating will have their data immediately overwritten. |

From File...

When you press "From File", the analyzer brings up a Windows dialog and a menu entitled "File Open." This menu allows you to navigate to the various fields in the Windows dialog without using a keyboard or mouse. The **Tab** and **Arrow** keys can also be used for dialog navigation.

Listed below are the functions of the various fields in the dialog, and the corresponding softkeys:

Open

Performs the recall of the specified file. While the recall is being performed, the floppy icon appears briefly in the Meas bar.

File/Folder List

Enables you to navigate to the center of the dialog that contains the list of files and folders. Once here you can get information about the file and use the tab keys to navigate to the other fields in the dialog, such as Look In.

Look In

The **Look In** field shows the path from which the file will be recalled and allows you to change the path using the up and down arrow keys to navigate to other paths; the Enter key to open a directory; and the Backspace key to go back one directory. The **Look In field** first uses the last path from the Save As dialog **Save In:** path for that same file type. There is no softkey for directly navigating to the Look In field, but you can use the left tab to get here from the File/Folder List.

User specified paths are remembered when you leave and return to a Mode and are reset back to the default using **Restore Mode Defaults**.

Sort

Accesses a menu that enables you to sort the files within the File Open dialog. Only one sorting type can be selected at a time and the sorting happens immediately. The sorting types are **By Date**, **By Name**, **By extension**, and **By Size**.

Files of Type

This field shows the file suffix for the type of file you have selected to recall. For example, if you navigated here while recalling State, "Mode state (*.state)" is in the field. If you navigated here while recalling Trace, ""Mode state (*.trace)" is in the field. If you navigated here while importing a trace data file, "Trace Data (*.csv)" is in the field. For some file types, there is more than one choice in the dropdown menu, which you can select by using the up and down arrow keys and Enter.

Up One Level

This key corresponds to the icon of a folder with the up arrow that is in the tool bar of the dialog. When pressed, it causes the file and folder list to navigate up one level in the directory structure. The Backspace key does the same thing.

Cancel

This key corresponds to the **Cancel** selection in the dialog. It causes the current **Open** request to be cancelled. The ESC key does the same thing.

| Key Path | Recall, State |
|----------------------|---|
| Notes | Brings up the Open dialog for recalling a State Save Type |
| Initial S/W Revision | Prior to A.02.00 |

Edit Register Names

You may enter a custom name on any of the Register keys, to help you remember what you are using that state to save. To do this, press the **Edit Register Names** key, choose the register whose name you wish to edit, and then enter the desired label using the Alpha Editor or an external PC keyboard.

The maximum number of characters that can be added is 30. In most cases, 30 characters will fit on two lines of the key.

For more information and the SCPI command, see Edit Register Names under the **Save, State** function.

| Key Path | Recall, State |
|----------------------|---|
| Mode | All |
| Dependencies | N9060A-7FP or N9060B-2FP license required to edit the register names. When the feature is not licensed, sending the SCPI command generates an error, -221, "Settings conflict;Option not available" |
| Initial S/W Revision | A.11.00 |

Register 1 thru Register 16

Selecting any one of these register keys causes the State of the mode from the specified Register to be recalled. Each of the register keys annotates whether it is empty or at what date and time it was last

modified. In addition, you can use the **Edit Register Names** key under **Save, State** to enter custom names for each register.

Registers are shared by all modes, so recalling from any one of the registers will cause a mode switch to the mode that was active when the save to the Register occurred.

Although these 16 registers are the only registers available from the front panel, there are 128 state registers available in the instrument. Registers 17–128 are only available from the SCPI interface, using the *RCL command.

After the recall completes, the message "Register <register number> recalled" appears in the message bar. If you are in the Spectrum Analyzer Mode, and you are recalling a register that was saved in the Spectrum Analyzer Mode, then after the recall, you will still be in the Recall Register menu. If the Recall causes you to switch modes, then after the Recall, you will be in the Frequency menu.

If a requested register is empty an error is generated.

| | |
|---------------------------------|---|
| Key Path | Recall, State |
| Example | *RCL 1 |
| Range | 1–16 from front panel, 1–128 from SCPI |
| Readback | Date and time with seconds resolution are displayed on the key OR A custom name of up to 30 characters entered using the Save, State, Edit Register Names key OR “(empty)” if no prior save operation has been performed to this register. |
| Initial S/W Revision | Prior to A.02.00 |
| Modified at S/W Revision | Prior to A.11.00 |

Register 1 thru Register 16

Selecting any one of these register keys causes the State of the mode from the specified Register to be recalled. Each of the register keys annotates whether it is empty or at what date and time it was last modified. In addition, you can use the **Edit Register Names** key under **Save, State** to enter custom names for each register.

Registers are shared by all modes, so recalling from any one of the registers will cause a mode switch to the mode that was active when the save to the Register occurred.

Although these 16 registers are the only registers available from the front panel, there are 128 state registers available in the instrument. Registers 17–128 are only available from the SCPI interface, using the *RCL command.

After the recall completes, the message "Register <register number> recalled" appears in the message bar. If you are in the Spectrum Analyzer Mode, and you are recalling a register that was saved in the Spectrum Analyzer Mode, then after the recall, you will still be in the Recall Register menu. If the Recall causes you to switch modes, then after the Recall, you will be in the Frequency menu.

If a requested register is empty an error is generated.

| | |
|--------------------------|--|
| Key Path | Recall, State |
| Example | *RCL 1 |
| Range | 1-16 from front panel, 1-128 from SCPI |
| Readback | Date and time with seconds resolution are displayed on the key OR A custom name of up to 30 characters entered using the Save, State,Edit Register Names key OR “(empty)” if no prior save operation has been performed to this register. |
| Initial S/W Revision | Prior to A.02.00 |
| Modified at S/W Revision | Prior to A.11.00 |

Sequences

These keys allow you to import a Tab separated or .txt file that will automatically setup all the parameters required for building a Sequence. The parameters will automatically be loaded into the Stated Sequencer.

Once selected, in order to import the selected Sequence Type you must select the Open key in the Source Sequence menu.

| | |
|-----------------------|--|
| Key Path | Recall, Sequences |
| Mode | All |
| Remote Command | :MMEMory:LOAD:SEQuences: SLIS ALIS SAALIS "MySequence.txt" |
| Example | :MMEM:LOAD:SEQ:SLIS "MySequence.txt" |
| Notes | Available file types are: –CSV (Comma delimited) (*.csv) –Text (Tab delimited) (*.txt) |
| Initial S/W Revision | A.05.00 |

Source Sequence

The list of parameters, that configure steps, that makes up a sequence for the Source.

The Source sequence is a sequence of flexible configurable steps that can be set anywhere in the instruments frequency range.

| | |
|----------------------|--------------------------------------|
| Key Path | Recall, Sequences |
| Example | :MMEM:LOAD:SEQ:SLIS "MySequence.txt" |
| Dependencies | Only available in XOBT |
| Initial S/W Revision | A.05.00 |

Open...

When you press “Open”, the analyzer brings up a Windows dialog and a menu entitled “**File Open.**” This menu allows you to navigate to the various fields in the Windows dialog without using a keyboard or mouse. The **Tab** and **Arrow** keys can also be used for dialog navigation.

See "[From File...](#)" on page 2473 in **Recall, State**, for a full description of this dialog and menu.

| | |
|----------------------|--|
| Key Path | Recall, Data |
| Notes | The key location is mode-dependent and will vary. Brings up Open dialog for recalling a <mode specific> Save Type |
| Initial S/W Revision | Prior to A.02.00 |

Data (Import)

Importing a data file loads data that was previously saved from the current measurement or from other measurements and/or modes that produce compatible data files. The Import Menu only contains Data Types that are supported by the current measurement.

Since the commonly exported data files are in .csv format, the data can be edited by the user prior to importing. This allows you to export a data file, manipulate the data in Excel (the most common PC Application for manipulating .csv files) and then import it.

Importing Data loads measurement data from the specified file into the specified or default destination, depending on the data type selected. Selecting an Import Data menu key will not actually cause the importing to occur, since the analyzer still needs to know from where to get the data. Pressing the Open key in this menu brings up the Open dialog and Open menu that provides you with the options from where to recall the data. Once a filename has been selected or entered in the Open menu, the recall occurs as soon as the Open button is pressed.

| | |
|----------------------|--|
| Key Path | Recall |
| Mode | All |
| Notes | The menu is built from whatever data types are available for the mode. Some keys will be missing completely, so the key locations in the sub-menu will vary. No SCPI command directly controls the Data Type that this key controls. The Data Type is included in the MMEM:LOAD commands. |
| Dependencies | If a file type is not used by a certain measurement, it is grayed out for that measurement. The key for a file type will not show at all if there are no measurements in the Mode that support it. |
| Preset | Is not affected by Preset or shutdown, but is reset during Restore Mode Defaults |
| Readback | The data type that is currently selected |
| Initial S/W Revision | Prior to A.02.00 |

Masks

This key enables you to recall a preset mask file from the list. It is only available in SEM measurement under the Data menu: Limit Mask. Limit Mask enables setting a preset limit mask for 802.11p 5MHz and 10MHz system.

You cannot change or create the preset mask file since it is a binary file. This key is valid for the Spectrum Emission Mask measurement.

File location: "My Documents\WLAN\data.masks"

Note that "**My Documents**" is an alias to a directory and its location depends on which user is logged in. At XSA start up, all of the limit mask files in the current user's "My Documents\WLAN\data.masks" directory are overwritten.

File type: Binary

Filename:

11p_5MHz_A.mask

11p_5MHz_B.mask

11p_5MHz_C.mask

11p_5MHz_D.mask

11p_10MHz_A.mask

11p_10MHz_B.mask

11p_10MHz_C.mask

11p_10MHz_D.mask

File extension: .mask

Selecting OPEN under the Import Data menu, opens the above directory enabling you to select a mask file.

Example:

File Location: My Documents/WLAN/data/masks

File Name: 11p_5MHz_A.mask

| | |
|--------------------------|----------------------------------|
| parameter_table_23.52557 | 52.93253 |
| Key Path | Recall, Data |
| Mode | WLAN |
| Remote Command | MMEMory:LOAD:MASK <string> |
| Example | MMEM:LOAD:MASK "11p_5MHz_A.mask" |
| Initial S/W Revision | A.11.00 |
| Help Map ID | 45559 |

Capture Buffer

Capture buffer functionality is only available when measurement is Mod Accuracy and radio standard is not 802.11ac 80+80MHz. The captured data is raw data which is not processed.

| | |
|------------------------------|---|
| parameter_table_ 23.52557 | 52.93253 |
| Key Path | Recall, Data |
| Mode | WLAN |
| Example | MMEM:LOAD:CAPT "MyCaptureData.bin" This loads the file of capture data (on the default file directory path) into the instrument. |
| Dependencies | Capture buffer data is only available when measurement is Mod Accuracy and radio standard is not 802.11ac 80+80MHz. In other situation, this key is grayed out. |
| Initial S/W Revision | A.11.00 |
| Help Map ID | 45560 |

Open...

When you press "Open", the analyzer brings up a Windows dialog and a menu entitled "File Open." This menu allows you to navigate to the various fields in the Windows dialog without using a keyboard or mouse. The **Tab** and **Arrow** keys can also be used for dialog navigation.

See "[From File...](#)" on page 2473 in **Recall, State**, for a full description of this dialog and menu.

| | |
|----------------------|--|
| Key Path | Recall, Data |
| Notes | The key location is mode-dependent and will vary. Brings up Open dialog for recalling a <mode specific> Save Type |
| Initial S/W Revision | Prior to A.02.00 |

Restart

The Restart function restarts the current sweep, or measurement, or set of averaged/held sweeps or measurements. If you are Paused, pressing Restart does a Resume.

The Restart function is accessed in several ways:

- Pressing the Restart key
- Sending the remote command INIT:IMMEDIATE
- Sending the remote command INIT:RESTART

See "[More Information](#)" on page 2481

| Key Path | Front-panel key |
|-------------------------------|--|
| Remote Command | :INITiate[:IMMEDIATE] :INITiate:RESTART |
| Example | :INIT:IMM :INIT:REST |
| Notes | :INITiate:RESTART and :INITiate:IMMEDIATE perform exactly the same function. |
| Couplings | Resets average/hold count k. For the first sweep overwrites all active (update=on) traces with new current data. For application modes, it resets other parameters as required by the measurement. |
| Status Bits/OPC dependencies | This is an Overlapped command. The STATUS:OPERation register bits 0 through 8 are cleared. The STATUS:QUESTIONable register bit 9 (INTEgrity sum) is cleared. The SWEEPING bit is set. The MEASURING bit is set. |
| Backwards Compatibility Notes | For Spectrum Analysis mode in ESA and PSA, the Restart hardkey and the INITiate:RESTART command restart trace averages (displayed average count reset to 1) for a trace in Clear Write , but did not restart Max Hold and Min Hold . In the X-Series, the Restart hardkey and the INITiate:RESTART command restart not only Trace Average , but MaxHold and MinHold traces as well. For wireless comms modes in ESA and PSA, the Restart hardkey and the INITiate:RESTART command restart every measurement, which includes all traces and numeric results. There is no change to this operation. |
| Initial S/W Revision | Prior to A.02.00 |

More Information

The **Restart** function first aborts the current sweep/measurement as quickly as possible. It then resets the sweep and trigger systems, sets up the measurement and initiates a new data measurement sequence with a new data acquisition (sweep) taken once the trigger condition is met.

If the analyzer is in the process of aligning when **Restart** is executed, the alignment finishes before the restart function is performed.

Even when set for Single operation, multiple sweeps may be taken when Restart is pressed (for example, when averaging/holding is on). Thus when we say that **Restart** "restarts a measurement," we may mean:

- It restarts the current sweep
- It restarts the current measurement
- It restarts the current set of sweeps if any trace is in Trace Average, Max Hold or Min Hold
- It restarts the current set of measurements if Averaging, or Max Hold, or Min Hold is on for the measurement
- depending on the current settings.

With **Average/Hold Number** (in **Meas Setup** menu) set to 1, or Averaging off, or no trace in Trace Average or Hold, a single sweep is equivalent to a single measurement. A single sweep is taken after the trigger condition is met; and the analyzer stops sweeping once that sweep has completed. However, with **Average/Hold Number** >1 and at least one trace set to **Trace Average, Max Hold, or Min Hold (SA Measurement)** or **Averaging on (most other measurements)**, multiple sweeps/data acquisitions are taken for a single measurement. The trigger condition must be met prior to each sweep. The sweep is stopped when the average count k equals the number N set for **Average/Hold Number**. A measurement average usually applies to all traces, marker results, and numeric results; but sometimes it only applies to the numeric results.

Once the full set of sweeps has been taken, the analyzer will go to idle state. To take one more sweep without resetting the average count, increment the average count by 1, by pressing the step up key while **Average/Hold Number** is the active function, or sending the remote command `CALC:AVER:TCON UP`.

Save

The **Save** menu lets you choose what you want to save and where you want to save it. Among the types of files you can save are **States**, **Traces**, and **Screen Images**. In addition, an **Export (Data)** option lets you save a number of data types as CSV files for easy import into Excel and other spreadsheet programs.

| | |
|----------------------|---|
| Key Path | Front-panel key |
| Mode | All |
| Notes | No remote command for this key specifically, but the :MMEM:STORe command is available for specific file types. An example is :MMEM:STOR:STATe <filename>. |
| Initial S/W Revision | Prior to A.02.00 |

State

The Save State menu lets you choose a register or file for saving the state.

The content of a state file includes all of the settings and data required to return the analyzer as closely as possible to the Mode it was in, with the exact settings which were in place, when the save occurred. The Mode settings in each state file include the settings that are affected by Mode Preset, as well as the additional settings affected by Restore Mode Defaults; all of the Mode's settings. In addition, all of the settings of the **Input/Output** system are included, even though they are outside of the Mode's state, because they are needed to restore the complete setup. Persistent **System** settings (for example, Verbose SCPI) are not affected by either Mode Preset or Restore Mode Defaults, nor are they included in a saved State file.

After the save completes, the message "File <filename> saved" or "State Register <register number> saved" is displayed.

For rapid saving, the State menu lists 16 registers to save to. Pressing a Register key initiates the save. You can also select a file to save to.

The default path for all State Files is:

My Documents\<>mode name>\state

where <mode name> is the parameter used to select the mode with the INST:SEL command (for example, SA for the Spectrum Analyzer).

| | |
|----------------|---|
| Key Path | Save |
| Mode | All |
| Remote Command | :MMEMory:STORe:STATe <filename> |
| Example | MMEM:STOR:STATe "MyStateFile.state" This stores the current instrument state data in the file MyStateFile.state in the default directory. |
| Notes | Both single and double quotes are supported for any filename parameter over remote. After saving to a register, that register's menu key is updated with the date the time, unless a custom label has been entered for that key. After saving to a register, you remain in the Save State menu, so that you can see the Register key |

update. After saving to a file, the analyzer automatically returns to the previous menu and any Save As dialog goes away.

| | |
|-------------------------------------|-----------------------------------|
| Backwards Compatibility SCPI | :MMEMory:STORe:STATe 1,<filename> |
| Initial S/W Revision | Prior to A.02.00 |

To File . . .

When you press “To File”, the analyzer brings up a Windows dialog and a menu entitled “Save As.” This menu allows you to navigate to the various fields in the Windows dialog without using a keyboard or mouse. The **Tab** and **Arrow** keys can also be used for dialog navigation.

The Listed below

are the functions of the various fields in the dialog, and the corresponding softkeys:

Save

Performs the save to the specified file of the selected type. If the file already exists, a dialog will appear that allows you to replace the existing file by selecting **OK**, or you can Cancel the request. If you select OK, the file will be overwritten. Using the C: drive is strongly discouraged, since it runs the risk of being overwritten during an instrument software upgrade.

While the save is being performed, the floppy icon appears briefly in the Meas bar.

File/Folder List

Enables you to navigate to the center of the dialog that contains the list of files and folders. Once here you can get information about the file and use the tab keys to navigate to the other fields in the dialog, such as Save In.

Save In

The Save In field shows the path to which the file will be saved and allows you to change the path using the up and down arrow keys to navigate to other paths; the Enter key to open a directory; and the Backspace key to go back one directory. The **Save In field** defaults to the default path for this type of file and remembers the last path you used to save this type of file. There is no softkey for directly navigating to the Save In field but you can use left tab to get here from the File/Folder List.

User specified paths are remembered when you leave and return to a Mode and are reset back to the default using **Restore Mode Defaults**.

File Name

The **File Name** field is initially loaded with an automatically generated filename specific to the appropriate Save Type. The automatically generated filename is guaranteed not to conflict with any filename currently in the directory. You may replace or modify this filename using the File Name key. See the ["Quick Save " on page 2469](#) documentation for more on the automatic file naming algorithm.

When you press the **File Name** key the analyzer displays the Alpha Editor. Use the knob to choose the letter to add and the front-panel Enter key to add the letter to the file name. The BK character moves you back and the FW character moves you forward in the filename. The Select key on the front panel generates a space character. When you are done entering the filename press the **Done** softkey. This returns back to the **File Open** dialog and menu, but does not cause the save to occur.

Save As Type

This field shows the file suffix for the type of file you have selected to save. For example, if you navigated here while saving State, "Mode state (*.state)" is in the field. If you navigated here from saving Trace, ""Mode state (*.trace)" is in the field. If you navigated here while exporting a trace data file, "Trace Data (*.csv)" is in the field. For some file types, there is more than one choice in the dropdown, which you can select by using the up and down arrow keys and Enter.

Up One Level

This key corresponds to the icon of a folder with the up arrow that is in the tool bar of the dialog. When pressed, it causes the file and folder list to navigate up one level in the directory structure. The Backspace key does the same thing.

Create New Folder

This key corresponds to the icon of a folder with the "*" that is in the tool bar of the dialog. When pressed, a new folder is created in the current directory with the name **New Folder** and you can enter a new folder name using the Alpha Editor.

Cancel

This key corresponds to the **Cancel** selection in the dialog. It causes the current **Save As** request to be cancelled. The ESC key does the same thing.

| | |
|----------------------|---|
| Key Path | Save, State |
| Mode | All |
| Notes | Brings up Save As dialog for saving a State Save Type |
| Initial S/W Revision | Prior to A.02.00 |

Edit Register Names

You may enter a custom name on any of the Register keys, to help you remember what you are using that state to save. To do this, press the **Edit Register Names** key, choose the register whose name you wish to edit, and then enter the desired label using the Alpha Editor or an external PC keyboard.

The maximum number of characters that can be added is 30. In most cases, 30 characters will fit on two lines of the key.

See ["More Information" on page 2486](#)

| | |
|-----------------------|--|
| Key Path | Save, State |
| Mode | All |
| Remote Command | :MMEMory:REGister:STATe:LABel <reg number>,"label" :MMEMory:REGister:STATe:LABel? <reg number> |
| Example | :MMEM:REG:STAT:LAB 1,"my label" |
| Notes | <reg number> is an integer from 1 to 16. If the SCPI specifies an invalid register number an error message is generated, -222,"Data out of range;Invalid register label number" "label" is a string from 0 to 30 characters in length. If a label exceeds 30 characters, an error message is generated, -150,"String data error;Label clipped to 30 characters" "label" of length 0 erases the custom label and restores the default (time and date) label. E.g.: :MMEM:REG:STAT:LAB 1,"" |
| Dependencies | N9060A-7FP or N9060B-2FP license required to edit the register names. When the feature is not licensed, sending this command generates an error, -221,"Settings conflict;Option not available" |
| Preset | The names are unaffected by Preset or power cycle but are set to the default label (time and date) on a "Restore System Defaults->Misc" |
| Initial S/W Revision | A.11.00 |

More Information

When you edit one of the register names, the time and date field will be replaced by the custom name.

If you delete all the characters in the custom name, it restores the default (time and date).

The register names are stored within the state files, but they are not part of the instrument state; that is, once you have edited a register name, loading a new state will not change that register name. Another consequence of this is that the names will be persistent through a power cycle. Also, if a named state file is transferred to another analyzer, it will bring its custom name along with it.

If you try to edit the name of an empty register, the analyzer will first save the state to have a file to put the name in. If you load a named state file into an analyzer with older firmware it will ignore the metadata.

The *SAV and *RCL commands will not be affected by the custom register names, nor will the MMEM commands.

Register 1 thru Register 16

Selecting any one of these register menu keys causes the State of the currently active mode to be saved to the specified Register. The registers are provided for rapid saving and recalling, since you do not need to specify a filename or navigate to a file. Each of the register menu keys annotates whether it is empty or at what date and time it was last modified. In addition, you can use the **Edit Register Names** key to enter custom names for each register.

Although these 16 registers are the only registers available from the front panel, there are 128 state registers available in the instrument. Registers 17–128 are only available from the SCPI interface, using the *SAV command.

There is one set of 128 state registers in the instrument, not one set for each Mode. When a state is saved, the Mode it was saved from is saved with it; then when it is recalled, the instrument switches to that Mode.

After the save completes, the corresponding register menu key annotation is updated with the date and time and the message "Register <register number> saved" is displayed.

| | |
|--------------------------|--|
| Key Path | Save, State |
| Mode | All |
| Example | *SAV 1 |
| Range | 1–16 from front panel, 1–128 from SCPI |
| Readback | Date and time with seconds resolution are displayed on the key OR A custom name of up to 30 characters entered using the Edit Register Names key OR “(empty)” if no prior save operation has been performed to this register. |
| Initial S/W Revision | Prior to A.02.00 |
| Modified at S/W Revision | A.11.00 |

Register 1 thru Register 16

Selecting any one of these register menu keys causes the State of the currently active mode to be saved to the specified Register. The registers are provided for rapid saving and recalling, since you do not need to specify a filename or navigate to a file. Each of the register menu keys annotates whether it is empty or at what date and time it was last modified. In addition, you can use the **Edit Register Names** key to enter custom names for each register.

Although these 16 registers are the only registers available from the front panel, there are 128 state registers available in the instrument. Registers 17–128 are only available from the SCPI interface, using the *SAV command.

There is one set of 128 state registers in the instrument, not one set for each Mode. When a state is saved, the Mode it was saved from is saved with it; then when it is recalled, the instrument switches to that Mode.

After the save completes, the corresponding register menu key annotation is updated with the date and time and the message "Register <register number> saved" is displayed.

| | |
|---------------------------------|--|
| Key Path | Save, State |
| Mode | All |
| Example | *SAV 1 |
| Range | 1-16 from front panel, 1-128 from SCPI |
| Readback | Date and time with seconds resolution are displayed on the key OR A custom name of up to 30 characters entered using the Edit Register Names key OR “(empty)” if no prior save operation has been performed to this register. |
| Initial S/W Revision | Prior to A.02.00 |
| Modified at S/W Revision | A.11.00 |

Mass Storage Catalog (Remote Command Only)

| | |
|-----------------------------|---|
| Key path | SCPI Only |
| Remote Command | :MMEMory:CATalog? [<directory_name>] |
| Notes | The string must be a valid logical path. Queries disk usage information (drive capacity, free space available) and obtains a list of files and directories in a specified directory in the following format: <numeric_value>,<numeric_value>,{<file_entry>} It returns two numeric parameters and as many strings as there are files and directories. The first parameter indicates the total amount of storage currently used in bytes. The second parameter indicates the total amount of storage available, also in bytes. The <file_entry> is a string. Each <file_entry> indicates the name, type, and size of one file in the directory list: <file_name>,<file_type>,<file_size> As the windows file system has an extension that indicates file type, <file_type> is always empty. <file_size> provides the size of the file in bytes. For directories, <file_entry> is surrounded by square brackets and both <file_type> and <file_size> are empty |
| Initial S/W Revision | Prior to A.02.00 |

Mass Storage Change Directory (Remote Command Only)

| | |
|-----------------------|--|
| Key path | SCPI Only |
| Remote Command | :MMEMory:CDIRectory [<directory_name>] :MMEMory:CDIRectory? |

| | |
|----------------------|---|
| Notes | <p>The string must be a valid logical path.</p> <p>Changes the default directory for a mass memory file system. The <directory_name> parameter is a string. If no parameter is specified, the directory is set to the *RST value.</p> <p>At *RST, this value is set to the default user data storage area, that is defined as System.Environment.SpecialFolder.Personal.</p> <p>Query returns full path of the default directory.</p> |
| Initial S/W Revision | Prior to A.02.00 |

Mass Storage Copy (Remote Command Only)

| | |
|-----------------------|--|
| Key path | SCPI Only |
| Remote Command | :MMEMory:COpy <string>,<string>[,<string>,<string>] |
| Notes | <p>The string must be a valid logical path.</p> <p>Copies an existing file to a new file or an existing directory to a new directory.</p> <p>Two forms of parameters are allowed. The first form has two parameters. In this form, the first parameter specifies the source, and the second parameter specifies the destination.</p> <p>The second form has four parameters. In this form, the first and third parameters specify the source. The second and fourth parameters specify the directories. The first pair of parameters specifies the source. The second pair specifies the destination. An error is generated if the source doesn't exist or the destination file already exists.</p> <p>This command will generate an "access denied" error if the destination is a restricted folder (e.g., C:\Windows) and the current user does not have Power User or Administrator privileges.</p> |

Mass Storage Device Copy (Remote Command Only)

This command transfers data to/from a file and a peripheral device.

| | |
|-----------------------|---|
| Key path | SCPI Only |
| Remote Command | :MMEMory:COpy:DEvice <source_string>,<dest_string> |
| Notes | <p>The strings must be a valid logical path or a valid device keyword. If the dest_string is a device keyword, the data is copied from the source file to the device. If the source_string is a device keyword, the data is copied to the source file from the device.</p> <p>Valid device keywords are:</p> <p>SNS (smart noise source)</p> <p>An error is generated if the file or device is not found.</p> |

Mass Storage Delete (Remote Command Only)

| | |
|-----------------------|--|
| Key path | SCPI Only |
| Remote Command | :MMEMory:DElete <file_name>[,<directory_name>] |

| | |
|----------------------|---|
| Notes | The string must be a valid logical path. Removes a file from the specified directory. The <file_name> parameter specifies the file name to be removed. This command will generate an “access denied” error if the file is in a restricted folder (e.g., C:\Windows) and the current user does not have Power User or Administrator privileges. |
| Initial S/W Revision | Prior to A.02.00 |

Mass Storage Data (Remote Command Only)

Creates a file containing the specified data OR queries the data from an existing file.

| | |
|----------------------|--|
| Key path | SCPI Only |
| Remote Command | :MMEMory:DATA <file_name>, <data> :MMEMory:DATA? <file_name> |
| Notes | The string must be a valid logical path. The command form is MMEMory:DATA <file_name>,<data>. It loads <data> into the file <file_name>. <data> is in 488.2 block format. <file_name> is string data. The query form is MMEMory:DATA? <file_name> with the response being the associated <data> in block format. |
| Initial S/W Revision | Prior to A.02.00 |

Mass Storage Make Directory (Remote Command Only)

| | |
|----------------------|---|
| Key path | SCPI Only |
| Remote Command | :MMEMory:MDIRectory <directory_name> |
| Notes | The string must be a valid logical path. Creates a new directory. The <directory_name> parameter specifies the name to be created. This command will generate an “access denied” error if the new directory would be in a restricted folder (e.g., C:\Windows) and the current user does not have Power User or Administrator privileges. |
| Initial S/W Revision | Prior to A.02.00 |

Mass Storage Move (Remote Command Only)

| | |
|----------------|---|
| Key path | SCPI Only |
| Remote Command | :MMEMory:MOVE <string>,<string>[,<string>,<string>] |
| Notes | The string must be a valid logical path. Moves an existing file to a new file or an existing directory to a new directory. Two forms of parameters are allowed. The first form has two parameters. In this form, the first parameter specifies the source, and the second parameter specifies the destination. The second form has four parameters. In this form, the first and third parameters specify the source. |

The second and fourth parameters specify the directories. The first pair of parameters specifies the source. The second pair specifies the destination. An error is generated if the source doesn't exist or the destination file already exists.

This command will generate an "access denied" error if the destination is a restricted folder (e.g., C:\Windows) and the current user does not have Power User or Administrator privileges.

| | |
|----------------------|------------------|
| Initial S/W Revision | Prior to A.02.00 |
|----------------------|------------------|

Mass Storage Remove Directory (Remote Command Only)

| | |
|----------|------------------|
| Key path | SCPI Only |
|----------|------------------|

| | |
|-----------------------|--------------------------------------|
| Remote Command | :MMEMory:RDIRectory <directory_name> |
|-----------------------|--------------------------------------|

| | |
|-------|--|
| Notes | <p>The string must be a valid logical path.</p> <p>Removes a directory. The <directory_name> parameter specifies the directory name to be removed. All files and directories under the specified directory shall also be removed.</p> <p>This command will generate an "access denied" error if the folder is a restricted folder (e.g., C:\Windows) or is in a restricted folder and the current user does not have Power User or Administrator privileges.</p> |
|-------|--|

| | |
|----------------------|------------------|
| Initial S/W Revision | Prior to A.02.00 |
|----------------------|------------------|

Sequences

These keys allow you to save a Tab separated or CSV file of the setup parameters required to build a Sequence.

In order to save you must select the Save As button and choose a destination folder.

| | |
|----------|------------------------|
| Key Path | Save, Sequences |
|----------|------------------------|

| | |
|------|-----|
| Mode | All |
|------|-----|

| | |
|-----------------------|---|
| Remote Command | :MMEM:STOR:SEquences: SLISt ALISt SAALISt SSTep "MySequence.txt" |
|-----------------------|---|

| | |
|----------------|---------------------------------------|
| Example | :MMEM:STOR:SEQ:SLISt "MySequence.txt" |
|----------------|---------------------------------------|

| | |
|-------|--|
| Notes | <p>Available file types are:</p> <ul style="list-style-type: none"> -CSV (Comma delimited) (*.csv) -Text (Tab delimited) (*.txt) |
|-------|--|

| | |
|----------------------|---------|
| Initial S/W Revision | A.05.00 |
|----------------------|---------|

Source Sequence

The list of parameters, that configure steps, that makes up a sequence for the Source.

The Source sequence is a sequence of flexible configurable steps that can be set anywhere in the instruments frequency range.

| | |
|-----------------------------|--------------------------------------|
| Key Path | Save, Sequences |
| Example | :MMEM:STOR:SEQ:SLIS "MySequence.txt" |
| Dependencies | Only available in XOBT |
| Initial S/W Revision | A.05.00 |

Save As . . .

This menu lets you select the location where you can save the Sequence. This menu is a standard Windows® dialog with Save As menu keys. The "File Name" field in the Save As dialog is initially loaded with an automatically generated filename specific to the appropriate Save Type. The automatically generated filename is guaranteed not to conflict with any filename currently in the directory. You may replace or modify this filename using the File Name softkey. See the Quick Save key documentation for more on the automatic file naming algorithm.

The default path for all Sequence Files is:

My Documents\Sequences

| | |
|-----------------------------|--|
| Key Path | Save, Sequences |
| Mode | All |
| Notes | Brings up Save As dialog for saving a Sequence Save Type |
| Initial S/W Revision | A.05.00 |

Data (Export)

Exporting a data file stores data from the current measurement to mass storage files. The Export Menu only contains data types that are supported by the current measurement.

Since the commonly exported data files are in .csv format, the data can be edited by you prior to importing. This allows you to export a data file, manipulate the data in Excel (the most common PC Application for manipulating .csv files) and then import it.

Selecting an Export Data menu key will not actually cause the exporting to occur, since the analyzer still needs to know where you wish to save the data. Pressing the Save As key in this menu brings up the Save As dialog and Save As menu that allows you to specify the destination file and directory. Once a filename has been selected or entered in the Open menu, the export will occur as soon as the Save key is pressed.

| | |
|-----------------|--|
| Key Path | Save |
| Mode | All |
| Notes | The menu is built from whatever data types are available for the mode. So the key locations in the sub menu will vary. No SCPI command directly controls the Data Type that this key controls. The Data Type is included in |

| | |
|----------------------|---|
| | the MMEM:STOR commands. |
| Dependencies | If a file type is not used by a certain measurement, that type is grayed out for that measurement. The key for a file type will not show at all if there are no measurements in the Mode that support it. |
| Preset | Is not affected by a Preset or shutdown, but is reset during Restore Mode Defaults |
| Readback | The data type that is currently selected |
| Initial S/W Revision | Prior to A.02.00 |

Meas Results

| | |
|--------------------------|---|
| parameter_table_23.52557 | 52.93253 |
| Key Path | Save, Data |
| Mode | WLAN |
| Example | MMEM:STOR:RES "MyResultsFile.csv" This stores the measurement results data in the file MyResultsFile.xml in the default directory. |
| Initial S/W Revision | A.11.00 |
| Help Map ID | 45561 |

Capture Buffer

Capture buffer functionality is only available when measurement is Mod Accuracy and radio standard is not 802.11ac 80+80MHz. The captured data is raw data which is not processed.

| | |
|--------------------------|--|
| parameter_table_23.52557 | 52.93253 |
| Key Path | Save, Data |
| Mode | WLAN |
| Example | MMEM:STOR:CAPT "MyCaptureData.bin" This stores the capture data in the file MyCaptureData.bin in the default directory. |
| Dependencies | Capture buffer data is only available when measurement is Mod Accuracy and radio standard is not 802.11ac 80+80MHz. In other measurements, this key is grayed out. |
| Initial S/W Revision | A.11.00 |
| Help Map ID | 45562 |

Save As . . .

When you press "Save As", the analyzer brings up a Windows dialog and a menu entitled "**Save As.**" This menu allows you to navigate to the various fields in the Windows dialog without using a keyboard or mouse. The **Tab** and **Arrow** keys can also be used for dialog navigation.

See "[To File . . .](#)" on page 2484 in **Save, State** for a full description of this dialog and menu.

The default path for saving files is:

For all of the Trace Data Files:

My Documents\<<mode name>\data\traces

For all of the Limit Data Files:

My Documents\<<mode name>\data\limits

For all of the Measurement Results Data Files:

My Documents\<<mode name>\data\<<measurement name>\results

For all of the Capture Buffer Data Files:

My Documents\<<mode name>\data\captureBuffer

| Key Path | Save, Data |
|----------------------|--|
| Mode | All |
| Notes | The key location is mode-dependent and will vary. Brings up the Save As dialog for saving a <mode specific> Save Type. The save is performed immediately and does not wait until the measurement is complete. |
| Initial S/W Revision | Prior to A.02.00 |

Screen Image

Pressing Screen Image accesses a menu of functions that enable you to specify a format and location for the saved screen image. It brings up a menu that allows you to specify the color scheme of the Screen Image (Themes) or navigate to the Save As dialog to perform the actual save.

Screen Image files contain an exact representation of the analyzer display. They cannot be loaded back onto the analyzer, but they can be loaded into your PC for use in many popular applications.

The image to be saved is actually captured when the **Save** front panel key is pressed, and kept in temporary storage to be used if you ask for a Screen Image save. When the Screen Image key is pressed, a "thumbnail" of the captured image is displayed, as shown below:

When you continue on into the **Save As** menu and complete the Screen Image save, the image depicted in the thumbnail is the one that gets saved, showing the menus that were on the screen before going into the **Save** menus. The save is performed immediately and does not wait until the measurement is complete.

After you have completed the save, the **Quick Save** front-panel key lets you quickly repeat the last save performed, using an auto-named file, with the current screen data.

NOTE

For versions previous to A.01.55, if you initiate a screen image save by navigating through the Save menus, the image that is saved will contain the Save menu softkeys, not the menus and the active function that were on the screen when you first pressed the Save front panel key.

| | |
|----------------------|--|
| Key Path | Save |
| Mode | All |
| Remote Command | :MMEMory:STORe:SCReem <filename> |
| Example | :MMEM:STOR:SCR "myScreen.png" This stores the current screen image in the file MyScreenFile.png in the default directory. |
| Initial S/W Revision | Prior to A.02.00 |

Themes

Accesses a menu of functions that enable you to choose the theme to be used when saving the screen image.

The **Themes** option is the same as the **Themes** option under the **Display** and **Page Setup** dialogs. It allows you to choose between themes to be used when saving the screen image.

| | |
|--------------------------------------|---|
| Key Path | Save, Screen Image |
| Remote Command | :MMEMory:STORe:SCReem:THEMe TDColor TDMonochrome FCOLor FMONochrome :MMEMory:STORe:SCReem:THEMe? |
| Example | :MMEM:STOR:SCR:THEM TDM |
| Preset | 3D Color; Is not part of Preset, but is reset by Restore Misc Defaults or Restore System Defaults All and survives subsequent running of the modes. |
| Readback | 3D Color 3D Mono Flat Color Flat Mono |
| Backwards Compatibility Notes | In ESA and PSA we offer the choice of "Reverse Bitmap" or "Reverse Metafile" when saving screen images. This is much like the "Flat Color" theme available in X-Series. Also, if you selected Reverse Bitmap AND a black & white screen image, that would be much like "Flat Monochrome". In other words, each of the X-Series themes has a similar screen image type in ESA/PSA. But they are not identical. |
| Initial S/W Revision | Prior to A.02.00 |

3D Color

Selects a standard color theme with each object filled, shaded and colored as designed.

| | |
|-----------------------------|-----------------------------------|
| Key Path | Save, Screen Image, Themes |
| Example | MMEM:STOR:SCR:THEM TDC |
| Readback | 3D Color |
| Initial S/W Revision | Prior to A.02.00 |

3D Monochrome

Selects a format that is like 3D color but shades of gray are used instead of colors.

| | |
|-----------------------------|-----------------------------------|
| Key Path | Save, Screen Image, Themes |
| Example | MMEM:STOR:SCR:THEM TDM |
| Readback | 3D Mono |
| Initial S/W Revision | Prior to A.02.00 |

Flat Color

Selects a format that is best when the screen is to be printed on an ink printer.

| | |
|-----------------|-----------------------------------|
| Key Path | Save, Screen Image, Themes |
|-----------------|-----------------------------------|

| | |
|----------------------|-------------------------|
| Example | MMEM:STOR:SCR:THEM FCOL |
| Readback | Flat Color |
| Initial S/W Revision | Prior to A.02.00 |

Flat Monochrome

Selects a format that is like Flat Color. But only black is used (no colors, not even gray), and no fill.

| | |
|----------------------|-----------------------------------|
| Key Path | Save, Screen Image, Themes |
| Example | MMEM:STOR:SCR:THEM FMON |
| Readback | Flat Mono |
| Initial S/W Revision | Prior to A.02.00 |

Save As...

When you press "Save As", the analyzer brings up a Windows dialog and a menu entitled "**Save As.**" This menu allows you to navigate to the various fields in the Windows dialog without using a keyboard or mouse. The **Tab** and **Arrow** keys can also be used for dialog navigation.

See "[To File . . .](#)" on page 2484 in **Save, State** for a full description of this dialog and menu.

The default path for Screen Images is

My Documents\`<mode name>`\screen.

where `<mode name>` is the parameter used to select the mode with the INST:SEL command (for example, SA for the Spectrum Analyzer).

| | |
|----------------------|--|
| Key Path | Save, Screen Image |
| Notes | Brings up Save As dialog for saving a Screen Image Save Type |
| Initial S/W Revision | Prior to A.02.00 |

Single (Single Measurement/Sweep)

Sets the analyzer for Single measurement operation. The single/continuous state is Meas Global, so the setting will affect all the measurements. If you are Paused, pressing **Single** does a Resume.

See "[More Information](#)" on page 2498

| | |
|-------------------------------|--|
| Key Path | Front-panel key |
| Example | :INIT:CONT OFF |
| Notes | See Cont key description. |
| Backwards Compatibility Notes | <p>For Spectrum Analysis mode in ESA and PSA, the Single hardkey and the INITiate:IMM switched from continuous measurement to single measurement and restarted sweeps and averages (displayed average count reset to 1), but did not restart Max Hold and Min Hold. In the X-Series, the Single hardkey and the INITiate:IMM command initiate a sweep/ measurement/ average sequence/hold sequence including MaxHold and MinHold.</p> <p>For Spectrum Analysis mode in ESA and PSA, the Single hardkey restarted the sweep regardless of whether or not you were in an active sweep or sweep sequence. In the X-Series, Restart does this but Single only restarts the sweep or sweep sequence if you are in the idle state.</p> <p>INIT[:IMM] in ESA & PSA Spectrum Analysis Mode does an implied ABORT. In some other PSA Modes, INIT[:IMM] is ignored if not in the idle state. . The X-Series follows the ESA/PSA SA Mode model, which may cause some Modes to have compatibility problems.</p> |
| Initial S/W Revision | Prior to A.02.00 |

More Information

See "[Restart](#)" on page 2481 for details on the INIT:IMMEDIATE (Restart) function.

If you are already in single sweep, the INIT:CONT OFF command has no effect.

If you are already in Single Sweep, then pressing the **Single** key in the middle of a sweep does not restart the sweep or sequence. Similarly, pressing the **Single** key does not restart the sweep or sequence if the sweep is not in the idle state (for example, if you are taking a very slow sweep, or the analyzer is waiting for a trigger). Instead, it results in a message. "Already in Single, press Restart to initiate a new sweep or sequence". Even though pressing the **Single** key in the middle of a sweep does not restart the sweep, sending INIT:IMMEDIATE does reset it.

To take one more sweep without resetting the average count, increment the average count by 1, by pressing the step up key while **Average/Hold Number** is the active function, or sending the remote command CALC:AVER:TCON UP.

Source

Opens a menu of keys that access various source configuration menus and settings. In the test set, pressing this key also causes the central view area to change and display the Source Control Main view.

| Key Path | Front-panel key |
|----------|-----------------|
|----------|-----------------|

RF Output

This parameter sets the source RF power output state.

| Key Path | Source |
|-----------------------|---|
| Remote Command | :OUTPut[:EXTernal][:STATe] ON OFF 1 0 :OUTPut[:EXTernal][:STATe]? |
| Example | OUTP OFF OUTP? |
| Notes | <p>The EXTERNAL node is shown in RD text so the SCPI remains the same between internal and external source control. However, for EXT we do not wish to document this node to the customer since we are controlling the internal source rather than the external source.</p> <p>This setting is for the independent mode and has no effect on the "List Sequencer" on page 2585. If the "Sequencer" on page 2586 is set to ON, the list sequencer controls the source output and this key will be grayed-out. And this setting will be none-forceful grey out on front panel to indicate out-of-scope. Non-forceful means user still can change this setting by SCPI but cannot change on front panel. When set to OFF will make source leave list sequencer and this setting will be black out and take effect immediately.</p> <p>When the RF Output is ON, an "RF" annunciator is displayed in the system settings panel. When the RF Output is turned Off, the RF annunciator is cleared. If the "Sequencer" on page 2586 is set to ON, the "RF" annunciator will be replaced by "SEQ" in the system settings panel, indicating that the output is controlled by the list sequencer.</p> |
| Preset | Off |
| Range | On Off |
| Initial S/W Revision | A.05.00 |

Amplitude

Allows you to access the Amplitude sub-menu.

| Key Path | Source |
|----------------------|--|
| Notes | <p>The sub-menu under this button is for independent mode and has no effect on "List Sequencer" on page 2585. If the "Sequencer" on page 2586 is set to ON, the list sequencer controls the source output and this key will be grayed-out on front panel to indicate out-of-scope. When you set "Sequencer" on page 2586 to Off will make source leave list sequencer and this button will be black out.</p> |
| Initial S/W Revision | A.05.00 |

RF Power

Allows you to adjust the power level of the source using the numeric keypad, step keys, or RPG. Pressing any digit, 0 through 9, on the numeric keypad brings up the unit terminator.

Please refer to the ["RF Power Range " on page 2501](#) table below for the valid ranges.

| Key Path | Source, Amplitude |
|-----------------------|--|
| Remote Command | :SOURce:POWer[:LEVel][:IMMediate][:AMPLitude] <ampl> :SOURce:POWer[:LEVel][:IMMediate][:AMPLitude]? |
| Example | :SOUR:POW -100 dBm |
| Notes | <p>Amplitude corrections can be specified for use with the source. In the event of amplitude corrections being applied, the valid ranges for the RF power do not change dependant on the current amplitude correction setting. If the combination of RF power + amplitude correction is higher or lower than the source output range, the Source Unleveled bit is set and the "Source Unleveled" indicator will appear on status panel to indicate that the source cannot maintain the output power that has been requested.</p> <p>When signal generator is unable to maintain the requested output level, the "Source Unleveled" indicator will appear on status panel. When the source output setting is restored to the normal range, the "Source Unleveled" is removed from status panel.</p> <p>Internal source has list sequence mode, which comprises of several steps which contain separate output power, frequency and waveform etc. When the source list sequence playing is complete, the last step keeps playing, and user can use this command to change the list sequence last step's output power.</p> <p>The multiport adapter RFIO TX ports and GPS ports cannot ensure power accuracy when power setting is lower than -130dBm, this power setting value is defined by the sum of RF Power setting and related amplitude correction value. But user settable value could be lower than this limit. When application detected there exists power setting lower than -130dBm on MPA RFIO TX ports, then popup warning message . When application detected there exists power setting lower than -130dBm on MPA GPS ports, then popup warning message . This is only warning message, and check is performed when RF is ON.</p> |
| Notes | The Min and Max value here defined UI settable amplitude range. This range is larger than actual amplitude range with level accuracy defined in spec. |
| Dependencies | The RF power is dependent on the RF output port and frequency, such that the current frequency and selected output port determine the valid range of power values. |
| Couplings | If "Real-Time AWGN" on page 2546 AWGN State is On and "ARB" on page 2535 ARB State is On, this setting will be adjusted to the value to maintain the AWGN power relationship defined by "Power Control Mode" on page 2547 Power Control Mode and other noise settings |
| Preset | -100 dBm |
| Min | The range of values depends on the current frequency and selected RF output port. Please refer to the "RF Power Range " on page 2501 table below for the valid ranges. |
| Max | The range of values depends on the current frequency and selected RF output port. Please refer to the "RF Power Range " on page 2501 table below for the valid ranges. |

| | |
|--------------------------|---|
| Initial S/W Revision | A.05.00 |
| Modified at S/W Revision | A.16.00 (Add couplings with AWGN state) |

RF Power Range

| RF Output Port | Frequency Range | Min Output Power | Max Output Power |
|-------------------|--------------------|------------------|------------------|
| High Power RF Out | 10 MHz ≤ f ≤ 6 GHz | -150 dBm | 20 dBm |
| RFIO 1 & RFIO 2 | 10 MHz ≤ f ≤ 6 GHz | -150 dBm | 0 dBm |
| GPS (Note2) | 10 MHz ≤ f ≤ 6 GHz | -150 dBm | 0 dBm |

Note: This is the UI power range, it's larger than actual spec.

Note2: GPS port is on the multiport adapter, or E6607C which has embedded MPA.

Set Reference Power

This key allows you to set the power reference. Pressing this key turns the power reference state to ON, sets the reference power value to the current RF output power, maintains this power at the RF output, and sets the displayed power to 0.00 dB. All subsequent RF power values entered under Source>Amplitude>RF Power are interpreted as being relative to this reference power.

When you use a power reference, the signal generator outputs an RF power that is set relative to the reference power by the value entered under Source>Amplitude>RF Power as follows:

Output power = reference power – entered power

Where:

reference power equals the original RF Power entered under Source>Amplitude>RF Power and set as the reference power

entered power equals a new value entered under Source>Amplitude>Amptd Offset

In addition, the displayed power value is the same as a new value entered under Source>Amplitude>RF Power.

NOTE

If Power Ref is set to ON with a reference value set, entering a value under Source>Amplitude>RF Power and pressing Set Reference Power will add that value to the existing Power Ref value.

If you wish to change the reference power value to a new value entered under Source>Amplitude>RF Power, first you must set Power Ref to OFF and then press Set Reference Power.

| Key Path | Source, Amplitude |
|----------------------|---|
| Dependencies | This key is unavailable, and is grayed out when the " List Sequencer " on page 2585 is turned ON. |
| Initial S/W Revision | A.05.00 |

Power Ref

This key allows you to toggle the state of the power reference.

When you use a power reference, the signal generator outputs an RF power that is set relative to the reference power by the value entered under Source>Amplitude>RF Power as follows:

Output power = reference power + entered power

Where:

reference power equals the original RF Power entered under Source>Amplitude>RF Power and set as the reference power

entered power equals a new value entered under Source>Amplitude>Amptd Offset

For more information on Reference Frequency refer to ["Set Reference Power " on page 2501](#)

| Key Path | Source, Amplitude |
|-----------------------|--|
| Remote Command | :SOURce:POWer:REFerence <ampl> :SOURce:POWer:REFerence? :SOURce:POWer:REFerence:STATe OFF ON 0 1 :SOURce:POWer:REFerence:STATe? |
| Example | :SOUR:POW:REF 0.00 dBm :SOUR:POW:REF:STATe ON |
| Dependencies | This setting is unavailable and is grayed out when the "List Sequencer" on page 2585 is turned ON. |
| Couplings | This value is coupled to the "Set Reference Power " on page 2501 key such that pressing the Set Reference Power key updates the reference power with the current output power. |
| Preset | 0.00 dBm OFF |
| Min | -125.00 dBm |
| Max | 10.00 dBm |
| Initial S/W Revision | A.05.00 |

Amptd Offset

Allows you to specify the RF output power offset value.

When the amplitude offset is set to zero (0) and you set a new offset value (positive or negative), the displayed amplitude value will change as follows and the RF output power will not change:

Displayed value = output power + offset value

Where:

output power equals the original RF Power entered under Source>Amplitude>RF Power

offset value equals the value entered under Source>Amplitude>Amptd Offset

When the amplitude offset is set to a value other than zero (0) and you enter a new RF power value under Source>Amplitude>RF Power, the displayed power will be the same as the value entered and the RF output power will be equal to the value entered minus the offset value as follows:

Output power = entered power – offset power

Displayed Power = output power + offset power

Displayed power = entered power

Where:

entered power equals the amplitude entered under Source>Amplitude>RF Power

offset power equals the value previously entered and set under Source>Amplitude>Amptd Offset

| Key Path | Source, Amplitude |
|-----------------------|--|
| Remote Command | :SOURce:POWer[:LEVel][:IMMediate]:OFFSet <rel_ampl> :SOURce:POWer[:LEVel][:IMMediate]:OFFSet? |
| Example | :SOUR:POW:OFFS 0.00 dB |
| Dependencies | This setting is unavailable, and is grayed out when the List Sequencer is turned ON. |
| Preset | 0.00 dB |
| Min | -200.00 dB |
| Max | 200.00 dB |
| Initial S/W Revision | A.05.00 |

Modulation

Allows you to toggle the state of the modulation.

| Key Path | Source |
|-----------------------|--|
| Remote Command | :OUTPut:MODulation[:STATe] ON OFF 1 0 :OUTPut:MODulation[:STATe]? |
| Example | :OUTP:MOD OFF |
| Notes | This setting is for independent mode and has no effect on " List Sequencer " on page 2585. If the " Sequencer " on page 2586 is set to ON, the list sequencer controls the source output and this key will be grayed-out. And this setting will be none-forceful grey out on front panel to indicate out-of-scope. Non-forceful means user still can change this setting by SCPI but cannot change manually on front panel. When set to Off will make source leave list sequencer and this setting will be black out and take effect immediately When the Modulation is ON, the "MOD" annunciator is displayed in the system settings panel. When the Modulation is turned Off, the "MOD" annunciator is cleared. If the " Sequencer " on page 2586 is set to ON, the "MOD" annunciator will be replaced by "SEQ" in the system settings panel indicating that the output is controlled by list sequencer. |
| Preset | Off |
| Range | On Off |
| Initial S/W Revision | A.05.00 |

Frequency

Allows you to access the Frequency sub-menu.

| Key Path | Source |
|----------------------|--|
| Notes | The sub-menu under this button is for independent mode and has no effect on "List Sequencer" on page 2585 . If the "Sequencer" on page 2586 is set to ON, the list sequencer controls the source output and this key will be grayed-out. And this button will be grey out on front panel to indicate out-of-scope. When setto Off will make source leave list sequencer and this button will be black out. |
| Initial S/W Revision | A.05.00 |

Frequency

Allows you to set the RF Output Frequency. You can adjust the frequency of the source using the numeric keypad, step keys, or RPG. Pressing any digit, 0 through 9, on the numeric keypad brings up the unit terminator.

| Key Path | Source, Frequency |
|-----------------------|---|
| Remote Command | :SOURce:FREQuency[:CW] <freq> :SOURce:FREQuency[:CW]? |
| Example | :SOUR:FREQ 1.00 GHz |
| Notes | Internal source has list sequence mode, which comprises of several steps which contain separate output power, frequency and waveform etc. When the source list sequence playing is complete, the last step keeps playing, and user can use this command to change the list sequence last step's output frequency. |
| Couplings | The frequency value is coupled to the current channel band and number, such that updates to the band and number will update the frequency value to the corresponding absolute frequency. |
| Preset | 1.00 GHz |
| Min | 10.00 MHz |
| Max | Hardware Dependant: Option 503 = 3.6 GHz Option 504 = 3.8 GHz Option 506 = 6.00 GHz |
| Initial S/W Revision | A.05.00 |

Channel

The frequency of the source can be specified by a channel number of a given frequency band. This key allows you to specify the current channel number. For the appropriate range of channel numbers for a given frequency band, refer to the following tables: ["GSM/EDGE Channel Number Ranges" on page 2505](#),

"W-CDMA Channel Number Ranges" on page 2506, "CDMA 2000 / 1xEVDO Channel Number Ranges" on page 2507, and "LTE FDD Channel Number Ranges" on page 2509.

| Key Path | Source, Frequency |
|-----------------------|---|
| Remote Command | :SOURce:FREQuency:CHANnels:NUMBer <int> :SOURce:FREQuency:CHANnels:NUMBer? |
| Example | :SOUR:FREQ:CHAN:NUMB 1 |
| Notes | This key is grayed out when the "Radio Standard" on page 2513 is set to NONE. This key is grayed out on E6630A. |
| Dependencies | This key is grayed out when the "Radio Standard" on page 2513 is set to NONE. This key is grayed out on E6630A. |
| Couplings | The channel number is coupled to the frequency value when the "Radio Standard" on page 2513 is not set to NONE. When the frequency value is changed, the channel number will increase or decrease to match the new frequency. If the frequency is not at an exact match for a channel number, the nearest channel number is displayed along with a greater than or less than sign to indicate the frequency is above or below the channel number. |
| Preset | 1 |
| Min | Please refer to the tables below for the valid ranges. |
| Max | Please refer to the tables below for the valid ranges. |
| Initial S/W Revision | A.05.00 |

GSM/EDGE Channel Number Ranges

| Band | Link (Device) | Range | Frequency (MHz) |
|----------|---------------|------------------------|---------------------------|
| P-GSM | Uplink (MS) | $1 \leq n \leq 124$ | $890.0 + 0.2*n$ |
| | Downlink (BS) | $1 \leq n \leq 124$ | $935.0 + 0.2*n$ |
| E-GSM | Uplink (MS) | $0 \leq n \leq 124$ | $890.0 + 0.2*n$ |
| | | $975 \leq n \leq 1023$ | $890.0 + 0.2*(n-1024)$ |
| | Downlink (BS) | $0 \leq n \leq 124$ | $935.0 + 0.2*n$ |
| | | $975 \leq n \leq 1023$ | $935.0 + 0.2*(n-1024)$ |
| DCS 1800 | Uplink (MS) | $512 \leq n \leq 885$ | $1710.200 + 0.20*(n-512)$ |
| | Downlink (BS) | $512 \leq n \leq 885$ | $1805.200 + 0.20*(n-512)$ |
| PCS 1900 | Uplink (MS) | $512 \leq n \leq 810$ | $1850.200 + 0.2*(n-512)$ |
| | Downlink (BS) | $512 \leq n \leq 810$ | $1930.200 + 0.2*(n-512)$ |
| R-GSM | Uplink (MS) | $0 \leq n \leq 124$ | $890.0 + 0.2*n$ |
| | | $955 \leq n \leq 1023$ | $890.0 + 0.2*(n-1024)$ |
| | Downlink (BS) | $0 \leq n \leq 124$ | $935.0 + 0.2*n$ |
| | | $955 \leq n \leq 1023$ | $935.0 + 0.2*(n-1024)$ |
| GSM 450 | Uplink (MS) | $256 \leq n \leq 293$ | $450.6 + 0.2*(n-259)$ |
| | Downlink (BS) | $256 \leq n \leq 293$ | $460.6 + 0.2*(n-259)$ |

| Band | Link (Device) | Range | Frequency (MHz) |
|----------|---------------|-----------------------|--------------------------|
| GSM 480 | Uplink (MS) | $306 \leq n \leq 340$ | $479.000 + 0.20*(n-306)$ |
| | Downlink (BS) | $306 \leq n \leq 340$ | $489.000 + 0.20*(n-306)$ |
| GSM 850 | Uplink (MS) | $128 \leq n \leq 251$ | $824.200 + 0.20*(n-128)$ |
| | Downlink (BS) | $128 \leq n \leq 251$ | $869.200 + 0.20*(n-128)$ |
| GSM 700 | Uplink (MS) | $438 \leq n \leq 516$ | $777.200 + 0.20*(n-438)$ |
| | Downlink (BS) | $438 \leq n \leq 516$ | $747.200 + 0.20*(n-438)$ |
| T-GSM810 | Uplink (MS) | $350 \leq n \leq 425$ | $806.0 + 0.20*(n-350)$ |
| | Downlink (BS) | $350 \leq n \leq 425$ | $851.0 + 0.20*(n-350)$ |

W-CDMA Channel Number Ranges

| Band | Link (Device) | Range | Frequency (MHz) |
|-----------|---------------|---------------------------|---------------------|
| Band I | Downlink | $10562 \leq n \leq 10838$ | $n \div 5$ |
| | Uplink | $9612 \leq n \leq 9888$ | $n \div 5$ |
| Band II | Downlink | $412 \leq n \leq 687$ | $n \div 5 + 1850.1$ |
| | | $9662 \leq n \leq 9938$ | $n \div 5$ |
| | Uplink | $12 \leq n \leq 287$ | $n \div 5 + 1850.1$ |
| | | $350 \leq n \leq 425$ | $n \div 5$ |
| Band III | Downlink | $1162 \leq n \leq 1513$ | $n \div 5 + 1575$ |
| | Uplink | $937 \leq n \leq 1288$ | $n \div 5 + 1525$ |
| Band IV | Downlink | $537 \leq n \leq 1738$ | $n \div 5 + 1805$ |
| | | $1887 \leq n \leq 2087$ | $n \div 5 + 1735.1$ |
| | Uplink | $1312 \leq n \leq 1513$ | $n \div 5 + 1450$ |
| | | $1662 \leq n \leq 1862$ | $n \div 5 + 1380.1$ |
| Band V | Downlink | $1007 \leq n \leq 1087$ | $n \div 5 + 670.1$ |
| | | $4357 \leq n \leq 4458$ | $n \div 5$ |
| | Uplink | $782 \leq n \leq 862$ | $n \div 5 + 670.1$ |
| | | $4132 \leq n \leq 4233$ | $n \div 5$ |
| Band VI | Downlink | $1037 \leq n \leq 1062$ | $n \div 5 + 670.1$ |
| | | $4387 \leq n \leq 4413$ | $n \div 5$ |
| | Uplink | $812 \leq n \leq 837$ | $n \div 5 + 670.1$ |
| | | $4162 \leq n \leq 4188$ | $n \div 5$ |
| Band VII | Downlink | $2237 \leq n \leq 2563$ | $n \div 5 + 2175$ |
| | | $2587 \leq n \leq 2912$ | $n \div 5 + 2105.1$ |

LTE FDD Channel Number Ranges

The carrier frequency in the uplink and downlink is designated by the E-UTRA Absolute Radio Frequency Channel Number (EARFCN) in the range 0 – 65535. The relation between EARFCN and the carrier

frequency in MHz for the downlink is given by the following equation, where FDL_low and NOffs-DL are given in table 5.4.4-1 and NDL is the downlink EARFCN.

$$FDL = FDL_low + 0.1(NDL - NOffs-DL)$$

The relation between EARFCN and the carrier frequency in MHz for the uplink is given by the following equation where FUL_low and NOffs-UL are given in table 5.4.4-1 and NUL is the uplink EARFCN.

$$FUL = FUL_low + 0.1(NUL - NOffs-UL)$$

| Band | Downlink | | Uplink | | | |
|------|---------------|----------|--------------|---------------|----------|---------------|
| | FDL_low (MHz) | NOffs-DL | Range of NDL | FUL_low (MHz) | NOffs-UL | Range of NUL |
| 1 | 2110 | | 0 | 0 - 599 | 1920 | 18000 - 18599 |

| ... | | | | | | |

Note: The channel numbers that designate carrier frequencies so close to the operating band edges that the carrier extends beyond the operating band edge shall not be used. This implies that the first 7, 15, 25, 50, 75 and 100 channel numbers at the lower operating band edge and the last 6, 14, 24, 49, 74 and 99 channel numbers at the upper operating band edge shall not be used for channel bandwidths of 1.4, 3, 5, 10, 15 and 20 MHz respectively.

LTE TDD Channel Number Ranges

The carrier frequency in the uplink and downlink is designated by the E-UTRA Absolute Radio Frequency Channel Number (EARFCN) in the range 0 – 65535. The relation between EARFCN and the carrier frequency in MHz for the downlink is given by the following equation, where FDL_low and NOffs-DL are given in table 5.4.4-1 and NDL is the downlink EARFCN.

$$FDL = FDL_low + 0.1(NDL - NOffs-DL)$$

The relation between EARFCN and the carrier frequency in MHz for the uplink is given by the following equation where FUL_low and NOffs-UL are given in table 5.4.4-1 and NUL is the uplink EARFCN.

$$FUL = FUL_low + 0.1(NUL - NOffs-UL)$$

| Band | Downlink | Uplink | | | | |
|---------------|----------|--------------|---------------|----------|--------------|---------------|
| FDL_low (MHz) | NOffs-DL | Range of NDL | FUL_low (MHz) | NOffs-UL | Range of NUL | |
| 33 | 1900 | 36000 | 36000 - 36199 | 1900 | 36000 | 36000 - 36199 |
| 34 | 2010 | 36200 | 36200 - 36349 | 2010 | 36200 | 36200 - 36349 |
| 35 | 1850 | 36350 | 36350 - 36949 | 1850 | 36350 | 36350 - 36949 |
| 36 | 1930 | 36950 | 36950 - 37549 | 1930 | 36950 | 36950 - 37549 |

| Band | Downlink | Uplink | | | | |
|------|----------|--------|---------------|------|-------|------------------|
| 37 | 1910 | 37550 | 37550 -37749 | 1910 | 37550 | 37550 - 37749 |
| 38 | 2570 | 37750 | 37750 -38249 | 2570 | 37750 | 37750 - 38249 |
| 39 | 1880 | 38250 | 38250 -38649 | 1880 | 38250 | 38250 - 38649 |
| 40 | 2300 | 38650 | 38650 -39649 | 2300 | 38650 | 38650 - 39649 |
| 41 | 2496 | 39650 | 39650 - 41589 | 2496 | 39650 | 39650 - 41589 |
| 42 | 3400 | 41590 | 41590 - 43589 | 3400 | 41590 | 41590 - 43589 |
| 43 | 3600 | 43590 | 43590 - 45589 | 3600 | 43590 | 43590 - 45589 |

Note: The channel numbers that designate carrier frequencies so close to the operating band edges that the carrier extends beyond the operating band edge shall not be used. This implies that the first 7, 15, 25, 50, 75 and 100 channel numbers at the lower operating band edge and the last 6, 14, 24, 49, 74 and 99 channel numbers at the upper operating band edge shall not be used for channel bandwidths of 1.4, 3, 5, 10, 15 and 20 MHz respectively.

TDSCDMA Channel Number Ranges

1.28 Mcps TDD Option

No TX-RX frequency separation is required as Time Division Duplex (TDD) is employed. Each subframe consists of 7 main timeslots where all main timeslots (at least the first one) before the single switching point are allocated DL and all main timeslots (at least the last one) after the single switching point are allocated UL.

The nominal channel spacing is 1.6 MHz, but this can be adjusted to optimise performance in a particular deployment scenario.

The carrier frequency is designated by the UTRA absolute radio frequency channel number (UARFCN). The value of the UARFCN in the IMT2000 band is defined in the general case as follows:

$$N_t = 5 * F \quad 0.0 \text{ MHz} \leq F \leq 3276.6 \text{ MHz}$$

where F is the carrier frequency in MHz

Additional channels applicable to operation in the frequency band defined in sub-clause 5.2(d) are defined via the following UARFCN definition:

$$N_t = 5 * (F - 2150.1 \text{ MHz}) \quad 2572.5 \text{ MHz} \leq F \leq 2617.5 \text{ MHz}$$

UARFCN

1.28 Mcps TDD Option

The following UARFCN range shall be supported for each band:

**Table: UTRA Absolute Radio
Frequency Channel Number 1.28
Mcps TDD Option**

| Frequency Band | Frequency Range | UARFCN Uplink and Downlink transmission |
|---|-----------------|---|
| For operation in frequency band as defined in subclause 5.2 (a) | 1900–1920 MHz | 9504 to 9596 |
| | 2010–2025 MHz | 10054 to 10121 |
| For operation in frequency band as defined in subclause 5.2 (b) | 1850–1910 MHz | 9254 to 9546 |
| | 1930–1990 MHz | 9654 to 9946 |
| For operation in frequency band as defined in subclause 5.2 (c) | 1910–1930 MHz | 9554 to 9646 |
| For operation in frequency band as defined in subclause 5.2 (d) | 2570–2620 MHz | 12854 to 13096 |
| For operation in frequency band as defined in subclause 5.2 (e) | 2300–2400 MHz | 11504 to 11996 |
| For operation in frequency band as defined in subclause 5.2 (f) | 1880–1920 MHz | 9404 to 9596 |

Radio Setup

Allows access to the sub-menus for selecting the radio standard and associated radio band. You can also set a frequency reference and offset.

This menu is greyed out when on E6630A. Radio band settings for GSM, cdma2000, and so on -- most of which are not actually supported in E6630A, which has three narrow frequency bands. So band settings are grayed out.

| Key Path | Source, Frequency |
|----------------------|-------------------|
| Initial S/W Revision | A.05.00 |

Radio Standard

Allows access to the channel band sub-menus to select the desired radio standard. When you have selected the radio standard, you can then set an active channel band. The radio standard and the active channel band allow you to use channel numbers to set frequency automatically.

| Initial S/W Revision | A.05.00 |

None

Selects no radio standard for use. When you have selected the radio standard to NONE, you cannot use channel numbers to set frequency automatically. You will need to set the frequency manually.

| | |
|-----------------------------|---|
| Key Path | Source, Frequency, Radio Setup, Radio Standard |
| Initial S/W Revision | A.05.00 |

GSM/EDGE

Sets GSM/EDGE as the radio standard for use and accesses the GSM/EDGE specific channel band sub-menus.

| | |
|-----------------------------|---|
| Key Path | Source, Frequency, Radio Setup, Radio Standard |
| Initial S/W Revision | A.05.00 |

P-GSM

Selects P-GSM as the active channel band.

| | |
|-----------------------------|---|
| Key Path | Source, Frequency, Radio Setup, Radio Standard, GSM/EDGE |
| Example | :SOUR:FREQ:CHAN:BAND PGSM |
| Initial S/W Revision | A.05.00 |

E-GSM

Selects E-GSM as the active channel band.

| | |
|-----------------------------|---|
| Key Path | Source, Frequency, Radio Setup, Radio Standard, GSM/EDGE |
| Example | :SOUR:FREQ:CHAN:BAND EGSM |
| Initial S/W Revision | A.05.00 |

R-GSM

Selects R-GSM as the active channel band.

| | |
|----------------------|---|
| Key Path | Source, Frequency, Radio Setup, Radio Standard, GSM/EDGE |
| Example | :SOUR:FREQ:CHAN:BAND RGSM |
| Initial S/W Revision | A.05.00 |

DCS 1800

Selects DCS 1800 as the active channel band.

| | |
|----------------------|---|
| Key Path | Source, Frequency, Radio Setup, Radio Standard, GSM/EDGE |
| Example | :SOUR:FREQ:CHAN:BAND DCS1800 |
| Initial S/W Revision | A.05.00 |

PCS 1900

Selects PCS 1900 as the active channel band.

| | |
|----------------------|---|
| Key Path | Source, Frequency, Radio Setup, Radio Standard, GSM/EDGE |
| Example | :SOUR:FREQ:CHAN:BAND PCS1900 |
| Initial S/W Revision | A.05.00 |

GSM 450

Selects GSM 450 as the active channel band.

| | |
|----------------------|---|
| Key Path | Source, Frequency, Radio Setup, Radio Standard, GSM/EDGE |
| Example | :SOUR:FREQ:CHAN:BAND GSM450 |
| Initial S/W Revision | A.05.00 |

GSM 480

Selects GSM 480 as the active channel band.

| | |
|----------------------|---|
| Key Path | Source, Frequency, Radio Setup, Radio Standard, GSM/EDGE |
| Example | :SOUR:FREQ:CHAN:BAND GSM480 |
| Initial S/W Revision | A.05.00 |

GSM 850

Selects GSM 850 as the active channel band.

| | |
|----------------------|---|
| Key Path | Source, Frequency, Radio Setup, Radio Standard, GSM/EDGE |
| Example | :SOUR:FREQ:CHAN:BAND GSM850 |
| Initial S/W Revision | A.05.00 |

GSM 700

Selects GSM 700 as the active channel band.

| | |
|----------------------|---|
| Key Path | Source, Frequency, Radio Setup, Radio Standard, GSM/EDGE |
| Example | :SOUR:FREQ:CHAN:BAND GSM700 |
| Initial S/W Revision | A.05.00 |

T-GSM 810

Selects T-GSM 810 as the active channel band.

| | |
|----------------------|---|
| Key Path | Source, Frequency, Radio Setup, Radio Standard, GSM/EDGE |
| Example | :SOUR:FREQ:CHAN:BAND T-GSM810 |
| Initial S/W Revision | A.05.00 |

WCDMA

Sets WCDMA as the radio standard for use and accesses the W-CDMA specific channel band sub-menus.

| | |
|----------------------|---|
| Key Path | Source, Frequency, Radio Setup, Radio Standard |
| Initial S/W Revision | A.05.00 |

Band I

Selects Band I as the active channel band.

| | |
|----------------------|--|
| Key Path | Source, Frequency, Radio Setup, Radio Standard, WCDMA |
| Example | :SOUR:FREQ:CHAN:BAND BANDI |
| Initial S/W Revision | A.05.00 |

Band II

Selects Band II as the active channel band.

| | |
|----------------------|--|
| Key Path | Source, Frequency, Radio Setup, Radio Standard, WCDMA |
| Example | :SOUR:FREQ:CHAN:BAND BANDII |
| Initial S/W Revision | A.05.00 |

Band III

Selects Band III as the active channel band.

| | |
|----------------------|--|
| Key Path | Source, Frequency, Radio Setup, Radio Standard, WCDMA |
| Example | :SOUR:FREQ:CHAN:BAND BANDIII |
| Initial S/W Revision | A.05.00 |

Band IV

Selects Band IV as the active channel band.

| | |
|----------------------|--|
| Key Path | Source, Frequency, Radio Setup, Radio Standard, WCDMA |
| Example | :SOUR:FREQ:CHAN:BAND BANDIV |
| Initial S/W Revision | A.05.00 |

Band V

Selects Band V as the active channel band.

| | |
|----------------------|--|
| Key Path | Source, Frequency, Radio Setup, Radio Standard, WCDMA |
| Example | :SOUR:FREQ:CHAN:BAND BANDV |
| Initial S/W Revision | A.05.00 |

Band VI

Selects Band VI as the active channel band.

| | |
|----------------------|--|
| Key Path | Source, Frequency, Radio Setup, Radio Standard, WCDMA |
| Example | :SOUR:FREQ:CHAN:BAND BANDVI |
| Initial S/W Revision | A.05.00 |

Band VII

Selects Band VII as the active channel band.

| | |
|----------------------|--|
| Key Path | Source, Frequency, Radio Setup, Radio Standard, WCDMA |
| Example | :SOUR:FREQ:CHAN:BAND BANDVII |
| Initial S/W Revision | A.05.00 |

Band VIII

Selects Band VIII as the active channel band.

| | |
|----------------------|--|
| Key Path | Source, Frequency, Radio Setup, Radio Standard, WCDMA |
| Example | :SOUR:FREQ:CHAN:BAND BANDVIII |
| Initial S/W Revision | A.05.00 |

Band IX

Selects Band IX as the active channel band.

| | |
|----------------------|--|
| Key Path | Source, Frequency, Radio Setup, Radio Standard, WCDMA |
| Example | :SOUR:FREQ:CHAN:BAND BANDIX |
| Initial S/W Revision | A.05.00 |

Band X

Selects Band X as the active channel band.

| | |
|----------------------|--|
| Key Path | Source, Frequency, Radio Setup, Radio Standard, WCDMA |
| Example | :SOUR:FREQ:CHAN:BAND BANDX |
| Initial S/W Revision | A.05.00 |

Band XI

Selects Band XI as the active channel band.

| | |
|----------------------|--|
| Key Path | Source, Frequency, Radio Setup, Radio Standard, WCDMA |
| Example | :SOUR:FREQ:CHAN:BAND BANDXI |
| Initial S/W Revision | A.05.00 |

Band XII

Selects Band XII as the active channel band.

| | |
|----------------------|--|
| Key Path | Source, Frequency, Radio Setup, Radio Standard, WCDMA |
| Example | :SOUR:FREQ:CHAN:BAND BANDXII |
| Initial S/W Revision | A.05.00 |

Band XIII

Selects band XIII as the active channel band.

| | |
|----------------------|--|
| Key Path | Source, Frequency, Radio Setup, Radio Standard, WCDMA |
| Example | :SOUR:FREQ:CHAN:BAND BANDXIII |
| Initial S/W Revision | A.05.00 |

Band XIV

Selects Band XIV as the active channel band.

| | |
|----------------------|--|
| Key Path | Source, Frequency, Radio Setup, Radio Standard, WCDMA |
| Example | :SOUR:FREQ:CHAN:BAND BANDXIV |
| Initial S/W Revision | A.05.00 |

CDMA 2000 / 1xEVDO

Sets CDMA 2000 / 1XEVDO as the radio standard for use and accesses the CDMA 2000/1xEVDO specific channel band sub-menus.

| | |
|----------------------|---|
| Key Path | Source, Frequency, Radio Setup, Radio Standard |
| Initial S/W Revision | A.05.00 |

US CELL

Selects US Cell as the active channel band.

| | |
|----------------------|---|
| Key Path | Source, Frequency, Radio Setup, Radio Standard, CDMA 2000 / 1xEVDO |
| Example | :SOUR:FREQ:CHAN:BAND USCELL |
| Initial S/W Revision | A.05.00 |

US PCS

Selects US PCS as the active channel band.

| | |
|----------------------|---|
| Key Path | Source, Frequency, Radio Setup, Radio Standard, CDMA 2000 / 1xEVDO |
| Example | :SOUR:FREQ:CHAN:BAND PCS |
| Initial S/W Revision | A.05.00 |

Japan Cell

Selects Japan Cell as the active channel band.

| | |
|----------------------|---|
| Key Path | Source, Frequency, Radio Setup, Radio Standard, CDMA 2000 / 1xEVDO |
| Example | :SOUR:FREQ:CHAN:BAND JAPAN |
| Initial S/W Revision | A.05.00 |

Korean PCS

Selects Korean PCS as the active channel band.

| | |
|----------------------|---|
| Key Path | Source, Frequency, Radio Setup, Radio Standard, CDMA 2000 / 1xEVDO |
| Example | :SOUR:FREQ:CHAN:BAND KOREAN |
| Initial S/W Revision | A.05.00 |

NMT 450

Selects NMT 450 as the active channel band.

| | |
|----------------------|---|
| Key Path | Source, Frequency, Radio Setup, Radio Standard, CDMA 2000 / 1xEVDO |
| Example | :SOUR:FREQ:CHAN:BAND NMT |
| Initial S/W Revision | A.05.00 |

IMT 2000

Selects IMT 2000 as the active channel band.

| | |
|----------------------|---|
| Key Path | Source, Frequency, Radio Setup, Radio Standard, CDMA 2000 / 1xEVDO |
| Example | :SOUR:FREQ:CHAN:BAND IMT2K |
| Initial S/W Revision | A.05.00 |

Upper 700

Selects Upper 700 as the active channel band.

| | |
|----------------------|---|
| Key Path | Source, Frequency, Radio Setup, Radio Standard, CDMA 2000 / 1xEVDO |
| Example | :SOUR:FREQ:CHAN:BAND UPPER |
| Initial S/W Revision | A.05.00 |

Secondary 800

Selects Secondary 800 as the active channel band.

| | |
|----------------------|---|
| Key Path | Source, Frequency, Radio Setup, Radio Standard, CDMA 2000 / 1xEVDO |
| Example | :SOUR:FREQ:CHAN:BAND SECOND |
| Initial S/W Revision | A.05.00 |

400 Euro PAMR

Selects 400 Euro PAMR as the active channel band.

| | |
|----------------------|---|
| Key Path | Source, Frequency, Radio Setup, Radio Standard, CDMA 2000 / 1xEVDO |
| Example | :SOUR:FREQ:CHAN:BAND PAMR400 |
| Initial S/W Revision | A.05.00 |

800 PAMR

Selects 800 PAMR as the active channel band.

| | |
|----------------------|---|
| Key Path | Source, Frequency, Radio Setup, Radio Standard, CDMA 2000 / 1xEVDO |
| Example | :SOUR:FREQ:CHAN:BAND PAMR800 |
| Initial S/W Revision | A.05.00 |

2.5GHz IMT EXT

Selects 2.5 GHz IMT EXT as the active channel band.

| | |
|----------------------|---|
| Key Path | Source, Frequency, Radio Setup, Radio Standard, CDMA 2000 / 1xEVDO |
| Example | :SOUR:FREQ:CHAN:BAND IMTEXT |
| Initial S/W Revision | A.05.00 |

US PCS 1.9GHz

Selects US PCS 1.9 GHz as the active channel band.

| | |
|----------------------|---|
| Key Path | Source, Frequency, Radio Setup, Radio Standard, CDMA 2000 / 1xEVDO |
| Example | :SOUR:FREQ:CHAN:BAND PCS1DOT9G |
| Initial S/W Revision | A.05.00 |

AWS

Selects AWS as the active channel band.

| | |
|----------------------|---|
| Key Path | Source, Frequency, Radio Setup, Radio Standard, CDMA 2000 / 1xEVDO |
| Example | :SOUR:FREQ:CHAN:BAND AWS |
| Initial S/W Revision | A.05.00 |

US 2.5GHz

Selects US 2.5 GHz as the active channel band.

| | |
|----------------------|---|
| Key Path | Source, Frequency, Radio Setup, Radio Standard, CDMA 2000 / 1xEVDO |
| Example | :SOUR:FREQ:CHAN:BAND US2DOT5G |
| Initial S/W Revision | A.05.00 |

700 Public Safety

Selects 700 Public Safety as the active channel band.

| | |
|----------------------|---|
| Key Path | Source, Frequency, Radio Setup, Radio Standard, CDMA 2000 / 1xEVDO |
| Example | :SOUR:FREQ:CHAN:BAND PUBLIC |
| Initial S/W Revision | A.05.00 |

C2K Lower 700

Selects C2K Lower 700 as the active channel band.

| | |
|----------------------|---|
| Key Path | Source, Frequency, Radio Setup, Radio Standard, CDMA 2000 / 1xEVDO |
| Example | :SOUR:FREQ:CHAN:BAND LOWER |
| Initial S/W Revision | A.05.00 |

LTE

Sets LTE FDD as the radio standard for use and accesses the LTE FDD specific channel band sub-menus..

| | |
|----------------------|---|
| Key Path | Source, Frequency, Radio Setup, Radio Standard |
| Initial S/W Revision | A.09.50 |

BAND 1

Selects BAND 1 as the band for the current step.

| | |
|----------------------|--|
| Key Path | Source, Frequency, Radio Setup, Radio Standard, LTE |
| Example | :SOUR:FREQ:CHAN:BAND BAND1 |
| Initial S/W Revision | A.09.50 |

BAND 2

Selects BAND 2 as the band for the current step.

| | |
|----------------------|--|
| Key Path | Source, Frequency, Radio Setup, Radio Standard, LTE |
| Example | :SOUR:FREQ:CHAN:BAND BAND2 |
| Initial S/W Revision | A.09.50 |

BAND 3

Selects BAND 3 as the band for the current step.

| | |
|----------------------|--|
| Key Path | Source, Frequency, Radio Setup, Radio Standard, LTE |
| Example | :SOUR:FREQ:CHAN:BAND BAND3 |
| Initial S/W Revision | A.09.50 |

BAND 4

Selects BAND 4 as the band for the current step.

| | |
|----------------------|--|
| Key Path | Source, Frequency, Radio Setup, Radio Standard, LTE |
| Example | :SOUR:FREQ:CHAN:BAND BAND4 |
| Initial S/W Revision | A.09.50 |

BAND 5

Selects BAND 5 as the band for the current step.

| | |
|----------|--|
| Key Path | Source, Frequency, Radio Setup, Radio Standard, LTE |
|----------|--|

| | |
|----------------------|----------------------------|
| Example | :SOUR:FREQ:CHAN:BAND BAND5 |
| Initial S/W Revision | A.09.50 |

BAND 6

Selects BAND 6 as the band for the current step.

| | |
|----------------------|--|
| Key Path | Source, Frequency, Radio Setup, Radio Standard, LTE |
| Example | :SOUR:FREQ:CHAN:BAND BAND6 |
| Initial S/W Revision | A.09.50 |

BAND 7

Selects BAND 7 as the band for the current step.

| | |
|----------------------|--|
| Key Path | Source, Frequency, Radio Setup, Radio Standard, LTE |
| Example | :SOUR:FREQ:CHAN:BAND BAND7 |
| Initial S/W Revision | A.09.50 |

BAND 8

Selects BAND 8 as the band for the current step.

| | |
|----------------------|--|
| Key Path | Source, Frequency, Radio Setup, Radio Standard, LTE |
| Example | :SOUR:FREQ:CHAN:BAND BAND8 |
| Initial S/W Revision | A.09.50 |

BAND 9

Selects BAND 9 as the band for the current step.

| | |
|----------------------|--|
| Key Path | Source, Frequency, Radio Setup, Radio Standard, LTE |
| Example | :SOUR:FREQ:CHAN:BAND BAND9 |
| Initial S/W Revision | A.09.50 |

BAND 10

Selects BAND 10 as the band for the current step.

| | |
|----------|--|
| Key Path | Source, Frequency, Radio Setup, Radio Standard, LTE |
|----------|--|

| | |
|----------------------|-----------------------------|
| Example | :SOUR:FREQ:CHAN:BAND BAND10 |
| Initial S/W Revision | A.09.50 |

BAND 11

Selects BAND 11 as the band for the current step.

| | |
|----------------------|--|
| Key Path | Source, Frequency, Radio Setup, Radio Standard, LTE |
| Example | :SOUR:FREQ:CHAN:BAND BAND11 |
| Initial S/W Revision | A.09.50 |

BAND 12

Selects BAND 12 as the band for the current step.

| | |
|----------------------|--|
| Key Path | Source, Frequency, Radio Setup, Radio Standard, LTE |
| Example | :SOUR:FREQ:CHAN:BAND BAND12 |
| Initial S/W Revision | A.09.50 |

BAND 13

Selects BAND 13 as the band for the current step.

| | |
|----------------------|--|
| Key Path | Source, Frequency, Radio Setup, Radio Standard, LTE |
| Example | :SOUR:FREQ:CHAN:BAND BAND13 |
| Initial S/W Revision | A.09.50 |

BAND 14

Selects BAND 14 as the band for the current step.

| | |
|----------------------|--|
| Key Path | Source, Frequency, Radio Setup, Radio Standard, LTE |
| Example | :SOUR:FREQ:CHAN:BAND BAND14 |
| Initial S/W Revision | A.09.50 |

BAND 17

Selects BAND 17 as the band for the current step.

| | |
|----------|--|
| Key Path | Source, Frequency, Radio Setup, Radio Standard, LTE |
|----------|--|

| | |
|----------------------|-----------------------------|
| Example | :SOUR:FREQ:CHAN:BAND BAND17 |
| Initial S/W Revision | A.09.50 |

BAND 18

Selects BAND 18 as the band for the current step.

| | |
|----------------------|--|
| Key Path | Source, Frequency, Radio Setup, Radio Standard, LTE |
| Example | :SOUR:FREQ:CHAN:BAND BAND18 |
| Initial S/W Revision | A.09.50 |

BAND 19

Selects BAND 19 as the band for the current step.

| | |
|----------------------|--|
| Key Path | Source, Frequency, Radio Setup, Radio Standard, LTE |
| Example | :SOUR:FREQ:CHAN:BAND BAND19 |
| Initial S/W Revision | A.09.50 |

BAND 20

Selects BAND 20 as the band for the current step.

| | |
|----------------------|--|
| Key Path | Source, Frequency, Radio Setup, Radio Standard, LTE |
| Example | :SOUR:FREQ:CHAN:BAND BAND20 |
| Initial S/W Revision | A.09.50 |

BAND 21

Selects BAND 21 as the band for the current step.

| | |
|----------------------|--|
| Key Path | Source, Frequency, Radio Setup, Radio Standard, LTE |
| Example | :SOUR:FREQ:CHAN:BAND BAND21 |
| Initial S/W Revision | A.09.50 |

BAND 24

Selects BAND 24 as the band for the current step.

| | |
|----------|--|
| Key Path | Source, Frequency, Radio Setup, Radio Standard, LTE |
|----------|--|

| | |
|----------------------|-----------------------------|
| Example | :SOUR:FREQ:CHAN:BAND BAND24 |
| Initial S/W Revision | A.09.50 |

BAND 25

Selects BAND 25 as the band for the current step.

| | |
|----------------------|--|
| Key Path | Source, Frequency, Radio Setup, Radio Standard, LTE |
| Example | :SOUR:FREQ:CHAN:BAND BAND25 |
| Initial S/W Revision | A.09.50 |

BAND 26

Selects BAND 26 as the band for the current step.

| | |
|----------------------|--|
| Key Path | Source, Frequency, Radio Setup, Radio Standard, LTE |
| Example | :SOUR:FREQ:CHAN:BAND BAND26 |
| Initial S/W Revision | A.12.53 |

BAND 27

Selects BAND 27 as the band for the current step.

| | |
|----------------------|--|
| Key Path | Source, Frequency, Radio Setup, Radio Standard, LTE |
| Example | :SOUR:FREQ:CHAN:BAND BAND27 |
| Initial S/W Revision | A.14.00 |

BAND 28

Selects BAND 28 as the band for the current step.

| | |
|----------------------|--|
| Key Path | Source, Frequency, Radio Setup, Radio Standard, LTE |
| Example | :SOUR:FREQ:CHAN:BAND BAND28 |
| Initial S/W Revision | A.14.00 |

BAND 31

Selects BAND 31 as the band for the current step.

| | |
|----------|--|
| Key Path | Source, Frequency, Radio Setup, Radio Standard, LTE |
|----------|--|

| | |
|----------------------|-----------------------------|
| Example | :SOUR:FREQ:CHAN:BAND BAND31 |
| Initial S/W Revision | A.14.00 |

LTE TDD

Sets LTE TDD as the radio standard for use and accesses the LTE TDD specific channel band sub-menus..

| | |
|----------------------|---|
| Key Path | Source, Frequency, Radio Setup, Radio Standard |
| Initial S/W Revision | A.11.50 |

BAND 33

Selects BAND 33 as the band for the current step.

| | |
|----------------------|--|
| Key Path | Source, Frequency, Radio Setup, Radio Standard, LTE TDD |
| Example | :SOUR:FREQ:CHAN:BAND BAND33 |
| Initial S/W Revision | A.11.50 |

BAND 34

Selects BAND 34 as the band for the current step.

| | |
|----------------------|--|
| Key Path | Source, Frequency, Radio Setup, Radio Standard, LTE TDD |
| Example | :SOUR:FREQ:CHAN:BAND BAND34 |
| Initial S/W Revision | A.11.50 |

BAND 35

Selects BAND 35 as the band for the current step.

| | |
|----------------------|--|
| Key Path | Source, Frequency, Radio Setup, Radio Standard, LTE TDD |
| Example | :SOUR:FREQ:CHAN:BAND BAND35 |
| Initial S/W Revision | A.11.50 |

BAND 36

Selects BAND 36 as the band for the current step.

| | |
|----------------------|--|
| Key Path | Source, Frequency, Radio Setup, Radio Standard, LTE TDD |
| Example | :SOUR:FREQ:CHAN:BAND BAND36 |
| Initial S/W Revision | A.11.50 |

BAND 37

Selects BAND 37 as the band for the current step.

| | |
|----------------------|--|
| Key Path | Source, Frequency, Radio Setup, Radio Standard, LTE TDD |
| Example | :SOUR:FREQ:CHAN:BAND BAND37 |
| Initial S/W Revision | A.11.50 |

BAND 38

Selects BAND 38 as the band for the current step.

| | |
|----------------------|--|
| Key Path | Source, Frequency, Radio Setup, Radio Standard, LTE TDD |
| Example | :SOUR:FREQ:CHAN:BAND BAND38 |
| Initial S/W Revision | A.11.50 |

BAND 39

Selects BAND 39 as the band for the current step.

| | |
|----------------------|--|
| Key Path | Source, Frequency, Radio Setup, Radio Standard, LTE TDD |
| Example | :SOUR:FREQ:CHAN:BAND BAND39 |
| Initial S/W Revision | A.11.50 |

BAND 40

Selects BAND 40 as the band for the current step.

| | |
|----------------------|--|
| Key Path | Source, Frequency, Radio Setup, Radio Standard, LTE TDD |
| Example | :SOUR:FREQ:CHAN:BAND BAND40 |
| Initial S/W Revision | A.11.50 |

BAND 41

Selects BAND 41 as the band for the current step.

| | |
|----------------------|--|
| Key Path | Source, Frequency, Radio Setup, Radio Standard, LTE TDD |
| Example | :SOUR:FREQ:CHAN:BAND BAND41 |
| Initial S/W Revision | A.11.50 |

BAND 42

Selects BAND 42 as the band for the current step.

| | |
|----------------------|--|
| Key Path | Source, Frequency, Radio Setup, Radio Standard, LTE TDD |
| Example | :SOUR:FREQ:CHAN:BAND BAND42 |
| Initial S/W Revision | A.11.50 |

BAND 43

Selects BAND 43 as the band for the current step.

| | |
|----------------------|--|
| Key Path | Source, Frequency, Radio Setup, Radio Standard, LTE TDD |
| Example | :SOUR:FREQ:CHAN:BAND BAND43 |
| Initial S/W Revision | A.11.50 |

BAND 44

Selects BAND 44 as the band for the current step.

| | |
|----------------------|--|
| Key Path | Source, Frequency, Radio Setup, Radio Standard, LTE TDD |
| Example | :SOUR:FREQ:CHAN:BAND BAND44 |
| Initial S/W Revision | A.14.00 |

TDSCDMA

Sets TDSCDMA as the radio standard for use and accesses the TDSCDMA specific channel band sub-menus..

| | |
|----------------------|---|
| Key Path | Source, Frequency, Radio Setup, Radio Standard |
| Initial S/W Revision | A.11.50 |

BAND A

Selects BAND A as the band for the current step.

| | |
|----------------------|--|
| Key Path | Source, Frequency, Radio Setup, Radio Standard, TDSCDMA |
| Example | :SOUR:FREQ:CHAN:BAND BANDA |
| Initial S/W Revision | A.11.50 |

BAND B

Selects BAND B as the band for the current step.

| | |
|----------------------|--|
| Key Path | Source, Frequency, Radio Setup, Radio Standard, TDSCDMA |
| Example | :SOUR:FREQ:CHAN:BAND BANDB |
| Initial S/W Revision | A.11.50 |

BAND C

Selects BAND C as the band for the current step.

| | |
|----------------------|--|
| Key Path | Source, Frequency, Radio Setup, Radio Standard, TDSCDMA |
| Example | :SOUR:FREQ:CHAN:BAND BANDC |
| Initial S/W Revision | A.11.50 |

BAND D

Selects BAND D as the band for the current step.

| | |
|----------------------|--|
| Key Path | Source, Frequency, Radio Setup, Radio Standard, TDSCDMA |
| Example | :SOUR:FREQ:CHAN:BAND BANDD |
| Initial S/W Revision | A.11.50 |

BAND E

Selects BAND E as the band for the current step.

| | |
|----------------------|--|
| Key Path | Source, Frequency, Radio Setup, Radio Standard, TDSCDMA |
| Example | :SOUR:FREQ:CHAN:BAND BANDE |
| Initial S/W Revision | A.11.50 |

BAND F

Selects BAND F as the band for the current step.

| | |
|----------------------|--|
| Key Path | Source, Frequency, Radio Setup, Radio Standard, TDSCDMA |
| Example | :SOUR:FREQ:CHAN:BAND BANDF |
| Initial S/W Revision | A.11.50 |

Radio Band Link

Allows you to specify the channel band type as either uplink or downlink link direction. This value is used in conjunction with the channel band and channel number to determine the absolute frequency output by the

source. When set to “Uplink”, the source will calculate the uplink frequency using an uplink formula together with the selected channel band and channel number . When set to “Downlink”, the source will calculate the downlink frequency using a downlink formula together with the selected channel band and channel number.

| | |
|--------------------------------------|---|
| Key Path | Source, Frequency, Radio Setup |
| Remote Command | :SOURce:RADio:BAND:LINK DOWN UP :SOURce:RADio:BAND:LINK? |
| Example | :SOUR:RAD:BAND:LINK UP |
| Preset | DOWN |
| Range | DOWN UP |
| Backwards Compatibility SCPI | :SOURce:RADio:DEVIce BTS MS :SOURce:RADio:DEVIce? |
| Backwards Compatibility Notes | BTS maps to the Downlink frequency MS maps to the Uplink frequency |
| Initial S/W Revision | A.05.00 |

Set Reference Frequency

This key allows you to set the frequency reference. Pressing this key turns the frequency reference state to ON, sets the reference frequency value to the current frequency, maintains this frequency at the RF output, and sets the displayed frequency to 0.00 Hz. All subsequent frequencies entered under Source>Frequency>Frequency are interpreted as being relative to this reference frequency.

When you use a frequency reference, the signal generator outputs a frequency that is set relative to the reference frequency by the value entered under Source>Frequency>Frequency as follows:

$$\text{Output frequency} = \text{reference frequency} - \text{entered frequency}$$

Where:

reference frequency equals the original RF frequency entered under Source>Frequency>Frequency and set as the reference frequency

entered frequency equals a new value entered under Source>Frequency>Frequency

In addition, the displayed frequency value will be the same as the value entered under Source>Frequency>Frequency.

NOTE

If Freq Reference is set to ON with a reference value set, entering a value under Source>Frequency>Frequency and pressing Set Frequency Reference will add that value to the existing Freq Reference value.

If you wish to change the reference frequency value to the new value entered under Source>Frequency>Frequency, first you must set Freq Reference to OFF and then press Set Frequency Reference.

| | |
|-----------------|--------------------------|
| Key Path | Source, Frequency |
|-----------------|--------------------------|

| | |
|-----------------------------|--|
| Remote Command | :SOURce:FREQuency:REFerence:SET |
| Example | :SOUR:FREQ:REF:SET |
| Dependencies | This setting is unavailable, and is grayed out when the List Sequencer is turned ON. |
| Initial S/W Revision | A.05.00 |

Freq Reference

This key allows you to toggle the state of the frequency reference. When the frequency reference state is ON, an annunciator is displayed on the main source view to indicate this state to the user.

When you use a frequency reference, the signal generator outputs a frequency that is set relative to the reference frequency by the value entered under Source>Frequency>Frequency as follows:

Output frequency = reference frequency + entered frequency

Where:

reference frequency equals the original RF frequency entered under Source>Frequency>Frequency and set as the reference frequency

entered frequency equals a new value entered under Source>Frequency>Frequency

For more information on Reference Frequency refer to ["Set Reference Frequency" on page 2532](#)

| Key Path | Source, Frequency |
|-----------------------------|--|
| Remote Command | :SOURce:FREQuency:REFerence <freq> :SOURce:FREQuency:REFerence? :SOURce:FREQuency:REFerence:STATe OFF ON 0 1 :SOURce:FREQuency:REFerence:STATe? |
| Example | :SOUR:FREQ:REF 0.00 Hz :SOUR:FREQ:REF:STATe ON |
| Dependencies | This setting is unavailable, and is grayed out when the List Sequencer is turned ON. |
| Couplings | The frequency reference state is coupled to the frequency reference set immediate action. When the reference set immediate action key is pressed, or the SCPI command issued, it turns the frequency reference state ON. |
| Preset | 0.00 Hz OFF |
| Min | 0.00 Hz |
| Max | Hardware Dependant: Option 503 = 3.6 GHz Option 504 = 3.8 GHz Option 506 = 6.00 GHz |
| Initial S/W Revision | A.05.00 |

Freq Offset

Allows you to specify the frequency offset value. When the frequency offset state is ON, an annunciator is displayed on the main source view to indicate this state to the user.

When the frequency offset is set to zero (0) and you set a new offset value, the displayed frequency value will change as follows and the RF output frequency will not change:

Displayed value = output frequency + offset value

Where:

output frequency equals the original frequency entered under Source > Frequency > Frequency

offset value equals the value entered under Source > Frequency > Freq Offset

When the frequency offset is set to a value other than zero (0) and you enter a new frequency value under Source > Frequency > Frequency, the displayed frequency will be the same as the value entered and the RF output frequency will be equal to the value entered minus the offset value as follows:

Output frequency = entered frequency – offset frequency

Displayed frequency = output frequency + offset frequency

Displayed frequency = entered frequency

Where:

entered frequency equals the frequency entered under Source > Frequency > Frequency

offset frequency equals the value previously entered and set under Source > Frequency > Freq Offset

| | |
|-----------------------------|--|
| Key Path | Source, Frequency |
| Remote Command | :SOURce:FREQuency:OFFSet <freq> :SOURce:FREQuency:OFFSet? |
| Example | :SOUR:FREQ:OFFS 0 Hz |
| Dependencies | This setting is unavailable, and is grayed out when the List Sequencer is turned ON. |
| Preset | 0 Hz |
| Min | -100.00 GHz |
| Max | 100.00 GHz |
| Initial S/W Revision | A.05.00 |

Modulation Setup

Allows access to the menus for setting up the available modulation types: "ARB" on page 2535, "AM" on page 2581, "FM" on page 2583, and "PM" on page 2584.

| | |
|-----------------------------|---------------|
| Key Path | Source |
| Initial S/W Revision | A.05.00 |

ARB

Allows you access to the ARB sub-menus.

| | |
|----------------------|---------------------------------|
| Key Path | Source, Modulation Setup |
| Initial S/W Revision | A.05.00 |

ARB

Allows you to toggle the state of the ARB function. When the ARB is On, a “MOD” annunciator is displayed in the system settings panel. When the ARB is turned Off, the MOD annunciator is cleared

| | |
|--------------------------|---|
| Key Path | Source, Modulation Setup, ARB |
| Remote Command | :SOURce:RADio:ARB[:STATe] ON OFF 1 0 :SOURce:RADio:ARB[:STATe]? |
| Example | :SOUR:RAD:ARB OFF :SOUR:RAD:ARB? |
| Notes | If the ARB is ON, a user then loads or deletes another file to ARB memory, the playing waveform segment may not keep phase continuity during the ARB memory operation. The waveform will be replayed after the ARB operation is finished. |
| Dependencies | This setting is for independent mode and has no effect on 3.3.8 list sequencer mode. Setting "Sequencer" on page 2586 Sequencer to On will put source enter list sequencer mode, and even if ARB state is On, the ARB file will not be played. Setting "Sequencer" on page 2586 Sequencer to Off will make source leave list sequencer mode, and this setting will take effect immediately. The ARB can only be turned on when there is a waveform file selected for playback. On the GUI If no waveform is selected, this key is grayed out. If you send the SCPI command to turn the ARB on with no waveform selected for playback, the ARB state remains OFF and an error is generated. "- When you try to recall a certain set of states in which the selected waveform is not in ARB memory and the ARB state is On, errors are reported |
| Couplings | If "Real-Time AWGN" on page 2546 AWGN State is On and this setting is On, "RF Power" on page 2500 RF Power will be adjusted to the value to maintain the AWGN power relationship defined by "Power Control Mode" on page 2547 Power Control Mode and other noise settings |
| Preset | Off |
| Range | On Off |
| Initial S/W Revision | A.05.00 |
| Modified at S/W Revision | A.16.00 (Add couplings with AWGN state) |

Select Waveform

Allows you to access to the waveform selection sub-menus.

Pressing this key changes the central view area to show the Waveform File Selection view.

| | |
|----------------------|--------------------------------------|
| Key Path | Source, Modulation Setup, ARB |
| Initial S/W Revision | A.05.00 |

Select Waveform

Allows you to select a waveform sequence or segment for the dual ARB to play.

| | |
|----------------------|---|
| Key Path | Source, Modulation Setup, ARB, Select Waveform |
| Remote Command | :SOURce:RADio:ARB:WAVeform <string> :SOURce:RADio:ARB:WAVeform? |
| Example | :SOUR:RAD:ARB:WAV "test_waveform.bin" |
| Notes | <p>If intended waveform is not in the memory yet, then issuing this command by SCPI will invoke ARB loading operation first, which involves a delay of unpredictable length. So this command should be followed by the query *OPC?, which holds off subsequent commands until the loading operating is complete.</p> <p><string> - specifies the name of the waveform segment or waveform sequence to be played by the ARB.</p> <p>When in Sequence Analyzer mode, and Include Source is Yes, if the you attempt to play a waveform sequence but not all the required waveform segments are in the ARB playback memory, the application will reject the loading operation with an error is generated .</p> <p>When Include Source is No, if you attempt to play a waveform sequence but not all the required waveform segments are contained in the ARB playback memory, the application will attempt to load the required segments from either the default directory of the current directory. If the ARB memory does not have enough space for all the waveform segments to be loaded, an error is generated and none of the waveform segments is loaded.</p> <p>If the ARB is ON, and you attampt to play a waveform sequence but not all the waveform segments within the sequence could be found to be loaded into ARB memory, an error is generated. The selected waveform keeps the previous value and ARB state remains On.</p> <p>If you specify a waveform segment over SCPI but the waveform segment is not present within ARB playback memory and cannot be found for auto loading within the current directory or the default directory, an error is generatedand the file selection remains unchanged.</p> <p>If you select a waveform for playback and the waveform requires a license that is not installed on the instrument, an error is generated.error is generated.</p> <p>If the ARB is ON and you load a file to ARB memory or delete a file from ARB memory, the playing waveform segment may not keep phase continuity during the ARB memory operation. The waveform will be replayed after the ARB operation is finished.</p> |
| Initial S/W Revision | A.05.00 |

Segments on Hard Disk

Allows you access to the sub-menus for loading waveform segments from the hard disk into ARB memory. The default directory is: D: varb.

Pressing this key changes the current view to the Waveform Management View.

| | |
|----------------------|---|
| Key Path | Source, Modulation Setup, ARB, Select Waveform |
| Initial S/W Revision | A.05.00 |

Load Segment To ARB Memory

Allows you to load the selected file into ARB memory. On the front panel you select the file for loading to the ARB memory by highlighting the desired file in the list. Using the SCPI command, you specify the file name on the HDD.

“NVWFM” (none-volatile storage) MSUS (Mass Storage Unit Specifier) is supported in the memory subsystem because the ARB memory cannot be accessed directly. Therefore, files must be downloaded to the instrument hard disk and then loaded into the ARB memory. “NVWFM” MSUS will be mapped to the default directory D: VARB. The SCPI command supports using either “NVWFM” MSUS or specifying a full path. For more information, see [Memory Subsystem \(Remote Command Only\)](#).

If a file of the same name already exists within ARB memory, it is overwritten. If you wish to load two segments of the same name, you must rename one of the segments before loading it into ARB memory. To rename a segment, you can either use Windows File Explorer, or the :MMEMory:COpy command.

| | |
|-----------------------|---|
| Key Path | Source, Modulation Setup, ARB, Select Waveform, Segments on Hard Disk |
| Remote Command | :SOURce:RADio:ARB:LOAD <string> |
| Example | :SOUR:RAD:ARB:LOAD "D: VARB\testwaveform.bin" or :SOUR:RAD:ARB:LOAD "NVWFM:testwaveform.bin" |
| Notes | <p>Because loading the file involves a delay of unpredictable length, this command should be followed by the query *OPC?, which holds off subsequent commands until the loading operating is complete.</p> <p><string> – specifies the path name of the file to load from the HDD into ARB memory. It could be a <full path + filename>, or <“NVWFM” MSUS + colon + filename>.</p> <p>When in Sequence Analyzer mode, and Include Source is Yes, an attempt to load a file to ARB memory will be rejected with an error.</p> <p>When Include Source is No and if there is insufficient free ARB memory to load the selected waveform, an error is generated. .</p> <p>If you specify a file over SCPI, but the file is not at the specified location, an error is generated.</p> <p>If you try to load a waveform file but the file contains less than 500 IQ samples, an error is generated.</p> <p>If you try to load a Signal Studio waveform “*.wfm” which contains invalid waveform header, an error is generated.</p> <p>If the ARB is ON when you load a file to ARB memory or delete a file from ARB memory, the playing waveform segment may not keep phase continuity during the ARB memory operation. The waveform will be replayed after the ARB operation is finished.</p> <p>ARB can be loaded into ARB memory even required licenses do not present on the instrument. In this</p> |

case, a GUI only warning message -800, "Operation complete; Loaded <filename> successfully, but no license <required licenses> installed". User can install required licenses according to <required licenses> string to license it, or multi-pack license it.

Initial S/W Revision A.05.00

Load All To ARB Memory

Allows you to load all the segment files within the currently selected directory into ARB memory. If a file of the same name already exists within ARB memory, it is overwritten. If you wish to load two segments of the same name, you must rename one of the segments before loading it into ARB memory. To rename a segment, you can either use Windows File Explorer, or the :MEMory:COPY command.

Key Path **Source, Modulation Setup, ARB, Select Waveform, Segments on Hard Disk**

Remote Command :SOURce:RADio:ARB:LOAD:ALL <string>

Example :SOUR:RAD:ARB:LOAD:ALL "D: varb"

Notes <string> - specifies the directory on the HDD to load the files into ARB memory from.
 When in Sequence Analyzer mode, and Include Source is Yes, an attempt to load all files from a directory to ARB memory is rejected with an error.
 When Include Source is No and there is insufficient free ARB memory to load all the waveforms, when the ARB memory is full, the copy ceases, and an error is generated.
 If you specify a directory over SCPI, but the directory does not exist, an error is generated.
 If the ARB is ON, a user then loads or deletes file to ARB memory, the playing waveform segment may not keep phase continuity during the ARB memory operation. The waveform will be replayed after the ARB operation is finished.

Initial S/W Revision A.05.00

Change Directory...

Allows you to change the currently selected directory on the hard disk. Pressing this key opens a standard windows change directory dialog allowing you to select the new directory of interest.

The current directory is used for manually loading waveform segments into ARB memory for playback, and as a search location for waveform segments that are required to be loaded into ARB memory for playback of a waveform sequence or a list sequence.

Key Path **Source, Modulation Setup, ARB, Select Waveform, Segments on Hard Disk**

Notes No remote command, SCPIfront panel only.

Initial S/W Revision A.05.00

Default Directory...

Allows you to change the default directory. It is used as a search location for waveform segments that are required to be loaded into ARB memory for playback of a waveform sequence, and as a search location for

selecting waveforms using SCPI.

| | |
|----------------------|---|
| Key Path | Source, Modulation Setup, ARB, Select Waveform, Segments on Hard Disk |
| Remote Command | :SOURce:RADio:ARB:DEFault:DIRectory <string> :SOURce:RADio:ARB: DEFault:DIRectory? |
| Example | :SOUR:RAD:ARB:DEF:DIR "D:\ArbFiles" :SOUR:RAD:ARB:DEF:DIR? |
| State Saved | Persistent, survives a power cycle and a preset but not saved in the instrument state |
| Initial S/W Revision | A.05.00 |

Segments in ARB Memory

Allows you access to the sub-menus for managing the files within ARB memory.

| | |
|----------------------|---|
| Key Path | Source, Modulation Setup, ARB, Select Waveform |
| Initial S/W Revision | A.05.00 |

Delete Segment From ARB Mem

Allows you to remove a segment from ARB playback memory.

| | |
|----------------------|---|
| Key Path | Source, Modulation Setup, ARB, Select Waveform, Segments in ARB Memory |
| Remote Command | :SOURce:RADio:ARB:DELete <string> |
| Example | :SOUR:RAD:ARB:DEL "testwaveform.bin" |
| Notes | <p><string> - specifies the waveform to be deleted from the ARB playback memory.</p> <p>When in Sequence Analyzer mode and Include Source is Yes, an attempt to delete a file from ARB memory is rejected with an error.</p> <p>When Include Source is No and you specify a file that does not exist within ARB memory, an error is generated.</p> <p>It is possible to delete files from within the ARB memory when the ARB is ON. However, if you attempt to delete the file that is currently playing an error is generated.</p> <p>It is possible to delete a file from within the ARB memory when the sequencer state is ON and the file is not being used by the List Sequencer. If you attempt to delete a file which is being used by the list sequencer, an error is generated.</p> <p>When sequencer state is On, even if ARB state is On, the selected waveform will not be played. In this case, if the selected waveform is not used in List Sequence, it can be deleted and the ARB state is turned Off.</p> <p>If the ARB is ON and you load a file to ARB memory or delete a file from ARB memory, the playing waveform segment may not keep phase continuity during the ARB memory operation. The waveform will be replayed after the ARB operation is finished.</p> |
| Initial S/W Revision | A.05.00 |

Delete All From ARB Memory

Allows you to remove all segments from ARB playback memory.

| | |
|----------------------|--|
| Key Path | Source, Modulation Setup, ARB, Select Waveform, Segments in ARB Memory |
| Remote Command | :SOURce:RADio:ARB:DELeTe:ALL |
| Example | :SOUR:RAD:ARB:DELeTe:ALL |
| Notes | <p>When in Sequence Analyzer mode and Include Source is Yes, an attempt to delete all files from ARB memory is rejected with an error.</p> <p>When Include Source is No and you attempt to delete all files from ARB memory when the ARB is currently playing a file, all files except the one playing are deleted and an error is generated.</p> <p>If you attempt to delete all files from ARB memory when there are waveform files used in "List Sequencer" on page 2585 and "Sequencer" on page 2586 state is ON, all files except the files currently being used in list sequencer are deleted, and an error is generated.</p> <p>If the ARB is ON and you load a file to ARB memory or delete a file from ARB memory, the playing waveform segment may not keep phase continuity during the ARB memory operation. The waveform will be replayed after the ARB operation is finished.</p> |
| Initial S/W Revision | A.05.00 |

Query ARB Memory File List (Remote Command Only)

Queries the test set for the list of waveform segments in the ARB memory.

NOTE

This command returns a string for waveform segment names in ARB memory. If you want a string list of waveform segments in the ARB memory, use **"Query ARB Memory Full File List (Remote Command Only)" on page 2540**.

| | |
|----------------------|--|
| Remote Command | :SOURce:RADio:ARB:CATalog? |
| Example | :SOUR:RAD:ARB:CATalog? |
| Notes | <p>The return data is in the following format:</p> <p><integer> - memory used</p> <p><integer> - memory free</p> <p><string> ... - comma separated list of waveform segments within ARB memory</p> |
| Initial S/W Revision | A.05.00 |

Query ARB Memory Full File List (Remote Command Only)

Queries the test set for the string list of waveform segments in the ARB memory. It returns a string list for waveform segment names in the ARB memory.

| | |
|----------------|---|
| Remote Command | :SOURce:RADio:ARB:FCATalog? |
| Example | :SOUR:RAD:ARB:FCATalog? |
| Notes | <p>The return data is in the following format:</p> <p><integer> - memory used</p> |

| | |
|----------------------|---|
| | <integer> - memory free <integer> - file count in ARB memory <string>, <string>, ... <string> - comma separated string list of waveform segments within ARB memory Example: SOUR:RAD:ARB:FCAT? EXT returns: 27499,2069653,3,"c2k.wfm","gsm.wfm","wcdma.wfm" |
| Initial S/W Revision | A.09.00 |

ARB Setup

Allows access to the ARB setup sub-menus.

| | |
|----------------------|--------------------------------------|
| Key Path | Source, Modulation Setup, ARB |
| Initial S/W Revision | A.05.00 |

Sample Rate

Allows you to set the ARB waveform playback sample rate.

| | |
|-----------------------|---|
| Key Path | Source, Modulation Setup, ARB, ARB Setup |
| Remote Command | :SOURce:RADio:ARB:SCLock:RATE <freq> :SOURce:RADio:ARB:SCLock:RATE? |
| Example | :SOUR:RAD:ARB:SCL:RATE 48.00 MHz |
| Notes | If there is a sample rate specified in the header of the waveform file, changing that sample rate is not recommended, as it may cause problems with burst timing. |
| Dependencies | When a new waveform is selected for playback the settings contained within the associated waveform header file are applied to the ARB. The sample rate is one of the values stored within the header file. If the newly selected waveform file has an associated header file, the sample rate is updated with the value from the header file. The sample rate will remain unchanged if the newly selected waveform does not have an associated header file. |
| Preset | 125.00 MHz |
| Min | 1.00 kHz |
| Max | 125.00 MHz |
| Initial S/W Revision | A.05.00 |

Run-Time Scaling

Allows you to adjust the run-time scaling value. The run-time scaling value is applied in real-time while the waveform is playing.

| | |
|----------|---|
| Key Path | Source, Modulation Setup, ARB, ARB Setup |
|----------|---|

| | |
|-----------------------------|--|
| Remote Command | :SOURce:RADio:ARB:RSCaling <real> :SOURce:RADio:ARB:RSCaling? |
| Example | :SOUR:RAD:ARB:RSC 100.00 |
| Dependencies | When a new waveform is selected for playback the settings contained within the associated waveform header file are applied to the ARB. The run-time scaling is one of the values stored within the header file. If the newly selected waveform file has an associated header file, the run-time scaling is updated with the value from the header file. The run-time scaling will remain unchanged if the newly selected waveform does not have an associated header file. |
| Preset | 70.00 % |
| Min | 1.00 % |
| Max | 100.00 % |
| Initial S/W Revision | A.05.00 |

Baseband Freq Offset

Allows you to adjust the value by which the baseband frequency is offset relative to the carrier.

| | |
|-----------------------------|---|
| Key Path | Source, Modulation Setup, ARB, ARB Setup |
| Remote Command | :SOURce:RADio:ARB:BASEband:FREQuency:OFFSet <freq> :SOURce:RADio:ARB:BASEband:FREQuency:OFFSet? |
| Example | :SOUR:RAD:ARB:BAS:FREQ:OFFS 0.00 Hz |
| Dependencies | When a new waveform is selected for playback the settings contained within the associated waveform header file are applied to the ARB. The baseband frequency offset is one of the values stored within the header file. If the newly selected waveform file has an associated header file, the baseband frequency offset is updated with the value from the header file. The baseband frequency offset will remain unchanged if the newly selected waveform does not have an associated header file. |
| Preset | 0.00 Hz |
| Min | -50.00 MHz |
| Max | 50.00 MHz |
| Initial S/W Revision | A.05.00 |

Edit RMS

Allows you to edit or calculate current RMS of selected waveform.

| | |
|-----------------------------|---|
| Key Path | Source, Modulation Setup, ARB, ARB Setup |
| Initial S/W Revision | A.14.50 |

Current RMS

Allows you to directly specify current RMS value used to playback currently selected waveform. Please note incorrect RMS value may cause inaccurate power output in E6640A that is sensitive to RMS value.

This setting is also updated by RMS in waveform header or updated when invoking RMS calculation operation.

This setting can be saved to the header of currently selected waveform by invoking ["Save Setup To Header" on page 2580](#) "Save Setup To Header".

| | |
|----------------------|---|
| Key Path | Source, Modulation Setup, ARB, ARB Setup, Edit RMS |
| Remote Command | :SOURce:RADio:ARB:RMS <float> :SOURce:RADio:ARB:RMS? |
| Example | :SOUR:RAD:ARB:HEAD:RMS 0.7 :SOUR:RAD:ARB:HEAD:RMS? |
| Notes | Valid range is 0 to 1.414, values outside the range will be clipped to the closest boundary. Note this value does not affect "List Sequencer" on page 2585 Source List Sequencer that always uses RMS value resides in each ARB header. If want this value to take effect in list sequencer, use "Save Setup To Header" on page 2580 "Save Setup to Header" to save current RMS value to header first, then play the ARB in source list sequencer. |
| Dependencies | When a new waveform is selected for playback, this setting is updated by the RMS value defined in associated waveform header file. If selected waveform has no associated header file or header file does not specify RMS value, then instrument will try to calculate out one automatically. Calculating RMS can also update this setting. |
| Preset | 0 |
| Range | 0 ~ 1.414 |
| Initial S/W Revision | A.14.50 |

RMS Calculation Mode

Allows you to specify the mode to calculate the current RMS.

| | |
|----------------------|--|
| Key Path | Source, Modulation Setup, ARB, ARB Setup, Edit RMS |
| Remote Command | :SOURce:RADio:ARB:RMS:CALCulation:MODE AUTO M1 M2 M3 M4 :SOURce:RADio:ARB:RMS:CALCulation:MODE? |
| Example | :SOUR:RAD:ARB:RMS:CALC:MODE AUTO |
| Notes | If no waveform is selected, or selected waveform is waveform sequence, the key will grey out. |
| Preset | AUTO |
| Range | AUTO M1 M2 M3 M4 |
| Initial S/W Revision | A.14.50 |

Auto

RMS will be calculated based on the whole sample range of current selected waveform.

| | |
|-----------------------------|--|
| Key Path | Source, Modulation Setup, ARB, ARB Setup, Edit RMS, Calculate RMS, RMS Calculation Mode |
| Example | :SOUR:RAD:ARB:RMS:CALC:MODE AUTO |
| Initial S/W Revision | A.14.50 |

Marker 1

Selects marker 1 to designate sample range used for RMS calculation.

| | |
|-----------------------------|---|
| Key Path | Source, Modulation Setup, ARB, ARB Setup, Edit RMS, Calculate RMS, RMS Calculation Mode , Marker |
| Example | :SOUR:RAD:ARB:RMS:CALC:MODE M1 |
| Initial S/W Revision | A.14.50 |

Marker 2

Selects marker 2 to designate sample range used for RMS calculation.

| | |
|-----------------------------|---|
| Key Path | Source, Modulation Setup, ARB, ARB Setup, Edit RMS, Calculate RMS, RMS Calculation Mode , Marker |
| Example | :SOUR:RAD:ARB:RMS:CALC:MODE M2 |
| Initial S/W Revision | A.14.50 |

Marker 3

Selects marker 3 to designate sample range used for RMS calculation.

| | |
|-----------------------------|---|
| Key Path | Source, Modulation Setup, ARB, ARB Setup, Edit RMS, Calculate RMS, RMS Calculation Mode , Marker |
| Example | :SOUR:RAD:ARB:RMS:CALC:MODE M3 |
| Initial S/W Revision | A.14.50 |

Marker 4

Selects marker 4 to designate sample range used for RMS calculation.

| | |
|-----------------------------|---|
| Key Path | Source, Modulation Setup, ARB, ARB Setup, Edit RMS, Calculate RMS, RMS Calculation Mode , Marker |
| Example | :SOUR:RAD:ARB:RMS:CALC:MODE M4 |
| Initial S/W Revision | A.14.50 |

Calculate RMS

Allows you to calculate current RMS based on mode selected. This will update ["Current RMS" on page 2543](#) Current RMS setting.

| | |
|----------------------|--|
| Key Path | Source, Modulation Setup, ARB, ARB Setup, Edit RMS, Calculate RMS |
| Remote Command | :SOURce:RADio:ARB:RMS:CALCulate |
| Example | :SOUR:RAD:ARB:RMS:CALC |
| Notes | <p>If no waveform is selected, invoking this operation will get error “-221 Setting conflict; No waveform is selected for RMS operation”.</p> <p>If no waveform is selected, or selected waveform is waveform sequence, the key will grey out.</p> <p>If selected waveform does not contain marker data, but "RMS Calculation Mode" on page 2543 “RMS Calculation Mode” is set to marker, under this circumstance, invoking calculation operation will get error “-221 Setting conflict; There is no marker for currently selected waveform, auto RMS calculation mode is used instead”, and "RMS Calculation Mode" on page 2543 “RMS Calculation Mode” will be coupled to “Auto” mode automatically.</p> <p>RMS calculation does not suit for waveform sequence. If selected waveform is waveform sequence file, invoking this operation will get error “-221 Setting conflict; RMS calculation does not apply to waveform sequence”. But users can still edit current RMS as play parameter, and can save current RMS to waveform sequence header for later use.</p> |
| Initial S/W Revision | A.14.50 |

Use Header RMS

Allows you to quickly set RMS in ARB header to ["Current RMS" on page 2543](#) Current RMS setting.

| | |
|----------------------|---|
| Key Path | Source, Modulation Setup, ARB, ARB Setup, Edit RMS, |
| Notes | <p>No remote command, front panel only.</p> <p>If no waveform is selected, the key will grey out.</p> <p>If no waveform is selected, invoking this operation will get error “-221 Setting conflict; No waveform is selected for RMS operation”.</p> |
| Initial S/W Revision | A.14.50 |

Real-Time AWGN Setup

The source allows you to apply additive white Gaussian noise (AWGN) to a carrier in real time while the modulating waveform plays in the dual ARB player. Pressing this key allows access to the real time AWGN sub-menus and changes the central display area to show the AWGN Setup view.

This feature is controlled by E6650A-AW1 option

| | |
|----------------------|--|
| Key Path | Source, Modulation Setup, ARB, ARB Setup |
| Notes | This menu only appears and related SCPIs are only available when E6650A-AW1 option presents. |
| Initial S/W Revision | A.16.00 |

Real-Time AWGN

Allows you to enable or disable adding real-time AWGN to the carrier modulated by the waveform currently being played by the dual ARB.

| | |
|-----------------------------|--|
| Key Path | Source, Modulation Setup, ARB, ARB Setup, Real-Time AWGN Setup |
| Remote Command | :SOURce:RADio:ARB:NOISe[:STATe] ON OFF 1 0 :SOURce:RADio:ARB:NOISe[:STATe]? |
| Example | :SOUR:RAD:ARB:NOIS OFF |
| Dependencies | When a new waveform is selected for playback the settings contained within the associated waveform header file are applied to the ARB. The AWGN state is one of the values stored within the header file. If the newly selected waveform file has an associated header file, the AWGN state is updated with the value from the header file. The AWGN state will remain unchanged if the newly selected waveform does not have an associated header file. |
| Couplings | If this setting is On and "ARB" on page 2535 ARB State is On, "RF Power" on page 2500 RF Power will be adjusted to the value to maintain the AWGN power relationship defined by "Power Control Mode" on page 2547 Power Control Mode and other noise settings |
| Preset | Off |
| Range | On Off |
| Initial S/W Revision | A.16.00 |

Carrier To Noise Ratio

Allows you to specify the carrier to noise ratio (C/N) in dB. The carrier power is defined as the total modulated signal power without noise power added. The noise power is applied over the specified bandwidth of the carrier signal.

| | |
|-----------------------------|--|
| Key Path | Source, Modulation Setup, ARB, ARB Setup, Real-Time AWGN Setup |
| Remote Command | :SOURce:RADio:ARB:NOISe:CN <ampl> :SOURce:RADio:ARB:NOISe:CN? |
| Example | :SOUR:RAD:ARB:NOIS:CN 0.00 dB |
| Dependencies | When a new waveform is selected for playback the settings contained within the associated waveform header file are applied to the ARB. The AWGN C/N ratio is one of the values stored within the header file. If the newly selected waveform file has an associated header file, the AWGN C/N ratio is updated with the value from the header file. The AWGN C/N ratio will remain unchanged if the newly selected waveform does not have an associated header file. |
| Preset | 0.00 dB |
| Min | -100.00 dB |
| Max | 100.00 dB |
| Initial S/W Revision | A.16.00 |

Carrier Bandwidth

Allows you to specify the bandwidth over which the AWGN is applied. The carrier RMS power and the noise power are integrated over the selected carrier bandwidth for the purpose of calculating carrier to noise ratio (C/N).

| | |
|-----------------------------|--|
| Key Path | Source, Modulation Setup, ARB, ARB Setup, Real-Time AWGN Setup |
| Remote Command | :SOURCE:RADio:ARB:NOISe:CBWidth <freq> :SOURCE:RADio:ARB:NOISe:CBWidth? |
| Example | :SOUR:RAD:ARB:NOIS:CBW 1.00 Hz |
| Dependencies | When a new waveform is selected for playback the settings contained within the associated waveform header file are applied to the ARB. The AWGN carrier bandwidth is one of the values stored within the header file. If the newly selected waveform file has an associated header file, the AWGN carrier bandwidth is updated with the value from the header file. The AWGN carrier bandwidth will remain unchanged if the newly selected waveform does not have an associated header file. |
| Min | 1.00 Hz |
| Max | 200.00 MHz |
| Initial S/W Revision | A.16.00 |

Noise Bandwidth

Allows you to specify the flat noise bandwidth of the real-time noise for an ARB waveform.

| | |
|-----------------------------|--|
| Key Path | Source, Modulation Setup, ARB, ARB Setup, Real-Time AWGN Setup |
| Remote Command | :SOURCE:RADio:ARB:NOISe:BANDwidth <freq> :SOURCE:RADio:ARB:NOISe:BANDwidth? |
| Example | :SOUR:RAD:ARB:NOIS:BAND 1.00 Hz |
| Notes | Generally, flat noise bandwidth should be set slightly wider than the carrier bandwidth (typically 1.6 times wider) |
| Notes | Max Noise Bandwidth equals $0.8 * \text{Maximum ARB Sample Rate}$ reported in HW capability |
| Dependencies | When a new waveform is selected for playback the settings contained within the associated waveform header file are applied to the ARB. The AWGN carrier bandwidth is one of the values stored within the header file. If the newly selected waveform file has an associated header file, the AWGN carrier bandwidth is updated with the value from the header file. The AWGN carrier bandwidth will remain unchanged if the newly selected waveform does not have an associated header file. |
| Preset | 1.00 Hz |
| Min | 1.00 Hz |
| Max | 160.00 MHz |
| Initial S/W Revision | A.16.00 |

Power Control Mode

This setting offers four ways to control the RF output power when adding AWGN to a signal.

| | |
|----------------------|---|
| Key Path | Source, Modulation Setup, ARB, ARB Setup, Real-Time AWGN Setup |
| Remote Command | :SOURce:RADio:ARB:NOISe:POWeR:CONTRol[:MODE] TOTal CARRier NOISe NCHannel :SOURce:RADio:ARB:NOISe: POWer:CONTRol[:MODE]? |
| Example | :SOUR:RAD:ARB:NOIS:POW:CONT NCHannel :SOUR:RAD:ARB:NOIS:POW:CONT? |
| Preset | TOTal |
| Range | Total Power Carrier Power Total Noise Power Noise Power in Channel |
| Initial S/W Revision | A.16.00 |

Total

Set the power control mode as total power.

| | |
|----------------------|---|
| Key Path | Source, Modulation Setup, ARB, ARB Setup, Real-Time AWGN Setup, Power Control Mode |
| Example | :SOUR:RAD:ARB:NOIS:POW:CONT TOTal |
| Couplings | Set to this value will make Carrier Power Carrier Power, Total Noise Power Total Noise Power, and Channel Noise Power Channel Noise Power buttons invisible on menu. Selecting Total as the power control mode makes the total power and C/N independent variables while making the carrier power and total noise power dependent variables. The dependent variables carrier power and total noise power are set by the total power, C/N, and the rest of the Noise settings. The carrier power and total noise power change as any noise parameter is adjusted to keep the total power and the C/N at their last specified values. |
| Initial S/W Revision | A.16.00 |

Carrier

Set the power control mode as carrier power.

| | |
|----------------------|---|
| Key Path | Source, Modulation Setup, ARB, ARB Setup, Real-Time AWGN Setup, Power Control Mode |
| Example | :SOUR:RAD:ARB:NOIS:POW:CONT CARRier |
| Couplings | Set to this value will make Carrier Power Carrier Power button visible, while Total Noise Power Total Noise Power and Channel Noise Power Channel Noise Power buttons invisible from menu. Selecting Carrier as the power control mode makes the carrier power and C/N independent variables while making the total power and total noise power dependent variables. The dependent variables total power and total noise power are set by the carrier power, C/N, and the rest of the Noise settings. The total power and total noise power change as any noise parameter is adjusted to keep the carrier power and the C/N at their last specified values. |
| Initial S/W Revision | A.16.00 |

Total Noise

Set the power control mode as total noise power.

| | |
|----------------------|---|
| Key Path | Source, Modulation Setup, ARB, ARB Setup, Real-Time AWGN Setup, Power Control Mode |
| Example | :SOUR:RAD:ARB:NOIS:POW:CONT NOISe |
| Couplings | Set to this value will make Total Noise Power Total Noise Power button visible, while Carrier Power Carrier Power and Channel Noise Power Channel Noise Power buttons invisible from menu. Selecting Total Noise as the power control mode makes the total noise power and C/N independent variables while making the total power and carrier power dependent variables. The dependent variables total power and carrier power are set by the total noise power, C/N, and the rest of the Noise settings. The total power and carrier power change as any noise parameter is adjusted to keep the total noise power and the C/N at their last specified values. |
| Initial S/W Revision | A.16.00 |

Channel Noise

Set the power control mode as channel noise power.

| | |
|----------------------|--|
| Key Path | Source, Modulation Setup, ARB, ARB Setup, Real-Time AWGN Setup, Power Control Mode |
| Example | :SOUR:RAD:ARB:NOIS:POW:CONT NChannel |
| Couplings | Set to this value will make Channel Noise Power Channel Noise Power button visible, while Total Noise Power Total Noise Power and Carrier Power Carrier Power buttons invisible from menu. Selecting Channel Noise as the power control mode makes the noise power in channel and C/N independent variables while making the carrier power and total noise power dependent variables. The dependent variables carrier power and total noise power are set by the channel noise power, C/N, and the rest of the Noise settings. The carrier power and total noise power change as any noise parameter is adjusted to keep the channel noise power and the C/N at their last specified values. |
| Initial S/W Revision | A.16.00 |

Trigger Type

Allows access to the trigger type sub-menus. The setting for trigger type determines the behavior of the waveform when it plays.

| | |
|-----------------------|--|
| Key Path | Source, Modulation Setup, ARB |
| Remote Command | :SOURce:RADio:ARB:TRIGger:TYPE CONTInuous SINGle SADVance :SOURce:RADio:ARB:TRIGger:TYPE? |
| Example | :SOUR:RAD:ARB:TRIG:TYPE CONT :SOUR:RAD:ARB:TRIG:TYPE? |
| Notes | Gated trigger type will be implemented at a later release |
| Preset | CONTInuous |
| Range | Continuous Single Seg Adv |
| Initial S/W Revision | A.05.00 |

Continuous

Sets the active trigger type to Continuous. If Continuous is already selected as the active trigger type, pressing this key allows access to the continuous trigger type setup menu. In Continuous trigger mode, the waveform repeats continuously.

| | |
|-----------------------------|--|
| Key Path | Source, Modulation Setup, ARB, Trigger Type |
| Remote Command | :SOURce:RADio:ARB:TRIGger:TYPE:CONTInuous[:TYPE] FREE TRIGger RESet :SOURce:RADio:ARB:TRIGger:TYPE:CONTInuous[:TYPE]? |
| Example | :SOUR:RAD:ARB:TRIG:TYPE:CONT FREE |
| Preset | FREE |
| Range | Free Run Trigger + Run Reset + Run |
| Initial S/W Revision | A.05.00 |

Free Run

Selects Free Run as the trigger response for the continuous trigger type. Free Run sets the waveform generator to play a waveform sequence or segment continuously, without waiting for a trigger. In this mode, the waveform generator does not respond to triggers.

| | |
|-----------------------------|--|
| Key Path | Source, Modulation Setup, ARB, Trigger Type, Continuous |
| Example | :SOUR:RAD:ARB:TRIG:TYPE:CONT FREE |
| Initial S/W Revision | A.05.00 |

Trigger + Run

Sets Trigger and Run as the trigger response for the continuous trigger type. Trigger and Run sets the waveform generator to play a waveform sequence or segment continuously when the first trigger is received, and to ignore any subsequent triggers.

| | |
|-----------------------------|--|
| Key Path | Source, Modulation Setup, ARB, Trigger Type, Continuous |
| Example | :SOUR:RAD:ARB:TRIG:TYPE:CONT TRIG |
| Initial S/W Revision | A.05.00 |

Reset + Run

Sets Reset and Run as the trigger response for the continuous trigger type. Reset and Run sets the waveform generator to play a waveform sequence or segment continuously when the first trigger is received. Subsequent triggers reset the waveform sequence or segment to the start, and then play it continuously.

| | |
|-----------------------------|--|
| Key Path | Source, Modulation Setup, ARB, Trigger Type, Continuous |
| Example | :SOUR:RAD:ARB:TRIG:TYPE:CONT RES |
| Initial S/W Revision | A.05.00 |

Single

Sets the active trigger type to Single. If Single is already selected as the active trigger type, pressing this key allows access to the single trigger type setup menu. In Single trigger mode, the waveform plays once.

| | |
|-----------------------------|--|
| Key Path | Source, Modulation Setup, ARB, Trigger Type |
| Remote Command | :SOURce:RADio:ARB:RETRigger ON OFF IMMediate :SOURce:RADio:ARB:RETRigger? |
| Example | :SOUR:RAD:ARB:RETR OFF |
| Notes | ON: Buffered Trigger OFF: No Retrigger Immediate: Restart on Trigger This is defined as an enumerated SCPI command, with ON OFF being considered as enumerated types rather than Boolean. This means the query will return OFF instead of 0, and ON instead of 1. |
| Preset | ON |
| Range | No Retrigger Buffered Trigger Restart on Trigger |
| Initial S/W Revision | A.05.00 |

No Retrigger

Selects No Retrigger as the trigger response for single trigger type. No Retrigger sets the waveform generator to play a waveform sequence or segment once when a trigger is received. Any triggers then received during playback are ignored.

| | |
|-----------------------------|--|
| Key Path | Source, Modulation Setup, ARB, Trigger Type, Single |
| Example | :SOUR:RAD:ARB:RETR OFF |
| Initial S/W Revision | A.05.00 |

Buffered Trigger

Selects Buffered Trigger as the trigger response for single trigger type. Buffered Trigger sets the waveform generator to play a waveform sequence or segment once when a trigger is received. If a trigger is received during playback, the waveform generator plays the sequence or segment to the end, then plays the sequence or segment once more.

| | |
|-----------------------------|--|
| Key Path | Source, Modulation Setup, ARB, Trigger Type, Single |
| Example | :SOUR:RAD:ARB:RETR ON |
| Initial S/W Revision | A.05.00 |

Restart on Trigger

Selects Restart on Trigger as the trigger response for single trigger type. Restart on Trigger sets the waveform generator to play a waveform sequence or segment once when a trigger is received. If a trigger is received during playback, the waveform generator resets and plays the sequence or segment from the start.

| | |
|-----------------------------|--|
| Key Path | Source, Modulation Setup, ARB, Trigger Type, Single |
| Example | :SOUR:RAD:ARB:RETR IMM |
| Initial S/W Revision | A.05.00 |

Segment Advance

Sets the active trigger type to Segment Advance. If Segment Advance is already selected as the active trigger type, pressing this key allows access to the segment advance trigger type setup menu.

Segment Advance triggering allows you to control the playback of waveform segments within a waveform sequence. When a trigger is received the ARB advances to the next waveform segment within the waveform sequence. This type of triggering ignores the repetition count for the waveform segment within the waveform sequence. For example, if a waveform segment has a repetition count of 10 and you select single segment advance triggering mode, the waveform segment will only play once.

Segment Advance triggering can also be used for waveform segments only. In this situation the same waveform segment is played again when a trigger is received.

| | |
|-----------------------------|---|
| Key Path | Source, Modulation Setup, ARB, Trigger Type |
| Remote Command | :SOURce:RADio:ARB:TRIGger:TYPE:SADVance[:TYPE] SINGLE CONTInuous :SOURce:RADio:ARB:TRIGger:TYPE:SADVance[:TYPE]? |
| Example | :SOUR:RAD:ARB:TRIG:TYPE:SADV SING |
| Preset | CONTInuous |
| Range | Single Continuous |
| Initial S/W Revision | A.05.00 |

Single

Selects Single as the trigger response for Segment Advance trigger type. With single selected, once a trigger is received a segment is played once. If a trigger is received during playback of a segment, the segment plays to completion and the next segment is played once.

| | |
|-----------------------------|---|
| Key Path | Source, Modulation Setup, ARB, Trigger Type, Segment Advance |
| Example | :SOUR:RAD:ARB:TRIG:TYPE:SADV SING |
| Initial S/W Revision | A.05.00 |

Continuous

Selects Continuous as the trigger response for Segment Advance trigger type. With continuous selected, once a trigger is received a segment is played continuously. When subsequent triggers are received, the currently playing segment plays to completion and then the next segment is played continuously.

| | |
|----------------------|---|
| Key Path | Source, Modulation Setup, ARB, Trigger Type, Segment Advance |
| Example | :SOUR:RAD:ARB:TRIG:TYPE:SADV CONT |
| Initial S/W Revision | A.05.00 |

Trigger Source

The trigger source setting determines how the source receives the trigger that starts the waveform playing. Therefore, this key is grayed out if the trigger type is free run, since free run triggers immediately with no trigger source required.

| | |
|-----------------------|---|
| Key Path | Source, Modulation Setup, ARB |
| Remote Command | :SOURce:RADio:ARB:TRIGger[:SOURce] KEY BUS EXTernal2 :SOURce:RADio:ARB:TRIGger[:SOURce]? |
| Example | :SOUR:RAD:ARB:TRIGger KEY |
| Dependencies | This key is grayed out if the current trigger type is Continuous, Free Run. |
| Preset | EXTernal2 |
| Range | Trigger Key Bus External 2 |
| Initial S/W Revision | A.05.00 |

Trigger Key

Sets the current trigger source to the front panel Trigger key. When Trigger Key is selected, the waveform is triggered when you press the front panel Trigger key.

| | |
|----------------------|--|
| Key Path | Source, Modulation Setup, ARB, Trigger Source |
| Example | :SOUR:RAD:ARB:TRIGger KEY |
| Initial S/W Revision | A.05.00 |

Bus

Sets the current trigger source to Bus. Selecting Bus trigger source enables triggering over GPIB, LAN, or USB using the :SOURce:RADio:ARB:TRIGger:INITiate command.

| | |
|----------------------|--|
| Key Path | Source, Modulation Setup, ARB, Trigger Source |
| Example | :SOUR:RAD:ARB:TRIGger BUS |
| Initial S/W Revision | A.05.00 |

External 2

Sets the current trigger source to External 2. Selecting External 2 enables triggering a waveform by an externally applied signal.

| | |
|----------------------|--|
| Key Path | Source, Modulation Setup, ARB, Trigger Source |
| Example | :SOUR:RAD:ARB:TRIGger EXT2 |
| Notes | Note: When on E6640A, trigger 2 is a bi-directional trigger port. So when trigger 2 has been configured as OUTPUT type, choosing External 2 as the input trigger for the current step will generate error. |
| Initial S/W Revision | A.05.00 |

Trigger Initiate

Used to initiate an immediate trigger event if the trigger source is set to Trigger Key.

| | |
|----------------------|---|
| Key Path | Source, Modulation Setup, ARB |
| Notes | No remote command, SCPI front panel only. |
| Initial S/W Revision | A.05.00 |

Waveform Sequences

Allows access to the waveform sequence sub-menus. Pressing this key changes the central view area to display the Waveform Sequence List view.

| | |
|----------------------|---|
| Key Path | Source, Modulation Setup, ARB |
| Notes | No remote command, SCPI front panel only. |
| Initial S/W Revision | A.05.00 |

Build New Sequence

Allows access to the sub-menus for creating a new waveform sequence. Pressing this key changes the central view area to display the Waveform Sequence Creation and Editing view.

| | |
|----------------------|--|
| Key Path | Source, Modulation Setup, ARB, Waveform Sequences |
| Notes | No remote command, SCPI front panel only. |
| Initial S/W Revision | A.05.00 |

Current Segment

Specifies the selected sequence segment that will be affected by the menu functions.

| | |
|----------------------|---|
| Key Path | Source, Modulation Setup , ARB, Waveform Sequences, Build New Sequence |
| Notes | No remote command, SCPI front panel only. This key is grayed out and unavailable if the sequence is currently empty. |
| Initial S/W Revision | A.05.00 |

Insert New Waveform

Allows you access to the sub-menu for inserting a new waveform segment or sequence. Pressing this key also changes the central display to show the Waveform File Selection View.

| | |
|----------------------|---|
| Key Path | Source, Modulation Setup, ARB, Waveform Sequences, Build New Sequence |
| Notes | No remote command, SCPI front panel only. Waveform segment name string length upper limit is 128 chars. Please do NOT insert waveform which name string exceeds 128 chars. |
| Initial S/W Revision | A.05.00 |

Insert Waveform

Inserts the currently highlighted waveform to the end of the waveform sequence. Pressing this key also returns you to the menus for creating or editing a sequence, and returns the central view to the sequence creation view.

| | |
|----------------------|---|
| Key Path | Source, Modulation Setup, ARB, Waveform Sequences, Build New Sequence, Insert New Waveform |
| Notes | No remote command, SCPI front panel only. Waveform segment name string length upper limit is 128 chars. Please do NOT insert waveform which name string exceeds 128 chars. |
| Initial S/W Revision | A.05.00 |

Segments on Hard Disk

Allows you access to the sub-menus for loading waveform segments from the hard disk into ARB memory. The default directory is: D: varb.

Pressing this key changes the current view to the Waveform Management View.

| | |
|----------------------|---|
| Key Path | Source, Modulation Setup, ARB, Select Waveform |
| Initial S/W Revision | A.05.00 |

Load Segment To ARB Memory

Allows you to load the selected file into ARB memory. On the front panel you select the file for loading to the ARB memory by highlighting the desired file in the list. Using the SCPI command, you specify the file name on the HDD.

“NVWFM” (none-volatile storage) MSUS (Mass Storage Unit Specifier) is supported in the memory subsystem because the ARB memory cannot be accessed directly. Therefore, files must be downloaded to the instrument hard disk and then loaded into the ARB memory. “NVWFM” MSUS will be mapped to the default directory D: VARB. The SCPI command supports using either “NVWFM” MSUS or specifying a full path. For more information, see [Memory Subsystem \(Remote Command Only\)](#).

If a file of the same name already exists within ARB memory, it is overwritten. If you wish to load two segments of the same name, you must rename one of the segments before loading it into ARB memory. To rename a segment, you can either use Windows File Explorer, or the :MMEMory:COPY command.

| | |
|-----------------------------|--|
| Key Path | Source, Modulation Setup, ARB, Select Waveform, Segments on Hard Disk |
| Remote Command | :SOURCE:RADio:ARB:LOAD <string> |
| Example | :SOUR:RAD:ARB:LOAD "D: VARB\testwaveform.bin" or :SOUR:RAD:ARB:LOAD "NVWFM:testwaveform.bin" |
| Notes | <p>Because loading the file involves a delay of unpredictable length, this command should be followed by the query *OPC?, which holds off subsequent commands until the loading operating is complete.</p> <p><string> – specifies the path name of the file to load from the HDD into ARB memory. It could be a <full path + filename>, or <“NVWFM” MSUS + colon + filename>.</p> <p>When in Sequence Analyzer mode, and Include Source is Yes, an attempt to load a file to ARB memory will be rejected with an error.</p> <p>When Include Source is No and if there is insufficient free ARB memory to load the selected waveform, an error is generated. .</p> <p>If you specify a file over SCPI, but the file is not at the specified location, an error is generated.</p> <p>If you try to load a waveform file but the file contains less than 500 IQ samples, an error is generated.</p> <p>If you try to load a Signal Studio waveform “*.wfm” which contains invalid waveform header, an error is generated.</p> <p>If the ARB is ON when you load a file to ARB memory or delete a file from ARB memory, the playing waveform segment may not keep phase continuity during the ARB memory operation. The waveform will be replayed after the ARB operation is finished.</p> <p>ARB can be loaded into ARB memory even required licenses do not present on the instrument. In this case, a GUI only warning message –800, “Operation complete; Loaded <filename> successfully, but no license <required licenses> installed”. User can install required licenses according to <required licenses> string to license it, or multi-pack license it.</p> |
| Initial S/W Revision | A.05.00 |

Load All To ARB Memory

Allows you to load all the segment files within the currently selected directory into ARB memory. If a file of the same name already exists within ARB memory, it is overwritten. If you wish to load two segments of the

same name, you must rename one of the segments before loading it into ARB memory. To rename a segment, you can either use Windows File Explorer, or the :MEMory:COpy command.

| | |
|----------------------|---|
| Key Path | Source, Modulation Setup, ARB, Select Waveform, Segments on Hard Disk |
| Remote Command | :SOURce:RADio:ARB:LOAD:ALL <string> |
| Example | :SOUR:RAD:ARB:LOAD:ALL "D: varb" |
| Notes | <p><string> - specifies the directory on the HDD to load the files into ARB memory from.</p> <p>When in Sequence Analyzer mode, and Include Source is Yes, an attempt to load all files from a directory to ARB memory is rejected with an error.</p> <p>When Include Source is No and there is insufficient free ARB memory to load all the waveforms, when the ARB memory is full, the copy ceases, and an error is generated.</p> <p>If you specify a directory over SCPI, but the directory does not exist, an error is generated.</p> <p>If the ARB is ON, a user then loads or deletes file to ARB memory, the playing waveform segment may not keep phase continuity during the ARB memory operation. The waveform will be replayed after the ARB operation is finished.</p> |
| Initial S/W Revision | A.05.00 |

Change Directory...

Allows you to change the currently selected directory on the hard disk. Pressing this key opens a standard windows change directory dialog allowing you to select the new directory of interest.

The current directory is used for manually loading waveform segments into ARB memory for playback, and as a search location for waveform segments that are required to be loaded into ARB memory for playback of a waveform sequence or a list sequence.

| | |
|----------------------|--|
| Key Path | Source, Modulation Setup, ARB, Select Waveform, Segments on Hard Disk |
| Notes | No remote command, SCPIfront panel only. |
| Initial S/W Revision | A.05.00 |

Default Directory...

Allows you to change the default directory. It is used as a search location for waveform segments that are required to be loaded into ARB memory for playback of a waveform sequence, and as a search location for selecting waveforms using SCPI.

| | |
|----------------------|---|
| Key Path | Source, Modulation Setup, ARB, Select Waveform, Segments on Hard Disk |
| Remote Command | :SOURce:RADio:ARB:DEFault:DIRectory <string> :SOURce:RADio:ARB: DEFault:DIRectory? |
| Example | :SOUR:RAD:ARB:DEF:DIR "D:\ArbFiles" :SOUR:RAD:ARB:DEF:DIR? |
| State Saved | Persistent, survives a power cycle and a preset but not saved in the instrument state |
| Initial S/W Revision | A.05.00 |

Segments in ARB Memory

Allows you access to the sub-menus for managing the files within ARB memory.

| | |
|----------------------|---|
| Key Path | Source, Modulation Setup, ARB, Select Waveform |
| Initial S/W Revision | A.05.00 |

Delete Segment From ARB Mem

Allows you to remove a segment from ARB playback memory.

| | |
|----------------------|---|
| Key Path | Source, Modulation Setup, ARB, Select Waveform, Segments in ARB Memory |
| Remote Command | :SOURce:RADio:ARB:DELeTe <string> |
| Example | :SOUR:RAD:ARB:DEL "testwaveform.bin" |
| Notes | <p><string> - specifies the waveform to be deleted from the ARB playback memory.</p> <p>When in Sequence Analyzer mode and Include Source is Yes, an attempt to delete a file from ARB memory is rejected with an error.</p> <p>When Include Source is No and you specify a file that does not exist within ARB memory, an error is generated.</p> <p>It is possible to delete files from within the ARB memory when the ARB is ON. However, if you attempt to delete the file that is currently playing an error is generated.</p> <p>It is possible to delete a file from within the ARB memory when the sequencer state is ON and the file is not being used by the List Sequencer. If you attempt to delete a file which is being used by the list sequencer, an error is generated.</p> <p>When sequencer state is On, even if ARB state is On, the selected waveform will not be played. In this case, if the selected waveform is not used in List Sequence, it can be deleted and the ARB state is turned Off.</p> <p>If the ARB is ON and you load a file to ARB memory or delete a file from ARB memory, the playing waveform segment may not keep phase continuity during the ARB memory operation. The waveform will be replayed after the ARB operation is finished.</p> |
| Initial S/W Revision | A.05.00 |

Delete All From ARB Memory

Allows you to remove all segments from ARB playback memory.

| | |
|----------------|---|
| Key Path | Source, Modulation Setup, ARB, Select Waveform, Segments in ARB Memory |
| Remote Command | :SOURce:RADio:ARB:DELeTe:ALL |
| Example | :SOUR:RAD:ARB:DELeTe:ALL |
| Notes | <p>When in Sequence Analyzer mode and Include Source is Yes, an attempt to delete all files from ARB memory is rejected with an error.</p> <p>When Include Source is No and you attempt to delete all files from ARB memory when the ARB is currently playing a file, all files except the one playing are deleted and an error is generated.</p> <p>If you attempt to delete all files from ARB memory when there are waveform files used in "List</p> |

["Sequencer" on page 2585](#) and ["Sequencer" on page 2586](#) state is ON, all files except the files currently being used in list sequencer are deleted, and an error is generated.

If the ARB is ON and you load a file to ARB memory or delete a file from ARB memory, the playing waveform segment may not keep phase continuity during the ARB memory operation. The waveform will be replayed after the ARB operation is finished.

| | |
|----------------------|---------|
| Initial S/W Revision | A.05.00 |
|----------------------|---------|

Segments on Hard Disk

This key functions the same as ["Segments on Hard Disk" on page 2611](#).

| | |
|----------|---|
| Key Path | Source, Modulation Setup, ARB, Waveform Sequences, Build New Sequence, Insert New Waveform |
|----------|---|

| | |
|----------------------|------------------|
| Initial S/W Revision | Prior to A.09.00 |
|----------------------|------------------|

Load Segment To ARB Memory

This key functions the same as ["Load Segment To ARB Memory" on page 2611](#).

| | |
|----------|--|
| Key Path | Source, Modulation Setup, ARB, Waveform Sequences, Build New Sequence, Insert New Waveform, Segment on Hard Drive |
|----------|--|

| | |

| Initial S/W Revision | Prior to A.09.00 |
|----------------------|------------------|

Change Directory ...

This key functions the same as ["Change Directory..." on page 2613](#).

| | |
|----------|--|
| Key Path | Source, Modulation Setup, ARB, Waveform Sequences, Build New Sequence, Insert New Waveform, Segment on Hard Drive |
|----------|--|

| | |
|----------------------|------------------|
| Initial S/W Revision | Prior to A.09.00 |
|----------------------|------------------|

Default Directory ...

This key functions the same as ["Default Directory..." on page 2613](#)

| | |
|----------------------|--|
| Key Path | Source, Modulation Setup, ARB, Waveform Sequences, Build New Sequence, Insert New Waveform, Segment on Hard Drive |
| Initial S/W Revision | Prior to A.09.00 |

Segments in ARB Memory

This key functions the same as ["Segments in ARB Memory" on page 2613](#).

| | |
|----------------------|---|
| Key Path | Source, Modulation Setup, ARB, Waveform Sequences, Build New Sequence, Insert New Waveform |
| Initial S/W Revision | Prior to A.09.00 |

Delete Segment From ARB Memory

This key functions the same as ["Delete Segment From ARB Mem" on page 2614](#).

| | |
|----------------------|--|
| Key Path | Source, Modulation Setup, ARB, Waveform Sequences, Build New Sequence, Insert New Waveform, Segment in ARB Memory |
| Initial S/W Revision | Prior to A.09.00 |

Delete All From ARB Memory

This key functions the same as ["Delete All From ARB Memory" on page 2614](#).

| | |
|----------------------|--|
| Key Path | Source, Modulation Setup, ARB, Waveform Sequences, Build New Sequence, Insert New Waveform, Segment in ARB Memory |
| Initial S/W Revision | Prior to A.09.00 |

Query ARB Memory File List (Remote Command Only)

This command functions the same as ["Query ARB Memory File List \(Remote Command Only\)" on page 2540](#).

| | |
|----------------------|------------------|
| Initial S/W Revision | Prior to A.09.00 |
|----------------------|------------------|

Edit Selected Waveform

Allows access to the sub-menus for editing the details of the currently selected waveform segment.

| | |
|----------------------|--|
| Key Path | Source, Modulation Setup, ARB, Waveform Sequences, Build New Sequence |
| Notes | No remote command, front panel only. |
| Initial S/W Revision | A.05.00 |

Repetitions

Allows you to specify the number of times the currently selected waveform is played within the sequence.

| | |
|----------------------|--|
| Key Path | Source, Modulation Setup, ARB, Waveform Sequences, Build New Sequence, Edit Selected Waveform |
| Notes | No remote command, SCPI front panel only. |
| Preset | 1 |
| Min | 1 |
| Max | 65535 |
| Initial S/W Revision | A.05.00 |

Marker 1

Allows you to enable or disable marker 1 for the currently selected waveform. For a waveform sequence, you can enable and disable markers on a per-segment basis, allowing you to output markers from some waveform segments within the sequence, but not for others.

| | |
|----------------------|--|
| Key Path | Source, Modulation Setup, ARB, Waveform Sequences, Build New Sequence, Edit Selected Waveform |
| Notes | No remote command, front panel only. |
| Preset | Enabled |
| Range | Enabled Disabled |
| Initial S/W Revision | A.05.00 |

Marker 2

Allows you to enable or disable marker 2 for the currently selected waveform. For a waveform sequence, you can enable and disable markers on a per-segment basis, allowing you to output markers from some waveform segments within the sequence, but not for others.

| | |
|----------------------|--|
| Key Path | Source, Modulation Setup, ARB, Waveform Sequences, Build New Sequence, Edit Selected Waveform |
| Notes | No remote command, front panel only. |
| Preset | Enabled |
| Range | Enabled Disabled |
| Initial S/W Revision | A.05.00 |

Marker 3

Allows you to enable or disable marker 3 for the currently selected waveform. For a waveform sequence, you can enable and disable markers on a per-segment basis, allowing you to output markers from some waveform segments within the sequence, but not for others.

| | |
|----------------------|--|
| Key Path | Source, Modulation Setup, ARB, Waveform Sequences, Build New Sequence, Edit Selected Waveform |
| Notes | No remote command, front panel only. |
| Preset | Enabled |
| Range | Enabled Disabled |
| Initial S/W Revision | A.05.00 |

Marker 4

Allows you to enable or disable marker 4 for the currently selected waveform. For a waveform sequence, you can enable and disable markers on a per-segment basis, allowing you to output markers from some waveform segments within the sequence, but not for others.

| | |
|----------------------|--|
| Key Path | Source, Modulation Setup, ARB, Waveform Sequences, Build New Sequence, Edit Selected Waveform |
| Notes | No remote command, front panel only. |
| Preset | Enabled |
| Range | Enabled Disabled |
| Initial S/W Revision | A.05.00 |

Delete Segment

Allows you to delete the selected segment from the waveform sequence.

| | |
|----------------------|--|
| Key Path | Source, Modulation Setup, ARB, Waveform Sequences, Build New Sequence |
| Notes | No remote command, front panel only. |
| Initial S/W Revision | A.05.00 |

Save Sequence...

Pressing this key displays the “Save As” dialog. The sequence name is passed to the save as dialog to use as the filename for saving, and the directory the save as dialog will open into is the default waveform directory.

| | |
|----------------------|--|
| Key Path | Source, Modulation Setup, ARB, Waveform Sequences, Build New Sequence |
| Initial S/W Revision | A.05.00 |

Build New Sequence (Remote Command Only)

This command is the SCPI equivalent of the waveform sequence creation features described in ["Build New Sequence" on page 2554](#).

This command writes a waveform sequence file to the hard disk. You must specify the waveform sequence file path and filename which will be saved on the hard disk, and the waveform segment file path and name which will be nested into the waveform sequence file. You can utilize mass storage unit specifier (MSUS) "NVWFM" or use a real full path representation. See the example below. MSUS "NVWFM" is mapped to D: VARB directory on test set hard disk.

Any number of segments, up to a segment count limit of 64, can be used to create a sequence. Repeated segments are included in the count limit.

Each waveform segment name string length upper limit is 128 chars. Please do NOT insert waveform which name string exceeds 128 chars.

The internal source does not support nesting one waveform sequence file into another waveform sequence file.

Remote Command :SOURce:RADio:ARB:SEquence[:MWAVeform] <filename>, <waveform1>, <reps>, NONE | M1 | M2 | M3 | M4 | M1M2 | M1M3 | M1M4 | M2M3 | M2M4 | M3M4 | M1M2M3 | M1M2M4 | M1M3M4 | M2M3M4 | M1M2M3M4 | ALL, {<waveform2>, <reps>, NONE | M1 | M2 | M3 | M4 | M1M2 | M1M3 | M1M4 | M2M3 | M2M4 | M3M4 | M1M2M3 | M1M2M4 | M1M3M4 | M2M3M4 | M1M2M3M4 | ALL, } ...

(For additional description of each item, see Notes below ["For Setup SCPI" on page 2563](#) "For Setup SCPI".)

:SOURce:RADio:ARB:SEquence[:MWAVeform]? <filename>

(For additional description of each item, see Notes ["For Query SCPI" on page 2564](#) below.)

Example

For setup:

```
>:SOUR:RAD:ARB:SEQ "NVWFM:testSeq1.seq", "NVWFM:wfmSegment1.wfm", 10, M2M3M4, "NVWFM:wfmSegment2.wfm", 20, M1M3
```

Or

```
>:SOUR:RAD:ARB:SEQ "D: VARB\testSeq1.seq", " D: VARB\wfmSegment1.wfm", 10, M2M3M4, " D: VARB\wfmSegment2.wfm", 20, M1M3
```

For query, must specify which waveform sequence file to query.

```
>:SOUR:RAD:ARB:SEQ? "NVWFM:testSeq1.seq"
```

Or

```
>:SOUR:RAD:ARB:SEQ? "D: VARB\testSeq1.seq",
```

Notes**For Setup SCPI**

For the Setup SCPI command, the parameters are:

<filename> - String Type

This variable specifies the path and name for the waveform sequence file. The path supports MSUS (NVWFM) or a real full path representation. See example.

<waveform1> - String Type

This variable specifies the path and name of the first existing waveform segment. The path supports

MSUS (NVWFM) or a real full path representation. See example.

The segment file must reside within ARB playback memory before it can be played by the ARB player.

<reps> - Integer Type

This variable specifies the number of times a segment or sequence plays before moving on to the next segment or sequence.

<marker> - Enum Type

NONE - This choice disables all four markers for the waveform. Disabling markers means that the waveform sequence ignores the segments or sequence marker settings.

M1, M2, M3, M4 - these choices, either individually or a combination of them, enable the markers for the waveform segment or sequence. Markers not specified are ignored for that segment or sequence.

ALL - This choice enables all four markers in the waveform segment or sequence.

<waveform2> - String type.

This variable specifies the name of a second existing waveform segment. The path supports MSUS (NVWFM) and real full path representation both. See example.

The segment file must reside within ARB playback memory before it can be played by the ARB player.

<reps> same as above, for the 2nd waveform segment.

<marker> same as above, for the 2nd waveform segment.

You can insert several waveform segments into a waveform sequence file. Just repeat inserting waveform segments as described above.

Error Checks for Setup SCPI command:

If you do not specify a filename, or you use an unsupported MSUS (that is, not NVWFM), or have an error in the waveform sequence file path, an error is generated.

Notes

Error Checks for Query SCPI command: (Continued)

If the specified waveform sequence file name suffix is not “.seq”, error is generated.

If you use an unsupported MSUS (that is, not NVWFM), or have an error in the waveform segment file path, an error is generated.

If the first specified waveform file cannot be found, an error is generated.

If you nest one waveform sequence file into another waveform sequence file, an error is generated.

If the specified repetition value is larger than 65535 or smaller than 1, an error is generated.

If the specified marker type is unrecognized, an error is generated.

For Query SCPI

For the Query the parameters are:

<filename> - String type.

This variable specifies the path and name of the waveform sequence file being queried. The path supports MSUS (NVWFM) or a real full path representation. See example.

The return value is a <string>, which includes each waveform segment file name, repetitions, and marker type. For example:

>:SOUR:RAD:ARB:SEQ? “NVWFM:testSeq1.seq”,

<“wfmSegment1.wfm, 10, ALL, wfmSegment2.wfm, 20, M1M3”,

Error Checks for Query SCPI command:

If you do not specify a filename, an error is generated.
 If the waveform sequence file name is empty, an error is generated.
 If the specified waveform sequence file cannot be found, an error is generated.

| | |
|----------------------|---------|
| Initial S/W Revision | A.05.00 |
|----------------------|---------|

Edit Selected Sequence

Allows access to the sub-menus for editing the sequence currently selected within the Waveform Sequence List view. Pressing this key changes the central view area to display the Waveform Sequence Creation and Editing view.

| | |
|----------------------|--|
| Key Path | Source, Modulation Setup, ARB, Waveform Sequences |
| Notes | No remote command, front panel only. |
| Initial S/W Revision | A.05.00 |

Current Directory...

Allows you to change the currently selected directory on the hard disk. Pressing this key opens a standard windows change directory dialog and allows you to select the new directory of interest.

| | |
|----------------------|--|
| Key Path | Source, Modulation Setup, ARB, Waveform Sequences |
| Notes | No remote command, front panel only. |
| Initial S/W Revision | A.05.00 |

Waveform Utilities

Allows you access to the waveform utilities sub-menus.

| | |
|----------------------|--------------------------------------|
| Key Path | Source, Modulation Setup, ARB |
| Initial S/W Revision | A.05.00 |

Multi-Pack Licenses

Allows you access to the Multi - Pack License sub-menus. Pressing this key also changes the central view area to display the Multi -Pack License Management view.

On modular instrument like E6630A or E6640A, multi-pack license operations are only allowed on the default module, i.e. "Left" module for E6630A or "TRX1" module for E6640A.

| | |
|----------------------|---|
| Key Path | Source, Modulation Setup, ARB, Waveform Utilities |
| Dependencies | This key is only available if there is at least one Multi-pack license installed on the instrument. |
| Initial S/W Revision | A.05.00 |

Add Waveform

Pressing this key accesses the Add Waveform sub-menu. It also changes the central display area to display the Multi-Pack License Waveform Add view.

| | |
|----------------------|--|
| Key Path | Source, Modulation Setup, ARB, Waveform Utilities, Multi-Pack Licenses |
| Dependencies | This key is only available if there is at least one slot available within at least one multi-pack license. |
| Initial S/W Revision | A.05.00 |

Add Waveform

Allows you to add the currently selected waveform segment to a multi-pack license. The new waveform is added to the next available slot regardless of which slot was selected on the Multi-Pack License Management view.

| | |
|----------------------|---|
| Key Path | Source, Modulation Setup, ARB, Waveform Utilities, Multi-Pack Licenses, Add Waveform |
| Remote Command | :SYSTem:LKEY:WAVeform:ADD <string> or :SYSTem:LIcense[:FPACK]:WAVeform:ADD <string> |
| Example | SYST:LKEY:WAV:ADD "mywaveform.wfm" or SYST:LIC:WAV:ADD "mywaveform.wfm" |
| Notes | The second SCPI :SYSTem:LIcense[:FPACK]:WAVeform:ADD is provided to be consistent with the style of Keysight signal sources. You can use either one of them. Since adding a waveform segment to a Multi-Pack license causes the license slot to enter the trial period of only 48 hours, pressing this key causes a confirmation dialog to be displayed to ensure you do want to add the waveform segment to the Multi-Pack. If you attempt to license a waveform that is already licensed using another slot an error is generated. . |
| Dependencies | This key is only available if the currently selected file is a secure waveform requiring a license, and there is at least one slot available within at least one multi-pack license. If the waveform highlighted is a secure waveform, but is already licensed, this key will be unavailable. |
| Initial S/W Revision | A.05.00 |

Segments on Hard Disk

Allows you access to the sub-menus for loading waveform segments from the hard disk into ARB memory. The default directory is: D: varb.

Pressing this key changes the current view to the Waveform Management View.

| | |
|----------------------|---|
| Key Path | Source, Modulation Setup, ARB, Select Waveform |
| Initial S/W Revision | A.05.00 |

Load Segment To ARB Memory

Allows you to load the selected file into ARB memory. On the front panel you select the file for loading to the ARB memory by highlighting the desired file in the list. Using the SCPI command, you specify the file name on the HDD.

“NVWFM” (none-volatile storage) MSUS (Mass Storage Unit Specifier) is supported in the memory subsystem because the ARB memory cannot be accessed directly. Therefore, files must be downloaded to the instrument hard disk and then loaded into the ARB memory. “NVWFM” MSUS will be mapped to the default directory D: VARB. The SCPI command supports using either “NVWFM” MSUS or specifying a full path. For more information, see [Memory Subsystem \(Remote Command Only\)](#).

If a file of the same name already exists within ARB memory, it is overwritten. If you wish to load two segments of the same name, you must rename one of the segments before loading it into ARB memory. To rename a segment, you can either use Windows File Explorer, or the :MMEMory:COpy command.

| | |
|-----------------------------|---|
| Key Path | Source, Modulation Setup, ARB, Select Waveform, Segments on Hard Disk |
| Remote Command | :SOURce:RADio:ARB:LOAD <string> |
| Example | :SOUR:RAD:ARB:LOAD "D: VARB\testwaveform.bin" or :SOUR:RAD:ARB:LOAD "NVWFM:testwaveform.bin" |
| Notes | <p>Because loading the file involves a delay of unpredictable length, this command should be followed by the query *OPC?, which holds off subsequent commands until the loading operation is complete.</p> <p><string> – specifies the path name of the file to load from the HDD into ARB memory. It could be a <full path + filename>, or <“NVWFM” MSUS + colon + filename>.</p> <p>When in Sequence Analyzer mode, and Include Source is Yes, an attempt to load a file to ARB memory will be rejected with an error.</p> <p>When Include Source is No and if there is insufficient free ARB memory to load the selected waveform, an error is generated. .</p> <p>If you specify a file over SCPI, but the file is not at the specified location, an error is generated.</p> <p>If you try to load a waveform file but the file contains less than 500 IQ samples, an error is generated.</p> <p>If you try to load a Signal Studio waveform “*.wfm” which contains invalid waveform header, an error is generated.</p> <p>If the ARB is ON when you load a file to ARB memory or delete a file from ARB memory, the playing waveform segment may not keep phase continuity during the ARB memory operation. The waveform will be replayed after the ARB operation is finished.</p> <p>ARB can be loaded into ARB memory even if required licenses do not present on the instrument. In this case, a GUI only warning message -800, “Operation complete; Loaded <filename> successfully, but no license <required licenses> installed”. User can install required licenses according to <required licenses> string to license it, or multi-pack license it.</p> |
| Initial S/W Revision | A.05.00 |

Load All To ARB Memory

Allows you to load all the segment files within the currently selected directory into ARB memory. If a file of the same name already exists within ARB memory, it is overwritten. If you wish to load two segments of the same name, you must rename one of the segments before loading it into ARB memory. To rename a segment, you can either use Windows File Explorer, or the :MEMory:COpy command.

| | |
|-----------------------------|---|
| Key Path | Source, Modulation Setup, ARB, Select Waveform, Segments on Hard Disk |
| Remote Command | :SOURce:RADio:ARB:LOAD:ALL <string> |
| Example | :SOUR:RAD:ARB:LOAD:ALL "D: varb" |
| Notes | <p><string> - specifies the directory on the HDD to load the files into ARB memory from.</p> <p>When in Sequence Analyzer mode, and Include Source is Yes, an attempt to load all files from a directory to ARB memory is rejected with an error.</p> <p>When Include Source is No and there is insufficient free ARB memory to load all the waveforms, when the ARB memory is full, the copy ceases, and an error is generated.</p> <p>If you specify a directory over SCPI, but the directory does not exist, an error is generated.</p> <p>If the ARB is ON, a user then loads or deletes file to ARB memory, the playing waveform segment may not keep phase continuity during the ARB memory operation. The waveform will be replayed after the ARB operation is finished.</p> |
| Initial S/W Revision | A.05.00 |

Change Directory...

Allows you to change the currently selected directory on the hard disk. Pressing this key opens a standard windows change directory dialog allowing you to select the new directory of interest.

The current directory is used for manually loading waveform segments into ARB memory for playback, and as a search location for waveform segments that are required to be loaded into ARB memory for playback of a waveform sequence or a list sequence.

| | |
|-----------------------------|--|
| Key Path | Source, Modulation Setup, ARB, Select Waveform, Segments on Hard Disk |
| Notes | No remote command, SCPIfront panel only. |
| Initial S/W Revision | A.05.00 |

Default Directory...

Allows you to change the default directory. It is used as a search location for waveform segments that are required to be loaded into ARB memory for playback of a waveform sequence, and as a search location for selecting waveforms using SCPI.

| | |
|-----------------------|---|
| Key Path | Source, Modulation Setup, ARB, Select Waveform, Segments on Hard Disk |
| Remote Command | :SOURce:RADio:ARB:DEFault:DIRectory <string> :SOURce:RADio:ARB: DEFault:DIRectory? |
| Example | :SOUR:RAD:ARB:DEF:DIR "D:\ArbFiles" |

| | |
|----------------------|---|
| | :SOUR:RAD:ARB:DEF:DIR? |
| State Saved | Persistent, survives a power cycle and a preset but not saved in the instrument state |
| Initial S/W Revision | A.05.00 |

Segments on Hard Disk

This key functions the same as ["Segments on Hard Disk" on page 2611](#).

| | |
|----------------------|---|
| Key Path | Source, Modulation Setup, ARB, Waveform Utilities, Multi-Pack Licenses, Add Waveform |
| Initial S/W Revision | Prior to A.09.00 |

Load Segment To ARB Memory

This key functions the same as ["Load Segment To ARB Memory" on page 2611](#).

| | |
|----------------------|--|
| Key Path | Source, Modulation Setup, ARB, Waveform Utilities, Multi-Pack Licenses, Add Waveform, Segment on Hard Drive |
| Initial S/W Revision | Prior to A.09.00 |

Load All To ARB Memory

This key functions the same as ["Load All To ARB Memory" on page 2612](#).

| | |
|----------------------|--|
| Key Path | Source, Modulation Setup, ARB, Waveform Utilities, Multi-Pack Licenses, Add Waveform, Segment on Hard Drive |
| Initial S/W Revision | Prior to A.09.00 |

Change Directory ...

This key functions the same as ["Change Directory..." on page 2613](#).

| | |
|----------------------|--|
| Key Path | Source, Modulation Setup, ARB, Waveform Utilities, Multi-Pack Licenses, Add Waveform, Segment on Hard Drive |
| Initial S/W Revision | Prior to A.09.00 |

Default Directory ...

This key functions the same as ["Default Directory..." on page 2613](#)

| | |
|----------|--|
| Key Path | Source, Modulation Setup, ARB, Waveform Utilities, Multi-Pack Licenses, Add Waveform, Segment on Hard Drive |
|----------|--|

| | |
|----------------------|------------------|
| Initial S/W Revision | Prior to A.09.00 |
|----------------------|------------------|

Replace Waveform

Pressing this key accesses the Replace Waveform submenu. It also changes the central display area to display the Multi-Pack License Waveform Add view.

| | |
|----------------------|--|
| Key Path | Source, Modulation Setup, ARB, Waveform Utilities, Multi-Pack Licenses |
| Dependencies | This key is only available if the currently selected slot is in the trial state. |
| Initial S/W Revision | A.05.00 |

Replace Waveform

Allows you to replace the waveform in the currently selected slot with the waveform currently selected in the Multi-Pack License Waveform Add view.

| | |
|----------------------|--|
| Key Path | Source, Modulation Setup, ARB, Waveform Utilities, Multi-Pack Licenses, Replace Waveform |
| Remote Command | :SYSTem:LKEY:WAVeform:REPLace <int>, <string> or :SYSTem:LiCense[:FPACK]:WAVeform:REPLace <int>, <string> |
| Example | SYST:LKEY:WAV:REPL 1, "myotherwaveform.wfm" or :SYST:LiC:WAV:REPL 1, "myotherwaveform.wfm" |
| Notes | The second SCPI :SYSTem:LiCense[:FPACK]:WAVeform:REPLace is provided to be consistent with the style of Keysight signal sources. You can use either one of them. If you attempt to license a waveform that is already licensed using another slot an error is generated. Waveform slot number <int> is positive. If you attempt to input a slot number less than or equals 0, an error is generated. |
| Initial S/W Revision | A.05.00 |

Segments on Hard Disk

This key functions the same as ["Segments on Hard Disk" on page 2611](#).

| | |
|----------------------|---|
| Key Path | Source, Modulation Setup, ARB, Waveform Utilities, Multi-Pack Licenses, Replace Waveform |
| Initial S/W Revision | Prior to A.09.00 |

Load Segment To ARB Memory

This key functions the same as ["Load Segment To ARB Memory" on page 2611](#).

| | |

| Initial S/W Revision | Prior to A.09.00 |

Load All To ARB Memory

This key functions the same as ["Load All To ARB Memory" on page 2612](#).

| | |
|----------------------|--|
| Key Path | Source, Modulation Setup, ARB, Waveform Utilities, Multi-Pack Licenses, Replace Waveform, Segment on Hard Drive |
| Initial S/W Revision | Prior to A.09.00 |

Change Directory ...

This key functions the same as ["Change Directory..." on page 2613](#).

| | |
|----------------------|--|
| Key Path | Source, Modulation Setup, ARB, Waveform Utilities, Multi-Pack Licenses, Replace Waveform, Segment on Hard Drive |
| Initial S/W Revision | Prior to A.09.00 |

Default Directory ...

This key functions the same as ["Default Directory..." on page 2613](#)

| | |
|----------------------|--|
| Key Path | Source, Modulation Setup, ARB, Waveform Utilities, Multi-Pack Licenses, Replace Waveform, Segment on Hard Drive |
| Initial S/W Revision | Prior to A.09.00 |

Clear Waveform from Slot

Allows you to clear the waveform from the selected slot.

| | |
|-----------------------|--|
| Key Path | Source, Modulation Setup, ARB, Waveform Utilities, Multi-Pack Licenses |
| Remote Command | :SYSTem:LKEY:WAVeform:CLEar <int> or :SYSTem:LIcense[:FPACK]:WAVeform:CLEar <int> |
| Example | SYST:LKEY:WAV:CLE 1 or :SYST:LIC:WAV:CLE 1 |
| Notes | The second SCPI :SYSTem:LIcense[:FPACK]:WAVeform:CLEar is provided to be consistent with the style of Keysight signal sources. You can use either one of them. |

Waveform slot number <int> is positive. If you attempt to input a slot number less than or equals 0, an error is generated.

Dependencies This key is only available if the currently selected slot is in the trial state.

Initial S/W Revision A.05.00

Lock Waveform in Slot

If the selected slot is in the trial state or the lock required state, the waveform that occupies the slot is locked and permanently licensed.

Key Path **Source, Modulation Setup, ARB, Waveform Utilities, Multi-Pack Licenses**

Remote Command :SYSTem:LKEY:WAVeform:LOCK <int>
or
:SYSTem:LICense[:FPACK]:WAVeform:LOCK <int>

Example SYST:LKEY:WAV:LOCK 1
or
SYST:LIC:WAV:LOCK 1

Notes The second SCPI :SYSTem:LICense[:FPACK]:WAVeform:LOCK is provided to be consistent with the style of Keysight signal sources. You can use either one of them.
Waveform slot number <int> is positive. If you attempt to input a slot number less than or equals 0, an error is generated.

Dependencies This key is only available if the currently selected slot is in the trial state or the lock required state.

Initial S/W Revision A.05.00

Slot Status Query (Remote Command Only)

Returns the status of the specified slot.

Remote Command :SYSTem:LKEY:WAVeform:STATus? <int>
or
:SYSTem:LICense[:FPACK]:WAVeform:STATus? <int>

Example :SYST:LKEY:WAV:STAT? 1
<"Locked"
or
:SYST:LIC:WAV:STAT? 1
<"Locked"

Notes The second SCPI :SYSTem:LICense[:FPACK]:WAVeform:STATus is provided to be consistent with the style of Keysight signal sources. You can use either one of them.
Waveform slot number <int> is positive. If you attempt to input a slot number less than or equals 0, an error is generated.

| | |
|----------------------|--|
| | error is generated. Result type is string. If input slot number exceeds total available slot number, "Nonexistent" is returned. |
| Range | "Locked" "Available" "Trail" "LockRequired" "Nonexistent" |
| Initial S/W Revision | A.05.00 |

Slots Free Query (Remote Command Only)

Returns the number of license slots free.

| | |
|-----------------------|---|
| Remote Command | :SYSTem:LKEY:WAVeform:FREE? or :SYSTem:LIcense[:FPACK]:WAVeform:FREE? |
| Example | :SYST:LKEY:WAV:FREE? or :SYST:LIC:WAV:FREE? |
| Notes | The second SCPI :SYSTem:LIcense[:FPACK]:WAVeform:FREE is provided to be consistent with the style of Keysight signal sources. You can use either one of them. |
| Initial S/W Revision | A.05.00 |

Slot Used Query (Remote Command Only)

Returns the number of license slots used.

| | |
|-----------------------|---|
| Remote Command | :SYSTem:LKEY:WAVeform:USED? or :SYSTem:LIcense[:FPACK]:WAVeform:USED? |
| Example | :SYST:LKEY:WAV:USED? or :SYST:LIC:WAV:USED? |
| Notes | The second SCPI :SYSTem:LIcense[:FPACK]:WAVeform:USED is provided to be consistent with the style of Keysight signal sources. You can use either one of them. |
| Initial S/W Revision | A.05.00 |

Slot Waveform Name Query (Remote Command Only)

Returns the waveform name of the specified slot

| | |
|-----------------------|---|
| Remote Command | :SYSTem:LKEY:WAVeform:NAME? <int> or :SYSTem:LIcense[:FPACK]:WAVeform:NAME? <int> |
|-----------------------|---|

| | |
|-----------------------------|---|
| Example | :SYST:LKEY:WAV:NAME? 1 <"CDMA2K_22.wfm" or :SYST:LIC:WAV:NAME? 1 <"CDMA2K_22.wfm" |
| Notes | Waveform slot number <int> is positive. If you attempt to input a slot number less than or equals 0, an error is generated. Result type is string. If input slot number exceeds total available slot number, "Nonexistent" is returned. If no waveform stored in the specified slot, then empty string is returned. |
| Initial S/W Revision | A.12.00 |

Slot Waveform Unique ID Query (Remote Command Only)

Returns the waveform unique ID of the specified slot

| | |
|-----------------------------|---|
| Remote Command | :SYSTem:LKEY:WAVeform:UID? <int> or :SYSTem:LICense[:FPACK]:WAVeform:UID? <int> |
| Example | :SYST:LKEY:WAV:UID? 2 <"1346752140" or :SYST:LIC:WAV:UID? 2 <"1346752140" |
| Notes | Waveform slot number <int> is positive. If you attempt to input a slot number less than or equals 0, an error is generated. Result type is string. If input slot number exceeds total available slot number, "Nonexistent" is returned. If no waveform stored in the specified slot, then "0" is returned |
| Initial S/W Revision | A.12.00 |

Locked Waveform Name List Query (Remote Command Only)

Returns the waveform name list of locked.

| | |
|-----------------------------|---|
| Remote Command | :SOURce:RADio:ARB:MPLicensed:NAME:LOCKed? |
| Example | SOUR:RAD:ARB:MPL:NAME:LOCKed? <"CDMA2K_27.wfm", "GSM_MCS1.WFM", "c2kWfm.wfm" |
| Initial S/W Revision | A.11.00 |

Locked Waveform Unique ID List Query (Remote Command Only)

Returns the waveform unique id list of locked.

| | |
|-----------------------------|---|
| Remote Command | :SOURce:RADio:ARB:MPLicensed:UID:LOCKed? |
| Example | SOUR:RAD:ARB:MPL:UID:LOCKed? <"2996927136","3812603511","3710986266" |
| Notes | Each Signal Studio waveform has a unique id recorded in header. So if the unique ids are same, that means they are same one waveform. So besides SCPI to query locked waveform name list, also provide a SCPI to query locked waveform unique id list |
| Initial S/W Revision | A.11.00 |

Marker Utilities

Allows access to the marker utilities sub-menus.

| | |
|-----------------------------|--------------------------------------|
| Key Path | Source, Modulation Setup, ARB |
| Initial S/W Revision | A.05.00 |

Marker Polarity

Allows access to the marker polarity sub-menu, which allows you to specify the polarity for the four markers. For a positive polarity, the marker signal is high during the marker points. For a negative marker polarity, the marker signal is high during the period of no marker points.

| | |
|-----------------------------|--|
| Key Path | Source, Modulation Setup, ARB, Marker Utilities |
| Initial S/W Revision | A.05.00 |

Mkr 1 Polarity

Allows you to set the polarity of marker 1.

| | |
|-----------------------------|---|
| Key Path | Source, Modulation Setup, ARB, Marker Utilities, Marker Polarity |
| Remote Command | :SOURce:RADio:ARB:MPOLarity:MARKer1 POSitive NEGative :SOURce:RADio:ARB:MPOLarity:MARKer1? |
| Example | :SOUR:RAD:ARB:MPOL:MARK1 NEG |
| Dependencies | When a new waveform is selected for playback the settings contained within the associated waveform header file are applied to the ARB. The marker polarity is one of the values stored within the header file. If the newly selected waveform file has an associated header file, the marker polarity is updated with the value from the header file. The marker polarity will remain unchanged if the newly selected waveform does not have an associated header file. |
| Preset | Pos |
| Range | Neg Pos |
| Initial S/W Revision | A.05.00 |

Mkr 2 Polarity

Allows you to set the polarity of marker 2.

| | |
|-----------------------------|---|
| Key Path | Source, Modulation Setup, ARB, Marker Utilities, Marker Polarity |
| Remote Command | :SOURce:RADio:ARB:MPOLarity:MARKer2 POSitive NEGative :SOURce:RADio:ARB:MPOLarity:MARKer2? |
| Example | :SOUR:RAD:ARB:MPOL:MARK2 NEG |
| Dependencies | When a new waveform is selected for playback the settings contained within the associated waveform header file are applied to the ARB. The marker polarity is one of the values stored within the header file. If the newly selected waveform file has an associated header file, the marker polarity is updated with the value from the header file. The marker polarity will remain unchanged if the newly selected waveform does not have an associated header file. |
| Preset | Pos |
| Range | Neg Pos |
| Initial S/W Revision | A.05.00 |

Mkr 3 Polarity

Allows you to set the polarity of marker 3.

| | |
|-----------------------------|---|
| Key Path | Source, Modulation Setup, ARB, Marker Utilities, Marker Polarity |
| Remote Command | :SOURce:RADio:ARB:MPOLarity:MARKer3 POSitive NEGative :SOURce:RADio:ARB:MPOLarity:MARKer3? |
| Example | :SOUR:RAD:ARB:MPOL:MARK3 NEG |
| Dependencies | When a new waveform is selected for playback the settings contained within the associated waveform header file are applied to the ARB. The marker polarity is one of the values stored within the header file. If the newly selected waveform file has an associated header file, the marker polarity is updated with the value from the header file. The marker polarity will remain unchanged if the newly selected waveform does not have an associated header file. |
| Preset | Pos |
| Range | Neg Pos |
| Initial S/W Revision | A.05.00 |

Mkr 4 Polarity

Allows you to set the polarity of marker 4.

| | |
|-----------------------|---|
| Key Path | Source, Modulation Setup, ARB, Marker Utilities, Marker Polarity |
| Remote Command | :SOURce:RADio:ARB:MPOLarity:MARKer4 POSitive NEGative :SOURce:RADio:ARB:MPOLarity:MARKer4? |

| | |
|-----------------------------|---|
| Example | :SOUR:RAD:ARB:MPOL:MARK4 NEG |
| Dependencies | When a new waveform is selected for playback the settings contained within the associated waveform header file are applied to the ARB. The marker polarity is one of the values stored within the header file. If the newly selected waveform file has an associated header file, the marker polarity is updated with the value from the header file. The marker polarity will remain unchanged if the newly selected waveform does not have an associated header file. |
| Preset | Pos |
| Range | Neg Pos |
| Initial S/W Revision | A.05.00 |

Marker Routing

Allows access to the marker routing sub-menus, which allow you to specify where the marker events are routed. It should be noted that the markers can also be routed to Trigger 1 Out and Trigger 2 Out, however this must be set up using the menus accessed by pressing the “Trigger” hard key.

| | |
|-----------------------------|--|
| Key Path | Source, Modulation Setup, ARB, Marker Utilities |
| Initial S/W Revision | A.05.00 |

Pulse/RF Blank

Allows you to select which marker is used for the pulse/RF blanking function. The pulse/RF blanking function blanks the RF when the marker signal goes low. The marker polarity determines when the marker signal is high. For a positive polarity, this is during the marker points. For a negative polarity, this is when there are no marker points.

Marker points should be set before using this function. Enabling this function without setting maker points may create a continuous low or high signal, dependant on the marker polarity. This causes either no RF output, or a continuous RF output.

| | |
|-----------------------------|---|
| Key Path | Source, Modulation Setup, ARB, Marker Utilities, Marker Routing |
| Remote Command | :SOURce:RADio:ARB:MDEStination:PULSe NONE M1 M2 M3 M4 :SOURce:RADio:ARB:MDEStination:PULSe? |
| Example | :SOUR:RAD:ARB:MDES:PULS NONE |
| Dependencies | When a new waveform is selected for playback the settings contained within the associated waveform header file are applied to the ARB. The pulse/RF blanking setting is one of the values stored within the header file. If the newly selected waveform file has an associated header file, the pulse/RF blanking setting is updated with the value from the header file. The pulse/RF blanking setting will remain unchanged if the newly selected waveform does not have an associated header file. |
| Range | None M1 M2 M3 M4 |
| Initial S/W Revision | A.05.00 |

None

Sets no marker to be used for the pulse/RF blanking function, essentially turning the RF blanking function off.

| | |
|----------------------|--|
| Key Path | Source, Modulation Setup, ARB, Marker Utilities, Marker Routing, Pulse/RF Blank |
| Example | :SOUR:RAD:ARB:MDES:PULS NONE |
| Initial S/W Revision | A.05.00 |

Marker 1

Sets marker 1 to be used for the pulse/RF blanking function.

| | |
|----------------------|--|
| Key Path | Source, Modulation Setup, ARB, Marker Utilities, Marker Routing, Pulse/RF Blank |
| Example | :SOUR:RAD:ARB:MDES:PULS M1 |
| Initial S/W Revision | A.05.00 |

Marker 2

Sets marker 2 to be used for the pulse/RF blanking function.

| | |
|----------------------|--|
| Key Path | Source, Modulation Setup, ARB, Marker Utilities, Marker Routing, Pulse/RF Blank |
| Example | :SOUR:RAD:ARB:MDES:PULS M2 |
| Initial S/W Revision | A.05.00 |

Marker 3

Sets marker 3 to be used for the pulse/RF blanking function.

| | |
|----------------------|--|
| Key Path | Source, Modulation Setup, ARB, Marker Utilities, Marker Routing, Pulse/RF Blank |
| Example | :SOUR:RAD:ARB:MDES:PULS M3 |
| Initial S/W Revision | A.05.00 |

Marker 4

Sets marker 4 to be used for the pulse/RF blanking function.

| | |
|----------------------|--|
| Key Path | Source, Modulation Setup, ARB, Marker Utilities, Marker Routing, Pulse/RF Blank |
| Example | :SOUR:RAD:ARB:MDES:PULS M4 |
| Initial S/W Revision | A.05.00 |

ALC Hold

Allows you to specify which marker is routed for use within the ALC hold function. The ALC hold marker function holds the ALC circuitry at the average value of the sample points set by the marker.

The ALC hold function operates during the low periods of the marker signal. The marker polarity determines when the marker signal is high. For positive polarity, this is during the marker points. For a negative polarity, this is when there are no marker points.

| | |
|-----------------------------|--|
| Key Path | Source, Modulation Setup, ARB, Marker Utilities, Marker Routing |
| Remote Command | :SOURce:RADio:ARB:MDEStination:ALCHold NONE M1 M2 M3 M4 :SOURce:RADio:ARB:MDEStination:ALCHold? |
| Example | :SOUR:RAD:ARB:MDES:ALCH NONE |
| Dependencies | When a new waveform is selected for playback the settings contained within the associated waveform header file are applied to the ARB. The ALC hold setting is one of the values stored within the header file. If the newly selected waveform file has an associated header file, the ALC hold setting is updated with the value from the header file. The ALC hold setting will remain unchanged if the newly selected waveform does not have an associated header file. |
| Range | None M1 M2 M3 M4 |
| Initial S/W Revision | A.05.00 |

None

Sets no marker to be used for the ALC hold function, essentially turning the ALC hold function off.

| | |
|-----------------------------|--|
| Key Path | Source, Modulation Setup, ARB, Marker Utilities, Marker Routing, ALC Hold |
| Example | :SOUR:RAD:ARB:MDES:PULS NONE |
| Initial S/W Revision | A.05.00 |

Marker 1

Sets marker 1 to be used for the ALC hold function.

| | |
|-----------------------------|--|
| Key Path | Source, Modulation Setup, ARB, Marker Utilities, Marker Routing, ALC Hold |
| Example | :SOUR:RAD:ARB:MDES:PULS M1 |
| Initial S/W Revision | A.05.00 |

Marker 2

Sets marker 2 to be used for the ALC hold function.

| | |
|-----------------------------|--|
| Key Path | Source, Modulation Setup, ARB, Marker Utilities, Marker Routing, ALC Hold |
| Example | :SOUR:RAD:ARB:MDES:PULS M2 |
| Initial S/W Revision | A.05.00 |

Marker 3

Sets marker 3 to be used for the ALC hold function.

| | |
|-----------------------------|--|
| Key Path | Source, Modulation Setup, ARB, Marker Utilities, Marker Routing, ALC Hold |
| Example | :SOUR:RAD:ARB:MDES:PULS M3 |
| Initial S/W Revision | A.05.00 |

Marker 4

Sets marker 4 to be used for the ALC hold function.

| | |
|-----------------------------|--|
| Key Path | Source, Modulation Setup, ARB, Marker Utilities, Marker Routing, ALC Hold |
| Example | :SOUR:RAD:ARB:MDES:PULS M4 |
| Initial S/W Revision | A.05.00 |

Header Utilities

Allows access to the header utilities sub-menu. Pressing this key also causes the central display area to change to display the File Header Information view.

| | |
|-----------------------------|---|
| Key Path | Source, Modulation Setup, ARB |
| Dependencies | This key is only available if there is currently a waveform selected for playback. If no waveform is selected, the key is grayed out. |
| Initial S/W Revision | A.05.00 |

Clear Header

Allows you to clear the header information from the file header associated with the currently selected waveform.

| | |
|-----------------------------|--|
| Key Path | Source, Modulation Setup, ARB, Header Utilities |
| Remote Command | :SOURce:RADio:ARB:HEADer:CLEar |
| Example | :SOUR:RAD:ARB:HEAD:CLE |
| Notes | Attempting to clear the header details via SCPI when no waveform was selected for playback will generate an error. |
| Initial S/W Revision | A.05.00 |

Save Setup To Header

Allows you to save new file header information details to the file.

| | |
|--------------------------|---|
| Key Path | Source, Modulation Setup, ARB, Header Utilities |
| Remote Command | :SOURce:RADio:ARB:HEADer:SAVE |
| Example | :SOUR:RAD:ARB:HEAD:SAVE |
| Notes | Attempting to save the header details via SCPI when no waveform was selected for playback will generate an error. |
| Initial S/W Revision | A.05.00 |
| Modified at S/W Revision | A.16.00 (AWGN settings will be saved to header as well) |

Query Waveform Unique ID (Remote Command Only)

Each Signal Studio waveform contains a unique waveform ID, which recorded in the header. This command allows you to query the unique waveform ID from the header. This is a SCPI only command. User can also check [Error! Reference source not found.](#) for waveform unique ID display.

| | |
|----------------------|--|
| Remote Command | :MMEMory:HEADer:ID? "<file name>" |
| Example | :MMEM:HEAD:ID? "test.wfm" (query the waveform already loaded into the ARB memory) :MMEM:HEAD:ID? "D: VARB\test.wfm" (query the waveform on the hard disk by absolute path) :MMEM:HEAD:ID? "NVWFM:test.wfm" (query the waveform on the hard disk by MSUS) |
| Notes | SCPI query only. The queried waveform file can be in ARB memory, or on hard disk. If want to query ARB in ARB memory, then give out the file name directly. If want to query ARB on the hard disk, then absolute file path or MSUS should be given along with the file name. The valid MSUS is "NVWFM" which is mapped to D: VARB on hard disk. If the file cannot be found in ARB memory or on hard disk, an error is generated and value -1 is returned |
| Initial S/W Revision | A.09.00 |

Bus Trigger Command (Remote Command Only)

Used to initiate an immediate trigger event if the trigger source is set to Bus.

| | |
|----------------------|------------------------------------|
| Remote Command | :SOURce:RADio:ARB:TRIGger:INITiate |
| Example | :SOUR:RAD:ARB:TRIG:INIT |
| Initial S/W Revision | A.05.00 |

AM

Allows access to the menu for configuring the Amplitude Modulation.

| | |
|----------------------|---------------------------------|
| Key Path | Source, Modulation Setup |
| Initial S/W Revision | A.05.00 |

AM

Enables or disables the amplitude modulation.

Turning AM on when another modulation format is already on results in the previous modulation format being turned off and the generation of an error.

| | |
|-----------------------|---------------------------------------|
| Key Path | Source, Modulation Setup, AM |
| Remote Command | :SOURce:AM:STATe :SOURce:AM:STATe? |
| Example | :SOUR:AM:STAT OFF |
| Preset | Off |
| Range | On Off |
| Initial S/W Revision | A.05.00 |

AM Depth

Allows you to set the amplitude modulation depth in percent.

| | |
|-----------------------|---|
| Key Path | Source, Modulation Setup, AM |
| Remote Command | :SOURce:AM[:DEPTh] [:LINear] :SOURce:AM[:DEPTh] [:LINear]? |
| Example | :SOUR:AM 0.1 |
| Preset | 0.1 % |
| Min | 0.1 % |
| Max | 95.0 % |
| Initial S/W Revision | A.05.00 |

AM Rate

Allows you to set the internal amplitude modulation rate.

| | |
|-----------------------|---|
| Key Path | Source, Modulation Setup, AM |
| Remote Command | :SOURce:AM:INTernal:FREQuency :SOURce:AM:INTernal:FREQuency? |
| Example | :SOUR:AM:INT:FREQ 40.0 Hz |

| | |
|----------------------|----------|
| Preset | 400.0 Hz |
| Min | 10 Hz |
| Max | 40 kHz |
| Initial S/W Revision | A.05.00 |

FM

Allows access to the menu for configuring the frequency modulation.

| | |
|----------------------|---------------------------------|
| Key Path | Source, Modulation Setup |
| Initial S/W Revision | A.05.00 |

FM

Enables or disables the frequency modulation.

Turning FM on when another modulation format is already on results in the previous modulation format being turned off and the generation of an error.

| | |
|-----------------------|---------------------------------------|
| Key Path | Source, Modulation Setup, FM |
| Remote Command | :SOURce:FM:STATe :SOURce:FM:STATe? |
| Example | :SOUR:FM:STAT OFF |
| Preset | Off |
| Range | On Off |
| Initial S/W Revision | A.05.00 |

FM Deviation

Allows you to set the frequency modulation deviation.

| | |
|-----------------------|---|
| Key Path | Source, Modulation Setup, FM |
| Remote Command | :SOURce:FM[:DEViation] :SOURce:FM[:DEViation]? |
| Example | :SOUR:FM 1.00 kHz |
| Preset | 1.00 Hz |
| Min | 1.00 Hz |
| Max | 100.00 kHz |
| Initial S/W Revision | A.05.00 |

FM Rate

Allows you to set the internal frequency modulation rate.

| | |
|----------------------|---|
| Key Path | Source, Modulation Setup, FM |
| Remote Command | :SOURce:FM:INTernal:FREQuency :SOURce:FM:INTernal:FREQuency? |
| Example | :SOUR:FM:INT:FREQ 40.0 Hz |
| Preset | 400.0 Hz |
| Min | 10 Hz |
| Max | 40 kHz |
| Initial S/W Revision | A.05.00 |

PM

Allows access to the menu for configuring the phase modulation.

| | |
|----------------------|---------------------------------|
| Key Path | Source, Modulation Setup |
| Initial S/W Revision | A.05.00 |

PM

Enables or disables the phase modulation.

Turning PM on when another modulation format is already on results in the previous modulation format being turned off and the generation of an error.

| | |
|----------------------|---------------------------------------|
| Key Path | Source, Modulation Setup, PM |
| Remote Command | :SOURce:PM:STATe :SOURce:PM:STATe? |
| Example | :SOUR:PM:STAT OFF |
| Preset | Off |
| Range | On Off |
| Initial S/W Revision | A.05.00 |

PM Deviation

Allows you to set the phase modulation deviation.

| | |
|----------------|---|
| Key Path | Source, Modulation Setup, PM |
| Remote Command | :SOURce:PM[:DEViation] :SOURce:PM[:DEViation]? |

| | |
|----------------------|-------------------|
| Example | :SOUR:PM 1.00 rad |
| Preset | 0.1 rad |
| Min | 0.1 rad |
| Max | 20.0 rad |
| Initial S/W Revision | A.05.00 |

PM Rate

Allows you to set the internal phase modulation rate.

| | |
|-----------------------|---|
| Key Path | Source, Modulation Setup, PM |
| Remote Command | :SOURce:PM:INTernal:FREQuency :SOURce:PM:INTernal:FREQuency? |
| Example | :SOUR:PM:INT:FREQ 40.0 Hz |
| Preset | 400.0 Hz |
| Min | 10 Hz |
| Max | 40 kHz |
| Initial S/W Revision | A.05.00 |

List Sequencer

Allows you access to the sub-menus for configuring the list sequencer.

List sequences allows you to enter frequencies and amplitudes at unequal intervals in nonlinear ascending, descending or random order. Each step within the list can also include its own waveform file for playback, step duration, trigger event and trigger output.

The complexities involved in configuring the list sequencer do not lend itself to manual configuration; hence the manual configuration for this feature is limited. For easier configuration of the list sequencer, it is recommended that you use either SCPI or load a tab delimited file containing the setup parameters in a tabular form. The details of the SCPI for configuring the list sequencer can be found in ["Step Configuration \(Remote Command Only\)" on page 2619](#).

Once the List Sequencer has been configured using the front panel, SCPI, or loading in a tab delimited file, the sequence must be initiated using the front panel Initiate Sequence key or the corresponding SCPI command.

| | |
|----------------------|---------------|
| Key Path | Source |
| Initial S/W Revision | A.05.00 |

Sequencer

Allows you to set the state of the list sequencer. When the list sequencer is on, the source is outputting the sequence defined by the sequencer. When the list sequencer is off, the source outputs a single waveform segment or sequence (independent mode) at a single frequency and amplitude.

| | |
|-----------------------------|---|
| Key Path | Source, List Sequencer |
| Remote Command | :SOURce:LIST[:STATe] ON OFF 1 0 :SOURce:LIST[:STATe]? |
| Example | :SOUR:LIST OFF |
| Notes | When the sequencer is set to ON, the list sequencer controls the output of the source. |
| Couplings | When in Sequence Analyzer mode and the list sequencer state is Off, Include Source is forced to No, and the Include Source key is grayed out. When in Sequence Analyzer mode and the list sequencer state is On, Include Source is available to set. And, an ARB memory related operation, like load or delete will be rejected. |
| Preset | Off |
| Range | On Off |
| Initial S/W Revision | A.05.00 |

Initiate Sequence

Pressing this key arms the sequence for single execution. Once the sequence is armed the source begins the sequence as soon as the trigger is received. If the trigger is set to Free Run, the sequence starts immediately.

| | |
|-----------------------------|---|
| Key Path | Source, List Sequencer |
| Remote Command | :SOURce:LIST:TRIGger[:IMMediate] |
| Example | :SOUR:LIST:TRIG |
| Notes | When in Sequence Analyzer mode and Include Source is Yes, the Initiate list sequencer operation is rejected, and the key is grayed out, since source list sequence request is sent to physics via Parallel batch by sequence analyzer. If the file needed by the sequencer is not already in ARB memory, the sequence cannot be initiated and an error will be generated. There is a blocking SCPI query which can be used to query if source list sequence being initiated successfully or not. (see " Query List Sequence Initiation Armed Status (Remote Command Only) " on page 2630 Query Source List Sequence Armed Status) |
| Dependencies | Under the Sequence Analyzer Mode, if Meas Setup->Include Source is set to YES, Source->List Sequencer->Initiate Sequence is disabled. |
| Initial S/W Revision | A.05.00 |

List Sequencer Setup

Allows you access to the list sequencer setup menus.

| | |
|----------|-------------------------------|
| Key Path | Source, List Sequencer |
|----------|-------------------------------|

Number of Steps

Allows you to specify the number of steps within the list sequence.

| | |
|-----------------------|--|
| Key Path | Source, List Sequencer, List Sequencer Setup |
| Remote Command | :SOURce:LIST:NUMBer:STEPs <integer> :SOURce:LIST:NUMBer:STEPs? |
| Example | :SOUR:LIST:NUMB:STEP 1 |
| Notes | Increasing the number of steps creates additional steps at the end of the list, with all the settings within the steps set to their default values. Decreasing the number of steps removes steps from the end of the list. The settings within the removed steps are not reset. This means that increasing the number of steps again would allow you to retrieve these steps. |
| Dependencies | The Step Count parameter is increased or decreased when you insert or delete a point from within the GUI interface to the sequencer. |
| Preset | 1 |
| Min | 1 |
| Max | 1000 |
| Initial S/W Revision | A.05.00 |

Current Step

Allows you to select the step number you wish to view or edit.

| | |
|----------------------|---|
| Key Path | Source, List Sequencer, List Sequencer Setup |
| Notes | No remote command, front panel only. |
| Preset | 1 |
| Min | 1 |
| Max | Step Count |
| Initial S/W Revision | A.05.00 |

Insert Step Before

Allows you to insert a new step, containing default values, before the currently selected step. Inserting a step will automatically increase the Step Count parameter by 1. If sequence already reaches upper limit of

1000 steps, then insert more step will be rejected and popup error –221, “Setting Conflict; Cannot insert more steps, maximum number of steps reached”

| | |
|-----------------------------|---|
| Key Path | Source, List Sequencer, List Sequencer Setup |
| Notes | No remote command, front panel only. If the list already contains the maximum limit of 1000 steps, no operation will be made after pressing this key. |
| Initial S/W Revision | A.05.00 |

Delete Step

Allows you to delete the current step. Deleting a step will automatically decrease the Step Count parameter by 1. If sequence only has one step left, delete step will be rejected and popup error –221, “Setting conflict; Cannot delete current step, minimum number of steps reached”

| | |
|-----------------------------|---|
| Key Path | Source, List Sequencer, List Sequencer Setup |
| Notes | No remote command, Front Panel key only. If the list already contains the minimum limit of 1 step, no operation will be made after pressing this key |
| Initial S/W Revision | A.05.00 |

Clear List

Allows you to clear the list. Clearing the list sets the number of steps to the default value of 1 and sets the parameters for the only step to their default values.

| | |
|-----------------------------|---|
| Key Path | Source, List Sequencer, List Sequencer Setup |
| Initial S/W Revision | A.05.00 |

Step Trigger

Allows access to the sub-menu for selecting the trigger input for the current step.

| | |
|-----------------------------|--|
| Key Path | Source, List Sequencer, List Sequencer Setup |
| Remote Command | :SOURce:LIST:STEP[1] 2 3...1000:SETup:INPut:TRIGger IMMEDIATE INTERNAL EXTERNAL2 KEY BUS EXTERNAL4 :SOURce:LIST:STEP[1] 2 3...1000:SETup:INPut:TRIGger? |
| Example | :SOUR:LIST:STEP2:SET:INP:TRIG BUS :SOUR:LIST:STEP2:SET:INP:TRIG? |
| Notes | SCPI is supported after A.09.40 |
| Preset | Free Run |
| Range | Free Run Internal Manual (Trigger Key) Bus External 2 EXTERNAL4 |
| Initial S/W Revision | A.05.00 |

Free Run

Sets the trigger input for the current step to Free Run.

| | |
|-----------------------------|---|
| Key Path | Source, List Sequencer, List Sequencer Setup, Step Trigger |
| Example | :SOUR:LIST:STEP2:SET:INP:TRIG IMM |
| Notes | SCPI is supported after A.09.40 |
| Initial S/W Revision | A.05.00 |

Internal

Sets the trigger input for the current step to Internal.

| | |
|-----------------------------|---|
| Key Path | Source, List Sequencer, List Sequencer Setup, Step Trigger |
| Example | :SOUR:LIST:STEP2:SET:INP:TRIG INT |
| Notes | SCPI is supported after A.09.40 |
| Initial S/W Revision | A.05.00 |

Manual (Trigger Key)

Sets the trigger input for the current step to Manual (Trigger Key). Any step in the sequence set to Manual will cause the sequence execution to stop until the manual trigger key is pressed. Sending the Bus Trigger SCPI command will have no effect. At any point in the sequence where the list sequencer is paused waiting for a software trigger, a pop up dialog is displayed until the trigger event occurs.

| | |
|-----------------------------|---|
| Key Path | Source, List Sequencer, List Sequencer Setup, Step Trigger |
| Example | :SOUR:LIST:STEP2:SET:INP:TRIG KEY |
| Notes | SCPI is supported after A.09.40 |
| Initial S/W Revision | A.05.00 |

Bus

Sets the trigger input for the current step to Bus. Any step in the sequence set to Bus will cause the sequence execution to stop until the Bus Trigger SCPI command is sent. Pressing the manual trigger key has no effect. At any point in the sequence where the list sequencer is paused waiting for a software trigger, a pop up dialog is displayed until the trigger event occurs.

| | |
|-----------------------------|---|
| Key Path | Source, List Sequencer, List Sequencer Setup, Step Trigger |
| Example | :SOUR:LIST:STEP2:SET:INP:TRIG BUS |
| Notes | SCPI is supported after A.09.40 |
| Initial S/W Revision | A.05.00 |

External 2

Sets the trigger input for the current step to External 2.

| | |
|-----------------------------|--|
| Key Path | Source, List Sequencer, List Sequencer Setup, Step Trigger |
| Example | :SOUR:LIST:STEP2:SET:INP:TRIG EXT2 |
| Notes | SCPI is supported after A.09.40 |
| Notes | Note: When on E6640A, trigger 2 is a bi-directional trigger port. So when trigger 2 has been configured as OUTPUT type, choosing External 2 as the input trigger for the current step will generate error. |
| Initial S/W Revision | A.05.00 |

Transition Time

Allows you to specify the transition time for the current step.

The transition time is the amount of time allowed for the source to settle at the current frequency or amplitude value.

Transition Time should not be taken as additional time before or inside the Step Duration. You can set a value for the settling time to allow the source output frequency or amplitude to become stable. Make sure that during this period of time, you do not use the source output signal.

The following table lists recommended values for appropriate settling times to allow for changes within the source.

| Value Changed | Recommended Transition Time |
|---------------|---|
| Frequency | 500 μ s |
| Amplitude | 100 μ s to within 0.1 dB 20 μ s to within 1.0 dB |

If the Transition Time value is shorter than the time necessary for the hardware to settle and a List Sequence is initiated, a **warning** is generated.

If the Transition Time value is longer than the Step Duration, an error is generated when initiating a source list sequence. For source list sequence, transition time is included in the step duration length. If the Transition Time value is longer than the Step Duration Time, the real step duration length is extended to equal the transition time and cause a timing shift.

| | |
|-----------------------|--|
| Key Path | Source, List Sequencer, List Sequencer Setup |
| Remote Command | :SOURce:LIST:STEP[1] 2 3...1000:SETup:TRANsition:TIME <time> :SOURce:LIST:STEP[1] 2 3...1000:SETup:TRANsition:TIME? |
| Example | :SOUR:LIST:STEP2:SET:TRAN:TIME 1ms :SOUR:LIST:STEP2:SET:TRAN:TIME? |

| | |
|----------------------|---------------------------------|
| Notes | SCPI is supported after A.09.40 |
| Preset | 1.0 ms |
| Min | 0.0 ms |
| Max | 4.0 ks |
| Initial S/W Revision | A.05.00 |

Radio Setup

Allows you access to the sub-menus for setting up the radio standard, band, and radio band link direction for the current step.

| | |
|----------------------|---|
| Key Path | Source, List Sequencer, List Sequencer Setup |
| Notes | No remote command, front panel only. |
| Initial S/W Revision | A.05.00 |

Radio Standard

Allows access to the sub-menus for selecting the radio standard and the associated radio band for use in the current step.

| | |
|-----------------------|---|
| Key Path | Source, List Sequencer, List Sequencer Setup, Radio Setup |
| Remote Command | :SOURce:LIST:STEP[1] 2 3...1000:SETup:RADIo:BAND NONE PGSM EGSM RGSM DCS1800 PCS1900 TGSM810 GSM450 GSM480 GSM700 GSM850 BANDI BANDII BANDIII BANDIV BANDV BANDVI BANDVII BANDVIII BANDIX BANDX BANDXI BANDXII BANDXIII BANDXIV BANDXIX USCELL USPCS JAPAN KOREAN NMT IMT2K UPPER SECOND PAMR400 PAMR800 IMTEXT PCS1DOT9G AWS US2DOT5G PUBLIC LOWER NONE BAND1 BAND2 BAND3 BAND4 BAND5 BAND6 BAND7 BAND8 BAND10 BAND11 BAND12 BAND13 BAND14 BAND17 BAND18 BAND19 BAND20 BAND21 BAND24 BAND25 BAND26 BAND27 BAND28 BAND29 BAND30 BAND31 BAND33 BAND34 BAND35 BAND36 BAND37 BAND38 BAND39 BAND40 BAND41 BAND42 BAND43 BAND44 BANDA BANDB BANDC BANDD BANDE BANDF :SOURce:LIST:STEP[1] 2 3...1000:SETup: RADIo:BAND? |
| Example | :SOUR:LIST:STEP2:SET:RAD:BAND PGSM :SOUR:LIST:STEP2:SET:RAD:BAND? |
| Notes | SCPI is supported after A.09.40 |
| Initial S/W Revision | A.05.00 |

None

Selects no radio standard for use on the current step.

| | |
|----------------------|--|
| Key Path | Source, List Sequencer, List Sequencer Setup, Radio Setup, Radio Standard |
| Example | :SOUR:LIST:STEP2:SET:RAD:BAND NONE |
| Notes | SCPI is supported after A.09.40 |
| Initial S/W Revision | A.05.00 |

GSM/EDGE

Pressing this key once selects GSM/EDGE as the radio standard and the current GSM/EDGE band as the active channel band. Pressing this key again allows access to the sub-menus for selecting a different GSM/EDGE band.

| | |
|----------------------|--|
| Key Path | Source, List Sequencer, List Sequencer Setup, Radio Setup, Radio Standard |
| Initial S/W Revision | A.05.00 |

P-GSM

Selects P-GSM as the band for the current step.

| | |
|----------------------|--|
| Key Path | Source, List Sequencer, List Sequencer Setup, Radio Setup, Radio Standard, GSM/EDGE |
| Initial S/W Revision | A.05.00 |

E-GSM

Selects E-GSM as the band for the current step.

| | |
|----------------------|--|
| Key Path | Source, List Sequencer, List Sequencer Setup, Radio Setup, Radio Standard, GSM/EDGE |
| Initial S/W Revision | A.05.00 |

R-GSM

Selects R-GSM as the band for the current step.

| | |
|----------------------|--|
| Key Path | Source, List Sequencer, List Sequencer Setup, Radio Setup, Radio Standard, GSM/EDGE |
| Initial S/W Revision | A.05.00 |

DCS 1800

Selects DCS 1800 as the band for the current step.

| | |
|----------------------|--|
| Key Path | Source, List Sequencer, List Sequencer Setup, Radio Setup, Radio Standard, GSM/EDGE |
| Initial S/W Revision | A.05.00 |

PCS 1900

Selects PCS 1900 as the band for the current step.

| | |
|----------------------|--|
| Key Path | Source, List Sequencer, List Sequencer Setup, Radio Setup, Radio Standard, GSM/EDGE |
| Initial S/W Revision | A.05.00 |

GSM 450

Selects GSM 450 as the band for the current step.

| | |
|----------------------|--|
| Key Path | Source, List Sequencer, List Sequencer Setup, Radio Setup, Radio Standard, GSM/EDGE |
| Initial S/W Revision | A.05.00 |

GSM 480

Selects GSM 480 as the band for the current step.

| | |
|----------------------|--|
| Key Path | Source, List Sequencer, List Sequencer Setup, Radio Setup, Radio Standard, GSM/EDGE |
| Initial S/W Revision | A.05.00 |

GSM 850

Selects GSM 850 as the band for the current step.

| | |
|----------------------|--|
| Key Path | Source, List Sequencer, List Sequencer Setup, Radio Setup, Radio Standard, GSM/EDGE |
| Initial S/W Revision | A.05.00 |

GSM 700

Selects GSM 700 as the band for the current step.

| | |
|----------------------|--|
| Key Path | Source, List Sequencer, List Sequencer Setup, Radio Setup, Radio Standard, GSM/EDGE |
| Initial S/W Revision | A.05.00 |

T-GSM 810

Selects T-GSM 810 as the band for the current step.

| | |
|----------------------|--|
| Key Path | Source, List Sequencer, List Sequencer Setup, Radio Setup, Radio Standard, GSM/EDGE |
| Initial S/W Revision | A.05.00 |

WCDMA

Pressing this key once selects WCDMA as the radio standard and the current WCDMA band as the active channel band. Pressing this key again allows access to the sub-menus for selecting a different WCDMA band.

| | |
|----------------------|--|
| Key Path | Source, List Sequencer, List Sequencer Setup, Radio Setup, Radio Standard |
| Initial S/W Revision | A.05.00 |

Band I

Selects Band I as the band for the current step.

| | |
|----------------------|---|
| Key Path | Source, List Sequencer, List Sequencer Setup, Radio Setup, Radio Standard, WCDMA |
| Initial S/W Revision | A.05.00 |

Band II

Selects Band II as the band for the current step.

| | |
|----------------------|---|
| Key Path | Source, List Sequencer, List Sequencer Setup, Radio Setup, Radio Standard, WCDMA |
| Initial S/W Revision | A.05.00 |

Band III

Selects Band III as the band for the current step.

| | |
|----------------------|---|
| Key Path | Source, List Sequencer, List Sequencer Setup, Radio Setup, Radio Standard, WCDMA |
| Initial S/W Revision | A.05.00 |

Band IV

Selects Band IV as the band for the current step.

| | |
|----------------------|---|
| Key Path | Source, List Sequencer, List Sequencer Setup, Radio Setup, Radio Standard, WCDMA |
| Initial S/W Revision | A.05.00 |

Band V

Selects Band V as the band for the current step.

| | |
|----------------------|---|
| Key Path | Source, List Sequencer, List Sequencer Setup, Radio Setup, Radio Standard, WCDMA |
| Initial S/W Revision | A.05.00 |

Band VI

Selects Band VI as the band for the current step.

| | |
|----------------------|---|
| Key Path | Source, List Sequencer, List Sequencer Setup, Radio Setup, Radio Standard, WCDMA |
| Initial S/W Revision | A.05.00 |

Band VII

Selects Band VII as the band for the current step.

| | |
|----------------------|---|
| Key Path | Source, List Sequencer, List Sequencer Setup, Radio Setup, Radio Standard, WCDMA |
| Initial S/W Revision | A.05.00 |

Band VIII

Selects Band VIII as the band for the current step.

| | |
|----------------------|---|
| Key Path | Source, List Sequencer, List Sequencer Setup, Radio Setup, Radio Standard, WCDMA |
| Initial S/W Revision | A.05.00 |

Band IX

Selects Band IX as the band for the current step.

| | |
|----------------------|---|
| Key Path | Source, List Sequencer, List Sequencer Setup, Radio Setup, Radio Standard, WCDMA |
| Initial S/W Revision | A.05.00 |

Band X

Selects Band X as the band for the current step.

| | |
|----------------------|---|
| Key Path | Source, List Sequencer, List Sequencer Setup, Radio Setup, Radio Standard, WCDMA |
| Initial S/W Revision | A.05.00 |

Band XI

Selects Band XI as the band for the current step.

| | |
|----------------------|---|
| Key Path | Source, List Sequencer, List Sequencer Setup, Radio Setup, Radio Standard, WCDMA |
| Initial S/W Revision | A.05.00 |

Band XII

Selects Band XII as the band for the current step.

| | |
|----------------------|---|
| Key Path | Source, List Sequencer, List Sequencer Setup, Radio Setup, Radio Standard, WCDMA |
| Initial S/W Revision | A.05.00 |

Band XIII

Selects Band XIII as the band for the current step.

| | |
|----------------------|---|
| Key Path | Source, List Sequencer, List Sequencer Setup, Radio Setup, Radio Standard, WCDMA |
| Initial S/W Revision | A.05.00 |

Band XIV

Selects Band XIV as the band for the current step.

| | |
|----------------------|---|
| Key Path | Source, List Sequencer, List Sequencer Setup, Radio Setup, Radio Standard, WCDMA |
| Initial S/W Revision | A.05.00 |

CDMA 2000 / 1xEVDO

Pressing this key once selects CDMA 2000/1xEVDO as the radio standard and the current CDMA 2000/1xEVDO band as the active channel band. Pressing this key again allows access to the sub-menus for selecting a different CDMA 2000/1xEVDO band.

| | |
|----------------------|--|
| Key Path | Source, List Sequencer, List Sequencer Setup, Radio Setup, Radio Standard |
| Initial S/W Revision | A.05.00 |

US CELL

Selects US Cell as the band for the current step.

| | |
|----------------------|--|
| Key Path | Source, List Sequencer, List Sequencer Setup, Radio Setup, Radio Standard, CDMA 2000 / 1xEVDO |
| Initial S/W Revision | A.05.00 |

US PCS

Selects US PCS as the band for the current step.

| | |
|----------------------|--|
| Key Path | Source, List Sequencer, List Sequencer Setup, Radio Setup, Radio Standard, CDMA 2000 / 1xEVDO |
| Initial S/W Revision | A.05.00 |

Japan Cell

Selects Japan Cell as the band for the current step.

| | |
|----------------------|--|
| Key Path | Source, List Sequencer, List Sequencer Setup, Radio Setup, Radio Standard, CDMA 2000 / 1xEVDO |
| Initial S/W Revision | A.05.00 |

Korean PCS

Selects Korean PCS as the band for the current step.

| | |
|----------------------|--|
| Key Path | Source, List Sequencer, List Sequencer Setup, Radio Setup, Radio Standard, CDMA 2000 / 1xEVDO |
| Initial S/W Revision | A.05.00 |

NMT 450

Selects NMT 450 as the band for the current step.

| | |
|----------------------|--|
| Key Path | Source, List Sequencer, List Sequencer Setup, Radio Setup, Radio Standard, CDMA 2000 / 1xEVDO |
| Initial S/W Revision | A.05.00 |

IMT 2000

Selects IMT 2000 as the band for the current step.

| | |
|----------------------|--|
| Key Path | Source, List Sequencer, List Sequencer Setup, Radio Setup, Radio Standard, CDMA 2000 / 1xEVDO |
| Initial S/W Revision | A.05.00 |

Upper 700

Selects Upper 700 as the band for the current step.

| | |
|----------------------|--|
| Key Path | Source, List Sequencer, List Sequencer Setup, Radio Setup, Radio Standard, CDMA 2000 / 1xEVDO |
| Initial S/W Revision | A.05.00 |

Secondary 800

Selects Secondary 800 as the band for the current step.

| | |
|----------------------|--|
| Key Path | Source, List Sequencer, List Sequencer Setup, Radio Setup, Radio Standard, CDMA 2000 / 1xEVDO |
| Initial S/W Revision | A.05.00 |

400 Euro PAMR

Selects 400 Euro PAMR as the band for the current step.

| | |
|----------------------|--|
| Key Path | Source, List Sequencer, List Sequencer Setup, Radio Setup, Radio Standard, CDMA 2000 / 1xEVDO |
| Initial S/W Revision | A.05.00 |

800 PAMR

Selects 800 PAMR as the band for the current step.

| | |
|----------------------|--|
| Key Path | Source, List Sequencer, List Sequencer Setup, Radio Setup, Radio Standard, CDMA 2000 / 1xEVDO |
| Initial S/W Revision | A.05.00 |

2.5GHz IMT EXT

Selects 2.5 GHz IMT EXT as the band for the current step.

| | |
|----------------------|--|
| Key Path | Source, List Sequencer, List Sequencer Setup, Radio Setup, Radio Standard, CDMA 2000 / 1xEVDO |
| Initial S/W Revision | A.05.00 |

US PCS 1.9GHz

Selects US PCS 1.9 GHz as the band for the current step.

| | |
|----------------------|--|
| Key Path | Source, List Sequencer, List Sequencer Setup, Radio Setup, Radio Standard, CDMA 2000 / 1xEVDO |
| Initial S/W Revision | A.05.00 |

AWS

Selects AWS as the band for the current step.

| | |
|----------------------|--|
| Key Path | Source, List Sequencer, List Sequencer Setup, Radio Setup, Radio Standard, CDMA 2000 / 1xEVDO |
| Initial S/W Revision | A.05.00 |

US 2.5GHz

Selects US 2.5 GHz as the band for the current step.

| | |
|----------------------|--|
| Key Path | Source, List Sequencer, List Sequencer Setup, Radio Setup, Radio Standard, CDMA 2000 / 1xEVDO |
| Initial S/W Revision | A.05.00 |

700 Public Safety

Selects 700 Public Safety as the band for the current step.

| | |
|----------------------|--|
| Key Path | Source, List Sequencer, List Sequencer Setup, Radio Setup, Radio Standard, CDMA 2000 / 1xEVDO |
| Initial S/W Revision | A.05.00 |

C2K Lower 700

Selects C2K Lower 700 as the band for the current step.

| | |
|----------------------|--|
| Key Path | Source, List Sequencer, List Sequencer Setup, Radio Setup, Radio Standard, CDMA 2000 / 1xEVDO |
| Initial S/W Revision | A.05.00 |

LTE

Pressing this key once selects LTE FDD as the radio standard and the current LTE FDD band as the active channel band. Pressing this key again allows access to the sub-menus for selecting a different LTE FDD band.

| | |
|----------------------|--|
| Key Path | Source, List Sequencer, List Sequencer Setup, Radio Setup, Radio Standard |
| Initial S/W Revision | A.09.50 |

BAND 1

Selects BAND 1 as the band for the current step.

| | |
|----------------------|---|
| Key Path | Source, List Sequencer, List Sequencer Setup, Radio Setup, Radio Standard, LTE |
| Initial S/W Revision | A.09.50 |

BAND 2

Selects BAND 2 as the band for the current step.

| | |
|----------------------|---|
| Key Path | Source, List Sequencer, List Sequencer Setup, Radio Setup, Radio Standard, LTE |
| Initial S/W Revision | A.09.50 |

BAND 3

Selects BAND 3 as the band for the current step.

| | |
|----------------------|---|
| Key Path | Source, List Sequencer, List Sequencer Setup, Radio Setup, Radio Standard, LTE |
| Initial S/W Revision | A.09.50 |

BAND 4

Selects BAND 4 as the band for the current step.

| | |
|----------------------|---|
| Key Path | Source, List Sequencer, List Sequencer Setup, Radio Setup, Radio Standard, LTE |
| Initial S/W Revision | A.09.50 |

BAND 5

Selects BAND 5 as the band for the current step.

| | |
|----------------------|---|
| Key Path | Source, List Sequencer, List Sequencer Setup, Radio Setup, Radio Standard, LTE |
| Initial S/W Revision | A.09.50 |

BAND 6

Selects BAND 6 as the band for the current step.

| | |
|----------------------|---|
| Key Path | Source, List Sequencer, List Sequencer Setup, Radio Setup, Radio Standard, LTE |
| Initial S/W Revision | A.09.50 |

BAND 7

Selects BAND 7 as the band for the current step.

| | |
|----------------------|---|
| Key Path | Source, List Sequencer, List Sequencer Setup, Radio Setup, Radio Standard, LTE |
| Initial S/W Revision | A.09.50 |

BAND 8

Selects BAND 8 as the band for the current step.

| | |
|----------------------|---|
| Key Path | Source, List Sequencer, List Sequencer Setup, Radio Setup, Radio Standard, LTE |
| Initial S/W Revision | A.09.50 |

BAND 9

Selects BAND 9 as the band for the current step.

| | |
|----------------------|---|
| Key Path | Source, List Sequencer, List Sequencer Setup, Radio Setup, Radio Standard, LTE |
| Initial S/W Revision | A.09.50 |

BAND 10

Selects BAND 10 as the band for the current step.

| | |
|----------------------|---|
| Key Path | Source, List Sequencer, List Sequencer Setup, Radio Setup, Radio Standard, LTE |
| Initial S/W Revision | A.09.50 |

BAND 11

Selects BAND 11 as the band for the current step.

| | |
|----------------------|---|
| Key Path | Source, List Sequencer, List Sequencer Setup, Radio Setup, Radio Standard, LTE |
| Initial S/W Revision | A.09.50 |

BAND 12

Selects BAND 12 as the band for the current step.

| | |
|----------------------|---|
| Key Path | Source, List Sequencer, List Sequencer Setup, Radio Setup, Radio Standard, LTE |
| Initial S/W Revision | A.09.50 |

BAND 13

Selects BAND 13 as the band for the current step.

| | |
|----------------------|---|
| Key Path | Source, List Sequencer, List Sequencer Setup, Radio Setup, Radio Standard, LTE |
| Initial S/W Revision | A.09.50 |

BAND 14

Selects BAND 14 as the band for the current step.

| | |
|----------------------|---|
| Key Path | Source, List Sequencer, List Sequencer Setup, Radio Setup, Radio Standard, LTE |
| Initial S/W Revision | A.09.50 |

BAND 17

Selects BAND 17 as the band for the current step.

| | |
|----------------------|---|
| Key Path | Source, List Sequencer, List Sequencer Setup, Radio Setup, Radio Standard, LTE |
| Initial S/W Revision | A.09.50 |

BAND 18

Selects BAND 18 as the band for the current step.

| | |
|----------------------|---|
| Key Path | Source, List Sequencer, List Sequencer Setup, Radio Setup, Radio Standard, LTE |
| Initial S/W Revision | A.09.50 |

BAND 19

Selects BAND 19 as the band for the current step.

| | |
|----------------------|---|
| Key Path | Source, List Sequencer, List Sequencer Setup, Radio Setup, Radio Standard, LTE |
| Initial S/W Revision | A.09.50 |

BAND 20

Selects BAND 20 as the band for the current step.

| | |
|----------------------|---|
| Key Path | Source, List Sequencer, List Sequencer Setup, Radio Setup, Radio Standard, LTE |
| Initial S/W Revision | A.09.50 |

BAND 21

Selects BAND 21 as the band for the current step.

| | |
|----------------------|---|
| Key Path | Source, List Sequencer, List Sequencer Setup, Radio Setup, Radio Standard, LTE |
| Initial S/W Revision | A.09.50 |

BAND 24

Selects BAND 24 as the band for the current step.

| | |
|----------------------|---|
| Key Path | Source, List Sequencer, List Sequencer Setup, Radio Setup, Radio Standard, LTE |
| Initial S/W Revision | A.09.50 |

BAND 25

Selects BAND 25 as the band for the current step.

| | |
|----------------------|---|
| Key Path | Source, List Sequencer, List Sequencer Setup, Radio Setup, Radio Standard, LTE |
| Initial S/W Revision | A.09.50 |

BAND 26

Selects BAND 26 as the band for the current step.

| | |
|----------------------|---|
| Key Path | Source, List Sequencer, List Sequencer Setup, Radio Setup, Radio Standard, LTE |
| Initial S/W Revision | A.12.53 |

BAND 27

Selects BAND 27 as the band for the current step.

| | |
|----------------------|---|
| Key Path | Source, List Sequencer, List Sequencer Setup, Radio Setup, Radio Standard, LTE |
| Initial S/W Revision | A.14.00 |

BAND 28

Selects BAND 28 as the band for the current step.

| | |
|----------------------|---|
| Key Path | Source, List Sequencer, List Sequencer Setup, Radio Setup, Radio Standard, LTE |
| Initial S/W Revision | A.14.00 |

BAND 31

Selects BAND 31 as the band for the current step.

| | |
|----------------------|---|
| Key Path | Source, List Sequencer, List Sequencer Setup, Radio Setup, Radio Standard, LTE |
| Initial S/W Revision | A.14.00 |

LTE TDD

Sets LTE TDD as the radio standard for use and accesses the LTE TDD specific channel band sub-menus..

| | |
|----------------------|---|
| Key Path | Source, Frequency, Radio Setup, Radio Standard |
| Initial S/W Revision | A.11.50 |

BAND 33

Selects BAND 33 as the band for the current step.

| | |
|----------------------|--|
| Key Path | Source, Frequency, Radio Setup, Radio Standard, LTE TDD |
| Example | :SOUR:FREQ:CHAN:BAND BAND33 |
| Initial S/W Revision | A.11.50 |

BAND 34

Selects BAND 34 as the band for the current step.

| | |
|----------------------|--|
| Key Path | Source, Frequency, Radio Setup, Radio Standard, LTE TDD |
| Example | :SOUR:FREQ:CHAN:BAND BAND34 |
| Initial S/W Revision | A.11.50 |

BAND 35

Selects BAND 35 as the band for the current step.

| | |
|----------------------|--|
| Key Path | Source, Frequency, Radio Setup, Radio Standard, LTE TDD |
| Example | :SOUR:FREQ:CHAN:BAND BAND35 |
| Initial S/W Revision | A.11.50 |

BAND 36

Selects BAND 36 as the band for the current step.

| | |
|----------------------|--|
| Key Path | Source, Frequency, Radio Setup, Radio Standard, LTE TDD |
| Example | :SOUR:FREQ:CHAN:BAND BAND36 |
| Initial S/W Revision | A.11.50 |

BAND 37

Selects BAND 37 as the band for the current step.

| | |
|----------------------|--|
| Key Path | Source, Frequency, Radio Setup, Radio Standard, LTE TDD |
| Example | :SOUR:FREQ:CHAN:BAND BAND37 |
| Initial S/W Revision | A.11.50 |

BAND 38

Selects BAND 38 as the band for the current step.

| | |
|----------------------|--|
| Key Path | Source, Frequency, Radio Setup, Radio Standard, LTE TDD |
| Example | :SOUR:FREQ:CHAN:BAND BAND38 |
| Initial S/W Revision | A.11.50 |

BAND 39

Selects BAND 39 as the band for the current step.

| | |
|----------------------|--|
| Key Path | Source, Frequency, Radio Setup, Radio Standard, LTE TDD |
| Example | :SOUR:FREQ:CHAN:BAND BAND39 |
| Initial S/W Revision | A.11.50 |

BAND 40

Selects BAND 40 as the band for the current step.

| | |
|----------------------|--|
| Key Path | Source, Frequency, Radio Setup, Radio Standard, LTE TDD |
| Example | :SOUR:FREQ:CHAN:BAND BAND40 |
| Initial S/W Revision | A.11.50 |

BAND 41

Selects BAND 41 as the band for the current step.

| | |
|----------------------|--|
| Key Path | Source, Frequency, Radio Setup, Radio Standard, LTE TDD |
| Example | :SOUR:FREQ:CHAN:BAND BAND41 |
| Initial S/W Revision | A.11.50 |

BAND 42

Selects BAND 42 as the band for the current step.

| | |
|----------------------|--|
| Key Path | Source, Frequency, Radio Setup, Radio Standard, LTE TDD |
| Example | :SOUR:FREQ:CHAN:BAND BAND42 |
| Initial S/W Revision | A.11.50 |

BAND 43

Selects BAND 43 as the band for the current step.

| | |
|----------------------|--|
| Key Path | Source, Frequency, Radio Setup, Radio Standard, LTE TDD |
| Example | :SOUR:FREQ:CHAN:BAND BAND43 |
| Initial S/W Revision | A.11.50 |

BAND 44

Selects BAND 44 as the band for the current step.

| | |
|----------------------|---|
| Key Path | Source, List Sequencer, List Sequencer Setup, Radio Setup, Radio Standard, LTE TDD |
| Initial S/W Revision | A.14.00 |

TDSCDMA

Sets TDSCDMA as the radio standard for use and accesses the TDSCDMA specific channel band sub-menus..

| | |
|----------------------|---|
| Key Path | Source, Frequency, Radio Setup, Radio Standard |
| Initial S/W Revision | A.11.50 |

BAND A

Selects BAND A as the band for the current step.

| | |
|----------------------|--|
| Key Path | Source, Frequency, Radio Setup, Radio Standard, TDSCDMA |
| Example | :SOUR:FREQ:CHAN:BAND BANDA |
| Initial S/W Revision | A.11.50 |

BAND B

Selects BAND B as the band for the current step.

| | |
|----------------------|--|
| Key Path | Source, Frequency, Radio Setup, Radio Standard, TDSCDMA |
| Example | :SOUR:FREQ:CHAN:BAND BANDB |
| Initial S/W Revision | A.11.50 |

BAND C

Selects BAND C as the band for the current step.

| | |
|----------------------|--|
| Key Path | Source, Frequency, Radio Setup, Radio Standard, TDSCDMA |
| Example | :SOUR:FREQ:CHAN:BAND BANDC |
| Initial S/W Revision | A.11.50 |

BAND D

Selects BAND D as the band for the current step.

| | |
|----------------------|--|
| Key Path | Source, Frequency, Radio Setup, Radio Standard, TDSCDMA |
| Example | :SOUR:FREQ:CHAN:BAND BANDD |
| Initial S/W Revision | A.11.50 |

BAND E

Selects BAND E as the band for the current step.

| | |
|----------------------|--|
| Key Path | Source, Frequency, Radio Setup, Radio Standard, TDSCDMA |
| Example | :SOUR:FREQ:CHAN:BAND BANDE |
| Initial S/W Revision | A.11.50 |

BAND F

Selects BAND F as the band for the current step.

| | |
|----------------------|--|
| Key Path | Source, Frequency, Radio Setup, Radio Standard, TDSCDMA |
| Example | :SOUR:FREQ:CHAN:BAND BANDF |
| Initial S/W Revision | A.11.50 |

Radio Band Link

Allows you to specify the radio band link direction for the steps within the list sequence. The link is used in conjunction with the channel band and channel number to determine the output frequency.

When set to “Uplink”, the source will calculate the uplink frequency according to an uplink formula together with selected channel band and channel number. When set to “Downlink”, the source will calculate the downlink frequency according to a downlink formula together with selected channel band and channel number.

| | |
|-----------------------|---|
| Key Path | Source, List Sequencer, List Sequencer Setup, Radio Setup |
| Remote Command | :SOURce:LIST:STEP[1] 2 3...1000:SETup:RADio:BAND:LINK DOWN UP :SOURce:LIST:STEP[1] 2 3...1000:SETup:RADio:BAND:LINK? |

| | |
|----------------------|--|
| Example | :SOUR:LIST:STEP2:SET:RAD:BAND:LINK UP :SOUR:LIST:STEP2:SET:RAD:BAND:LINK? |
| Notes | SCPI is supported after A.09.40 |
| Preset | DOWN |
| Range | DOWN UP |
| Initial S/W Revision | A.05.00 |

Channel

Allows you to specify the frequency of the current step via a channel number.

| | |
|-----------------------|---|
| Key Path | Source, List Sequencer, List Sequencer Setup |
| Remote Command | :SOURce:LIST:STEP[1] 2 3...1000:SETup:CNFRfrequency <double> :SOURce:LIST:STEP[1] 2 3...1000:SETup:CNFRfrequency? |
| Example | :SOUR:LIST:STEP2:SET:CNFR 124 :SOUR:LIST:STEP2:SET:CNFR? |
| Notes | SCPI is supported after A.09.40. This SCPI is used to setup channel number or frequency setting, according to current Radio Band setting. If Radio Band is "NONE", then it's frequency. If Radio Band is not "NONE", then it's channel number. |
| Couplings | The channel number is coupled to the step frequency value. When the step frequency value is changed, the channel number will increase or decrease to match the new step frequency. If the step frequency is not at an exact match for a channel number, the nearest channel number is displayed, along with a greater than, or less than sign to indicate the frequency is above or below the channel number. |
| Preset | 1 |
| Min | 0 (Please refer to for valid ranges.) |
| Max | 10838 (Please refer to for valid ranges.) |
| Initial S/W Revision | A.05.00 |

Frequency

Allows you to specify a frequency value for the current step.

| | |
|-----------------------|--|
| Key Path | Source, List Sequencer, List Sequencer Setup |
| Remote Command | :SOURce:LIST:STEP[1] 2 3...1000:SETup:CNFRfrequency <double> :SOURce:LIST:STEP[1] 2 3...1000:SETup:CNFRfrequency? |
| Example | :SOUR:LIST:STEP2:SET:CNFR 1GHz :SOUR:LIST:STEP2:SET:CNFR? |
| Notes | SCPI is supported after A.09.40. |

| | |
|----------------------|--|
| | This SCPI is used to setup channel number or frequency setting, according to current Radio Band setting. If Radio Band is "NONE", then it's frequency. If Radio Band is not "NONE", then it's channel number. |
| Couplings | The frequency value is coupled to the channel band and number for the step, such that updates to the radio band and channel number will update the frequency value to the corresponding absolute frequency. The reverse is also true, changing the frequency value causes the value of the channel number to be updated. |
| Preset | 1.00 GHz |
| Min | 10.00 MHz |
| Max | Hardware Dependant: Option 503 = 3.6 GHz Option 504 = 3.9 GHz Option 506 = 6.00 GHz |
| Initial S/W Revision | A.05.00 |

Power

Allows you to specify a power value for the current step.

| | |
|----------------|--|
| Key Path | Source, List Sequencer, List Sequencer Setup |
| Remote Command | :SOURce:LIST:STEP[1] 2 3...1000:SETup:AMPLitude <double> :SOURce:LIST:STEP[1] 2 3...1000:SETup:AMPLitude? |
| Example | :SOUR:LIST:STEP2:SET:AMPL -50dBm :SOUR:LIST:STEP2:SET:AMPL? |
| Notes | SCPI is supported after A.09.40 |
| Notes | Amplitude corrections can be specified for use with the source. In the event of amplitude corrections being applied, the valid ranges for the RF power do not change dependant on the current amplitude correction setting. Instead, if the combination of RF power + amplitude correction is higher or lower than the source output range, the Source Unleveled bit is set and the "Source Unleveled" indicator will appear on status panel to indicate that the source cannot maintain the output power that has been requested. The multiport adapter RFIO TX ports and GPS ports cannot ensure power accuracy when power setting is lower than -130dBm, this power setting value is defined by the sum of RF Power setting and related amplitude correction value. But user settable value could be lower than this limit. When application detected there exists power setting lower than -130dBm on MPA RFIO TX ports, then popup warning message . When application detected there exists power setting lower than -130dBm on MPA GPS ports, then popup warning message . These are only warning messages, and check is performed when RF is ON. |
| Notes | The Min and Max value here defined UI settable amplitude range. This range is larger than actual amplitude range with level accuracy defined in spec. |
| Dependencies | The RF power is dependent on the RF output port and frequency, such that the current frequency and selected output port determine the valid range of power values. |
| Preset | -100 dBm |

| | |
|----------------------|--|
| Min | The range of values depends on the current frequency and selected RF output port. Please refer to "RF Power" on page 2500 and the table RF Power Range for the valid ranges. |
| Max | The range of values depends on the current frequency and selected RF output port. Please refer to "RF Power" on page 2500 and the table RF Power Range for the valid ranges. |
| Initial S/W Revision | A.05.00 |

Waveform

Allows you access to the sub-menus for selecting the waveform to be played back during the current step. Pressing this key also changes the central display area to show the Waveform File Selection view.

| | |
|----------------------|--|
| Key Path | Source, List Sequencer, List Sequencer Setup |
| Remote Command | :SOURce:LIST:STEP[1] 2 3...1000:SETup:WAVeform <string> :SOURce:LIST:STEP[1] 2 3...1000:SETup:WAVeform? |
| Example | :SOUR:LIST:STEP2:SET:WAV "CW" :SOUR:LIST:STEP2:SET:WAV? |
| Notes | SCPI is supported after A.09.40 |
| Remote Command Notes | String type, takes "Off" "CW" "Cont" "waveform name" |
| Preset | CW |
| Range | Waveform Continue Previous CW Off |
| Initial S/W Revision | A.05.00 |

CW

Sets the current step to output a CW tone.

| | |
|----------------------|---|
| Key Path | Source, List Sequencer, List Sequencer Setup, Waveform |
| Example | :SOUR:LIST:STEP2:SET:WAV "CW" |
| Notes | SCPI is supported after A.09.40 |
| Initial S/W Revision | A.05.00 |

Selected Waveform

Inserts the currently selected waveform in the waveform selection view as the waveform for playback during the current step.

| | |
|----------|---|
| Key Path | Source, List Sequencer, List Sequencer Setup, Waveform |
| Example | :SOUR:LIST:STEP2:SET:WAV "waveform name" |
| Notes | SCPI is supported after A.09.40 If the selected waveform contains header (which contains ARB play parameters), source list |

sequence will automatically apply header settings of the selected waveform in that step.

| | |
|----------------------|---------|
| Initial S/W Revision | A.05.00 |
|----------------------|---------|

Continue Previous

Sets the current step to continue with playback of the waveform from the previous step. When continuing the previous waveform, the ARB playback will not pause while the source retunes to the new frequency or amplitude that may be defined for the new step.

| | |
|----------|---|
| Key Path | Source, List Sequencer, List Sequencer Setup, Waveform |
|----------|---|

| | |
|----------------|---------------------------------|
| Example | :SOUR:LIST:STEP2:SET:WAV "Cont" |
|----------------|---------------------------------|

| | |
|-------|---------------------------------|
| Notes | SCPI is supported after A.09.40 |
|-------|---------------------------------|

| | |
|----------------------|---------|
| Initial S/W Revision | A.05.00 |
|----------------------|---------|

Off

Disable RF output of the current step.

| | |
|----------|---|
| Key Path | Source, List Sequencer, List Sequencer Setup, Waveform |
|----------|---|

| | |
|----------------|--------------------------------|
| Example | :SOUR:LIST:STEP2:SET:WAV "Off" |
|----------------|--------------------------------|

| | |
|-------|---------------------------------|
| Notes | SCPI is supported after A.09.40 |
|-------|---------------------------------|

| | |
|----------------------|---------|
| Initial S/W Revision | A.05.00 |
|----------------------|---------|

Segments on Hard Disk

Allows you access to the sub-menus for loading waveform segments from the hard disk into ARB memory. The default directory is: D: varb.

Pressing this key changes the current view to the Waveform Management View.

| | |
|----------|---|
| Key Path | Source, Modulation Setup, ARB, Select Waveform |
|----------|---|

| | |
|----------------------|---------|
| Initial S/W Revision | A.05.00 |
|----------------------|---------|

Load Segment To ARB Memory

Allows you to load the selected file into ARB memory. On the front panel you select the file for loading to the ARB memory by highlighting the desired file in the list. Using the SCPI command, you specify the file name on the HDD.

"NVWFM" (none-volatile storage) MSUS (Mass Storage Unit Specifier) is supported in the memory subsystem because the ARB memory cannot be accessed directly. Therefore, files must be downloaded to the instrument hard disk and then loaded into the ARB memory. "NVWFM" MSUS will be mapped to the

default directory D: VARB. The SCPI command supports using either “NVWFM” MSUS or specifying a full path. For more information, see [Memory Subsystem \(Remote Command Only\)](#).

If a file of the same name already exists within ARB memory, it is overwritten. If you wish to load two segments of the same name, you must rename one of the segments before loading it into ARB memory. To rename a segment, you can either use Windows File Explorer, or the :MMEMory:COPI command.

| | |
|-----------------------------|--|
| Key Path | Source, Modulation Setup, ARB, Select Waveform, Segments on Hard Disk |
| Remote Command | :SOURce:RADio:ARB:LOAD <string> |
| Example | :SOUR:RAD:ARB:LOAD “D: VARB\testwaveform.bin” or :SOUR:RAD:ARB:LOAD “NVWFM:testwaveform.bin” |
| Notes | <p>Because loading the file involves a delay of unpredictable length, this command should be followed by the query *OPC?, which holds off subsequent commands until the loading operating is complete.</p> <p><string> – specifies the path name of the file to load from the HDD into ARB memory. It could be a <full path + filename>, or <“NVWFM” MSUS + colon + filename>.</p> <p>When in Sequence Analyzer mode, and Include Source is Yes, an attempt to load a file to ARB memory will be rejected with an error.</p> <p>When Include Source is No and if there is insufficient free ARB memory to load the selected waveform, an error is generated. .</p> <p>If you specify a file over SCPI, but the file is not at the specified location, an error is generated.</p> <p>If you try to load a waveform file but the file contains less than 500 IQ samples, an error is generated.</p> <p>If you try to load a Signal Studio waveform “*.wfm” which contains invalid waveform header, an error is generated.</p> <p>If the ARB is ON when you load a file to ARB memory or delete a file from ARB memory, the playing waveform segment may not keep phase continuity during the ARB memory operation. The waveform will be replayed after the ARB operation is finished.</p> <p>ARB can be loaded into ARB memory even required licenses do not present on the instrument. In this case, a GUI only warning message –800, “Operation complete; Loaded <filename> successfully, but no license <required licenses> installed”. User can install required licenses according to <required licenses> string to license it, or multi-pack license it.</p> |
| Initial S/W Revision | A.05.00 |

Load All To ARB Memory

Allows you to load all the segment files within the currently selected directory into ARB memory. If a file of the same name already exists within ARB memory, it is overwritten. If you wish to load two segments of the same name, you must rename one of the segments before loading it into ARB memory. To rename a segment, you can either use Windows File Explorer, or the :MEMory:COPI command.

| | |
|-----------------------|--|
| Key Path | Source, Modulation Setup, ARB, Select Waveform, Segments on Hard Disk |
| Remote Command | :SOURce:RADio:ARB:LOAD:ALL <string> |
| Example | :SOUR:RAD:ARB:LOAD:ALL “D: varb” |
| Notes | <p><string> - specifies the directory on the HDD to load the files into ARB memory from.</p> <p>When in Sequence Analyzer mode, and Include Source is Yes, an attempt to load all files from a</p> |

directory to ARB memory is rejected with an error.
 When Include Source is No and there is insufficient free ARB memory to load all the waveforms, when the ARB memory is full, the copy ceases, and an error is generated.
 If you specify a directory over SCPI, but the directory does not exist, an error is generated.
 If the ARB is ON, a user then loads or deletes file to ARB memory, the playing waveform segment may not keep phase continuity during the ARB memory operation. The waveform will be replayed after the ARB operation is finished.

| | |
|----------------------|---------|
| Initial S/W Revision | A.05.00 |
|----------------------|---------|

Change Directory...

Allows you to change the currently selected directory on the hard disk. Pressing this key opens a standard windows change directory dialog allowing you to select the new directory of interest.

The current directory is used for manually loading waveform segments into ARB memory for playback, and as a search location for waveform segments that are required to be loaded into ARB memory for playback of a waveform sequence or a list sequence.

| | |
|----------------------|--|
| Key Path | Source, Modulation Setup, ARB, Select Waveform, Segments on Hard Disk |
| Notes | No remote command, SCPI front panel only. |
| Initial S/W Revision | A.05.00 |

Default Directory...

Allows you to change the default directory. It is used as a search location for waveform segments that are required to be loaded into ARB memory for playback of a waveform sequence, and as a search location for selecting waveforms using SCPI.

| | |
|-----------------------|---|
| Key Path | Source, Modulation Setup, ARB, Select Waveform, Segments on Hard Disk |
| Remote Command | :SOURce:RADio:ARB:DEFault:DIRectory <string> :SOURce:RADio:ARB: DEFault:DIRectory? |
| Example | :SOUR:RAD:ARB:DEF:DIR "D:\ArbFiles" :SOUR:RAD:ARB:DEF:DIR? |
| State Saved | Persistent, survives a power cycle and a preset but not saved in the instrument state |
| Initial S/W Revision | A.05.00 |

Segments in ARB Memory

Allows you access to the sub-menus for managing the files within ARB memory.

| | |
|----------------------|---|
| Key Path | Source, Modulation Setup, ARB, Select Waveform |
| Initial S/W Revision | A.05.00 |

Delete Segment From ARB Mem

Allows you to remove a segment from ARB playback memory.

| | |
|-----------------------|---|
| Key Path | Source, Modulation Setup, ARB, Select Waveform, Segments in ARB Memory |
| Remote Command | :SOURce:RADio:ARB:DELeTe <string> |
| Example | :SOUR:RAD:ARB:DEL "testwaveform.bin" |
| Notes | <p><string> - specifies the waveform to be deleted from the ARB playback memory.</p> <p>When in Sequence Analyzer mode and Include Source is Yes, an attempt to delete a file from ARB memory is rejected with an error.</p> <p>When Include Source is No and you specify a file that does not exist within ARB memory, an error is generated.</p> <p>It is possible to delete files from within the ARB memory when the ARB is ON. However, if you attempt to delete the file that is currently playing an error is generated.</p> <p>It is possible to delete a file from within the ARB memory when the sequencer state is ON and the file is not being used by the List Sequencer. If you attempt to delete a file which is being used by the list sequencer, an error is generated.</p> <p>When sequencer state is On, even if ARB state is On, the selected waveform will not be played. In this case, if the selected waveform is not used in List Sequence, it can be deleted and the ARB state is turned Off.</p> <p>If the ARB is ON and you load a file to ARB memory or delete a file from ARB memory, the playing waveform segment may not keep phase continuity during the ARB memory operation. The waveform will be replayed after the ARB operation is finished.</p> |
| Initial S/W Revision | A.05.00 |

Delete All From ARB Memory

Allows you to remove all segments from ARB playback memory.

| | |
|-----------------------|--|
| Key Path | Source, Modulation Setup, ARB, Select Waveform, Segments in ARB Memory |
| Remote Command | :SOURce:RADio:ARB:DELeTe:ALL |
| Example | :SOUR:RAD:ARB:DELeTe:ALL |
| Notes | <p>When in Sequence Analyzer mode and Include Source is Yes, an attempt to delete all files from ARB memory is rejected with an error.</p> <p>When Include Source is No and you attempt to delete all files from ARB memory when the ARB is currently playing a file, all files except the one playing are deleted and an error is generated.</p> <p>If you attempt to delete all files from ARB memory when there are waveform files used in "List Sequencer" on page 2585 and "Sequencer" on page 2586 state is ON, all files except the files currently being used in list sequencer are deleted, and an error is generated.</p> <p>If the ARB is ON and you load a file to ARB memory or delete a file from ARB memory, the playing waveform segment may not keep phase continuity during the ARB memory operation. The waveform will be replayed after the ARB operation is finished.</p> |
| Initial S/W Revision | A.05.00 |

Segments on Hard Disk

This key functions the same as ["Segments on Hard Disk" on page 2611](#).

| | |
|----------------------|---|
| Key Path | Source, List Sequencer, List Sequencer Setup, Waveform |
| Initial S/W Revision | Prior to A.09.00 |

Load Segment To ARB Memory

This key functions the same as ["Load Segment To ARB Memory" on page 2611](#).

| | |
|----------------------|--|
| Key Path | Source, List Sequencer, List Sequencer Setup, Waveform, Segment on Hard Drive |
| Initial S/W Revision | Prior to A.09.00 |

Load All To ARB Memory

This key functions the same as ["Load All To ARB Memory" on page 2612](#).

| | |
|----------------------|--|
| Key Path | Source, List Sequencer, List Sequencer Setup, Waveform, Segment on Hard Drive |
| Initial S/W Revision | Prior to A.09.00 |

Change Directory ...

This key functions the same as ["Change Directory..." on page 2613](#).

| | |
|----------------------|--|
| Key Path | Source, List Sequencer, List Sequencer Setup, Waveform, Segment on Hard Drive |
| Initial S/W Revision | Prior to A.09.00 |

Default Directory ...

This key functions the same as ["Default Directory..." on page 2613](#)

| | |
|----------------------|--|
| Key Path | Source, List Sequencer, List Sequencer Setup, Waveform, Segment on Hard Drive |
| Initial S/W Revision | Prior to A.09.00 |

Segments in ARB Memory

This key functions the same as ["Segments in ARB Memory" on page 2613](#).

| | |
|----------------------|---|
| Key Path | Source, List Sequencer, List Sequencer Setup, Waveform, Segments in ARB Memory |
| Initial S/W Revision | Prior to A.09.00 |

Delete Segment From ARB Memory

This key functions the same as "Delete Segment From ARB Mem" on page 2614.

| | |
|----------------------|--|
| Key Path | Source, List Sequencer, List Sequencer Setup, Waveform, Segments in ARB Memory, Segment in ARB Memory |
| Initial S/W Revision | Prior to A.09.00 |

Delete All From ARB Memory

This key functions the same as "Delete All From ARB Memory" on page 2614.

| | |
|----------------------|--|
| Key Path | Source, List Sequencer, List Sequencer Setup, Waveform, Segments in ARB Memory, Segment in ARB Memory |
| Initial S/W Revision | Prior to A.09.00 |

Step Duration

Allows access to the sub-menus for setting up the duration of play for the current step.

The duration can be set to be either the number of times for the ARB file associated with the sequence to play, or a specific time value, or continuous. If the step is set to play a CW tone, the step duration cannot be set to a play count.

| | |
|----------------------|---|
| Key Path | Source, List Sequencer, List Sequencer Setup |
| Remote Command | :SOURce:LIST:STEP[1] 2 3...1000:SETup:DURation:TYPE TIME COUNT CONTInuous CABort :SOURce:LIST:STEP[1] 2 3...1000:SETup:DURation:TYPE? |
| Example | :SOUR:LIST:STEP2:SET:DUR:TYPE TIME :SOUR:LIST:STEP2:SET:DUR:TYPE? |
| Notes | SCPI is supported after A.09.40 |
| Notes | If "Step Duration" is set to "Time" or "Play Count" for the last step, the last step of ARB keeps playing as if set to "Continuous", until the set "Time" has expired or until the "Play Count" setting is reached. However, you can query Error! Reference source not found. Source Sweeping Condition Message to find out if the current list sequence is complete or not. |
| Range | Time Play Count Continuous Continuous Abort |
| Initial S/W Revision | A.05.00 |

Time

Sets the duration of the current step to be a time value for the length of time the step will play. Pressing this key again opens another menu which allows you to set the time value for the step duration.

| | |
|----------------------|--|
| Key Path | Source, List Sequencer, List Sequencer Setup, Step Duration |
| Example | :SOUR:LIST:STEP2:SET:DUR:TYPE TIME |
| Notes | SCPI is supported after A.09.40 |
| Initial S/W Revision | A.05.00 |

Duration Time

Allows you to specify the length of time the current step will play.

When Step Duration is **Continuous Abort** this parameter specifies the maximum duration that the waveform will continue to play after a step trigger is received before the transition to the next waveform will occur. Duration is limited to a maximum of 20 seconds.

If the Transition Time value is longer than the Step Duration Time, an error is generated when initiating a source list sequence. For source list sequence, transition time is included in the step duration length (not occupy additional time). If the Transition Time value is longer than the Step Duration Time, the real step duration length is extended to equal the transition time and cause a timing shift. This check is also described in section **Error! Reference source not found.** List Sequence Step Validation.

| | |
|-----------------------|--|
| Key Path | Source, List Sequencer, List Sequencer Setup, Step Duration, Time |
| Remote Command | :SOURce:LIST:STEP[1] 2 3...1000:SETup:DURation:TCOUNT <double> :SOURce:LIST:STEP[1] 2 3...1000:SETup:DURation:TCOUNT? |
| Example | :SOUR:LIST:STEP2:SET:DUR:TCO 1s :SOUR:LIST:STEP2:SET:DUR:TCO? |
| Notes | SCPI is supported after A.09.40 This SCPI is reused by "Play Count", "Duration Time" and "Continuous Abort" according to current Duration Type setting is "Play Count" or "Duration Time" or "Continuous Abort". If current "Duration Type" is "Continuous", then popup error -221, "Settings conflict; Cannot accept time or count input when step duration type is Continuous on step #" |
| Notes | If "Duration Time" is set for the last step, the last step of ARB keeps playing as if set to "Continuous" after set time expires. However, you can query Source Sweeping Condition Message (:STAT:OPER:COND?) to find out if the current list sequence is complete or not. |
| Preset | 1.00 ms |
| Min | 100 µs |
| Max | 1800 s |
| Initial S/W Revision | A.05.00 |

Play Count

Sets the duration of the current step to be an integer value for the number of times (play count) the ARB file is selected for playback during this step. For example, a 5 second ARB will be set to play 5 times during the step.

| | |
|-----------------------------|---|
| Key Path | Source, List Sequencer, List Sequencer Setup, Step Duration |
| Example | :SOUR:LIST:STEP2:SET:DUR:TYPE COUN |
| Notes | SCPI is supported after A.09.40 This key is unavailable and is grayed out if the current step is configured to CW tone rather than an ARB waveform. |
| Initial S/W Revision | A.05.00 |

Header Utilities

Allows access to the header utilities sub-menu. Pressing this key also causes the central display area to change to display the File Header Information view.

| | |
|-----------------------------|---|
| Key Path | Source, Modulation Setup, ARB |
| Dependencies | This key is only available if there is currently a waveform selected for playback. If no waveform is selected, the key is grayed out. |
| Initial S/W Revision | A.05.00 |

Continuous

Sets the current step to be played continuously until the next step starts. The waveform will always play completely before transitioning to the next step.

| | |
|-----------------------------|--|
| Key Path | Source, List Sequencer, List Sequencer Setup, Step Duration |
| Example | :SOUR:LIST:STEP2:SET:DUR:TYPE CONT |
| Notes | SCPI is supported after A.09.40 |
| Initial S/W Revision | A.05.00 |

Output Trigger

Allows you to specify the trigger output for the current step. The trigger output signal is sent at the start of the step.

When select "On", trigger event will occur on both Internal and External2 paths. Select "Off" will turn off trigger output.

| | |
|-----------------------|---|

Step Configuration (Remote Command Only)

This SCPI command is used to configure the List Sequencer and is detailed in the table below. The command is defined such that you send one command per step, with the step number being specified as a subopcode of the SCPI command. Each command includes all the parameter settings for the step. As a step is setup, the values entered are run through several levels of validation.

| | |
|-----------------------|--|
| Remote Command | <pre>:SOURce:LIST:STEP[1] 2 ... 4..1000:SETup IMMEDIATE INTernal KEY BUS EXTernal2, <time>, NONE PGSM EGSM RGSM DCS1800 PCS1900 TGSM810 GSM450 GSM480 GSM700 GSM850 BANDI BANDII BANDIII BANDIV BANDV BANDVI BANDVII BANDVIII BANDIX BANDX BANDXI BANDXII BANDXIII BANDXIV BANDXIX USCELL USPCS JAPAN KOREAN NMT IMT2K UPPER SECOND PAMR400 PAMR800 IMTEXT PCS1DOT9G AWS US2DOT5G PUBLIC LOWER NONE BAND1 BAND2 BAND3 BAND4 BAND5 BAND6 BAND7 BAND8 BAND10 BAND11 BAND12 BAND13 BAND14 BAND17 BAND18 BAND19 BAND20 BAND21 BAND24 BAND25 BAND26 BAND33 BAND34 BAND35 BAND36 BAND37 BAND38 BAND39 BAND40 BAND41 BAND42 BAND43 BANDA BANDB BANDC BANDD BANDE BANDF, DOWN UP, <freq>, <ampl>, <string>, TIME COUNT CONTinuous, <time>, ON OFF 1 0, [<int>], :SOURce:LIST:STEP[1] 2 ... 4..1000:SETup?</pre> |
| Example | :SOUR:LIST:STEP1:SET INT, 1ms, PGSM, DOWN, 10, -25 dBm, "GSM_Test1.bin", TIME, 10ms, OFF, 255 |
| Notes | <p>The parameters are:</p> <p>(There is a total of 11 items in each step, the following is a list of the items in the order they must appear in the remote command.)</p> <ol style="list-style-type: none"> 1. Step Trigger <enum> – specifies the input trigger for the step. For details of the valid types of step trigger see "Step Trigger" on page 2588. 2. Transition Time <time> – specifies the transition time for the step in seconds. For details of the valid ranges for the transition time see "Transition Time" on page 2590. 3. Radio Band <enum> – specifies the radio band for the step. For details of the valid radio bands see "Radio Setup" on page 2591. 4. Radio Band Link <enum> – specifies the radio band link direction for the step. For details of the valid link types, see "Radio Band Link" on page 2607. 5. Frequency/Channel Number <freq>/<chan num> – specifies the frequency in Hz or the channel number for the step. The channel number and frequency are combined as one parameter that represents the frequency or channel number depending on the radio band setting. If the radio band is set to NONE, this value is interpreted as a frequency value in Hz. If the radio band is set to a valid band, this value is interpreted as a channel number. For details of the valid ranges for frequency and channel numbers, see "Channel" on page 2608 and "Frequency" on page 2608. 6. Power <ampl> – specifies the output power for the step in dBm. For details of the valid ranges see "Power" on page 2609. 7. Waveform <string> – specifies the waveform for playback during the step. The step can output either a new ARB waveform, continue playback of the previous waveform, or output a CW tone. The |

options for specifying these are:

<filename> - plays the specified waveform from the start. The filename value is the name of the file within ARB playback memory, it does not include the windows path to the file on the HDD. If you enter a filename for a waveform that does not reside within ARB playback memory, an error is generated.

CONT - continues playback of the ARB file from the previous step

CW - outputs a CW tone

OFF - disable RF output

8. Step Duration <enum> - specifies the duration of the step. The duration can be specified to be either time, or play count of the ARB file associated with the step, or continuous. If Waveform is set to "CW", this value cannot be set to Play Count and an error will be generated. If continuous is selected, the following Time or Count value is ignored. For further details of this setting, see "[Step Duration](#)" on page 2616.

9. Time or Count <time/int> - specifies time duration in seconds or play count of the ARB file associated with the step. For further details of this setting, including the valid ranges for the time or play count setting, "[Time](#)" on page 2616 and "[Play Count](#)" on page 2617.

10. Output Trigger <Boolean> - specifies the output trigger for the step. For details of the ranges for this setting see "[Output Trigger](#)" on page 2618.

| | |
|----------------------|--|
| Dependencies | The range of subopcode values is 1 to 1000 and the value you enter is determined by the number of steps you have configured. For details see " Number of Steps " on page 2587. If you attempt to remotely set or query a subopcode that is out of range, an error is generated. |
| Initial S/W Revision | A.05.00 |

Step Configuration of Step Trigger parameter list (Remote Command Only)

This SCPI command is to configure "Step Trigger" parameter array of the whole List Sequencer at one time. The number of array is same as step number defined in "[Number of Steps](#)" on page 2587 Number of Steps. As a step is setup, the value entered run through several levels of validation.

| | |
|-----------------------------|--|
| Remote Command | :SOURce:LIST:SETup:INPut:TRIGger <enum>, <enum>, <enum>, ... :SOURce:LIST:SETup:INPut:TRIGger? |
| Example | :SOUR:LIST:SET:INP:TRIG IMM,INT,EXT2 :SOUR:LIST:SET:INP:TRIG? |
| Notes | The command is to setup below parameter array of whole list sequence. Step Trigger <enum> - specifies the input trigger for the step. For details of the valid types of step trigger see " Step Trigger " on page 2588. If input parameter number exceeds the step number defined by " Number of Steps " on page 2587 Number of Steps then generate error ", and only those parametes whose index number falls in number of steps will be updated. |
| Remote Command Notes | IMMEDIATE INTERNAL KEY BUS EXTERNAL2 |
| Dependencies | The range is 1 to 1000 which is determined by the number of steps you have configured. For details see " Number of Steps " on page 2587. |
| Initial S/W Revision | A.09.40 |

Step Configuration of Transition Time parameter list (Remote Command Only)

This SCPI command is to configure “Transition Time” parameter array of the whole List Sequencer at one time. The number of array is same as step number defined in ["Number of Steps" on page 2587](#) Number of Steps. As a step is setup, the value entered run through several levels of validation.

| | |
|-----------------------------|---|
| Remote Command | :SOURce:LIST:SETup:TRANsition:TIME <time>, <time>, <time>, ... :SOURce:LIST:SETup:TRANsition:TIME? |
| Example | :SOUR:LIST:SET:TRAN:TIME 1ms,1ms,1ms :SOUR:LIST:SET:TRAN:TIME? |
| Notes | The command is to setup below parameter array of whole list sequence. Transition Time <time> – specifies the transition time for the step in seconds. For details of the valid ranges for the transition time see "Transition Time" on page 2590 If input parameter number exceeds the step number defined by "Number of Steps" on page 2587 Number of Steps then generate error ", and only those parametes whose index number falls in number of steps will be updated. |
| Dependencies | The range is 1 to 1000 which is determined by the number of steps you have configured. For details see "Number of Steps" on page 2587 . |
| Initial S/W Revision | A.09.40 |

Step Configuration of Radio Band parameter list (Remote Command Only)

This SCPI command is to configure “Radio Band” parameter array of the whole List Sequencer at one time. The number of array is same as step number defined in ["Number of Steps" on page 2587](#) Number of Steps. As a step is setup, the value entered run through several levels of validation.

Step Configuration of Radio Band Link parameter list (Remote Command Only)

This SCPI command is to configure “Radio Band Link” parameter array of the whole List Sequencer at one time. The number of array is same as step number defined in ["Number of Steps" on page 2587](#) Number of Steps. As a step is setup, the value entered run through several levels of validation.

| | |
|-----------------------------|---|
| Remote Command | :SOURce:LIST:SETup:RADio:BAND:LINK <enum>, <enum>, <enum>, ... :SOURce:LIST:SETup:RADio:BAND:LINK? |
| Example | :SOUR:LIST:SET:RAD:BAND:LINK DOWN,UP,UP :SOUR:LIST:SET:RAD:BAND:LINK? |
| Notes | The command is to setup below parameter array of whole list sequence. Radio Band Link <enum> – specifies the radio band link direction for the step. For details of the valid link types, see "Radio Band Link" on page 2607 . If input parameter number exceeds the step number defined by "Number of Steps" on page 2587 Number of Steps then generate error ", and only those parametes whose index number falls in number of steps will be updated. |
| Remote Command Notes | DOWN UP |
| Dependencies | The range is 1 to 1000 which is determined by the number of steps you have configured. For details see "Number of Steps" on page 2587 . |
| Initial S/W Revision | A.09.40 |

Step Configuration of Frequency/Channel Number parameter list (Remote Command Only)

This SCPI command is to configure “Frequency” or “Channel Number” parameter array of the whole List Sequencer at one time. The number of array is same as step number defined in ["Number of Steps" on page 2587](#) Number of Steps. As a step is setup, the value entered run through several levels of validation.

| | |
|-----------------------|--|
| Remote Command | :SOURce:LIST:SETup:CNFRrequency <double>, <double>, <double>, ... :SOURce:LIST:SETup:CNFRrequency? |
| Example | :SOUR:LIST:SET:CNFR 1GHz,100MHz,100MHz :SOUR:LIST:SET:CNFR? SOUR:LIST:SET:CNFR 124,124,124 :SOUR:LIST:SET:CNFR? |

| | |
|----------------------|---|
| Notes | <p>The command is to setup below parameter array of whole list sequence.</p> <p>Frequency/Channel Number <freq>/<chan num> – specifies the frequency in Hz or the channel number for the step. The channel number and frequency are combined as one parameter that represents the frequency or channel number depending on the radio band setting. If the radio band is set to NONE, this value is interpreted as a frequency value in Hz. If the radio band is set to a valid band, this value is interpreted as a channel number. For details of the valid ranges for frequency and channel numbers, see "Channel" on page 2608 and "Frequency" on page 2608</p> <p>This SCPI is used to setup/query channel number or frequency setting, according to current Radio Band setting of that step. If Radio Band is “NONE”, then it’s frequency. If Radio Band is not “NONE”, then it’s channel number</p> <p>If input parameter number exceeds the step number defined by "Number of Steps" on page 2587 Number of Steps then generate error ", and only those parametes whose index number falls in legal step number will be updated.</p> |
| Dependencies | <p>The range is 1 to 1000 which is determined by the number of steps you have configured. For details see "Number of Steps" on page 2587.</p> |
| Initial S/W Revision | A.09.40 |

Step Configuration of Power parameter list (Remote Command Only)

This SCPI command is to configure “Power” parameter array of the whole List Sequencer at one time. The number of array is same as step number defined in ["Number of Steps" on page 2587](#) Number of Steps. As a step is setup, the value entered run through several levels of validation.

| | |
|-----------------------|--|
| Remote Command | <pre>:SOURce:LIST:SETup:AMPLitude <ampl>, <ampl>, <ampl>, ... :SOURce:LIST:SETup:AMPLitude?</pre> |
| Example | <pre>:SOUR:LIST:SET:AMPL -50dBm,-40dBm,-30dBm :SOUR:LIST:SET:AMPL?</pre> |
| Notes | <p>The command is to setup below parameter array of whole list sequence.</p> <p>Power <ampl> – specifies the output power for the step in dBm. For details of the valid ranges see "Power" on page 2609.</p> <p>If input parameter number exceeds the step number defined by "Number of Steps" on page 2587 Number of Steps then generate error ", and only those parametes whose index number falls in legal step number will be updated.</p> |
| Dependencies | <p>The range is 1 to 1000 which is determined by the number of steps you have configured. For details see "Number of Steps" on page 2587.</p> |
| Initial S/W Revision | A.09.40 |

Step Configuration of Waveform parameter list (Remote Command Only)

This SCPI command is to configure “Waveform” parameter array of the whole List Sequencer at one time. The number of array is same as step number defined in ["Number of Steps" on page 2587](#) Number of Steps. As a step is setup, the value entered run through several levels of validation.

| | |
|-----------------------|--|
| Remote Command | <pre>:SOURce:LIST:SETup:WAVEform <string>, <string>, <string>, ...</pre> |
|-----------------------|--|

| | |
|-----------------------------|---|
| | :SOURce:LIST:SETup:WAVeform? |
| Example | :SOUR:LIST:SET:WAV "CW","Off","CONT" :SOUR:LIST:SET:WAV? |
| Notes | <p>The command is to setup below parameter array of whole list sequence.</p> <p>Waveform <string> - specifies the waveform for playback during the step. The step can output either a new ARB waveform, continue playback of the previous waveform, or output a CW tone. The options for specifying these are:</p> <p><filename> - plays the specified waveform from the start. The filename value is the name of the file within ARB playback memory, it does not include the windows path to the file on the HDD. If you enter a filename for a waveform that does not reside within ARB playback memory, an error is generated.</p> <p>CONT - continues playback of the ARB file from the previous step</p> <p>CW - outputs a CW tone</p> <p>OFF - disable RF output</p> <p>If input parameter number exceeds the step number defined by "Number of Steps" on page 2587 then generate error ", and only those parameters whose index number falls in number of steps will be updated.</p> |
| Dependencies | The range is 1 to 1000 which is determined by the number of steps you have configured. For details see " Number of Steps " on page 2587. |
| Range | "filename" "CW" "Off" "CONT" |
| Initial S/W Revision | A.09.40 |

Step Configuration of Step Duration parameter list (Remote Command Only)

This SCPI command is to configure "Step Duration" parameter array of the whole List Sequencer at one time. The number of array is same as step number defined in "[Number of Steps](#)" on page 2587 Number of Steps. As a step is setup, the value entered run through several levels of validation.

| | |
|-----------------------------|---|
| Remote Command | :SOURce:LIST:SETup:DURation:TYPE <enum>, <enum>, <enum>, ... :SOURce:LIST:SETup:DURation:TYPE? |
| Example | :SOUR:LIST:SET:DUR:TYPE COUN,TIME,CONT :SOUR:LIST:SET:DUR:TYPE? |
| Notes | <p>The command is to setup below parameter array of whole list sequence.</p> <p>Step Duration <enum> - specifies the duration of the step. The duration can be specified to be either time, or play count of the ARB file associated with the step, or continuous. If Waveform is set to "CW", this value cannot be set to Play Count and an error will be generated. If continuous is selected, the following Time or Count value is ignored. For further details of this setting, see "Step Duration" on page 2616.</p> <p>If input parameter number exceeds the step number defined by "Number of Steps" on page 2587 then generate error ", and only those parameters whose index number falls in number of steps will be updated.</p> |
| Remote Command Notes | TIME COUNT CONTinuous |
| Dependencies | The range is 1 to 1000 which is determined by the number of steps you have configured. For details |

| | |
|----------------------|--|
| | see "Number of Steps" on page 2587 . |
| Initial S/W Revision | A.09.40 |

Step Configuration of Duration Time or Play Count parameter list (Remote Command Only)

This SCPI command is to configure “Duration Time” or “Play Count” parameter array of the whole List Sequencer at one time. The number of array is same as step number defined in ["Number of Steps" on page 2587](#) Number of Steps. As a step is setup, the value entered run through several levels of validation.

| | |
|-----------------------|--|
| Remote Command | :SOURce:LIST:SETup:TOCount <time/int>, <time/int>, <time/int>, ... :SOURce:LIST:SETup:TOCount? |
| Example | :SOUR:LIST:SET:TOC 1s,2s,3s :SOUR:LIST:SET:TOC? :SOUR:LIST:SET:TOC 5,6,7 :SOUR:LIST:SET:TOC? |
| Notes | The command is to setup below parameter array of whole list sequence. Time or Count <time/int> – specifies time duration in seconds or play count of the ARB file associated with the step. For further details of this setting, including the valid ranges for the time or play count setting, "Time" on page 2616 and "Play Count" on page 2617 . If input parameter number exceeds the step number defined by "Number of Steps" on page 2587 Number of Steps then generate error ", and only those parametes whose index number falls in number of steps will be updated. If current "Step Duration" on page 2616 is “Continuous”, then generate error -221, "Settings conflict;Cannot accept time or count input when step duration type is Continuous on step #" |
| Dependencies | The range is 1 to 1000 which is determined by the number of steps you have configured. For details see "Number of Steps" on page 2587 . |
| Initial S/W Revision | A.09.40 |

Step Configuration of Output Trigger parameter list (Remote Command Only)

This SCPI command is to configure “Output Trigger” parameter array of the whole List Sequencer at one time. The number of array is same as step number defined in ["Number of Steps" on page 2587](#) Number of Steps. As a step is setup, the value entered run through several levels of validation.

| | |
|-----------------------|--|
| Remote Command | :SOURce:LIST:SETup:OUTPut:TRIGger <bool>, <bool>, <bool>, ... :SOURce:LIST:SETup:OUTPut:TRIGger ? |
| Example | :SOUR:LIST:SET:OUTP:TRIG ON,OFF,ON :SOUR:LIST:SET:OUTP:TRIG? |
| Notes | The command is to setup below parameter array of whole list sequence. Output Trigger <Boolean> – specifies the output trigger for the step. For details of the ranges for this setting see "Output Trigger" on page 2618 . If input parameter number exceeds the step number defined by "Number of Steps" on page 2587 Number of Steps then generate error ", and only those parametes whose index number falls in |

| | |
|----------------------|--|
| | legal step number will be updated. |
| Remote Command Notes | ON OFF 1 0 |
| Dependencies | The range is 1 to 1000 which is determined by the number of steps you have configured. For details see " Number of Steps " on page 2587. |
| Initial S/W Revision | A.09.40 |

Clear List (Remote Command Only)

This command is the SCPI equivalent of the Clear List UI feature described in.

| | |
|-----------------------|--------------------------|
| Remote Command | :SOURce:LIST:SETup:CLEar |
| Example | :SOUR:LIST:SETup:CLE |
| Initial S/W Revision | A.05.00 |

Trigger Type

Allows access to the sub-menu for selecting the output trigger type for the list sequencer globally. It cannot be changed between different sequence steps.

| | |
|-----------------------|---|
| Key Path | Source, List Sequencer |
| Remote Command | :SOURce:LIST:TRIGgerout:TYPe BEGinningofstep DATamarker |
| Example | :SOUR:LIST:TRIG:TYP BEG :SOUR:LIST:TRIG:TYP? |
| Notes | SCPI is supported after A.14.00 This an alias SCPI of :SOURce:LIST:TRIGger:OUTPut:TYPe STEP MARKer Recommend to use : SOURce:LIST:TRIGger:OUTPut:TYPe STEP MARKer |
| Preset | BEGinningofstep |
| Range | BEGinningofstep DATamarker |
| Initial S/W Revision | A.14.00 |

BeginningOfStep

Sets the output trigger type as BeginningOfStep for the whole source sequence.

| | |
|-----------------|---|
| Key Path | Source, List Sequencer, Trigger Type |
| Example | :SOUR:LIST:TRIG:TYP BEG |
| Notes | SCPI is supported after A.14.00 This an alias SCPI of :SOURce:LIST:TRIGger:OUTPut:TYPe STEP Recommend to use : SOURce:LIST:TRIGger:OUTPut:TYPe STEP |

| | |
|----------------------|---------|
| Initial S/W Revision | A.14.00 |
|----------------------|---------|

DataMarker

Sets the output trigger type as DataMarker for the whole source sequence. When DataMarker is selected, which marker to route is also needed to be set.

| | |
|-----------------|---|
| Key Path | Source, List Sequencer, Trigger Type |
| Example | :SOUR:LIST:TRIG:TYP DAT |
| Notes | SCPI is supported after A.14.00 This an alias SCPI of :SOURce:LIST:TRIGger:OUTPut:TYPE MARKer Recommend to use : SOURce:LIST:TRIGger:OUTPut:TYPE MARKer |

| | |
|----------------------|---------|
| Initial S/W Revision | A.14.00 |
|----------------------|---------|

Marker 1

Sets the output trigger maker routing to Marker 1 for DataMarker in the whole source sequence.

| | |
|-----------------|--|
| Key Path | Source, List Sequencer, Trigger Type, DataMarker |
| Example | :SOUR:LIST:TRIG:TYPE:MARK M1 |
| Notes | SCPI is supported after A.14.00 This an alias SCPI of :SOURce:LIST:TRIGger:OUTPut:TYPE:MARKer M1 Recommend to use :SOURce:LIST:TRIGger:OUTPut:TYPE:MARKer M1 |

| | |
|----------------------|---------|
| Initial S/W Revision | A.14.00 |
|----------------------|---------|

Marker 2

Sets the output trigger maker routing to Marker 2 for DataMarker in the whole source sequence.

| | |
|-----------------|--|
| Key Path | Source, List Sequencer, Trigger Type, DataMarker |
| Example | :SOUR:LIST:TRIG:TYPE:MARK M2 |
| Notes | SCPI is supported after A.14.00 This an alias SCPI of :SOURce:LIST:TRIGger:OUTPut:TYPE:MARKer M2 Recommend to use :SOURce:LIST:TRIGger:OUTPut:TYPE:MARKer M2 |

| | |
|----------------------|---------|
| Initial S/W Revision | A.14.00 |
|----------------------|---------|

Marker 3

Sets the output trigger maker routing to Marker 3 for DataMarker in the whole source sequence.

| | |
|----------------------|--|
| Key Path | Source, List Sequencer, Trigger Type, DataMarker |
| Example | :SOUR:LIST:TRIG:TYPE:MARK M3 |
| Notes | SCPI is supported after A.14.00 This an alias SCPI of :SOURce:LIST:TRIGger:OUTPut:TYPE:MARKer M3 Recommend to use :SOURce:LIST:TRIGger:OUTPut:TYPE:MARKer M3 |
| Initial S/W Revision | A.14.00 |

Marker 4

Sets the output trigger maker routing to Marker 4 for DataMarker in the whole source sequence.

| | |
|----------------------|--|
| Key Path | Source, List Sequencer, Trigger Type, DataMarker |
| Example | :SOUR:LIST:TRIG:TYPE:MARK M4 |
| Notes | SCPI is supported after A.14.00 This an alias SCPI of :SOURce:LIST:TRIGger:OUTPut:TYPE:MARKer M4 Recommend to use :SOURce:LIST:TRIGger:OUTPut:TYPE:MARKer M4 |
| Initial S/W Revision | A.14.00 |

Manual Trigger Now

Pressing this key provides a software trigger event to the list sequencer. During execution of sequence, if the sequencer is halted on any step that has been configured with a “Manual” step trigger, then this key press will cause the sequencer to continue and execute the step.

| | |
|-----------------------|--------------------------------------|
| Key Path | Source, List Sequencer |
| Remote Command | No remote command, front panel only. |
| Initial S/W Revision | A.05.00 |

Remote Software Trigger (Remote command Only)

During execution of a list sequence, the sequence will halt and wait at any step that has Step Trigger set to “Bus”. Sending this command will trigger the step and continue the sequence.

| | |
|-----------------------|---|
| Remote Command | :SOURce:LIST:TRIGger:INITiate[:IMMediate] |
| Example | :SOUR:LIST:TRIG:INIT |
| Initial S/W Revision | A.05.00 |

Query List Sequence Initiation Armed Status (Remote Command Only)

This is a blocking SCPI query to determine if source list sequence being initiated successfully or not.

| | |
|-----------------------------|--|
| Remote Command | :SOURce:LIST:INITiation:ARMed? |
| Example | :SOUR:LIST:INIT:ARMed? |
| Notes | The return data is in the following format: Integer |
| Notes | Query only SCPI. Returning "1" if list sequence has been initiated successfully, returning "0" if not. Once get "0", you can use :SYST:ERR? to query what error happened. Just like "*OPC?", this command can be blocked until event/status "IsSourceSweeping" happens, and then returns. Doing so can help user's script query armed status only once during the time interval of the initiation. As an ancillary SCPI of existing SCPI ":SOUR:LIST:TRIGger[:IMMediate]" (see "Initiate Sequence" on page 2586 Initiate Sequence), the right usage of this command is to use it after ":SOUR:LIST:TRIG". If not, this command will return "1" immediately. |
| Notes | There is an alias SCPI ":SOURce:LIST:TRIGger:INITiation:ARMed?". |
| Initial S/W Revision | A.09.40 |

Source Preset

Allows you to preset the source settings to their default values.

| | |
|-----------------------|----------------|
| Key Path | Source |
| Remote Command | :SOURce:PRESet |
| Example | :SOUR:PRES |

Span X Scale

Accesses a menu of functions that enable you to set the horizontal scale parameters.

| | |
|----------------------|------------------------|
| Key Path | Front-panel key |
| Initial S/W Revision | Prior to A.02.00 |

Ref Value

Sets the reference value for time on the horizontal axis. When Auto Scaling is set to On, the displayed plots use a Scale/Div value determined by the analyzer, based on the measurement result.

| | |
|--------------------------|--|
| Key Path | SPAN X Scale |
| Mode | BASIC, PNOISE, WCDMA, C2K, GSM, WIMAXOFDMA, TDSCDMA, 1XEVD0, DVB, DTMB, ISDBT, CMMB, LTE, LTETDD, DCATV, WLAN, MSR,LTEATDD, LTEAFDD |
| Remote Command | :DISPlay:WAVeform:VIEW[1] 2:WINDow[1]:TRACe:X[:SCALe]:RLEVel <time> :DISPlay:WAVeform:VIEW[1] 2:WINDow[1]:TRACe:X[:SCALe]:RLEVel? |
| Example | DISP:WAV:VIEW:WIND:TRAC:X:RLEV 10 ms DISP:WAV:VIEW:WIND:TRAC:X:RLEV? |
| Notes | You must be in a mode that includes the Waveform measurement to use this command. Use INSTRument:SElect to set the mode. |
| Couplings | If Auto Scaling is set to On, this value is automatically determined by the measurement result. When you set this value manually, Auto Scaling automatically changes to Off. |
| Preset | 0.00 s |
| State Saved | Saved in instrument state. |
| Min | -1.000 s |
| Max | 10.00 s |
| Initial S/W Revision | Prior to A.02.00 |
| Modified at S/W Revision | A.03.00 |

Scale/Div

Sets the horizontal scale by changing a time value per division.

| | |
|-----------------------|--|
| Key Path | SPAN X Scale |
| Mode | BASIC, PNOISE, WCDMA, C2K, GSM, WIMAXOFDMA, TDSCDMA, 1XEVD0, DVB, DTMB, ISDBT, CMMB, LTE, LTETDD, DCATV, WLAN, MSR,LTEATDD, LTEAFDD |
| Remote Command | :DISPlay:WAVeform:VIEW[1] 2:WINDow[1]:TRACe:X[:SCALe]:PDIVision <time> :DISPlay:WAVeform:VIEW[1] 2:WINDow[1]:TRACe:X[:SCALe]:PDIVision? |
| Example | DISP:WAV:VIEW:WIND:TRAC:X:PDIV 500 us DISP:WAV:VIEW:WIND:TRAC:X:PDIV? |

| | |
|--------------------------|--|
| Notes | You must be in a mode that includes the Waveform measurement to use this command. Use INSTRument:SElect to set the mode. |
| Couplings | If Auto Scaling is set to On, this value is automatically determined by the measurement result. When you set this value manually, Auto Scaling automatically changes to Off. |
| Preset | All except the following list: 200.0 us LTEAFDD, LTEATDD: 1.000 ms LTETDD: 1.000 ms LTE: 1.000 ms |
| State Saved | Saved in instrument state. |
| Min | 1.000 ns |
| Max | 320 s |
| Initial S/W Revision | Prior to A.02.00 |
| Modified at S/W Revision | A.03.00, A.14.00 |

Ref Position

Sets the reference position for the X axis to Left, Center or Right.

| | |
|--------------------------|--|
| Key Path | SPAN X Scale |
| Mode | BASIC, PNOISE, WCDMA, C2K, GSM, WIMAXOFDMA, TDSCDMA, 1XEVD0, DVB, DTMB, ISDBT, CMMB, LTE, LTETDD, DCATV, WLAN, MSR,LTEATDD, LTEAFDD |
| Remote Command | :DISPlay:WAVeform:VIEW[1] 2:WINDow[1]:TRACe:X[:SCALE]:RPOSition LEFT CENTer RIGHT :DISPlay:WAVeform:VIEW[1] 2:WINDow[1]:TRACe:X[:SCALE]:RPOSition? |
| Example | DISP:WAV:VIEW:WIND:TRAC:X:RPOS LEFT DISP:WAV:VIEW:WIND:TRAC:X:RPOS? |
| Notes | Allows you to set the reference position to Left, Ctr (center) or Right. You must be in a mode that includes the Waveform measurement to use this command. Use INSTRument:SElect to set the mode. |
| Preset | LEFT |
| State Saved | Saved in instrument state. |
| Range | Left Ctr Right |
| Initial S/W Revision | Prior to A.02.00 |
| Modified at S/W Revision | A.03.00 |

Auto Scaling

Toggles the scale coupling function between On and Off.

| | |
|---------------------------------|--|
| Key Path | SPAN X Scale |
| Mode | BASIC, PNOISE, WCDMA, C2K, GSM, WIMAXOFDMA, TDSCDMA, 1XEVD0, DVB, DTMB, ISDBT, CMMB, LTE, LTE_TDD, DCATV, WLAN, MSR, LTE_TDD, LTEAFDD |
| Remote Command | :DISPlay:WAVeform:VIEW[1] 2:WINDow[1]:TRACe:X[:SCALe]:COUPle 0 1 OFF ON :DISPlay:WAVeform:VIEW[1] 2:WINDow[1]:TRACe:X[:SCALe]:COUPle? |
| Example | DISP:WAV:VIEW:WIND:TRAC:X:COUP ON DISP:WAV:VIEW:WIND:TRAC:X:COUP? |
| Notes | You must be in a mode that includes the Waveform measurement to use this command. Use INSTRument:SElect to set the mode. |
| Couplings | When Auto Scaling is On and the Restart front-panel key is pressed, this function automatically determines the scale per division and reference values based on the measurement results. When you set a value to either Scale/Div or Ref Value manually, Auto Scaling automatically changes to Off. |
| Preset | 1 |
| State Saved | Saved in instrument state. |
| Range | On Off |
| Initial S/W Revision | Prior to A.02.00 |
| Modified at S/W Revision | A.03.00 |

Sweep/Control

Accesses a menu that enables you to configure the Sweep and Control functions of the analyzer, such as Acquisition Time and Gating.

| | |
|----------------------|------------------------|
| Key Path | Front-panel key |
| Initial S/W Revision | Prior to A.02.00 |

Pause/Resume

Pauses a measurement after the current data acquisition is complete.

When Paused, the label on the key changes to Resume. Pressing Resume un-pauses the measurement. When you are Paused, pressing **Restart**, **Single** or **Cont** does a Resume.

| | |
|-----------------------|--|
| Key Path | Sweep/Control |
| Remote Command | :INITiate:PAUSE |
| Dependencies | Grayed out in Measurements that do not support Pausing. Blanked in Modes that do not support Pausing. |
| Initial S/W Revision | Prior to A.02.00 |

| | |
|-----------------------|--|
| Key Path | Sweep/Control |
| Remote Command | :INITiate:RESume |
| Dependencies | Grayed out in Measurements that do not support Pausing. Blanked in Modes that do not support Pausing. |
| Initial S/W Revision | Prior to A.02.00 |

Abort (Remote Command Only)

This command is used to stop the current measurement. It aborts the current measurement as quickly as possible, resets the sweep and trigger systems, and puts the measurement into an "idle" state. If the analyzer is in the process of aligning when ABORT is sent, the alignment finishes before the abort function is performed. So ABORT does not abort an alignment.

If the analyzer is set for Continuous measurement, it sets up the measurement and initiates a new data measurement sequence with a new data acquisition (sweep) taken once the trigger condition is met.

If the analyzer is set for Single measurement, it remains in the "idle" state until an :INIT:IMM command is received.

| | |
|-----------------------|--------|
| Remote Command | :ABORT |
| Example | :ABOR |

| | |
|------------------------------|--|
| Notes | <p>If :INITiate:CONTinuous is ON, then a new continuous measurement will start immediately; with sweep (data acquisition) occurring once the trigger condition has been met.</p> <p>If :INITiate:CONTinuous is OFF, then :INITiate:IMMEDIATE is used to start a single measurement; with sweep (data acquisition) occurring once the trigger condition has been met.</p> |
| Dependencies | <p>For continuous measurement, ABORt is equivalent to the Restart key.</p> <p>Not all measurements support the abort command.</p> |
| Status Bits/OPC dependencies | <p>The STATus:OPERation register bits 0 through 8 are cleared.</p> <p>The STATus:QUEStionable register bit 9 (INTEgrity sum) is cleared.</p> <p>Since all the bits that feed into OPC are cleared by the ABORt, the ABORt will cause the *OPC query to return true.</p> |
| Initial S/W Revision | <p>Prior to A.02.00</p> |

User Preset

Accesses a menu that gives you the following three choices:

- **User Preset** – recalls a state previously saved using the Save User Preset function.
- **User Preset All Modes** – presets all of the modes in the analyzer
- **Save User Preset**– saves the current state for the current mode

| Key Path | Front-panel key |
|-------------------------------|--|
| Backwards Compatibility Notes | <p>User Preset is actually loading a state, and in legacy analyzers, it was possible to load a state without affecting the trace data, limit lines or correction data. Similarly it was possible to do a User Preset without affecting the trace data, limit lines or correction data.</p> <p>In the X-Series, “state” always includes all of this data; so whenever state is loaded, or User Preset is executed, all of the traces, limit lines and corrections are affected. Although this differs from previous behavior, it is desirable behavior, and should not cause adverse issues for users.</p> <p>On ESA and PSA, User Preset affected the entire instrument’s state. In the X-Series, User Preset only recalls the state for the active mode. There is a User Preset file for each mode. User Preset can never cause a mode switch as it can in legacy analyzers. If you want to recall all modes to their user preset file state, you will need to do a User Preset after mode switching into each mode.</p> <p>User Preset recalls mode state which can now include data like traces; whereas on ESA and PSA, User Preset did not affect data.</p> |
| Initial S/W Revision | Prior to A.02.00 |

User Preset

User Preset sets the state of the currently active mode back to the state that was previously saved for this mode using the Save User Preset menu key or the SCPI command, `SYST:PRES:USER:SAV`. It not only recalls the Mode Preset settings, but it also recalls all of the mode persistent settings, and the Input/Output system setting that existed at the time Save User Preset was executed.

If a Save User Preset has not been done at any time, User Preset recalls the default user preset file for the currently active mode. The default user preset files are created if, at power-on, a mode detects there is no user preset file. There will never be a scenario when there is no user preset file to restore. For each mode, the default user preset state is the same state that would be saved if a Save User Preset is performed in each mode right after doing a Restore Mode Default and after a Restore Input/Output Defaults.

The User Preset function does the following:

- Aborts the currently running measurement.
- Sets the mode State to the values defined by Save User Preset.
- Makes the saved measurement for the currently running mode the active measurement.
- Brings up the saved menu for the power-on mode.
- Clears the input and output buffers.
- Sets the Status Byte to 0.

| | |
|-----------------------------|--|
| Key Path | User Preset |
| Remote Command | :SYSTem:PRESet:USER |
| Example | :SYST:PRES:USER:SAVE:SYST:PRES:USER |
| Notes | :SYST:PRES:USER:SAVE is used to save the current state as the user preset state. Clears all pending OPC bits. The Status Byte is set to 0. Pressing the User Preset front-panel key while already in the User Preset menu will cause the User Preset to get executed |
| Couplings | A user preset will cause the currently running measurement to be aborted and cause the saved measurement to be active. Recalling a User Preset file has the same issues that recalling a Save State file has. Some settings may need to be limited and therefore re-coupled, since the capabilities of the mode may have changes when the User Preset file was last saved. |
| Initial S/W Revision | Prior to A.02.00 |

User Preset All Modes

Recalls all of the User Preset files for each mode, switches to the power-on mode, and activates the saved measurement from the power-on mode User Preset file.

NOTE

When the instrument is secured, all of the user preset files are converted back to their default user preset files.

The User Preset function does the following:

- Aborts the currently running measurement.
- Switches the Mode to the power-on mode.
- Restores the User Preset files for each mode.
- Makes the saved measurement for the power-on mode the active measurement.
- Brings up the saved menu for the power-on mode.
- Clears the input and output buffers.
- Sets the Status Byte to 0.

| | |
|-----------------------|--|
| Key Path | User Preset |
| Remote Command | :SYSTem:PRESet:USER:ALL |
| Example | :SYST:PRES:USER:SAVE:SYST:PRES:USER:ALL |
| Notes | Clears all pending OPC bits. The Status Byte is set to 0. :SYST:PRES:USER:SAVE is used to save the current state as the user preset state. |
| Couplings | A user preset will cause the currently running measurement to be aborted, cause a mode switch to the power-on mode, and cause the saved measurement to be active in the power-on mode. Recalling a User Preset file has the same issues that recalling a Save State file has. Some settings may need to be limited and therefore re-coupled, since the capabilities of the mode may have changes when the User Preset file was last saved. |

| | |
|----------------------|------------------|
| Initial S/W Revision | Prior to A.02.00 |
|----------------------|------------------|

Save User Preset

Saves the currently active mode and its State. You can recall this User Preset file by pressing the User Preset menu key or sending the SYST:PRES:USER remote command. This same state is also saved by the Save State function.

| | |
|-----------------------|---|
| Key Path | User Preset |
| Remote Command | :SYSTem:PRESet:USER:SAVE |
| Example | :SYST:PRES:USER:SAVE |
| Notes | :SYST:PRES:SAVE creates the same file as if the user requested a *SAV or a MMEM:STOR:STAT, except User Preset Save does not allow the user to specify the filename or the location of the file. |
| Initial S/W Revision | Prior to A.02.00 |

View/Display

Accesses a menu of functions that enable you to set up and control the display parameters for the current measurement.

This topic contains the following sections:

["View Selection by name \(Remote Command Only\)" on page 2644](#)

["View Selection by number \(Remote Command Only\)" on page 2644](#)

View Selection by name (Remote Command Only)

Selects the results view.

| Key Path | View/Display |
|--------------------------|---|
| Mode | BASIC, PNOISE, WCDMA, C2K, GSM, WIMAXOFDMA, TDSCDMA, 1XEVD0, DVB, DTMB, ISDBT, CMMB, LTE, LTETDD, DCATV, WLAN, MSR,LTEATDD, LTEAFDD |
| Remote Command | :DISPlay:WAVeform:VIEW[:SElect] RFENvelope IQ :DISPlay:WAVeform:VIEW[:SElect]? |
| Example | DISP:WAV:VIEW RFEN DISP:WAV:VIEW? |
| Notes | You must be in a mode that includes the Waveform measurement to use this command. Use INSTRument:SElect to set the mode. |
| Preset | RFENvelope |
| State Saved | Saved in instrument state. |
| Range | RF Envelope Q Waveform |
| Initial S/W Revision | Prior to A.02.00 |
| Modified at S/W Revision | A.03.00 |

View Selection by number (Remote Command Only)

Displays the numeric values of the measurement results.

| | |
|-----------------------|---|
| Mode | BASIC, PNOISE, WCDMA, C2K, GSM, WIMAXOFDMA, TDSCDMA, 1XEVD0, DVB, DTMB, ISDBT, CMMB, LTE, LTETDD, DCATV, WLAN, MSR,LTEATDD, LTEAFDD |
| Remote Command | :DISPlay:WAVeform:VIEW:NSElect <integer> :DISPlay:WAVeform:VIEW:NSElect? |
| Example | DISP:WAV:VIEW:NSEL 1 DISP:WAV:VIEW:NSEL? |
| Notes | You must be in a mode that includes the Waveform measurement to use this command. Use INSTRument:SElect to set the mode. |
| Preset | 1 |
| State Saved | Saved in instrument state. |

| | |
|--------------------------|------------------|
| Min | 1 |
| Max | 2 |
| Initial S/W Revision | Prior to A.02.00 |
| Modified at S/W Revision | A.03.00 |

| | |
|----------------------|------------------------|
| Key Path | Front-panel key |
| Initial S/W Revision | Prior to A.02.00 |

Display

The Display menu is common to most measurements, and is used for configuring items on the display. Some Display menu settings apply to all the measurements in a mode, and some only to the current measurement. Those under the **System Display Settings** key apply to all measurements in all modes.

| | |
|----------------------|---------------------|
| Key Path | Display |
| Key Path | View/Display |
| Initial S/W Revision | Prior to A.02.00 |

Annotation

Turns on and off various parts of the display annotation. The annotation is divided up into four categories:

1. Meas Bar: This is the measurement bar at the top of the screen. It does not include the settings panel or the Active Function. Turning off the Meas Bar turns off the settings panel and the Active Function. When the Meas Bar is off, the graticule area expands to fill the area formerly occupied by the Meas Bar.
2. Screen Annotation: this is the annotation and annunciation around the graticule, including any annotation on lines (such as the display line, the threshold line, etc.) This does NOT include the marker number or the N dB result. When off, the graticule expands to fill the entire graticule area.
3. Trace annotation: these are the labels on the traces, showing their detector (or their math mode).
4. Active Function annotation: this is the active function display in the meas bar, and all of the active function values displayed on softkeys.

See the figure below. Each type of annotation can be turned on and off individually.

| | |
|----------------------|-----------------------|
| Key Path | View/Display, Display |
| Initial S/W Revision | Prior to A.02.00 |

Meas Bar On/Off

This function turns the Measurement Bar on and off, including the settings panel. When off, the graticule area expands to fill the area formerly occupied by the Measurement Bar.

| | |
|----------------|---|
| Key Path | View/Display, Display, Annotation |
| Remote Command | :DISPlay:ANNOtation:MBAR[:STATe] OFF ON 0 1 :DISPlay:ANNOtation:MBAR[:STATe]? |
| Example | DISP:ANN:MBAR OFF |
| Dependencies | Grayed out and forced to OFF when System Display Settings, Annotation is set to Off. |
| Preset | On This should remain Off through a Preset when System DisplaySettings, Annotation is set to Off. |

| | |
|----------------------|----------------------------|
| State Saved | Saved in instrument state. |
| Initial S/W Revision | Prior to A.02.00 |

Screen

This controls the display of the annunciation and annotation around the graticule, including any annotation on lines (such as the display line, the threshold line, etc.) and the y-axis annotation. This does NOT include marker annotation (or the N dB result). When off, the graticule expands to fill the entire graticule area, leaving only the 1.5% gap above the graticule as described in the Trace/Detector chapter.

| Key Path | View/Display, Display, Annotation |
|-----------------------|--|
| Remote Command | :DISPlay:ANNotation:SCReen[:STATe] OFF ON 0 1 :DISPlay:ANNotation:SCReen[:STATe]? |
| Example | DISP:ANN:SCR OFF |
| Dependencies | Grayed-out and forced to OFF when System Display Settings, Annotation is set to Off. |
| Preset | On This should remain Off through a Preset when System DisplaySettings, Annotation is set to Off |
| State Saved | Saved in instrument state. |
| Initial S/W Revision | Prior to A.02.00 |

Active Function Values On/Off

Turns on and off the active function display in the Meas Bar, and all of the active function values displayed on the softkeys.

Note that all of the softkeys that have active functions have these numeric values blanked when this function is on. This is a security feature..

15 Waveform Measurement
View/Display

| | |
|----------------------|--|
| Key Path | View/Display, Display, Annotation |
| Remote Command | :DISPlay:ACTivefunc[:STATE] ON OFF 1 0 :DISPlay:ACTivefunc[:STATE] ? |
| Example | DISP:ACT OFF |
| Dependencies | Grayed out and forced to OFF when System Display Settings, Annotation is set to Off. |
| Preset | On This should remain Off through a Preset when System DisplaySettings, Annotation is set to Off |
| State Saved | Saved in instrument state. |
| Initial S/W Revision | Prior to A.02.00 |

Title

Displays menu keys that enable you to change or clear a title on your display.

| | |
|----------------------|-----------------------|
| Key Path | View/Display, Display |
| Initial S/W Revision | Prior to A.02.00 |

Change Title

Writes a title into the "measurement name" field in the banner, for example, "Swept SA".

Press Change Title to enter a new title through the alpha editor. Press Enter or Return to complete the entry. Press ESC to cancel the entry and preserve your existing title.

The display title will replace the measurement name. It remains for this measurement until you press **Change Title** again, or you recall a state, or a Preset is performed. A title can also be cleared by pressing **Title, Clear Title**.

NOTE

Notice the inclusion of the <measurement> parameter in the command below. Because each measurement remembers the Display Title, the command must be qualified with the measurement name. For the Swept SA measurement this is not the case; no <measurement> parameter is used when changing the Display Title for the Swept SA measurement.

| | |
|----------------------|---|
| Key Path | View/Display, Display, Title |
| Mode | All |
| Remote Command | :DISPlay:<measurement>:ANNotation:TITLe:DATA <string> :DISPlay:<measurement>:ANNotation:TITLe:DATA? |
| Example | DISP:ANN:TITL:DATA "This Is My Title" This example is for the Swept SA measurement in the Spectrum Analyzer mode. The SANalyzer <measurement> name is not used. DISP:ACP:ANN:TITL:DATA "This Is My Title" This example is for Measurements other than Swept SA. Both set the title to: This Is My Title |
| Notes | Pressing this key cancels any active function. When a title is edited the previous title remains intact (it is not cleared) and the cursor goes at the end so that characters can be added or BKSP can be used to go back over previous characters. |
| Preset | No title (measurement name instead) |
| State Saved | Saved in instrument state. |
| Initial S/W Revision | Prior to A.02.00 |

Clear Title

Clears a title from the front-panel display. Once cleared, the title cannot be retrieved. After the title is cleared, the current Measurement Name replaces it in the title bar.

| | |
|----------|---|
| Key Path | View/Display, Display, Title |
| Example | The following commands clear the title and restore the measurement's original title: DISP:ANN:TITL:DATA "" This example is for the Swept SA measurement in the Spectrum Analyzer mode. The SANalyzer <measurement> name is not used. DISP:ACP:ANN:TITL:DATA "" This example is for ACP; in measurements other than Swept SA the measurement name is required. |
| Notes | Uses the :DISPlay:<measurement>:ANNotation:TITLe:DATA <string> command with an empty string (in the Swept SA, the <measurement> is omitted). |

| | |
|----------------------|----------------------|
| Preset | Performed on Preset. |
| Initial S/W Revision | Prior to A.02.00 |

Graticule

Pressing Graticule turns the display graticule On or Off. It also turns the graticule y-axis annotation on and off.

| | |
|----------------------|--|
| Key Path | View/Display, Display |
| Remote Command | :DISPlay:WINDow[1]:TRACe:GRATicule:GRID[:STATe] OFF ON 0 1 :DISPlay:WINDow[1]:TRACe:GRATicule:GRID[:STATe]? |
| Example | DISP:WIND:TRAC:GRAT:GRID OFF |
| Notes | The graticule is the set of horizontal and vertical lines that make up the grid/divisions for the x-axis and y-axis. |
| Preset | On |
| State Saved | Saved in instrument state |
| Initial S/W Revision | Prior to A.02.00 |

System Display Settings

These settings are "Mode Global" – they affect all modes and measurements and are reset only by **Restore Misc Defaults** or **Restore System Defaults** under System.

| | |
|----------------------|------------------------------|
| Key Path | View/Display, Display |
| Initial S/W Revision | Prior to A.02.00 |

Annotation Local Settings

This is a Mode Global override of the meas local annotation settings. When it is **All Off**, it forces **ScreenAnnotation, Meas Bar, Trace, and Active Function Values** settings to be **OFF** for all measurements in all modes. This provides the security based "annotation off" function of previous analyzers; hence it uses the legacy SCPI command.

When it is **All Off**, the **Screen, Meas Bar, Trace, and Active Function Values** keys under the **Display, Annotation** menu are grayed out and forced to **Off**. When **Local Settings** is selected, you are able to set the local annotation settings on a measurement by measurement basis.

| | |
|----------------|--|
| Key Path | View/Display, Display, System Display Settings |
| Remote Command | :DISPlay:WINDow[1]:ANNotation[:ALL] OFF ON 0 1 :DISPlay:WINDow[1]:ANNotation[:ALL]? |
| Example | :DISP:WIND:ANN OFF |

| | |
|-------------------------------|---|
| Preset | On (Set by Restore Misc Defaults) |
| State Saved | Not saved in instrument state. |
| Backwards Compatibility Notes | The WINDow parameter and optional subopcode is included for backwards compatibility but ignored – all windows are equally affected. |
| Initial S/W Revision | Prior to A.02.00 |

Themes

Accesses a menu of functions that enable you to choose the theme to be used when saving the screen image.

The **Themes** option is the same as the **Themes** option under the **Display** and **Page Setup** dialogs. It allows you to choose between themes to be used when saving the screen image.

| | |
|-------------------------------|---|
| Key Path | Save, Screen Image |
| Remote Command | :MMEMory:STORe:SCReen:THEMe TDColor TDMonochrome FCoLor FMONochrome :MMEMory:STORe:SCReen:THEMe? |
| Example | :MMEM:STOR:SCR:THEM TDM |
| Preset | 3D Color; Is not part of Preset, but is reset by Restore Misc Defaults or Restore System Defaults All and survives subsequent running of the modes. |
| Readback | 3D Color 3D Mono Flat Color Flat Mono |
| Backwards Compatibility Notes | In ESA and PSA we offer the choice of "Reverse Bitmap" or "Reverse Metafile" when saving screen images. This is much like the "Flat Color" theme available in X-Series. Also, if you selected Reverse Bitmap AND a black & white screen image, that would be much like "Flat Monochrome". In other words, each of the X-Series themes has a similar screen image type in ESA/PSA. But they are not identical. |
| Initial S/W Revision | Prior to A.02.00 |

3D Color

Selects a standard color theme with each object filled, shaded and colored as designed.

| | |
|----------------------|-----------------------------------|
| Key Path | Save, Screen Image, Themes |
| Example | MMEM:STOR:SCR:THEM TDC |
| Readback | 3D Color |
| Initial S/W Revision | Prior to A.02.00 |

3D Monochrome

Selects a format that is like 3D color but shades of gray are used instead of colors.

| | |
|----------------------|-----------------------------------|
| Key Path | Save, Screen Image, Themes |
| Example | MMEM:STOR:SCR:THEM TDM |
| Readback | 3D Mono |
| Initial S/W Revision | Prior to A.02.00 |

Flat Color

Selects a format that is best when the screen is to be printed on an ink printer.

| | |
|----------------------|-----------------------------------|
| Key Path | Save, Screen Image, Themes |
| Example | MMEM:STOR:SCR:THEM FCOL |
| Readback | Flat Color |
| Initial S/W Revision | Prior to A.02.00 |

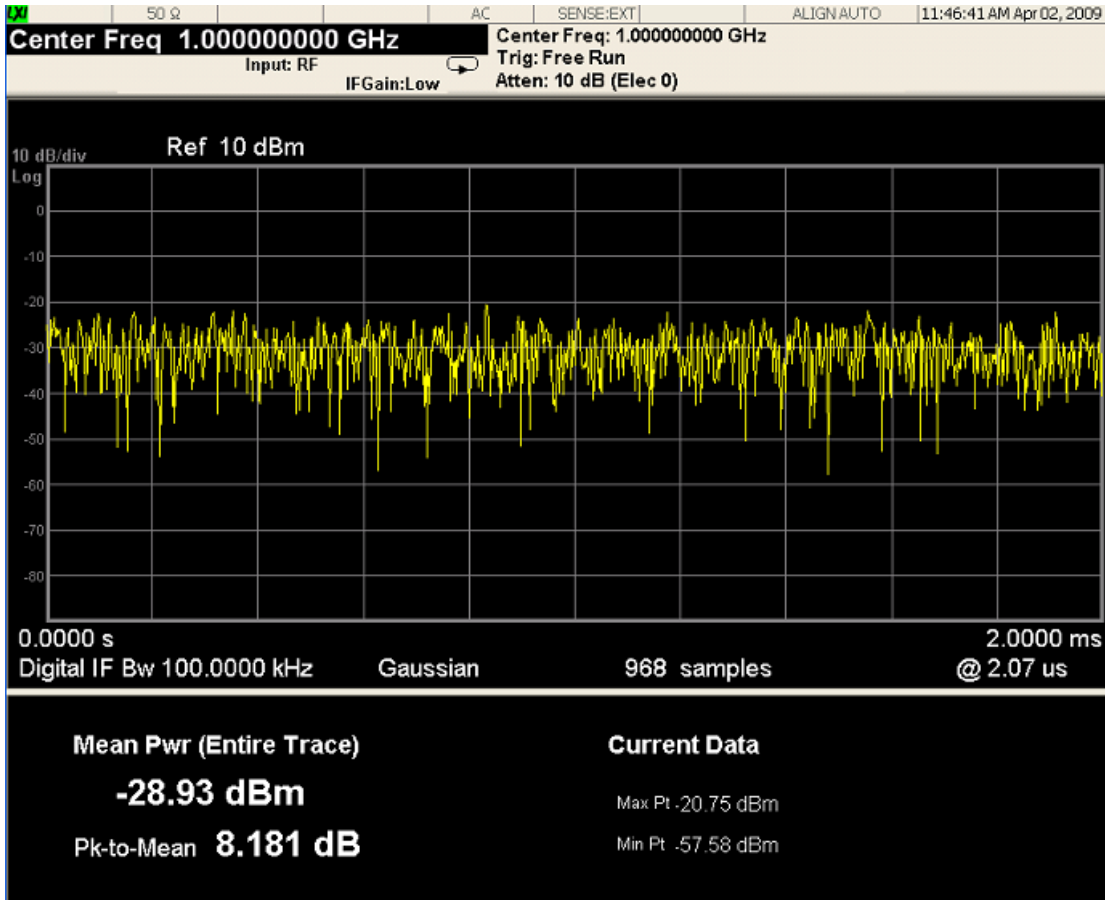

Flat Monochrome

Selects a format that is like Flat Color. But only black is used (no colors, not even gray), and no fill.

| | |
|----------------------|-----------------------------------|
| Key Path | Save, Screen Image, Themes |
| Example | MMEM:STOR:SCR:THEM FMON |
| Readback | Flat Mono |
| Initial S/W Revision | Prior to A.02.00 |

RF Envelope

This view shows an example of the RF Envelope result for the waveform (time domain) measurements in the graph window. The measured values for the mean power and peak-to-mean power are shown in the text window.

Numeric Results

| Name | Type | Description | Unit | Format |
|------------|---------|--|------|-----------|
| Mean Pwr | Float64 | The mean power (dBm). This is either the power across the entire trace, or the power between markers if the markers are enabled. | dBm | XX.XX dBm |
| Pk-to-Mean | Float64 | This is the ratio of the maximum signal level to the mean power. | dB | XX.XX dB |
| Max Pt | Float64 | The maximum of the most recently acquired data. | dBm | XX.XX dBm |
| Min Pt | Float64 | The minimum of the most recently acquired data. | dBm | XX.XX dBm |

| | |
|----------------------|---------------------|
