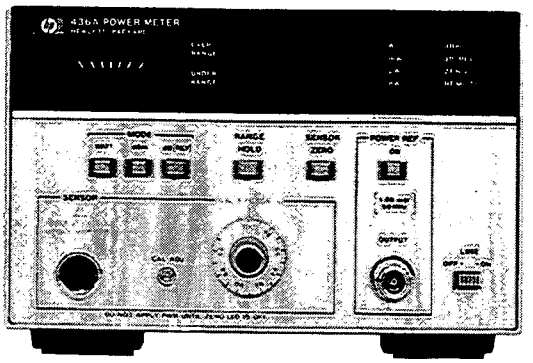
OPERATING AND SERVICE MANUAL

HP 436A
POWER METER



HP Part No. 00436-90053
Edition 1 E0489
HP Binder Part No. 9282-1078

HEWLETT PACKARD

CERTIFICATION

Hewlett-Packard Company certifies that this product met its published specifications at the time of shipment from the factory. Hewlett-Packard further certifies that its calibration measurements are traceable to the United States National Bureau of Standards, to the extent allowed by the Bureau's calibration facility, and to the calibration facilities of other International Standards Organization members.

WARRANTY

This Hewlett-Packard instrument product is warranted against defects in material and workmanship for a period of one year from date of shipment. During the warranty period, Hewlett-Packard Company will, at its option, either repair or replace products which prove to be defective.

For warranty service or repair, this product must be returned to a service facility designated by HP. Buyer shall prepay shipping charges to HP and HP shall pay shipping charges to return the product to Buyer. However, Buyer shall pay all shipping charges, duties, and taxes for products returned to HP from another country.

HP warrants that its software and firmware designated by HP for use with an instrument will execute its programming instructions when properly installed on that instrument. HP does not warrant that the operation of the instrument, or software, or firmware will be uninterrupted or error free.

LIMITATION OF WARRANTY

The foregoing warranty shall not apply to defects resulting from improper or inadequate maintenance by Buyer, Buyer-supplied software or interfacing, unauthorized modification or misuse, operation outside of the environmental specifications for the product, or improper site preparation or maintenance.

NO OTHER WARRANTY IS EXPRESSED OR IMPLIED. HP SPECIFICALLY DISCLAIMS THE IMPLIED WARRANTIES OF MERCHANTABILITY AND FITNESS FOR A PARTICULAR PURPOSE.

EXCLUSIVE REMEDIES

THE REMEDIES PROVIDED HEREIN ARE BUYER'S SOLE AND EXCLUSIVE REMEDIES. HP SHALL NOT BE LIABLE FOR ANY DIRECT, INDIRECT, SPECIAL, INCIDENTAL, OR CONSEQUENTIAL DAMAGES, WHETHER BASED ON CONTRACT, TORT, OR ANY OTHER LEGAL THEORY.

ASSISTANCE

Product maintenance agreements and other customer assistance agreements are available for Hewlett-Packard products.

For any assistance, contact your nearest Hewlett-Packard Sales and Service Office. Addresses are provided at the back of this manual.

OPERATING AND SERVICE MANUAL

HP 436A
POWER METER
(Including Options 003, 004 and 022)

SERIAL NUMBERS

This manual applies directly to instruments with serial numbers prefixed 2410A and 2410U.

With changes described in Section VII, this manual also applies to instruments with serial numbers prefixed:

1447A, 1448A, 1451A, 1501A, 1503A, 1504A, 1505A, 1538A, 1550A, 1606A, 1611A, 1629A, 1713A, 1725A, 1746A, 1803A, 1908A, 1911A, 1917A, 1918A, 1930A, 2008A, 2016A, 2101A, 2236A, 2330A, 2347A and 2347U.

For additional important information about serial numbers, see INSTRUMENTS COVERED BY MANUAL in Section I.

HP 436A

Herstellerbescheinigung

Hiermit wird bescheinigt, dass dieses Gerät/System in Übereinstimmung mit den Bestimmungen von Postverfügung 1046/84 funkenstört ist.

Der Deutschen Bundespost wurde das Inverkehrbringen dieses Gerätes/Systems angezeigt und die Berechtigung zur Überprüfung der Serie auf Einhaltung der Bestimmungen eingeräumt.

Zusatzinformation für Mess- und Testgeräte:

Werden Mess- und Testgeräte mit ungeschirmten Kabeln und/oder in offenen Messaufbauten verwendet, so ist vom Betreiber sicherzustellen, dass die Funk-Entstörbestimmungen unter Betriebsbedingungen an seiner Grundstücksgrenze eingehalten werden.

Manufacturer's Declaration

This is to certify that this product meets the radio frequency interference requirements of Directive FTZ 1046/1984. The German Bundespost has been notified that this equipment was put into circulation and has been granted the right to check the product type for compliance with these requirements.

Note: If test and measurement equipment is operated with unshielded cables and/or used for measurements on open set-ups, the user must ensure that under these operating conditions, the radio frequency interference limits are met at the border of his premises.

SAFETY CONSIDERATIONS

GENERAL

This product and related documentation must be reviewed for familiarization with safety markings and instructions before operation.

This product is a Safety Class I instrument (provided with a protective earth terminal).

BEFORE APPLYING POWER

Verify that the product is set to match the available line voltage and the correct fuse is installed.

SAFETY EARTH GROUND

An uninterruptible safety earth ground must be provided from the main power source to the product input wiring terminals, power cord, or supplied power cord set.

WARNINGS

Any interruption of the protective (grounding) conductor (inside or outside the instrument) or disconnecting the protective earth terminal will cause a potential shock hazard that could result in personal injury. (Grounding one conductor of a two conductor outlet is not sufficient protection.) In addition, verify that a common ground exists between the unit under test and this instrument prior to energizing either unit.

Whenever it is likely that the protection has been impaired, the instrument must be made inoperative and be secured against any unintended operation.

If this instrument is to be energized via an autotransformer (for voltage reduction) make sure the common terminal is connected to neutral (that is, the grounded side of the mains supply).

Servicing instructions are for use by service-trained personnel only. To avoid dangerous electric shock, do not perform any servicing unless qualified to do so.

Adjustments described in the manual are performed with power supplied to the instrument while protective covers are removed. Energy available at many points may, if contacted, result in personal injury.

Capacitors inside the instrument may still be charged even if the instrument has been disconnected from its source of supply.

For continued protection against fire hazard, replace the line fuse(s) only with 250V fuse(s) of the same current rating and type (for example, normal blow, time delay, etc.). Do not use repaired fuses or short circuited fuseholders.

SAFETY SYMBOLS

Instruction manual symbol: the product will be marked with this symbol when it is necessary for the user to refer to the instruction manual (see Table of Contents for page references).

Indicates hazardous voltages.

Indicates earth (ground) terminal.

WARNING The WARNING sign denotes a hazard. It calls attention to a procedure, practice, or the like, which, if not correctly performed or adhered to, could result in personal injury. Do not proceed beyond a WARNING sign until the indicated conditions are fully understood and met.

CAUTION The CAUTION sign denotes a hazard. It calls attention to an operating procedure, practice, or the like, which, if not correctly performed or adhered to, could result in damage to or destruction of part or all of the product. Do not proceed beyond a CAUTION sign until the indicated conditions are fully understood and met.

POWER METER

POWER CABLE

Figure 1-1. HP Model 436A Power Meter and Accessories Supplied

SECTION I
GENERAL INFORMATION

1-1. INTRODUCTION

1-2. This manual provides information pertaining to the installation, operation, testing, adjustment and maintenance of the HP Model 436A Power Meter.

1-3. Figure 1-1 shows the Power Meter with accessories supplied.

1-4. Packaged with this manual is an Operating Information Supplement. This is simply a copy of the first three sections of this manual. This supplement should be kept with the instrument for use by the operator. Additional copies of the Operating Information Supplement may be ordered through your nearest Hewlett-Packard office. The part numbers are listed on the title page of this manual.

1-5. On the title page of this manual, below the manual part number, is a "Microfiche" part number. This number may be used to order 4x6-inch microfilm transparencies of the manual. The microfiche package also includes the latest Manual Changes supplement as well as all pertinent Service Notes.

1-6. SPECIFICATIONS

1-7. Instrument specifications are listed in Table 1-1. These specifications are the performance standards or limits against which the instrument may be tested.

1-8. INSTRUMENTS COVERED BY MANUAL

1-9. Power Meter Options 003, 004, and 022 are documented in this manual. The differences are noted in the appropriate location such as OPTIONS in Section I, the Replaceable Parts List, and the schematic diagrams.

1-10. This instrument has a two-part serial number. The first four digits and the letter comprise the serial number prefix. The last five digits form the sequential suffix that is unique to each instrument. The contents of this manual apply directly to instruments having the same serial number prefix(es) as listed under SERIAL NUMBERS on the title page.

1-11. An instrument manufactured after the printing of this manual may have a serial prefix that is not listed on the title page. This unlisted serial prefix indicates that the instrument is different from those documented in this manual. The manual for this instrument is supplied with a yellow Manual Changes supplement that contains change information that documents the differences.

1-12. In addition to change information, the supplement may contain information for correcting errors in the manual. To keep this manual as current and accurate as possible, Hewlett-Packard recommends that you periodically request the latest Manual Changes supplement. The supplement for this manual is keyed to the manual's print date and part number, both of which appear on the title page. Complimentary copies of the supplement are available from Hewlett-Packard.

1-13. For information concerning a serial number prefix not listed on the title page or in the Manual Changes supplement, contact your nearest Hewlett-Packard office.

1-14. DESCRIPTION

1-15. The Power Meter is a precision digital-readout instrument capable of automatic and manual measurement of RF and Microwave power levels. It is designed for interconnection with a compatible Power Sensor (refer to Table 1-1, Specifications) to form a complete power measurement system. The frequency and power range of the system are determined by the particular Power Sensor selected for use. With the Power Sensors available, the overall frequency range of the system is 100 kHz to 18 GHz, and the overall power range is −70 to +35 dBm.

1-16. Significant operating features of the Power Meter are as follows:

- **Digital Display**: The display is a four-digit, seven-segment LED, plus a sign when in the dBm or dB (REL) mode. It also has under- and

Table 1-1. Specifications

SPECIFICATIONS

Frequency Range:
100 kHz to 26.5 GHz (depending on power sensor used).

Power Range:
(display calibrated in watts, dBm, and dB relative to reference power level).

With 8481A, 8482A, or 8483A sensors: 50 dB with 5 full scale ranges of −20, −10, 0, 10, and 20 dBm (10 μW to 100 mW).

With 8481B or 8482B sensors: HP 8481B is 44 dB (1 mW to 25W) at 0 to 35°C and HP 8482B is 43 dB (1 mW to 20W) at 35°C to 55°C with 5 ranges of 10, 20, 30, 40 and 43 or 44 dBm.

With 8481H or 8482H sensors: 45 dB with 5 ranges of 0, 10, 20, 30 and 35 dBm (1 mW to 3W).

With 8484A sensor: 50 dB with 5 full scale ranges of −60, −50, −40, −30, and −20 dBm (1 nW to 10 μW).

Accuracy:

Instrumentation[1]:
Watt mode: ±0.5%.
dBm mode: ±0.02 dB ±0.001 dB/°C.[3]
dB [REL] mode[2]: ±0.02 dB ±0.001 dB/°C.[3]

Zero: Automatic, operated by front panel switch.

Zero set: ±0.5% of full scale on most sensitive range. typical, ±1 count on other ranges.

Zero carry over: ±0.2% of full scale when zeroed on the most sensitive range.

Noise (typical, at constant temperature, peak change over any one-minute interval): 20 pW (8484A); 40 nW (8481A, 8482A, 8483A); 4 μW (8481H, 8482H).

Drift (1 hour, typical, at constant temperature after 24-hour warm-up); 20 pW (8484A); 10 nW (8481A, 8482A, 8483A); 1.0 μW (8481H, 8482H).

Power Reference: Internal 50 MHz oscillator with Type N Female connector on front panel (or rear panel, Option 003 only).

Power output: 1.00 mW.
Factory set to ± 0.7%, traceable to the National Bureau of Standards.
Accuracy: ±1.2% worst case (±0.9% rss) for one year (0°C to 55°C).

Response Time:
(0 to 99% of reading, five time constants)

Range 1 (most sensitive)	<10 seconds.
Range 2	<1 second
Range 3–5	<100 milliseconds.

(Typical, measured at recorder output).

Cal Factor:
16-position switch normalizes meter reading to account for calibration factor or effective efficiency. Range 85% to 100% in 1% steps.

Cal Adjustment:
Front panel adjustment provides capability to adjust gain of meter to match power sensor in use.

Recorder Output:
Proportional to indicated power with 1 volt corresponding to full scale and 0.316 volts to −5 dB; 1 kΩ output impedance, BNC connector.

RF Blanking Output:
Open collector TTL; low corresponds to blanking when auto-zero mode is engaged.

Display:
Digital display with four digits, 20% over-range capability on all ranges. Also, uncalibrated analog peaking meter to see fast changes.

Power Consumption:
100V ± 10%, 48 to 66 Hz and 360 to 440 Hz.
120V +5%, −10%, 48 to 66 Hz and 360 to 440 Hz.
220 or 240V +5%, −10% 48 to 66 Hz.
Typically less than 24 watts (<25 watts for Opt. 022), 60 V·A maximum.

Dimensions:
134 mm High (5-1/4 inches).
213 mm Wide (8-3/8 inches).
279 mm Deep (11 inches).

Net Weight: 4.5 kg (10 lbs).

[1]Includes sensor non-linearity. Add +2, −4% on top range when using the 8481A, 8482A, or 8483A power sensors.

[2]Specifications are for within range measurements. For range-to-range accuracy add the range uncertainties.

[3]Referenced to 25°C.

DESCRIPTION (cont'd)

overrange indicators. There is a 20 percent overrange capability in all ranges. Large 10 mm (0.375 inch) digits are easy to see even in a high glare environment.

- **Auxiliary Meter:** Complements the digital display by showing fast changes in power level. Ideal for "peaking" transmitter output or other variable power devices.

- **Choice of Display in Watts, dBm or dB:** Absolute power can be read out in watts or dBm. Relative power measurements are made possibile with the dB [REF] switch. Pressing this switch zeros the display for any applied input power and any deviation from this reference is shown in dB with a resolution of ±0.01 dB. This capability is particularly useful in frequency response testing.

- **Power Units and Mode Annunciator:** The units annunciator provides error-free display interpretation by indicating appropriate power units in the watt mode. The mode annunciator indicates the mode of operation: dBm, dB (REL), ZERO or REMOTE.

- **Completely Autoranging:** The Power Meter automatically switches through its 5 ranges to provide completely "hands off" operation. The RANGE HOLD switch locks the Power Meter in one of its ranges when autoranging is not desired.

- **Automatic Sensor Recognition:** The Power Meter continually decodes the sensitivity of the Power Sensor to which it is connected. This information is then used to automatically control the digital display decimal point location and, when WATT MODE operation is selected, to light the appropriate power units annunciator.

- **Auto Zero:** Zeroing the meter is accomplished by merely depressing the SENSOR ZERO switch and waiting until the display shows all zeros before releasing it. The meter is ready to make measurements as soon as the zero light in the mode annunciator goes off.

- **RF Blanking Output:** Open collector TTL; low corresponds to blanking when the sensor zero is engaged, May be used to remove the RF input signal connected to the power sensor.

- **Calibration Accuracy:** A 1.00 mW, 50 MHz reference output is available at the front panel for calibrating the Power Meter and the Power Sensor as a system. Calibration is accomplished using the CAL ADJ and CAL FACTOR % controls. The CAL ADJ control compensates for slight differences in sensitivity associated with a particular type of Power Sensor and the CAL FACTOR % control compensates for mismatch losses and effective efficiency over the frequency range of the Power Sensor.

- **Recorder Output:** Provides a linear output with respect to the input power level. For each range, a +1.00 Vdc output corresponds to a full scale input power level. Refer to Table 1-1, Specifications, for the full-scale range values associated with the various types of Power Sensors available.

1-17. The Hewlett-Packard Interface Bus (HP-IB) Option 022 allows full remote control operation of all the power meter functions (CAL FACTOR can be programmed to either 100% or the CAL FACTOR which has been manually set on the front panel). This option may be added by the user at a later time as his requirements grow.

1-18. OPTIONS

1-19. Input-Output Options

1-20. Option 003. A rear panel POWER REF OUTPUT connector replaces the standard front panel connector.

1-21. Option 004. The 1.5 metre (5 ft.) power sensor cable is not shipped with the power meter.

1-22. Remote Control Options

1-23. Option 022 adds remote interface capability to the Power Meter. Option 022 is compatible with the Hewlett-Packard Interface Bus (AH1, C0, DC2, DT1, L2, LE0, PP0, RL2, SH1, SR0, T3, TE0).

1-24. Option 022 may be ordered in kit form under HP part number 00436-60035. The kit contains a control assembly printed-circuit board, an input/output assembly printed circuit board, and a data cable for interconnection.

1-25. ACCESSORIES SUPPLIED

1-26. The accessories supplied with the Power Meter are shown in Figure 1-1.

a. The 1.5 metre (5 ft.) Power Sensor Cable, HP 11730A, is used to couple the Power Sensor to the Power Meter. Order option 004 to delete the standard 1.5 metre cable.

b. The line power cable may be supplied in one of four configurations. Refer to the paragraph entitled Power Cables in Section II.

c. An alignment tool for adjusting the CAL ADJ front panel control (HP Part No. 8710-0630).

1-27. EQUIPMENT REQUIRED BUT NOT SUPPLIED

1-28. To form a complete RF power measurement system, a Power Sensor such as the HP Model 8481A must be connected to the Power Meter via the Power Sensor cable.

1-29. EQUIPMENT AVAILABLE

1-30. The HP Model 11683A Range Calibrator is recommended for performance testing, adjusting, and troubleshooting the Power Meter. The Power Meter's range-to-range accuracy and auto-zero operation can easily be verified with the Calibrator. It also has the capability of supplying a full-scale test signal for each range.

1-31. Two extender boards (HP Part Numbers 5060-0258, and 5060-0630; 24 and 44 pins respectively) enable the Power Meter printed circuit assemblies to be accessed for service. Rubber bumpers (HP Part No. 0403-0015) should be installed on the extender boards to prevent the boards from touching.

1-32. The following table lists the cable accessories and their lengths that are available for use with the Power Meter. Order option 004 if the standard 1.5 metre cable is not desired with a cable accessory.

Cable Accessory	Cable Length
HP 11730B	3.0 m (10 ft)
HP 11730C	6.1 m (20 ft)
HP 11730D	15.2 m (50 ft)
HP 11730E	30.5 m (100 ft)
HP 11730F	61.0 m (200 ft)

1-33 RECOMMENDED TEST EQUIPMENT

1-34. The test equipment shown in Table 1-2 is recommended for use during performance testing, adjustments, and troubleshooting. To ensure optimum performance of the Power Meter, the specifications of a substitute instrument must equal or exceed the critical specifications shown in the table.

1-35 SAFETY CONSIDERATIONS

1-36. The Power Meter is a Safety Class I instrument. This instrument has been designed according to international safety standards.

1-37. This operating and service manual contains information, cautions, and warnings which must be followed by the user to ensure safe operation and to retain the instrument in safe condition.

Table 1-2. Recommended Test Equipment

Instrument Type	Critical Specifications	Suggested Model	Use *
Range Calibrator	Chopped dc output for each range referenced to 1 mW range	HP 11683A	P,A,T
Digital Voltmeter	Function: DC, resistance Range Resistance: 200 ohms Vdc: 100 mVdc, 1000 mVdc, 10 Vdc, 100 Vdc 10MΩ input impedance 6-digit resolution (±0.05% of reading, ±0.02% of range)	HP 3456A	P,A,T
Power Meter	Range: 1 mW Transfer Accuracy (input -to-output): 0.2%	HP 432A	P, A
Thermistor Mount	SWR: 1.05, 50 MHz Accuracy: ±0.5% at 50 MHz	HP 478A-H75** or HP 478A-H76**	P, A
Counter	Frequency Range: 220 Hz, 50 MHz Sensitivity: 100 mVrms Accuracy: 0.01%	HP 5315A	A
Oscilloscope	Bandwidth: dc to 50 MHz Vertical Sensitivity: 0.2V/division Horizontal Sensitivity: 1 ms/division	HP 180C/ 1801A/1821A	T
Logic Analyzer	Clock Input: 60 kHz Trigger Word: 8 Bits Bit Input: TTL Display Word: 8 Bits	HP 1600A	T

*P = Performance Tests; A = Adjustments; T = Troubleshooting

**For maximum accuracy the 478A-H75 should be calibrated by the National Bureau of Standards. The 478A-H76, which includes HP Standards Laboratory calibration, may be used with a measurement system accuracy of 0.58% instead of 0.5%.

SECTION II
INSTALLATION

2-1. INTRODUCTION

2-2. This section provides all information necessary to install the Power Meter. Covered in the section are initial inspection, power requirements, line voltage selection, interconnection, circuit options, mounting, storage, and repackaging for shipment.

2-3. INITIAL INSPECTION

2-4. Inspect the shipping container for damage. If the shipping container or cushioning material is damaged, it should be kept until the contents of the shipment have been checked for completeness and the instrument has been checked mechanically and electrically. The contents of the shipment should be as shown in Figure 1-1. Procedures for checking electrical performance are given in Section IV. If the contents are incomplete, if there is mechanical damage or defect, or if the instrument does not pass the electrical performance test, notify the nearest Hewlett-Packard office. If the shipping container is damaged, or the cushioning material shows signs of stress, notify the carrier as well as the Hewlett-Packard office. Keep the shipping materials for the carrier's inspection.

2-5. PREPARATION FOR USE

2-6. Power Requirements

2-7. The Power Meter requires a power source of 100, 120, 220, or 240 Vac, +5%, −10%, 48 to 440 Hz single phase. Power consumption is approximately 20 watts.

WARNING

If this instrument is to be energized via an autotransformer for voltage reduction, make sure the common terminal is connected to the earthed pole of the power source.

2-8. Line Voltage and Fuse Selection

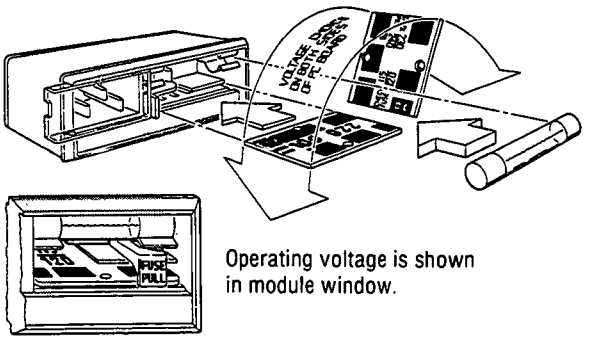
CAUTION

BEFORE PLUGGING THIS INSTRUMENT into the Mains (line) voltage, be sure the correct voltage and fuse have been selected.

2-9. A rear panel, line power module permits operation from 100, 120, 220, or 240 Vac. The number visible in the window (located on the module) indicates the nominal line voltage to which the instrument must be connected. Verify that the line voltage selection card and the fuse are matched to the power source. Refer to Figure 2-1, Line Voltage and Fuse Selection. Table 2-1 lists the ratings and HP part numbers for the replaceable fuses.

WARNING

For protection against fire hazard, the line fuse for 220/240V operation should only be a 250V slow blow fuse with the correct current rating.



Operating voltage is shown in module window.

SELECTION OF OPERATING VOLTAGE

1. Open cover door, pull the FUSE PULL lever and rotate to left. Remove the fuse.
2. Remove the Line Voltage Selection Card. Position the card so the line voltage appears at top-left corner. Push the card firmly into the slot.
3. Rotate the FUSE PULL lever to its normal position. Insert a fuse of the correct value in the holder. Close the cover door.

WARNING

To avoid the possibility of hazardous electrical shock, do not operate this instrument at line voltages greater than 126.5 Vac with line frequencies greater than 66 Hz (leakage currents at these line settings may exceed 3.5 mA).

Figure 2-1. Line Voltage and Fuse Selection

Table 2-1. Line Fuse Ratings and Part Numbers

Line Voltage	Rating	Part Number
100/120V	.75A, 250V	2110-0063
220/240V	.375A, 250V, SLO-BLO	2110-0421

2-10. Power Cable

WARNINGS

BEFORE SWITCHING ON THIS INSTRUMENT, the protective earth terminals of this instrument must be connected to the protective conductor of the (mains) power cord. The mains plug shall only be inserted in a socket outlet provided with a protective earth contact. The protective action must not be negated by the use of an extension cord (power cable) without a protective conductor (grounding).

2-11. In accordance with international safety standards, this instrument is equipped with a three-wire power cable. When connected to an appropriate ac power receptacle, this cable grounds the instrument cabinet. The type of power cable plug shipped with each instrument depends on the country of destination. Refer to Figure 2-2 for the part numbers of the power cable plugs available.

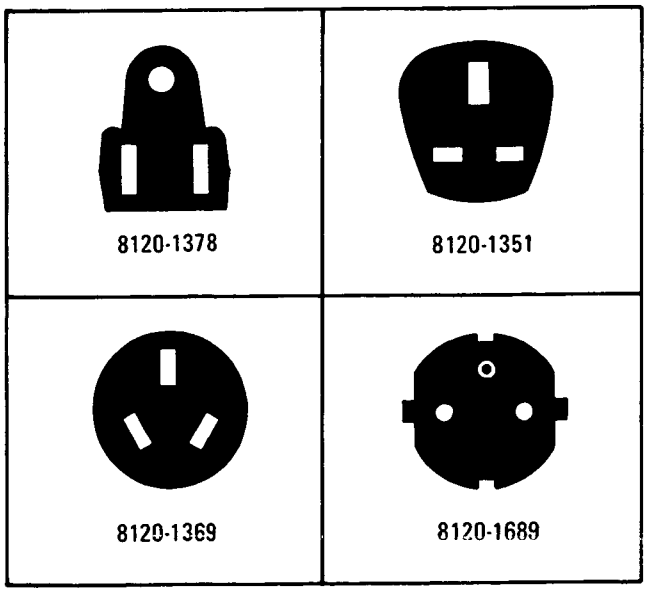


Figure 2-2. Power Cable and Mains Plug Part Numbers

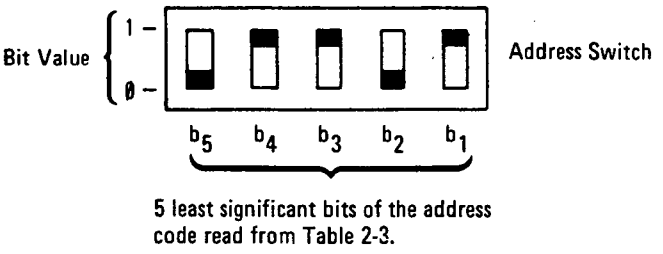
2-12. ADDRESS SELECTION

WARNINGS

This task should be performed only by service trained persons who are aware of the potential shock hazard of working on an instrument with protective covers removed.

To avoid hazardous electrical shock, the line (mains) power cable should be disconnected before attempting to change the HP-IB address.

Look up the address code in Table 2-3. Read the binary equivalent of the code. Set the five least significant bits of the code on the address switch as shown below. (The address switch A6S1, is on the HP-IB Control Assembly.)



5 least significant bits of the address code read from Table 2-3.

The switch is shown set for Talk address "M" (1001101) and Listen address "—" (0101101).

2-13. Circuit Options

2-14. A jumper option is available for selecting a filtered or unfiltered dc RECORDER OUTPUT. Table 2-2 lists the factory installed jumper connections and indicates how they may be reconnected to select the option.

2-15. Interconnections

2-16. Power Sensor. For proper system operation, the Power Sensor must be connected to the Power Meter using either the Power Sensor cable supplied with the Power Meter or any of the optional Power Sensor cables specified in Section I. Each of these cables employs a sensitivity line to enable the Power Meter to determine the operating range of the Power Sensor and thus, the true value of the input signal. For example, the 8481A and

8481H Power Sensors provide identical full scale outputs in response to input signal levels of 100 milliwatts and 3 watts, respectively. The difference in their sensitivity codes is detected by the Power Meter, however, and the Power Meter digital readout is automatically configured to indicate the appropriate value.

2-17. Hewlett-Packard Interface Bus Option 022. Interconnection data for Hewlett-Packard Interface Bus Option 022 is provided in Figure 2-3. Power Meter programming and output data format is described in Section III, Operation. HP-IB address selection is explained in Table 2-3.

2-18. Mating Connectors

2-19. Interface Connector. The interface mating connector for Option 022 is indicated in Figure 2-3.

2-20. Coaxial Connectors. Coaxial mating connectors used with the Power Meter should be US MIL-C-39012-compatible type N male or 50-ohm BNC male.

2-21. Operating Environment

2-22. The operating environment should be within the following limitations:

Temperature	0°C to +55°C
Humidity	<95% relative
Altitude	<4570 m (15,000 ft)

2-23. Bench Operation

2-24. The instrument cabinet has plastic feet and a fold-away tilt stand for convenience in bench operation. (The plastic feet are shaped to ensure self-aligning of the instruments when stacked.) The tilt stand raises the front of the instrument for easier viewing of the control panel.

2-25. Rack Mounting

2-26. Instruments that are narrower than full rack width may be rack mounted using Hewlett-Packard sub-module cabinets. If it is desired to rack mount one Power Meter by itself, order half-module kit, HP Part Number 5061-0057. If it is desired to rack mount two Power Meters side by side, order the following items:

a. Option 908 Rack Mounting Flange Kit—(For instruments without handles) HP Part Number 5061-9677.

b. Option 913 Rack Mounting Flange Kit—(For instruments with handles) HP Part Number 5061-9771.

c. Lock Link Kit—Kit consists of lock hardware and screws for joining instrument cabinets in several different configurations. Enough horizontal links (12 front, 6 rear) for three side-by-side joints (up to 4 instruments), and enough vertical links (4 front, 4 rear) to form two over/under joints (up to 3 instruments) HP Part Number 5061-0094.

2-27. Option 907 In addition to the rack mounting hardware, a front handle assembly (two provided) is also available for the Power Meter. The part number is HP 5061-9689.

2-28. STORAGE AND SHIPMENT

2-29. Environment

2-30. The instrument should be stored in a clean dry environment. The following environmental limitations apply to both storage and shipment:

Temperature	−40°C to +75°C
Humidity	<95% relative
Altitude	<7620 m (25,000 ft)

2-31. Packaging

2-32. Original Packaging. Containers and materials identical to those used in factory packaging are available through Hewlett-Packard offices. If the instrument is being returned to Hewlett-Packard for servicing, attach a tag indicating the type of service required, return address, model number, and full serial number. Also mark the container FRAGILE to assure careful handling. In any correspondence refer to the instrument by model number and full serial number.

2-33. Other Packaging. The following general instructions should be used for re-packaging with commercially available materials:

a. Wrap the instrument in heavy paper or plastic. (If shipping to a Hewlett-Packard office or service center, attach a tag indicating the service required, return address, model number, and full serial number.)

b. Use a strong shipping container. A double-wall carton made of 275-lb test material is adequate.

c. Use enough shock-absorbing material (3 to 4-inch layer) around all sides of instrument to provide firm cushion and prevent movement in the container. Protect the control panel with cardboard.

d. Seal the shipping container securely.

e. Mark the shipping container FRAGILE to assure careful handling.

Table 2-2. Circuit Options

Assembly	Service Sheet	Jumper Functions
A-D Converter Assembly A3	8	The factory-installed jumpers provide a filtered dc RECORDER OUTPUT which corresponds to the average power input to the Power Sensor. If external filtering is desired, reconnect the jumpers to provide the optional unfiltered dc RECORDER OUTPUT as shown on Service Sheet 8.

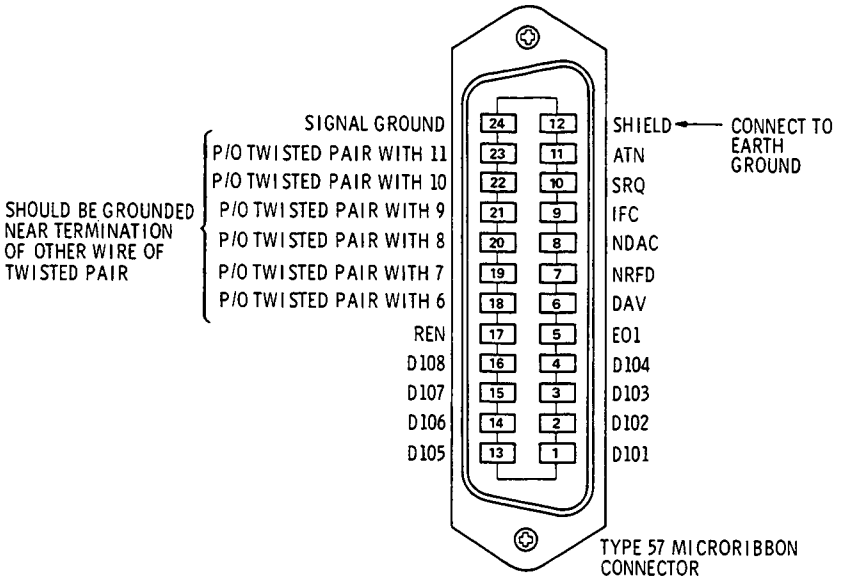
NOTE 2: HP-IB valid TALK addresses
NOTE 3: Logic 1 = 0V



Logic Levels

The Hewlett-Packard Interface Bus logic levels are TTL compatible, i.e., the true (1) state is 0.0 Vdc to 0.4 Vdc and the false (0) state is +2.5 Vdc to +5.0 Vdc.

Programming and Output Data Format

Refer to Section III, Operation.

Mating Connector

HP 1251-0293; Amphenol 57-30240.

Mating Cables Available

HP 10631A, 1.0 metre (3 ft.); HP 10631B, 2.0 metres (6 ft.)
HP 10631C, 4.0 metres (12 ft.); HP 10631D, 0.5 metre (1.5 ft.)

Cabling Restrictions

1. A Hewlett-Packard Interface Bus System may contain no more than 1.8 metres (6 ft.) of connecting cable per instrument.
2. The maximum accumulative length of connecting cable for any Hewlett-Packard Interface Bus System is 20.0 metres (65.6 ft.)

Figure 2-3. Hewlett-Packard Interface Bus Connection

SECTION III
OPERATION

3-1. INTRODUCTION

3-2. This section provides complete operating information for the Power Meter. Included in the section are a description of all front- and rear-panel controls, connectors, and indicators (panel features), operator's checks, operating instructions, power measurement accuracy considerations, and operator's maintenance.

3-3. Since the power meter can be operated locally as well as remotely via the Hewlett-Packard Interface Bus (Option 022), the information in this section is arranged accordingly. All information unique to a particular operating configuration is designated as such; where no distinction is made, the information is applicable to both standard and optional instrument operation.

3-4. PANEL FEATURES

3-5. Front and rear panel features of the Power Meter are described in Figure 3-1. This figure contains a detailed description of the controls, connectors and indicators.

3-6. OPERATOR'S MAINTENANCE

3-7. The only maintenance the operator should normally perform is replacement of the primary power fuse located within Line Module Assembly A11. For instructions on how to change the fuse, refer to Section II, Line Voltage Selection.

CAUTION

Make sure that only fuses with the required rated current and of the specified type (normal blow, time delay, etc.) are used for replacement. The use of repaired fuses and the short-circuiting of fuseholders must be avoided.

3-8. OPERATOR'S CHECKS

3-9. A procedure for verifying the major functions of the Power Meter is provided in Figure 3-2. The procedure is divided into two parts: Local Operation and Remote Hewlett-Packard Interface Bus Operation. For a standard instrument it is only necessary to perform the Local Operation procedure. For units equipped with the remote option, the Local Operation procedure should be performed first to establish a reference against which remote operation can be verified. Information covering remote programming of the Power Meter is provided in the following paragraphs, and a Hewlett-Packard Interface Bus Verification Program is provided in Section VIII, Service.

3-10. LOCAL OPERATING INSTRUCTIONS

3-11. Figure 3-3 provides general instructions for operating the Power Meter via the front-panel controls.

WARNING

Any interruption of the protective (grounding) conductor (inside or outside the instrument) or disconnecting the protective earth terminal is likely to make this instrument dangerous. Intentional interruption is prohibited.

FRONT AND REAR PANEL FEATURES

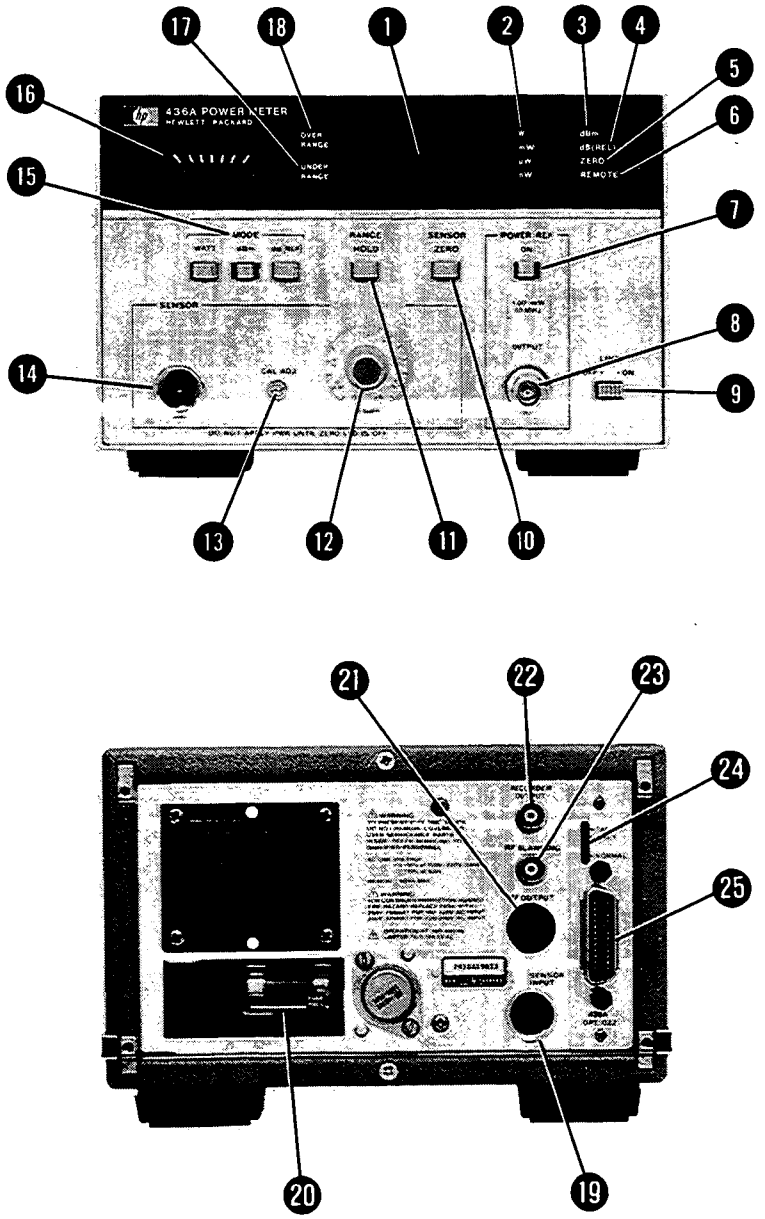


Figure 3-1. Front and Rear Panel Controls, Connectors, and Indicators (1 of 4)

FRONT PANEL FEATURES

1 Digital Readout: Indicates sign and decimal value of RF input power in Watts, dBm, or in dB relative to a stored reference.

2 Range Lamps (W,mW, μW, nW): Enabled in WATT MODE. Light to indicate level of Digital Readout indication.

3 dBm: Lights to indicate that dBm MODE is selected and Digital Readout indication is in dBm.

4 dB (REL): Lights to indicate that dB RELATIVE MODE is selected and Digital Readout indication is in dB with respect to stored reference level.

5 ZERO: Lights to indicate that power sensor auto-zero circuit is enabled and 23 RF BLANKING output is active.

6 REMOTE: Associated with the Hewlett-Packard Interface Bus Option 022. Lights to indicate that front-panel switches are disabled and power meter operation is being controlled via remote interface.

7 POWER REF ON: Alternate action pushbutton switch. When set to ON (in), enables 8 POWER REF OUTPUT.

8 POWER REF OUTPUT: Enabled when 7 POWER REF switch is set to ON. Provides RF output of 1.00 mW ± 0.70% for system calibration.

9 LINE ON-OFF: Alternate action pushbutton switch. Applies ac line power to Power Meter when set to ON (in).

10 SENSOR ZERO: Spring-loaded pushbutton switch. When pressed, enables Power Sensor auto zero loop for a period of approximately 4 seconds (5 ZERO lamp remains lit for the duration of this period).

NOTE

In order to auto-zero the Power Sensor, no RF input power may be applied while the 5 ZERO lamp is lit. If any RF input power is applied, it will introduce an offset that will affect all subsequent measurements.

11 RANGE HOLD: Alternate action pushbutton switch. When set to off (out) allows Power Meter to autorange as required to track changes in RF input power level. When set to on (in), locks Power Meter in last range enabled during autoranging.

12 CAL FACTOR %: Rotary switch which changes the gain of the Power Meter amplifier circuits to compensate for mismatch losses and effective efficiency of the Power Sensor. A chart of CAL FACTOR % versus frequency is printed on each Power Sensor.

13 CAL ADJ: Screwdriver adjustment for calibrating the Power Meter and any Power Sensor to a known standard.

14 SENSOR: Provides input connection for Power Sensor via Power Sensor Cable.

15 MODE: Interlocking pushbutton switches which configure the Power Meter to indicate average RF input power in watts, in dBm, or in dB with respect to a stored reference.

WATT: Alternate action pushbutton switch. When set to on (in), selects WATT Mode. (Power Meter is configured to indicate RF input power in watts, milliwatts, microwatts, or nanowatts.

dBm: Alternate action pushbutton switch. When set to on (in), selects dBm Mode. (Power Meter is configured to indicate RF input power in dBm.)

dB [REF]: Spring-loaded pushbutton switch. When pressed, selects dB Relative Mode. (RF input power level displayed on 1 Digital Readout is stored as dB reference and 1, Digital Readout changes to 0. Then Power Meter is configured to indicate changes in RF input level in dB with respect to stored reference.)

NOTE

When the dB relative mode is selected, the WATT Mode or dBm Mode can be selected by pressing the 15 WATT MODE or dBm Mode switch and the power applied to the Sensor is displayed on the 1 Digital

(continued)

Figure 3-1. Front and Rear Panel Controls, Connectors, and Indicators (2 of 4)

FRONT AND REAR PANEL FEATURES

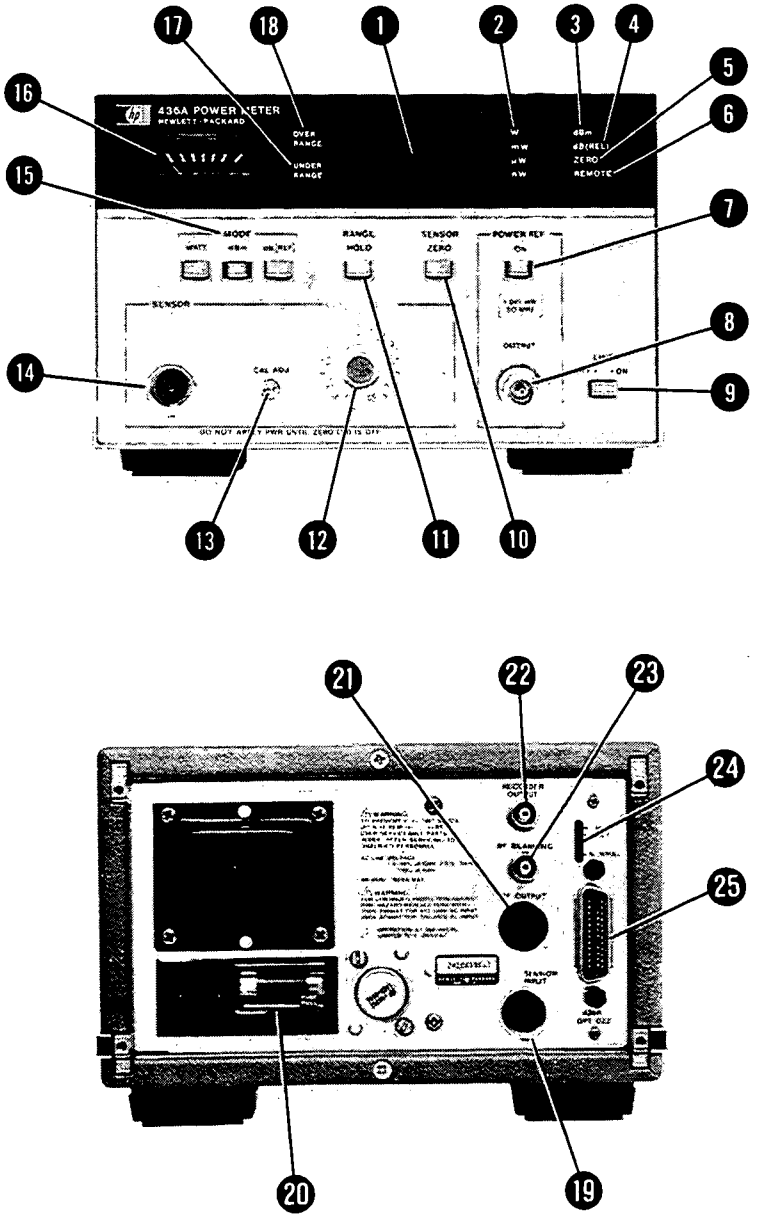

Figure 3-1. Front and Rear Panel Controls, Connectors, and Indicators (3 of 4)

FRONT PANEL FEATURES (cont'd)

(Note cont'd)

Readout. To return to the dB Relative Mode without changing the stored reference, press the 15 *WATT MODE or dBm MODE switch just enough to release the previously selected MODE switch. Do not press the* 15 *dB [REF] MODE switch or a new reference will be entered.*

WARNING

Any interruption of the protective (grounding) conductor inside or outside the instrument or disconnecting of the protective earth terminal is likely to make the instrument dangerous. Intentional interruption is prohibited. (See Section II.)

16 **Auxiliary Meter:** Provides a linear display with respect to RF input power. For any given range, a full-scale meter indication corresponds to the highest indication that can be obtained on the Digital Display.

17 **UNDER RANGE:** Lights to indicate that RF input power level is too small to be measured on selected range (autoranging disabled), or on Power Meter lowest range (autoranging enabled).

18 **OVER RANGE:** Lights to indicate that RF input power level is too large to be measured on selected range (autoranging disabled), or on Power Meter highest range (autoranging enabled).

REAR PANEL FEATURES

19 **SENSOR INPUT:** This rear panel input is wired in parallel with the front panel input 14 .

20 **Line Power Module:** Permits operation from 100, 120, 220, or 240 Vac. The number visible in window indicates nominal line voltage to which instrument must be connected (see Figure 2-1). Protective grounding conductor connects to the instrument through this module.

21 **POWER REF OUTPUT:** Takes the place of the front panel 8 POWER REF OUTPUT connector (Option 003 only).

22 **RECORDER OUTPUT:** Provides a linear output with respect to the input power. +1.00 Vdc corresponds to a full scale 1 Digital Readout indication on the range selected (refer to Table 1-1). The minimum load which may be coupled to the output is 1 MΩ.

23 **RF BLANKING:** Contact closure to ground when 10 SENSOR ZERO switch is pressed. May be used to remove RF input signal during automatic zeroing operation.

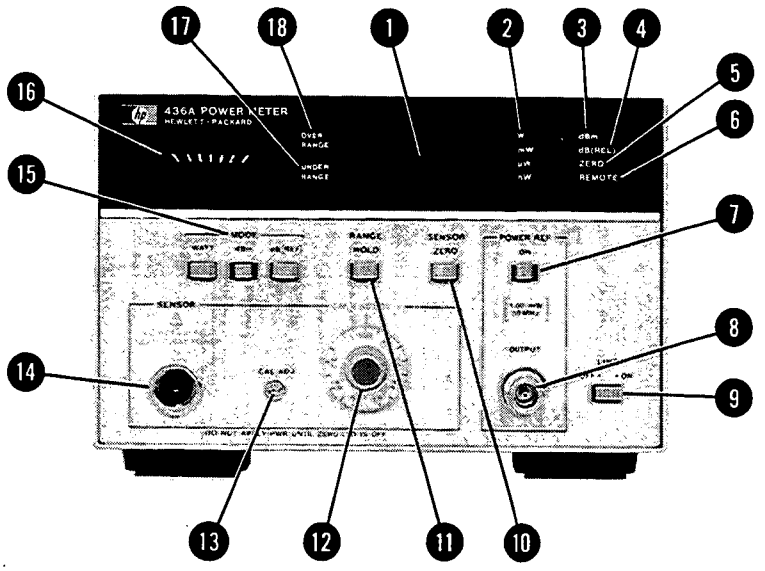
24 **TALK ONLY/NORMAL:** Associated with Hewlett-Packard Interface Bus Option 022 only. NORMAL position configures the Power Meter as a basic talker. TALK ONLY position is normally used only when there is no controller connected to the interface bus (e.g., when Power Meter is interconnected with an HP 5150A recorder).

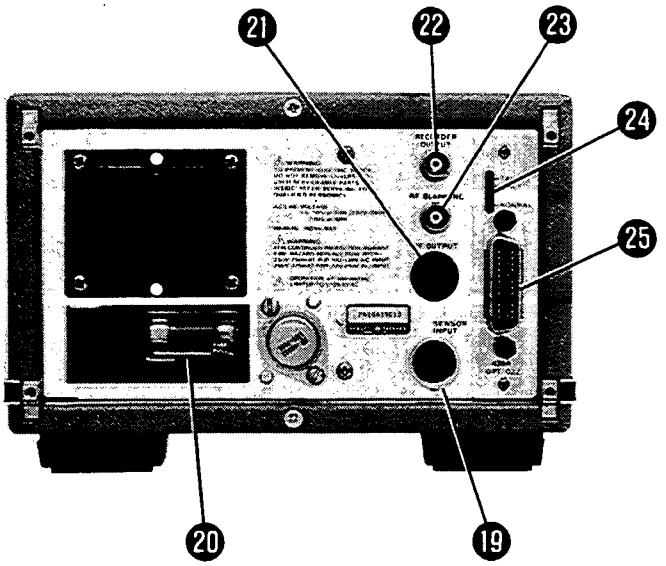
25 **Interface Connector:** For Power Meter connection to remote interface Option 022.

Figure 3-1. Front and Rear Panel Controls, Connectors, and Indicators (4 of 4)

OPERATOR'S CHECKS

LOCAL OPERATION





WARNINGS

BEFORE CONNECTING LINE POWER TO THIS INSTRUMENT, ensure that all devices connected to this instrument are connected to the protective (earth) ground.

BEFORE SWITCHING ON THIS INSTRUMENT, ensure that the line power (mains) plug is connected to a three-conductor line power outlet that has a protective (earth) ground. (Grounding one conductor of a two-conductor outlet is not sufficient.)

Figure 3-2. Operator's Checks (1 of 5)

OPERATOR'S CHECKS

LOCAL OPERATION (cont'd)

1. BEFORE SWITCHING ON THIS INSTRUMENT, ensure that the power transformer primary is matched to the available line voltage, the correct fuse is installed, and the safety precautions are taken. See Power Requirements, Line Voltage Selection, Power Cables, and associated warnings and cautions in Section II.

NOTE

If Power Meter is equipped with the Hewlett-Packard Interface Bus option, unplug data bus cable from connector J7 on rear panel before performing this procedure. When data bus cable is unplugged, Power Meter is automatically configured for Local operation via front-panel controls.

CAUTION

DO NOT TWIST the body of the power sensor when connecting or disconnecting it to other instruments. Twisting may cause major damage to the power sensor electrical circuits.

2. Connect the Power Sensor to the Power Meter with the Power Sensor Cable.

3. Connect the Power Sensor to the 8 POWER REF OUTPUT connector.

4. Connect the Power Cable to the power outlet and 20 Line Power Module receptacle, and set the 9 LINE switch to ON (in).

5. Set the remaining Power Meter switches as follows:

12 CAL FACTOR%	Set to reference calibration factor.
7 POWER REF	off (out)
15 MODE	WATT
11 RANGE HOLD	off (out)

NOTE

Perform steps 6 through 19 only if Power Meter is connected to 8481A, 8482A, or 8483A Power Sensor. If Power Meter is connected to 8481H or 8482H Power Sensor, proceed to step 20.

6. Press and hold the 10 SENSOR ZERO switch until the digital readout stabilizes. While the switch is held depressed, verify that the 5 ZERO lamp is lit and that the 23 RF BLANKING output is 0.0±0.4V.

7. Release the 10 SENSOR ZERO switch and verify that the 5 ZERO lamp remains lit for approximately four seconds. When the 5 ZERO lamp goes out, verify that the 1 Digital Readout indicates 0.00±0.02 μW.

8. Set the 11 RANGE HOLD and 7 POWER REF switches to ON (in). Verify that the 18 OVER-RANGE lamp lights and that the 1 Digital Readout blanks (1_._μW).

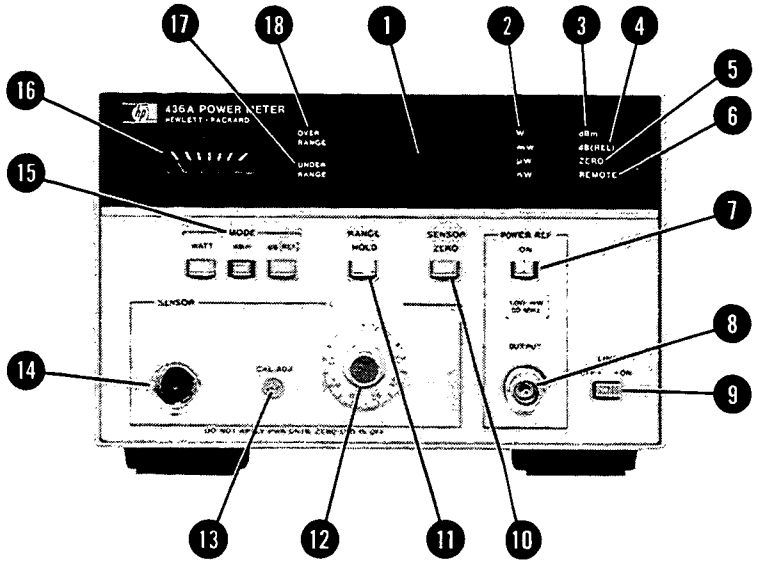
9. Set the 11 RANGE HOLD switch to off (out). Verify that the Power Meter autoranges to the 1 mW range and that the 18 OVER RANGE lamp goes out.

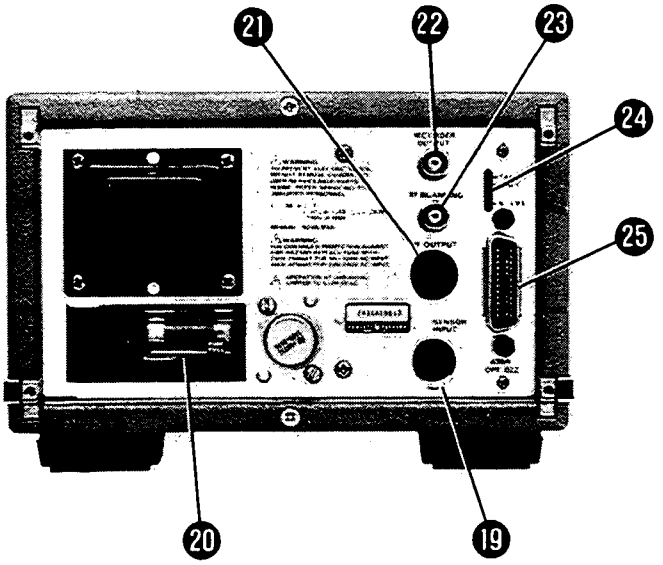
10. Adjust the 13 CAL ADJ control so that the 1 Digital Readout indicates 1.000 mW. Verify that the pointer on the 16 Auxiliary Meter is aligned between the last two marks, and that the 22 RECORDER OUTPUT is approximately 1.000 Vdc.

Figure 3-2. Operator's Checks (2 of 5)

OPERATOR'S CHECKS

LOCAL OPERATION (cont'd)





NOTE

Underscore (_) indicates blanked digit.

11. Rotate the 12 CAL FACTOR % switch through its range and verify that the 1 Digital Readout indication increases slightly for each successive step. Then return the 12 CAL FACTOR % switch to 100.

Figure 3-2. Operator's Checks (3 of 5)

OPERATOR'S CHECKS

LOCAL OPERATION (cont'd)

12. Set the (15) dBm MODE switch to on (in) and verify that the (1) Digital Readout indicates −0.0 ± 0.01 dBm.

13. Set the (11) RANGE HOLD switch to on (in) and the (7) POWER REF switch to off (out). Verify that the (17) UNDER RANGE lamp lights and that the (1) Digital Readout blanks (−1_._ dBm).

14. Set the (11) RANGE HOLD switch to off (out) and verify that the (1) Digital Readout blanked indication changes to −3_._. The new indication verifies that the Power Meter has autoranged to the most sensitive dBm range.

15. Set the (11) RANGE HOLD and (7) POWER REF switches to ON (in). Verify that the (18) OVER RANGE lamp lights and that the (1) Digital Readout blanked indication changes to −1_._.

16. Set the (11) RANGE HOLD switch to off (out) and verify that the (1) Digital Readout indicates −0.00 ± 0.01 dBm. This new indication verifies that the Power Meter has autoranged properly.

17. Adjust the (13) CAL ADJ control fully counterclockwise and verify the (1) Digital Readout is not 0.00 dBm (-1.1 to -2.0 dBm typical).

18. Press the (15) dB [REF] MODE switch and verify that the (3) dBm lamp goes out, the (4) dB (REL) lamp lights, and the (1) Digital Readout changes to −0.00. This step verifies that the Power Meter can store a dB reference value and indicate RF input power levels in dB with respect to the stored reference.

19. Set the (15) WATT Mode switch to on (in) and readjust the (13) CAL ADJ control so that the (1) Digital Readout indicates 1.000 mW.

> **NOTE:** *Steps 20 through 28 are performed in lieu of steps 6 through 19 when the Power Meter is connected to an 8481H or an 8482H Power Sensor.*

20. Press and hold the (10) SENSOR ZERO switch until the (1) Digital Readout stabilizes. While the switch is held pressed, verify that the (5) ZERO lamp is lit and that the (23) RF BLANKING output is 0.0 ± 0.4V.

21. Release the (10) SENSOR ZERO switch and verify that the (5) ZERO lamp remains lit for approximately four seconds. When the (5) ZERO lamp goes out, verify that the (1) Digital Readout indicates 0.00 ± 0.02 mW.

22. Set the (7) POWER REF switch to ON (in) and adjust the (13) CAL ADJ control so that the (1) Digital Readout indicates 1.000 mW. Verify that the pointer on the (16) Auxiliary Meter is aligned between the last two marks, and that the (22) RECORDER OUTPUT is approximately 1.000 Vdc.

23. Rotate the (12) CAL FACTOR % switch through its range and verify that the (1) Digital Readout increases slightly for each successive step. Then return the (12) CAL FACTOR % switch to 100.

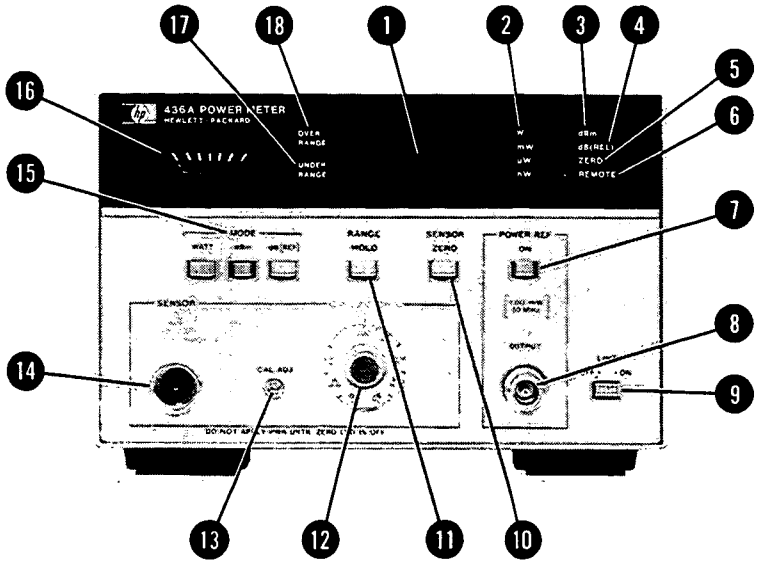
24. Set the (15) dBm MODE switch to on (in) and verify that the (1) Digital Readout indicates −0.00 ± 0.01 dBm.

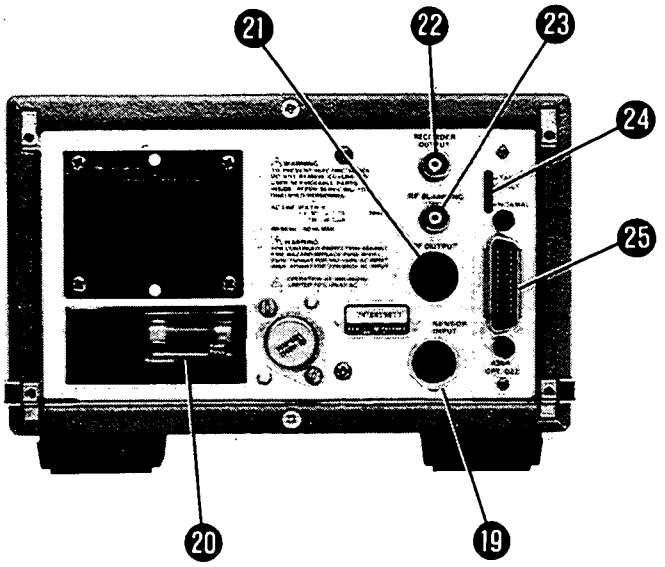
25. Set the (7) POWER REF switch to off (out). Verify that the (17) UNDER RANGE lamp lights and that the (1) Digital Readout blanks (−1 _._ dBm).

Figure 3-2. Operator's Checks (4 of 5)

OPERATOR'S CHECKS

LOCAL OPERATION (cont'd)





26. Set the 7 POWER REF switch to ON (in) and adjust the 13 CAL ADJ control fully counterclockwise and verify the 1 Digital Readout is not 0.00 dBm (-1.1 to -2.0 dBm typical).

27. Press the 15 dB [REF] Mode switch and verify that the 3 dBm lamp goes out, the 4 dB (REL) lamp lights, and the 1 Digital Readout changes to —0.00. This step verifies that the Power Meter can store a dB reference value and indicate input power levels in dB with respect to the stored reference.

28. Set the 15 WATT Mode switch to on (in) and readjust the 13 CAL ADJ control so that the 1 Digital Readout indicates 1.000 mW.

Figure 3-2. Operator's Checks (5 of 5)

OPERATING INSTRUCTIONS

LOCAL OPERATION

1. BEFORE SWITCHING ON THIS INSTRUMENT, ensure that the power transformer primary is matched to the available line voltage, the correct fuse is installed, and safety precautions are taken. See Power Requirement, Line Voltage Selection, Power Cables, and associated warnings and cautions in Section II.

NOTE

If Power Meter is equipped with the Hewlett-Packard Interface Bus Option, either unplug data bus cable from connector J7 on rear panel or program Power Meter for Local operation as described under Operating Instructions paragraph.

CAUTION

DO NOT TWIST the body of the power sensor when connecting or disconnecting it to other instruments. Twisting may cause major damage to the power sensor's electrical circuits.

2. Connect the Power Sensor to the Power Meter with the Power Sensor Cable.
3. Connect the Power Cable to the power outlet and (20) Line Power Module receptacle and set the (9) LINE ON-OFF switch to ON (in).
4. Set the remaining Power Meter switches as follows:

(12) CAL FACTOR %	100
(7) POWER REF	off (out)
(15) MODE	WATT
(11) RANGE HOLD	off (out)

5. Press and hold the (10) SENSOR ZERO switch and wait for the (1) Digital Readout to stabilize. Then verify that the (5) ZERO lamp is lit and that the (1) Digital Readout indicates 0.00 ±0.02.

NOTE

When auto-zeroing the Power Sensor, no RF input power may be applied while the ZERO lamp is lit. If any RF input power is applied, it will introduce an offset that will affect subsequent measurements.

6. Release the (10) SENSOR ZERO switch and wait approximately 4 seconds for the (5) ZERO lamp to go out.
7. Connect the Power Sensor to the (8) POWER REF OUTPUT connector and set the (7) POWER REF switch to ON (in). Then adjust the (13) CAL ADJ control so that the (1) Digital Readout indicates 1.000 mW.
8. Set the (7) POWER REF switch to off (out) and disconnect the Power Sensor from the (8) POWER REF OUTPUT connector.
9. Locate the calibration curve on the Power Sensor cover and determine the CAL FACTOR for the measurement frequency; set the Power Meter (12) CAL FACTOR % switch accordingly.

CAUTION

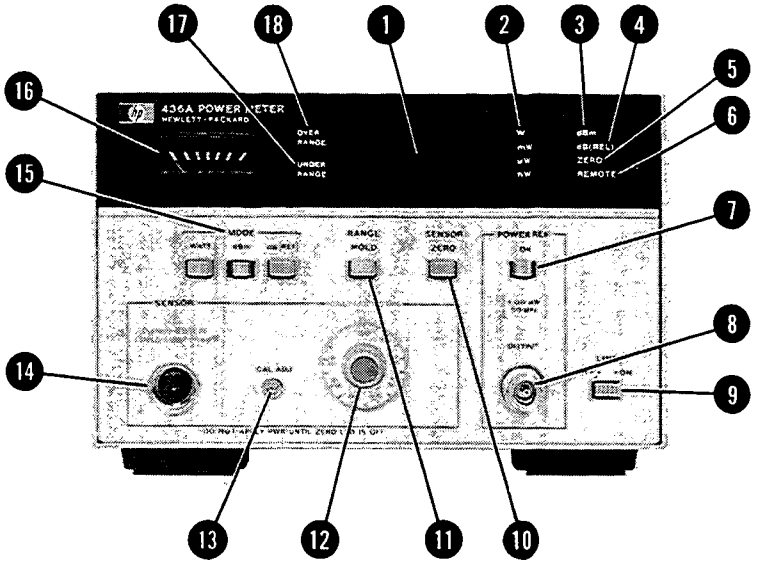
See Operating Precautions in the Power Sensor Operating and Service Manuals for maximum power levels which may be safely coupled to this system. Levels which exceed the limits may damage the Power Sensor, Power Meter or both.

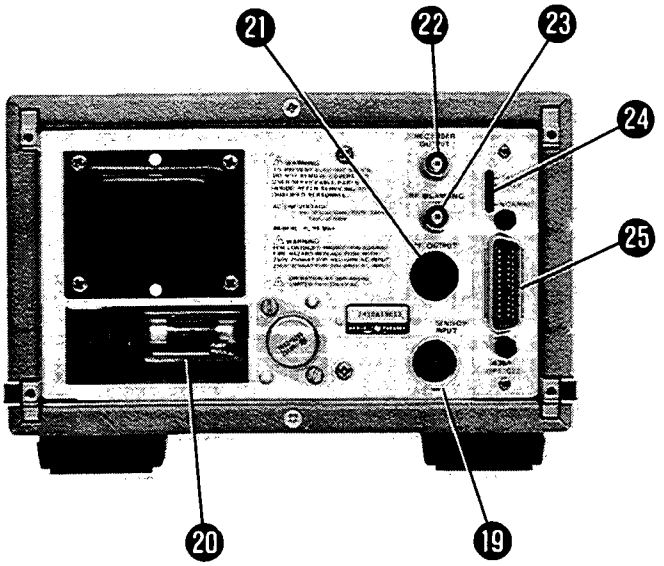
10. Set the (15) MODE and (11) RANGE HOLD switches for desired operation and connect the Power Sensor to the RF source.

Figure 3-3. Operating Instructions (1 of 3)

OPERATING INSTRUCTIONS

HEWLETT-PACKARD INTERFACE BUS (HP-IB) OPERATION





WARNINGS

BEFORE CONNECTING LINE POWER TO THIS INSTRUMENT, ensure that all devices connected to this instrument are connected to the protective (earth) ground.

BEFORE SWITCHING ON THIS INSTRUMENT, ensure that the line power (mains) plug is connected to a three-conductor line power outlet that has a protective (earth) ground. (Grounding one conductor of a two-conductor outlet is not sufficient.)

Figure 3-3. Operating Instructions (2 of 3)

OPERATING INSTRUCTIONS

HP-IB OPERATION (cont'd)

1. BEFORE SWITCHING ON THIS INSTRUMENT, ensure that the power transformer primary is matched to the available line voltage, the correct fuse is installed, and safety precautions are taken. See Power Requirement, Line Voltage Selection, Power Cables, and associated warnings and cautions in Section II.

CAUTION

DO NOT TWIST the body of the power sensor when connecting or disconnecting it to other instruments. Twisting may cause major damage to the power sensor's electrical circuits.

2. Connect the Power Sensor to the Power Meter with the Power Sensor Cable.
3. Connect the Power Meter to the **Remote Interface** (25).
4. Connect the Power Cable to the power outlet and (20) Line Power Module receptacles and set the (9) LINE ON-OFF switch to ON (in).
5. Set the Power Meter (12) CAL FACTOR % switch to 100 and the (7) POWER REF switch to off (out).
6. Set the remote enable input to the Power Meter to logical 1 (0.0 ± 0.4 Vdc) and program the Power Meter as follows:

Mode	WATT
Range	AUTO
(10) SENSOR ZERO	ON
(12) CAL FACTOR %	enabled

7. Wait for the (1) Digital Readout to stabilize, then verify that the (5) ZERO lamp is lit and that the (1) Digital Readout indicates 0.00 ± 0.02.

NOTE

When auto-zeroing the Power Sensor, no RF input power may be applied while the (5) ZERO lamp is lit. If any RF input power is applied, it will introduce an offset that will affect subsequent measurements.

8. Program the (10) SENSOR ZERO function to off by programming one of the other modes (WATT, dBm or dB Ref) and wait approximately 4 seconds for the (5) ZERO lamp to go out.
9. Connect the Power Sensor to the (8) POWER REF OUTPUT connector and set the (7) POWER REF switch to ON (in). Then adjust the (13) CAL ADJ control so that the (1) Digital Readout indicates 1.000 mW.
10. Set the (7) POWER REF switch to off (out) and disconnect the Power Sensor from the (8) POWER REF OUTPUT connector.
11. Locate the calibration curve on the Power Sensor to cover and determine the CAL FACTOR for the measurement frequency; set the Power Meter (12) CAL FACTOR % switch accordingly.

CAUTION

See Operating Precautions in the Power Sensor Operating and Service Manuals for maximum power levels which may be safely coupled to this system. Levels which exceed the limits may damage the Power Sensor, Power Meter or both.

12. Program the Power Meter to the desired Mode and Range, select the triggering most appropriate to the type of measurements anticipated, and connect the Power Sensor to the RF source.

Figure 3-3. Operating Instructions (3 of 3)

3-12. HEWLETT-PACKARD INTERFACE BUS REMOTE OPERATION

NOTE

For a quick and easy programming guide see Figure 3-8; for detailed information study paragraphs 3-12 through 3-61.

3-13. Hewlett-Packard Interface Bus (HP-IB) Option 022 adds remote programming and digital output capability to the Power Meter. For further information about the HP-IB, refer to IEEE Standard 488 and the Hewlett-Packard Catalog. Power Meter compatibility, programming, and data format is described in detail in the paragraphs which follow.

3-14. Compatibility

3-15. The Power Meter controls that can be programmed via the Hewlett-Packard Interface Bus are the MODE and SENSOR ZERO switches. The controls not programmable are the POWER REF and LINE switches. The CAL FACTOR % switch can be enabled and disabled via the interface bus but, when enabled, the calibration factor entered at the front-panel of the Power Meter is used.

3-16. In addition, specific ranges can be set and various triggering options are available to the programmer. This will be described in detail later.

3-17. The programming capability of the Power Meter will be described in terms of the twelve bus messages found in Table 3-1.

3-18. Data Messages

3-19. The Power Meter communicates on the bus primarily through data messages. It receives data messages that tell it what range to use, what mode to use, whether or not cal factor should be enabled, and what the measurement rate should be. It sends data messages that tell the measurement value, the mode and range the value was taken at, and what the instrument's status (see Table 3-4) was when it took the measurement.

3-20. Table 3-2 outlines the key elements involved in making a measurement. Indeed the Power Meter can be programmed to make measurements via the HP-IB by following only the sequence suggested in the table, and briefly referring to Tables 3-3, 3-4, (input and output data), and Fig. 3-8. However, to take advantage of the programming flexibility built into the Power Meter and minimize the time it takes to make a valid measurement, study the rest of the information in this section.

3-21. Receiving Data Messages

3-22. The Power Meter is configured to listen (receive data) when the controller places the interface bus in the command mode (ATN and REN lines low; IFC line high) and outputs listen address "—" (minus sign). The Power Meter then remains configured to listen (accept programming inputs when the interface bus is in the data mode) until it is unaddressed by the controller. To unaddress the Power Meter, the controller can either send the Abort Message (set the IFC line low) or send the Local Message (set the REN line high), or it can place the interface bus in the command mode and generate a universal unlisten command.

3-23. Data Input Format. The Power Meter does not require any particular data input format. It is capable of responding to each of the programming codes listed in Table 3-3 on an individual basis. Because it responds to these codes in the order it receives them, we recommend that the code for measurement rate be sent last.

3-24. Program Codes. Table 3-3 lists the program codes that the Power Meter responds to and the functions that they enable. In the listen mode, the Power Meter can handshake in 0.5 μs. The time required for the Power Meter to respond to the programming command, however, depends on where the Power Meter is in the operating program (see Figure 3-6). The overall worst case time for Power Meter response to a programming command is 2.5 seconds, the minimum response time is approximately 100 microseconds.

NOTE

In addition to the program codes listed in Table 3-3, Power Meter operation will be affected by all other program codes shown in columns 2, 3, 4, and 5 of Table 2-2, except (SP!"#$%&). Thus care should be taken to address the Power Meter to unlisten before sending these programming commands to other instruments on the interface bus.*

3-25. Programming the Range. Remote range programming is slightly different than Local range selection. For Local operation the Power Meter auto-ranges. For Remote operation, the program codes have provision for direct selection of the de-

Table 3-1. Message Reference Table

Message and Identification	Applicable	Command and Title	Response
Data	Yes	T3 Talker, L2 Listener, AH1 Acceptor Handshake SH1 Source Handshake.	Power Meter changes mode, range, measurement rate, and Cal Factor enable or disable. It outputs status and measurement data.
Trigger (DT0)	No	Device Trigger	The Power Meter does not respond to a Group Execute Trigger. However, remote trigger capability is part of the Data message (measurement rate).
Clear (DC4)	Yes No	DCL Device Clear SDC Selected Device Clear	Upon receipt of DCL command, Power Meter functions are set for Watt Mode, Auto Range, Cal Factor Disable and Measurement rate Hold.
Remote (RL2)[1]	Yes	REN Remote Enable	Power Meter goes to remote when addressed to listen, and REN is true (low).
Local (RL2)[1]	Yes No	REN Remote Disable GTL Go to Local	Power Meter goes to local when REN is false (high). Power Meter does not respond to GTL command.
Local Lockout (RL2)[1]	No	REN Remote Disable	Power Meter does not respond to LLO command.
Clear Lockout/ Set Local (RL2)[1]	Yes	REN Remote Disable	Returns all devices on bus to local operation.
Pass Control/Take Control (C∅)	No	Controller	Power Meter cannot act as bus controller.
Require Service (SR∅)	No	SRQ Service Request	Power Meter does not request service.
Status Byte	No	SPE Serial Poll Enable SPD Serial Poll Disable	Power Meter does not respond to a Serial Poll
Status Bit (PP∅)	No	PP Parallel Poll	Power Meter does not respond to a parallel poll.
Abort	Yes	IFC Interface Clear	Power Meter stops talking or listening.

[1]The 436A does not have complete RL2 capability since it cannot process the Go-To-Local (GTL) message.

NOTE

Complete HP-IB capability as defined in IEEE Std. 488 is AH1, C0, DC2, DT0, LE0, PP0, RL2, SH1, SR0, T3, TE0.

Table 3-2. Measurement Sequence

MEASUREMENT SEQUENCE

Event 1 {controller talk and Power Meter listen} , {Program Codes}

- {controller talk and Power Meter listen}: See controller manual. Power Meter Listen address factory set to "—" (see Tables 2-1 and 2-2).
  e.g., CMD "?U—","9D+V"
  wrt "pmrd","9D+V"
- {Program Codes}: Program codes to configure one or more of the following (see Table 3-3):
  1. Range
  2. Remote mode (Watt, dBm, dB [Ref]
  3. Cal Factor
  4. Measurement Rate (and trigger)

Event 2 Response time for meter's digital (operating program) circuitry (see Table 3-5 and Figures 3-5 and 3-6).

Event 3 Meter takes measurement; data available.

Event 4 Additional delay to allow analog circuits to settle; necessary only if on Range 1 (most sensitive) or if settling time measurement rates are not being used (see Figure 3-4). Here are some suggestions:*

1. Load reading into controller (event five) and check data string for range (look at character number 1 or check measured value).
2. If Power Meter is on Range 1, wait 10 seconds and take another reading.
3. If settling time measurement rates are being used and meter is *not* on Range 1, use the first reading.
4. If settling time measurement rates are *not* being used, determine the range and branch to an appropriate delay: Range 2, one second; Ranges 3-5, 0.1 second.

Event 5 {universal unlisten, controller listen and Power Meter talk} , {variable name}

- See controller manual. Power Meter Talk address factory set to "M" (see Tables 2-1 and 2-2).

*There are other ways to ensure that readings are not affected by analog circuit settling time. Also, these recommended delays are worst case. A thorough understanding of the material in this section will allow you to optimize measurement time for your particular application. For example, if the power level is not changing, the controller can average at least two consecutive readings to see if the result is still settling.

EXAMPLE PROGRAM SEQUENCE:

Line 1 {controller talk and power meter listen}, **"9D+T"**

- "9D+T":
  - Measurement Rate: Trigger with settling time.
  - Cal Factor Disable (100%)
  - dBm Mode
  - Auto Range

Line 2 {universal unlisten, controller listen and power meter talk} , {variable name}

- Power meter outputs measured value to controller.

Line 3 {Controller checks value in variable for Range 2 threshold (e.g., <—20 dBm for Model 8482A Power Sensor). If value is below threshold, program branches to line 4. If value is above threshold, program branches to line 5.}

Line 4 {wait 10 seconds, then go to line 1 } .

Line 5 {continue}.

Table 3-3. Hewlett-Packard Interface Bus Input Program Codes

Function	Program Codes	
	ASC II	DECIMAL
Range		
Least sensitive	5	53
	4	52
	3	51
	2	50
Most sensitive	1	49
Auto	9	57
MODE		
Watt	A	65
dB (Rel)	B	66
dB [Ref]	C	67
dBm	D	68
Sensor auto-zero	Z	90
CAL FACTOR		
Disable (100%)	+	43
Enable (front-panel switch setting)	—	45
Measurement Rate		
Hold	H	72
Trigger with setling time	T	84
Trigger, immediate	I	73
Free Run at maximum rate	R	82
Free Run with setling time	V	86

sired range as well as for selection of the autorange function.

3-26. Programming the Mode. Remote mode programming is similar to Local mode selection. The sequence shown in Example 1 is recommended for taking dB (Rel) readings from a dB [Ref] reference.

3-27. Programming Auto-Zero. The Power Meter is remotely zeroed the same way it is zeroed in local. Example 2 shown on the next page outlines the program steps that should be written. Specific examples are provided later in this Section. (Refer to Tables 3-3 and 3-4 for Power Meter input and output strings. Refer to controller manual for programming syntax.)

3-28. Programming Cal Factor. While the setting of the front panel CAL FACTOR switch cannot be remotely changed, the programmer does have a choice. If CAL FACTOR enable is programmed, then the Power Meter uses the Cal Factor set by the switch. If CAL FACTOR Disable is programmed, then the Power Meter uses a Cal Factor of 100%, but the program can correct for cal factor by computing the corrected reading from the actual reading and the cal factor (a Cal Factor table must be stored in an array).

3-29. Programming Measurement Rate. A feature that is only available via remote programming is selection of standby, triggered, or free running operation of the Power Meter. (During Local operation, the Power Meter is allowed to free run with approximately 133 milliseconds allowed for settling time between measurements.) The specific remote triggering capabilities are:

a. **Hold (H)** — when the power meter is programmed to Hold, it is inhibited from taking measurements and from outputting data. Thus, it is set to a predetermined reference condition from which a measurement can be triggered synchronously to some external event.

b. **Trigger Immediate (I)** — this programming command directs the Power Meter to make one measurement and output the data in the minimum possible time, then to go into Hold until the next triggering command is received. It does not allow settling time prior to the measurement.

c. **Trigger with Delay (T)** — this trigger command is identical to the trigger immediate command except that it causes the Power Meter to execute a settling-time delay subroutine before taking a measurement and outputting data.

EXAMPLE 1 (dB Rel/dB Ref)

1	{controller talk and Power Meter listen}, **"CT"**	Sets reference at present RF input level.
2	{controller talk and Power Meter listen}, **"BT"**	Takes first reading relative to set reference
3	{universal unlisten, controller listen and Power Meter talk}, {Variable name}	Power Meter outputs reading to controller
4	{controller talk and Power Meter listen}, **"T"**	Takes subsequent readings
5	{universal unlisten, controller listen and Power Meter talk}, {Variable name}	Power Meter outputs reading to controller

Receiving Data Messages (cont'd)

d. **Free run at maximum rate (R)** — this programming command is normally used for asynchronous operation of the Power Meter. It directs the Power Meter to continuously take measurements and output data in the minimum possible time. It does not allow settling time prior to each measurement.

e. **Free run with delay (V)** — this programming command is identical to the previous command except that it causes the Power Meter to execute a settling-time delay subroutine prior to each measurement.

3-30. When programming the Power Meter for synchronous triggered operation, there are two factors that the programmer must consider to ensure the validity of the output measurement data. The first factor is the time that it takes the Power Meter to respond to a full scale change in input power level. A typical Power Meter response curve is shown in Figure 3-4. By comparing this curve with the measurement timing cycle shown in Figure 3-5 and summarized in Table 3-5, the validity of the Power Meter output can be tabulated according to operating range and triggering interval versus change in input power level. A general summary of this information is as follows:

a. When the Power Meter is programmed for trigger with settling time operation, sufficient time is provided for the Power Meter to settle to the input power level on all ranges except Range 1 (most sensitive range). On Range 1 approximately 10 seconds (9—10 measurements) are required for the Power Meter to settle to the input power level.

b. When the Power Meter is programmed for trigger immediate operation, the desired amount of settling time can be incorporated into the program.

3-31. Programming the Local to Remote Mode Change. The second factor that must be considered when programming the Power Meter for synchronous triggered operation is whether the first trigger is sent immediately after terminating local operation. As illustrated in Figure 3-6, the Power Meter will not respond to the first trigger following a local to remote transistion until it completes the previously initiated measurement and display cycle. Thus, the first data output of the Power Meter may not be valid. The options available to the programmer are:

1. Send a trigger command (Data Message) and discount the first data output. Upon outputting the data, the Power Meter will go to Hold and operate synchronously starting with the next trigger command.

2. Wait approximately 2.5 seconds after placing the Power Meter in remote and sending the first program trigger command (Data Message).

3. Send a Clear Message (DCL) immediately after placing the Power Meter in remote. This will restart the Power Meter operating program.

3-32. Sending Data Messages from the Power Meter

3-33. The (24) TALK ONLY/NORMAL switch (see Figure 3-3) enables the Power Meter to func-

EXAMPLE 2 (Auto Zero)

1	Remove RF power from power sensor (or set it at least 20 dB below the lowest range of the sensor).	
2	{controller talk and Power Meter listen}, **"Z1T"**	Send zero trigger program codes.
3	{universal unlisten, controller listen and Power Meter talk} ,{variable name}	Read measured value data from meter (characters 4, 5, 6, and 7).
4	If absolute value of measured data is not < 2 (0000 ± 0002) then branch to step 2; if it is, then continue. (Although this step averages three seconds, it may take as long as 10 seconds to execute.)	
5	{controller talk and Power Meter listen} , **"9 + DI"**	Send normal measurement mode program codes.
6	{universal unlisten, controller listen and Power Meter talk} ,{variable name}	Read status character (number 0) from motor's output data string.
7	Check status character for an auto zero loop enabled condition (character 0 $\geq$ decimal 84). If loop is enabled then branch to step 5. If not, then continue. (This step takes approximately four seconds to execute.)	

Sending Data Messages (cont'd)

tion as a basic talker or in the talk only mode. If the basic talker function is selected, the Power Meter is configured to talk when the controller places the interface bus in the command mode and outputs talk address M. The Power Meter then remains configured to talk (output data when the interface bus is in the data mode), until it is unaddressed to talk by the controller. To unaddress the Power Meter, the controller can either send an Abort Message (generate an interface clear), or it can place the interface bus in the command mode and output a new talk address or a universal untalk command. Examples of addressing and unaddressing the Power Meter to talk are provided in Table 3-2 and Figure 3-8.

3-34. Talk Only Mode. When the Power Meter functions in the Talk Only Mode, it is automatically configured to TALK when the interface bus is in the Data Mode and there is at least one listener. Since there can only be one talker at a time per interface bus, this function is normally selected only when there is no controller connected to the system (e.g., when the Power Meter is interconnected to an HP 5150A recorder).

3-35. Output Data Format. The output data format of the Power Meter is shown and described in Table 3-4.

3-36. The output data is a fourteen character string that is provided once at the end of each measurement cycle. It is a good idea to read at least part of this string into the controller after each measurement cycle, even if it will not be used. This will avoid the possibility of incorrect data being read after some future measurement.

3-37. The string begins with a status character and ends with a carriage return and a line feed. Measured value is formatted as a real constant: plus or minus four digits (leading zeros not suppressed) followed by an exponential multiplier. The decimal point is not provided because it is understood that it follows the four "measured value" digits. The two-digit exponent is always negative.

3-38. Data Output Time. Figure 3-6 provides a simplified flow chart of Power Meter operation. As shown in the figure, the Power Meter operates according to a stored program and can only output

Table 3-4. Hewlett-Packard Interface Bus Output Data String

	Definition		Character ASC II	Character Decimal

Table 3-5. Power Meter Remote Access Time to First Output Data Character

Measurement Triggering	Mode	Worst Case Access Time to First Output Character		
		Range 1 or 2	Range 3,4 or 5	Auto Range
Free Run at maximum rate, Trigger immediately	WATT dBm dB (REL) db [REF]	70 ms 90 ms 160 ms 160 ms	70 ms 90 ms 160 ms 160 ms	Compute measurement times from Figure 3-5 and add measurement time of each range that Power Meter steps through to delay time listed below. From To Delay: 1 2 1070 ms; 2 1 1070 ms; 2 3 133 ms; 3 2 1070 ms; 4 3,5 133 ms; 5 4 133 ms Examples: Starting at block labeled "HOLD" in Figure 3-5, worst case access time for range 1—3, and range 3—1 changes with WATT MODE selected are: Range 1 70 ms; 1—2 Delay 1070 ms; Range 2 53 ms; 2—3 Delay 133 ms; Range 3 53 ms; 1379 ms Range 3 50 ms (33+17); 3—2 Delay 1070 ms; Range 2 33 ms; 2—1 Delay 1070 ms; Range 1 33 ms; 2256 ms
Free Run with settling time or Trigger with settling time.	WATT dBm dB (REL) db [REF]	1130 ms 1130 ms 1200 ms 160 ms	190 ms 190 ms 260 ms 160 ms	Compute worst case Auto Range access times from Figure 3-5. Examples: Starting at block labeled "HOLD" in Figure 3-5; worst case access times for range 1-3 and range 3-1 with WATT MODE selected are: 1 - 3 (1070 + 53, +1070 + 53 + 133 + 53) =2432 ms 3-1(133+33+1070+33+1070+33) = 2372 ms.

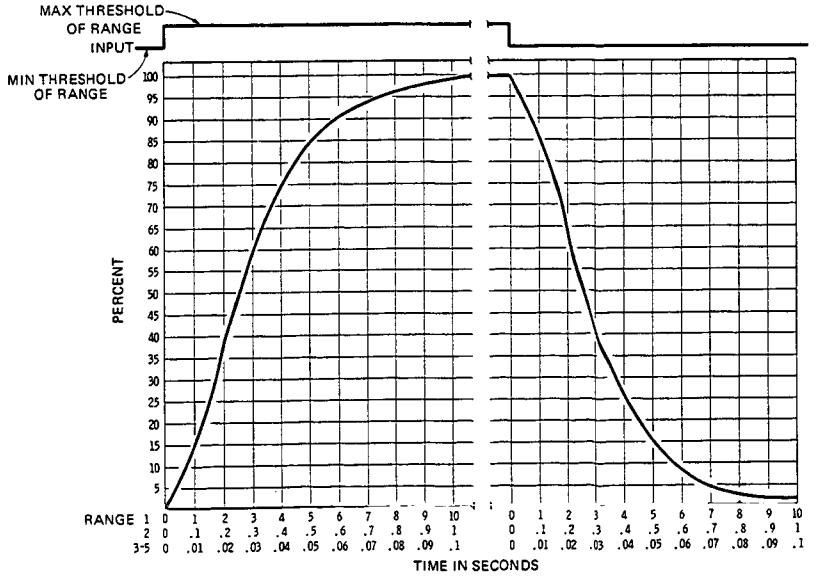

Figure 3-4. Power Meter Response Curve (Settling Time for Analog Circuits)

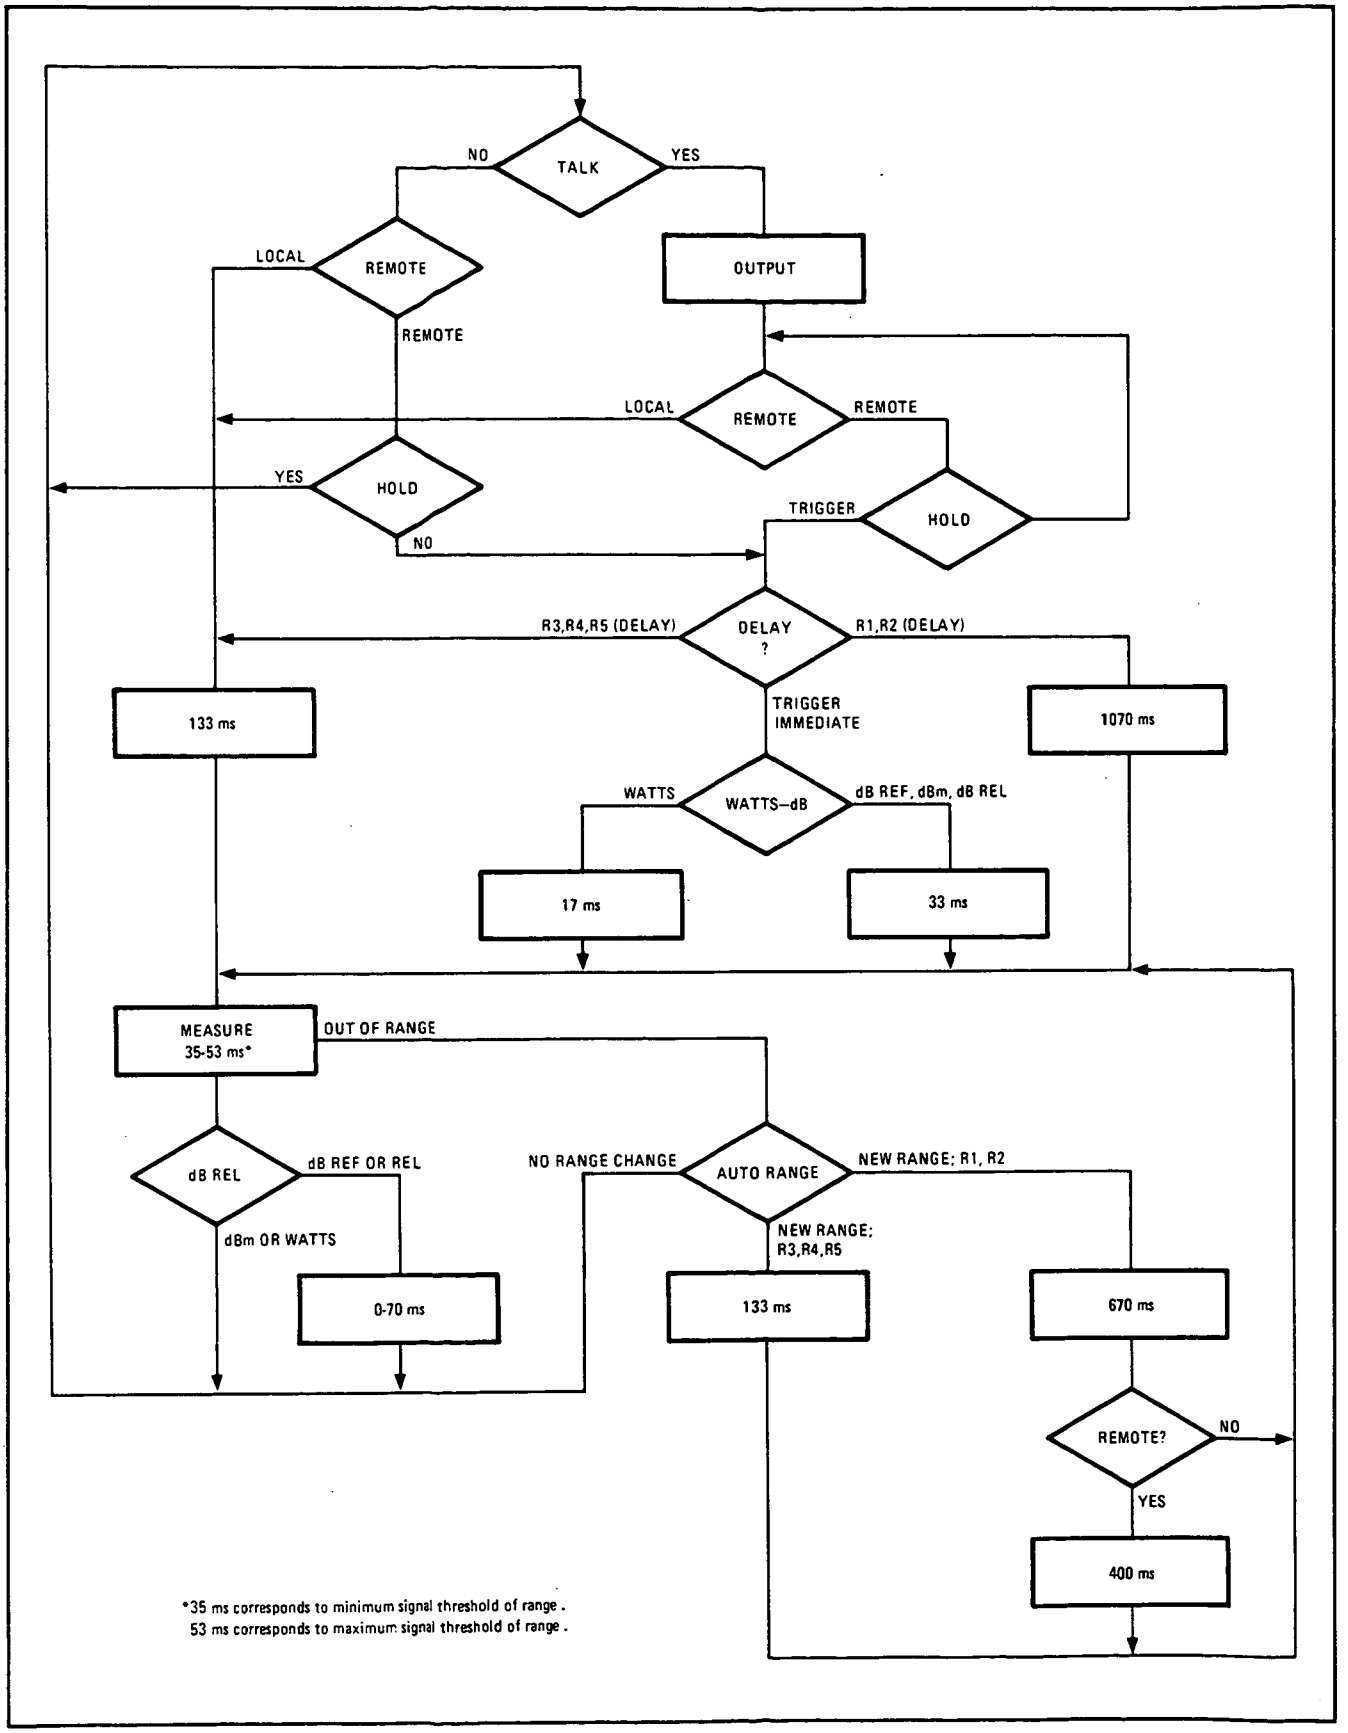

Figure 3-5. Measurement Timing Flow Chart (Settling Time for Digital Circuitry)

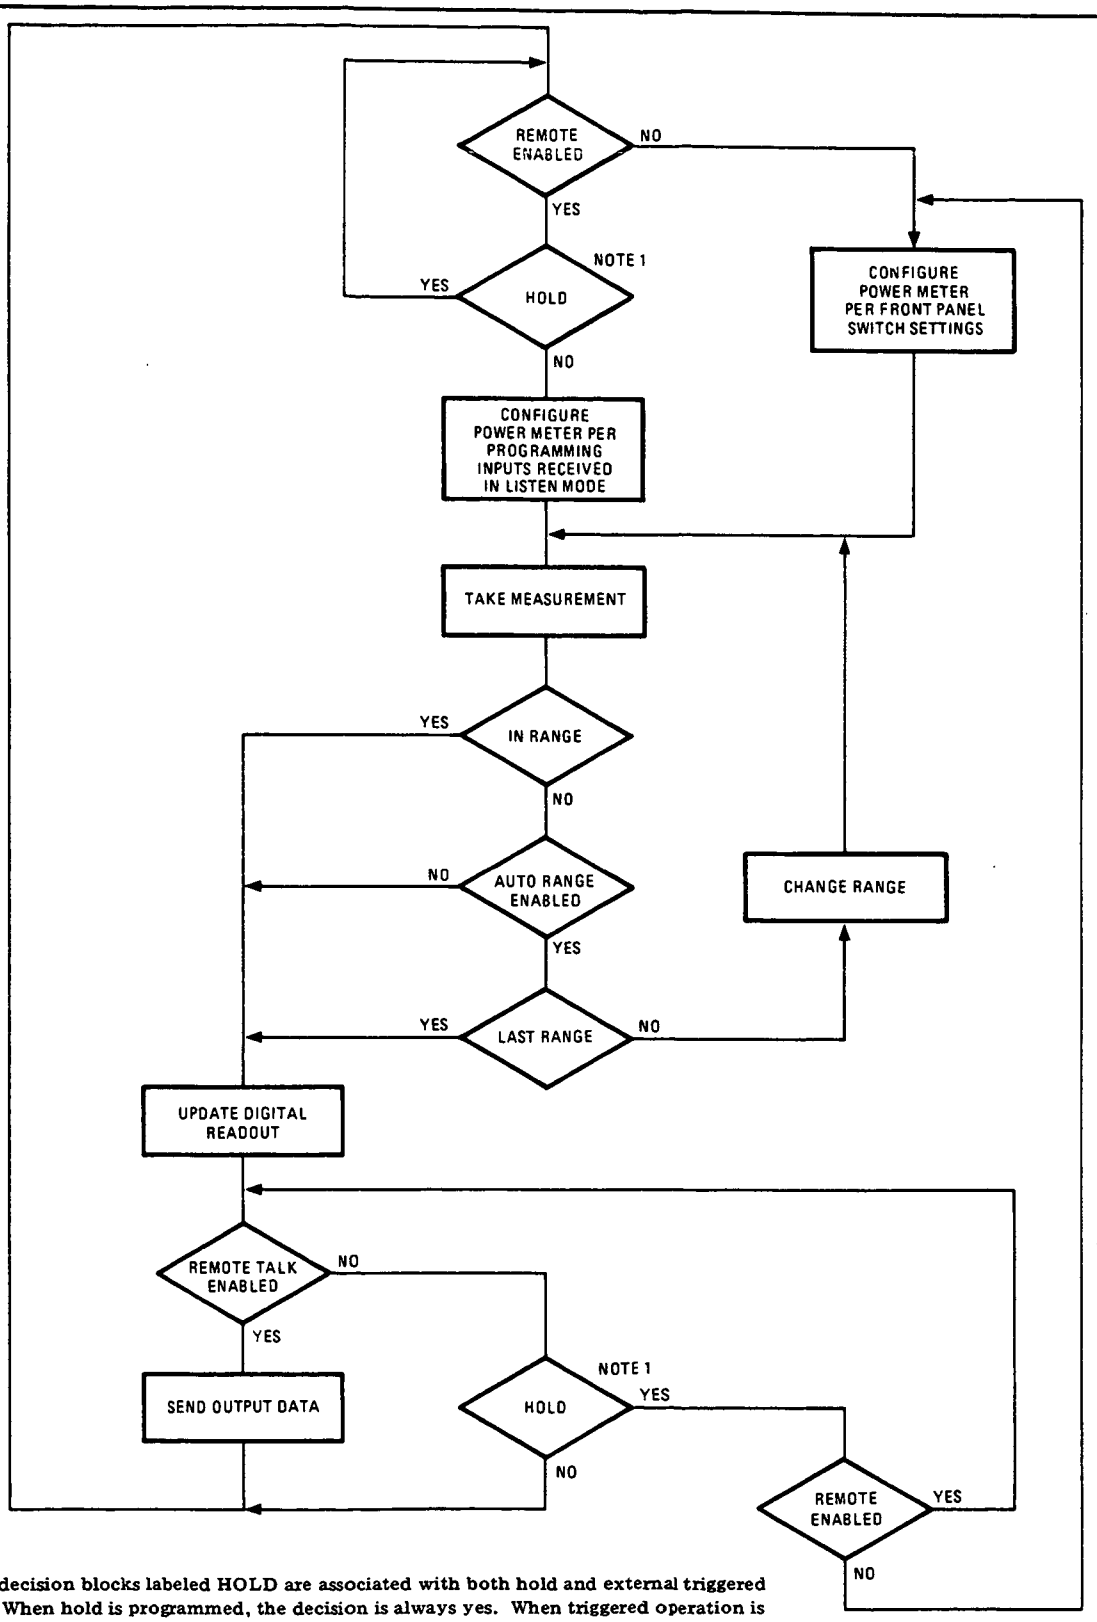

Note: The decision blocks labeled HOLD are associated with both hold and external triggered operation. When hold is programmed, the decision is always yes. When triggered operation is programmed, the decision is no, starting when a trigger is received and continuing until the digital readout is updated. The decision then reverts to yes until receipt of the next trigger. Thus, when the Power Meter is programmed for external triggering, it will provide output data only after receiving a trigger in the listen mode.

Figure 3-6. Operating Program Simplified Flow Chart

Sending Data Messages (cont'd)

data after taking a measurement. Thus, when the interface bus is placed in the data mode after the Power Meter has been addressed to talk, the time required to access the first output data character depends on where the Power Meter is in the operating program, and on how the Power Meter has been previously programmed (see Programming Codes above.) Worst case access times for each of the Power Meter operating configurations are listed in Table 3-5.

3-39. After the first output character is sent, the remaining characters are sent at either a 10-kHz rate (infinitely fast listener) or at the receive rate of the slowest listener.

3-40. Receiving the Trigger Message

3-41. The Power Meter has no provision for responding to a Trigger Message (bus command GET). Power Meter triggering is done with the Data Message (through the Measurement Rate Program Codes).

3-42. Receiving the Clear Message

3-43. The Power Meter has provision for responding to the DCL bus command but not the SDC bus command. Upon receipt of the DCL command, the Power Meter operating program is reset causing the Power Meter to enter the Hold state shown at the top of Figure 3-6, and the HP-IB circuits are configured to provide Watt Mode, Auto Range, and Cal Factor Disable outputs.

3-44. Receiving the Remote Message

3-45. When the Power Meter recieves the Remote Message (REN line low) it completes the rest of its current measurement cycle (see Figure 3-6) and then goes to remote. See the Local to Remote Mode Change (paragraph 3-31) for information about how to program the local to remote mode change.

3-46. Receiving the Local Message

3-47. The Power Meter does not respond to the GTL (go to local) bus command. It reverts to local operation when the REN (remote enable) bus line goes false (high).

3-48. Receiving the Local Lockout and Clear Lockout Set Local Messages

3-49. The Power Meter does not respond to the Local Lockout Message (LLO bus command). It responds to the Clear Lockout/Set Local Message in that when the REN bus line goes false, it will revert to local operation.

3-50. Receiving the Pass Control Message

3-51. The Power Meter has no provision for operation as a controller.

3-52. Sending the Required Service Message

3-53. The Power Meter does not have provision for requesting service.

3-54. Sending the Status Byte Message

3-55. The Power Meter does not respond to a Serial Poll.

3-56. Sending the Status Bit Message

3-57. The Power Meter does not respond to a Parallel Poll.

3-58. Receiving the Abort Message

3-59. When the Power Meter receives an Interface Clear command (IFC), it stops talking or listening.

3-60. Test of HP-IB Operation

3-61. Figure 3-7 outlines a quick check of the 436A remote functions. This gives the user two alternatives for testing the power meter: 1, write a program corresponding to Figure 3-7 for a quick check or 2, use the program in Section VIII for complete testing and troubleshooting.

3-62. POWER MEASUREMENT ACCURACY

3-63. A power measurement is never free from error or uncertainty. Any RF system has RF losses, mismatch losses, mismatch uncertainty, instrumentation uncertainty and calibration uncertainty. Measurement errors as high as 50% are not only possible, they are highly likely unless the error sources are understood and, as much as possible, eliminated.

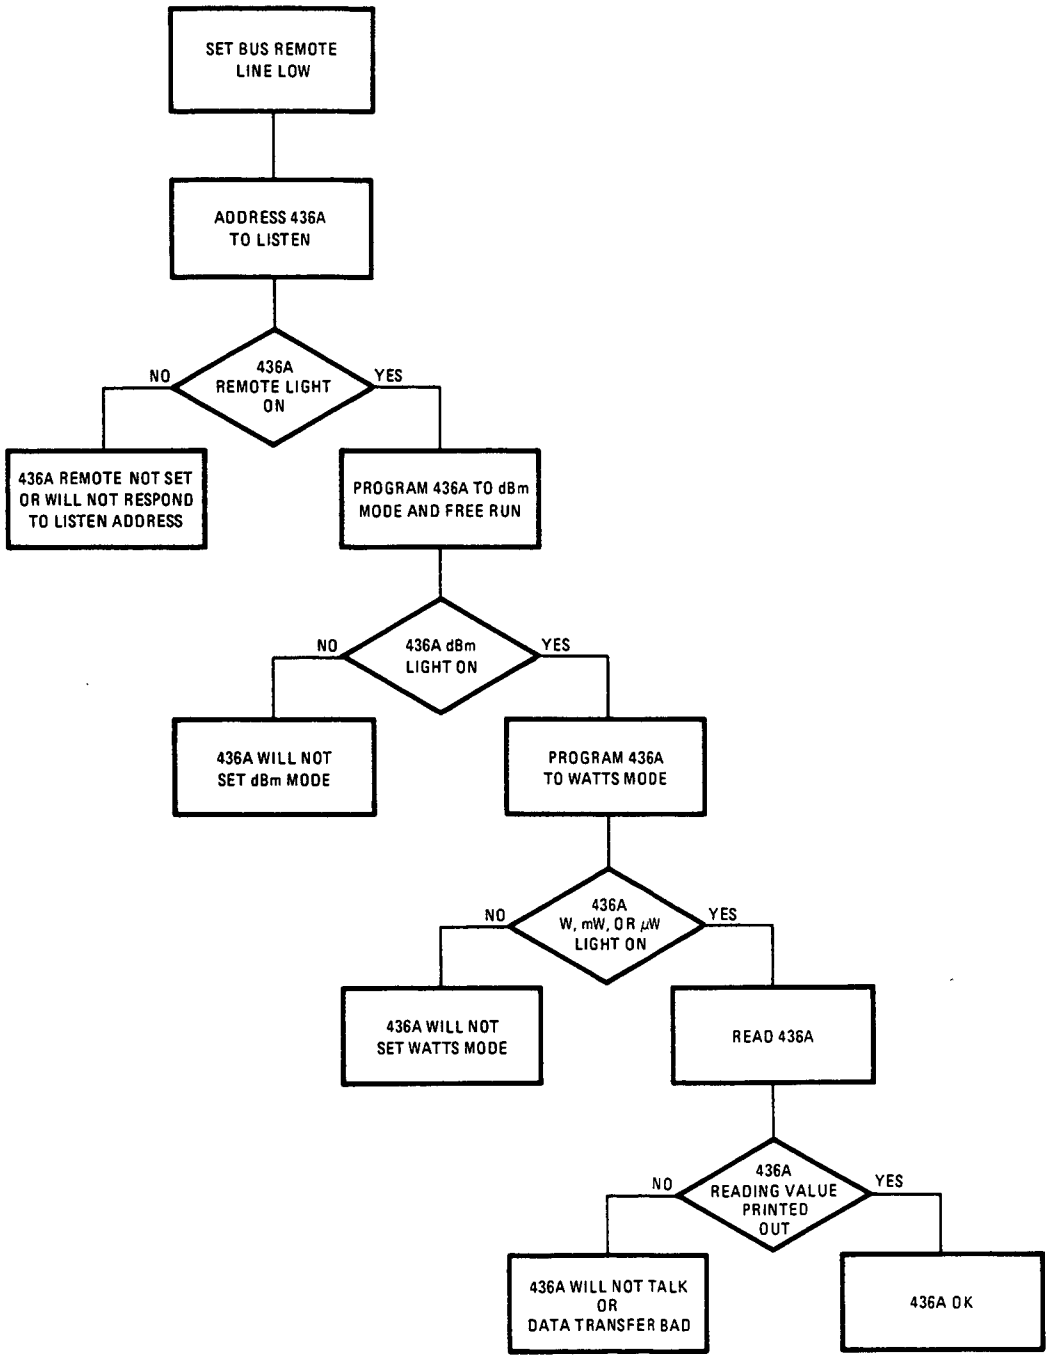

Figure 3-7. Test of HP-IB Operation Flowchart

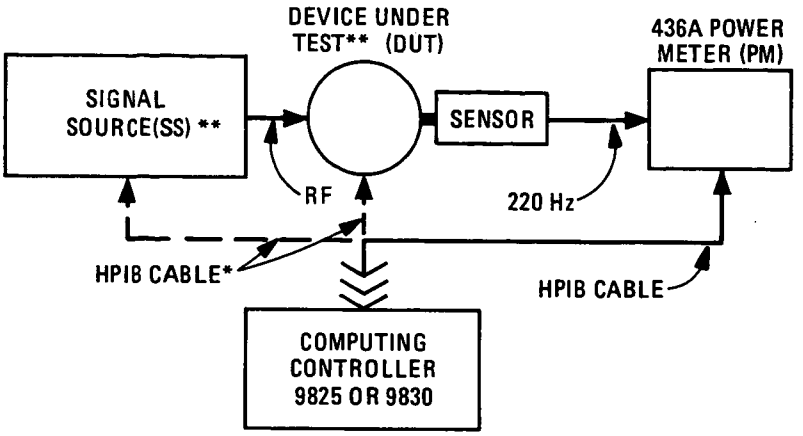
436A QUICK PROGRAMMING GUIDE

This guide will help set up and program simple HP-IB instrumentation systems, thereby freeing you from making an in-depth study of system design and BASIC or HPL programming languages.

I. THE SYSTEM:



* HP-IB cables shown with dotted lines are used only if the Source and Device under test are programmable.

** Signal Source and Device Under Test may be the same, e.g., checking Sig. Gen. Flatness.

II. THE PROGRAM: If the power meter is the only part of the system to be programmed, use the program statements in the order given. For more complex systems or programs, include statements derived from the information in the optional (dashed line) flow chart boxes. When it is necessary to write more statements, refer to Table 3-2.

Figure 3-8. 436A Quick Programming Guide (5 of 5)

3-64. Sources of Error and Measurement Uncertainty

3-65. RF Losses. Some of the RF power that enters the Power Sensor is not dissipated in the power sensing elements. This RF loss is caused by dissipation in the walls of waveguide power sensors, in the center conductor of coaxial power sensors, in the dielectric of capacitors, connections within the sensor, and radiation losses.

3-66. Mismatch. The result of mismatched impedances between the device under test and the power sensor is that some of the power fed to the sensor is reflected before it is dissipated in the load. Mismatches affect the measurement in two ways. First, the initial reflection is a simple loss and is called mismatch loss. Second, the power reflected from the sensor mismatch travels back up the transmission line until it reaches the source. There, most of it is dissipated in the source impedance, but some of its re-reflected by the source mismatch. The re-reflected power returns to the power sensor and adds to, or subtracts from, the incident power. For all practical purposes, the effect the re-reflected power has upon the power measurement is unpredictable. This effect is called mismatch uncertainty.

3-67. Instrumentation Uncertainty. Instrumentation uncertainty describes the ability of the metering circuits to accurately measure the dc output from the Power Sensor's power sensing device. In the Power Meter this error is ± 0.5% for Ranges 1 through 5. It is important to realize, however, that these uncertainty specifications do not indicate overall measurement accuracy.

3-68. Power Reference Uncertainty. The output level of the Power Reference Oscillator is factory set to 1 mW ± 0.70% at 50 MHz. This reference is normally used to calibrate the system, and is, therefore, a part of the system's total measurement uncertainty.

3-69. Cal Factor Switch Resolution Error. The resolution of the CAL FACTOR % switch contributes a significant error to the total measurement because the switch has 1% steps. The maximum error possible in each position is ±0.5%.

3-70. Corrections for Error

3-71. The two correction factors basic to power meters are calibration factor and effective efficiency. Effective efficiency is the correction factor for RF losses within the Power Sensor. Calibration factor takes into account the effective efficiency and mismatch losses.

3-72. Calibration factor is expressed as a percentage with 100% meaning the power sensor has no losses. Normally the calibration factor will be 100% at 50 MHz, the operating frequency of the internal reference oscillator.

3-73. The Power Sensors used with the Power Meter have individually calibrated calibration factor curves placed on their covers. To correct for RF and mismatch losses, simply find the Power Sensor's calibration factor at the measurement frequency from the curve or the table that is supplied with the Power Sensor and set the CAL FACTOR % switch to this value. The measurement error due to this error is now minimized.

3-74. The CAL FACTOR % switch resolution error of ±0.5% may be reduced by one of the following methods:

a. Leave the CAL FACTOR % switch on 100% after calibration, then make the measurement and record the reading. Use the reflection coefficient, magnitude and phase angle from the table supplied with the Power Sensor to calculate the corrected power level.

b. Set the CAL FACTOR % switch to the nearest position above and below the correction factor given on the table. Interpolating between the power levels measured provides the corrected power level.

3-75. Calculating Total Uncertainty

3-76. Certain errors in calculating the total measurement uncertainty have been ignored in this discussion because they are beyond the scope of this manual. Application Note AN-64, "*Microwave Power Measurement*", delves deeper into the calculation of power measurement uncertainties. It is available, on request, from your nearest HP office.

3-77. Known Uncertainties. The known uncertainties which account for part of the total power measurement uncertainty are:

a. Instrumentation uncertainty ±0.5% or ±0.02 dB (Range 1 through 5).

b. Power reference uncertainty ±0.7% or ±0.03 dB.

3-77. Known Uncertainties (cont'd)

c. CAL FACTOR switch resolution ±0.5% or ±0.02 dB.

The total uncertainty from these sources is ±1.7% or ±0.07 dB.

3-78 Calculating Mismatch Uncertainty. Mismatch uncertainty is the result of the source mismatch interacting with the Power Sensor mismatch. The magnitude of uncertainty is related to the magnitudes of the source and Power Sensor reflection coefficients, which can be calculated from SWR. Figure 3-9 shows how the calculations are to be made and Figure 3-10 illustrates mismatch uncertainty and total calculated uncertainty for two cases. In the first case, the Power Sensor's SWR = 1.5, and in the second case, the Power Sensor's SWR = 1.26. In both cases the source has a SWR of 2.0. The example shows the effect on power measurement accuracy a poorly matched power sensor will have as compared to one with low mismatch.

3-79. A faster, easier way to find mismatch uncertainty is to use the HP Mismatch Error (uncertainty) Limits/Reflectometer Calculator. The calculator may be obtained, on request, from your nearest Hewlett-Packard office by using HP Part Number 5952-0448.

3-80. The method of calculating measurement uncertainty from the uncertainty in dB is shown by Figure 3-11. This method would be used when the initial uncertainty calculations were made with the Mismatch Error/Reflectometer Calculator.

CALCULATING MEASUREMENT UNCERTAINTY

1. Calculate the reflection coefficient from the given SWR.

$$\rho = \frac{SWR - 1}{SWR + 1}$$

Power Sensor #1	Power Sensor #2	Power Source
$\rho_1 = \frac{1.5-1}{1.5+1}$	$\rho_2 = \frac{1.25-1}{1.25+1}$	$\rho_s = \frac{2.0-1}{2.0+1}$
$= \frac{0.5}{2.5}$	$= \frac{0.25}{2.25}$	$= \frac{1.0}{3.0}$
$= 0.2$	$= 0.111$	$= 0.333$

2. Calculate the relative power and percentage power mismatch uncertainties from the reflection coefficients. An initial reference level of 1 is assumed.

Relative Power Uncertainty

$PU = [1 \pm (\rho_n \rho_s)]^2$ where P_n = SWR of Power Sensor # n, P_s = SWR of Power Source

$PU_1 = \{1 \pm [(0.2)(0.333)]\}^2$	$PU_2 = \{1 \pm [(0.111)(0.333)]\}^2$
$= \{1 \pm 0.067\}^2$	$= \{1 \pm 0.037\}^2$
$= \{1.067\}^2$ and $\{0.933\}^2$	$= \{1.037\}^2$ and $\{0.963\}^2$
$= 1.138$ and 0.870	$= 1.073$ and 0.938

Percentage Power Uncertainty

%PU =	(PU − 1) 100% for PU > 1	and	−(1 − PU) 100% for PU < 1

=	7.3%	and	−7.2%

Figure 3-9. Calculating Measurement Uncertainties (1 of 2)

CALCULATING MEASUREMENT UNCERTAINTY

3. Calculate the Measurement Uncertainty in dB.

$$MU = 10\left[\log_{10}\left(\frac{P_1}{P_0}\right)\right] \text{ dB for } \frac{P_1}{P_0} > 1$$

$$= 10\left[\log\left(\frac{10P_1}{10P_0}\right)\right] \text{ dB}$$

$$= 10\ [\log(10P_1) - \log(10P_0)] \text{ dB for } \frac{P_1}{P_0} < 1$$

$MU_1 = 10\left[\log\left(\frac{1.138}{1}\right)\right]$ and $10\ [\log(10)(0.870) - \log(10)(1)]$

$= 10\ [0.056]$ and $10\ [\log(8.70) - \log(10)]$

and $10\ [0.94 - 1]$

and $10\ [-0.060]$

$= +0.56$ dB and -0.60 dB

$MU_2 = 10\left[\log\left(\frac{1.073}{1}\right)\right]$ and $10\ [\log(10)(0.928) - \log(10)(1)]$

$= 10\ [0.031]$ and $10\ [\log(9.28) - \log(10)]$

and $10\ [0.968 - 1]$

and $10\ [-0.032]$

$= +0.31$ dB and -0.32 dB

Figure 3-9. Calculating Measurement Uncertainties (2 of 2)

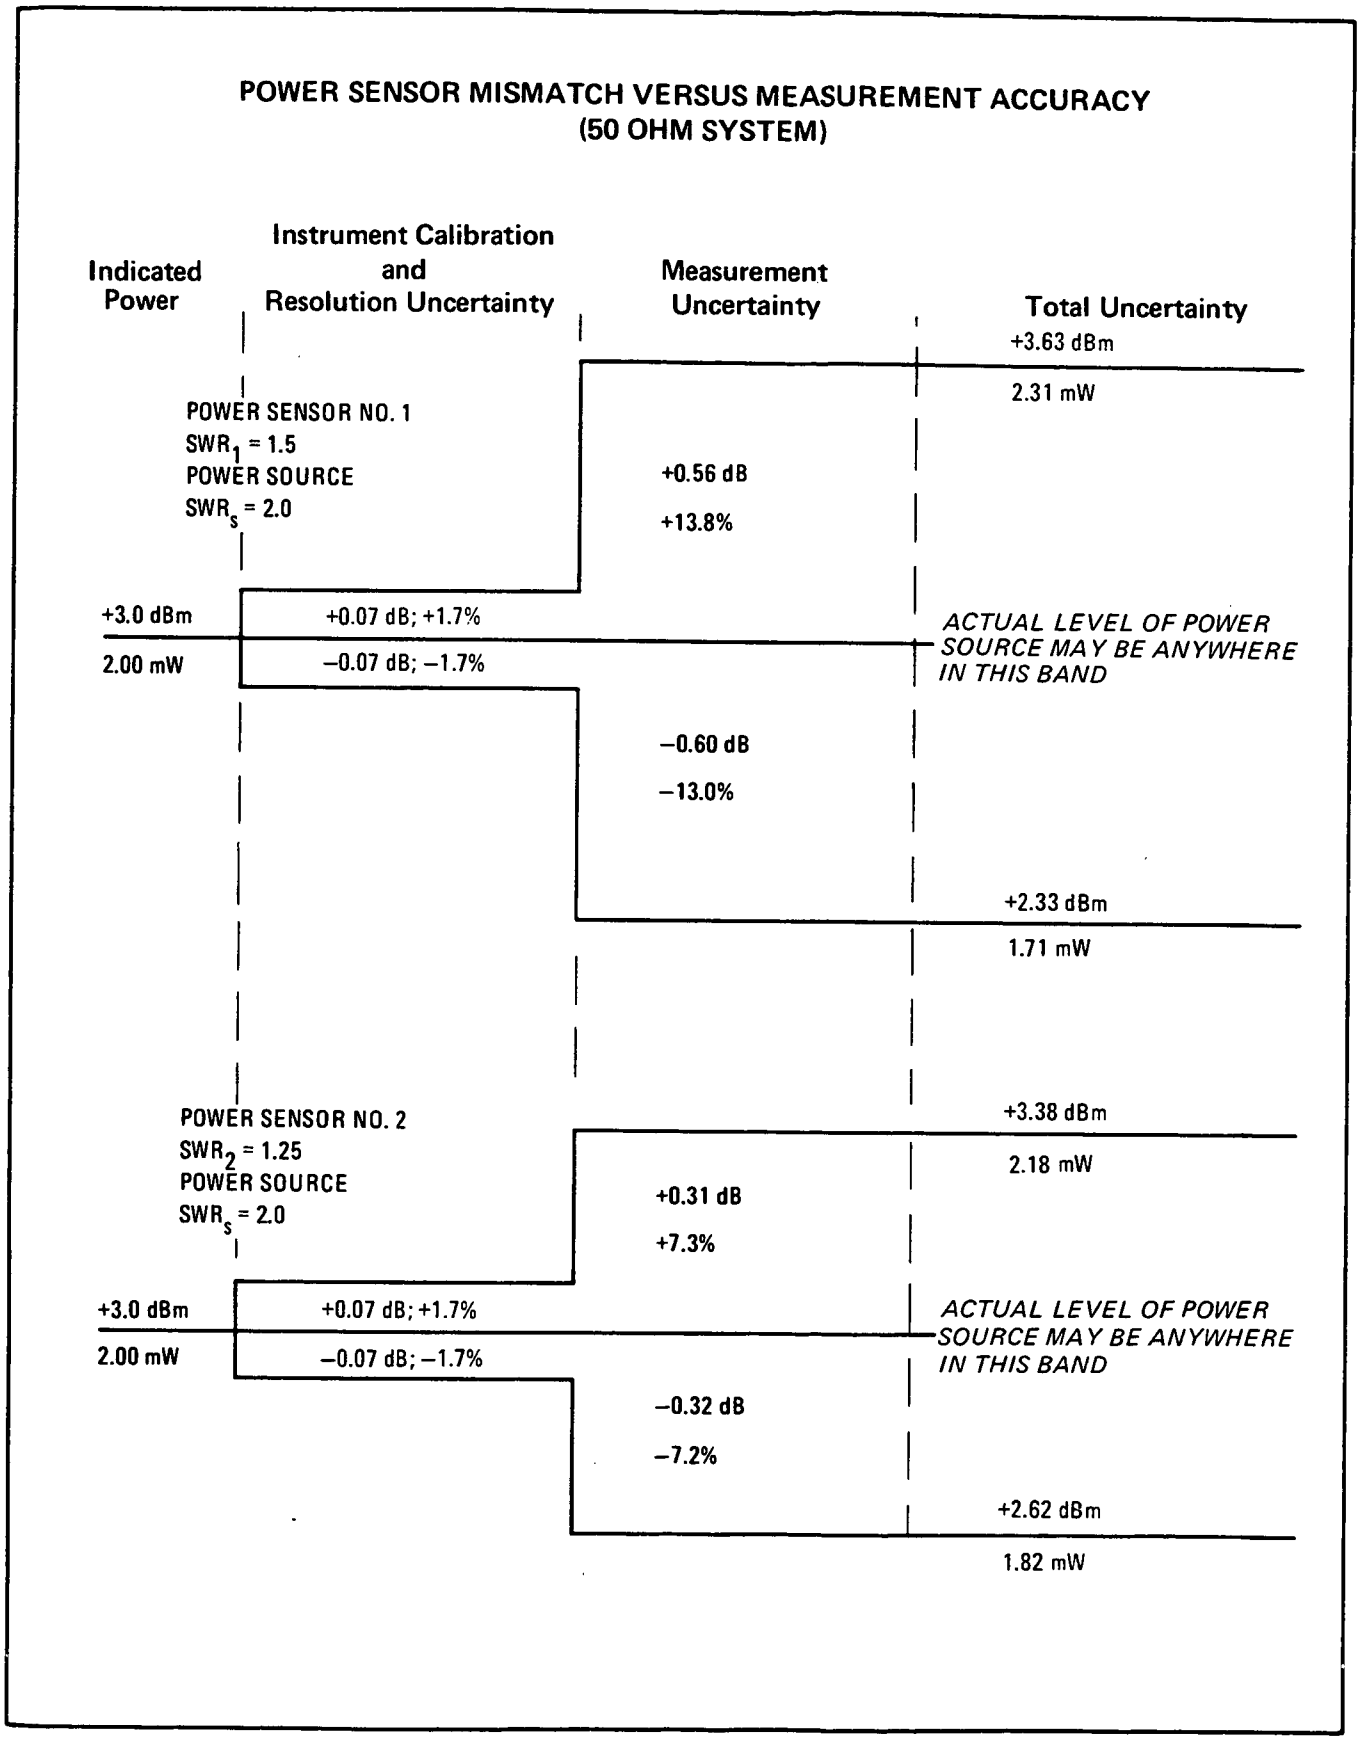

Figure 3-10. The Effect of Power Sensor Mismatch on Measurement Accuracy

CALCULATING MEASUREMENT UNCERTAINTY

1. For this example the known values are: source SWR, 2.2 and power sensor SWR, 1.16. From the Mismatch Error Calculator the mismatch uncertainty is found to be +0.24, −0.25 dB.

2. Add the known uncertainties from paragraph 3-73, (± 0.10 dB). Our total measurement uncertainty is +0.34, —0.35 dB.

3. Calculate the relative measurement uncertainty from the following formula:

$$dB = 10 \log \left(\frac{P_1}{P_0}\right)$$

$$\frac{dB}{10} = \log \left(\frac{P_1}{P_0}\right)$$

$$\frac{P_1}{P_0} = \log^{-1} \left(\frac{dB}{10}\right)$$

If dB is positive then:
$P_1 > P_0$; let $P_0 = 1$

$$MU = P_1 = \log^{-1} \left(\frac{dB}{10}\right)$$

$$= \log^{-1} \left(\frac{0.34}{10}\right)$$

$$= 1.081$$

If dB is negative then:
$P_1 < P_0$; let $P_1 = 1$

$$MU = P_0 = \frac{1}{\log^{-1} \left(\frac{dB}{10}\right)}$$

$$= \frac{1}{\log^{-1} \left(\frac{0.35}{10}\right)}$$

$$= \frac{1}{1.082}$$

$$= 0.923$$

4. Calculate the percentage Measurement Uncertainty.

For $P_1 > P_0$

$$\%MU = (P_1 - P_0)\,100$$

$$= (1.081 - 1)\,100$$

$$= +8.1\%$$

For $P_1 < P_0$

$$\%MU = -(P_1 - P_0)\,100$$

$$= -(1 - 0.923)\,100$$

$$= -7.7\%$$

Figure 3-11. Calculating Measurement Uncertainty (Uncertainty in dB Known)

SECTION IV
PERFORMANCE TESTS

4-1. INTRODUCTION

4-2. The procedures in this section test the electrical performance of the Power Meter using the specifications of Table 1-1 as performance standards. All tests can be performed without access to the interior of the instrument. A simpler operational test is included in Section III under Operator's Checks.

4-3. EQUIPMENT REQUIRED

4-4. Equipment required for the performance tests is listed in Table 1-2, Recommended Test Equipment. Any equipment that satisfies the critical specifications given in the table may be substituted for the recommended model(s).

4-5. TEST RECORD

4-6. Results of the performance tests may be tabulated on the Test Record at the end of the test procedures. The Test Record lists all of the tested specifications and their acceptable limits. Test results recorded at incoming inspection can be used for comparison in periodic maintenance, troubleshooting, and after repairs or adjustments.

4-7. PERFORMANCE TESTS

4-8. The performance tests given in this section are suitable for incoming inspection, troubleshooting, or preventive maintenance. During any performance test, all shields and connecting hardware must be in place. The tests are designed to verify published instrument specifications. Perform the tests in the order given and record the data on the test card and/or in the data spaces provided at the end of each procedure.

NOTE

The Power Meter must have a half-hour warmup and the line voltage must be within +5%, −10% of nominal if the performance tests are to be considered valid.

4-9. Each test is arranged so that the specification is written as it appears in Table 1-1. Next, a description of the test and any special instructions or problem areas are included. Each test that requires test equipment has a setup drawing and a list of the required equipment. The initial steps of each procedure give control settings required for that particular test.

PERFORMANCE TESTS

4-10. ZERO CARRYOVER TEST

SPECIFICATION: ±0.2% of full scale when zeroed on the most sensitive range.

DESCRIPTION: After the Power Meter is initially zeroed on the most sensitive range, the change in the digital readout is monitored as the Power Meter is stepped through its ranges. Thus, this test also takes noise and drift into account because noise , drift, and zero carry-over readings cannot be separated.

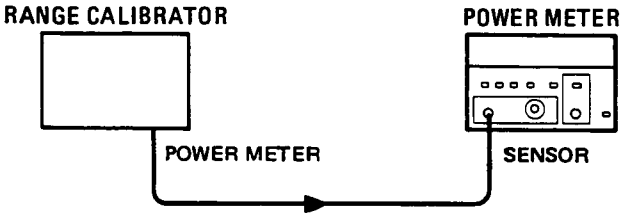

Figure 4-1. Zero Carryover Test Setup

EQUIPMENT: Range Calibrator . . . . . HP 11683A

PROCEDURE:

1. Set the Power Meter switches as follows:

   CAL FACTOR % 100
   POWER REF . . . . . off (out)
   MODE . . . . . WATT
   RANGE HOLD . . . . . off (out)
   LINE . . . . . ON (in)

2. Set the Range Calibrator switches as follows:

   FUNCTION . . . . . STANDBY
   POLARITY . . . . . NORMAL
   RANGE . . . . . 100 μW
   LINE . . . . . ON (in)

   NOTE: *After switching to STANDBY, allow 60 seconds for the Range Calibrator to settle before zeroing the Power Meter.*

3. Connect the equipment as shown in Figure 4-1.

4. Press and hold the Power Meter SENSOR ZERO switch and wait for the digital readout to stabilize. Then verify that the Power Meter ZERO lamp is lit and that the digital readout indicates 0.00 ± 0.02.

   NOTE: *Power Meter is now zeroed on most sensitive range (10 μW).*

5. Release the Power Meter SENSOR ZERO switch and wait for the ZERO lamp to go out before proceeding to the next step.

6. Set the Range Calibrator FUNCTION switch to CALIBRATE and verify that the Power Meter autoranges to the 100 μW range.

7. Set the Power Meter RANGE HOLD switch to on (in) and the Range Calibrator FUNCTION switch to standby.

PERFORMANCE TESTS

4-10. ZERO CARRYOVER TEST (cont'd)

8. Wait for the Power Meter's digital readout to stabilize and verify that the indication observed is within the limits shown on the table below. Then set the POWER Meter RANGE HOLD switch to off (out).

9. Repeat steps 6, 7, and 8 with the Range Calibrator RANGE switch set, in turn, to 1 mW, 10 mW, and 100 mW. Verify that the Power Meter autoranges properly, and that the indication observed on each range is within the limits shown in Table 4-1.

Table 4-1. Zero Carryover Autorange Digital Readout Results

Range Calibrator and Power Meter Range	Results		
	Min	Actual	Max
100 μW	—0.2	_____	0.2
1 mW	—.002	_____	.002
10 mW	—0.02	_____	0.02
100 mW	—00.2	_____	00.2

4-11. INSTRUMENT ACCURACY TEST

SPECIFICATION:
WATT MODE: ±0.5% in Ranges 1 through 5.
dBm MODE: ±0.02 dB ±0.001 dB/°C in Ranges 1 through 5.
dB (REL) MODE: ±0.02 dB ±0.001 dB/°C in Ranges 1 through 5.

NOTE

The dB (REL) specifications are for within-range measurements. For range-to-range accuracy, add the uncertainty associated with the range in which the reference was entered, to the uncertainty associated with the range in which the measurement was made. For example, if a reference is entered in Range 1 and a measurement is made in Range 5, the total uncertainty is ±0.04 (Range 1 ±0.02 + Range 5 ± 0.02 = ± 0.04).

DESCRIPTION: After the Power Meter is initially calibrated on the 1 mW range, the digital readout is monitored as the Range Calibrator is adjusted to provide reference inputs corresponding to each of the Power Meter operating ranges.

PERFORMANCE TESTS

4-11. INSTRUMENT ACCURACY TEST (cont'd)

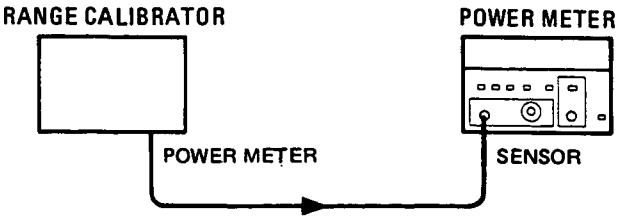

Figure 4-2. Instrument Accuracy Test Setup

EQUIPMENT: Range Calibrator . . . . . HP 11683A

PROCEDURE:

1. Set the Power Meter switches as follows:

   CAL FACTOR % 100
   POWER REF . . . . . off (out)
   MODE . . . . . WATT
   RANGE HOLD . . . . . off (out)
   LINE . . . . . ON (in)

2. Set the Range Calibrator switches as follows:

   FUNCTION . . . . . STANDBY
   POLARITY . . . . . NORMAL
   RANGE . . . . . 1 mW
   LINE . . . . . ON (in)

   NOTE: *After switching to STANDBY, allow 60 seconds for the Range Calibrator to settle before zeroing the Power Meter.*

3. Connect the equipment as shown in Figure 4-2.

4. Press and hold the Power Meter SENSOR ZERO swtich and wait for the digital readout to stabilize. Then verify that the Power Meter ZERO lamp is lit and that the digital readout indicates 0.00 ± 0.02. If the digital readout does not indicate 0.00 ± 0.02 repeat the procedure.

   NOTE: *Power Meter is now zeroed on the most sensitive range (10 μW).*

5. Release the Power Meter SENSOR ZERO switch and wait for the ZERO lamp to go out before proceeding to the next step.

6. Set the Range Calibrator FUNCTION switch to CALIBRATE and verify that the Power Meter autoranges to the 1 mW range.

7. Observe the Power Meter digital readout and, if necessary, adjust the front-panel CAL ADJ control to obtain a 1.000 ± 0.002 indication.

   NOTE: *The Range Calibrator output level is adjustable in 5 dB increments. Thus, the 3 μW, 30 μW, 300 μW, 3 mW, and 30 mW legends on the RANGE switch are approximations. The true outputs for these settings are 3.16 μW, 31.6 μW, 316 μW, 3.16 mW and 31.6 mW.*

PERFORMANCE TESTS

4-11. INSTRUMENT ACCURACY TEST (cont'd)

8. Set the Range Calibrator RANGE switch to the lowest setting (3 μW) and wait a few seconds for the meter to settle.

9. Set the Range Calibrator RANGE switch to 10 μW (−20 dBm).

10. When the power meter reading has settled, verify that the reading is within the limits specified in the WATT mode in Table 4-2.

11. Set the power meter MODE switch to dBm. Verify that the reading is within limits specified for dBm Mode in Table 4-2.

12. Set the MODE switch back to WATT and set the Range Calibrator RANGE switch to the next setting specified in Table 4-2 (100 μW). Repeat steps 10 and 11.

13. Repeat steps 10 and 11 at each range setting specified in Table 4-2.

Table 4-2. Instrument Accuracy Test Results (P/O Errata)

Range Calibrator and Power Meter Range	Results (Watt Mode)			Range Calibrator and Power Meter Range	Results (dBm Mode)		
	Min.	Actual	Max.		Min.	Actual	Max.
10 μW	9.95		10.05	−20 dBm	−20.02		−19.98
100 μW	99.5		100.5	−10 dBm	−10.02		−9.98
1 mW	0.995		1.005	0 dBm	−0.02		0.02
3 mW	3.14		3.18	+5 dBm	4.98		5.02
10 mW	9.95		10.05	+10 dBm	9.98		10.02
100 mW	99.5		100.5	+20 dBm	19.98		20.02

14. Set the Range Calibrator RANGE switch to −10 dBm.

15. Set the Power Meter MODE switch to dB [REF] and verify that the digital readout indicates 0.00 ± 0.01.

16. Set the Range Calibrator RANGE switch, in turn, to −20 dBm, −5 dBm, and +10 dBm. Verify that the Power Meter autoranges properly, and that the indication observed on each range is within the limits specified in Table 4-3.

Table 4-3. Instrument Accuracy Test Results for dB [REF] Mode

Range Calibrator and Power Meter Ranges	Results		
	Min	Actual	Max
−20 dBm	−9.96	_____	−10.04
−5 dBm	+4.96	_____	+5.04
+10 dBm	+19.96	_____	20.04

PERFORMANCE TESTS

4-12. CALIBRATION FACTOR TEST

SPECIFICATION: 16-position switch normalizes meter reading to account for calibration factor. Range 85% to 100% in 1% steps. 100% position corresponds to calibration factor at 50 MHz.

DESCRIPTION: After the Power Meter is zeroed on the most sensitive range, a 1 mW input level is applied to the Power Meter and the CAL ADJ control is adjusted to obtain a 1.000 mW indication. Then the CAL FACTOR % switch is stepped through its 16 positions and the digital readout is monitored to ensure that the proper indication is obtained for each position.

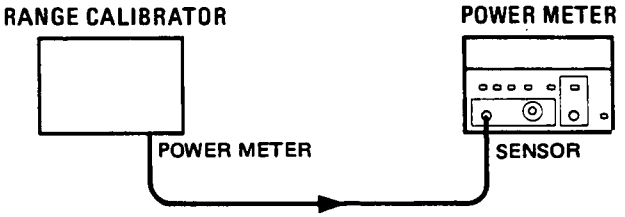

Figure 4-3. Calibration Factor Test Setup

PROCEDURE:

1. Set the Power Meter switches as follows:

   CAL FACTOR % 100
   POWER REF . . . . . Off (out)
   MODE . . . . . WATT
   RANGE HOLD . . . . . Off (out)
   LINE . . . . . ON (in)

2. Set the Range Calibrator switches as follows:

   FUNCTION . . . . . STANDBY
   POLARITY . . . . . NORMAL
   RANGE . . . . . 1 mW
   LINE . . . . . ON (in)

   NOTE: *After switching to STANDBY, allow 60 seconds for the Range Calibrator to settle before zeroing the Power Meter.*

3. Connect the equipment as shown in Figure 4-3.

4. Press and hold the Power Meter SENSOR ZERO switch and wait for the digital readout to stabilize. Then verify that the Power Meter ZERO lamp is lit and that the digital readout indicates 0.00 ± 0.02.

   NOTE: *Power Meter is now zeroed on the most sensitive range (10 μW).*

5. Release the Power Meter SENSOR ZERO switch and wait for the ZERO lamp to go out before proceeding to step 6.

6. Set the Range Calibrator FUNCTION switch to CALIBRATE and verify that the Power Meter autoranges to the 1 mW range.

7. Adjust the Power Meter CAL ADJ control to obtain a 1.000 ± 0.002 indication on the digital readout.

PERFORMANCE TESTS

4-12. CALIBRATION FACTOR TEST (cont'd)

8. Set the CAL FACTOR % switch, in turn, to each position and verify that the indications observed are within the limits specified in Table 4-4.

Table 4-4. Calibration Factor Test Results

CAL FACTOR Switch Position	Results			CAL FACTOR Switch Position	Results		
	Min.	Actual	Max.		Min.	Actual	Max.
100	0.994	_____	1.006	92	1.081	_____	1.093
99	1.004	_____	1.016	91	1.093	_____	1.105
98	1.014	_____	1.026	90	1.105	_____	1.117
97	1.025	_____	1.037	89	1.118	_____	1.130
96	1.036	_____	1.048	88	1.130	_____	1.142
95	1.047	_____	1.059	87	1.143	_____	1.155
94	1.058	_____	1.070	86	1.157	_____	1.169
93	1.069	_____	1.081	85	1.170	_____	1.182

4-13. POWER REFERENCE LEVEL TEST

SPECIFICATION: Internal 50 MHz oscillator factory set to 1 mW ± 0.7% traceable to the National Bureau of Standards.
Accuracy: ±1.2% worst case (±0.9% rms) for one year (0°C to 55°C).

DESCRIPTION: The power reference oscillator output is factory adjusted to 1 mW ± 0.7%. To achieve this accuracy, Hewlett-Packard employs a special measurement system accurate to 0.5% (traceable to the National Bureau of Standards) and allows for a transfer error of ±0.2% in making the adjustment. If an equivalent measurement system is employed for verification, the power reference oscillator output can be verified to 1 mW ±1.9% (±1.2% accuracy + ±0.5% verification system error + ±0.2% transfer error = 1.9% maximum error). The power reference oscillator can be set to ±0.7% using the same equipment and following the adjustment procedure in paragraph 5-22. To ensure maximum accuracy in verifying the power reference oscillator output, the following procedure provides step-by-step instructions for using specified Hewlett-Packard test instruments of known capability. If equivalent test instruments are used, signal acquisition criteria may vary and reference should be made to the manufacturer's guidelines for operating the instruments.

NOTE

The Power Meter may be returned to the nearest Hewlett-Packard office to have the power reference oscillator checked and/or adjusted. Refer to Section II, PACKAGING.

PERFORMANCE TESTS

4-13. POWER REFERENCE LEVEL TEST (cont'd)

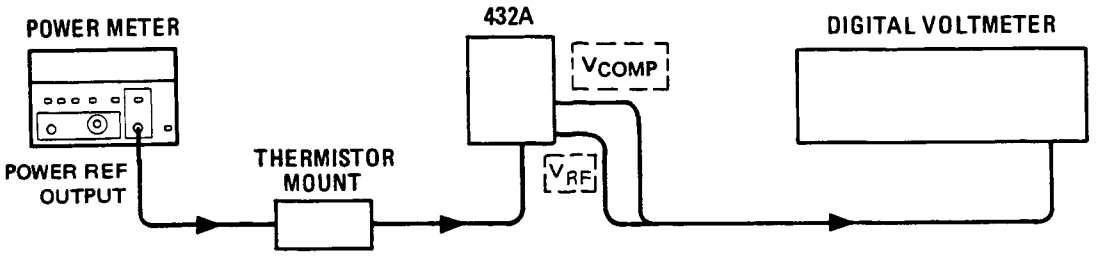

Figure 4-4. Power Reference Level Test Setup

EQUIPMENT:

Power Meter	HP 432A
Thermistor Mount	HP 478A-H75
Digital Voltmeter (DVM)	HP 3456A

PROCEDURE:

1. Set up the DVM to measure resistance and connect the DVM between the V_{RF} connector on the rear panel of the 432A, and pin 1 on the thermistor mount end of the 432A interconnect cable.

2. Round off the DVM indication to two decimal places and record this value as the internal bridge resistance (R) of the 432A (approximately 200 ohms).

3. Connect the 432A to the Power Meter as shown in Figure 4-4.

4. Set the Power Meter LINE switch to ON (in) and the POWER REF switch to off (out). Then wait thirty minutes for the 432A thermistor mount to stabilize before proceeding to the next step.

5. Set the 432A RANGE switch to COARSE ZERO and adjust the front-panel COARSE ZERO control to obtain a zero meter indication.

6. Fine zero the 432A on the most sensitive range, then set the 432A RANGE switch to 1 mW.

NOTE

Ensure that DVM input leads are isolated from chassis ground when performing the next step.

7. Set up the DVM to measure microvolts and connect the positive and negative input leads, respectively, to the V_{COMP} and V_{RF} connectors on the rear panel of the 432A.

8. Observe the indication on the DVM. If less than 400 microvolts, proceed to the next step. If 400 microvolts or greater, press and hold the 432A FINE ZERO switch and adjust the COARSE ZERO control so that the DVM indicates 200 microvolts or less. Then release the FINE ZERO switch and proceed to the next step.

9. Round off the DVM indication to the nearest microvolt and record this value as V_0.

PERFORMANCE TESTS

4-13. POWER REFERENCE LEVEL TEST (cont'd)

10. Set the Power Meter POWER REF switch to ON (in) and record the indications observed on the DVM as V_1.

11. Disconnect the DVM negative input lead from the V_{RF} connector on the 432A and reconnect it to 432A chassis ground. Record the new indication observed on the DVM as V_{COMP}.

12. Calculate the power reference oscillator output level (P_{RF}) from the following formula:

$$P_{RF} = \frac{2\,V_{COMP}\,(V_1 - V_0) + V_0^2 - V_1^2}{4R\ (\text{CALIBRATION FACTOR})}$$

Where:

P_{RF} = power reference oscillator output level

V_{COMP} = previously recorded value

V_1 = previously recorded value

V_0 = previously recorded value

R = previously recorded value

CALIBRATION FACTOR = value for thermistor mount at 50 MHz (traceable to the National Bureau of Standards)

13. Verify that the P_{RF} is within the following limits:

Min.	Actual	Max.
0.988 mW	_____	1.012 mW

SECTION V
ADJUSTMENTS

5-1. INTRODUCTION

5-2. This section describes the adjustments which will return the Power Meter to peak operating condition after repairs are completed.

5-3. If the adjustments are to be considered valid, the Power Meter must have a half-hour warmup and the line voltage must be within +5 to —10% of nominal.

5-4. SAFETY CONSIDERATIONS

5-5. Although this instrument has been designed in accordance with international safety standards, this manual contains information, cautions, and warnings which must be followed to ensure safe operation and to retain the instrument in safe condition (see Sections II and III). Service and adjustments should be performed only by qualified service personnel.

WARNING

Any interruption of the protective (grounding) conductor (inside or outside the instrument) or disconnection of the protective earth terminal is likely to make the instrument dangerous. Intentional interruption is prohibited.

5-6. Any adjustment, maintenance, and repair of the opened instrument with voltage applied should be avoided as much as possible and, when inevitable, should be carried out only by a skilled person who is aware of the hazard involved.

5-7. Capacitors inside the instrument may still be charged even if the instrument has been disconnected from its source of supply.

5-8. Make sure that only fuses with the required rated current and of the specified type (normal blow, time delay, etc.) are used for replacement. The use of repaired fuses and the shortcircuiting of fuseholders must be avoided.

5-9. Whenever it is likely that the protection offered by fuses has been impaired, the instrument must be made inoperative and secured against any unintended operation.

WARNING

Adjustments described herein are performed with power supplied to the instrument while protective covers are removed. Energy available at many points may, if contacted, result in personal injury.

5-10. EQUIPMENT REQUIRED

5-11. The test equipment required for the adjustment procedures is listed in Table 1-2, Recommended Test Equipment. The critical specifications of substitute test instruments must meet or exceed the standards listed in the table if the Power Meter is to meet the standards set forth in Table 1-1, Specifications.

5-12. FACTORY SELECTED COMPONENTS

5-13. Factory selected components are indicated on the schematic and replaceable parts list with an asterisk immediately following the reference designator. The nominal value of the component is listed. Table 5-1 lists the parts by reference designator and provides an explanation of how the component is selected, the normal value range, and a reference to the appropriate service sheet. The Manual Changes supplement will update any changes to factory selected component information.

5-14. ADJUSTMENT LOCATIONS

5-15. Each of the adjustments are shown on the component locator photographs that are part of the Service Sheets.

ADJUSTMENTS

Table 5-1. Factory Selected Components

Reference Designator	Selected For	Normal Value Range	Service Sheet
A2R7, R12, R18 and R81	Optimum Power Meter accuracy above 10 mW. Measure (to 3 significant digits) the +15 and −15V supply voltages at A9TP3 and TP4. Connect the Range Calibrator HP 11683A to the Power Meter's sensor connector. IF the magnitude of the −15V supply exceeds the magnitude of the +15V supply OR IF the magnitude of the +15V supply does not exceed the magnitude of the −15V supply by more than 0.5 Vdc, THEN select A2R12 for 10.00 to 10.01 mW reading with a 10 mW input. (Increasing A2R12 increases the reading.) With 100 mW input select A2R18 and R81 for a reading of 99.9 to 100.0. (Increasing A2R18 and R81 increases the power meter reading.) Check the 10 mW and 30 mW full scale readings and choose compromise resistor values as necessary for a maximum ±1 count error. IF the magnitude of the +15V supply exceeds the magnitude of the −15V supply by more than 0.5V THEN change A2R7 to 40.0kΩ, and follow the previous selection procedure.	A2R7 42.2 kΩ (40.0 kΩ to 42.2 kΩ) A2R12 100 kΩ (20.0 kΩ to 147 kΩ) A2R18 178 kΩ* A2R81 9.09 kΩ*	7
A2R50	Adjust A2R69 FREQ (Frequency Adj) for maximum indication on digital readout, then check frequency of 220 MHz Multivibrator. If out of specification (220 ±16 Hz) select value for A2R50 to produce maximum indication on digital readout while 220 Hz Multivibrator frequency is in specification.	13.3 kΩ (10 kΩ to 17.8 kΩ)	7
A8R5	A Power Reference Oscillator output of 1 mW if this value falls outside the range of adjustment available with LEVEL ADJUST potentiometer A8R5	7100Ω (7100Ω to 7500Ω)	14
A2VR1,2	Correct accuracy on the 30 mW, and 100 mW ranges when accuracy on the other ranges is within specifications.	2.37V to 2.61V	7
A8VR2, A8R2	1) If the reference output power is outside the range of 1.000 ±.007 mW between 0°C and 55°C, and 2) if the A8VR2, A8R2 combination is 5.11V−825Ω, then change the A8VR2, A8R2 combination to 8.25V−1470Ω. However, if the A8VR2, A8R2 combination is already 8.25V−1470Ω, then a problem exists elsewhere.	5.11V−825Ω or 8.25V−1470Ω	14
A2C14	Proper phase detector operation with a multivibrator frequency of 220 Hz.	4700 pF (2500 pF to 10,000 pF)	7

NOTE: Do the Power Supply Adjustment (paragraph 5-23) first, then do the adjustments described in paragraphs 5-16 through 5-22.

*Combined series resistance 147 kΩ to 500 kΩ.

ADJUSTMENTS

5-16. DC OFFSET ADJUSTMENT

REFERENCE: Service Sheet 8.

DESCRIPTION: DC OFF potentiometer A3R2 is adjusted to remove any dc voltage introduced by the dc amplifier

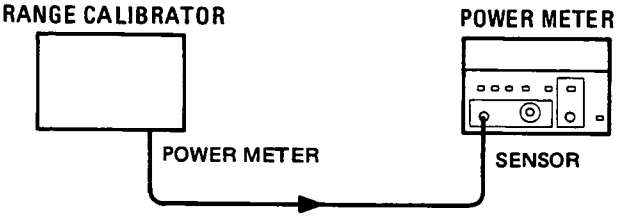

Figure 5-1. DC Offset Adjustment Setup

EQUIPMENT: Range Calibrator . . . . . HP 11683A

PROCEDURE:

1. Set the Power Meter Switches as follows:

   CAL FACTOR % 100
   POWER REF . . . . . off (out)
   MODE . . . . . WATT
   RANGE HOLD . . . . . off (out)
   LINE . . . . . ON (in)

2. Set the Range Calibrator switches as follows:

   FUNCTION . . . . . CALIBRATE
   POLARITY . . . . . NORMAL
   RANGE . . . . . 100 mW
   LINE . . . . . ON (in)

3. Connect the equipment as shown in Figure 5-1.

4. Verify that the Power Meter autoranges to the 100 mW range, then set the RANGE HOLD switch to ON (in).

5. Set the Range Calibrator FUNCTION switch to STANDBY.

6. Remove the Power Meter top cover and adjust DC OFF potentiometer A3R2 so that the digital readout indicates 00.0 with a blinking minus sign.

5-17. AUTO ZERO OFFSET ADJUSTMENT

REFERENCE: Service Sheet 8.

DESCRIPTION: ZERO OFF potentiometer A3R47 is adjusted to remove any dc offset that is introduced when the SENSOR ZERO switch is pressed.

ADJUSTMENTS

5-17. AUTO ZERO OFFSET ADJUSTMENT (cont 'd)

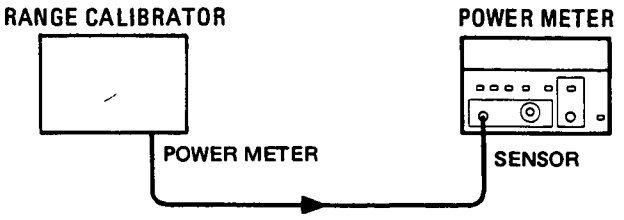

Figure 5-2. Auto Zero Offset Adjustment Setup

EQUIPMENT: Range Calibrator . . . . . HP 11683A

PROCEDURE:

1. Set the Power Meter switches as follows:

   CAL FACTOR % 100
   POWER REF . . . . . off (out)
   MODE . . . . . WATT
   RANGE HOLD . . . . . off (out)
   LINE . . . . . ON (in)

2. Set the Range Calibrator switches as follows:

   FUNCTION . . . . . STANDBY
   POLARITY . . . . . NORMAL
   LINE . . . . . ON (in)

3. Connect the equipment as shown in Figure 5-2.

4. Verify that the Power Meter autoranges to the 10 μW range, and remove the Power Meter top cover.

   NOTE

   If specified indication cannot be obtained in next step, perform DC Spike Balance Adjustment. Then repeat this procedure.

5. Press and hold the Power Meter SENSOR ZERO switch and adjust ZERO OFF potentiometer A3R47 so that the digital readout indicates 0.00 with blinking minus sign.

5-18. SPIKE BALANCE ADJUSTMENT

REFERENCE: Service Sheets 7 and 8.

DESCRIPTION: A reference signal is applied to the Power Meter from the Range Calibrator to force the sensor zero circuit to its negative extreme. The SENSOR ZERO switch is then held pressed while BAL potentiometer A3R65 is adjusted to center the sensor zero circuit output voltage range.

ADJUSTMENTS

5-18. SPIKE BALANCE ADJUSTMENT (cont'd)

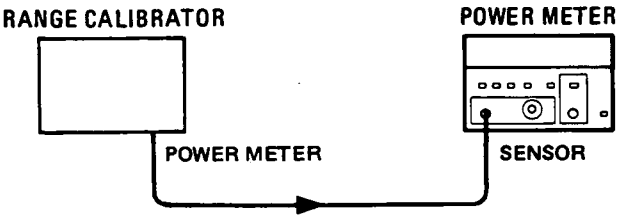

Figure 5-3. Spike Balance Adjustment Setup

EQUIPMENT: Range Calibrator . . . . . HP 11683A

PROCEDURE:

1. Set the Power Meter switches as follows:

   CAL FACTOR % 100
   POWER REF . . . . . off (out)
   MODE . . . . . WATT
   RANGE HOLD . . . . . off (out)
   LINE . . . . . ON (in)

2. Set the Range Calibrator switches as follows:

   FUNCTION . . . . . CALIBRATE
   POLARITY . . . . . NORMAL
   RANGE . . . . . 100 μW
   LINE . . . . . ON (in)

3. Remove the Power Meter top cover and adjust the front-panel CAL ADJ control so that the digital readout indicates 100.0 μW

4. Press and hold the Power Meter SENSOR ZERO switch and adjust BAL potentiometer A3R65 so that the display readout indicates 60.0 ± 0.2 μW.

NOTE

The Power Meter sensor zero circuit must be re-zeroed as described in the following steps before valid power measurements can be made.

5. Set the Range Calibrator FUNCTION switch to standby. Then press the Power Meter SENSOR ZERO switch and wait for the digital readout to stabilize.

6. Release the Power Meter SENSOR ZERO switch and wait for the ZERO lamp to go out.

ADJUSTMENTS

5-19. MULTIVIBRATOR ADJUSTMENT

REFERENCE: Service Sheet 7.

DESCRIPTION: FREQ potentiometer A2R69 is adjusted to set the reference frequency of the multivibrator which drives the phase detector and the FET power sensor.

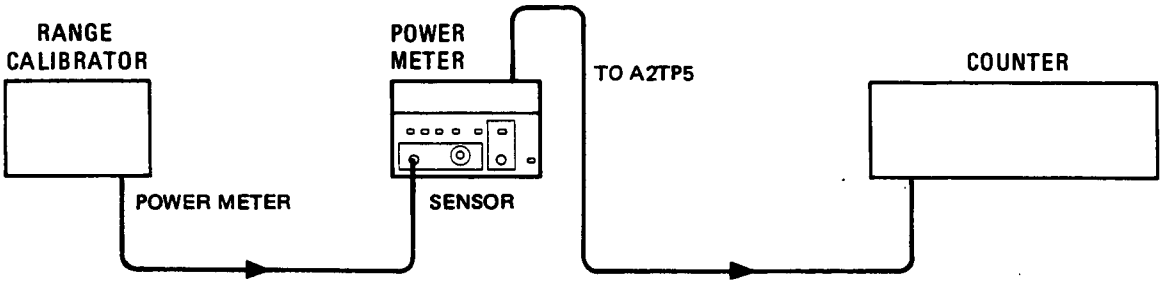

Figure 5-4. Multivibrator Adjustment Setup

EQUIPMENT:

Range Calibrator	HP 11683A
Counter	HP 5315A

PROCEDURE:

1. Set the Power Meter switches as follows:

CAL FACTOR %	100
POWER REF	off (out)
MODE	WATT
RANGE HOLD	off (out)
LINE	ON (in)

2. Set the Range Calibrator switches as follows:

FUNCTION	CALIBRATE
POLARITY	NORMAL
LINE	ON (in)

3. Connect the equipment as shown in Figure 5-4.

4. Remove the Power Meter top cover, adjust FREQ potentiometer A2R69 to obtain maximum indication on the digital readout, and verify that the counter indicates 220 ± 16 Hz.

5. Perform the Instrument Accuracy Test described in Section IV to verify overall Power Meter accuracy. If all indications are obtained as specified, the adjustment is complete. If any indication cannot be obtained as specified, perform the A-D Converter and Linear Meter Adjustment.

ADJUSTMENTS

5-20. A-D CONVERTER AND LINEAR METER ADJUSTMENT

REFERENCE: Service Sheets 7 and 8.

DESCRIPTION: The A-D converter circuit is adjusted to obtain the specified digital readout accuracy and the meter circuit is adjusted for a corresponding indication.

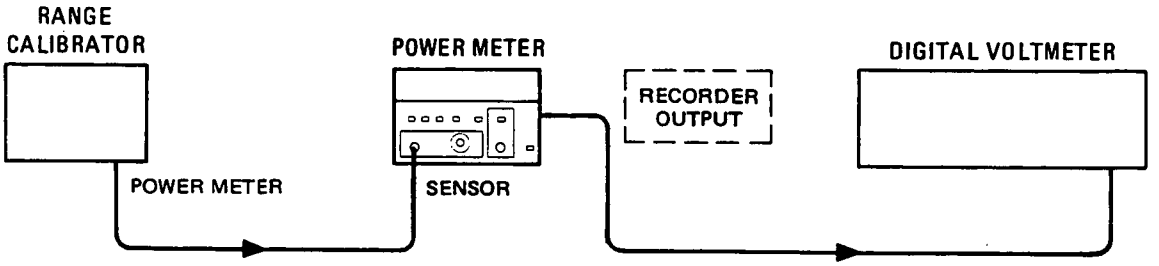

Figure 5-5. A-D Converter and Linear Meter Adjustment Setup

EQUIPMENT:

Range Calibrator	HP 11683A
Digital Voltmeter (DVM)	HP 3456A

PROCEDURE:

1. Set the Power Meter switches as follows:

CAL FACTOR %	100
POWER REF	off (out)
MODE	WATT
RANGE HOLD	off (out)
LINE	ON (in)

2. Set the Range Calibrator switches as follows:

FUNCTION	STANDBY
RANGE	1 mW
POLARITY	NORMAL
LINE	ON (in)

3. Connect the equipment as shown in Figure 5-5.

4. Remove the Power Meter top cover and set the DVM to the 1000 mV range.

5. Press the Power Meter SENSOR ZERO switch and wait for the display readout to stabilize. Then release the SENSOR ZERO switch and wait for ZERO led to go out before proceeding to the next step.

6. Set the Range Calibrator FUNCTION switch to CALIBRATE and adjust the Power Meter front-panel CAL ADJ control to obtain a 1.000 Vdc indication on the DVM.

7. Adjust the Power Meter LIN potentiometer A3R37 so that the digital readout indicates 1.000 mW.

5-20. A-D CONVERTER AND LINEAR METER ADJUSTMENT (cont'd)

8. Set the Power Meter MODE and RANGE HOLD switches to dBm and on (in), respectively.

NOTE

The next step sets the A-D log threshold. When the specified indication (—10.00 dBm) is obtained, the digital readout should be just on the verge of blanking, i.e., the readout may randomly alternate between —10.00 and UNDER RANGE, —1.

9. Set the Range Calibrator RANGE switch to —10 dBm and adjust the power meter LZR, A3R59, for —10 dBm.

10. Set the Power Meter RANGE HOLD switch to off (out) and the Range Calibrator RANGE switch to 1 mW.

11. Adjust Power Meter LFS potentiometer A3R48 so that the digital readout indicates —0.00.

12. Set the Power Meter MODE switch to WATT and adjust MTR potentiometer A3R17 so that the pointer is aligned half way between the last two marks on the meter face.

5-21. POWER REFERENCE OSCILLATOR FREQUENCY ADJUSTMENT

NOTE

Adjustment of the Power Reference Oscillator frequency may also affect the output level of the oscillator. Thus after the frequency is adjusted to 50.0 ± 0.5 MHz, the output level should be checked as described in Section IV. A procedure for adjusting the output to the specified level is provided in the next paragraph.

REFERENCE: Service Sheet 14.

DESCRIPTION: Variable inductor A8L1 is adjusted to set the power reference oscillator output frequency to 50.0 ± 0.5 MHz.

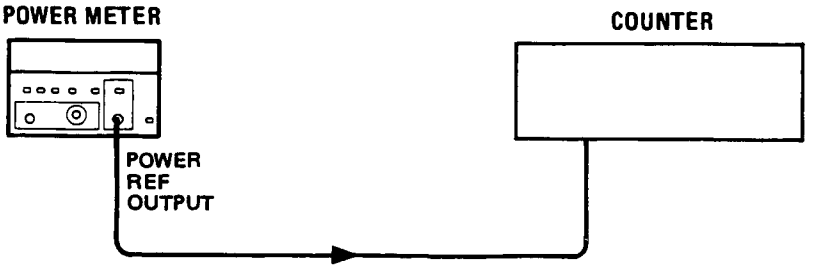

Figure 5-6. Power Reference Oscillator Frequency Adjustment Setup

ADJUSTMENTS

5-21. POWER REFERENCE OSCILLATOR FREQUENCY ADJUSTMENT (cont'd)

EQUIPMENT: Counter . . . . . HP 5315A

PROCEDURE:

1. Set the Power Meter LINE switch to ON (in) and the POWER REF switch to off (out).

2. Set up the counter to measure frequency and connect the equipment as shown in Figure 5-6.

3. Set the Power Meter POWER REF switch to ON (in) and observe the indication on the counter. If it is 50.0 ± 0.5 MHz, no adjustment of the power reference oscillator frequency is necessary. If it is not within these limits, adjust the power reference oscillator frequency as described in steps 4 through 9.

4. Remove the Power Meter top cover.

CAUTION

Take care not to ground the +15V or —15V inputs to the power reference oscillator when performing the following steps. Grounding either of these inputs could damage the power reference oscillator, and/or the power supply.

5. Grasp the power reference oscillator assembly firmly, and remove the four screws which secure it to the Power Meter chassis.

6. Tilt the power reference oscillator assembly to gain access to the circuit board underneath the metal cover, and adjust A8L1 to obtain a 50.00 ± 0.5 MHz indication on the counter.

7. Reposition the power reference oscillator on the Power Meter chassis but do not replace the mounting screws.

8. Observe the indication on the counter. If it is 50.0 ± 0.5 MHz, the adjustment procedure is complete. If it is not within these limits, repeat steps 6 and 7 except offset the power reference oscillator frequency as required to obtain a 50.0 ± 0.5 MHz indication on the counter when the power reference oscillator assembly is repositioned on the Power Meter chassis.

9. Replace the four screws which secure the power reference oscillator to the Power Meter chassis.

ADJUSTMENTS

5-22. POWER REFERENCE OSCILLATOR LEVEL ADJUSTMENT

REFERENCE: Service Sheet 14.

DESCRIPTION: The power reference oscillator output is factory-adjusted to 1 mW ± 0.7% using a special measurement system accurate to 0.5% (traceable to the National Bureau of Standards) and allowing for a 0.2% transfer error. To ensure maximum accuracy in readjusting the power reference oscillator, the following procedure provides step-by-step instructions for using specified Hewlett-Packard instruments of known capability. If equivalent instruments are used, signal acquisition criteria may vary and reference should be made to the manufacturer's guidelines for operating the equipment.

NOTE

The Power Meter may be returned to the nearest HP office to have the power reference oscillator checked and/or adjusted. Refer to Section II, PACKAGING.

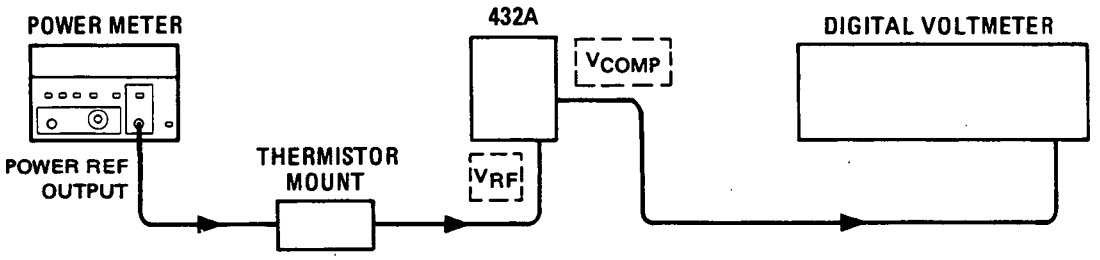

Figure 5-7. Power Reference Oscillator Level Adjustment Setup

EQUIPMENT:

Power Meter	HP 432A
Thermistor Mount	HP 478A-H75
Digital Voltmeter (DVM)	HP 3456A

PROCEDURE:

1. Set up the DVM to measure resistance and connect the DVM between the V_{RF} connector on the rear panel of the 432A and pin 1 on the thermistor mount end of the 432A interconnect cable.

2. Round off the DVM indication to two decimal places and record this value as the internal bridge resistance (R) of the 432A (approximately 200 ohms).

3. Connect the 432A to the Power Meter as shown in Figure 5-7.

4. Set the Power Meter LINE switch to ON (in) and the POWER REF switch to off (out). Then wait thirty minutes for the 432A thermistor mount to stabilize before proceeding to the next step.

5. Set the 432A RANGE switch to COARSE ZERO and adjust the front-panel COARSE ZERO control to obtain a zero meter indication.

6. Fine zero the 432A on the most sensitive range, then set the 432A RANGE switch to 1 mW.

ADJUSTMENTS

5-22. POWER REFERENCE OSCILLATOR LEVEL ADJUSTMENT (cont'd)

NOTE

Ensure that the DVM input leads are isolated from chassis ground when performing the next step.

7. Set up the DVM to measure microvolts and connect the positive and negative inputs leads, respectively, to the V_{COMP} and V_{RF} connectors on the rear panel of the 432A.

8. Observe the indication on the DVM. If less than 400 microvolts, proceed to the next step. If 400 microvolts or greater, press and hold the 432A FINE ZERO switch and adjust the COARSE ZERO control so that the DVM indicates 200 microvolts or less. Then release the FINE ZERO switch and proceed to the next step.

9. Round off the DVM indication to the nearest microvolt and record this value as V_0.

10. Disconnect the DVM negative input lead from the V_{RF} connector on the 432A and reconnect it to chassis ground.

11. Set the Power Meter POWER REF switch to ON (in) and record the indication observed on the DVM as V_{COMP}.

12. Disconnect the DVM negative input lead from chassis ground and reconnect it to the V_{RF} connector on the rear panel of the 432A. The DVM is not set up to measure V_1 which represents the power reference oscillator output level.

13. Calculate the value of V_1 equal to 1 milliwatt from the following equation:

$$V_1 - V_0 = V_{COMP} - \sqrt{(V_{COMP})^2 - (10^{-3})(4R)(\text{EFFECTIVE EFFICIENCY})}$$

where:

V_0 = previously recorded value

V_{COMP} = previously recorded value

10^{-3} = 1 milliwatt

R = previously recorded value

EFFECTIVE EFFICIENCY = value for thermistor mount at 50 MHz (traceable to the National Bureau of Standards).

14. Remove the Power Meter top cover and adjust LEVEL ADJUST potentiometer A8R4 so that the DVM indicates the calculated value of V_1.

ADJUSTMENTS

5-22. POWER REFERENCE OSCILLATOR LEVEL ADJUSTMENT (cont'd)

TYPICAL CALCULATIONS:

1. ACCURACY:

DVM Measurements:	(V_{COMP})	±0.018%
(HP 3490A —90 days, 23°C ±5°C)	($V_1 - V_0$)	±0.023%
	(R)	±0.03%
Math Assumptions :		±0.01%
EFFECTIVE EFFICIENCY CAL (NBS):		±0.5%
MISMATCH UNCERTAINTY : (Source & Mount SWR ≤1.05)		±0.1%
		≤ ±0.7%

2. MATH ASSUMPTIONS:

$$P_{RF} = \frac{2V_{COMP}(V_1 - V_0) + V_0^2 - V_1^2}{(4R)\,(\text{EFFECTIVE EFFICIENCY})}$$

Assume: $V_0^2 - V_1^2 = (V_1 - V_0)^2$

$-(V_1 - V_0)^2 = -V_1^2 + 2V_1 - V_0^2$

Want: $V_0^2 - V_1^2$

$\therefore$ error = $(V_1^2 + 2V_1 V_0 - V_0^2) - (V_0^2 - V_1^2) = -2V_0^2 + 2V_1 V_0 = 2V_0(V_1 - V_0)$

if $2V_0(V_1 - V_0) << 2V_{COMP}(V_1 - V_0)$ i.e., $V_0 << V_{COMP}$, error is negligable.

$V_{COMP} \sim 4$ volts. If $V_0 < 400\ \mu V$, error is $< 0.01\%$.

(typically V_0 can be set to $< 50\ \mu V$).

3. Derivation of Formula for $V_1 - V_0$

$$P_{RF} = \frac{2V_{COMP}(V_1 - V_0) + V_0^2 - V_1^2}{(4R)\,(\text{EFFECTIVE EFFICIENCY})}$$

Desired $P_{RF} = 1\ mW = 10^{-3}$

$$\therefore 10^{-3} = \frac{2V_{COMP}(V_1 - V_0) + V_0^2 - V_1^2}{(4R)\,(\text{EFFECTIVE EFFICIENCY})}$$

Let (4R) (EFFECTIVE EFFICIENCY) (10^{-3}) = K

ADJUSTMENTS

5-22. POWER REFERENCE OSCILLATOR LEVEL ADJUSTMENT (cont'd)

Substitute $-(V_1 - V_0)^2$ for $V_0^2 - V_1^2$ (see Math Assumptions under Accuracy)

Then $0 = (V_1 - V_0)^2 - 2V_{COMP}(V_1 - V_0) + K$

or $V_1 - V_0 = V_{COMP} - \sqrt{(V_{COMP})^2 - K}$

5-23. POWER SUPPLY ADJUSTMENTS†

REFERENCE: See Service Sheet 15.

DESCRIPTION: While the Power Meter is measuring an equivalent 10 mW signal from the 11683A Range Calibrator, the +15V supply is adjusted for a Power Meter indication of 9.99 mW to 10.01 mW. Then the range to range accuracy is checked (performance test 4-11). Finally, if all ranges are within limits, the +15V and —15V supplies are measured with a digital voltmeter.

EQUIPMENT:

Digital Voltmeter (DVM)	HP 3456A
Calibrator	HP 11683A

PROCEDURE:

1. Set the Power Meter switches as follows:

CAL FACTOR %	100
POWER REF	off (out)
MODE	WATT
RANGE HOLD	off (out)
LINE	ON (in)

2. Set the Range Calibrator switches as follows:

FUNCTION	CALIBRATE
POLARITY	NORMAL
RANGE	1 mW
LINE	ON (in)

3. Connect the Power Meter to the Range Calibrator.

4. Zero the Power Meter:

   a. Set the Range Calibrator FUNCTION switch to STANDBY.

   b. Press and hold the Power Meter SENSOR ZERO switch and wait for the digital readout to stabilize.

   c. Release the Power Meter SENSOR ZERO switch; wait for the ZERO lamp to go out before proceeding.

   d. Set the Range Calibrator FUNCTION switch to CALIBRATE.

   e. Adjust CAL ADJ for 1.00 mW.

†Refer to Section VII, Manual Changes, for backdating information.

ADJUSTMENTS

5-23. POWER SUPPLY ADJUSTMENTS (cont'd)

f. Set the Range Calibrator RANGE Switch to 10 mW.

5. Adjust A9R3 (+15V) for a Power Meter indication of 9.99 mW to 10.01 mW.

6. Check Power Meter range-to-range accuracy (Performance Test 4-11).

7. Measure and record the dc voltage at A9TP3 (−15V). The voltage should be between −15.5V and −14.5V.

8. Measure the dc voltage at A9TP4 (+15V). This voltage should be between +14.5 and +15.5 volts dc.

SECTION VI
REPLACEABLE PARTS

6-1. INTRODUCTION

6-2. This section contains information for ordering parts. Table 6-1 lists abbreviations used in the parts list and throughout the manual. Table 6-2 lists all replaceable parts in reference designation order. Table 6-3 contains the names and addresses that correspond with the manufacturers' code numbers.

6-3. ABBREVIATIONS

6-4. Table 6-1 lists abbreviations used in the parts list, schematics and throughout the manual. In some cases, two forms of the abbreviation are used, one all in capital letters, and one partial or no capitals. This occurs because the abbreviations in the parts list are always all capitals. However, in the schematics and other parts of the manual, other abbreviation forms are used with both lower case and upper case letters.

6-5. REPLACEABLE PARTS LIST

6-6. Table 6-2 is the list of replaceable parts and is organized as follows:

a. Electrical assemblies and their components in alpha-numerical order by reference designation.

b. Chassis-mounted parts in alpha-numerical order by reference designation.

c. Miscellaneous parts.

The information given for each part consists of the following:

a. The Hewlett-Packard part number.

b. The check digit (CD).

c. The total quantity (Qty) used in the instrument.

d. The description of the part.

e. A typical manufacturer of the part in a five-digit code.

f. The manufacturer's number for the part.

The total quantity for each part is given only once at the first appearance of the part number in the list.

6-7. ORDERING INFORMATION

6-8. To order a part listed in the replaceable parts table, quote the Hewlett-Packard part number, indicate the quantity required, and address the order to the nearest Hewlett-Packard office.

6-9. To order a part that is not listed in the replaceable parts table, include the instrument model number, instrument serial number, the description and function of the part, and the number of parts required. Address the order to the nearest Hewlett-Packard office.

6-10. PARTS PROVISIONING

6-11. Stocking spare parts for an instrument is often done to ensure quick return to service after a malfunction occurs. Hewlett-Packard has a Spare Parts Kit available for this purpose. The kit consists of selected replaceable assemblies and components for this instrument. The contents of the kit and the Recommended Spares list are based on failure reports and repair data, and parts support for one year. A complimentary Recommended Spares list for this instrument may be obtained on request and the Spare Parts Kit may be ordered through your nearest Hewlett-Packard office.

6-12. DIRECT MAIL ORDER SYSTEM

6-13. Within the USA, Hewlett-Packard can supply parts through a direct mail order system. Advantages of using the system are:

a. Direct ordering and shipment from the HP Parts Center in Mountain View, California.

b. No maximum or minimum on any mail order (there is a minimum order amount for parts ordered through a local HP office when the orders require billing and invoicing).

c. Prepaid transportation (there is a small handling charge for each order).

d. No invoices — to provide these advantages, a check or money order must accompany each order.

6-14. Mail order forms and specific ordering information is available through your local HP office. Addresses and phone numbers are located at the back of this manual.

lb . . . . . pound
LC . . . . . inductance-capacitance
LED . . light-emitting diode
LF . . . . . low frequency
LG . . . . . long
LH . . . . . left hand
LIM . . . . . limit
LIN . . . linear taper (used in parts list)
lin . . . . . linear
LK WASH . . . lock washer
LO . . . low; local oscillator
LOG . . . . logarithmic taper (used in parts list)
log . . . . . logrithm(ic)
LPF . . . . . low pass filter
LV . . . . . low voltage
m . . . . . meter (distance)
mA . . . . . milliampere
MAX . . . . . maximum
MΩ . . . . . megohm
MEG . . . . meg (10^6) (used in parts list)
MET FLM . . . . metal film
MET OX . . metallic oxide
MF . . . medium frequency; microfarad (used in parts list)
MFR . . . . . manufacturer
mg . . . . . milligram
MHz . . . . . megahertz
mH . . . . . millihenry
mho . . . . . mho
MIN . . . . . minimum
min . . . . . minute (time)
. . .' . . . . . minute (plane angle)
MINAT . . . . . miniature
mm . . . . . millimeter

NOTE

All abbreviations in the parts list will be in upper-case.

Table 6-1. Reference Designations and Abbreviations (2 of 2)

MOD . . . . . modulator
MOM . . . . . momentary
MOS . . . . . metal-oxide semiconductor
ms . . . . . millisecond
MTG . . . . . mounting
MTR . . . meter (indicating device)
mV . . . . . millivolt
mVac . . . . . millivolt, ac
mVdc . . . . . millivolt, dc
mVpk . . . . millivolt, peak
mVp-p . . . millivolt, peak-to-peak
mVrms . . . . millivolt, rms
mW . . . . . milliwatt
MUX . . . . . multiplex
MY . . . . . mylar
μA . . . . . microampere
μF . . . . . microfarad
μH . . . . . microhenry
μmho . . . . . micromho
μs . . . . . microsecond
μV . . . . . microvolt
μVac . . . . . microvolt, ac
μVdc . . . . . microvolt, dc
μVpk . . . microvolt, peak
μVp-p . . . microvolt, peak-to-peak
μVrms . . . . microvolt, rms
μW . . . . . microwatt
nA . . . . . nanoampere
NC . . . . . no connection
N/C . . . . normally closed
NE . . . . . neon
NEG . . . . . negative
nF . . . . . nanofarad
NI PL . . . . . nickel plate
N/O . . . . . normally open
NOM . . . . . nominal
NORM . . . . . normal
NPN . . . negative-positive-negative
NPO . . . . negative-positive zero (zero temperature coefficient)
NRFR . . not recommended for field replacement
NSR . . . . . not separately replaceable
ns . . . . . nanosecond
nW . . . . . nanowatt
OBD . . . order by description
OD . . . . . outside diameter
OH . . . . . oval head
OP AMPL . . . operational amplifier
OPT . . . . . option
OSC . . . . . oscillator
OX . . . . . oxide
oz . . . . . ounce
Ω . . . . . ohm
P . . . . peak (used in parts list)
PAM . . . . pulse-amplitude modulation
PC . . . . . printed circuit
PCM . . pulse-code modulation; pulse-count modulation
PDM . . . . . pulse-duration modulation
pF . . . . . picofarad
PH BRZ phosphor bronze
PHL . . . . . Phillips
PIN . . . positive-intrinsic-negative
PIV . . . . . peak inverse voltage
pk . . . . . peak
PL . . . . . phase lock
PLO . . . . . phase lock oscillator
PM . . . . phase modulation
PNP . . . positive-negative-positive
P/O . . . . . part of
POLY . . . . . polystyrene
PORC . . . . . porcelain
POS . . positive; position(s) (used in parts list)
POSN . . . . . position
POT . . . . . potentiometer
p-p . . . . . peak-to-peak
PP . . . peak-to-peak (used in parts list)
PPM . . . . . pulse-position modulation
PREAMPL . . . preamplifier
PRF . . . . pulse-repetition frequency
PRR . . . . pulse repetition rate
ps . . . . . picosecond
PT . . . . . point
PTM . . . . . pulse-time modulation
PWM . . . . . pulse-width modulation
PWV . . . . . peak working voltage
RC . . . . . resistance-capacitance
RECT . . . . . rectifier
REF . . . . . reference
REG . . . . . regulated
REPL . . . . . replaceable
RF . . . . . radio frequency
RFI . . . . radio frequency interference
RH . . . . round head; right hand
RLC . . . . . resistance-inductance-capacitance
RMO . . . rack mount only
rms . . . . root-mean-square
RND . . . . . round
ROM . . read-only memory
R&P . . . . . rack and panel
RWV . . . reverse working voltage
S . . . scattering parameter
s . . . . . second (time)
. . . " . second (plane angle)
S-B . . . . . slow-blow (fuse) (used in parts list)
SCR . . . silicon controlled rectifier; screw
SE . . . . . selenium
SECT . . . . . sections
SEMICON . . . . . semiconductor
SHF . . . . . superhigh frequency
SI . . . . . silicon
SIL . . . . . silver
SL . . . . . slide
SNR . . signal-to-noise ratio
SPDT . . . . . single-pole, double-throw
SPG . . . . . spring
SR . . . . . split ring
SPST . . . . . single-pole, single-throw
SSB . . . . . single sideband
SST . . . . . stainless steel
STL . . . . . steel
SQ . . . . . square
SWR . . standing-wave ratio
SYNC . . . . . synchronize
T . . timed (slow-blow fuse)
TA . . . . . tantalum
TC . . . . . temperature compensating
TD . . . . . time delay
TERM . . . . . terminal
TFT . . thin-film transistor
TGL . . . . . toggle
THD . . . . . thread
THRU . . . . . through
TI . . . . . titanium
TOL . . . . . tolerance
TRIM . . . . . trimmer
TSTR . . . . . transistor
TTL . . transistor-transistor logic
TV . . . . . television
TVI television interference
TWT . . traveling wave tube
U . . . . . micro (10^{-6}) (used in parts list)
UF . . . microfarad (used in parts list)
UHF . . ultrahigh frequency
UNREG . . . . unregulated
V . . . . . volt
VA . . . . . voltampere
Vac . . . . . volts, ac
VAR . . . . . variable
VCO . . . voltage-controlled oscillator
Vdc . . . . . volts, dc
VDCW . . volts, dc, working (used in parts list)
V(F) . . . . . volts, filtered
VFO . . variable-frequency oscillator
VHF . . . . . very-high frequency
Vpk . . . . . volts, peak
Vp-p . . volts, peak-to-peak
Vrms . . . . . volts, rms
VSWR . . . voltage standing wave ratio
VTO . . . . . voltage-tuned oscillator
VTVM . . . . vacuum-tube voltmeter
V(X) . . . . . volts, switched
W . . . . . watt
W/ . . . . . with
WIV . . . . working inverse voltage
WW . . . . . wirewound
W/O . . . . . without
YIG . . yttrium-iron-garnet
Z_o . . . . . characteristic impedance

NOTE

All abbreviations in the parts list will be in upper-case.

MULTIPLIERS

Abbreviation	Prefix	Multiple
T	tera	10^{12}
G	giga	10^{9}
M	mega	10^{6}
k	kilo	10^{3}
da	deka	10
d	deci	10^{-1}
c	centi	10^{-2}
m	milli	10^{-3}
μ	micro	10^{-6}
n	nano	10^{-9}
p	pico	10^{-12}
f	femto	10^{-15}
a	atto	10^{-18}
