

BEGIN MEASURING

To help you get started, a Quick Start Signal Source is included to generate signals for you to measure. If you have any questions about how to prepare the Analyzer or the Signal Source for use, refer to "Unpacking," at the end of this guide.

Pick one of the signals from the pages of this chapter. Follow the start-up instructions for that signal. Then explore the Analyzer. Select different menus, use the knob to modify numeric settings, and see what happens. The start-up instructions in this chapter are enough to get you started making measurements in the Modulation Domain.

There are short tasks in chapter 2 for each of the signals generated by the Signal Source. You can review these tasks for examples of how to use the Analyzer on the supplied signals, or for ideas of how to analyze your own signals.
