

Things for you to try ...

If you want to analyze this signal further, here is a suggestion. Try it on your own, at first. *Hint* shows how to complete the task.

Investigate one of the Distributions more closely.

Hint: Press the Vertical menu key. Move the distribution to the center of the display using Center and the knob. Then decrease the Span value. (Use the peak-peak value as a guide.) Go back and forth between Center and Span, as necessary.
