# **Errata**

#### Agilent References in this manual

**NOTICE:** This document contains references to Agilent Technologies. Agilent's former Test and Measurement business has become Keysight Technologies. For more information, go to:

www.keysight.com

#### About this manual

We've added this manual to the Keysight website in an effort to help you support your product. This manual provides the best information we could find. It may be incomplete or contain dated information.

# **Support for your product**

You can find information about technical and professional services, product support, and equipment repair and service on the web:

www.keysight.com

Select your country from the drop-down menu at the top. Under *Electronic Test and Measurement*, click on *Services*. The web page that appears next has contact information specific to your country.

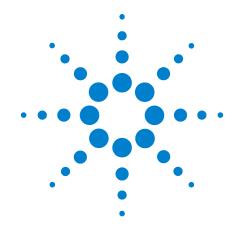

For more detailed product information, go to: www.keysight.com/find/*<product model>* i.e., for the M9514A, use: <a href="https://www.keysight.com/find/M9514A">www.keysight.com/find/M9514A</a>

Hypertext links to documents on agilent.com are no longer active. Use this substitution to access PDF files:

Broken links have the form: http://cp.literature.agilent.com/litweb/pdf/<*literature\_part\_number>*Substitute links with this form: http://literature.cdn.keysight.com/litweb/pdf/<*literature\_part\_number>*Where <*literature\_part\_number>* has the form: M9300-90001.pdf

For service notes, use: <a href="https://www.keysight.com/find/servicenotes">www.keysight.com/find/servicenotes</a>

# Agilent 34937A-34939A General Purpose Switch Modules

**User's Guide** 

Agilent Technologies, Inc. Printed in Malaysia Edition 2 September 2012 E0912

34980-90037

#### **Notices**

© Agilent Technologies, Inc. 2008

No part of this manual may be reproduced in any form or by any means (including electronic storage and retrieval or translation into a foreign language) without prior agreement and written consent from Agilent Technologies, Inc. as governed by United States and international copyright laws.

#### **Manual Part Number**

34980-90037

#### **Edition**

Second Edition, September 2012

Printed in Malaysia

Agilent Technologies, Inc. 3501 Stevens Creek Blvd Santa Clara, CA 95052 USA

Microsoft® and Windows® are U.S. registered trademarks of Microsoft Corporation.

#### **Software Revision**

This guide is valid for the firmware that was installed in the instrument at the time of manufacture. However, upgrading the firmware may add or change product features. For the latest firmware and documentation, go to the product page at:

www.agilent.com/find/34980A

#### Warranty

The material contained in this document is provided "as is," and is subject to being changed, without notice, in future editions. Further, to the maximum extent permitted by applicable law, Agilent disclaims all warranties, either express or implied, with regard to this manual and any information contained herein, including but not limited to the implied warranties of merchantability and fitness for a particular purpose. Agilent shall not be liable for errors or for incidental or consequential damages in connection with the furnishing, use, or performance of this document or of any information contained herein. Should Agilent and the user have a separate written agreement with warranty terms covering the material in this document that conflict with these terms, the warranty terms in the separate agreement shall control.

#### **Technology Licenses**

The hardware and/or software described in this document are furnished under a license and may be used or copied only in accordance with the terms of such license.

#### **Restricted Rights Legend**

U.S. Government Restricted Rights.
Software and technical data rights granted to the federal government include only those rights customarily provided to end user customers. Agilent provides this customary commercial license in Software and technical data pursuant to FAR 12.211 (Technical Data) and 12.212 (Computer Software) and, for the Department of Defense, DFARS 252.227-7015 (Technical Data - Commercial Items) and DFARS 227.7202-3 (Rights in Commercial Computer Software or Computer Software Documentation).

#### **Safety Notices**

#### **CAUTION**

A CAUTION notice denotes a hazard. It calls attention to an operating procedure, practice, or the like that, if not correctly performed or adhered to, could result in damage to the product or loss of important data. Do not proceed beyond a CAUTION notice until the indicated conditions are fully understood and met.

#### WARNING

A WARNING notice denotes a hazard. It calls attention to an operating procedure, practice, or the like that, if not correctly performed or adhered to, could result in personal injury or death. Do not proceed beyond a WARNING notice until the indicated conditions are fully understood and met.

# **Additional Safety Notices**

The following general safety precautions must be observed during all phases of operation of this instrument. Failure to comply with these precautions or with specific warnings or instructions elsewhere in this manual violates safety standards of design, manufacture, and intended use of the instrument. Agilent Technologies assumes no liability of the customer's failure to comply with the requirements.

#### **General**

Do not use this products in any manner not specified by the manufacturer. The protective features of this product may be impaired if it is used in a manner not specified in the operation instructions.

#### **Before Applying Power**

Verify that all safety precautions are taken. Make all connections to the unit before applying power.

#### **Ground the Instrument**

This product is provided with protective earth terminals. To minimize shock hazard, the instrument must be connected to the ac power mains through a grounded power cable, with the ground wire firmly connected to an electrical ground (safety ground) at the power outlet. Any interruption of the protective (grounding) conductor or disconnection of the protective earth terminal will cause a potential shock hazard that could result in personal injury.

# Do Not Operate in an Explosive Atmosphere

Do not operate the instrument in the presence of flammable gases or fumes.

# Do Not Remove the Instrument Cover

Only qualified, service-trained personal who are aware of the hazards involved should remove instrument covers. Always disconnect the power cable and any external circuits before removing the instrument cover.

#### **Do Not Modify the Instrument**

Do not install substitute parts or perform any unauthorized modification to the product. Return the product to an Agilent Sales and Service Office for service and repair to ensure that safety features are maintained.

#### **In Case of Damage**

Instruments that appear damaged or defective should be made inoperative and secured against unintended operation until they can be repaired by qualified service personnel.

#### **Safety Symbols**

Alternating current

Frame or chassis terminal

Standby supply. Unit is not completely disconnected from ac mains when switch is off

Caution, risk of electric shock

Caution, refer to accompanying description

# Waste Electrical and Electronic Equipment (WEEE) Directive 2002/96/EC

This product complies with the WEEE Directive (2002/96/EC) marking requirement. The affixed product label (see above) indicates that you must not discard this electrical/electronic product in domestic household waste.

Product Category: With reference to the equipment types in the WEEE directive Annex 1, this product is classified as a "Monitoring and Control instrumentation" product.

To return unwanted products, contact your local Agilent office, or go to www.agilent.com/environment/product for more information.

#### **Technical Support**

If you have questions about your shipment, or if you need information about warranty, service, or technical support, contact Agilent Technologies:

In the United States: (800) 829-4444 In Europe: 31 20 547 2111 In Japan: 0120-421-345

Or go to www.agilent.com/find/assist for information on contacting Agilent in your country of specific location. You can also contact your Agilent Technologies Representative.

# **Declaration of Conformity**

Declarations of Conformity for this product and for other Agilent products may be downloaded from the Internet. There are two methods to obtain the Declaration of Conformity:

- Go to http://regulations.corporate.agilent.com/DoC/search.htm . You can then search by product number to find the latest Declaration of Conformity.
- Alternately, you can go to the product web page (www.agilent.com/find/34980A), click on the Document Library tab then scroll down until you find the Declaration of Conformity link.

# **General Purpose Switch Modules**

This User's Guide covers the following two plug-in modules for the Agilent 34980A Multifunction Switch/Measure Unit:

| 34937A | 28-channel Form C and 4-channel Form A |
|--------|--|
| 34938A | 28-channel 5-amp Form A                |
| 34939A | 64-Channel High-Density Form A         |

- The 34937A provides independent control of 32 relays, including:
  - Twenty-eight Form C relays, each rated for 1 A at 60 W per channel
  - Four Form A (SPST) relays, each rated for 5 A at 150 W per channel.
- The 34938A, for power switching applications, offers 20 Form A relays, each rated for 5 A at 150 W per channel.
- The 34939A provides independent control of 64 Form-A relays, each rated for 1 A at 60 W per channel.

All three modules utilize armature-latching relays.

You can use these general-purpose switches in your 34980A mainframe for device actuation, digital output, signal routing, or — combined with other switch modules — to create flexible switching topologies. You can close multiple channels at the same time. These modules do not connect to the 34980A's analog buses.

# **Operating Considerations.**

#### WARNING

Do not connect either the 34937A, 34938A or 34939A module directly to a mains power outlet. If it is necessary to switch a mains voltage or any circuit where a large inductive load may be switched, you must add signal conditioning elements to reduce the potential transients before they reach the module or the Analog Buses.

#### **Electrical Considerations**

See the *Introduction to the Plug In Modules* chapter of the 34980A Mainframe User's Guide for detailed environmental operating conditions for the 34980A mainframe and its installed modules. That guidance sets maximum per channel current and power ratings at rated voltage for pollution degree 1 (dry) and pollution degree 2 (possible condensation) conditions, for each of the GP modules.

#### **Temperature Sensor**

A temperature sensor on these modules triggers system interrupts when high-carry current-induced heat on the modules is excessive and sets the HOT annunciator on the front panel. This over-temperature situation generates an SRQ event when the factory-set  $70~^{\rm oC}$  threshold is reached. It is up to the user to determine what, if any, action should be taken.

# **Switching Reactive Loads**

Reactive loads (those that include significant inductance or capacitance) can cause voltage spikes or current spikes during switching operations. The general purpose modules *are* designed for switching reactive loads. The optional 34937T and 34938T terminal blocks have solder pads for adding snubber circuits for the 5 A relays to reduce the reactive transients. See the drawings on page 8 and page 11 for the locations of snubber circuit pads and installation information about a snubber circuit.

# Hardware Power-Fail Jumper

A hardware jumper on the 34937A and 34938A modules allows you to define the power-failure states for the modules' 5 A latching relays. Depending on the position of the jumper, the 5 A relays will either open or maintain state when system power failure occurs.

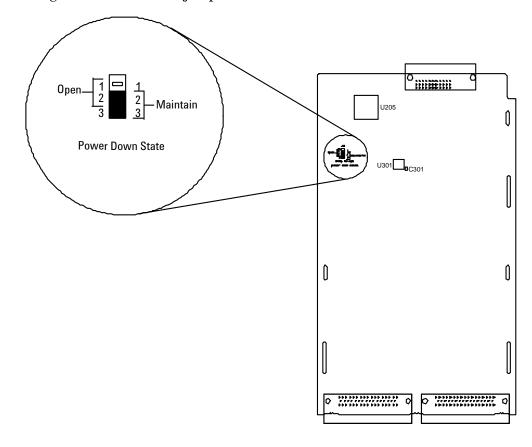

On the 34939A module, a hardware jumper allows you to define the power-failure state affecting *all 64* of the module's 1 A latching relays. Depending on the position of the jumper, these relays will either open or maintain state when system power failure occurs.

The jumpers are positionable across pins 1–2 ("Open" position) or across pins 2–3 ("Maintain" position). When shipped from the factory, the power-fail jumper is in the Maintain position (i.e. all relays maintain their present state when power fails).

WARNING

Before changing the position of the jumper, remove external connections from the module. Wait five to ten seconds to allow the module's internal capacitors to discharge.

After a five- to ten-second delay, remove the sheet metal cover from the module and move the position of the jumper mounted on the module. See the figure below for the jumper's location on the module.

# 34937A, 34938A and 34939A SCPI Programming Examples

The programming examples below provide you with SCPI command examples to use for actions specific to the general purpose switch modules.

The slot and channel addressing scheme used in these examples follow the form  $\mathbf{sccc}$  where  $\mathbf{s}$  is the mainframe slot number (1 through 8) and  $\mathbf{ccc}$  is the channel number.

For complete information on the SCPI commands used to program the 34980A, and for example programs, refer to the Agilent 34980A Programmer's Reference contained on the 34980A Product Reference CD.

#### **Opening and Closing Channels**

**Example: Closing and opening channels** The first two commands close channel 3 for a module in slot 2, then channel 5 for that module. The last command opens both channel 3 and channel 5.

```
ROUTe:CLOSe (@2003)
ROUTe:CLOSe (@2005)
ROUTe:OPEN (@2003,2005)
```

**Example: Querying channels for open or closed state** The following command returns a 1 (true) or 0 (false) state of channel 016 for a module in slot 3.

```
ROUTe:CLOSe (@3016)
ROUTe:CLOSe? (@3016) !Returns a 1
ROUTe:OPEN? (@3016) !Returns a 0
```

# **Reading Jumper State and System Identity**

**Example: Querying the power-failure state of 5 A relays** The following command returns the position of the power-fail jumper, either "MAIN" (all relays maintain their present state when power fails) or "OPEN" (all relays open when power fails) for a module in slot 4. If this command is sent to a module other than the 34937A or 34938A, "NONE" is returned (no error is generated). In particular, the position of the power-fail jumper on the 34939A module *cannot* be queried using this command.

```
SYSTem:MODule:PFAil:JUMPer:AMP5? 4
```

**Example: Querying the system for module identify (all modules)** The following command returns the identify of the module installed in slot 7.

```
SYSTem:CTYPe? 7
```

# Reading Cycle Count and Resetting Modules to Power-On State

**Example: Reading the cycle count for a relay (all switch modules)** The following command returns the relay cycle count on channel 7 and channel 16 for a module in slot 1.

```
DIAGnostic:RELay:CYCLes? (@1007,1016)
```

**Example: Clearing the cycle count for a relay (all switch modules)** The following command resets the relay cycle count on channels 7 and 16 for a module in slot 1.

```
DIAGnostic:RELay:CYCLes:CLEar (@1007,1016)
```

**Example: Resetting Module(s) to power-on state (all modules)** The following command resets a module in slot 4 to its power-on state.

SYSTem: CPON 4

#### 34937A 32-Channel GP Switch Module

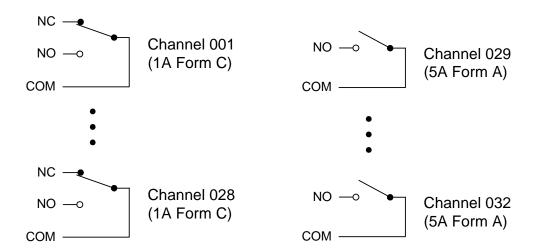

The 34937A general-purpose switch module provides independent control of:

- Twenty-eight Form C (SPDT) latching relays rated at 1 A
- Four Form A (SPST) latching relays rated at 5 A. You can set the power-failure state for these 5 A relays (see "Hardware Power-Fail Jumper" on page 2).

NOTE

A temperature sensor on these modules triggers system interrupts when high-carry current-induced heat on the modules reaches a threshold of 70  $^{\rm o}$ C. See description of the "HOT" annunciator on page 2.

#### 34937T Terminal Block

This terminal block with screw-type connections is labeled with the model number and the abbreviated module name. In addition, space is available on the label for you to write the slot number.

The 34980A Product Reference CD (shipped with the instrument) contains a 34937T Wiring Log for you to document your wiring configuration for this module. You can open the wiring log file in  $Microsoft^{\otimes}$  Excel<sup>®</sup> or  $Adobe^{\otimes}$  Acrobat<sup>®</sup> format.

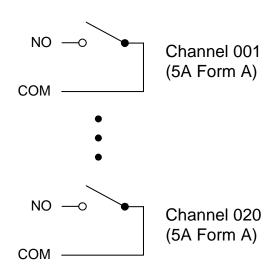

# 34938A 20-Channel High-Current GP Switch Module

The 34938A high-current GP switch module provides twenty 5 A Form A (SPST) relays for general purpose switching needs. You can set the power-failure state for these 5 A relays (see "Hardware Power-Fail Jumper" on page 2).

NOTE

A temperature sensor on these modules triggers system interrupts when high-carry current-induced heat on the modules reaches a threshold of 70  $^{\circ}$ C. See description of the "HOT" annunciator on page 2.

#### 34938T Terminal Block

This terminal block with screw-type connections is labeled with the model number and the abbreviated module name. In addition, space is available on the label for you to write the slot number.

The *34980A Product Reference* CD (shipped with the instrument) contains a 34938T Wiring Log for you to document your wiring configuration for this module. You can open the wiring log file in Microsoft<sup>®</sup> Excel<sup>®</sup> or Adobe<sup>®</sup> Acrobat<sup>®</sup> format.

Pads for user-supplied snubber circuity to alleviate reactive transients. The circuits may consist of resistors, capacitors, varistors, or other elements as needed to reduce the switching voltage and current transients inherent in reactive circuits.

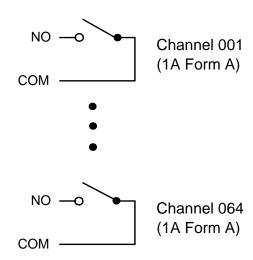

# 34939A 64-Channel High-Density Form-A GP Switch Module

The 34939A high-density GP switch module provides sixty-four 1 A Form A (SPST) relays for general purpose switching needs. You can set the power-failure state for these relays (see "Hardware Power-Fail Jumper" on page 2).

NOTE

A temperature sensor on these modules triggers system interrupts when high-carry current-induced heat on the modules reaches a threshold of 70  $^{\circ}$ C. See description of the "HOT" annunciator on page 2.

## 34939A Simplified Schematic

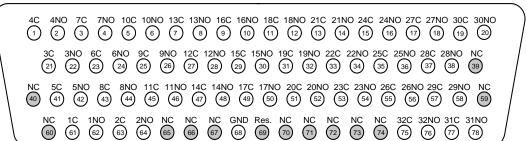

#### 34939A D-Sub Connectors

#### Bank 1

For orientation, the D-sub connector end of the module is facing you.
