## **1. Modification Record**

<b>Revision</b>	<b>Comments</b>	<b>Issue Date</b>
1.00	First Release	Dec 1, 2011

## **2. Purpose**

This document is intended to provide the measurement procedures for the interface S-parameter and impedance tests defined in the MIPI Alliance Specification for D-PHY. The instrument operations contained in this document are designed for Agilent E5071C ENA Network Analyzer Option TDR.

## **3. References**

MIPI Alliance D-PHY Conformance Test Suite Version 1.00

MIPI Alliance Specification for D-PHY Version 1.00

## **4. Resource Requirements**

1. ENA Series Network Analyzer with Enhanced Time Domain Option

*Note: Use the test set option of 4.5 GHz or above, and either of 2-port and 4-port.*

*Note: E5071C firmware revision A.10.05 or above is installed.*

*Note: E5071C-TDR application software revision A.01.50 or above is installed.*

2. Electronic Calibration Module N4431B (for 4.5/6.5/8.5 GHz models) or N4433A (14/20 GHz models)
3. 3.5 mm cables of 4 GHz bandwidth or above x2

# *Agilent MOI for MIPI D-PHY Conformance Tests*

## **5. Test Procedure**

### 5.1. Outline of Test Procedure

#### **1. Instrument Setup**

#### **2. Calibration and Adjustment**

Time Domain Calibration with the Setup Wizard in the TDR Application Software

Frequency Domain Calibration with the VBA Macro Program

#### **3. Measurements and Data Analysis**

##### **Time Domain Measurements**

- HS-TX Single-Ended Output Impedance
- HS-TX Single-Ended Output Impedance Mismatch
- HS-RX DC Differential Input Impedance

##### **Frequency Domain Measurements**

- HS-TX Differential Return Loss
- HS-TX Common-Mode Return Loss
- HS-TX Mode Conversion Limits
- HS-RX Differential Return Loss
- HS-RX Common-Mode Return Loss
- HS-RX Mode Conversion Limits

*Note: Hard Keys (Keys located on the Front panel of E5071C) are displayed in **Blue color** and **Bold**. (Example: **Avg, Analysis**)*

*Note: Soft keys (Keys on the screen) are displayed in **Bold**. (Example: **S11, Real, Transform**)*

*Note: Buttons (in the TDR or VBA) are displayed in **Green color** and **Bold**. (Example: **Trace, Rise Time**)*

*Note: Tabs (in the TDR) are displayed in **Brown color** and **Bold**. (Example: **Setup, Trace Control**)*

## Agilent MOI for MIPI D-PHY Conformance Tests

### 5.2. Instrument Setup

This section describes the procedures for recalling the state file and VBA macro that support the instrument setup. Download “E5071C-TDR Test Package for MIPI D-PHY Tx/Rx Devices” from [www.agilent.com/find/ena-tdr\\_dphy-txrx](http://www.agilent.com/find/ena-tdr_dphy-txrx).

Extract the zip file and transfer the extracted files to the instrument with a USB flash memory. For manual measurement settings, refer to 6 Appendix.

#### 5.2.1. Recalling State File

1. If TDR setup wizard appears, click **Close** button on the wizard.
2. Open **Setup** tab (item1).
3. Click **Advanced Mode** (item2).

4. A dialog box appears requesting for confirmation. Then click **Yes**. (Clear the check box for “Use Advanced Calibration Methods”)

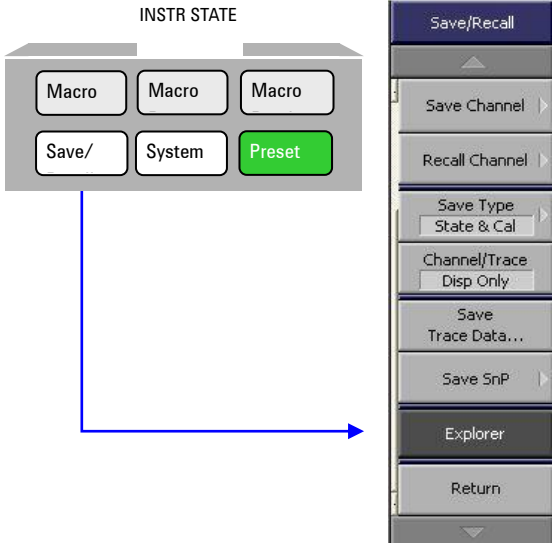

5. Click **File** (item3) and select **Recall State** to open the Recall State dialog box.
6. Specify the folder and appropriate state file name, and click **Open**.

E5071C Test Set Option	State File Name
240/245/260/265/280/285/440/445/460/465/480/485	MIPI_D-PHY_TxRx_24x-48x.tdr
2D5/2K5/4D5/4K5	MIPI_D-PHY_TxRx_2D5-4K5.tdr

# Agilent MOI for MIPI D-PHY Conformance Tests

## 5.2.2. Running VBA macro program

### 1. Installing the VBA macro program

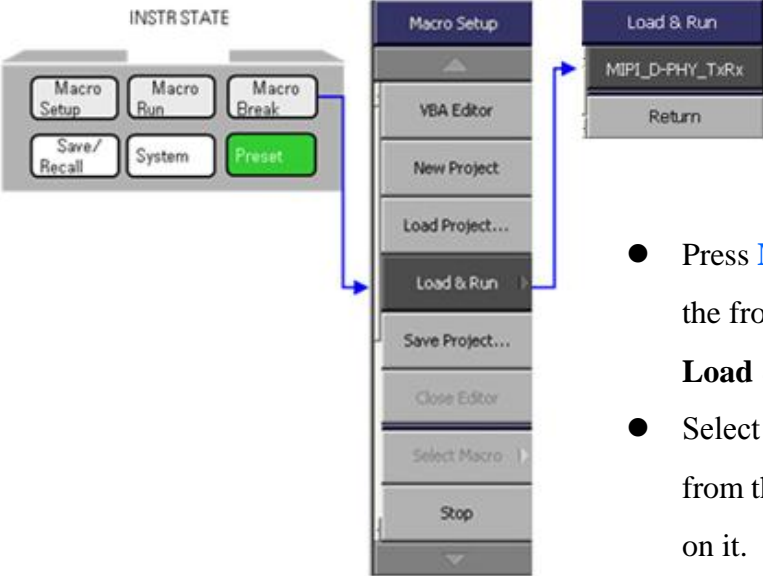

Obtain the VBA macro program from Agilent and install it on the E5071C.

- Press **Save/Recall** on the front panel, then press the **Explorer** soft key.
- Using **Explorer**, copy the file to the “D:¥VBA” folder.

## Agilent MOI for MIPI D-PHY Conformance Tests

### 2. Running the VBA macro program

The diagram illustrates the process of running a VBA macro program on an Agilent instrument. It shows three main components: the INSTR STATE panel, the Macro Setup menu, and the Load & Run soft key menu.

**INSTR STATE Panel:** This panel contains several buttons: Macro Setup, Macro Run, Macro Break, Save/Recall, System, and Preset. A blue arrow points from the Macro Setup button to the Macro Setup menu.

**Macro Setup Menu:** This menu is displayed vertically and contains the following options: Macro Setup, VBA Editor, New Project, Load Project..., Load & Run, Save Project..., Close Editor, Select Macro, and Stop. A blue arrow points from the Load & Run option to the Load & Run soft key menu.

**Load & Run Soft Key Menu:** This menu is displayed vertically and contains the following options: Load & Run, MIPI\_D-PHY\_TxRx, and Return. A blue arrow points from the MIPI\_D-PHY\_TxRx option back to the Macro Setup menu.

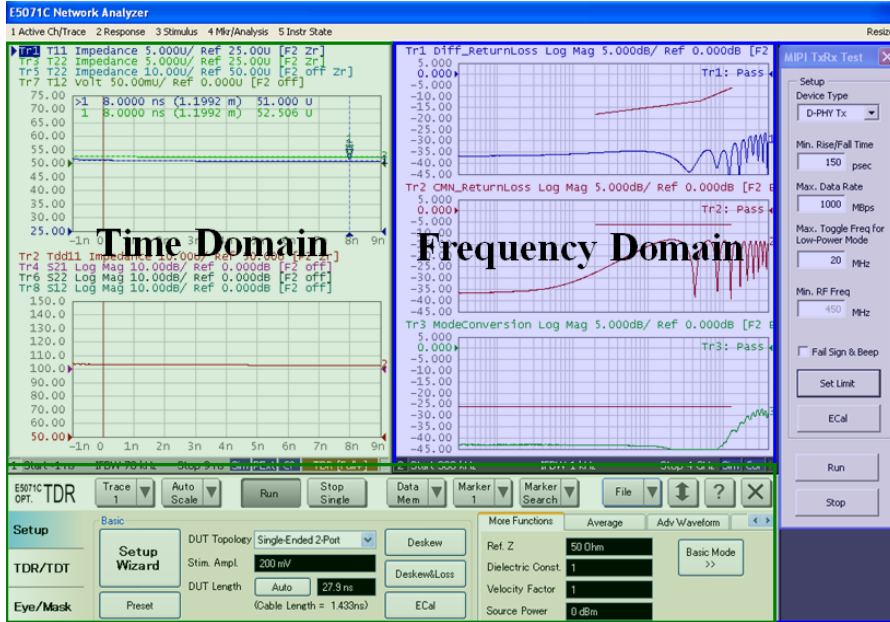

- Press **Macro Setup** button from the front panel, then click the **Load & Run** soft key.
- Select “MIPI\_D-PHY\_TxRx” from the soft key menu and click on it.

# Agilent MOI for MIPI D-PHY Conformance Tests

## Screen Configuration

This section describes the screen configuration of ENA Option TDR.

Channel1 dedicated to time domain measurements is controlled by the TDR application software located at the bottom of the screen and Channel2 dedicated to frequency domain measurements is controlled by the VBA macro program located at the upper right of the screen.

# Agilent MOI for MIPI D-PHY Conformance Tests

## Description of Measurement Window

### Channel 1 Time Domain

**Single-Ended Output Impedance (HS-TX)**  
Tr1: T11  
Tr3: T22

**DC Differential Input Impedance (HS-RX)**  
Tr2: Tdd11

### Channel 2 Frequency Domain

**Differential Return Loss (HS-TX/HS-RX)**  
Tr1: Sdd11

**Common-Mode Return Loss (HS-TX/HS-RX)**  
Tr2: Scc11

**Mode Conversion Limits (HS-TX/HS-RX)**  
Tr3: Sdc11

## Agilent MOI for MIPI D-PHY Conformance Tests

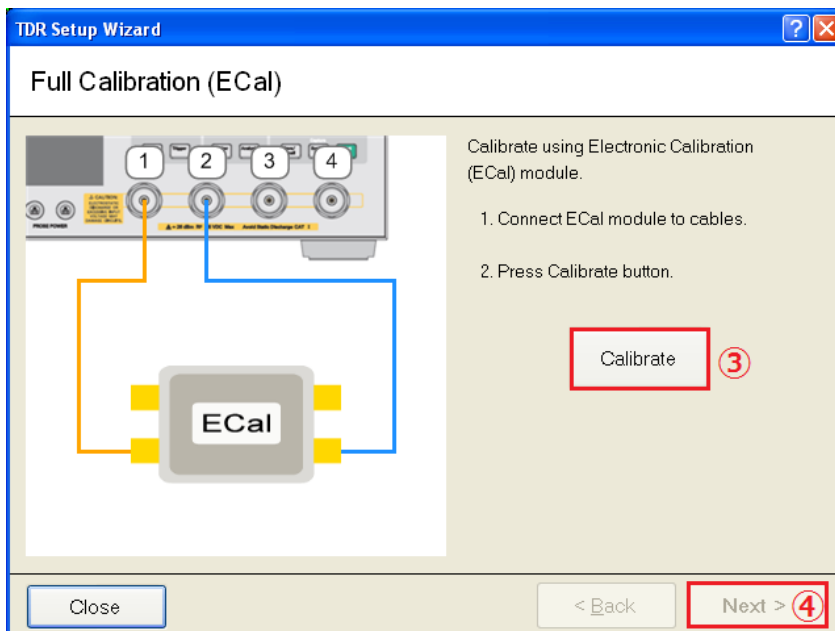

### 5.3. Calibration and Adjustment

#### 5.3.1. Time Domain Calibration

1. Connect the test cables to the port 1 and port 2 on the E5071C.
2. Press **Channel Next** key to select Channel1.
3. Open **Setup** tab (item1).
4. Click **ECal** (item2) to launch the Full Calibration (ECal) and Fixture Compensation wizard.

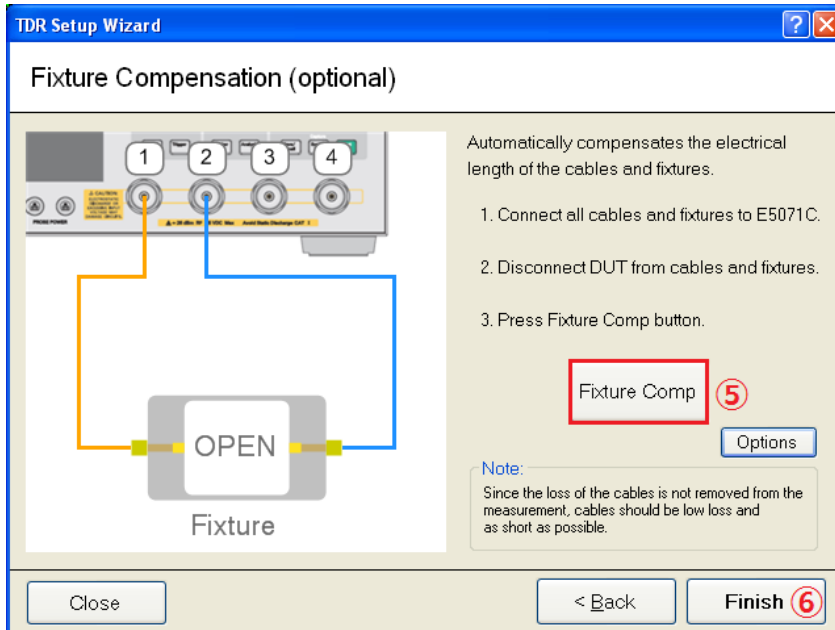

5. Connect the test cables to the ECal module.
6. Click **Calibrate** (item3), then it will start the full calibration. Wait until the check-mark appears on the right of Calibrate button.
7. Click **Next** (item4).

## Agilent MOI for MIPI D-PHY Conformance Tests

8. Connect port 1 and port 2 cables to the test fixtures and make the fixture end open.
9. Click **Fixture Comp** (item5), then it will start the fixture compensation. Wait until the check-mark appears on the right of Fixture Comp button.
10. Click **Finish** (item6).

## Agilent MOI for MIPI D-PHY Conformance Tests

### 5.3.2. Frequency Domain Calibration

1. Input the parameters expected with the DUT (item1)<sup>1</sup>.
2. Click **Set Limit** (item2).
3. Connect port 1 and port 2 cables to the ECal module.
4. Click **ECal** (item3) to perform the Full Calibration (ECal).

<sup>1</sup> Basically, the default values need not be changed.

## *Agilent MOI for MIPI D-PHY Conformance Tests*

### 5.4. HS-TX S-Parameters

#### 5.4.1. Differential Return Loss (SDD11)

##### 5.4.1.1. Purpose

To verify that the Differential Return Loss of the DUT's Clock and Data Lane HS transmitters exceeds the minimum conformance limits.

##### 5.4.1.2. Test Procedure

1. Press **Channel Next** key to select Channel2.
2. Press **Channel Max** key to enlarge Channel2.
3. Ensure the VBA shows the desired minimum rise and fall times, bit rate and maximum toggle frequency.
4. On the VBA macro, select "D-PHY Tx" from the drop down list and click Set Limit button.
5. Power on and configure the DUT to force its HS-TX into a fixed HS state, transmitting a continuous, repeating pattern on all Clock and Data Lanes.
6. Connect the DUT's Data Lane 0 transmitter to the Test System.
7. Click **Run** button on the VBA macro.
8. Read the pass/fail sign on the trace (item 1 in Figure 5-1).
9. Repeat the previous three steps for all other Data Lane, and the Clock Lane.

##### 5.4.1.3. Observable Results

For all Clock and Data Lanes, verify that the SDD11 HS-TX Differential Return Loss meets or exceeds the limits shown in the figure below.

## Agilent MOI for MIPI D-PHY Conformance Tests

**Figure 5-1 Differential Return Loss, Common-Mode Return Loss and Mode Conversion Limits (HS-TX) Example**

### 5.4.2. Common-Mode Return Loss (SCC11)

#### 5.4.2.1. Purpose

To verify that the Common-Mode Return Loss of the DUT's Clock and Data Lane HS transmitters exceeds the minimum conformance limits.

#### 5.4.2.2. Test Procedure

1. Press **Channel Next** key to select Channel2.
2. Press **Channel Max** key to enlarge Channel2.
3. Ensure the VBA shows the desired minimum rise and fall times, bit rate and maximum toggle frequency.
4. On the VBA macro, select "D-PHY Tx" from the drop down list and click Set Limit button.
5. Power on and configure the DUT to force its HS-TX into a fixed HS state, transmitting a continuous, repeating pattern on all Clock and Data Lanes.

## *Agilent MOI for MIPI D-PHY Conformance Tests*

6. Connect the DUT's Data Lane 0 transmitter to the Test System.
7. Click **Run** button on the VBA macro.
8. Read the pass/fail sign on the trace (item 2 in Figure 5-1).
9. Repeat the previous three steps for all other Data Lanes, and the Clock Lane.

### 5.4.2.3. Observable Results

For all Clock and Data Lanes, verify that the SCC11 HS-TX Common-Mode Return Loss meets or exceeds the limits shown in the figure below.

## 5.4.3. Mode Conversion Limits (SDC11)

### 5.4.3.1. Purpose

To verify that the Mode Conversion S-parameters of the DUT's Clock and Data Lane HS transmitters exceed the minimum conformance limits.

### 5.4.3.2. Test Procedure

1. Press **Channel Next** key to select Channel2.
2. Press **Channel Max** key to enlarge Channel2.
3. Ensure the VBA shows the desired minimum rise and fall times, bit rate and maximum toggle frequency.
4. On the VBA macro, select "D-PHY Tx" from the drop down list and click Set Limit button.
5. Power on and configure the DUT to force its HS-TX into a fixed HS state, transmitting a continuous, repeating pattern on all Clock and Data Lanes.
6. Connect the DUT's Data Lane 0 transmitter to the Test System.
7. Click **Run** button on the VBA macro.
8. Read the pass/fail sign on the trace (item 3 in Figure 5-1).
9. Repeat the previous three steps for all other Data Lanes, and the Clock Lane.

### 5.4.3.3. Observable Results

For all Clock and Data Lanes, verify that the SDC11 HS-TX Mode Conversion Loss meets or exceeds the limits shown in the figure below.

## *Agilent MOI for MIPI D-PHY Conformance Tests*

### 5.4.4. Single-Ended Output Impedance ( $Z_{OS}$ )

#### 5.4.4.1. Purpose

To verify that the Single-Ended Output Impedance ( $Z_{OS}$ ) of the DUT's HS transmitters is within the conformance limits.

#### 5.4.4.2. Test Procedure

1. Press **Channel Next** key to select Channel1.
2. Press **Channel Max** key to enlarge Channel1.
3. Power on and configure the DUT to force its HS-TX into a fixed HS state, transmitting a continuous, repeating pattern on all Clock and Data Lanes.
4. Connect the DUT's Data Lane 0 transmitter to the Test System.
5. Click **Stop Single** for Time Domain measurement.
6. Read the marker values<sup>2</sup> (item 1 in Figure 5-2) as  $Z_{OS}$  for the Dp and Dn pins.
7. Repeat the previous three steps for all other Data Lanes, and Clock lane.

#### 5.4.4.3. Observable Results

For all Clock and Data Lanes, verify that  $Z_{OS}$  is between 40 and 62.5 ohms for both the Dp and Dn pins.

---

<sup>2</sup> The markers are placed at 8 nsec by default. If the DUT response is not flat around the marker, adjust the marker position and horizontal scale.

## Agilent MOI for MIPI D-PHY Conformance Tests

Figure 5-2 Single Ended Output Impedance (HS-TX) Example

### 5.4.5. Single-Ended Output Impedance Mismatch ( $\Delta Z_{OS}$ )

#### 5.4.5.1. Purpose

To verify that the Single-Ended Output Impedance Mismatch ( $\Delta Z_{OS}$ ) of the DUT's HS transmitter is within the conformance limits.

#### 5.4.5.2. Test Procedure

1. Obtain the  $Z_{OS}$  values for each Clock and Data Lane from Single-Ended Output Impedance.
2. Compute the  $\Delta Z_{OS}$  value, as described below.

$$- \Delta Z_{OS} = 2(|Z_{OSDP} - Z_{OSDN}| / (Z_{OSDP} + Z_{OSDN}))$$

3. For each lane, compute  $\Delta Z_{OS}$  as described above.

#### 5.4.5.3. Observable Results

For all Clock and Data Lanes, verify that  $\Delta Z_{OS}$  is less than 10%.

## *Agilent MOI for MIPI D-PHY Conformance Tests*

### 5.5. HS-RX S-Parameters

#### 5.5.1. Differential Return Loss (SDD11)

##### 5.5.1.1. Purpose

To verify that the Differential Return Loss of the DUT's Clock and Data Lane HS receivers exceeds the minimum conformance limits.

##### 5.5.1.2. Test Procedure

1. Press **Channel Next** key to select Channel2.
2. Press **Channel Max** key to enlarge Channel2.
3. Ensure the VBA shows the desired minimum rise and fall times, bit rate, maximum toggle frequency and minimum RF frequency.
4. On the VBA macro, select "D-PHY Rx" from the drop down list and click Set Limit button.
5. Power on and configure the DUT to force its RX into fixed state where the HS-RX termination is enabled.
6. Connect the DUT's Data Lane 0 receiver to the Test System.
7. Click **Run** button on the VBA macro.
8. Read the pass/fail sign on the trace (item 1 in Figure 5-3).
9. Repeat the previous three steps for all other Data Lanes, and the Clock Lane.

## Agilent MOI for MIPI D-PHY Conformance Tests

### 5.5.1.3. Observable Results

For all Clock and Data Lanes, verify that the SDD11 HS-RX Differential Return Loss meets or exceeds the limits shown in the figure below.

**Figure 5-3 Differential Return Loss, Common-Mode Return Loss and Mode Conversion Limits (HS-RX) Example**

## 5.5.2. Common-Mode Return Loss (SCC11)

### 5.5.2.1. Purpose

To verify that the Common-Mode Return Loss of the DUT's Clock and Data Lane HS receivers exceeds the minimum conformance limits.

### 5.5.2.2. Test Procedure

1. Press **Channel Next** key to select Channel2.
2. Press **Channel Max** key to enlarge Channel2.
3. Ensure the VBA shows the desired minimum rise and fall times, bit rate, maximum toggle frequency and minimum RF frequency.

## *Agilent MOI for MIPI D-PHY Conformance Tests*

4. On the VBA macro, select “D-PHY Rx” from the drop down list and click Set Limit button.
5. Power on and configure the DUT to force its RX into fixed state where the HS-RX termination is enabled.
6. Connect the DUT’s Data Lane 0 receiver to the Test System.
7. Click **Run** button on the VBA macro.
8. Read the pass/fail sign on the trace (item 2 in Figure 5-3).
9. Repeat the previous three steps for all other Data Lanes, and the Clock Lane.

### 5.5.2.3. Observable Results

For all Clock and Data Lanes, verify that the SCC11 HS-RX Common-Mode Return Loss meets or exceeds the limits show in the figure below.

## 5.5.3. Mode Conversion Limit (SDC11)

### 5.5.3.1. Purpose

To verify that the Mode Conversion S-parameters of the DUT’s Clock and Data Lane HS receivers exceed the minimum conformance limits.

### 5.5.3.2. Test Procedure

1. Press **Channel Next** key to select Channel2.
2. Press **Channel Max** key to enlarge Channel2.
3. Ensure the VBA shows the desired minimum rise and fall times, bit rate, maximum toggle frequency and minimum RF frequency.
4. On the VBA macro, select “D-PHY Rx” from the drop down list and click Set Limit button.
5. Power on and configure the DUT to force its RX into fixed state where the HS-RX termination is enabled.
6. Connect the DUT’s Data Lane 0 receiver to the Test System.
7. Click **Run** button on the VBA macro.
8. Read the pass/fail sign on the trace (item 3 in Figure 5-3).

## *Agilent MOI for MIPI D-PHY Conformance Tests*

9. Repeat the previous three steps for all other Data Lanes, and the Clock Lane.

### 5.5.3.3. Observable Results

For all Clock and Data Lanes, verify that the SDC11 HS-RX Mode Conversion Loss meets or exceeds the limits shown in the figure below.

## 5.5.4. DC Differential Input Impedance ( $Z_{ID}$ )

### 5.5.4.1. Purpose

To verify that DC Differential Input Impedance ( $Z_{ID}$ ) of the TUT's HS-RX line termination is within the conformance limits.

### 5.5.4.2. Test Procedure

1. Press **Channel Next** key to select Channel1.
2. Press **Channel Max** key to enlarge Channel1.
3. Power on and configure the DUT to force its RX into fixed state where the HS-RX termination is enabled.
4. Connect the DUT's Data Lane 0 receiver to the Test System.
5. Click **Stop Single** for Time Domain measurement.
6. Read the marker value<sup>3</sup> (item 1 in Figure 5-4) as  $Z_{ID}$ .
7. Repeat the previous three steps for all other Data Lanes, and Clock Lane.

### 5.5.4.3. Observable Results

For all Clock and Data Lanes, verify that  $Z_{ID}$  is between 80 and 125 Ohms.

---

<sup>3</sup> The marker is placed at 8 nsec by default. If the DUT response is not flat around the marker, adjust the marker position and horizontal scale.

## Agilent MOI for MIPI D-PHY Conformance Tests

Figure 5-4 DC Differential Input Impedance (HS-RX) Example

# Agilent MOI for MIPI D-PHY Conformance Tests

## 6. Appendix

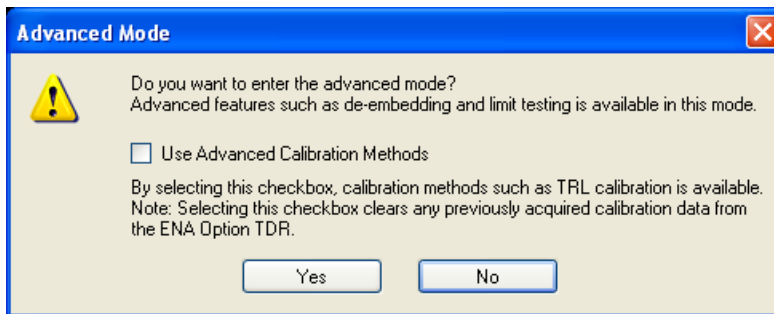

### 6.1. Manual Setup for Time Domain Measurement

#### 6.1.1. Starting Setup

1. If TDR setup wizard was appeared, click **Close** button in the TDR setup wizard.
2. Open **Setup** tab (item1).
3. Click **Preset** (item2).
4. A dialog box appears requesting for confirmation. Then click **OK**.
5. Set **DUT Topology** (item3) to “Single-Ended 2-port”.
6. Click **Advanced Mode** (item4).

7. A dialog box appears requesting for confirmation. Then click **Yes** (Clear the check box for “Use Advanced Calibration Methods”).

8. Click **Stop Single**.
9. Press **Display**.
10. Click **Allocate Traces** > .
11. Select **Trace4**.
12. Select **Data Mem** to Off.
13. Select **Trace5**.
14. Select **Data Mem** to Off.
15. Select **Trace6**.

## Agilent MOI for MIPI D-PHY Conformance Tests

16. Select **Data Mem** to Off.
17. Select **Trace7**.
18. Select **Data Mem** to Off.
19. Select **Trace8**.
20. Select **Data Mem** to Off.

### 6.1.2. HS-TX Single-Ended Output Impedance

#### 6.1.2.1. Measurement Setup

1. Open **TDR/TDT** tab.
2. Select **Trace1**.
3. Open **Parameters** tab.
4. Select the **Topology** (item1) of DUT to Single-Ended.

5. Set **Measure** to Time Domain.
6. Select **Format** to Impedance.
7. Set **Rise Time** to 200 ps (10-90%).
8. Click **T11** in the table.
9. Click the box below the left knob under Horizontal.
10. Input 1 nsec/div with the Entry dialog box.
11. Click the box below the right knob under Horizontal.
12. Input -1 nsec with the Entry dialog box.
13. Click the box below the left knob under Vertical.
14. Input 5 Ohm/div with the Entry dialog box.
15. Click the box below the right knob under Vertical.

## Agilent MOI for MIPI D-PHY Conformance Tests

16. Input 25 Ohm with the Entry dialog box.
17. Open **Trace Control** tab.
18. Clear Marker check box under Coupling.
19. Click **Trace Settings Copy** button. Then Trace Settings Copy dialog box appears.
20. Select **Trace1** in the From list.
21. Select **Trace3** in the To list.
22. Click **Copy**.
23. Click **Close**.
24. Select **Trace3**.
25. Open **Parameters** tab.
26. Click **T22** in the table.
27. Select **Trace1**.
28. Click **Maker** menu and select 1.
29. On Trace1, drag and drop the marker to 8 nsec.
30. Repeat the previous three steps for Trace3.

### 6.1.3. HS-RX DC Differential Input Impedance

1. Open **TDR/TDT** tab.
2. Select **Trace2**.
3. Open **Parameters** tab.
4. Select the **Topology** (item1) of DUT to Differential.

5. Select **Measure** to Time Domain.
6. Select **Format** to Impedance.
7. Set **Rise Time** to 200 ps (10-90%).

## *Agilent MOI for MIPI D-PHY Conformance Tests*

8. Click **Tdd11** in the table.
9. Click the box below the left knob under Horizontal.
10. Input 1 nsec/div with the Entry dialog box.
11. Click the box below the right knob under Horizontal.
12. Input -1 nsec with the Entry dialog box.
13. Click the box below the left knob under Vertical.
14. Input 10 Ohm/div with the Entry dialog box
15. Click the box below the right knob under Vertical.
16. Input 50 Ohm with the Entry dialog box.
17. Click **Marker** menu and select 1.
18. On Trace2, drag and drop the marker to 8 nsec.

### 6.2. Manual Setup for Frequency Domain Measurement

#### 6.2.1. Channel and Trace Settings

1. Press **Display**.
2. Click **Allocate Channels** > .
3. Press **Channel Next**.
4. Click **Num of Traces** > **3**.
5. Click **Allocate Traces** > .

#### 6.2.2. HS-TX/HS-RX Differential Return Loss

1. Press **Trace Next** to select Trace1.
2. Press **Sweep Setup** > **Sweep Type** > **Log Freq**.
3. Set **Points** to 1001.
4. Press **Start** > Set start value to 300 kHz.
5. Press **Stop** > Set stop value to 4 GHz.
6. Press **Avg** > Set **IF Bandwidth** to 1 kHz.
7. Press **Analysis** > **Fixture Simulator** > **Fixture Simulator** to turn it **ON**.

## *Agilent MOI for MIPI D-PHY Conformance Tests*

8. Click **Topology** > **Device** > **Bal**.
9. Click **Port1 (bal)** > **1-2**.
10. Click **Return**.
11. Click **BalUn ON All Traces**.
12. Click **Measurement** > **Sdd11**.
13. Press **Format** > **Log Mag**.
14. Press **Scale**.
15. Set **Scale/Div** to 5 dB/div.
16. Set **Reference position** to 9 Div.

### 6.2.3. HS-TX/HS-RX Common-Mode Return Loss

1. Press **Trace Next** to select Trace2.
2. Press **Meas** > **Scc11**.
3. Press **Format** > **Log Mag**.
4. Press **Scale**.
5. Set **Scale/Div** to 5 dB/div.
6. Set **Reference position** to 9 Div.

### 6.2.4. HS-TX/HS-RX Mode Conversion Limits

1. Press **Trace Next** to select Trace3.
2. Press **Meas** > **Sdc11**.
3. Press **Format** > **Log Mag**.
4. Press **Scale**.
5. Set **Scale/Div** to 5 dB/div.
6. Set **Reference position** to 9 Div.

## 6.3. Limit Test Settings

The E5071C-TDR provides a capability of setting limit lines to perform pass/fail test on

## *Agilent MOI for MIPI D-PHY Conformance Tests*

each measurement.

### 6.3.1. Turning On/Off Fail Sign

If this option is turned on, a fail sign appears when one or more measurement items violate the limit lines. It is useful to check overall test result.

1. Press **Analysis** > **Limit Test** > **Fail Sign** to switch the fail sign ON/OFF.

### 6.3.2. Setting the Warning Beeper

If this option is turned on, a beep is generated when one or more measurement items violate the limit lines.

1. Press **System** > **Misc Setup** > **Beeper** > **Beep Warning** to switch the warning beeper ON/OFF.

### 6.3.3. Defining the Limit Line

Set limit lines to perform pass/fail tests on the following measurement items.

- HS-TX Differential Return Loss (Trace1 in Channel2)
- HS-TX Common-Mode Return Loss (Trace2 in Channel2)
- HS-TX Mode Conversion Limits(Trace3 in Channel2)
- HS-RX Differential Return Loss (Trace1 in Channel2)
- HS-RX Common-Mode Return Loss (Trace2 in Channel2)
- HS-RX Mode Conversion Limits(Trace3 in Channel2)

*Note: If using the VBA, appropriate limit lines are automatically selected for Attenuation and Phase in accordance with the DUT cable type.*

1. Press **Channel Next** key and **Trace Next** key to activate the trace on which limit lines should be set.
2. Press **Analysis** > **Limit Test** > **Edit Limit Line** to display the limit table shown below (Initially, no segments are entered in the limit table). Using the limit table, create/edit a segment.

## Agilent MOI for MIPI D-PHY Conformance Tests

	Type	Begin Stimulus	End Stimulus	Begin Response	End Response
1	MAX	0 s	600 ps	105 u	105 u
2	MIN	0 s	600 ps	75 u	75 u
3	▼				

3. Enter the limit line data following the tables below.
4. Click **Return**.
5. Click **Limit Line** and turn it **ON**.
6. Click **Limit Test** and turn it **ON**.
7. Repeat 1 to 6 for each Measurement items.

### Differential Return Loss (HS-TX)

Type	Begin Stimulus	End Stimulus	Begin Response	End Response
Max	$F_{LP\_MAX}$	$F_H$	-18 dB	-12 dB
Max	$F_H$	$F_{MAX}$	-12 dB	-6 dB

### Differential Return Loss (HS-RX)

Type	Begin Stimulus	End Stimulus	Begin Response	End Response
Max	0	$F_{LP\_MAX}$	-18 dB	-18 dB
Max	$F_{LP\_MAX}$	$F_H$	-18 dB	-12 dB
Max	$F_H$	$F_{MAX}$	-12 dB	-6 dB

$F_{LP\_MAX}$ : Toggle Frequency

$F_H$ : Data Rate / 2

$F_{MAX}$ : 1 / Rise and Fall Time \* 5

## Agilent MOI for MIPI D-PHY Conformance Tests

### Common-Mode Return Loss (HS-TX)

Type	Begin Stimulus	End Stimulus	Begin Response	End Response
Max	$F_{LP\_MAX}$	$F_{MAX}$	-6 dB	-6 dB

### Common-Mode Return Loss (HS-TX)

Type	Begin Stimulus	End Stimulus	Begin Response	End Response
Max	0	$F_{INT\_MIN} / 4$	0 dB	0 dB
Max	$F_{INT\_MIN} / 4$	$F_{INT\_MIN}$	0 dB	-6 dB
Max	$F_{INT\_MIN}$	$F_{MAX}$	-6 dB	-6 dB

$F_{INT\_MIN}$ : Minimum RF Frequency

$F_{LP\_MAX}$ : Toggle Frequency

$F_{MAX}$ : 1 / Rise and Fall Time \* 5

### Mode Conversion Limits (HS-TX)

Type	Begin Stimulus	End Stimulus	Begin Response	End Response
Max	0	$F_{MAX}$	-26 dB	-26 dB

### Mode Conversion Limits (HS-RX)

Type	Begin Stimulus	End Stimulus	Begin Response	End Response
Max	0	$F_{MAX}$	-26 dB	-26 dB

$F_{MAX}$ : 1 / Rise and Fall Time \* 5
