

X-Series Measurement Applications

- Flexibility when you need it with transportable applications between X-Series signal analyzers
- Accelerate your designs with Agilent's first-to-market leadership in emerging standards
- Address ever-changing measurement needs in cellular communications, wireless connectivity, digital video, and general-purpose applications

X-Series Measurement Applications

Expand the capabilities of your X-Series signal analyzer with the industry's broadest offering of measurement applications. A shared library of more than 25 measurement applications increase the capability and functionality of the X-Series analyzers to speed your time to insight. These measurement applications provide essential measurements for specific tasks in cellular communications, wireless connectivity, digital video, and general-purpose applications.

The X-Series measurement applications and software transform X-Series signal analyzers into standards-based RF transmitter testers. They provide fast, one-button RF conformance measurements to help you design, evaluate, and manufacture your devices and equipment, and enable you to stay on the leading edge of your design and manufacturing challenges. With upgradeable CPU, memory, disk drives, and I/O ports, the X-Series signal analyzers enable you to keep your test assets current and extend instrument longevity.

A consistent measurement framework

Realize measurement integrity across your organization with consistent operation and test methods, proven algorithms, applications, and results. Your team can leverage the test system software through all phases of product development, allowing them to move at a faster pace. Whether you run them on the PXA, MXA, EXA, or CXA, you'll get the same results from the development lab into manufacturing. The only difference is the level of performance achieved by the instrument hardware, so you can choose the level of performance necessary for your application. And with consistent programming commands used across the X-Series, you minimize the effort and cost of creating test systems. Further extend your test assets by transporting applications across multiple X-Series analyzers, from EXA to PXA, across the lab, or around the globe. A common, familiar user interface means increased efficiency and productivity-when you learn how to use one X-Series analyzer, you know how to use them all.

Enhance and customize your data analysis power

With the open Windows[®] XP OS, you can create customized demodulation macros and run applications such as MATLAB to further analyze and visualize your wireless data, execute and test modulation schemes, and develop automated tests.

Try before you buy!

Free 14-day trials of X-Series measurement applications are available.

X-Series applications or 89600 VSA software?

X-Series measurement applications provide embedded and format-specific, one-button measurements for X-Series analyzers. With fast measurement speed, pass/fail testing, and simplicity of operation, these applications are ideally suited for design verification and manufacturing.

The 89600 VSA is the industry-leading measurement software for evaluating and troubleshooting signals in R&D. Supporting more than 30 measurement platforms and 75 signal standards and modulation types, including multichannel and MIMO analysis, the PC-based 89600 VSA provides the flexibility and sophisticated measurement tools essential to find and fix signal problems anywhere in the signal block diagram—from baseband (analog or digital) to IF and RF with bandwidths from 1 Hz to 30 GHz. It's your window into what's happening inside complex wireless devices. With views of virtually every facet of a problem, the 89600 VSA tools allow you to see the "why?" behind unexpected signal interactions.

1. Application model numbers with an "N" prefix are for PXA, MXA, and EXA signal analyzers and MXE EMI receiver. Application model numbers with a "W" prefix are for the CXA signal analyzer.

2. Transportable license is not available for CXA applications.

3. Single acquisition combined measurement optimized for remote use in high-volume manufacturing environment.

4. N6171A and N9051A also run on CXA.

Built-in help

Instead of searching through hundreds of pages in a manual, just press the Help key to access a comprehensive help system inside the X-Series analyzers- any key, any menu, anytime. This includes handy SCPI programming commands.

Cellular Communications

The cellular communication measurement applications cover a full range of technologies from existing 2G/3G systems to evolving 3.5G and 4G communication systems. These measurement applications adhere to the 3GPP and 3GPP2 standards, and closely follow standards as they change, allowing you to stay on the leading edge of your design and manufacturing challenges.

LTE FDD

- Supports 3GPP Release 9 LTE standard
- Downlink and uplink analysis in a single option
- · Transmitter characteristic measurements, including
 - Base station (eNB): EVM, freq error, DL RS power, RSTP, OSTP, SEM, ACLR
 - User equipment: EVM, freq error, I/Q offset, in-band emissions, SEM, ACLR
 - Multiple color coded result views: EVM vs. subcarrier, symbol, slot, resource block
- · Transport layer channel decoding
- Analog baseband analysis with PXA or MXA Option BBA (BBIQ inputs)

Multi-Standard Radio (MSR)

- · Supports 3GPP Release 9 MSR standard
- Transmitter test on any combination of LTE-FDD, W-CDMA/HSPA/HSPA+ and GSM/EDGE/EDGE Evolution signals
- · One-button measurements including
 - · Modulation quality: EVM, frequency error
 - Spectrum measurements: Channel power, spectrum emission mask (SEM), adjacent channel power (ACP), transmitter spurious emissions
- Automatic sequencing function to eliminate the need for wide analysis bandwidth option
- Carrier allocating algorithm with preset selection based on Test Configuration (TC) definitions in 3GPP standard

Multi-Standard Radio (MSR)

W-CDMA/HSPA/HSPA+

- W-CDMA, HSPA and HSPA+ per 3GPP release 99 to 8
- · Analysis of both uplink and downlink in a single option
- One-button transmitter measurements, including
 - Downlink: EVM, freq error, CPICH power, 640AM RCDE, SEM, ACLR
 - Uplink: EVM, freq error, PkCDE, RCDE, slot power, SEM, ACLR
 - Multiple result views: constellation, code domain, numeric display
- · Automatic detection of all channels and signals
- Analog baseband analysis with PXA or MXA Option BBA (BBIQ inputs)

W-CDMA/HSPA/HSPA+

GSM/EDGE/EDGE Evolution

- GSM, EDGE, and EDGE Evolution per 3GPP GERAN standard
- Analysis of both base and mobile stations in a single option
- · One-button transmitter measurements, including
 - Base station: EVM, phase and frequency error, output RF spectrum (ORFS), power vs. time (PvT)
 - Mobile station: EVM, phase and frequency error, ORFS, PvT, TX band spur
- Multicarrier BTS (MCBTS) and adaptive QPSK (AQPSK) modulated VAMOS measurements per Rel-9 of 3GPP TS 45 standard
- Analog baseband analysis with PXA or MXA Option BBA (BBIQ inputs)

TD-SCDMA/HSPA

cdma2000/cdmaOne

- cdmaOne and cdma2000 per 3GPP2 Release A
- Analysis of forward link and reverse link in a single option
- Forward link radio configuration (RC) 1 through 5 and reverse link RC1 through 4
- One-button Tx measurements with pass/fail per 3GPP2 standard, including
 - Modulation accuracy: composite Rho and EVM, frequency error, I/Q offset
 - Code domain power: displayed in Hadamard code or bitreverse order
 - Power and spectrum measurements: channel power, ACP, SEM, spurious emissions
- Analog baseband analysis with PXA or MXA Option BBA (BBIQ inputs)

Wireless Connectivity

The wireless connectivity measurement applications cover a full range of technologies – from *Bluetooth* through 802.11 WLAN and 802.16e OFDMA Mobile WiMAX. As technology advances, X-Series measurement applications are also advancing to enable you to continue tackling increasingly complex design and manufacturing test challenges.

802.16e OFDMA (Mobile WiMAX)

- 802.16 OFDMA measurements per IEEE 802.16 2005 standard
- Analysis of both base station and mobile station in a single option
- · One-button transmitter measurements, including
 - RCE (EVM), RSSI, preamble PCINR, subcarrier flatness, IQ metrics
 - Single input analysis of matrix A and pilot-based analysis of matrix B (MIMO) signals
 - SEM, ACP, channel power, spurious emissions
 - RCE in multiple levels (composite, pilot, data burst, un-modulated, and preamble)
- Analog baseband analysis with PXA or MXA Option BBA (BBIQ inputs)

www.agilent.com/find/N9075A www.agilent.com/find/W9075A

802.16d OFDM (Fixed WiMAX)

- IEEE standard 802.16d (802.16-2004)
- SCPI-based measurement application optimized for high-volume manufacturing
- Accelerates test speed with no measurement switching and fewer acquisitions
- Up to 36 bursts measurement results in a single acquisition (one capture)
- Measurements include transmit power, transmit output spectrum and modulation accuracy
- List power step measurement with frequency hopping (< 3.6 GHz)

General Purpose

The X-Series signal analyzers offer a variety of general purpose measurement applications for use in the development and manufacturing of RF and microwave transceivers and the components that comprise them. The general purpose measurement applications cover a full range of solutions from phase noise measurements for oscillator tests, to noise figure test of amplifiers, to digital demodulation on standards-based or propriety formats using the flexible digital modulation measurement application supporting more than 30 demodulators. X-Series signal analyzers support MATLAB, allowing you to create custom measurement programs for analyzing evolving signals and standards with your X-Series analyzers.

Analog demodulation

- · Demodulates AM, FM, or PM signals
- Demodulates FM stereo/RDS signals
- Display modulation metrics such as AM depth, FM deviation, PM deviation, THD, and SINAD
- · Audio filters
- Play the modulating signal over a speaker (tune & listen)
- Multiple measurement views:
 - View RF spectrum, demodulated waveform, AF spectrum, and demodulation metrics tables at the same time
 - View MPX, mono, stereo, left, right
 - View RDS/RBDS decoding results

www.agilent.com/find/N9063A www.agilent.com/find/W9063A

Phase noise

- Log plot: view entire phase noise behavior in frequency domain across a wide range of offset frequencies
- Spot frequency: monitor phase noise fluctuation vs. time at a user-specified single offset frequency
- · Suite of advanced marker functions
- Integrated noise measurements, including: RMS phase deviation, RMS phase jitter, residual FM
- Code compatible with ESA and PSA spectrum analyzer phase noise applications

Noise figure

- Noise figure, noise factor, gain, Y-factor, effective temperature, hot/cold power density measurements up to 26.5 GHz (hardware dependent)
- · Supports Agilent SNS and 346 Series noise sources
- · Internal uncertainty calculator
- · Saved calibration data during power cycle
- · User-defined sweep time to allow variable point averaging
- Code compatible with ESA and PSA spectrum analyzers and NFA noise figure analyzers

VXA vector signal analysis

EMC

- Measure designs to the latest CISPR 16-1-1 or MIL-STD requirements
- Perform pre-compliance conducted and radiated emissions tests
- Multiple detectors: peak, quasi-peak, EMI average, and RMS average
- Easily identify out-of-limit device emissions and maximize signals to compare against regulatory requirements
 - Signal list, frequency scan, and active detector meters are displayed on a single screen
- · View signals over time using the strip chart
- · Tune and listen to signals in the frequency scan list

www.agilent.com/find/N6141A www.agilent.com/find/W6141A

EMC

MATLAB software

- Install and execute MATLAB directly on the instrument or remotely using GPIB or LAN connectivity
- Purchase directly from Agilent in conjunction with an X-Series or PSA analyzer
- MATLAB instrument driver tested and supported by Agilent
- · Key applications
 - Create, modify, and execute your own X-Series applications
 - Automate measurements
 - Execute and test custom modulation schemes
 - Analyze, filter, and visualize data
 - Generate arbitrary waveforms
 - Build test systems

www.agilent.com/find/N6171A

MATLAB software

Pulse

- · Analyze the parameters of up to 1000 continuous pulses
- · Pulse analysis measurements include
 - Period, width, PRI/PRF, droop, overshoot, rise/fall time, average power, peak power, PDF, CDF, CCDF
 - Zoom feature for closer analysis of signal
 - Markers for absolute and relative measurements
 - Phase and frequency measurements such as pulseto-pulse phase, chirp, and pulse compression ratio
 - Extended analysis and statistics
- Also works with PSA spectrum analyzers and Infiniium oscilloscopes
- Runs inside the X-Series analyzers, Infiniium Series oscilloscopes or on an external PC

www.agilent.com/find/N9051A

Pulse

SCPI command language compatibility

- Emulates R&S FSP, FSU, and FSE spectrum analyzers in remotely controlled, automated test environments
- Supports over 278 SCPI and 16 IEEE 488.2 standard SCPI commands
- Covers general-purpose spectrum analyzer settings, including
 - Frequency, span, RBW, VBW, detectors, average type
 - Markers: normal, delta, marker noise, band power, and power density
 - Limit line and limit check functions
 - Channel power, ACP, CCDF
 - File saving and screen image
 - Free of charge when ordered with a new instrument; nominal charge as an upgrade to existing instruments

www.agilent.com/find/N9062A www.agilent.com/find/W9062A

SCPI command language compatibility

Remote language compatibility

- Emulates the HP/Agilent 856xE/EC and 8566/68 remote programming language
- Supports the most frequently used 856xE/EC and 8566/68 commands
- · Access from the front panel or via remote user interface
- Logs command errors
- Free of charge when ordered with a new instrument; nominal charge as an upgrade to existing instruments

www.agilent.com/find/N9061A

Remote language compatibility

Flexible Software Licensing

Choose from two license types:

• Fixed, perpetual license:

Fixed licenses are traditional licenses that fix an application to a specific instrument. Once installed, the license cannot be moved to another instrument and it becomes part of the test asset.

 Transportable, perpetual license: Transportable licenses allow an application to be moved between instruments, providing you the flexibility to manage test and measurement capabilities in your organization, across the lab, or around the globe, as your business needs evolve. A transportable license costs only 30% more than the equivalent fixed license and is available for most X-Series applications. Please refer to the Product Summary for specific availability.

Benefits of transportable licenses

- Maximize the flexibility of your test assets by sharing measurement applications between PXA, MXA or EXA signal analyzers
- Save money and increase your return on test asset investments as project needs change by purchasing fewer applications per instrument
- Save time by transporting the applications to the test bench nearest you, instead of physically moving the test equipment or DUT
- Use the same application at different X-Series performance levels in different time zones, departments, and/or test benches
- Keep up with your changing project needs by transporting an application up to 10 times per month; use a simple Agilent server connection with an instrument or a PC to check-in/out applications

www.agilent.com/find/X-Series_transportable

You Can Upgrade!

Options can be added after your initial purchase.

All of our X-Series application options are license-key upgradeable.

Try Before You Buy!

Free 14-day trials of X-Series measurement applications provide unrestricted use of each application's features and functionality on your X-Series analyzer. Redeem a trial license on-line today:

LXI

www.lxistandard.org

LXI is the LAN-based successor to GPIB, providing faster, more efficient connectivity. Agilent is a founding member of the LXI consortium.

Agilent Channel Partners

www.agilent.com/find/channelpartners

Get the best of both worlds: Agilent's measurement expertise and product breadth, combined with channel partner convenience.

Agilent Advantage Services is committed to your success throughout your equipment's lifetime. To keep you competitive, we continually invest in tools and processes that speed up calibration and repair and reduce your cost of ownership. You can also use Infoline Web Services to manage equipment and services more effectively. By sharing our measurement and service expertise, we help you create the products that change our world.
