Of your signal, more of the time:

- The 8.5-inch WVGA display offers 2x the viewing area and 5x the resolution versus a 5.7-inch QVGA display
- > 50,000 waveforms per second update rate allows you to see infrequent events and subtle signal details that the DS1000A/B will miss
- Memory depth up to 100 kpts (> 6-10x the DS1000A/B) allows you to keep your sample rate high at longer time/division settings

8.5-inch WVGA display offers 2x the viewing area and 5x the resolution

> 6x the memory allows you to keep sample rates higher on longer time/div settings

With the power of 4 instruments in 1:

- **Best-in-class oscilloscope**
Provides features not normally found in this class of scope such as a large display, deep memory, and powerful triggering
- **Industry-exclusive WaveGen built-in 20 MHz function generator**
Ideal for educational or design labs where bench space and budget are limited
- **Logic timing analyzer (MSO)**
Ideal for R&D engineers on a tight budget who need more than the traditional 2 or 4 analog channels to troubleshoot today's digital designs
- **Integrated Digital Voltmeter**
Provides a 3-digit voltmeter measurements (DVM) and 5-digit counter measurements inside the oscilloscope. The voltmeter operates through the same probes as the oscilloscope channels

Infrequent glitch and signal jitter captured after 2 seconds on 2000 X-Series with > 50,000 wfms/s

2000 X-Series' exclusive MSO adds eight integrated digital channels for extra triggering or logic analysis; DSO models are customer-upgradable to MSO models

Integrated digit voltmeter (DVM) allows you to characterize signals independent of the scopes triggering system.

DS1000B after 40 seconds—it never sees the glitches and shows limited signal jitter due to its significantly slower update rate

2000 X-Series' exclusive integrated 20-MHz function generator saves money and space
