Operating Notice

Where to find firmware

To change the personality of your emulation probe or emulation module for a new processor, you need to install new firmware.

If you have an emulation probe

Install the firmware from the floppy disk. The README file on the floppy disk contains instructions for installing the firmware using a PC or workstation.

If you have an emulation module

Use the CD-ROM to install the appropriate processor support package. This package installs the firmware on the hard disk of your 16600A/700A-series logic analysis system.

From the list of packages, double-click PROC-SUPPORT. For MPC860/850/821/801 firmware, install the "MPC8XX" package. For PowerPC 740/750 firmware, install the "POWERPC7XX" package.
