
VIEWING ONLINE HELP IN MICROSOFT INTERNET EXPLORER

If you are viewing the *standalone edition* of Fibre Channel Manager in the Microsoft Internet Explorer browser, perform the following procedure in order to view pop-up definitions in the online help system. This procedure distributes the appropriate ActiveX control file (FHPopup.ocx) from the management server to a Windows NT-based management workstation and registers the file. You should perform this procedure for each management workstation on which you want to view FC Manager online help from Microsoft Internet Explorer.

1. From the management workstation, open Microsoft Internet Explorer.
2. Enter the following URL. For *hostname*, enter the hostname of the management server. For *URLHtml*, enter the value of the URLHtml installation variable (default **fcman**).
http://hostname/URLHtml/help/htmlhelp/FHPopup.ocx
The File Download window appears.
3. Select the **Save this file to disk** option, then click the **OK** button.
The Save As window appears.
4. In the Save in box, select the Windows installation directory (default **Winnt**), select the **system32** directory, then click the **Save** button.
5. Click the **Start** button, select **Programs**, then select **Command Prompt**.
The Command Prompt window appears.
6. Enter the following command to change to the system directory.
c:\> cd\winnt\system32
7. Enter the following command to register the FHPopup.ocx file.
Regsvr32 FHPopup.ocx
A confirmation message appears.
8. Click the **OK** button.
9. Close the Command Prompt window.
