

Disposal of Solvents

All solvents can not be disposed by simply pouring down the drain. This is a description of the method for disposing waste solvents.

SOLVENTS: Acetone, TCE, photoresist chemicals, isopropanol, methanol, ethanol, various e-resists, etc.

All solvents and acids should be disposed off in bottles/jugs labeled as "LIQUID WASTE" (You can obtained them from Edward XU) and should be labled with roughly the proportion of each sensitive chemicals. When a few bottles/jugs are full, call 7000 to request a waste pickup.
