

Agilent 4284A/4285A Precision LCR Meter Family

20 Hz to 1 MHz
75 kHz to 30 MHz

Technical Overview

A new standard
for precise component,
semiconductor and
material measurements

Agilent Technologies

Agilent precision LCR meter family

Utilize state-of-the art measurement technologies

- 6-digits of resolution at any range
- Basic accuracies of 0.05% (Agilent 4284A) and 0.1% (Agilent 4285A)
- 20 impedance parameters to access and measure
- Constant V or I test signal level
- 20 Vrms test signal level (Agilent 4284A)

Move your process toward error-free operation

- Instrument setup state storage
- Comparator functions
- Selectable frequency error corrections
- Open, short and load corrections remove parasitics

Key specifications

Agilent 4284A precision LCR meter

Test frequency	20 Hz to 1 MHz over 8610 selectable frequencies
-----------------------	---

Measurement range¹

Z , R, X	:0.01 mΩ to 99.9999 MΩ
Y , G, B	:0.01 nS to 99.9999 S
C	:0.01 fF to 9.99999 F
L	:0.01 nH to 99.9999 kH
D	:0.000001 to 9.99999
Q	:0.01 to 99999.9

Basic accuracy	Z , C and L:0.05% D:0.0005
-----------------------	----------------------------

Test signal level range

Voltage	5 mVrms to 2 Vrms
Current	50 μArms to 20 mArms

Constant test signal level range

Voltage	10 mVrms to 1 Vrms
Current	100 μArms to 10 mArms

Measurement time²	39 ms/190 ms/830 ms at 1 kHz
-------------------------------------	------------------------------

4284A with Option 4284A-001

Test signal level range

Voltage	5 mVrms to 20 Vrms
Current	50 μArms to 200 mArms

Constant test signal level range

Voltage	10 mVrms to 10 Vrms
Current	100 μArms to 100 mArms

Internal DC bias	± (1 mV ~ 40 V), ≤ 100 mA, 0.1% accuracy
-------------------------	--

4284A with Option 4284A-002 and 42841A

DC current bias	0.01 A to 20 A (with 42841A and 42842A) 0.02 A to 40 A (with 42841A x 2 ea., 42842B and 42843A)
------------------------	--

1. Refer to specifications for complete accuracy.

2. Supplemental information only.

Satisfying your performance needs

Adapt instrument configurations to fit your test needs

- Internal voltage biasing up to ± 40 Vdc³
- High current biasing up to 40 A dc³ (Agilent 4284A)
- Wide range of frequencies, 20 Hz to 30 MHz
- BIN'ing and comparator functions for handlers
- SMD, axial and radial test fixtures³

Simplify your system development and integration

- Programming language compatible with IEEE 488.2
- Test port extensions: maximum 4 m for 4284A³ and 2 m for 4285A
- Identical operation for the entire family of products
- Scanner, handler and GPIB interfaces³

Key specifications

Agilent 4285A precision LCR meter

Test frequency	75 kHz to 30 MHz with 100 Hz resolution
-----------------------	---

Measurement range¹

Z , R, X	:0.01 m Ω to 99.9999 M Ω
Y , G, B	:0.01 nS to 99.9999 S
C	:0.01 fF to 999.999 μ F
L	:0.001 nH to 99.9999 H
D	:0.000001 to 9.99999
Q	:0.01 to 99999.9

Basic accuracy

Z , C and L	:0.1% D:0.001
-------------	---------------

Test signal level range

Voltage	5 mVrms to 2 Vrms
Current	200 μ Arms to 20 mArms

Constant test signal level range

Voltage	10 mVrms to 1 Vrms
Current	100 μ Arms to 20 mArms

Measurement time²

	30 ms/65 ms/200 ms
--	--------------------

4285A with Option 4285A-001

Internal DC bias	\pm (1 mV ~ 40 V), \leq 100 mA, 0.1% accuracy
-------------------------	---

4285A with Option 4285A-002, 42841A, and 42842C

DC current bias	0.01 A to 10 A
------------------------	----------------

1. Refer to specifications for complete accuracy.

2. Supplemental information only.

3. The options, the accessories, or the test fixtures are needed.

Versatile component measurements

Characterize inductive devices

- Sweep high current conditions
- Identify device properties precisely
- Test to RF frequencies

Low frequency measurements: Agilent 4284A

Inductive devices can now be accurately characterized from 20 Hz to 1 MHz with a dc bias current up to 40 A¹ dc.

High frequency measurements: Agilent 4285A

The Agilent 4285A's wide 75 kHz to 30 MHz range allow you to test RF inductors with improved accuracy and 0.001 nH resolution. Magnetic heads, ferrite-cores, and power inductors that need to be tested at a specified current signal level can be easily tested with the Agilent 4285A.

Inductance rolloff due to high dc current bias

Precise ceramic capacitor measurements

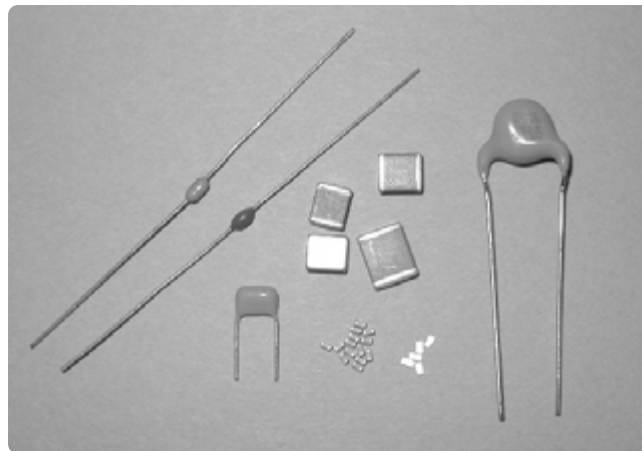

- Test at 1 kHz and 1 MHz
- Resolve measurements to low values
- Maintain constant signal levels

1 kHz and 1 MHz are the primary testing frequencies for ceramic materials and capacitors. The Agilent 4284A can provide these test frequencies while maintaining an equally excellent accuracy and 6-digits of measurement resolution.

1 MHz accuracies of capacitance (0.05%) and dissipation factor (0.0005) are essential for characterizing DUTs with low dissipation factors. Dissipation factors can change as a function of the applied test signal level to the DUT. For reliable and consistent measurements, the Agilent 4284A can maintain a constant voltage test signal level.

Dissipation factor rise due to high ac signal

1. Need Option 4284A-001

Adaptable parameter testing

Discover new material properties

- High accuracy and precise measurements
- Wide frequency ranges
- High test signal levels
- Agilent 16451B dielectric test fixture

The Agilent precision LCR meter family provides the accuracy, resolution, high test signal and bias levels¹ required for material measurements. Using the Agilent 16451B dielectric test fixture provides you with accurate permittivity and dissipation factor measurements.

The ability to output a constant test signal level permits repeatable and accurate magnetic/dielectric measurements. Both the Agilent 4284A and Agilent 4285A offer variable voltage and current test signal level control.

A material's characteristics versus frequency

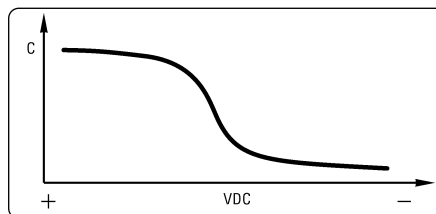

Semiconductor testing

- Extend the test cable to the DUT
- Detect small parameter changes
- Rapidly acquire data
- Test at multiple frequencies

Both instruments allow you to extend the front panel measurement port through test cables, switches, and probes directly to the DUT. The 6-digits of resolution give you the ability to sense and identify changes not normally seen by conventional LCR meters.

The accuracies of the Agilent 4284A at key test frequencies up to 1 MHz permit complete DUT evaluation for either production or laboratory needs.

For high speed device testing at frequencies above 1 MHz, the best solution is the Agilent 4285A.

C-V characteristics sample—MOS diode

1. Need Option 4284A/4285A-001

One LCR meter family for your product's life cycle

Research and development

Research tomorrow's electronic components now

- **Increase measurement confidence**
The basic accuracies are:
Agilent 4284A 0.05% and Agilent 4285A 0.1%.
- **Detect 1 ppm changes**
The 6-digits of resolution permit you to measure differences in materials not detectable before.
- **Fit the instrument to your test needs**
For low frequency applications the Agilent 4284A is the ideal tool. For testing at RF frequencies the Agilent 4285A is the best solution.

Material design

Design and test new materials

- **Material test fixtures**
For accurate permittivity and dissipation factor measurements of solid dielectric materials, the 16451B dielectric test fixture is provided. The 16452A liquid test fixture is provided for the permittivity measurements of liquids with minimal conductivity.
- **Sample program**
By using the sample program in the operation manual of 16451B, complex permittivity can be calculated rather easily and instantly. In addition, with the use of a spreadsheet software, the frequency response of permittivity can be displayed in a graph.

Production test

Reduce production test factors

- **Increase test throughput**
The precision LCR meter family reduces testing costs by providing accurate high throughput testing.
- **Interface easily to handlers**
Built-in comparator, cable compensation¹, and interfaces² permit system integration.
- **Minimize operator error**
Instrument state storage minimizes costly setup errors.

Quality assurance

Automated quality assurance

- **Reduce your system development time**
The Agilent 4284A and Agilent 4285A are designed to be used as elements in systems. This means GPIB, programming, and the ability to interface with scanners³.
- **Painlessly integrate the system**
GPIB and a scanner³ interface allow the instruments to easily integrate into system configurations.
- **Leverage your programming experience**
Learning to program one instrument automatically means you learn both.

1. For 4284A, need Option 4284A-006

2. Choose the combination from Option 4284A/4285A-201, 4284A/4285A-202, or 4284A/4285A-301

3. Need Option 4284A/4285A-301

Comprehensive incoming inspection

Satisfying difficulties and requirements of impedance measurements during incoming inspection

Many types of measurements requiring a variety of measurement conditions have to be carried out during incoming inspection. However, as measurement instruments cannot perform all of the measurements required, substitute measurements are made. On the other hand, purchasing all the necessary equipment would substantially increase capital costs.

By employing the precision LCR meter family, a wide frequency range is covered (20 Hz to 1 MHz for 4284A and 75 kHz to 30 MHz for 4285A) and various test signal levels can be set (20 Vrms/200 mArms for 4284A Option 4284A-001 and 2 Vrms/20 mArms for 4285A). In addition, the ALC function allows measurements of constant-voltage and constant-current signals, and the added capability of Option 4284A/4285A-001 enables up to ± 40 V of dc bias to be applied to the DUT. As a result of these features, a variety of measurement conditions can be carried out.

Furthermore, the precision LCR meter family achieves high accuracy measurements (basic $|Z|$ measurement accuracy: 0.05% for 4284A and 0.1% for 4285A), permitting the characteristics of inductors and capacitors to be evaluated with excellent reliability. Also, built-in compensation functions reduce the influence of test fixtures to a minimum, further raising the reliability.

Built-in functionalities for efficient measurements

In order to save time and facilitate the efficiency of measurement routines, the precision LCR meter family has the following features. The memory card¹ allows the measurement conditions to be pre-set for various components with different measurement needs. The comparator function can be set to sort into a maximum of 10 BINs, enabling many components to be handled during inspection. The Option 4284A/4285A-301 scanner interface solves the problem of having discrepancies in measurement values for different channels of the switching matrix by allowing channel compensation for up to 128 channels.

1. Need Option 4284A/4285A-004

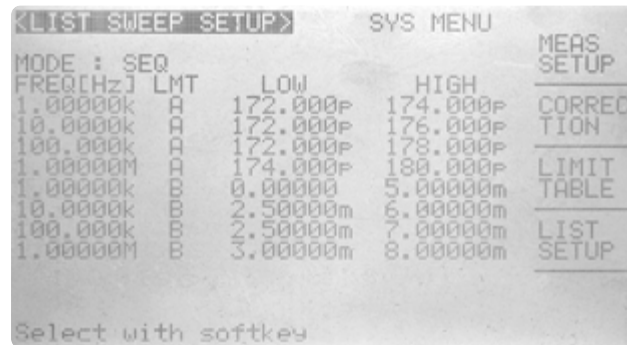

User friendly linterface

Simple front panel operation

- Clearly view the display
- See all instrument settings
- Interactive softkeys for simple control

Directly view all instrument settings and measurement results on the large LCD display. This simplifies operation and improves operator efficiency by minimizing readout error.

The softkeys simplify front panel operation by allowing the user to easily change instrument states by moving the LCD cursor with cursor keys. The softkeys will automatically change to reflect the cursor's position. This minimizes the number of menus and key strokes.

Customized test frequencies

Non-volatile memory

- Eliminate costly setup errors
- Increase user productivity
- Archive tests

The instruments contain two types of user accessible memory; internal and external (memory cards)¹. The memory can easily be used to store measurement setups. Later, a setup can be loaded back into the instrument. This reduces test setup errors and increases the user's productivity.

The memory can store 10 different instrument states, complete with correction data and system configuration. Entire setups including limit information can now be stored and loaded using either the internal memory or the memory card¹. The memory card¹ system is completely electronic and is based on EEPROM.

Inserting the memory card¹

1. Need Option 4284A/4285A-004

Testing with the proper tools

Measure the components' performance in your power supply

- Test your components under load conditions
- Bias inductive devices with high currents
- Satisfy your needs with the right instrument

Designing advanced switching power supplies require the use of inductors and transformers that operate in the RF regions.

For low frequencies, the Agilent 4284A¹ precision LCR meter with the Agilent 42841A bias current source, and the 42842A/B bias current test fixtures all combine to form a 40 A dc test system.

Where a high frequency measurement is required, use an Agilent 4285A², an Agilent 42842C bias current test fixture, and an Agilent 42841A bias current source to achieve up to 10 A dc biasing with measurements at 30 MHz.

Reduce system development time

The 4284A and 4285A employ a programming language, which is compatible with the IEEE 488.2. Since the command names are similar to the measurement functions, the time spent for creating and debugging programs can be largely minimized. The operation manual lists several key sample programs, allowing the user to efficiently create a program for their measurement system.

High current bias for inductor testing under load conditions

Code generation made easy

1. Need Option 4284A-002
2. Need Option 4285A-002

Specifications

All specifications are common to the Agilent 4284A and Agilent 4285A unless otherwise noted.

Measurement functions

Measurement parameters

|Z| (impedance), |Y| (admittance), θ (phase), R (resistance), X (reactance), G (conductance), B (susceptance), L (inductance), C (capacitance), Q (quality factor), D (dissipation factor), ESR (equivalent series resistance) and Rp (parallel resistance).

20 parameter combinations are available

Equivalent circuit modes:	Series and parallel
Mathematical functions:	Deviation and percent deviation
Trigger:	Internal, external and manual
Delay time:	0 to 60.000 s in 1 ms steps
Measurement terminals:	Four-Terminal Pair
Test cable lengths:	
Agilent 4284A-standard:	0 and 1 meter
Option 4284A-006:	adds 2 and 4 meter extension
Agilent 4285A-standard:	0.1 and 2 meters
Integration time:	Short, medium and long

Test signal

Test frequency:

Agilent 4284A: 20 Hz to 1 MHz, 8610 selectable frequencies
 Agilent 4285A: 75 kHz to 30 MHz, 100 Hz steps

Frequency accuracy: $\pm 0.01\%$

Output impedance:

Agilent 4284A: standard: $100 \Omega \pm 3\%$
 Option 4284A-001: $100 \Omega \pm 6\%$
 Agilent 4285A: $(25 + 0.5 f_m) \Omega \pm 10\%$ @ 1 MHz, $\pm 30\%$ @ 30 MHz,
 f_m = test frequency in MHz

AC test signal modes:

Normal: Programs selected voltage or current at the measurement terminals when they are opened or shorted, respectively.
 Constant: Maintains selected voltage or current at the device under test independent of changes in the device's impedance.

AC test signal

Agilent 4284A: standard

		Range	Accuracy
Normal	V	5 m Vrms to 2 Vrms	$\pm(10\% + 1 \text{ mVrms})$
	I	50 μ Arms to 20 mArms	$\pm(10\% + 10 \mu\text{Arms})$
Constant	V	10 m Vrms to 1 Vrms	$\pm(6\% + 1 \text{ mVrms})$
	I	100 μ Arms to 10 mArms	$\pm(6\% + 10 \mu\text{Arms})$

Agilent 4284A with Option 4284A-001

		Range	Accuracy
Normal	V	5 m Vrms to 20 Vrms	$\pm(10\% + 1 \text{ mVrms})$
	I	50 μ Arms to 200 mArms	$\pm(10\% + 10 \mu\text{Arms})$
Constant	V	10 m Vrms to 10 Vrms	$\pm(10\% + 1 \text{ mVrms})$
	I	100 μ Arms to 100 mArms	$\pm(10\% + 10 \mu\text{Arms})$

	I	200 μ Arms to 20 mArms	$\pm(8\% + 1 \text{ fm}\% + 40 \text{ } \mu\text{Arms})$
Constant	V	10 m Vrms to 1 Vrms	$\pm(6\% + 0.2 \text{ fm}\% + 1 \text{ mVrms})$
	I	100 μ Arms to 20 mArms	$\pm(6\% + 0.2 \text{ fm}\% + 40 \text{ } \mu\text{Arms})$

fm: test frequency in MHz

DC bias:

Standard: 0 V, 1.5 V and 2 V (Agilent 4284A only)

With

Option 4284A/4285A-001: 0 V to ± 40 V Rear panel DC bias monitor, BNC connector

Range	Resolution	Accuracy
$\pm(0.000 \text{ to } 4.000) \text{ V}$	1 mV	$\pm(0.1\% \text{ to } 1 \text{ mV})^1$
$\pm(4.002 \text{ to } 8.000) \text{ V}$	2 mV	$\pm(0.1\% \text{ to } 2 \text{ mV})^1$
$\pm(8.005 \text{ to } 20.000) \text{ V}$	5 mV	$\pm(0.1\% \text{ to } 5 \text{ mV})^1$
$\pm(20.01 \text{ to } 40.00) \text{ V}$	10 mV	$\pm(0.1\% \text{ to } 10 \text{ mV})^1$

Measurement range

Parameter	Range
Z , R, X:	0.01 m Ω to 99.9999 M Ω
Y , G, B:	0.01 nS to 99.9999 S
C:	4284A: 0.01 fF to 9.99999 F 4285A: 0.01 fF to 999.999 μ F
L:	4284A: 0.01 nH to 99.9999 kH 4285A: 0.001 nH to 99.9999 H
D:	0.000001 to 9.99999
Q:	0.01 to 99999.9
θ :	-180.000° to 180.000°
$\Delta\%$	-999.999% to 999.999%

Display

LCD Dot-matrix type display. Capable of displaying: measured values, control settings, comparator limits and decisions, list sweep tables, self test messages and annunciations.

Correction function

Open/short:	Eliminates measurement errors due to stray parasitic impedance in the test fixture.
Load:	Improves measurement accuracy by using a calibrated device as a reference.

List sweep function

A maximum of ten frequencies or test levels can be programmed. Single or sequential testing can be performed. When Option 4284A/4285A-001 is installed, dc bias sweep can also be performed.

1. Refer to measurement accuracy.

Specifications

Continued from page 11

Comparator function

Ten bin sorting for the primary measurement parameter, IN/OUT for the secondary measurement parameter.

Bin count: 0 to 999999

List sweep comparator: HIGH/IN/LOW decision output for each point in the list sweep table.

Other functions

Store/load: Ten instrument setups can be stored/loaded from the internal non-volatile memory. Ten additional setups can also be stored/loaded from each memory card¹.

GPIB: All instrument control settings, measured values, comparator limits, list sweep tables, and self test results.

Memory: Memory buffer can store a maximum of 128 measurement results and output the data over GPIB, ASCII and 64 bit binary data formats.

Options

Option 4284A/4285A-001: Power amplifier/dc bias
This option cannot be operated simultaneously with Option 4284A/4285A-002.

Agilent 4284A: Increases the AC test signal to 20 Vrms/0.2 Arms. Extends bias range to variable ± 40 Vdc. Rear panel BNC for dc voltage monitor.

Agilent 4285A: Adds variable ± 40 Vdc. Rear panel BNC for dc voltage monitor and current monitor.

Option 4284A/4285A-002: Accessory control interface/bias current
Interface allows the Agilent precision LCR meter to control the Agilent 42841A bias current source. This option cannot be operated simultaneously with Option 4284A/4285A-001.

Option 4284A-006: 2 m/4 m cable length operation (4284A only)
Increases test cable length capability. Adds 2 and 4 meter operation.

Option 4284A/4285A-201: Handler interface
This is a general purpose comparator/handler interface. Nine-sets of HIGH/LOW limits can be input allowing 10-bin sorting for L, C, or IZI. The handler interface enables systemization with an automatic component sorting machine. All signals are optically isolated.

Option 4284A/4285A-202: Handler interface

Option 4284A/4285A-301: Scanner interface
Open/short/load correction data for multiple channels is stored in non-volatile memory, a maximum of 128 for the Agilent 4284A and 90 for the Agilent 4285A. Three frequencies can be corrected on the Agilent 4284A while seven frequencies can be corrected on the Agilent 4285A.

1. Need Option 4284A/4285A-004

Specifications

Continued from page 12

General

Power requirements	100 V/120 V/220 V $\pm 10\%$, 240 V $+5\%/-10\%$, 47 Hz to 66 Hz.
Power consumption	200 VA
Operating temperature and humidity	0 °C to 55 °C, < 95% RH at 40 °C
Size	426(W) x 177(H) x 498(D) mm
Weight	Agilent 4284A: 15kg (33lb.) Agilent 4285A: 16kg (35.2lb.)

Supplemental performance characteristics (Not guaranteed)

Agilent 4284A

Stability	Medium integration and constant operating temperature of 23 °C ± 5 °C. $ Z , Y , L, C, R < 0.01\%/day$ $D < 0.0001/day$	
Temperature coefficient	Medium integration and 23 °C ± 5 °C.	

Agilent 4285A

Stability	Long integration and constant operating temperature of 23 °C ± 5 °C.	
	≤ 1 MHz	30 MHz
$ X , Y , L, C, R$	0.01 %/day	< 0.05 %/day
D	0.0001/day	< 0.0005/day
Temperature coefficient	Long integration, test signal voltage ≥ 20 mVrms and 23 °C ± 5 °C.	
	≤ 1 MHz	30 MHz
$ X , Y , L, C, R$	0.004%/°C	<0.05%/°C
D	0.00004/°C	<0.0005/°C

Settling time

Frequency	
4284A	< 70 ms; $f_m \geq 1$ kHz < 120 ms; $100 \text{ Hz} \leq f_m < 1$ kHz < 160 ms; $f_m < 100$ Hz
4285A	< 50 ms

Test signal < 120 ms (4284A) < 100 ms (4285A)

Range < 50 ms/range shift; $f_m \geq 1$ kHz

Input protection Internal circuit protection, when a charged capacitor is connected to the unknown terminals. The maximum capacitor voltage is:
 $V_{max} = \sqrt{1/C}$ (V) where: $V_{max} \leq 200$ V
 C is in Farads

Short	30 ms			
Medium	65 ms			
Long	200 ms			
Option 4284A/4285A-001:	DC bias current output: 100 mA max			

Measurement accuracy (Agilent 4284A only)

The following conditions must be met:

1. Warm up time: ≥ 30 minutes
2. Ambient temperature: $23\text{ }^{\circ}\text{C} \pm 5\text{ }^{\circ}\text{C}$
3. Test signal voltage: 0.3 Vrms to 1 Vrms
4. Test cable length: 0 m
5. Open and short corrections have been performed
6. $D \leq 0.1$ for C, L, X and B measurements
 $Q \leq 0.1$ for R and G measurements

See operation manual for additional conditions.

Accuracies are relative to calibrated standards. Absolute accuracies are given as: (Agilent 4284A's relative accuracy + calibration uncertainty of standards).

Accuracy equations

|Z|, |Y|, L, C, R, X, G and B accuracies are given as:

$$\pm[A + (K_a + K_b + K_c) \times 100] \text{ (\% of reading)}$$

where:

1. A is basic accuracy as shown in figure 1
2. K_a and K_b are impedance proportional factors given in Table 2.
The K_a term is negligible for impedance above 500 Ω .
The K_b term is negligible for impedances below 500 Ω .
3. K_c is the calibration interpolation factor given in Table 1.

D accuracy is given as:

$$\pm[A_e/100] \text{ (absolute D value)}$$

where:

1. $A_e = [A + (K_a + K_b + K_c) \times 100]$

Q accuracy is given as (when $Q_x \times D_e < 1$):

$$\pm[(Q_x^2 \times D_e)/(1 \mp (Q_x \times D_e))] \text{ (absolute Q value)}$$

where:

1. Q_x is the measured Q value
2. D_e is the D accuracy

Specifications

Continued from page 14

θ accuracy is given as:

$$\pm[(180/\pi) \times (A_e/100)] \text{ (absolute degrees)}$$

where:

$$1. A_e = [A + (K_a + K_b + K_c) \times 100]$$

Additional error due to temperature:

Multiply the measurement accuracy by the following temperature factors.

Temp °C	0	8	18	28	38	55
Factor		X 4	X 2	X 1	X 2	X 4

Example C and D accuracy calculation

Measurement conditions:

Frequency: 1 kHz
 Capacitance value: 100 nF
 Test signal level: 1 Vrms
 Integration time: Medium

Calculation:

- Step 1: Use Figure 1 to determine A and Z_m .
 a. Find the frequency along the X-axis.
 b. Find the capacitance value along a diagonal.
 c. Note the intersection of the values from steps a and b. Interpolation may be necessary.
 d. Each shaded area has two values for A; the upper number is for medium and long integrations, the lower number is for short integration. $A = 0.05\%$. Find Z_m by extrapolating horizontally to the Y-axis (impedance axis). $Z_m = 1590 \Omega$
- Step 2: Use Tables 1 and 2 to find K_a , K_b and K_c .
 a. Use the equations in Table 2 to find K_a and K_b .

$$K_a = (1 \times 10^{-3} / 1590)(1 + (200/1000)) = 7.5 \times 10^{-7}$$

$$K_b = (1590(1 \times 10^{-9})(1 + 70/1000)) = 1.67 \times 10^{-6}$$

 b. Use Table 1 to find K_c for the given frequency.

$$K_c = 0$$
- Step 3: Calculate C and D accuracy.

$$C = 0.05 + (7.5 \times 10^{-7} + 1.67 \times 10^{-6} + 0) \times 100\% = 0.05\%$$

$$D = 0.05/100 = 0.0005$$

Table 1. K_c : Calibration interpolation factor

Frequency	K_c
Direct correction frequencies	0
All other frequencies	0.0003

Note: Direct calibration frequencies are 20, 25, 30, 40, 50, 60, 80, 100, 120, 150, 200Hz. Sequence repeats for each decade up to 1 MHz. 48 frequencies total.

Figure 1. Baseline accuracy facto (4284A)

(For additional accuracy information refer to the impedance accuracy equation on page 14.)

- Notes:
1. Test signal level: 0.3 Vrms to 1 Vrms
 2. Upper number, medium and long integration
 3. Lower number, short integration

Specifications continued on page 18

Additional specifications (Agilent 4284A only)

When measured value < 10 mΩ, |Z|, R, and X accuracy, which is described on page 14, is given as following equation.

|Z|, R, and X accuracy:

• $\pm[(Ka + Kc) \times 100]$ (%)

Where

- Ka = Impedance proportional factor (refer to Table 2)
- Kc = Calibration interpolation factor (refer to Table 1)

Measurement accuracy (Agilent 4285A only)

Accuracy is specified for the following conditions:

1. Warm up time: ≥ 30 minutes
2. Ambient temperature: $23\text{ }^{\circ}\text{C} \pm 5\text{ }^{\circ}\text{C}$
3. Test signal level voltage: 0.2 Vrms to 1 Vrms
4. Test cable correction completed
5. Open and short corrections have been completed
6. $D \leq 0.1$ for C, L, X and B measurements
 $Q \leq 0.1$ for R and G measurements
7. For test frequencies above 10 MHz and DUT impedance $\geq 5\text{ k}\Omega$, the test signal level must be between 0.5 Vrms and 1 Vrms

These accuracies are absolute and include the calibration uncertainties of standards. Refer to the operation manual for additional setup conditions.

Accuracy equations

|Z|, |Y|, L, C, R, X, G and B accuracies are given as:

$\pm(A_n + B)$ (% of reading)

- where:
1. A_n is the accuracy equation as specified by Figure 2 and Table 3. A_n ranges from A_1 to A_8 .
 2. B is the test cable length factor in Table 5.

D accuracy is given as:

$\pm[A_e/100]$ (absolute D value)

Note: $A_e = (A_n + B)$

Q accuracy is given as:

$\pm[(Q_x^2 \times D_e)/(1 \mp (Q_x \times D_e))]$ (absolute Q value)

Note: Specification valid only when $Q_x D_e < 1$. Q_x is the measured value of Q. D_e is the computed D accuracy.

Specifications

Continued from page 19

Table 3. Accuracy equations

Medium/short integration period

$$A_1 = N_1\% + \left[\left(\frac{f}{30} \right)^2 \cdot 3\% \right] + \frac{100}{|Zm|} \left[0.02\% + \left(\frac{f}{30} \right) \cdot 0.1\% \right]$$

$$A_2 = N_2\% + \left[\left(\frac{f}{30} \right)^2 \cdot 3\% \right] + \frac{|Zm|}{25} \left[0.02\% + \left(\frac{f}{30} \right) \cdot 0.05\% \right]$$

$$A_3 = N_3\% + \left[\left(\frac{f}{5} \right)^2 \cdot 0.1\% \right] + \frac{|Zm|}{250} \left[0.02\% + \left(\frac{f}{30} \right) \cdot 0.05\% \right]$$

$$A_4 = 0.3\% + \left[\left(\frac{f}{30} \right)^2 \cdot 3\% \right] + \frac{|Zm|}{500} \left[0.05\% + \left(\frac{f}{30} \right) \cdot 0.1\% \right]$$

$$A_5 = 0.18\% + \left[\left(\frac{|Zm|}{5k} \right) \cdot 0.04\% \right]$$

$$A_6 = 0.18\% + \left[\left(\frac{f}{30} \right)^2 \cdot 3\% \right] + \frac{|Zm|}{2.5k} \left[0.02\% + \left(\frac{f}{10} \right) \cdot 0.03\% \right]$$

$$A_7 = 0.5\% + \left[\left(\frac{f}{30} \right)^2 \cdot 3\% \right] + \frac{|Zm|}{2.5k} \left[\left(\frac{f}{30} \right) \cdot 0.2\% \right]$$

$$A_8 = 0.18\% + \left[\left(\frac{|Zm|}{50k} \right) \cdot 0.06\% \right]$$

Long integration period

$$A_1 = N_1\% + \left[\left(\frac{f}{30} \right)^2 \cdot 3\% \right] + \frac{50}{|Zm|} \left[0.02\% + \left(\frac{f}{30} \right) \cdot 0.1\% \right]$$

$$A_2 = N_2\% + \left[\left(\frac{f}{30} \right)^2 \cdot 3\% \right] + \frac{|Zm|}{50} \left[0.02\% + \left(\frac{f}{30} \right) \cdot 0.05\% \right]$$

$$A_3 = N_3\% + \left[\left(\frac{f}{5} \right)^2 \cdot 0.1\% \right] + \frac{|Zm|}{500} \left[0.02\% + \left(\frac{f}{30} \right) \cdot 0.05\% \right]$$

$$A_4 = 0.3\% + \left[\left(\frac{f}{30} \right)^2 \cdot 3\% \right] + \frac{|Zm|}{500} \left[0.05\% + \left(\frac{f}{30} \right) \cdot 0.1\% \right]$$

$$A_5 = 0.18\% + \left[\left(\frac{|Zm|}{5k} \right) \cdot 0.02\% \right]$$

$$A_6 = 0.18\% + \left[\left(\frac{f}{30} \right)^2 \cdot 3\% \right] + \frac{|Zm|}{5k} \left[0.02\% + \left(\frac{f}{10} \right) \cdot 0.03\% \right]$$

$$A_7 = 0.5\% + \left[\left(\frac{f}{30} \right)^2 \cdot 3\% \right] + \frac{|Zm|}{5k} \left[\left(\frac{f}{30} \right) \cdot 0.2\% \right]$$

$$A_8 = 0.18\% + \left[\left(\frac{|Zm|}{50k} \right) \cdot 0.03\% \right]$$

f: Measured frequency (MHz)

Values of N₁, N₂, and N₃, are in the following table:

Frequency (f)	N ₁ , N ₂	N ₃
75kHz ≤ f ≤ 200kHz	0.15	0.15
200kHz < f ≤ 3MHz	0.08	0.08
3MHz < f ≤ 5MHz	0.15	0.15
5MHz < f ≤ 30MHz	0.3	

Specifications continued on page 20

Specifications

Continued from page 19

θ accuracy is given as:

$$\pm[(180/\pi) \times (A_e/100)] \text{ (absolute degrees)}$$

Note: 1. $A_e = (A_n + B)$

Additional error due to temperature:

Multiply the measurement accuracy by the following temperature factors.

Temp°C	0	8	18	28	38	48	55
Factor	X 3	X 2	X 1	X 2	X 3	X 4	

Example L and Q accuracy calculation

Measurement conditions:

Frequency: 500 kHz L value measured: 2 mH
 Test signal level: 1 Vrms Integration time: Long
 Cable length: 0 meters Q value measured (Q_x): 200

Calculation:

- Step 1: Use Figure 2 to determine A_n and Z_m .
- Find the frequency along the X-axis.
 - Find the inductance value along a diagonal.
 - Note the intersection of steps a and b.
 In this case $A_n = A_5$. Refer to the equations in Table 3.
 - Note that in step c Z_m is 6.3 k Ω .
- Step 2: Use Tables 3 and 4 to determine A_n and B.
- A_n is equation A_5 for long integration times:
 $0.18\% + [(|Z_m|/5 \text{ k}) \times 0.02\%]$
 - A_5 yields a value of 0.21%
 - Table 4 indicates that B has a value of 0.
 (@ cable length = 0 m)
 - L accuracy is $\pm(A_n + B) = 0.21\%$
 - Determine D accuracy (D_e): $(A_n + B)/100 = 0.0021$
 - Q accuracy: (ΔQ)
 $\pm[(Q_x^2 \times D_e)/(1 \mp (Q_x \times D_e))]$
 - ΔQ yields a value of -57 to 133, Actual Q: 143 to 333
 N_1 , N_2 and N_3 are in Table 3.

Table 4. Cable length correction

Test cable length	B (%)
0 meter	0
1 meter (16048A)	$f_m/15$
2 meter (16048D)	$f_m/15$

(f_m : test frequency in MHz)

Figure 2. Accuracy equation (A_n) frequency and impedance range (4285A)

Note: For additional accuracy information, refer to the impedance accuracy equation on page 18. The symbol in parenthesis (A_n) represents accuracy equations in Tables 3 and 4. (Measurements outside Figure 2 are permitted but accuracies are not specified.)

Accessories

The Agilent 42841A is used with either the Agilent 4284A or Agilent 4285A for high dc current bias measurements.

Agilent 42841A bias current source

Bias current output: Up to 20 Adc maximum, 0.01 Adc steps

Current accuracy: $\pm 1\%$ to 1A, $\pm 2\%$ to 5A, $\pm 3\%$ to 20 A

Output voltage: 38 Vdc maximum (for more details see page 23)

Frequency range: Agilent 4284A: 20 Hz to 1 MHz

Agilent 4285A: Up to 30 MHz when combined with the Agilent 42842C bias current fixture.

Test signal voltage: 0.5 Vrms to 2 Vrms

Basic measurement accuracy:

Agilent 4284A: 2% for < 1 kHz, 1% for 1 kHz to 1 MHz

Agilent 4285A: $\sqrt{f_m}$ % + Agilent 4285A accuracy
(f_m = test frequency in MHz)

Interface: Custom, directly controllable by the Agilent 4284A/4285A with Option 4284A/4285A-002

The Agilent 42842A/B/C are fixtures designed to interface from the Agilent 42841A bias current source to inductive DUT's.

Agilent 42842A/B/C bias current test fixture

Agilent 42842A: Up to 20 Adc maximum, used only with the Agilent 4284A

Agilent 42842B: Up to 40 Adc maximum, used only with the Agilent 4284A

Basic impedance accuracy:
Refer to Agilent 42841A specifications

Component dimensions (maximum):
80 mm (W) x 80 mm (H) x 80 mm (D)

Agilent 42842C: Up to 10 Adc maximum, used only with the Agilent 4285A. Option 42842C-001 adds the SMD test fixture.

Component dimensions (maximum):
60 mm (W) x 50 mm (H) x 60mm (D)

20A measurement system

40A measurement system

Bias current system configuration for 42842C

Agilent 42843A bias current cable

This cable is used with the Agilent 4284A for configurations greater than 20 Adc. Refer to the configuration table in the ordering information section.

This is the SMD test fixture, which is furnished with 42842C when Option 42842C-001 is ordered.

Frequency: ≤ 30 MHz

Maximum DC bias voltage: ± 40 V

Agilent 42851-61100 SMD test fixture Maximum DC bias current: ± 2 A

Supplemental characteristics data for the 42841A

Impedance measurement accuracy and applicable measurement range:

The figure to the right shows the inductance measurement accuracy of the 42841A measurement system configured for 40 A. The inductance measurement accuracy represents the tolerance of additional errors to the 4284A's measurement accuracy and is applicable at the 42842A/B's measurement terminals when all of the following conditions are satisfied:

- (1) 4284A integration mode: long
- (2) Test signal voltage level: 1 Vrms
- (3) Test cable: 16048A
- (4) Short compensation has been performed
- (5) Surrounding temperature: 5 °C to 45 °C
- (6) DUT's dissipation factor $D < 1$

The entire system's measurement error is given as 4284A accuracy + 42841A accuracy (see figure) + additional error due to temperature (see table). For more information see the operational manual of 42841A.

Bias current settling time:

The typical time required for the bias current to reach 99% of setting from 0 A is given as:

Bias current ≤ 1 A: $1 \text{ s} + I \text{ bias} + 0.6 \text{ s}$

Bias current ≤ 5 A: $0.2 \text{ s} + I \text{ bias} + 0.6 \text{ s}$

Bias current > 5 A: $0.1 \text{ s} + I \text{ bias} + 0.6 \text{ s}$

where $I \text{ bias}$ is bias current setting in amperes.

Temp (°C)		5	8	18	28	38	45
Additional Error	$I_{\text{bias}} \leq 10[\text{A}]$	3.0%	1.5%	0%	1.5%	3.0%	
	$I_{\text{bias}} \leq 40[\text{A}]$	4.0%	2.0%	0%	2.0%	4.0%

Cable length: 0.94 m (A/B/C/D)
1.3m (E)

Frequency: ≤ 100 kHz

Maximum DC bias voltage: ± 40 V

Ordering information

Agilent 4284A 20 Hz to 1 MHz precision LCR meter

Note: No test fixture is supplied with the Agilent 4284A.

Furnished accessories: Operation manual (04284-90000), power cable.

Options:

Option 4284A-700:	Standard power (2 V, 20 mA, 2 V DC bias)
Option 4284A-001:	Power amplifier/40V dc bias (see note 1)
Option 4284A-002:	Bias current interface (see note 1, 2)
Option 4284A-004:	Memory card
Option 4284A-006:	2 m/4 m cable length operation
Option 4284A-201:	General purpose handler interface (see note 2, 3)
Option 4284A-202:	Specific handler interface (see note 2, 3)
Option 4284A-301:	Scanner interface (see note 2)
Option 4284A-710:	Blank panel
Option 4284A-915:	Add service manual
Option 4284A-ABJ:	Add Japanese operation manual
Option 4284A-ABA:	Add English operation manual

Note 1: Options 4284A-001 and 4284A-002 do not operate simultaneously.

Note 2: A maximum of 2 of the following may be installed at one time:

Options 4284A-002, 4284A-201, 4284A-202, 4284A-303.

Note 3: Select either Option 4284A-201 or 4284A-202.

Agilent 4285A 75 kHz to 30 MHz precision LCR meter

Note: No test fixture is supplied with the Agilent 4285A.

Furnished accessories: Operation manual (04285-90000), power cable.

Options:

Option 4285A-700:	No DC bias
Option 4285A-001:	40V dc bias (see note 1)
Option 4285A-002:	Accessory control interface (see note 1, 2)
Option 4285A-004:	Memory card
Option 4285A-201:	General purpose handler interface (see note 2, 3)
Option 4285A-202:	Specific handler interface (see note 2, 3)
Option 4285A-301:	Scanner interface (see note 2)
Option 4285A-710:	Blank panel
Option 4285A-915:	Add service manual
Option 4285A-ABJ:	Add Japanese operation manual
Option 4285A-ABA:	Add English operation manual

Note 1: Options 4285A-001 and 4285A-002 do not operate simultaneously.

Note 2: A maximum of 2 of the following may be installed at one time:

Options 4285A-002, 4285A-201, 4285A-202, 4285A-301.

Note 3: Select either Option 4285A-201 or 4285A-202.

Agilent Technologies' Test and Measurement Support, Services, and Assistance

Agilent Technologies aims to maximize the value you receive, while minimizing your risk and problems. We strive to ensure that you get the test and measurement capabilities you paid for and obtain the support you need. Our extensive support resources and services can help you choose the right Agilent products for your applications and apply them successfully. Every instrument and system we sell has a global warranty. Support is available for at least five years beyond the production life of the product. Two concepts underlie Agilent's overall support policy: "Our Promise" and "Your Advantage."

Our Promise

Our Promise means your Agilent test and measurement equipment will meet its advertised performance and functionality. When you are choosing new equipment, we will help you with product information, including realistic performance specifications and practical recommendations from experienced test engineers. When you use Agilent equipment, we can verify that it works properly, help with product operation, and provide basic measurement assistance for the use of specified capabilities, at no extra cost upon request. Many self-help tools are available.

Your Advantage

Your Advantage means that Agilent offers a wide range of additional expert test and measurement services, which you can purchase according to your unique technical and business needs. Solve problems efficiently and gain a competitive edge by contracting with us for calibration, extra-cost upgrades, out-of-warranty repairs, and onsite education and training, as well as design, system integration, project management, and other professional engineering services. Experienced Agilent engineers and technicians worldwide can help you maximize your productivity, optimize the return on investment of your Agilent instruments and systems, and obtain dependable measurement accuracy for the life of those products.
