No part of this manual may be reproduced in any form or by any means (including electronic storage and retrieval or translation into a foreign language) without prior agreement and written consent from Agilent Technologies, Inc. as governed by United States and international copyright laws.

## Manual Part Number

B1542-90000

## Edition

Edition 1, July 2006

Agilent Technologies, Inc.  
395 Page Mill Road  
Palo Alto, CA 94303 USA

## Warranty

The material contained in this document is provided "as is," and is subject to being changed, without notice, in future editions. Further, to the maximum extent permitted by applicable law, Agilent disclaims all warranties, either express or implied, with regard to this manual and any information contained herein, including but not limited to the implied warranties of merchantability and fitness for a particular purpose. Agilent shall not be liable for errors or for incidental or consequential damages in connection with the furnishing, use, or performance of this document or of any information contained herein. Should Agilent and the user have a separate written agreement with warranty terms covering the material in this document that conflict with these terms, the warranty terms in the separate agreement shall control.

## Technology Licenses

The hardware and/or software described in this document are furnished under a license and may be used or copied only in accordance with the terms of such license.

## Restricted Rights Legend

If software is for use in the performance of U.S. Government prime contract or subcontract, Software is delivered and licensed as "Commercial computer software" as defined in DFAR 252.227-7014 (June 1995), or as a "commercial item" as defined in FAR 2.101(a) or as "Restricted computer software" as defined in FAR 52.227-19 (June 1987) or any equivalent agency regulation or contract clause. Use, duplication or disclosure of Software is subject to Agilent Technologies' standard commercial license terms, and non-DOD Departments and Agencies of the U.S. Government will receive no greater than Restricted Rights as

defined in FAR 52.227-19(c)(1-2) (June 1987). U.S. Government users will receive no greater than Limited Rights as defined in FAR 52.227-14 (June 1987) or DFAR 252.227-7015 (b)(2) (November 1995), as applicable in any technical data.

This product complies with the WEEE Directive (2002/96/EC) marking requirements. The affixed label indicates that you must not discard this electrical/ electronic product in domestic household waste.

**Product Category:** With reference to the equipment types in the WEEE Directive Annex I, this product is classed as a "Monitoring and Control instrumentation" product.

**Do not dispose in domestic household waste.**

To return unwanted products, contact your local Agilent office, or see [www.agilent.com/environment/product/](http://www.agilent.com/environment/product/) for more information.

---

## In This Manual

This manual provides the information about Agilent Technologies B1542A and consists of the following chapters:

- Chapter 1, “Introduction”  
This chapter describes product overview of Agilent B1542A.
- Chapter 2, “Installation”  
This chapter explains how to install Agilent B1542A.
- Chapter 3, “Performing System Setup and Compensation”  
This chapter explains how to perform system setup and how to update compensation data.
- Chapter 4, “Performing Measurement”  
This chapter describes measurement examples by using the pulsed IV test system.
- Chapter 5, “PLSDIV Test Definitions”  
This chapter provides reference information for application test definitions (PLSDIV test definitions) used for the pulsed IV measurement.
- Chapter 6, “PLSDIV TIS Commands”  
This chapter provides reference information for execution files (Plsdiv commands, PLSDIV TIS) used in the PLSDIV test definitions.
- Chapter 7, “Status Code and Error Messages”  
This chapter lists the status code and the error messages.

---

### NOTE

For the latest edition of electronic manuals and support information, visit the Agilent Technologies support site (<http://www.home.agilent.com>), and click Test & Measurement Equipment > Parametric Test, click Semiconductor Parameter/Device Analyzer Series, and click B1500A Semiconductor Device Analyzer. You can reach the Agilent B1500A support site.

---

### NOTE

The pulsed IV test system consists of some instruments, oscilloscope, pulse generator, source monitor unit, and so on. To use the instruments independently or for details of the instruments, see the manual of each instrument.

## **Introduction**

## **Introduction**

Agilent B1542A Pulsed IV Package for B1500/EasyEXPERT is a solution package for the Agilent B1500A/EasyEXPERT users and provides the automated pulsed IV test environment. This chapter introduces Agilent B1542A, and consists of the following sections.

- “Overview”
- “Typical Technical Information”
- “Accessories and Options”

## Overview

Agilent B1542A Pulsed IV Package expands the capabilities of Agilent B1500A Semiconductor Device Analyzer to enable the ultra short pulsed IV measurements with parametric characterization down to 10 ns pulse width for many new device structures such as silicon-on-insulator (SOI) transistors that are more susceptible to harmful thermal effects during characterization.

Using the B1542A, you can easily and effectively configure the pulsed IV test system and perform the pulsed IV measurement of MOSFET on the Agilent EasyEXPERT or Desktop EasyEXPERT application test environment.

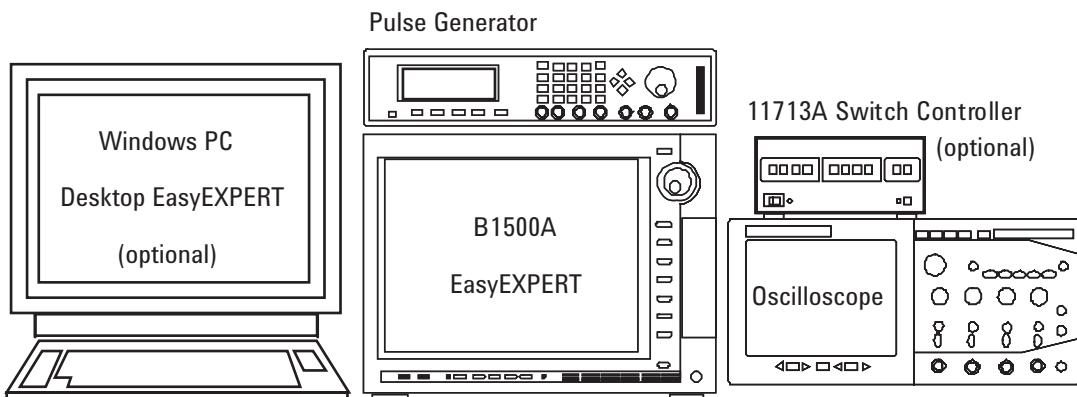

### System Hardware

The pulsed IV test system can be configured by using the following equipment. See Figure 1-1. The B1542A provides the accessories used to connect the equipment.

- Agilent B1500A Semiconductor Device Analyzer
- Pulse Generator, Agilent 81110A or 8110A with one output channel
- Oscilloscope, see Table 1-1. Minimum two measurement channels are required.
- Agilent 11713A Switch Controller and Pulse/DC Switch Units, optional
  - For configuring the DC + pulsed IV test system.
- Windows PC installed with Desktop EasyEXPERT, optional
  - Instead of the B1500A internal system controller.

Figure 1-1

Pulsed IV Test System by Using Agilent B1542A

## [Introduction](#)

### [Overview](#)

## **System Software**

The B1542A supports the pulsed IV measurement applications listed below. The programs used to perform the measurement are provided as the EasyEXPERT application test definition. Therefore the pulsed IV measurement can be performed on the EasyEXPERT or Desktop EasyEXPERT application test environment easily without creating the test programs. The B1542A also provides the test definition used for the system setup.

- Pulsed IV Id-Vd characteristics measurement
- Pulsed IV Id-Vg characteristics measurement
- Pulsed IV waveform measurement
- DC Id-Vd characteristics measurement
- DC Id-Vg characteristics measurement
- Pulsed IV system reset
- Pulsed IV system setup

**Table 1-1**

**Oscilloscope Supported by Agilent B1542A**

<b>Agilent Model Number</b>	<b>Remarks</b>
54853A	2.5 GHz, 20 Gs sampling, 4 channels. Revision A.05.01
54854A	4 GHz, 20 Gs sampling, 4 channels. Revision A.05.01
54855A	6 GHz, 20 Gs sampling, 4 channels. Revision A.05.01

## Typical Technical Information

The followings are the typical technical information of the pulsed IV test system configured by Agilent B1542A. Those are not the specifications but the typical and supplemental data the test system can provide.

Gate pulse width: 10 ns to 1  $\mu$ s

Gate pulse voltage: -4.5 V to 4.5 V

Gete pulse period: 100  $\mu$ s

Drain pulse maximum measurement current: 80 mA

Drain pulse current measurement resolution: 1  $\mu$ A

Drain voltage range: -10 V to 10 V

---

## Accessories and Options

Table 1-2 lists the available options for Agilent B1542A. And Table 1-3 lists the contents of the options.

**Table 1-2**

**Options and Accessories**

Model Number	Option Item	Description
B1542A		Pulsed IV Package for B1500/EasyEXPERT
	B1542A-001	Software license to use, media, and manual
	B1542A-021	Gate cable set
	B1542A-022	Drain cable set
	B1542A-023	Docking interface
	B1542A-024	Switch set
E3333A	E3333A-002	Add 81110A with 1 output channel
	E3333A-012	Add 54853A 2.5 GHz Infinium scope

**2**

## **Installation**

## Installation

This chapter describes the inspection and installation instructions of Agilent B1542A pulsed IV package for B1500A/EasyEXPERT, and consists of the following sections. To perform the pulsed IV measurement, complete the hardware and software installation described in this chapter.

- “Inspection”
- “RF Probes”
- “Hardware Installation”
- “Software Installation”

---

### CAUTION

#### Using Torque Wrench and Open-end Wrench

For the RF measurements, it is important to carefully contact and fasten the connectors of the RF cables. The condition of the cable connections may change the measurement result characteristics. Therefore treat the RF cables carefully, especially the RF connectors, and use the torque wrench and the open-end wrench when you fasten the RF connectors. The wrenches are furnished with the B1542A.

---

---

### CAUTION

#### Using Cable Tie

Use a cable tie to secure the cables. Then, do not tug the cable tie. You must treat the RF cables carefully to avoid the damage.

---

---

### NOTE

#### Using Pulse/DC Switch Units

The B1542A with the option B1542A-024 supports the automatic switching of the pulsed IV measurement and the DC IV measurement by using the Agilent 11713A Switch Controller and the pulse/dc switch units

To use the switch units without modifying the pulsed IV test definition, set the 11713A's GPIB address to 10.

To use another GPIB address, open the test definition, change the Address value of GPIB Write components used for the 11713A, and save the definition. Initially, it is set to Address=10.

---

---

### NOTE

#### Using Magnet Sheet

Use a magnet sheet to fix the divider or the bias-T to a metal plate. The magnet sheet is furnished with the B1542A.

---

## Inspection

Perform the following inspections when the B1542A arrives at your site.

1. Before unpacking any components, inspect all boxes for any sign of damage that might have occurred during shipment, such as:

- dents
- scratches
- cuts
- water marks

If you suspect any damage, notify your local Agilent Technologies sales or service office.

2. When you open the boxes containing the B1542A, check the components against the contents lists attached to the boxes. See also Table 1-3.

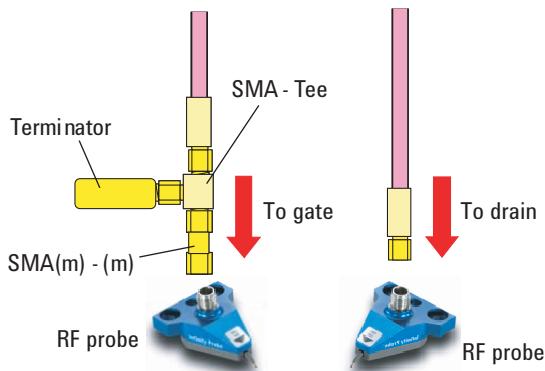

If anything is missing, notify your local Agilent Technologies sales or service office.

## RF Probes

The pulsed IV test system supports the measurement of the three-terminal MOSFET (source and substrate are shorted). And its measurement path must be extended to the RF probes as shown in Figure 2-1. One measurement path is for the gate terminal and the other path is for the drain terminal. Moreover the source/substrate terminal must be electrically connected to the ground via the shielding of the measurement path (RF probes and measurement cables). See Figure 2-2.

Figure 2-1

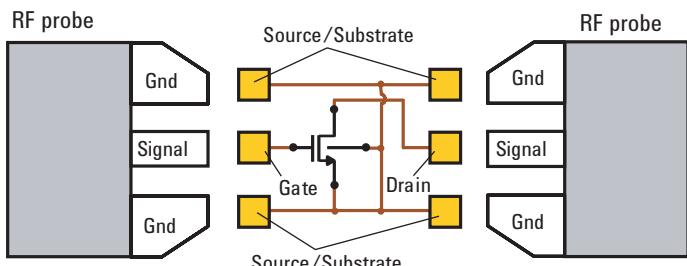

RF Probe Connection

Prepare two RF probes to perform the pulsed IV measurement. The RF probe must have the signal line and the ground lines as shown in Figure 2-2. The signal line is to contact the gate or drain pad, and the ground lines are to contact the source/substrate pads. For the RF probe and its installation, consult your favorite prober vender. Figure 2-1 shows the RF probes of Cascade Microtech, Inc.

Figure 2-2

Contact Pad and Probe Tip

## Hardware Installation

This section describes the instructions to install the B1542A. The installation instructions cover the connection of the control cables and the connection of the measurement cables to the RF probes used to contact the MOSFET gate and drain terminals. The connection overview of the pulsed IV test system is shown in Figure 2-4 and 2-5. Figure 2-5 is the connection diagram of the DC + pulsed IV test system and is effective only for the system installed with the option B1542A-024.

- “Installing Instruments”
- “Connecting GPIB Cables”
- “Installing Pulsed IV Test System”  
See this section if you install the B1542A without the option B1542A-024.
- “Installing DC + Pulsed IV Test System (for Option 024)”  
See this section if you install the B1542A with the option B1542A-024.
- “Connecting RF Probes”

### Installing Instruments

The pulsed IV test system uses the B1500A, pulse generator, oscilloscope, and switch controller with switch units. Install the instruments to the appropriate place. See Figure 2-3 for example. For more information, see the manual of each instrument. It provides the required environment and the necessary and unique information for the instrument. The switch controller is required for the DC + pulsed IV test system installed with the option B1542A-024.

### Connecting GPIB Cables

Connect the instruments by using the GPIB cables. The pulsed IV test system needs two cables and the DC + pulsed IV test system needs three cables.

1. Connect the GPIB cable between the B1500A and the pulse generator (for example 81110A).
2. Connect the GPIB cable between the oscilloscope (for example 54853A) and one of the above instruments.
3. Only for the DC + pulsed IV test system. Connect the GPIB cable between the 11713A switch controller and one of the above instruments. Set the 11713A GPIB address to 10. This is the value initially defined in the test definition.

Hardware Installation

Figure 2-3

Installing Instruments

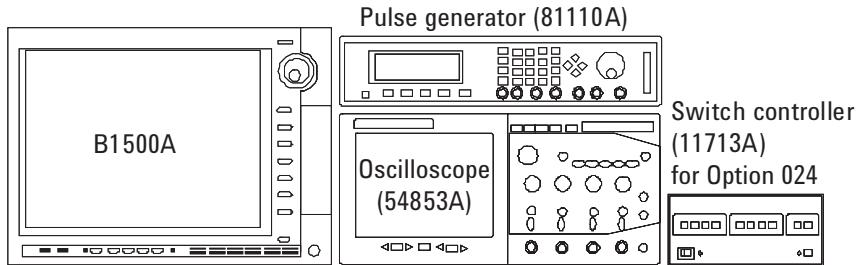

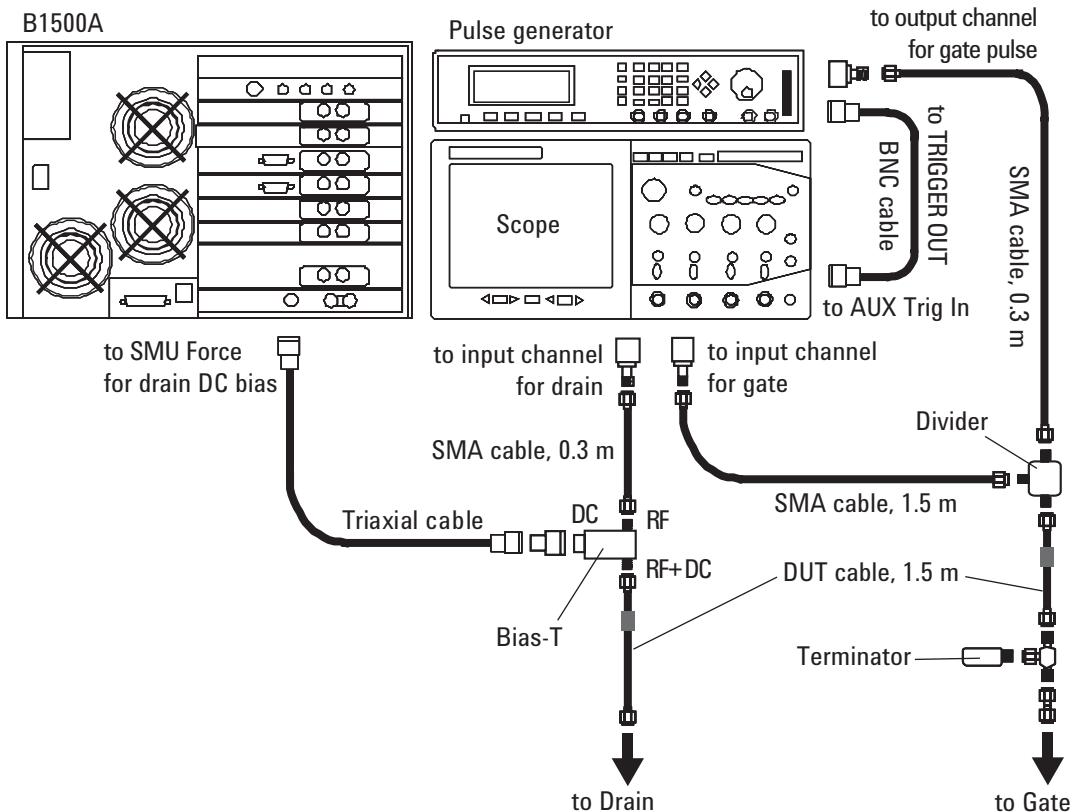

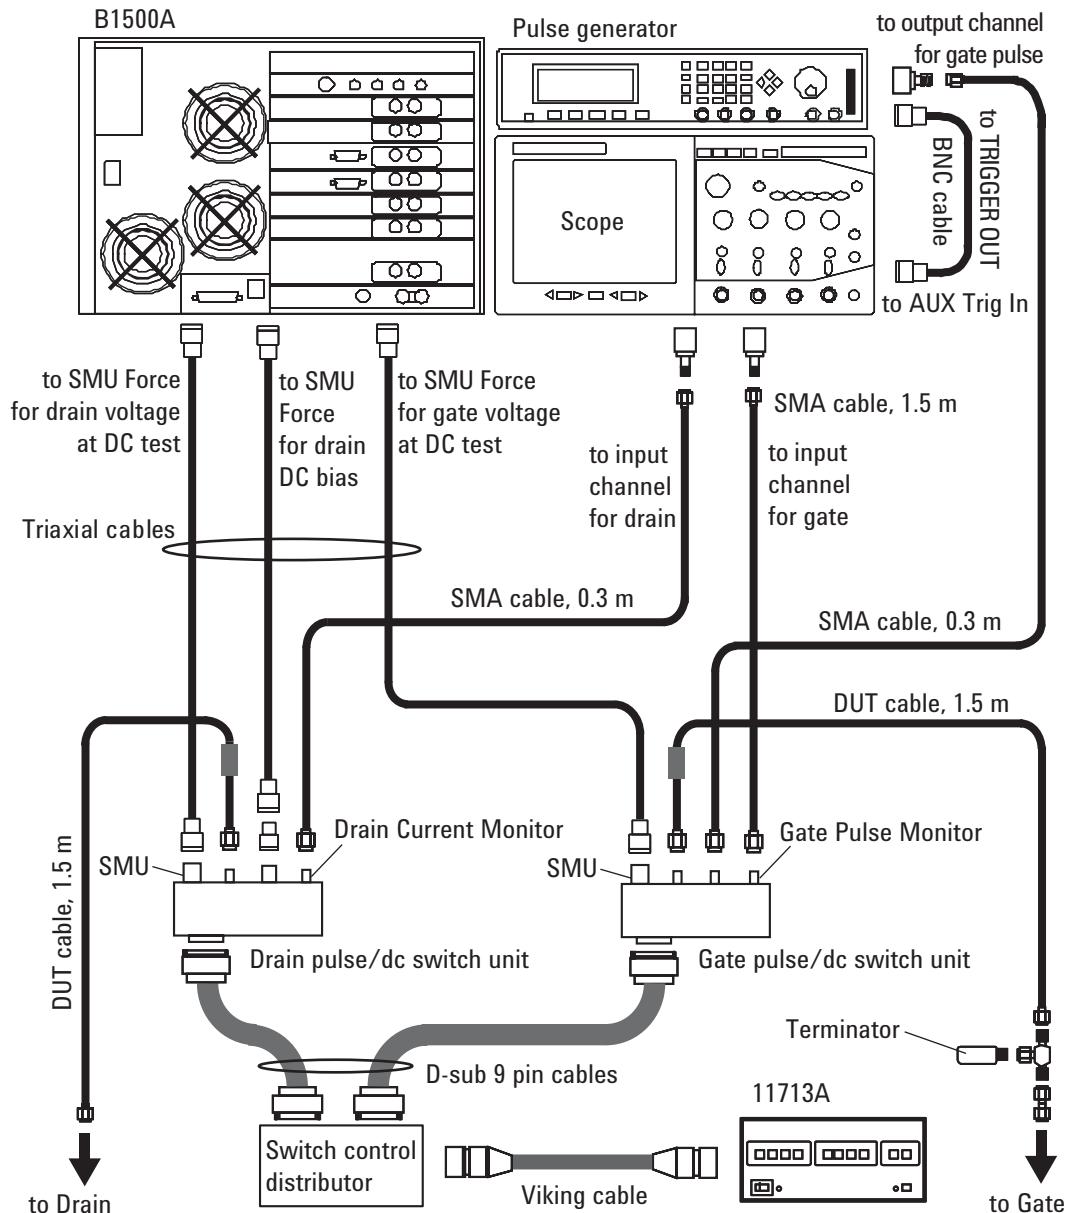

Figure 2-4

Pulsed IV Test System Connection Overview

**Figure 2-5 DC + Pulsed IV Test System Connection Overview (with B1542A-024)**

## Installing Pulsed IV Test System

The connection overview of the pulsed IV test system (without the option B1542A-024) is shown in Figure 2-4. To install the system, perform the following steps.

1. “Making Measurement Path for Gate” on page 2-8
2. “Making Measurement Path for Drain” on page 2-9
3. “Connecting RF Probes” on page 2-16

### Making Measurement Path for Gate

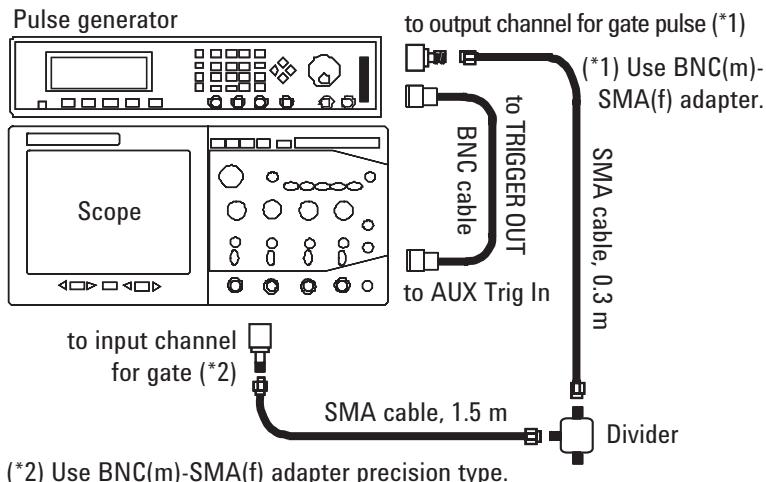

Connect the following accessories as shown in Figure 2-6. And fix the divider to the appropriate place. Use a torque wrench and an open-end wrench to fasten the SMA connectors.

Required accessories:

- BNC(m)-SMA(f) adapter, 1 ea., for pulse generator
- BNC(m)-SMA(f) adapter, precision type, 1 ea., for oscilloscope
- BNC cable, 1 ea.
- SMA cable, 0.3 m, 1 ea.
- SMA cable, 1.5 m, 1 ea.
- Divider, 1 ea.

Figure 2-6

### Measurement Path for Gate

## Making Measurement Path for Drain

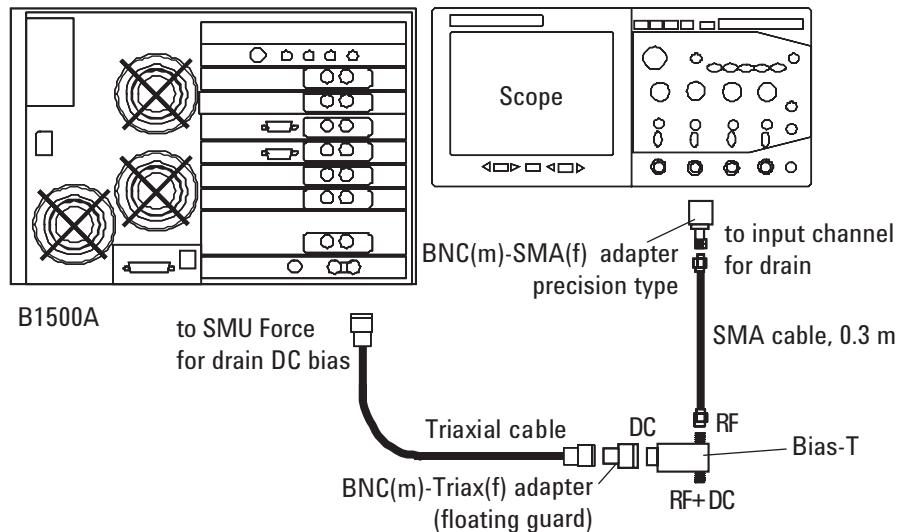

Connect the following accessories as shown in Figure 2-7. And fix the bias-T (bias network) to the appropriate place. Use a torque wrench and an open-end wrench to fasten the SMA connectors.

Required accessories:

- BNC(m)-SMA(f) adapter, precision type, 1 ea., for oscilloscope
- SMA cable, 0.3 m, 1 ea.
- Triaxial cable, 1 ea.
- BNC(m)-Triax(f) adapter, floating guard, 1 ea.
- Bias-T, 1 ea.

Figure 2-7

Measurement Path for Drain

## **Installing DC + Pulsed IV Test System (for Option 024)**

The connection overview of the DC + pulsed IV test system is shown in Figure 2-5. This is effective only for the system installed with the option B1542A-024. To install the system, perform the following steps.

When you install the B1542A with the option B1542A-024, skip the steps 1 and 2. They are not required for the installation of the B1542A with the option B1542A-024. However they are required for the retrofit of the option B1542A-024.

1. “Assembling Gate Switch Unit (for Option 024 Retrofit)” on page 2-11

See this section if you retrofit the option B1542A-024. This section is not required when you install the B1542A with the option B1542A-024.

2. “Assembling Drain Switch Unit (for Option 024 Retrofit)” on page 2-12

See this section if you retrofit the option B1542A-024. This section is not required when you install the B1542A with the option B1542A-024.

3. “Connecting Switch Controller (for Option 024)” on page 2-13

4. “Making Measurement Path for Gate (for Option 024)” on page 2-14

5. “Making Measurement Path for Drain (for Option 024)” on page 2-15

6. “Connecting RF Probes” on page 2-16

## Assembling Gate Switch Unit (for Option 024 Retrofit)

This section is required if you retrofit the option B1542A-024. This section is not required when you install the B1542A with the option B1542A-024. The following procedure assembles the Gate Pulse/DC Switch Unit. See Figure 2-8.

1. Unscrew and remove the top cover of the gate switch unit.
2. Connect the coaxial cables to the divider correctly. And fix the divider to the gate switch unit.  
Use a torque wrench and an open-end wrench to fasten the SMA connectors.
3. Screw and replace the top cover of the gate switch unit.

Required accessories:

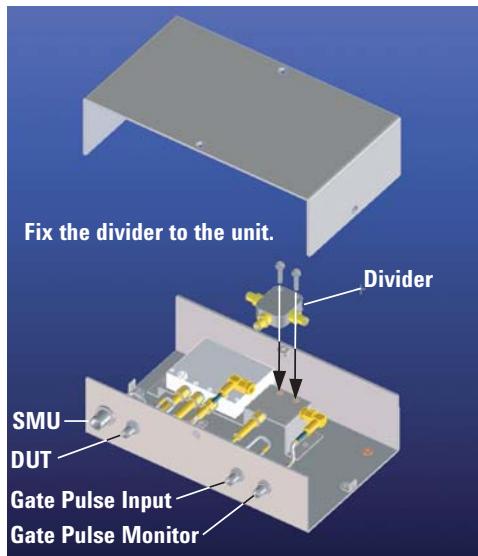

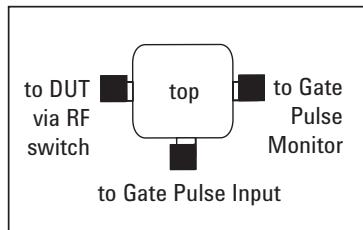

- Gate Pulse/DC Switch Unit without divider, 1 ea.
- Divider, 1 ea.
- Torx wrench, furnished with the option B1542A-024

This wrench is needed to remove or fasten the screws.

**Figure 2-8**

### Gate Pulse/DC Switch Unit

Connect coaxial cables to the divider.

## Assembling Drain Switch Unit (for Option 024 Retrofit)

This section is required if you retrofit the option B1542A-024. This section is not required when you install the B1542A with the option B1542A-024. The following procedure assembles the Drain Pulse/DC Switch Unit. See Figure 2-9.

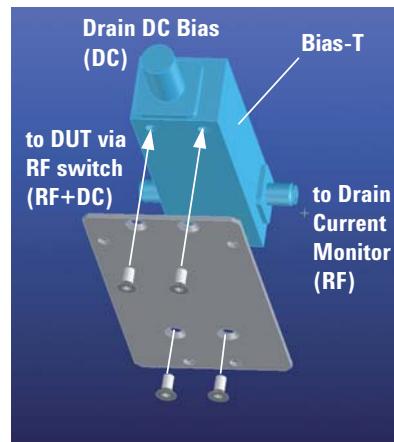

1. Unscrew and remove the top cover of the drain switch unit.
2. Remove the mounting plate inside the unit. And screw and fix it to the bias-T.
3. Connect the coaxial cables to the bias-T correctly. And fix the bias-T to the drain switch unit.  
Use a torque wrench and an open-end wrench to fasten the SMA connectors.
4. Screw and replace the top cover of the drain switch unit.

Required accessories:

- Drain Pulse/DC Switch Unit without bias-T, 1 ea.
- Bias-T, 1 ea.
- Torx wrench, furnished with the option B1542A-024. This wrench is needed to remove or fasten the screws.

Figure 2-9

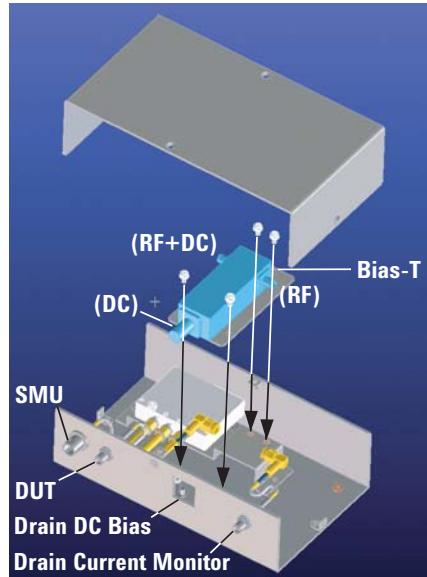

### Drain Pulse/DC Switch Unit

Fix the mounting plate to the Bias-T.

Connect the coaxial cables to the Bias-T.

Fix the Bias-T to the unit.

## Connecting Switch Controller (for Option 024)

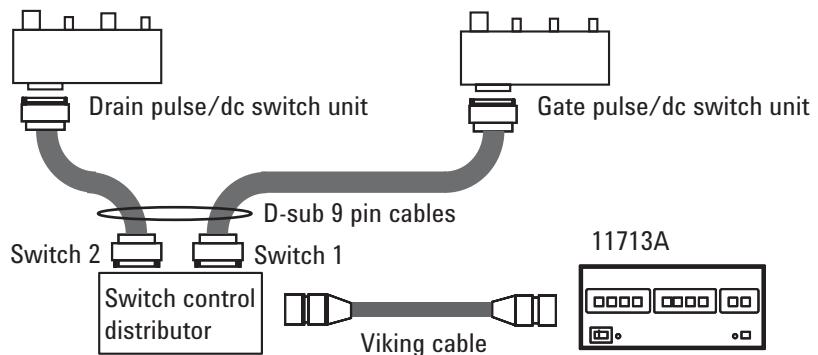

1. Install the Agilent 11713A switch controller and connect the GPIB cable. See “Installing Instruments” and “Connecting GPIB Cables” on page 2-5.
2. Fix the switch control distributor to the appropriate place.
3. Connect the viking cable between the 11713A switch controller and the switch distributor.
4. Connect the D-sub 9 pin cable between the switch distributor Switch 1 connector and the gate pulse/dc switch unit.
5. Connect the D-sub 9 pin cable between the switch distributor Switch 2 connector and the drain pulse/dc switch unit.

Required accessories and equipment:

- Viking cable, 1 ea.
- D-sub 9 pin cable, 2 ea.
- Agilent 11713A Switch Controller, 1 ea.
- Switch Control Distributor, 1 ea.
- Gate Pulse/DC Switch Unit with divider, 1 ea.
- Drain Pulse/DC Switch Unit with bias-T, 1 ea.

Figure 2-10

### Switch Controller, Switch Control Distributor, and Pulse/DC Switch Units

## Making Measurement Path for Gate (for Option 024)

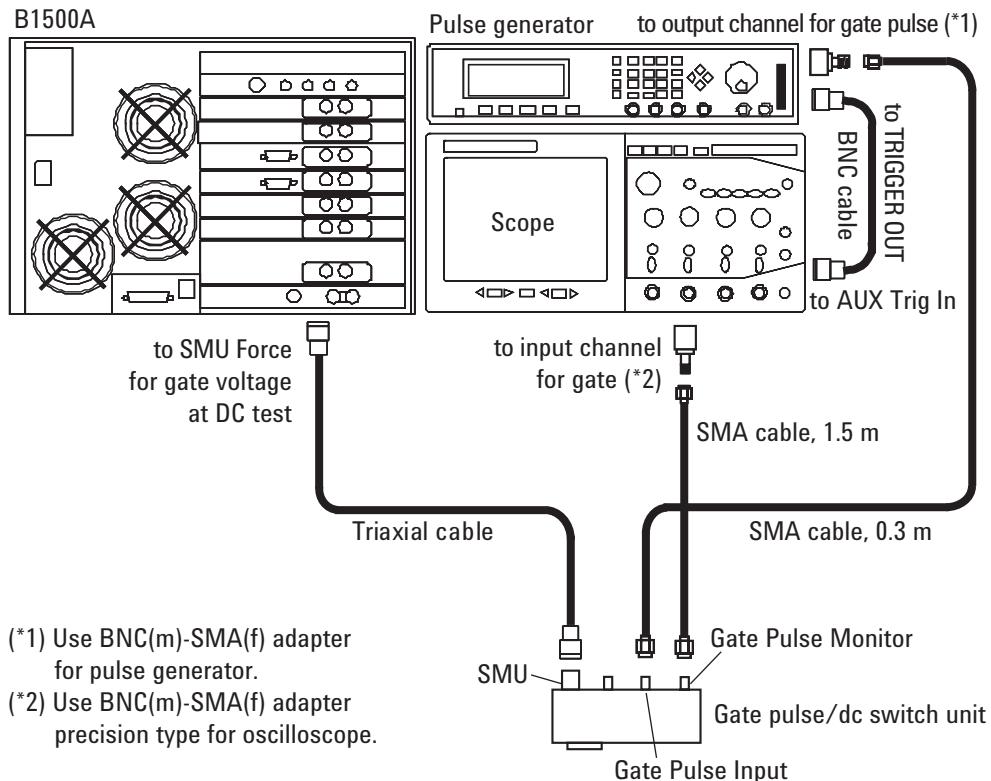

Connect the following accessories as shown in Figure 2-11. And fix the gate pulse/dc switch unit to the appropriate place. Use a torque wrench and an open-end wrench to fasten the SMA connectors.

Required accessories:

- BNC(m)-SMA(f) adapter, 1 ea., for pulse generator
- BNC(m)-SMA(f) adapter, precision type, 1 ea., for oscilloscope
- BNC cable, 1 ea.
- SMA cable, 0.3 m, 1 ea.
- SMA cable, 1.5 m, 1 ea.
- Triaxial cable, 1 ea.

Figure 2-11

### Measurement Path for Gate

## Making Measurement Path for Drain (for Option 024)

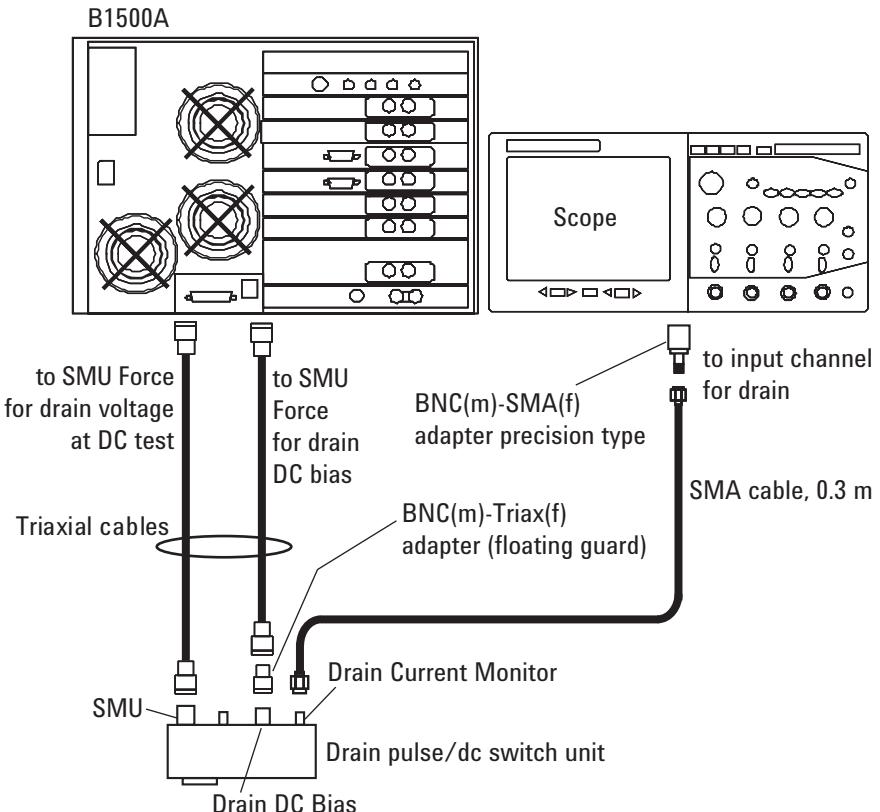

Connect the following accessories as shown in Figure 2-12. And fix the drain pulse/dc switch unit to the appropriate place. Use a torque wrench and an open-end wrench to fasten the SMA connectors.

Required accessories:

- BNC(m)-SMA(f) adapter, precision type, 1 ea., for oscilloscope
- SMA cable, 0.3 m, 1 ea.
- BNC(m)-Triax(f) adapter, floating guard, 1 ea.
- Triaxial cable, 2 ea.

Figure 2-12

### Measurement Path for Drain

## Connecting RF Probes

Connect the following accessories as shown in Figure 2-13. Use a torque wrench and an open-end wrench to fasten the SMA connectors.

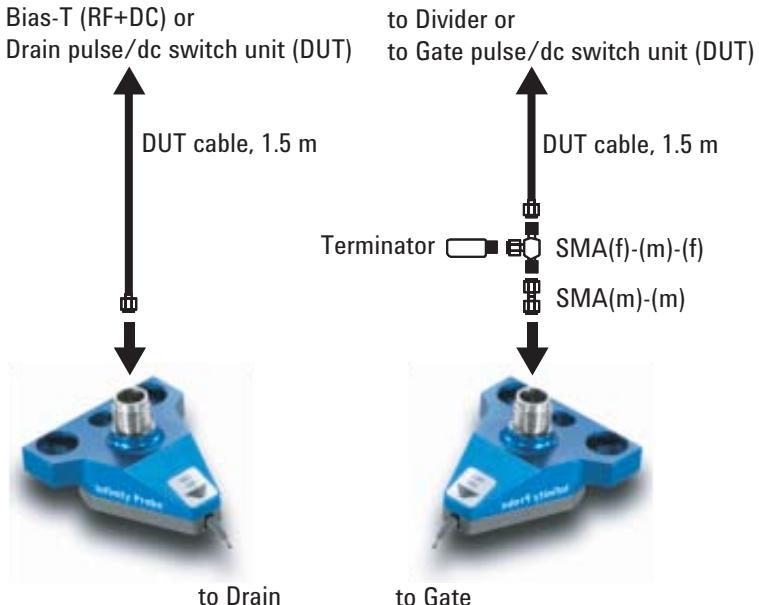

1. Connect a DUT cable between the RF probe and the bias-T's RF+DC connector or the Drain pulse/dc switch unit's DUT connector. And fix the RF probe to the appropriate place.
2. Connect the SMA adapters, terminator, and a DUT cable between the RF probe and the divider or the Gate pulse/dc switch unit's DUT connector. And fix the RF probe to the appropriate place.

Required accessories:

- DUT cable, 1.5 m, 2 ea.  
One cable is used to connect the path to the RF probe for drain.
- SMA(f)-(m)-(f) adapter, 1 ea.
- 50 Ω Terminator, 1 ea.
- SMA(m)-(m) adapter, 1 ea., used to connect the path to the RF probe for gate

**Figure 2-13**

### RF Probe Connections

## Software Installation

This section describes the instructions to install the pulsed IV system software furnished with the B1542A.

### System Requirements

The pulsed IV software must be installed in the one of the following system controller.

- Agilent B1500A's internal system controller
  - Firmware revision: A.02.00 or later
  - EasyEXPERT revision: A.02.00 or later
- Computer where the Desktop EasyEXPERT software is installed and which can run in the online mode. For the Desktop EasyEXPERT software, see Agilent B1500A User's Guide.
  - Desktop EasyEXPERT revision: A.02.00 or later

### Installing Software

Install the Pulsed IV Package software as shown below.

1. If the Start EasyEXPERT window is opened, close it first.
2. Insert the pulsed IV system software CD-ROM into the CD-ROM drive.
3. Execute the following file in the CD-ROM.  
    \Agilent PLSDIV\Agilent\_PLSDIV.msi
4. Follow the instructions of the setup wizard. And wait until the program installation is completed.
5. After the installation, remove the CD-ROM from the CD-ROM drive.

### Installing Cable Compensation Data

Install the drain cable compensation data as shown below.

1. If the Start EasyEXPERT window is opened, close it first.
2. Insert the drain cable compensation data CD-ROM into the CD-ROM drive.

## Installation

### Software Installation

3. Execute the following file in the CD-ROM.  
    \DrainSetup\drain\_setup.msi
4. Follow the instructions of the setup wizard. And wait until the data installation is completed.
5. After the installation, remove the CD-ROM from the CD-ROM drive.

## After Software Installation

1. Launch EasyEXPERT or Desktop EasyEXPERT. And click the Start EasyEXPERT button.
2. Open your workspace or create a new workspace.
3. Display the Application Test tab screen.
4. Import the pulsed IV test definitions from the following folder.  
    C:\Program Files\Agilent\PLSDIV\TestDefinitions
5. Open the PLSDIV Setup test definition and perform the system setup as described in Chapter 3, “Performing System Setup and Compensation.”

---

---

**3**

## **Performing System Setup and Compensation**

This chapter describes how to perform system setup and compensation of the pulsed IV test system and consists of the following sections. The system setup can be performed by using the pulsed IV setup (PLSDIV Setup) test definition on the EasyEXPERT application test environment.

- “Pulsed IV System Setup”
- “Starting System Setup”
- “System Configuration”
- “Compensation”
- “Drain Cable Replacement”

---

**NOTE****Drain Cable Replacement**

It is inadequate to replace only the defective part when you find any defect in the drain measurement path. The compensation data of the measurement path must be also updated after the replacement.

Order the drain cable set and replace it. After that, perform the compensation data installation. For the cable connection and the compensation data installation, see Chapter 2, “Installation.”

---

---

**NOTE****Before starting system setup**

Install the pulsed IV system components and connect the measurement cables properly. See Chapter 2, “Installation.”

Install the compensation data files. The files can be installed by running the setup program furnished with the drain cable set. See “Installing Cable Compensation Data” on page 2-17.

---

## Pulsed IV System Setup

Initially, the following system setup is required to use the pulsed IV test system. For the timing to perform the system setup, see Table 3-1.

- **System Configuration**

This action is necessary to specify the GPIB address and the source or measurement channels of PGU (pulse generator), DSO (digital sampling oscilloscope), and SMU (source monitor unit) used for the pulsed IV measurement. See “System Configuration” on page 3-7.

- **Compensation**

This action is necessary to obtain and update the compensation factors of the pulsed IV test system. See “Compensation” on page 3-8.

- **Drain Cable Replacement**

This action is necessary to obtain and update the compensation factors of the bias-T and the cable of the drain measurement path. See “Drain Cable Replacement” on page 3-13.

**Table 3-1**

**Execution Timing and Required Action**

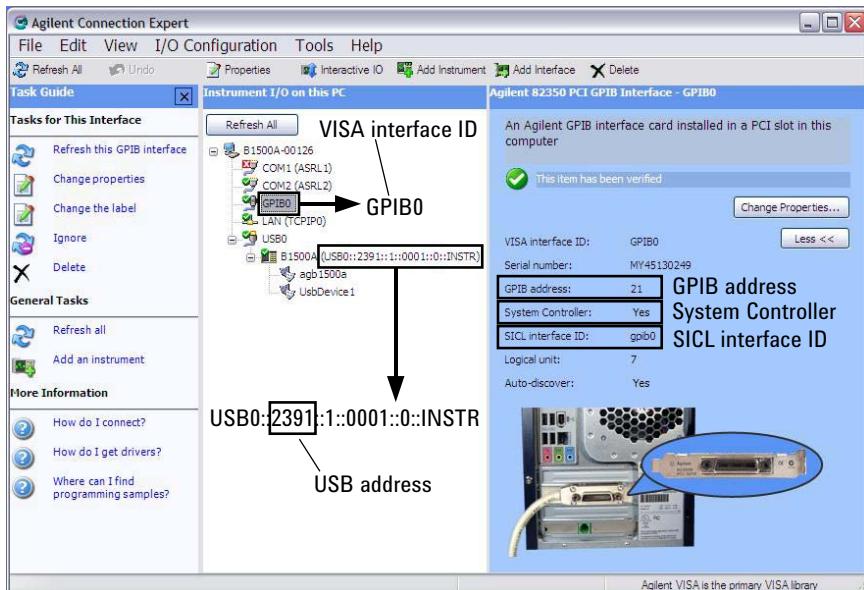

When the system setup is required	Required action
after system installation	“System Configuration”
	“Compensation”
after changing GPIB address of an instrument	“System Configuration”
after changing a channel assignment	“System Configuration”
	“Compensation”
after repair of oscilloscope	“Compensation”
after calibration of oscilloscope	“Compensation”
after replacing oscilloscope	“Compensation”
after replacing bias-T	“Drain Cable Replacement”
after replacing measurement cables to drain	“Drain Cable Replacement”

## Starting System Setup

1. Prepare the following accessories additionally to the system accessories and the system components.
  - Triaxial cable, 2 ea.
  - BNC cable, 1 ea.
  - BNC(m)-Triax(f) adapter, floating guard, 1 ea.
  - BNC(m)-(f)-(f) adapter, 1 ea.
  - GNDU-chassis adapter, 1 ea.
2. If the Start EasyEXPERT window is opened, close it first.
3. Launch Agilent Connection Expert on the system controller. See Figure 3-1.
4. Note the VISA interface ID. It must be set to the system setup configuration (see Visa Name in Table 3-2).
5. If you use the B1500A's internal system controller, note the USB address. It must be set to the system setup configuration (see USB Address in Table 3-2).

Figure 3-1

Agilent Connection Expert

6. If you use the external system controller, perform the following procedure.
  - a. Note the SICL interface ID. It must be set to the Desktop EasyEXPERT Execution Mode dialog box.
  - b. Launch Agilent Connection Expert installed in the B1500A.
  - c. Set the System Controller to *No*.
  - d. Set the GPIB address to the appropriate value, non 21 value.
  - e. Close Agilent Connection Expert, and reboot the B1500A. After that, leave the Start EasyEXPERT window on the B1500A screen.
  - f. Connect the GPIB cable between the B1500A and the system controller.
7. Close Agilent Connection Expert on the system controller.
8. Launch EasyEXPERT or Desktop EasyEXPERT.
9. If you use Desktop EasyEXPERT, open the Execution Mode dialog box and set the execution mode as follows. The dialog box can be opened by selecting the Option > Execution Mode menu.

**Execution mode**      Online

**SICL interface ID**      the value noted in the step 6-a shown above

**GPIB address**      the value set in the step 6-d shown above

10. Click the Start EasyEXPERT button.
11. Open your workspace or create a new workspace.
12. Display the Application Test tab screen.
13. Open the PLSDIV Setup test definition.
14. Set the DcSwitch field to *No* for the pulsed IV test system.

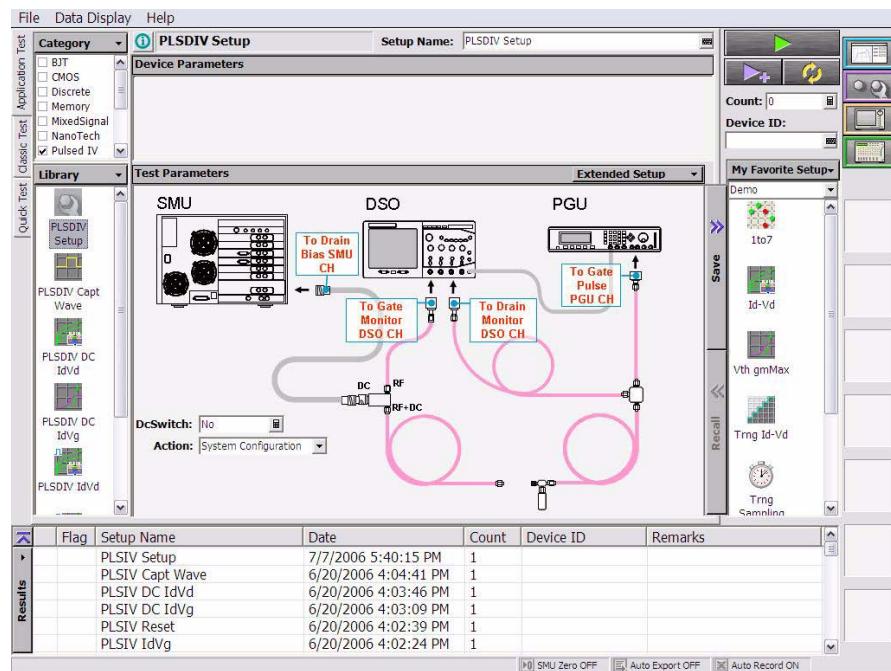

Set the DcSwitch field to *Yes* for the DC + pulsed IV test system.

## Performing System Setup and Compensation

### Starting System Setup

Figure 3-2

### PLSDIV Setup Test Definition

## System Configuration

Perform this action after completing the system installation or after changing a channel assignment or after changing the GPIB address of the system components.

1. Open the PLSDIV Setup test definition on the EasyEXPERT application test environment.
2. Set the System Configuration to the Actions field.
3. Click the Single button at the upper right corner of the EasyEXPERT screen. The Configuration window is displayed.
4. Set the channel assignment, GPIB address of instruments, Visa Name of the GPIB interface by using the Configuration window. See Table 3-2.

**Table 3-2**

**System Configuration Parameters**

Group	Field name	Description
CH Assignment	Gate PGU CH	Channel number used to force the gate pulse
	Gate Monitor DSO CH	Channel number used to monitor the gate voltage
	Drain Monitor DSO CH	Channel number used to monitor the drain voltage
	Drain Bias SMU CH	Channel number of the SMU used to force the drain voltage
GPIB Address	PGU, DSO, and SMU	GPIB address of PGU (pulse generator), DSO (oscilloscope), and SMU (source monitor unit).
Visa Name		Visa name of the GPIB interface
Controller	B1500 Internal	Check this box to use the B1500A internal system controller.
SMU	B1500 Internal	Check this box to use the B1500A internal SMUs.
	USB Address	B1500A internal USB address

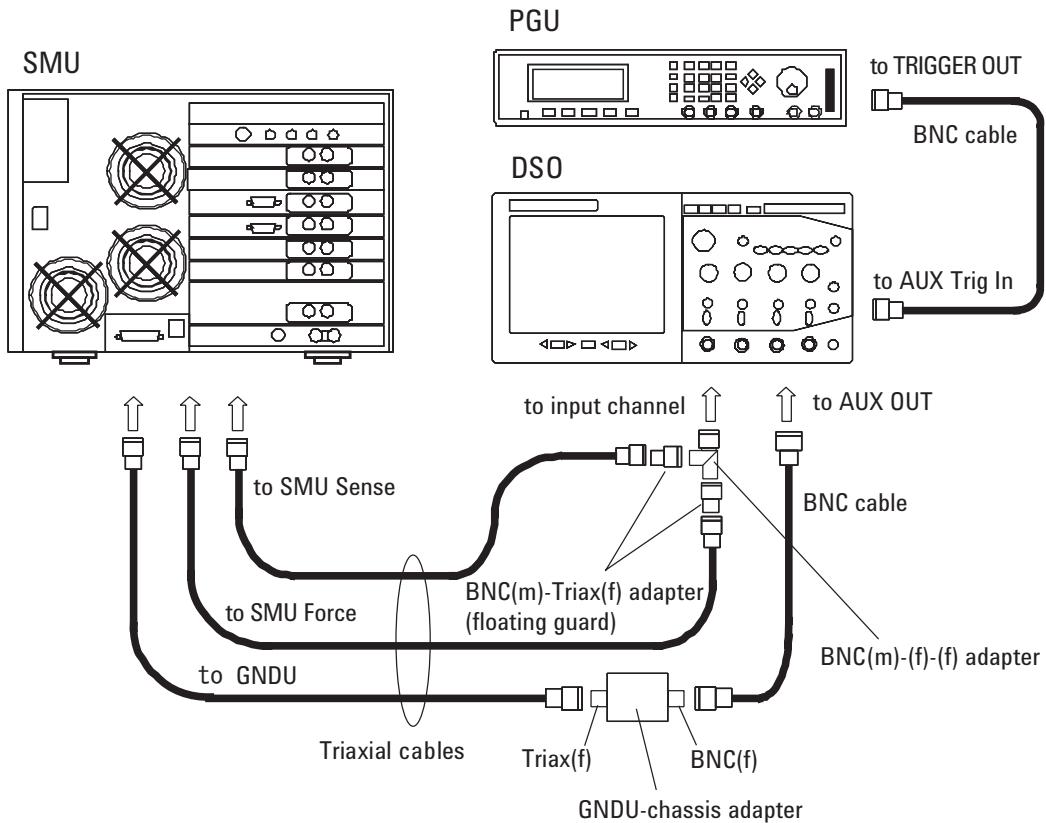

About the GPIB address setup, see the manual of each instrument.

## Compensation

Perform this action after completing system installation or changing a channel assignment or after replacement, repair, or calibration of oscilloscope.

**Figure 3-3**

**Oscilloscope Compensation Factor Measurement Setup**

1. Open the PLSDIV Setup test definition on the EasyEXPERT application test environment.
2. Set the Compensation to the Actions field.
3. Click the Single button at the upper right corner of the EasyEXPERT screen. Connection diagram window is displayed. See Figure 3-3.

4. Obtain the oscilloscope DC monitor compensation factors as shown below.
  - a. Confirm the setup. Or connect the cables as shown in the connection diagram window. Then leave the oscilloscope input channels open. The triaxial cables are connected later.
  - b. Click OK on the connection diagram window to continue the setup. This opens another connection diagram window.

Click Cancel to cancel the setup.
  - c. Connect the triaxial cables to the oscilloscope input channel used for the gate monitor. Then use two BNC(m)-Triax(f) adapters and a BNC(m)-(f)-(f) adapter.
  - d. Click OK on the connection diagram window to continue the setup. This opens a message box to confirm the execution of measurement.

Click Cancel to cancel the setup.
  - e. Click OK on the message box to continue the setup. This starts the compensation data measurement and opens a dialog box to show the measurement status. And after the measurement, another connection diagram window is displayed.

Click Cancel to cancel the setup.
  - f. Disconnect the triaxial cables from the oscilloscope input channel, and connect them to the oscilloscope input channel used for the drain monitor.
  - g. Click OK on the connection diagram window to continue the setup. This opens a message box to confirm the execution of measurement.

Click Cancel to cancel the setup.
  - h. Click OK on the message box to continue the setup. This starts the compensation data measurement and opens a dialog box to show the measurement status. After the measurement, the connection diagram window is displayed. See Figure 3-3.

Click Cancel to cancel the setup.

## Performing System Setup and Compensation

### Compensation

5. Measure the oscilloscope DC input impedance as shown below.
  - a. Confirm the setup. Or connect the cables as shown in the connection diagram window. Then leave the oscilloscope input channels open. The triaxial cables are connected later.
  - b. Click OK on the connection diagram window to continue the setup. This opens another connection diagram window.

Click Cancel to cancel the setup.
  - c. Connect the triaxial cables to the oscilloscope input channel used for the gate monitor. Then use two BNC(m)-Triax(f) adapters and a BNC(m)-(f)-(f) adapter.
  - d. Click OK on the connection diagram window to continue the setup. This opens a message box to confirm the execution of measurement.

Click Cancel to cancel the setup.
  - e. Click OK on the message box to continue the setup. This starts the compensation data measurement and opens a dialog box to show the measurement status. And after the measurement, another connection diagram window is displayed.

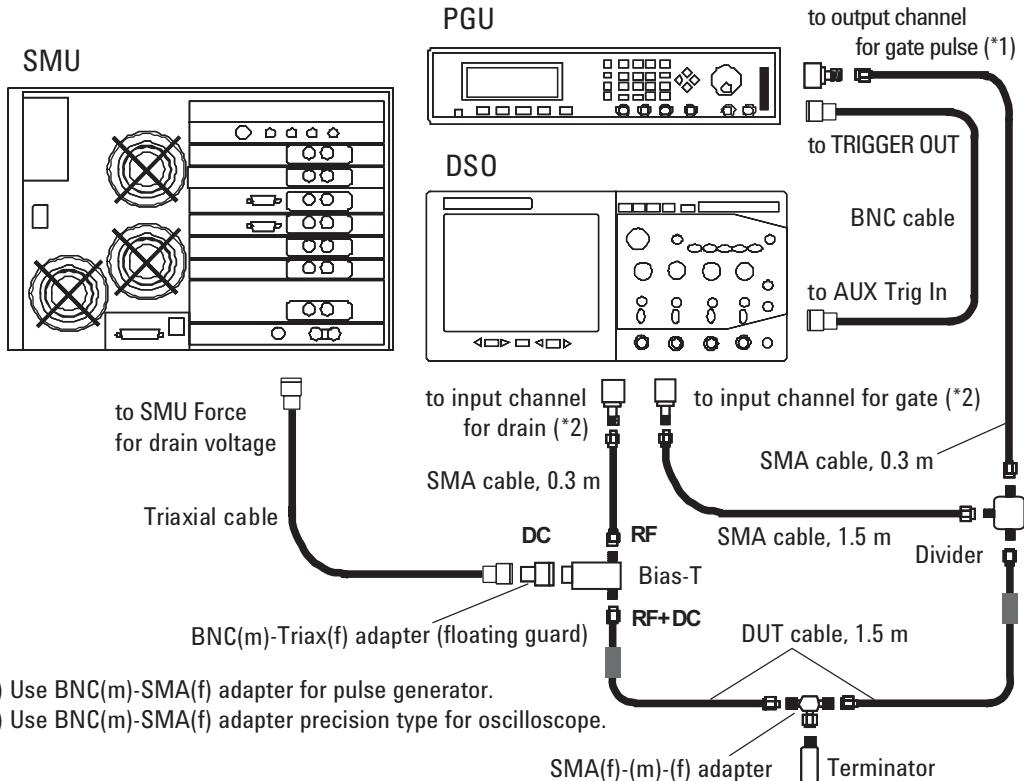

Click Cancel to cancel the setup.
  - f. Disconnect the triaxial cables from the oscilloscope input channel, and connect them to the oscilloscope input channel used for the drain monitor.
  - g. Click OK on the connection diagram window to continue the setup. This opens a message box to confirm the execution of measurement.

Click Cancel to cancel the setup.
  - h. Click OK on the message box to continue the setup. This starts the compensation data measurement and opens a dialog box to show the measurement status. After the measurement, the connection diagram window is displayed. See Figure 3-4 for the pulsed IV test system or Figure 3-5 for the DC + pulsed IV test system.

Click Cancel to cancel the setup.

6. Measure the delay time between the gate pulse and the drain pulse as shown below.
  - a. Confirm the setup. Or connect the cables as shown in the connection diagram window. Then disconnect the SMA(m)-(m) adapter from the SMA(f)-(m)-(f) adapter at the end of the gate connection cable and connect the drain connection cable to the SMA(f)-(m)-(f) adapter.
  - b. Click OK on the connection diagram window to continue the setup. This opens a message box to confirm the execution of delay time measurement. Click Cancel to cancel the setup.
  - c. Click OK on the message box to perform the delay time measurement. This starts the measurement and opens a dialog box to show the measurement status. After the measurement, the Compensation action is completed. Click Cancel to cancel the setup.

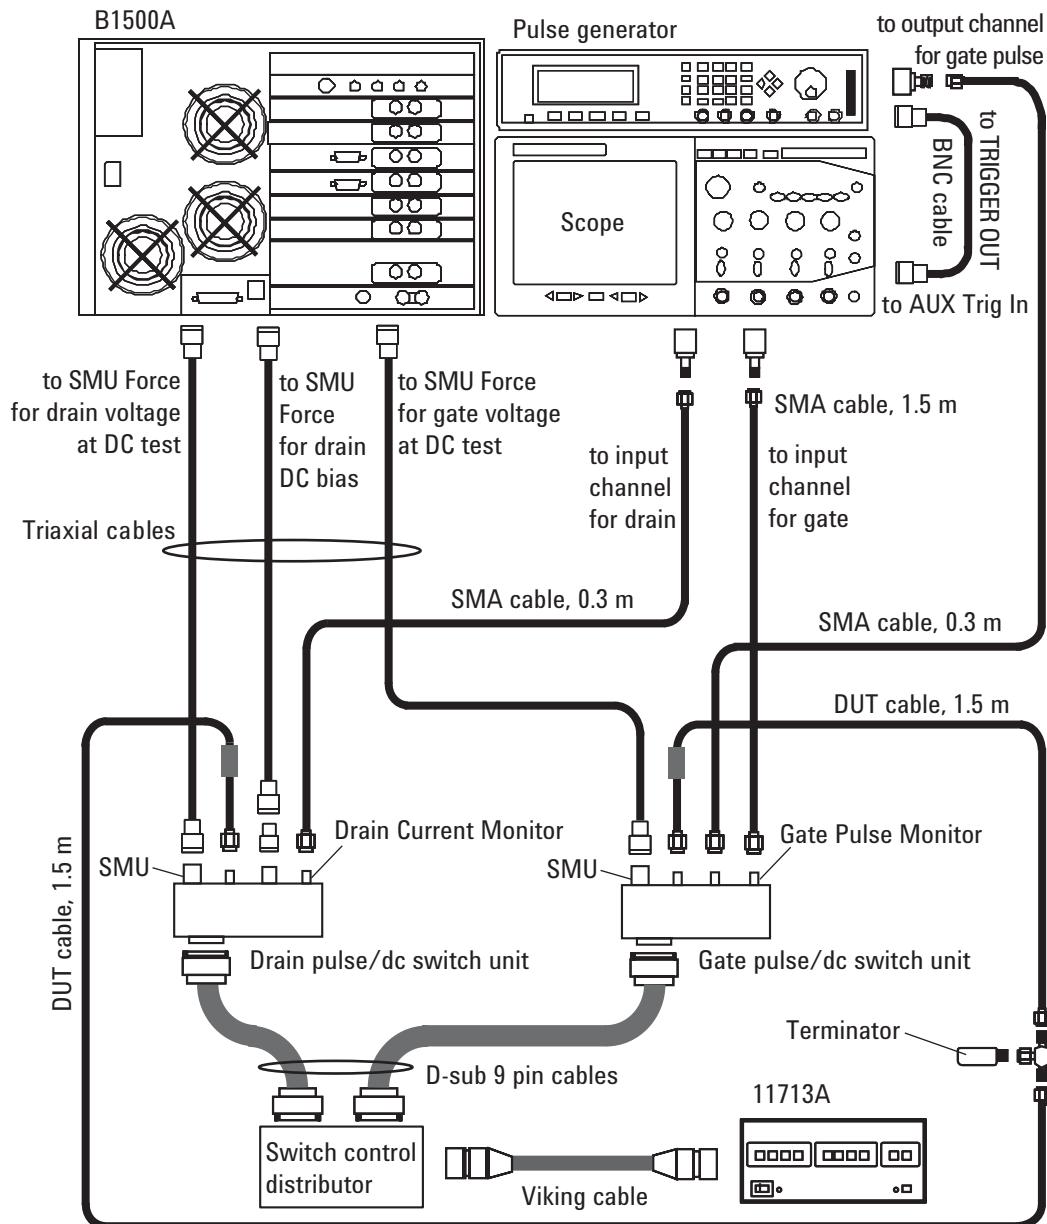

**Figure 3-4** Gate to Drain Delay Time Measurement Setup for Pulse IV Test System

**Performing System Setup and Compensation**  
**Compensation**

**Figure 3-5**

**Gate to Drain Delay Time Measurement Setup for DC + Pulse IV Test System**

## Drain Cable Replacement

Perform this action after replacing the bias-T or cables used for the drain terminal measurement path.

1. Open the PLSDIV Setup test definition on the EasyEXPERT application test environment.
2. Set the Drain Cable Replacement to the Actions field.
3. Click the Single button at the upper right corner of the EasyEXPERT screen. The connection diagram window is displayed. See Figure 3-4 for the pulsed IV test system or Figure 3-5 for the DC + pulsed IV test system.

Performing System Setup and Compensation  
Drain Cable Replacement

## Performing Measurement

---

## Performing Measurement

This chapter describes the measurement examples by using the pulsed IV test system, and consists of the following sections.

- “Theory of Measurement”
- “Before Measurement”
- “Pulse Waveform Measurement”
- “Pulsed Id-Vd Measurement”
- “Pulsed Id-Vg Measurement”
- “Performing System Reset”

---

### NOTE

#### Preparing Measurement Environment

Complete the installation described in Chapter 2, “Installation.”

Complete the system setup and the compensation described in Chapter 3, “Performing System Setup and Compensation.”

Turn on the instruments, and turn on the system controller if it is used.

Launch EasyEXPERT or Desktop EasyEXPERT.

---

### NOTE

#### If You Use Desktop EasyEXPERT

Set the B1500A GPIB configuration by using the Agilent Connection Expert installed in the B1500A as follows. And reboot the B1500A

- System Controller: *No*
- GPIB address: appropriate value, non 21

Leave the Start EasyEXPERT window on the B1500A screen.

Connect the GPIB cable between the B1500A and the system controller.

Set the Desktop EasyEXPERT execution mode to Online, and specify the SICL interface ID of the system controller and the GPIB address of the B1500A.

To confirm the SICL interface ID of the system controller, terminate Desktop EasyEXPERT and use Agilent Connection Expert on the system controller.

---

## Theory of Measurement

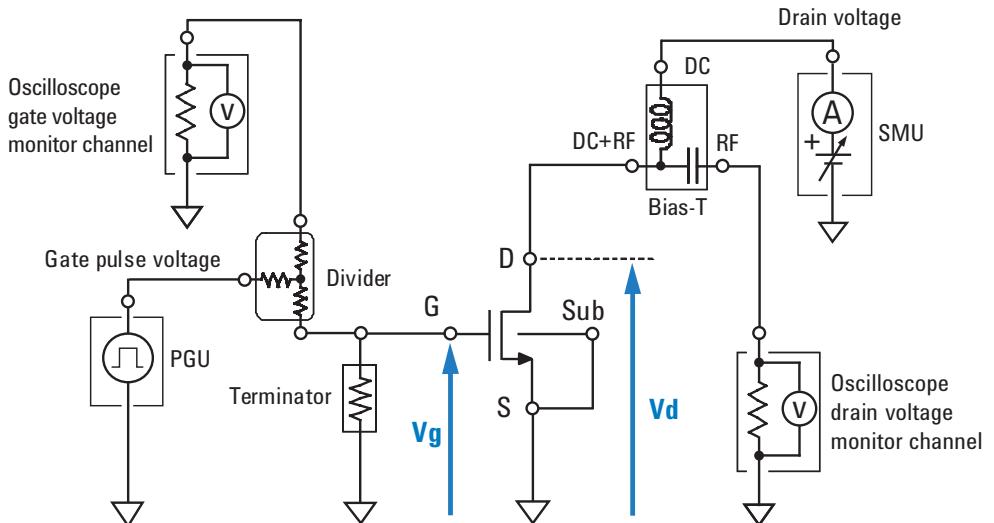

Figure 4-1 shows the pulsed IV measurement circuit diagram.

SMU (source monitor unit) forces DC voltage to the drain terminal through bias-T (bias network). And PGU (pulse generator) forces pulse voltage to the gate terminal through divider. Then the oscilloscope monitors the gate pulse through the divider. Also the oscilloscope monitors the drain pulse through the bias-T by using the another monitor channel.

The  $50 \Omega$  terminator must be connected as shown in Figure 4-1 to keep the impedance matching of the instrument's input/output terminals and to avoid the reflection at the gate terminal.

**Figure 4-1**

**Pulsed IV Measurement Circuit Diagram**

Simplified measurement circuit is shown in Figure 4-2.

$V_{pgu-out}$  is the PGU output voltage (pulse peak value). And  $V_{dSet}$  is the SMU output voltage. By applying  $V_{dSet}$  and  $V_{pgu-out}$  to the MOSFET, the oscilloscope's drain voltage monitor channel will capture the voltage drop caused by the shunt resistor  $Z$  (impedance of the drain voltage measurement path). And the drain current  $I_d$  can be given by the following formula. Where,  $V_{dInt}$  is the peak value of the negative pulse.

$$I_d = (V_{dSet} - V_{dInt}) / Z$$

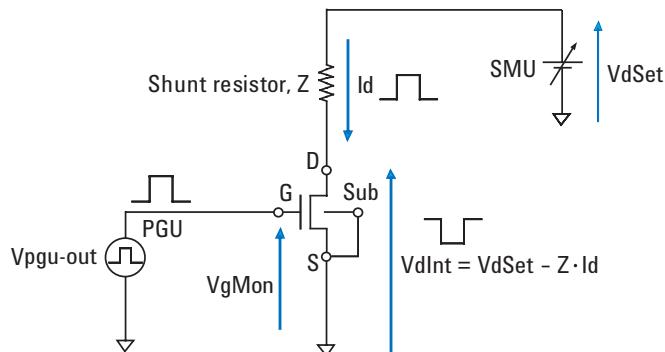

## Performing Measurement

### Theory of Measurement

The test system repeats this drain current measurement for all of the specified sweep voltage and gets the data to plot on the data display graph.

**Figure 4-2**

### Simplified Measurement Circuit

$VgMon$ ,  $VdInt$ , and  $Id$  values will be the value obtained at the specific timing of the pulse peak. It is the data extraction timing shown in Figure 5-9.

### Terminal Voltage and Source Output Value

In Figure 4-2,  $VgMon$  and  $VdInt$  are the device terminal voltage.  $Vpgu\text{-out}$  and  $VdSet$  are the source output values. Moreover the values are not same because of the several elements in the measurement path, shunt resistor, residual resistor, and so on. Therefore, it is required to select which value should be the target voltage before performing the measurement. To select it, use the drain voltage automatic adjustment function and the gate voltage automatic adjustment function in the pulsed IV test definitions.

If the drain voltage automatic adjustment function is ON,  $VdInt$  will be close to the target voltage  $Vd$ . And if the function is OFF,  $VdSet$  will be close to  $Vd$ .

If the gate voltage automatic adjustment function is ON,  $VgMon$  will be close to the target voltage  $Vg$ . And if the function is OFF,  $Vpgu\text{-out}$  will be close to  $Vg$ .

The target voltage  $Vd$  is calculated from the Test Parameters  $VdStart$ ,  $VdStop$ , and  $VdStep$  in the pulsed IV test definition. And  $Vg$  is calculated from  $VgStart$ ,  $VgStop$ , and  $VgStep$ .

## Before Measurement

Confirm or perform the followings before starting measurement.

### 1. Performing system reset

Perform system reset. See “Performing System Reset” on page 4-12.

### 2. Deciding device delay time

Connect the device under test (MOSFET) to the pulsed IV test system as shown in “RF Probes” on page 2-4, and measure the delay time between the gate monitor pulse and the drain monitor pulse by using the oscilloscope. Then decide the device delay time shown in Figure 4-3.

When performing the pulsed IV measurement, enter the decided value to the DeviceDelay field of the Device Parameters on the pulsed IV test definition setup screen.

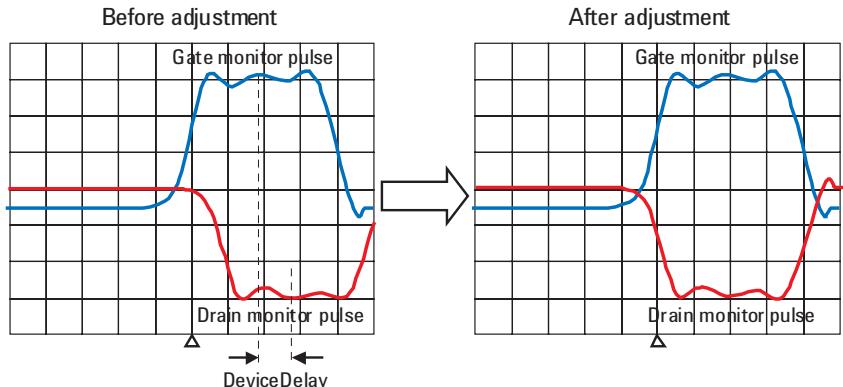

### 3. Setting GPIB address of the switch controller, only for the DC + pulsed IV test system (B1542A with the option B1542A-024)

Set the GPIB address of the Agilent 11713A switch controller to the value defined in the pulsed IV test definition. The value is initially defined as Address=10.

When performing the pulsed IV measurement, set Yes to the DcSwitch field of the Extended Test Parameters. This can be set on the Extended Setup dialog box opened by clicking the Extended Setup button on the pulsed IV test definition setup screen.

Figure 4-3

Device Delay Time

## Performing Measurement

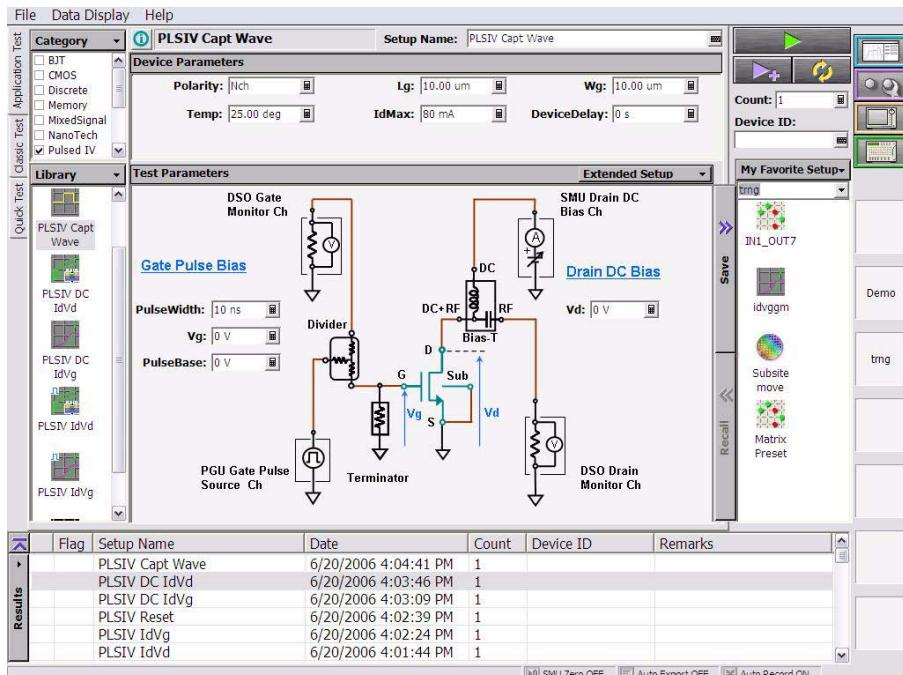

### Pulse Waveform Measurement

# Pulse Waveform Measurement

Pulse waveform measurement can be performed as follows.

Figure 4-4

### PLSDIV Capt Wave Test Definition

1. Open the PLSDIV Capt Wave test definition on the EasyEXPERT application test environment.
2. Set the measurement condition to the Device Parameters, Test Parameters, and Extended Test Parameters. For the description of the entry fields, see “PLSDIV Capt Wave” on page 5-4.
3. Connect the device under test (MOSFET) as shown in “RF Probes” on page 2-4.
4. Click the Single button at the upper right corner of the EasyEXPERT screen. Pulse waveform measurement is started.

Figure 4-5 is the measurement result example when DrainMonMode=Voltage, and Figure 4-6 is the example when DrainMonMode=Current.

Figure 4-5

Voltage Pulse Measurement Example

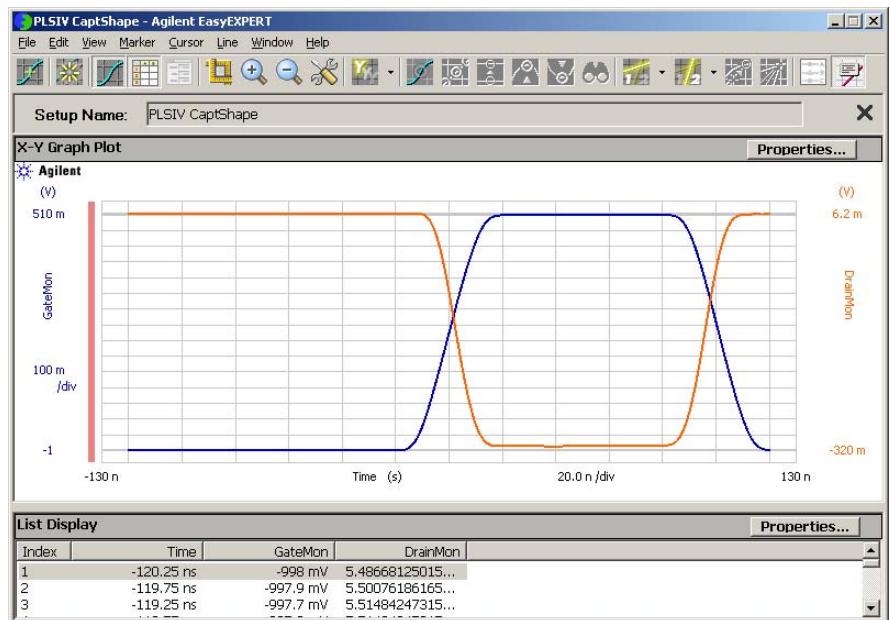

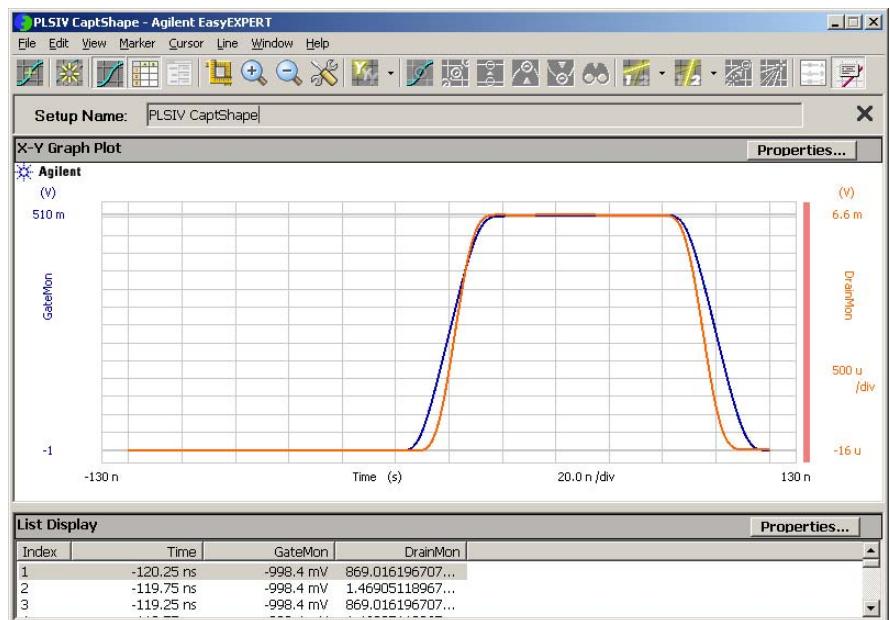

Figure 4-6

Current Pulse Measurement Example

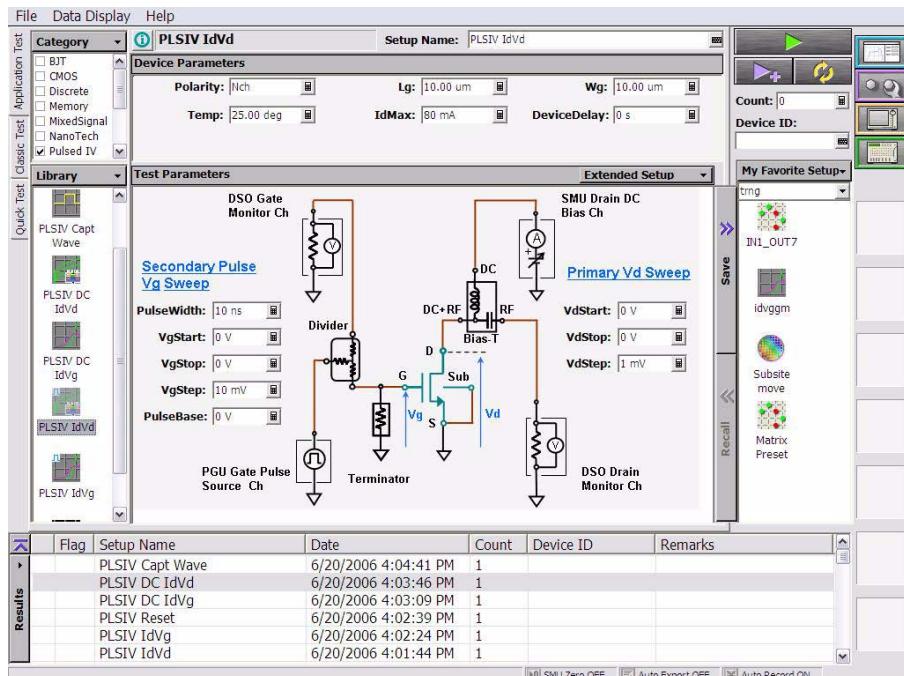

## Pulsed Id-Vd Measurement

Pulsed Id-Vd measurement can be performed as follows.

**Figure 4-7**

### PLSDIV IdVd Test Definition

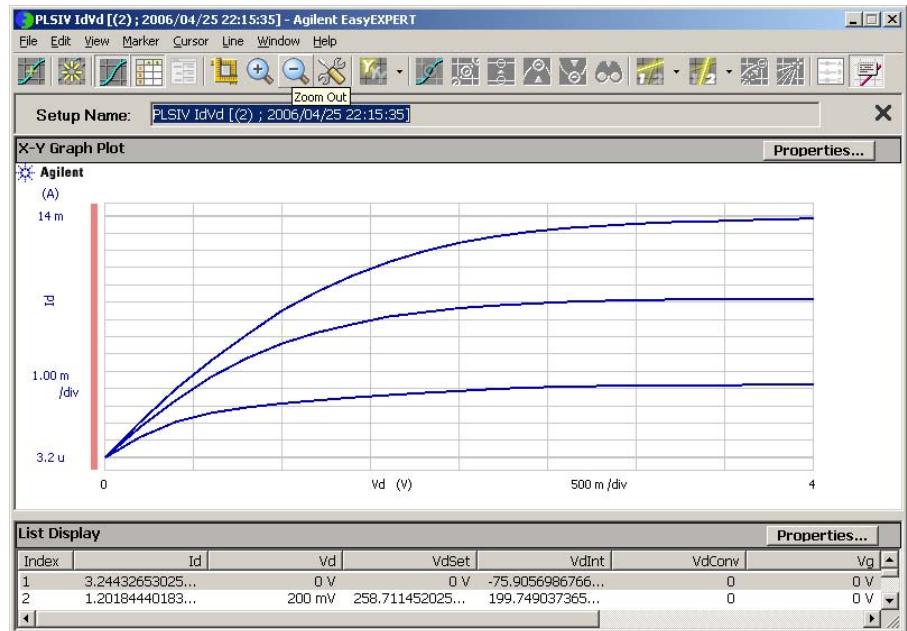

1. Open the PLSDIV IdVd test definition on the EasyEXPERT application test environment.
2. Set the measurement condition to the Device Parameters, Test Parameters, and Extended Test Parameters. For the description of the entry fields, see “PLSDIV IdVd” on page 5-11.
3. Connect the device under test (MOSFET) as shown in “RF Probes” on page 2-4.
4. Click the Single button at the upper right corner of the EasyEXPERT screen. Pulsed Id-Vd measurement is started.

Figure 4-8 shows the pulsed Id-Vd measurement result example.

Figure 4-8

Pulsed Id-Vd Measurement Example

## Performing Measurement

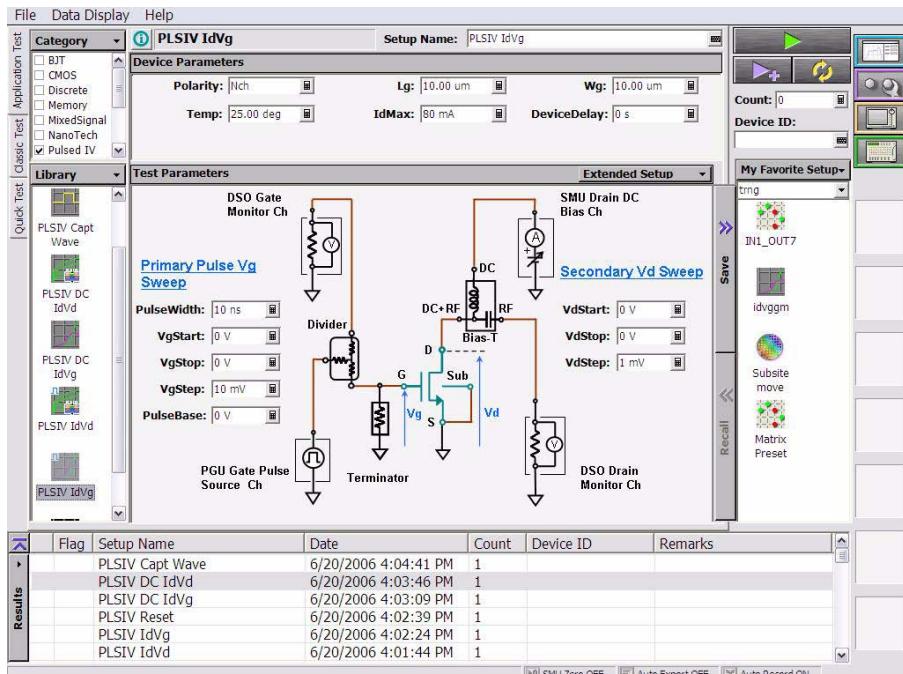

### Pulsed Id-Vg Measurement

## Pulsed Id-Vg Measurement

Pulsed Id-Vg measurement can be performed as follows.

**Figure 4-9**

### PLSDIV IdVg Test Definition

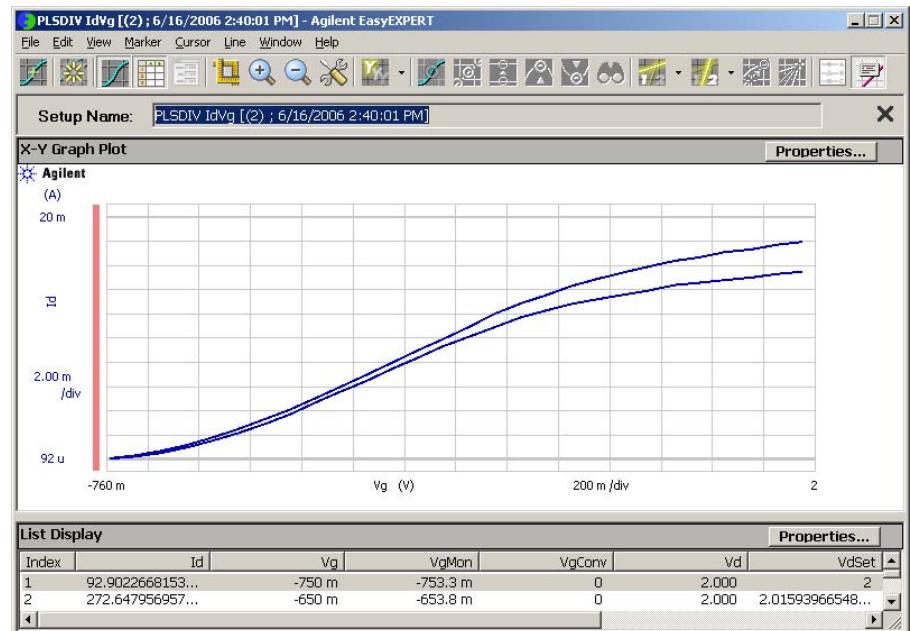

1. Open the PLSDIV IdVg test definition on the EasyEXPERT application test environment.
2. Set the measurement condition to the Device Parameters, Test Parameters, and Extended Test Parameters. For the description of the entry fields, see “PLSDIV IdVg” on page 5-15.
3. Connect the device under test (MOSFET) as shown in “RF Probes” on page 2-4.
4. Click the Single button at the upper right corner of the EasyEXPERT screen. Pulsed Id-Vg measurement is started.

Figure 4-10 shows the pulsed Id-Vg measurement result example.

Figure 4-10

Pulsed Id-Vg Measurement Example

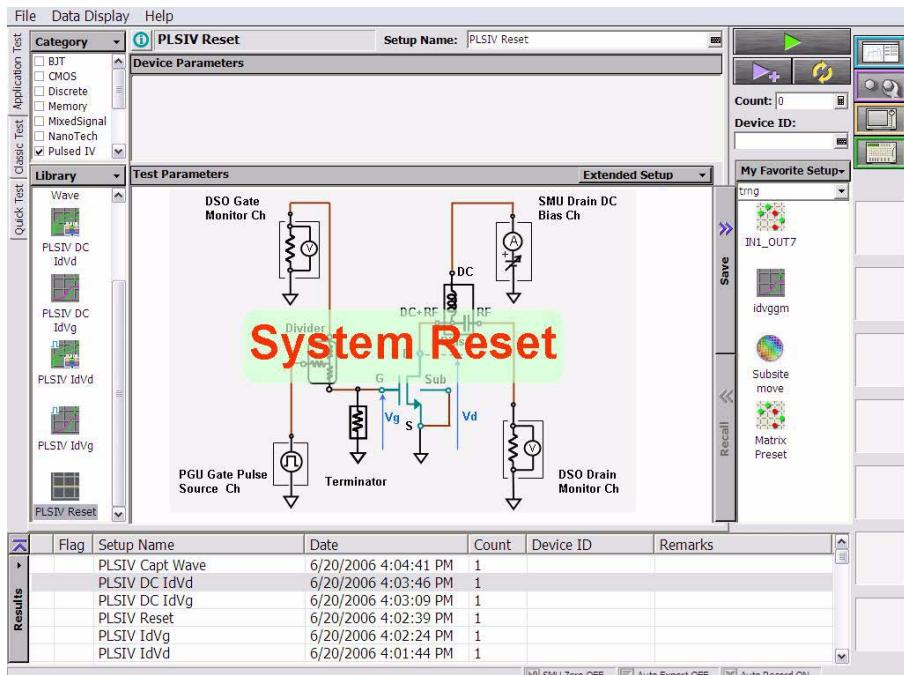

## Performing System Reset

This test definition resets the pulsed IV test system. Execute this definition when the test system is in any abnormal condition.

1. Open the PLSDIV Reset test definition on the EasyEXPERT application test environment.
2. Click the Single button at the upper right corner of the EasyEXPERT screen. The system reset is performed.

Figure 4-11

### PLSDIV Reset Test Definition

---

---

**5**

## PLSDIV Test Definitions

---

## PLSDIV Test Definitions

This chapter describes the pulsed IV application test library (PLSDIV test definitions) that can be opened and executed in the Agilent EasyEXPERT Application Test environment. The library contains the test definitions shown in Table 5-1.

Each section in this chapter contains detailed descriptions of all PLSDIV test definitions. The definitions are listed in alphabetical order. Each entry:

1. Gives one definition
2. Shows the measurement result example
3. Describes the setup parameters
4. Describes the test output parameters
5. Explains any additional information

---

### NOTE

The PLSDIV test definitions are stored in the following folder.

C:\Program Files\Agilent\PLSDIV\TestDefinitions

To use the PLSDIV test definitions, import the definitions to your workspace. The test definitions can be imported as shown below.

1. Display the Application Test tab screen.
2. Click the Library button, and select Import Test Definition... to open the Test Definition Import dialog box.
3. Import the definitions by using the Test Definition Import dialog box.

Note that the PLSDIV test definitions need the pulsed IV .exe library (Plsdiv commands, PLSDIV TIS). See Chapter 5, “PLSDIV Test Definitions.”

---

**Table 5-1****Summary of PLSDIV Application Definitions**

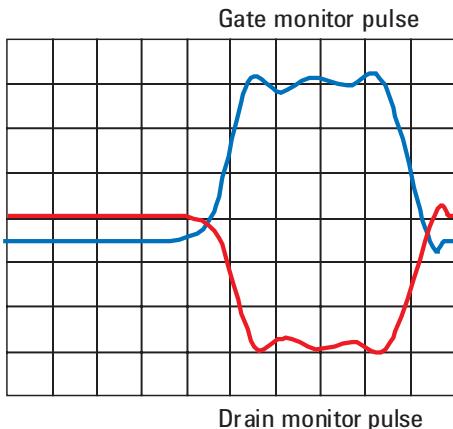

<b>Algorithm Name</b>	<b>Description</b>
PLSDIV Reset	Initializes the pulsed IV test system.
PLSDIV IdVd	Controls SMU (source monitor unit) to force the drain voltage, controls PGU (pulse generator) to force the gate voltage pulse, controls the oscilloscope to monitor the gate voltage and the drain voltage, calculates the drain current, and displays the Id-Vd characteristics.
PLSDIV IdVg	Controls SMU to force the drain voltage, controls PGU to force the gate voltage pulse, controls the oscilloscope to monitor the gate voltage and the drain voltage, calculates the drain current, and displays the Id-Vg characteristics.
PLSDIV DC IdVd	For the test system with the option B1542A-024. Controls SMUs to force the drain voltage and the gate voltage, measures the drain current, and displays the Id-Vd characteristics.
PLSDIV DC IdVg	For the test system with the option B1542A-024. Controls SMUs to force the drain voltage and the gate voltage and measure the drain current, and displays the Id-Vg characteristics.
PLSDIV Capt Wave	Controls SMU to force the drain voltage, controls PGU to force the gate voltage pulse, controls the oscilloscope to monitor the gate voltage pulse waveform and the drain voltage pulse waveform, calculates the drain current pulse waveform if the drain monitor mode is current, and displays the gate voltage pulse waveform and the drain voltage or current pulse waveform.
PLSDIV Setup	This test definition must be executed after installing the pulsed IV test system, changing channel assignment or GPIB address, or replacing oscilloscope, cable, or bias-T.

## PLSDIV Capt Wave

This test definition controls SMU (source monitor unit) to force the drain voltage, controls PGU (pulse generator) to force the gate voltage pulse, controls the oscilloscope to monitor the gate voltage pulse waveform and the drain voltage pulse waveform, calculates the drain current pulse waveform if the drain monitor mode is current, and displays the gate voltage pulse waveform and the drain voltage or current pulse waveform.

Figure 5-1

Pulse Waveform Measurement Result Example

**Device Parameters** The following parameters are available to set the test condition.

<b>Polarity</b>	Polarity of source output. Nch (force the specified value) or Pch (force the negative specified value). See “Parameters” on page 5-21.
<b>Lg</b>	Gate length, in m. $\geq 1$ nm, 4 digits or 1 nm resolution.
<b>Wg</b>	Gate width, in m. $\geq 1$ nm, 4 digits or 1 nm resolution.
<b>Temp</b>	Temperature, in degree. 4 digits or 0.001 degree resolution.
<b>IdMax</b>	Maximum drain current measurement range, in A. 0 to 80 mA, 4 digits or 1 $\mu$ A resolution.
<b>DeviceDelay</b>	Delay time caused by device under test, in s. -1 $\mu$ s to 1 $\mu$ s, 4 digits or 100 ps resolution. See “Parameters” on page 5-21.

**Test Parameters**

The following parameters are available to set the source output.

<b>PulseWidth</b>	Pulse width of PGU output pulse. 10 ns to 1 $\mu$ s, 4 digits or 1 ns resolution. See “Parameters” on page 5-21.
<b>Vg</b>	Voltage applied to the gate terminal. PGU output. -4.5 V to 4.5 V, 4 digits or 10 mV resolution.
<b>PulseBase</b>	PGU output baseline voltage. -4.5 V to 4.5 V, 4 digits or 10 mV resolution. See “Parameters” on page 5-21. Pulse amplitude must be > 55 mV and < 4.5 V. To use the gate voltage automatic adjustment function, set the pulse amplitude to < 4.0 V.
<b>Vd</b>	Voltage applied to the drain terminal. SMU output. -10 V to 10 V, 5 digits or 1 mV resolution.

**Extended Test Parameters**

The following parameters are available to set the test condition. For more details, see “Parameters” on page 5-21.

<b>TransTime</b>	Pulse leading/trailing edge transition time, in s. 2 ns to 500 ns, 3 digits or 1 ns resolution.
<b>MeasTime</b>	Measurement timing at the pulse top. 0 to 1, 3 digits or 0.01 resolution.
<b>SmplNum</b>	Oscilloscope sampling number. 16 to 262144, 6 digits or 1 step.
<b>SmthNum</b>	Oscilloscope smoothing number. 3 to 4001, 4 digits or 1 step.
<b>SmthStat</b>	Status of the oscilloscope smoothing. Enable or Disable.
<b>AvgNum</b>	Oscilloscope averaging number. 1 to 4095, 4 digits or 1 step.
<b>VdAdjust</b>	Status of the drain voltage automatic adjustment. Enable or Disable.
<b>VgAdjust</b>	Status of the gate voltage automatic adjustment. Enable or Disable.
<b>DcSwitch</b>	Availability of the pulse/dc switch units. Yes (exists) or No (none).
<b>ConnectChk</b>	Status of the connection check at initialization. Enable or Disable.
<b>GateZero</b>	Status of the gate monitor channel zero measurement at initialization. Enable or Disable.
<b>RangingMode</b>	Measurement ranging mode. Auto or Fixed.
<b>DrainMonMode</b>	Drain monitor mode. Voltage or Current.

## [PLSDIV Test Definitions](#)

### [PLSDIV Capt Wave](#)

#### **Test Output**

The following output parameters are displayed after the test.

**Time** Oscilloscope time data, in s.

**GateMon** Oscilloscope gate voltage waveform data, in V.

**DrainMon** Oscilloscope drain voltage waveform data, in V, if DrainMonMode=Voltage.

Drain current waveform, in A, if DrainMonMode=Current.

The drain voltage waveform data will be the data after compensation.

The drain current waveform data will be the data given by converting the drain voltage waveform data.

## PLSDIV DC IdVd

This test definition controls SMUs to force the drain voltage and the gate voltage, measures the drain current, and displays the Id-Vd characteristics.

**Device Parameters** The following parameters are available to set the test condition.

<b>Polarity</b>	Polarity of source output. Nch (force the specified value) or Pch (force the negative specified value).
<b>Lg</b>	Gate length, in m. $\geq 1 \text{ nm}$ , 4 digits or 1 nm resolution.
<b>Wg</b>	Gate width, in m. $\geq 1 \text{ nm}$ , 4 digits or 1 nm resolution.
<b>Temp</b>	Temperature, in degree. 4 digits or 0.001 degree resolution.
<b>IdMax</b>	Maximum drain current measurement range, in A. 0 to 80 mA, 4 digits or 1 $\mu\text{A}$ resolution.

**Test Parameters** The following parameters are available to set the source output.

<b>CableR</b>	Residual resistance of the gate measurement path from SMU to terminator. $\geq 0 \text{ m}\Omega$ , 4 digits or 1 $\text{m}\Omega$ resolution.
<b>TermR</b>	Resistance of terminator. $\geq 1 \text{ m}\Omega$ , 4 digits or 1 $\text{m}\Omega$ resolution. TermR=No applies 1E+30 $\Omega$ .
<b>Gate</b>	SMU connected to the gate terminal.
<b>VgStart</b>	Secondary sweep start voltage for the gate terminal. 0 to 5 V, 3 digits or 10 mV resolution.
<b>VgStop</b>	Secondary sweep stop voltage for the gate terminal. 0 to 5 V, 3 digits or 10 mV resolution.
<b>VgStep</b>	Secondary sweep step voltage for the gate terminal. 0 to 1 V, 3 digits or 10 mV resolution.
<b>Drain</b>	SMU connected to the drain terminal.
<b>VdStart</b>	Primary sweep start voltage for the drain terminal. 0 to 5 V, 3 digits or 10 mV resolution.
<b>VdStop</b>	Primary sweep stop voltage for the drain terminal. 0 to 5 V, 3 digits or 10 mV resolution.
<b>VdStep</b>	Primary sweep step voltage for the drain terminal. 0 to 1 V, 3 digits or 10 mV resolution.

## PLSDIV Test Definitions

### PLSDIV DC IdVd

- VdStart, VdStop, VdStep

The parameters set the primary sweep source used to apply the drain voltage. The number of sweep points is given by the following formula. Then ignore the numbers after the decimal point.

$$\text{Number of sweep points} = (\text{VdStop} - \text{VdStart}) / \text{VdStep} + 1$$

- VgStart, VgStop, VgStep

The parameters set the secondary sweep source used to apply the gate voltage. The number of sweep points is given by the following formula. Then ignore the numbers after the decimal point.

$$\text{Number of sweep points} = (\text{VgStop} - \text{VgStart}) / \text{VgStep} + 1$$

- Gate voltage

To apply the specified voltage (Vg) to the gate terminal, the SMU output voltage (VgSet) will be set to the following value.

$$\text{VgSet} = \text{Vg} * (\text{TermR} + \text{CableR}) / \text{TermR}$$

## Extended Test Parameters

The following parameters are available to set the test condition.

**IgLimit** Gate current compliance, in A. 1 nA to 100 mA, 3 digits or 1 nA resolution. Set the value that covers current to the terminator. For example, the current is 100 mA for TermR=50 Ω with Vg=5 V.

**IntegTime** Integration time. SHORT, MEDIUM, or LONG.

**HoldTime** Hold time, in s. 0 to 655.35. 5 digits or 10 ms resolution.

**DelayTime** Delay time, in s. 0 to 655.35. 5 digits or 100 μs resolution.

**DcSwitch** Availability of the pulse/dc switch units. Yes (exists) or No (none).

## Test Output

The following output parameters are displayed after the test.

**VdSet** Gate voltage, in V. SMU output value.

**Vg** Gate voltage, in V. Target value at the gate terminal.

**Vdrain** Drain voltage, in V. SMU output value.

**Id** Drain current, in A.

**IdPerWg** Drain current per unit gate width, in A/μm.

$$\text{IdPerWg} = \text{Id} / \text{Wg}$$

## PLSDIV DC IdVg

This test definition controls SMUs to force the drain voltage and the gate voltage, measures the drain current, and displays the Id-Vg characteristics.

**Device Parameters** The following parameters are available to set the test condition.

<b>Polarity</b>	Polarity of source output. Nch (force the specified value) or Pch (force the negative specified value).
<b>Lg</b>	Gate length, in m. $\geq 1 \text{ nm}$ , 4 digits or 1 nm resolution.
<b>Wg</b>	Gate width, in m. $\geq 1 \text{ nm}$ , 4 digits or 1 nm resolution.
<b>Temp</b>	Temperature, in degree. 4 digits or 0.001 degree resolution.
<b>IdMax</b>	Maximum drain current measurement range, in A. 0 to 80 mA, 4 digits or 1 $\mu\text{A}$ resolution.

**Test Parameters** The following parameters are available to set the source output.

<b>CableR</b>	Residual resistance of the gate measurement path from SMU to terminator. $\geq 0 \text{ m}\Omega$ , 4 digits or 1 $\text{m}\Omega$ resolution.
<b>TermR</b>	Resistance of terminator. $\geq 1 \text{ m}\Omega$ , 4 digits or 1 $\text{m}\Omega$ resolution. TermR=No applies 1E+30 $\Omega$ .
<b>Gate</b>	SMU connected to the gate terminal.
<b>VgStart</b>	Primary sweep start voltage for the gate terminal. 0 to 5 V, 3 digits or 10 mV resolution.
<b>VgStop</b>	Primary sweep stop voltage for the gate terminal. 0 to 5 V, 3 digits or 10 mV resolution.
<b>VgStep</b>	Primary sweep step voltage for the gate terminal. 0 to 1 V, 3 digits or 10 mV resolution.
<b>Drain</b>	SMU connected to the drain terminal.
<b>VdStart</b>	Secondary sweep start voltage for the drain terminal. 0 to 5 V, 3 digits or 10 mV resolution.
<b>VdStop</b>	Secondary sweep stop voltage for the drain terminal. 0 to 5 V, 3 digits or 10 mV resolution.
<b>VdStep</b>	Secondary sweep step voltage for the drain terminal. 0 to 1 V, 3 digits or 10 mV resolution.

## PLSDIV Test Definitions

### PLSDIV DC IdVg

- VgStart, VgStop, VgStep

The parameters set the primary sweep source used to apply the gate voltage. The number of sweep points is given by the following formula. Then ignore the numbers after the decimal point.

$$\text{Number of sweep points} = (\text{VgStop} - \text{VgStart}) / \text{VgStep} + 1$$

- VdStart, VdStop, VdStep

The parameters set the secondary sweep source used to apply the drain voltage. The number of sweep points is given by the following formula. Then ignore the numbers after the decimal point.

$$\text{Number of sweep points} = (\text{VdStop} - \text{VdStart}) / \text{VdStep} + 1$$

- Gate voltage

To apply the specified voltage (Vg) to the gate terminal, the SMU output voltage (VgSet) will be set to the following value.

$$\text{VgSet} = \text{Vg} * (\text{TermR} + \text{CableR}) / \text{TermR}$$

## Extended Test Parameters

The following parameters are available to set the test condition.

**IgLimit** Gate current compliance, in A. 1 nA to 100 mA, 3 digits or 1 nA resolution. Set the value that covers current to the terminator. For example, the current is 100 mA for TermR=50 Ω with Vg=5 V.

**IntegTime** Integration time. SHORT, MEDIUM, or LONG.

**HoldTime** Hold time, in s. 0 to 655.35. 5 digits or 10 ms resolution.

**DelayTime** Delay time, in s. 0 to 655.35. 5 digits or 100 μs resolution.

**DcSwitch** Availability of the pulse/dc switch units. Yes (exists) or No (none).

## Test Output

The following output parameters are displayed after the test.

**VdSet** Gate voltage, in V. SMU output value.

**Vg** Target gate voltage, in V.

**Vdrain** Drain voltage, in V. SMU output value.

**Id** Drain current, in A.

**IdPerWg** Drain current per unit gate width, in A/μm.

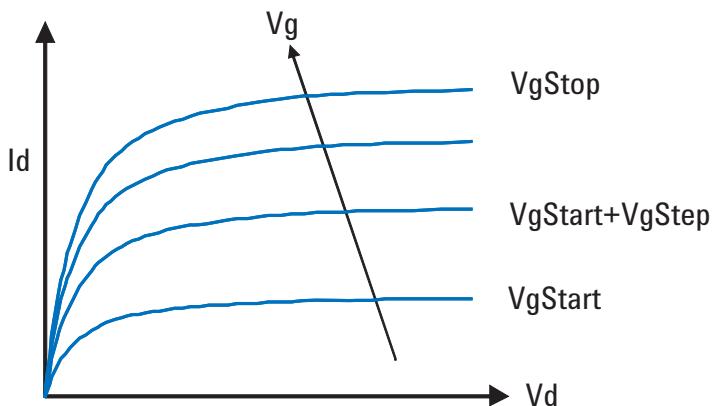

$$\text{IdPerWg} = \text{Id} / \text{Wg}$$

## PLSDIV IdVd

This test definition controls SMU (source monitor unit) to force the drain voltage, controls PGU (pulse generator) to force the gate voltage pulse, controls the oscilloscope to monitor the gate voltage and the drain voltage, calculates the drain current, and displays the Id-Vd characteristics.

Figure 5-2

Pulsed IV Id-Vd Measurement Result Example

**Device Parameters** The following parameters are available to set the test condition.

<b>Polarity</b>	Polarity of source output. Nch (force the specified value) or Pch (force the negative specified value). See “Parameters” on page 5-21.
<b>Lg</b>	Gate length, in m. $\geq 1$ nm, 4 digits or 1 nm resolution.
<b>Wg</b>	Gate width, in m. $\geq 1$ nm, 4 digits or 1 nm resolution.
<b>Temp</b>	Temperature, in degree. 4 digits or 0.001 degree resolution.
<b>IdMax</b>	Maximum drain current measurement range, in A. 0 to 80 mA, 4 digits or 1 $\mu$ A resolution.
<b>DeviceDelay</b>	Delay time caused by device under test, in s. -1 $\mu$ s to 1 $\mu$ s, 4 digits or 100 ps resolution. See “Parameters” on page 5-21.

## PLSDIV Test Definitions

### PLSDIV IdVd

#### Test Parameters

The following parameters are available to set the source output.

<b>PulseWidth</b>	Pulse width of PGU output pulse. 10 ns to 1 $\mu$ s, 4 digits or 1 ns resolution. See “Parameters” on page 5-21.
<b>VgStart</b>	Secondary sweep start voltage for the gate terminal. PGU output. -4.5 V to 4.5 V, 4 digits or 10 mV resolution.
<b>VgStop</b>	Secondary sweep stop voltage for the gate terminal. PGU output. -4.5 V to 4.5 V, 4 digits or 10 mV resolution.
<b>VgStep</b>	Secondary sweep step voltage for the gate terminal. PGU output. 10 mV to 4.5 V, 4 digits or 10 mV resolution.
<b>PulseBase</b>	PGU output baseline voltage. -4.5 V to 4.5 V, 4 digits or 10 mV resolution. See “Parameters” on page 5-21.
<b>VdStart</b>	Primary sweep start voltage for the drain terminal. SMU output. -10 V to 10 V, 5 digits or 1 mV resolution.
<b>VdStop</b>	Primary sweep stop voltage for the drain terminal. SMU output. -10 V to 10 V, 5 digits or 1 mV resolution.
<b>VdStep</b>	Primary sweep step voltage for the drain terminal. SMU output. -10 V to 10 V, 5 digits or 1 mV resolution.

- VdStart, VdStop, VdStep

The parameters set the primary sweep source used to apply the drain voltage. The number of sweep points is given by the following formula. Then ignore the numbers after the decimal point.

$$\text{Number of sweep points} = (\text{VdStop} - \text{VdStart}) / \text{VdStep} + 1$$

- VgStart, VgStop, VgStep

The parameters set the secondary sweep source used to apply the gate voltage. The number of sweep points is given by the following formula. Then ignore the numbers after the decimal point.

$$\text{Number of sweep points} = (\text{VgStop} - \text{VgStart}) / \text{VgStep} + 1$$

Pulse amplitude must be > 55 mV and < 4.5 V. So |VgStart – PulseBase| and |VgStop – PulseBase| must be > 55 mV and < 4.5 V.

To use the gate voltage automatic adjustment function, set the pulse amplitude to < 4.0 V.

**Extended Test Parameters**

The following parameters are available to set the test condition. For more details, see “Parameters” on page 5-21.

<b>TransTime</b>	Pulse leading/trailing edge transition time, in s. 2 ns to 500 ns, 3 digits or 1 ns resolution.
<b>MeasTime</b>	Measurement timing at the pulse top. 0 to 1, 3 digits or 0.01 resolution.
<b>SmplNum</b>	Oscilloscope sampling number. 16 to 262144, 6 digits or 1 step.
<b>SmthNum</b>	Oscilloscope smoothing number. 3 to 4001, 4 digits or 1 step.
<b>SmthStat</b>	Status of the oscilloscope smoothing. Enable or Disable.
<b>AvgNum</b>	Oscilloscope averaging number. 1 to 4095, 4 digits or 1 step.
<b>VdAdjust</b>	Status of the drain voltage automatic adjustment. Enable or Disable.
<b>VgAdjust</b>	Status of the gate voltage automatic adjustment. Enable or Disable.
<b>RangingMode</b>	Measurement ranging mode. Auto or Fixed.
<b>ConnectChk</b>	Status of the connection check at initialization. Enable or Disable.
<b>GateZero</b>	Status of the gate monitor channel zero measurement at initialization. Enable or Disable.
<b>DcSwitch</b>	Availability of the pulse/dc switch units. Yes (exists) or No (none).

## PLSDIV Test Definitions

### PLSDIV IdVd

#### Test Output

The following output parameters are displayed after the test.

<b>Id</b>	Drain current, in A.
<b>Vd</b>	Target drain voltage, in V.
<b>VdSet</b>	Drain voltage, in V. SMU output value.
<b>VdInt</b>	Drain voltage, in V. Oscilloscope monitor value.
<b>VdConv</b>	Convergence result of the drain voltage automatic adjustment.
<b>Vg</b>	Target gate voltage, in V.
<b>VgMon</b>	Gate voltage, in V. Oscilloscope monitor value.
<b>VgConv</b>	Convergence result of the gate voltage automatic adjustment.
<b>IdPerWg</b>	Drain current per unit gate width, in A/ $\mu$ m.
	$IdPerWg = Id / Wg$

VgMon, VdInt, and Id values will be the value obtained at the data extraction timing on the pulse top. See Figure 5-9.

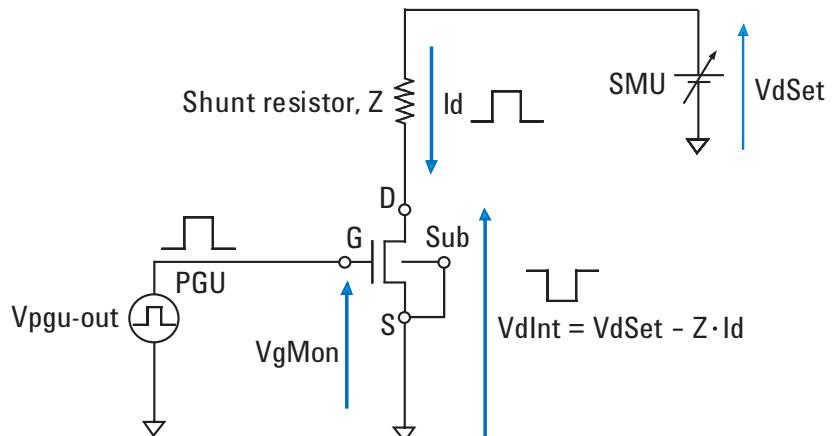

VdConv and VgConv returns 0 (convergence condition is satisfied) or -1 (not satisfied). If the automatic adjustment is OFF, 0 is returned.

If the drain voltage automatic adjustment function is ON, VdInt will be close to Vd. And if the function is OFF, VdSet will be close to Vd.

If the gate voltage automatic adjustment function is ON, VgMon will be close to Vg. And if the function is OFF, Vpgu-out will be close to Vg.

Figure 5-3

#### Test Output Parameters

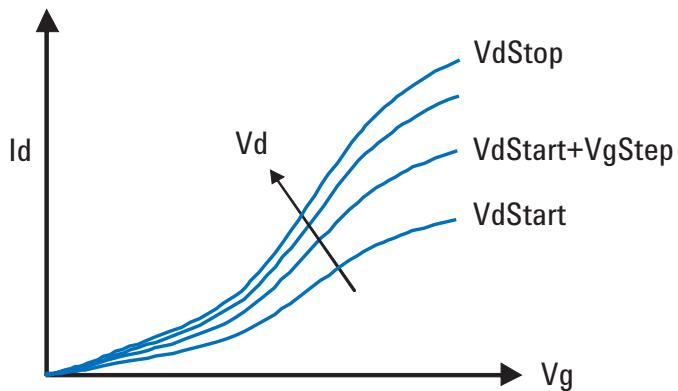

## PLSDIV IdVg

This test definition controls SMU (source monitor unit) to force the drain voltage, controls PGU (pulse generator) to force the gate voltage pulse, controls the oscilloscope to monitor the gate voltage and the drain voltage, calculates the drain current, and displays the Id-Vg characteristics.

Figure 5-4

Pulsed IV Id-Vg Measurement Result Example

**Device Parameters** The following parameters are available to set the test condition.

<b>Polarity</b>	Polarity of source output. Nch (force the specified value) or Pch (force the negative specified value). See “Parameters” on page 5-21.
<b>Lg</b>	Gate length, in m. $\geq 1$ nm, 4 digits or 1 nm resolution.
<b>Wg</b>	Gate width, in m. $\geq 1$ nm, 4 digits or 1 nm resolution.
<b>Temp</b>	Temperature, in degree. 4 digits or 0.001 degree resolution.
<b>IdMax</b>	Maximum drain current measurement range, in A. 0 to 80 mA, 4 digits or 1 $\mu$ A resolution.
<b>DeviceDelay</b>	Delay time caused by device under test, in s. -1 $\mu$ s to 1 $\mu$ s, 4 digits or 100 ps resolution. See “Parameters” on page 5-21.

## PLSDIV Test Definitions

### PLSDIV IdVg

#### Test Parameters

The following parameters are available to set the source output.

<b>PulseWidth</b>	Pulse width of PGU output pulse. 10 ns to 1 $\mu$ s, 4 digits or 1 ns resolution. See “Parameters” on page 5-21.
<b>VgStart</b>	Primary sweep start voltage for the gate terminal. PGU output. -4.5 V to 4.5 V, 4 digits or 10 mV resolution.
<b>VgStop</b>	Primary sweep stop voltage for the gate terminal. PGU output. -4.5 V to 4.5 V, 4 digits or 10 mV resolution.
<b>VgStep</b>	Primary sweep step voltage for the gate terminal. PGU output. 10 mV to 4.5 V, 4 digits or 10 mV resolution.
<b>PulseBase</b>	PGU output baseline voltage. -4.5 V to 4.5 V, 4 digits or 10 mV resolution. See “Parameters” on page 5-21.
<b>VdStart</b>	Secondary sweep start voltage for the drain terminal. SMU output. -10 V to 10 V, 5 digits or 1 mV resolution.
<b>VdStop</b>	Secondary sweep stop voltage for the drain terminal. SMU output. -10 V to 10 V, 5 digits or 1 mV resolution.
<b>VdStep</b>	Secondary sweep step voltage for the drain terminal. SMU output. -10 V to 10 V, 5 digits or 1 mV resolution.
• VgStart, VgStop, VgStep	

The parameters set the primary sweep source used to apply the gate voltage. The number of sweep points is given by the following formula. Then ignore the numbers after the decimal point.

$$\text{Number of sweep points} = (\text{VgStop} - \text{VgStart}) / \text{VgStep} + 1$$

Pulse amplitude must be > 55 mV and < 4.5 V. So  $|\text{VgStart} - \text{PulseBase}|$  and  $|\text{VgStop} - \text{PulseBase}|$  must be > 55 mV and < 4.5 V.

To use the gate voltage automatic adjustment function, set the pulse amplitude to < 4.0 V.

• VdStart, VdStop, VdStep
---------------------------

The parameters set the secondary sweep source used to apply the drain voltage. The number of sweep points is given by the following formula. Then ignore the numbers after the decimal point.

$$\text{Number of sweep points} = (\text{VdStop} - \text{VdStart}) / \text{VdStep} + 1$$

## Extended Test Parameters

The following parameters are available to set the test condition. For more details, see “Parameters” on page 5-21.

<b>TransTime</b>	Pulse leading/trailing edge transition time, in s. 2 ns to 500 ns, 3 digits or 1 ns resolution.
<b>MeasTime</b>	Measurement timing at the pulse top. 0 to 1, 3 digits or 0.01 resolution.
<b>SmplNum</b>	Oscilloscope sampling number. 16 to 262144, 6 digits or 1 step.
<b>SmthNum</b>	Oscilloscope smoothing number. 3 to 4001, 4 digits or 1 step.
<b>SmthStat</b>	Status of the oscilloscope smoothing. Enable or Disable.
<b>AvgNum</b>	Oscilloscope averaging number. 1 to 4095, 4 digits or 1 step.
<b>VdAdjust</b>	Status of the drain voltage automatic adjustment. Enable or Disable.
<b>VgAdjust</b>	Status of the gate voltage automatic adjustment. Enable or Disable.
<b>RangingMode</b>	Measurement ranging mode. Auto or Fixed.
<b>ConnectChk</b>	Status of the connection check at initialization. Enable or Disable.
<b>GateZero</b>	Status of the gate monitor channel zero measurement at initialization. Enable or Disable.
<b>DcSwitch</b>	Availability of the pulse/dc switch units. Yes (exists) or No (none).

## PLSDIV Test Definitions

### PLSDIV IdVg

#### Test Output

The following output parameters are displayed after the test.

<b>Id</b>	Drain current, in A.
<b>Vd</b>	Target drain voltage, in V.
<b>VdSet</b>	Drain voltage, in V. SMU output value.
<b>VdInt</b>	Drain voltage, in V. Oscilloscope monitor value.
<b>VdConv</b>	Convergence result of the drain voltage automatic adjustment.
<b>Vg</b>	Target gate voltage, in V.
<b>VgMon</b>	Gate voltage, in V. Oscilloscope monitor value.
<b>VgConv</b>	Convergence result of the gate voltage automatic adjustment.
<b>IdPerWg</b>	Drain current per unit gate width, in A/ $\mu$ m.
	$IdPerWg = Id / Wg$

VgMon, VdInt, and Id values will be the value obtained at the data extraction timing on the pulse top. See Figure 5-9.

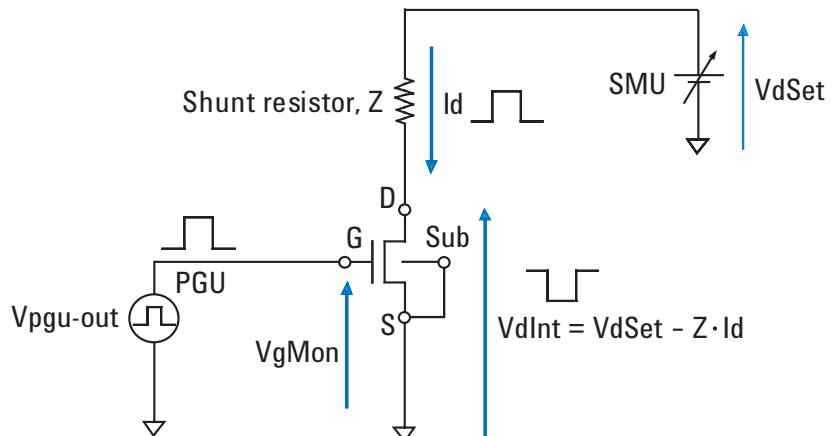

VdConv and VgConv returns 0 (convergence condition is satisfied) or -1 (not satisfied). If the automatic adjustment is OFF, 0 is returned.

If the drain voltage automatic adjustment function is ON, VdInt will be close to Vd. And if the function is OFF, VdSet will be close to Vd.

If the gate voltage automatic adjustment function is ON, VgMon will be close to Vg. And if the function is OFF, Vpgu-out will be close to Vg.

Figure 5-5

#### Test Output Parameters

## PLSDIV Reset

This test definition resets and initializes the pulsed IV test system.

**Device Parameters** None

**Test Parameters** None

**Extended Test Parameters** None

**Test Output** None

---

## PLSDIV Setup

This test definition is used to perform the system setup and the compensation of the pulsed IV test system. Specify the system type Pulsed IV (DcSwitch=No) or DC+Pulsed IV (DcSwitch=Yes), set the action in the Actions field, and click the Single button to perform the action.

**Device Parameters** None

**Test Parameters** The following parameter is available to select the action.

**DcSwitch** Availability of the pulse/dc switch units, Yes (exists) or No (none).

**Actions** Actions available for the pulsed IV system setup. System Configuration, Compensation, or Drain Cable Replacement.

- System Configuration

Specifies the GPIB address and the source or measurement channels of PGU (pulse generator), DSO (digital sampling oscilloscope), and SMU (source monitor unit) used for the pulsed IV measurement.

Perform this action after completing the system installation or after changing a channel assignment or after changing the GPIB address of system components.

- Compensation

Obtains and updates the compensation factors of the pulsed IV test system.

Perform this action after completing the system installation or after changing a channel assignment or after the replacement, repair, or calibration of oscilloscope.

- Drain Cable Replacement

Obtains and updates the compensation factors of the bias-T and the measurement path to the drain terminal.

Perform this action after replacing the bias-T or cables used for the drain terminal measurement path.

**Extended Test Parameters**

None

**Test Output**

None

## Parameters

This section explains the definitions of the parameters used in the pulsed IV test definitions.

### Polarity

Polarity controls the source output polarity. Usually, a positive polarity is used for the N channel devices and a negative polarity is used for the P channel devices.

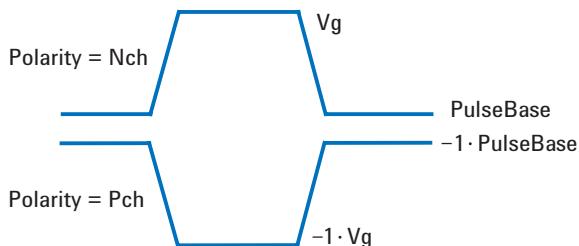

Figure 5-6 shows the polarity of gate pulse voltage.

### DeviceDelay

DeviceDelay defines the delay time set to the oscilloscope and used to compensate a skew caused by the device under test. This is important to synchronize the gate pulse and the drain pulse. Check the pulse waveform and read the delay time between the gate pulse and the drain pulse.

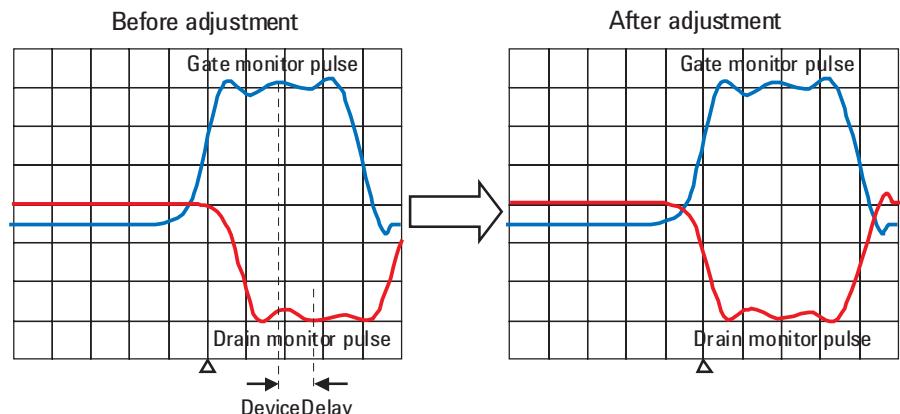

**Figure 5-6**

### Polarity

**Figure 5-7**

### DeviceDelay

## PLSDIV Test Definitions

### Parameters

#### PulseWidth

PulseWidth is the width of the gate pulse and defined as shown in Figure 5-8.

#### PulseBase

PulseBase is the baseline voltage of the gate pulse and defined as shown in Figure 5-8. The value must be low enough to turn off the device under test.

If you set PulseBase  $\leftrightarrow$  0 V, enable the gate voltage automatic adjustment function to obtain the stable gate pulse voltage. See “VgAdjust” on page 5-25.

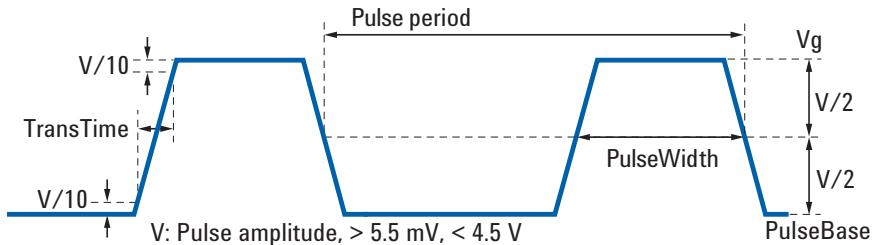

Pulse amplitude must be  $> 55$  mV and  $< 4.5$  V. To use the gate voltage automatic adjustment function, set the pulse amplitude to  $< 4.0$  V.

#### TransTime

TransTime is the gate pulse transition time for both leading and trailing edges and defined as shown in Figure 5-8. Initially, this value is set to 2 ns. Changing this value may cause a measurement error.

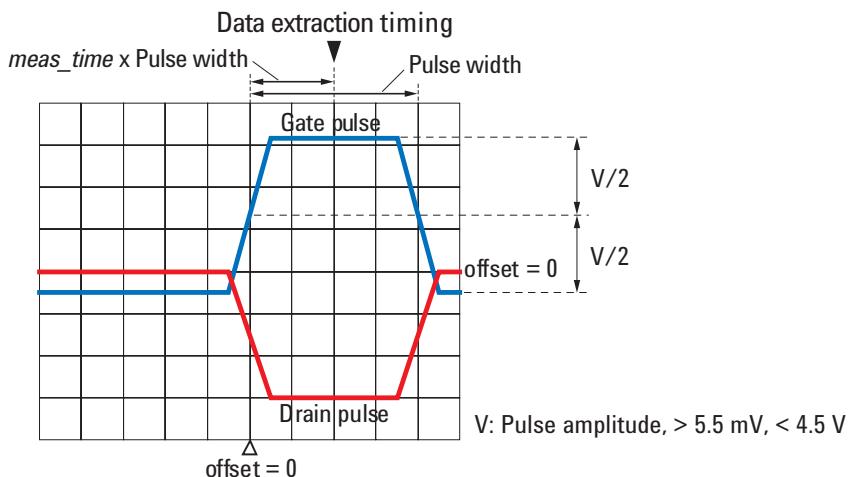

**Figure 5-8**

**TransTime, PulseWidth, and PulseBase**

**MeasTime**

MeasTime defines the data extraction timing (see Figure 5-9) which is the timing to extract the pulsed IV measurement data (gate voltage, drain voltage, and drain current) from the oscilloscope measurement result (pulse waveform). Initially, this value is set to 0.5. Changing this value may cause a measurement error. If you change this value, check the pulse waveform and choose the point where the pulse voltage is flat and stable.

**Figure 5-9****MeasTime****SmplNum**

SmplNum defines the sampling number set to the oscilloscope. Set the value in order to display the pulse waveform on the oscilloscope screen. A small number will improve measurement throughput.

Sampling rate of the oscilloscope is set to the value automatically calculated from the specified pulse width and the specified sampling number.

## PLSDIV Test Definitions

### Parameters

#### **SmthNum**

SmthNum defines the number of measurement points used for the smoothing function of oscilloscope. SmthNum must be less than SmplNum.

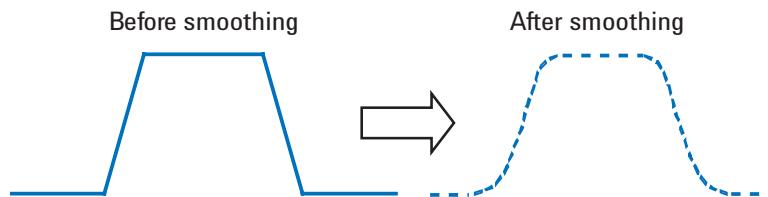

#### **SmthStat**

SmthStat sets the smoothing function ON or OFF of the oscilloscope.

The smoothing function averages the time-series data to reduce variations caused by high-frequency components. Set the value in order to display the pulse waveform on the oscilloscope screen. A too large number of smoothing points loses waveform edges, which disturbs accurate results.

**Figure 5-10**

#### **Smoothing Function**

#### **AvgNum**

AvgNum specifies the measurement averaging number set to the oscilloscope. The scope measures pulse waveform the specified number of times and displays the averaged pulse waveform. A large number reduces random noise and increases sharpness of waveform.

**VdAdjust**

VdAdjust sets the drain voltage automatic adjustment function ON or OFF. This function is used to compensate the voltage drop caused by the shunt resistor. See Figure 5-11. When this function is OFF, the SMU forces Vd (specified drain voltage). When this function is ON, the SMU output level will be automatically controlled so that Vd is applied to the drain terminal.

If you do not mind the effect of the shunt resistor, set this function OFF. This brings higher measurement throughput.

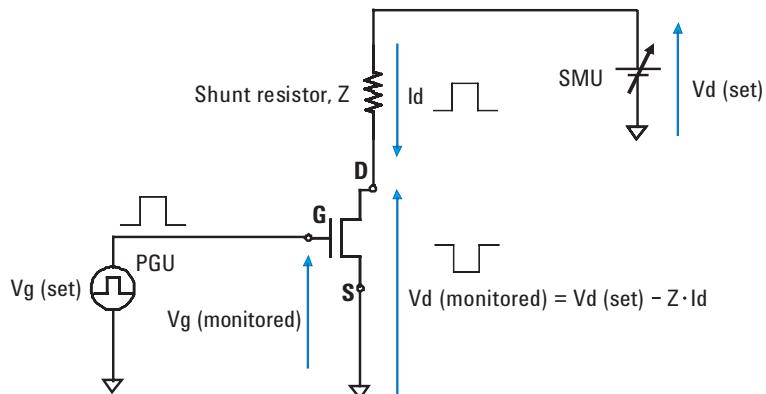

**VgAdjust**

VgAdjust sets the gate voltage automatic adjustment function ON or OFF. This function is used to obtain stable gate voltage. When this function is OFF, the PGU forces Vg (specified gate voltage). When this function is ON, the PGU output level will be automatically controlled so that Vg is applied to the gate terminal.

If you do not mind the stability of the gate voltage, set this function OFF. This brings higher measurement throughput.

If you set PulseBase  $\leftrightarrow$  0 V, set this function ON.

To use this function, set the pulse amplitude to < 4.0 V.

**Figure 5-11****VdAdjust and VgAdjust**

## PLSDIV Test Definitions

### Parameters

**RangingMode** RangingMode defines the measurement ranging mode set to the oscilloscope.

Auto ranging uses the best measurement range for the monitor value automatically. The maximum range is the best range for the specified IdMax value.

Fixed ranging uses the best range for the specified IdMax value. This mode contributes to higher measurement throughput.

**ConnectChk** ConnectChk sets the connection check function ON or OFF. This function is used to confirm if the divider, terminator, and bias-T are connected properly. For the correct connections, see “PlsdivInit” on page 6-15. The connection check can detect the following improper connections.

- divider is not connected
- terminator is not connected
- T-adapter is connected instead of divider
- bias-T’s DC+RF connector is connected to the gate monitor channel

**GateZero** GateZero sets the gate monitor channel zero measurement ON or OFF. This function is used to measure the offset data of the gate voltage monitor path and update the offset value stored in a system file.

Before performing the offset measurement, the measurement cables must be connected properly and the cable ends must be opened.

**DcSwitch** DcSwitch is used to declare the usage of the pulse/dc switch units. The value must be Yes only when the switch units are used.

To use the switch units without changing the test definition setup, set the GPIB address of Agilent 11713A Switch Controller to 10. To use another GPIB address, open the test definition, change the Address value of GPIB Write components used for the 11713A, and save the definition. Initially, it is set to Address=10.

## PLSDIV TIS Commands

This chapter provides reference information of the pulsed IV .exe library (Plsdiv commands, PLSDIV TIS) used in the PLSDIV application test definitions. This chapter consists of the following sections.

- “Command Summary”
- “Entering Plsdiv Commands”
- “Command Reference”

---

**NOTE**

The Plsdiv commands are stored in the following folder.

C:\Program Files\Agilent\PLSDIV\PLSDIVEExe\TISExe

To execute the Plsdiv commands, all of the required files must be installed properly. See Chapter 6, “PLSDIV TIS Commands.”

---

## Command Summary

The pulsed IV .exe library (Plsdiv commands) is summarized in Table 6-1.

When using the Plsdiv commands, the execution sequence of commands must be as shown in Figure 6-1. PlsdivInit command must be executed at the beginning of the measurement and PlsdivUninit command must be executed at the end of the measurement. The Plsdiv commands are only effective between PlsdivInit and PlsdivUninit commands.

Command execution must be completed with no error before executing a subsequent command. For example, the PlsdivMeasureId command must complete normally before the PlsdivCaptureMonData command can be executed.

### NOTE

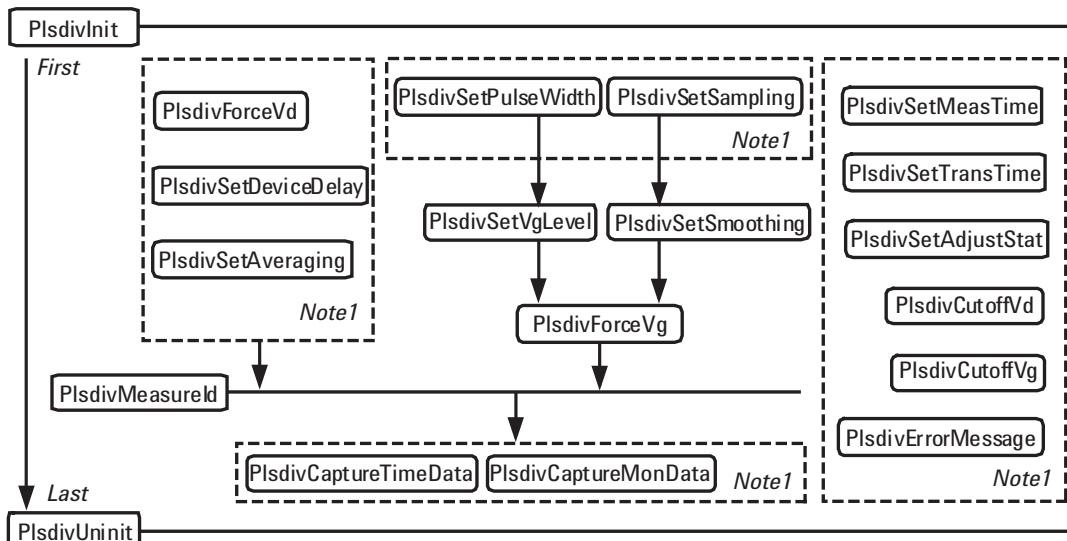

PlsdivUninit makes all Plsdiv commands inexecutable. Execute PlsdivInit to use the Plsdiv commands.

PlsdivCutoffVd makes PlsdivMeasureId inexecutable. Execute PlsdivForceVd before PlsdivMeasureId.

PlsdivCutoffVg makes PlsdivMeasureId inexecutable. Execute PlsdivForceVg before PlsdivMeasureId.

**Figure 6-1**

**Plsdiv Command Execution Sequence**

*Note 1: No condition in the execution sequence between commands in this box*

**Table 6-1** Plsdiv Command Summary

Command	Summary
PlsdivInit	Initializes the pulsed IV test system. Must be executed before any other Plsdiv command.
PlsdivForceVd	Sets the SMU (source monitor unit) output switch on and applies the specified drain voltage.
PlsdivSetDeviceDelay	Sets the device delay time between the gate pulse and the drain pulse.
PlsdivSetAveraging	Sets the oscilloscope averaging number for the pulsed IV measurement.
PlsdivSetMeasTime	Changes the timing for extracting the pulsed IV measurement data (optional).
PlsdivSetTransTime	Changes the pulse transition time of the gate voltage (optional).
PlsdivSetAdjustStat	Enables or disables the automatic output adjustment of the specified source.
PlsdivCutoffVd	Applies a 0 V drain voltage and sets the SMU output switch off.
PlsdivCutoffVg	Sets the PGU (pulse generator unit) output switch off.
PlsdivErrorMessage	Returns the error number and error message for the specified status code.
PlsdivSetSampling	Sets the oscilloscope sampling rate and sampling number for the pulsed IV measurement.
PlsdivSetSmoothing	Enables or disables smoothing of the specified oscilloscope channel.
PlsdivSetPulseWidth	Sets the pulse width of the gate voltage.
PlsdivSetVgLevel	Sets the pulse level and polarity of the gate voltage.
PlsdivForceVg	Sets the PGU output switch on and starts the gate voltage output.
PlsdivMeasureId	Performs the pulsed IV measurement and returns the measurement result. This performs drain voltage spot measurement and calculates the current value.
PlsdivCaptureTimeData	Reads the oscilloscope horizontal data (time data) after PlsdivMeasureId.
PlsdivCaptureMonData	Reads the oscilloscope vertical data (monitor data) after PlsdivMeasureId.
PlsdivUninit	Resets the pulsed IV test system.
DispMessage	Opens a pop-up window and displays the specified string.

## Entering Plsdiv Commands

Plsdiv commands can be entered by input from the Windows Command Execution setup on the Test Definition window's Test Contents tab screen (see "Setup Example" on page 6-8). Most Plsdiv commands need parameters to be sent or returned. The parameters will be variables that can be defined on the Test Specification tab screen or the Local Variable Definition setup on the Test Contents tab screen.

This section describes how to enter the Plsdiv commands.

- "Command Parameters"
- "Defining Numeric/Vector Input Parameter"
- "Defining String/Numeric Input Parameters"
- "Defining Numeric Output Parameter"
- "Defining Vector Output Parameter"
- "Defining String Output Parameter"
- "Defining Format Field"
- "Setup Example"

## Command Parameters

The Windows Command Execution setup supports commands with one input parameter and one output parameter, and does not support commands with multiple vector inputs or multiple outputs.

- If the command requires multiple string inputs, use string variables. In the Windows Command Execution setup, set the Write Type to String. Up to 20 string data can be defined.
- If the command requires multiple numeric inputs, use numeric variables and set the Write Type to String. To enter the numeric variable name, use the *string* built-in function. For example, enter `string(Rz)` for the Rz numeric variable.
- If the command requires both numeric inputs and string inputs, use string variables.

---

### NOTE

If you use variables for input parameters, do not forget to assign data to the variables before calling the command. Use the ASSIGN statement to assign the data.

## Defining Numeric/Vector Input Parameter

1. Define a vector variable in the Test Specification tab screen or the Local Variable Definition setup of the Test Contents tab screen.
2. Set the Write Type to List in the Windows Command Execution setup.
3. Enter the variable name in the Values field of the Write List area.

For the numeric parameter, a data element of vector variable is used to store the data for the parameter. Specify the data by using the Format field. For example, enter { 0 } to specify the data in the first element of the vector variable. For the Format field, see “Defining Format Field” on page 6-7.

For the vector parameter, ignore the Format field.

## Defining String/Numeric Input Parameters

1. Define string or numeric variables in the Test Specification or the Local Variable Definition setup in the Test Contents.
2. Set the Write Type to String in the Windows Command Execution setup.
3. Add a line in the Write String area.
4. Enter the variable name for the first parameter in the first line.

If the command needs multiple input parameters, add a line and enter the variable name for the variable in the added line. Then observe the order of parameters.

To enter a numeric variable name, use the *string* built-in function. For example, enter `string(Rz)` for the Rz numeric variable.

## Defining Numeric Output Parameter

1. Define a numeric variable in the Test Specification tab screen or the Local Variable Definition setup of the Test Contents tab screen.
2. Set the Read Type to Value in the Windows Command Execution setup.
3. Enter the variable name in the Value field of the Read Value area.

The Result field can be blank or the name of a numeric variable defined in the Test Specification or Local Variable Definition. The variable will be used to receive the command execution result.

## Defining Vector Output Parameter

1. Define a vector variable in the Test Specification tab screen or the Local Variable Definition setup of the Test Contents tab screen.
2. Set the Read Type to List in the Windows Command Execution setup.
3. Enter the variable name in the Values field of the Read List area.

The Result field can be blank or the name of a numeric variable defined in the Test Specification or Local Variable Definition. The variable will be used to receive the command execution result.

## Defining String Output Parameter

1. Define a string variable in the Test Specification tab screen or the Local Variable Definition setup of the Test Contents tab screen.
2. Set the Read Type to String in the Windows Command Execution setup.
3. Enter the variable name in the String field of the Read String area.

The Result field and the Length Actually Read field can be blank or the name of a numeric variable defined in the Test Specification or Local Variable Definition. The variable will be used to receive the command execution result or the length of the returned string data.

## Defining Format Field

The Format field requires a keyword to specify a data in vector variable. The keyword must have the style such as {I,A:F}, where,

- I** Index used to specify the element. Integer, 0 or positive number.  
Mandatory. 0 specifies the first element.
- A** Character length of the specified data element. Positive integer for right-aligned, or negative integer for left-aligned. If this value is not set, the length is not specified (no limit).
- F** Style of the data. See Table 6-2. If this value is not set, G is selected..

Following are the example formats. For more information, see online help or manual of Agilent T&M Programmers Toolkit.

- {0,5:E} First element, five characters, exponential notation
- {1,10} Second element, 10 characters, general

## PLSDIV TIS Commands

### Setup Example

- {2:x} Third element, no limit for length, hexadecimal numeric
- {3} Fourth element, no limit for length, general

**Table 6-2**

### Available F values

F	Meaning	F	Meaning
C or c	Circulation	N or n	Numeric
D or d	Decimal numeric	P or p	Percent
E or e	Exponential notation	R or r	Round trip
F or f	Fixed point	X or x	Hexadecimal numeric
G or g	General		

### Setup Example

The following example setup is used to execute a PlsdivMeasureId command that has two numeric inputs and four numeric outputs.

*ranging* and *id\_range* are numeric variables used for the input parameters, *read\_data* is a vector variable used for the output parameters, and *PassFail* is a numeric variable used to store the command execution result. They must be defined in the Test Specification tab screen or the Local Variable Definition setup on the Test Contents tab screen. Input parameter values must be set to the variables before executing the command. Four data will be assigned to *read\_data* in sequence.

**Table 6-3**

### Windows Command Execution Setup Example

Windows Command Execution							
Command Filename:	C:\Program Files\Agilent\PLSDIV\PLSDIVExe\TISExe\PlsdivMeasure1d.exe						
Argument:							
Write Type:	x	String		List			
Read Type:		String		Value	x	List	None
Write String							
	string(ranging)						
	string(id_range)						
Read List							
Result:	PassFail		Values:	read_data			

## Command Reference

This section contains detailed descriptions of all the Plsdiv commands. The commands are listed in alphabetical order. Each entry:

1. Gives one command
2. Describes the execution conditions, if any exists
3. Describes the file name to be entered in the Command Filename field
4. Describes the Write Type and Read Type settings that must be set when using the command
5. Describes the argument to be input in the Argument field, if it exists
6. Lists the input parameters (Write String or Write List) that must be sent to the command, if any exists
7. Lists the output parameters (Read String, Read Value, or Read List) returned by the command, if any exists
8. Describes the response (execution result) returned by the command and can be read by using the Result field of the Read String/Value/List area, if it exists
9. Explains any additional information

---

**NOTE**

The Plsdiv commands are stored in the following folder.

C:\Program Files\Agilent\PLSDIV\PLSDIVExe\TISExe

---

**NOTE**

The Plsdiv commands can be defined in the Windows Command Execution setup on the Test Definition window's Test Contents tab screen.

Most of the Plsdiv commands need parameters to be sent or to be returned. The parameters will be variables that can be defined in the Test Specification tab screen or the Local Variable Definition setup on the Test Contents tab screen.

---

## DispMessage

This command opens a pop-up window and displays the specified string. This command can be executed without the PlsdivInit command.

**Filename** DispMessage.exe

**Write Type** String

**Read Type** None

**Write String** This command needs the following input parameter.

**message** Specify a message to display in the pop-up window.

## PlsdivCaptureMonData

This command reads the oscilloscope vertical data (monitor data). It returns the gate voltage data, drain voltage data, or drain current data selected by the *term* and *drain\_mode* parameters.

<b>Execution Conditions</b>	PlsdivSetSampling and PlsdivMeasureId must be executed before this command. The PlsdivSetSampling command <i>sampling_num</i> parameter value must not be 0.
<b>Filename</b>	PlsdivCaptureMonData.exe
<b>Write Type</b>	String
<b>Read Type</b>	List
<b>Write String</b>	This command needs the following input parameters in this sequence.  <b>term</b> Terminal. Numeric value, 0 (gate) or 1 (drain).  <b>sampling_num</b> Sampling number of oscilloscope. Numeric value, 16 to 262144. The value must be the same as the <i>sampling_num</i> parameter value set to the PlsdivSetSampling command.  <b>drain_mode</b> Drain data type. Numeric value, 0 (voltage) or 1 (current).  If <i>term</i> =0, this command returns the gate voltage data. If <i>term</i> =1 and <i>drain_mode</i> =0, this command returns the drain voltage data. If <i>term</i> =1 and <i>drain_mode</i> =1, this command returns the drain current data.
<b>Read List</b>	This command returns the following output parameter.  <b>read_data</b> Oscilloscope vertical data (monitor data). Vector data. The number of returned data is <i>sampling_num</i> if the smoothing is off or the number of data displayed on the oscilloscope screen if the smoothing is on. The smoothing on/off is set by the PlsdivSetSmoothing command.
<b>Response</b>	Number of returned data. Numeric value.

## PlsdivCaptureTimeData

This command reads the oscilloscope horizontal data (time data).

<b>Execution Conditions</b>	PlsdivSetSampling and PlsdivMeasureId must be executed before this command. The PlsdivSetSampling command <i>sampling_num</i> parameter value must not be 0.
<b>Filename</b>	PlsdivCaptureTimeData.exe
<b>Write Type</b>	String
<b>Read Type</b>	List
<b>Write String</b>	This command needs the following input parameter. <b>sampling_num</b> Sampling number of oscilloscope. Numeric value, 16 to 262144. The value must be the same as the <i>sampling_num</i> parameter value set to the PlsdivSetSampling command.
<b>Read List</b>	This command returns the following output parameter. <b>read_data</b> Oscilloscope horizontal data (time data). Vector data. The number of returned data is <i>sampling_num</i> if the smoothing is off or the number of data displayed on the oscilloscope screen if the smoothing is on. The smoothing on/off is set by the PlsdivSetSmoothing command.
<b>Response</b>	Number of returned data. Numeric value.

## PlsdivCutoffVd

This command applies 0 V drain voltage and sets the SMU output switch off.

**Filename** PlsdivCutoffVd.exe

**Response** Status code. Numeric value. To read error message, use PlsdivErrorMessage. If no error is detected by this command execution, 0 is returned.

## PlsdivCutoffVg

This command sets the PGU output switch off.

**Filename** PlsdivCutoffVg.exe

**Response** Status code. Numeric value. To read the error message, use PlsdivErrorMessage. If no error is detected by this command execution, 0 is returned.

## PlsdivErrorMessage

This command returns the error number and error message for the specified status code. For the error code and message, see “Status Code and Error Messages” on page 7-1.

**Filename** PlsdivErrMessage.exe

**Write Type** String

**Read Type** String

**Write String** This command needs the following input parameter.

**status\_code** Status code returned by a command. Numeric value.

**Read String** This command returns the following output parameter.

**message** Error message specified by the *status\_code* parameter. The message is a string up to 256 characters.

**Response** Error number specified by the *status\_code* parameter. Numeric value.

## PLSDIV TIS Commands

### PlsdivForceVd

#### PlsdivForceVd

This command sets the SMU (source monitor unit) output switch on and applies the specified drain voltage.

<b>Filename</b>	PlsdivForceVd.exe
<b>Write Type</b>	String
<b>Read Type</b>	String. However, this command does not return any output parameter.
<b>Write String</b>	This command needs the following input parameter.
	<b>vd</b> Drain voltage in V. Numeric value, -10 to 10.
<b>Response</b>	Status code. Numeric value. To read the error message, use PlsdivErrorMessage. If no error is detected by this command execution, 0 is returned.

#### PlsdivForceVg

This command sets the PGU (pulse generator unit) output switch on, forces the gate voltage pulse, and returns the gate voltage monitor value.

<b>Execution Conditions</b>	PlsdivSetPulseWidth and PlsdivSetVgLevel commands must be executed before this command in this sequence.
<b>Filename</b>	PlsdivForceVg.exe
<b>Write Type</b>	String. However, this command does not need any input parameter.
<b>Read Type</b>	List
<b>Read List</b>	This command returns the following output parameters in this sequence. To read the values, specify a vector variable in the Values field of the ReadList area. The values are stored in the first and second elements of the vector variable.
<b>vg_mon</b>	Gate voltage monitor value that is the actual gate voltage monitored by the oscilloscope. Numeric value, in V.
<b>conv_stat</b>	Convergence result of the gate voltage automatic adjustment. Numeric value, 0 (convergence condition is satisfied) or -1 (not satisfied). If the automatic adjustment is off, 0 is returned. The convergence condition is a system parameter, no user definable.

<b>Auto Adjustment</b>	This function is set by the PlsdivSetAdjustStat command, and is used to adjust the gate voltage automatically so that the <i>vg_mon</i> value is close to the <i>vg_high</i> value specified by the PlsdivSetVgLevel command.
<b>Response</b>	Status code. Numeric value. To read the error message, use PlsdivErrorMessage. If no error is detected by this command execution, 0 is returned.

## PlsdivInit

This command initializes the pulsed IV test system. This command must be executed before any other Plsdiv command.

<b>Filename</b>	PlsdivInit.exe				
<b>Write Type</b>	String				
<b>Read Type</b>	String. However, this command does not return any output parameter.				
<b>Write String</b>	<p>This command needs the following input parameters in this sequence.</p> <table border="0"> <tr> <td><b>connect_check</b></td><td>Connection check status. Numeric value, 0 (does not perform) or 1 (performs connection check in the PlsdivInit process).</td></tr> <tr> <td><b>gate_zero</b></td><td>Gate zero status. Numeric value, 0 (does not perform) or 1 (performs gate monitor channel offset measurement in the PlsdivInit process).</td></tr> </table>	<b>connect_check</b>	Connection check status. Numeric value, 0 (does not perform) or 1 (performs connection check in the PlsdivInit process).	<b>gate_zero</b>	Gate zero status. Numeric value, 0 (does not perform) or 1 (performs gate monitor channel offset measurement in the PlsdivInit process).
<b>connect_check</b>	Connection check status. Numeric value, 0 (does not perform) or 1 (performs connection check in the PlsdivInit process).				
<b>gate_zero</b>	Gate zero status. Numeric value, 0 (does not perform) or 1 (performs gate monitor channel offset measurement in the PlsdivInit process).				
<b>Gate Zero</b>	<p>This function is used to measure the offset data of the gate voltage monitor path and update the offset value in a system file. The offset value is used until the next execution. Before performing the offset measurement, set up the test system measurement path properly and open the measurement terminals.</p>				
<b>Connection Check</b>	<p>This function is used to confirm if the divider, terminator, and bias-T are connected properly. For the proper connections, see Figure 6-2 and Figure 6-3. The connection check can detect the following improper connections.</p> <ul style="list-style-type: none"> <li>• divider is not connected</li> <li>• terminator is not connected</li> <li>• T-adapter is connected instead of divider</li> <li>• bias-T's DC+RF connector is connected to the gate monitor channel</li> </ul>				

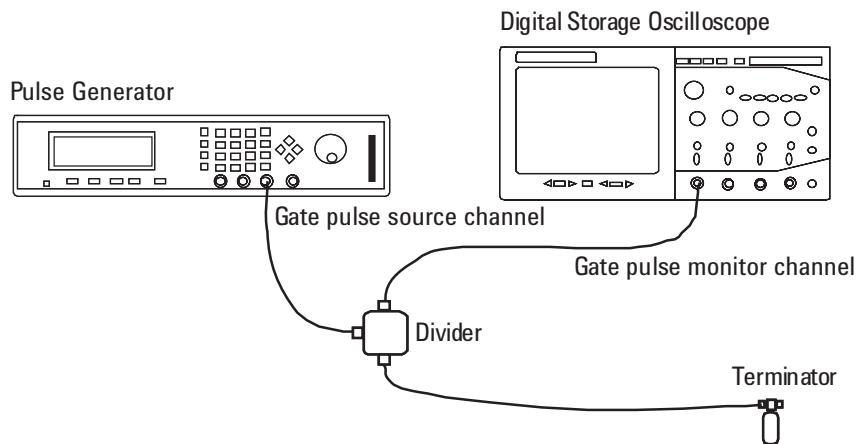

## PLSDIV TIS Commands

### PlsdivInit

If this function detects an improper connection, a nonzero status code will be returned.

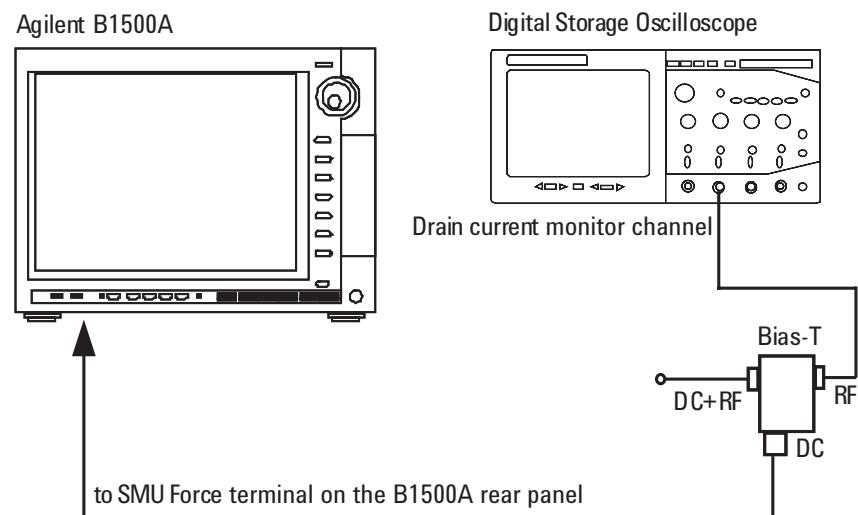

**Figure 6-2**

### Divider and Terminator connection

**Figure 6-3**

### Bias-T connection

### Response

Status code. Numeric value. To read the error message, use PlsdivErrorMessage. If no error is detected by this command execution, 0 is returned.

## PlsdivMeasureId

This command performs the pulsed IV measurement and returns the measurement result. This performs drain voltage spot measurement and calculates current value.

<b>Filename</b>	PlsdivMeasureId.exe								
<b>Write Type</b>	String								
<b>Read Type</b>	List								
<b>Write String</b>	This command needs the following input parameters in this sequence.								
	<b>ranging</b> Measurement ranging mode. Numeric value, 0 (auto ranging) or 1 (fixed ranging). <b>id_range</b> Drain current range, in A. Numeric value, 0 to 0.08.								
<b>Ranging Mode</b>	Auto ranging uses the best measurement range for the monitor value automatically. The maximum range is the best range for the specified <i>id_range</i> value. Fixed ranging uses the best range for the specified <i>id_range</i> value. This mode will improve measurement throughput.								
<b>Read List</b>	This command returns the following output parameters in this sequence. To read the values, specify a vector variable in the Values field of the ReadList area. The values are stored in the first element to the fourth element of the vector variable. <table border="0"> <tr> <td><b>id</b></td><td>Drain current, calculated from <i>vd_actual</i>. Numeric value, in A.</td></tr> <tr> <td><b>vd_set</b></td><td>Drain voltage, SMU output value. Numeric value, in V.</td></tr> <tr> <td><b>vd_actual</b></td><td>Drain voltage, oscilloscope monitor value. Numeric value, in V.</td></tr> <tr> <td><b>conv_stat</b></td><td>Convergence result of the drain voltage automatic adjustment. Numeric value, 0 (convergence condition is satisfied) or -1 (not satisfied). If the automatic adjustment is off, 0 is returned. The convergence condition is a system parameter, not user-definable.</td></tr> </table>	<b>id</b>	Drain current, calculated from <i>vd_actual</i> . Numeric value, in A.	<b>vd_set</b>	Drain voltage, SMU output value. Numeric value, in V.	<b>vd_actual</b>	Drain voltage, oscilloscope monitor value. Numeric value, in V.	<b>conv_stat</b>	Convergence result of the drain voltage automatic adjustment. Numeric value, 0 (convergence condition is satisfied) or -1 (not satisfied). If the automatic adjustment is off, 0 is returned. The convergence condition is a system parameter, not user-definable.
<b>id</b>	Drain current, calculated from <i>vd_actual</i> . Numeric value, in A.								
<b>vd_set</b>	Drain voltage, SMU output value. Numeric value, in V.								
<b>vd_actual</b>	Drain voltage, oscilloscope monitor value. Numeric value, in V.								
<b>conv_stat</b>	Convergence result of the drain voltage automatic adjustment. Numeric value, 0 (convergence condition is satisfied) or -1 (not satisfied). If the automatic adjustment is off, 0 is returned. The convergence condition is a system parameter, not user-definable.								
<b>Auto Adjustment</b>	This function is set by the PlsdivSetAdjustStat command, and is used to adjust the drain voltage automatically so that the <i>vd_actual</i> value is close to the <i>vd</i> value specified by the PlsdivForceVd command.								

## PLSDIV TIS Commands

### PlsdivSetAdjustStat

If this function is off, the *vd\_set* value will be equal to the *vd* value specified by the PlsdivForceVd command and the *vd\_actual* value will show the value divided by the shunt resistor.

#### Response

Status code. Numeric value. To read the error message, use PlsdivErrorMessage. If no error is detected by this command execution, 0 is returned.

### PlsdivSetAdjustStat

This command enables or disables the automatic output adjustment of the specified source, PGU (pulse generator) for the gate voltage or SMU (source monitor unit) for the drain voltage.

#### Filename

PlsdivSetAdjustStat.exe

#### Write Type

String

#### Read Type

String. However, this command does not return any output parameter.

#### Write String

This command needs the following input parameters in this sequence.

**term** Terminal. Numeric value, 0 (gate) or 1 (drain).

**adj\_stat** Function status. Numeric value, 0 (off) or 1 (on).

#### Response

Status code. Numeric value. To read the error message, use PlsdivErrorMessage. If no error is detected by this command execution, 0 is returned.

### PlsdivSetAveraging

This command sets the oscilloscope averaging number for the pulsed IV measurement. Large averaging number contributes high certainty of measurement result and long measurement time.

#### Filename

PlsdivSetAveraging.exe

#### Write Type

String

#### Read Type

String. However, this command does not return any output parameter.

#### Write String

This command needs the following input parameter.

**avg\_num** Averaging number. Numeric value, 1 to 4096.

<b>Response</b>	Status code. Numeric value. To read the error message, use PlsdivErrorMessage. If no error is detected by this command execution, 0 is returned.
-----------------	--

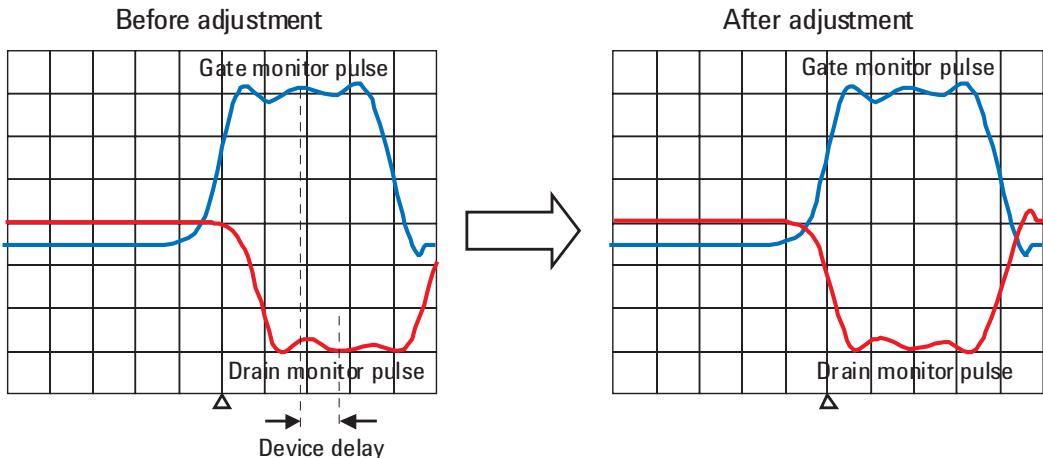

## PlsdivSetDeviceDelay

This command sets the device delay time between the gate pulse and the drain pulse.

Before performing the pulsed IV measurement, figure out the device delay time and set it by using this command. To figure out the device delay time, set up the test system properly, connect the device under test, apply voltage pulse to the gate terminal, and monitor the gate pulse and the drain pulse as shown in Figure 6-4.

<b>Filename</b>	PlsdivSetDeviceDelay.exe
<b>Write Type</b>	String
<b>Read Type</b>	String. However, this command does not return any output parameter.
<b>Write String</b>	This command needs the following input parameter.
	<b>device_delay</b> Delay time caused by test device, in second. Numeric value, -0.000001 to 0.000001.
<b>Response</b>	Status code. Numeric value. To read the error message, use PlsdivErrorMessage. If no error is detected by this command execution, 0 is returned.

**Figure 6-4**      **Adjustment for Device Delay**

## PlsdivSetMeasTime

This command changes the timing for extracting the pulsed IV measurement data (gate voltage, drain voltage, and drain current) from the oscilloscope measurement result (pulse waveform). This change is effective until the next PlsdivSetMeasTime command or the PlsdivUninit command. This command execution is optional.

**Remarks** Changing this value may cause measurement errors.

**Filename** PlsdivSetMeasTime.exe

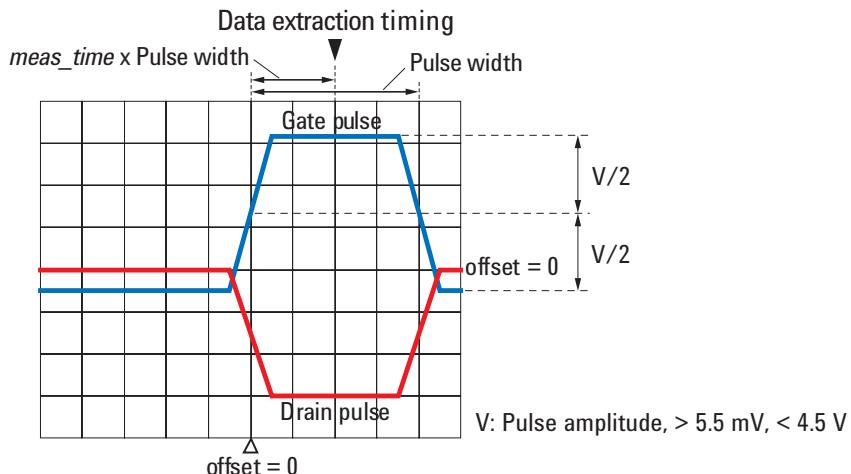

**Write Type** String

**Read Type** String. However, this command does not return any output parameter.

**Write String** This command needs the following input parameter.

**meas\_time** Data extraction timing. Numeric value, -1 to 1. Default value is 0.5. The data extraction timing is specified by the rate for the pulse width as shown in Figure 6-5.

**Figure 6-5** Data Extraction Timing

**Response** Status code. Numeric value. To read the error message, use PlsdivErrorMessage. If no error is detected by this command execution, 0 is returned.

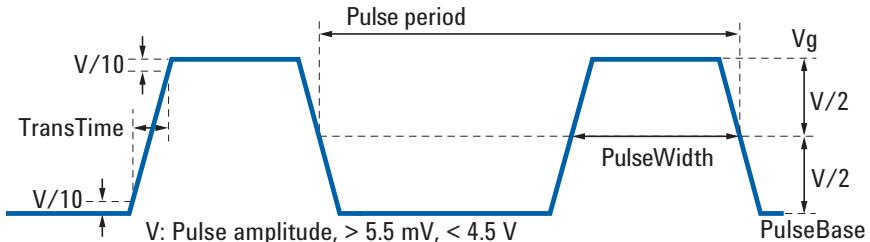

## PlsdivSetPulseWidth

This command sets the pulse width of the gate voltage.

<b>Filename</b>	PlsdivSetPulseWidth.exe
<b>Write Type</b>	String
<b>Read Type</b>	String. However, this command does not return any output parameter.
<b>Write String</b>	This command needs the following input parameter.
	<b>pulse_width</b> Pulse width of gate pulse, in second. Numeric value, 10 nsec to 1μsec. See Figure 6-6.
<b>Response</b>	Status code. Numeric value. To read the error message, use PlsdivErrorMessage. If no error is detected by this command execution, 0 is returned.

**Figure 6-6**

### Pulse Setup Parameters

## PlsdivSetSampling

This command sets the oscilloscope sampling rate and sampling number for the pulsed IV measurement.

<b>Remarks</b>	Adjust the sampling number and the sampling rate carefully to obtain the waveform you desire. To obtain faster measurement throughput, decrease the sampling number. Too small sampling numbers will cause measurement errors.
<b>Filename</b>	PlsdivSetSampling.exe
<b>Write Type</b>	String
<b>Read Type</b>	String. However, this command does not return any output parameter.

## PLSDIV TIS Commands

### PlsdivSetSmoothing

#### Write String

This command needs the following input parameters in this sequence.

**sampling\_rate** Sampling rate. Numeric value, 0 (auto), 1 to 20 G [times/sec].

It is difficult to find the optimum value. Set *sampling\_rate*=0 for an easy setup.

**sampling\_num** Total number of sampling. Numeric value, 0 (auto), 16 to 262144.

#### Response

Status code. Numeric value. To read the error message, use PlsdivErrorMessage. If no error is detected by this command execution, 0 is returned.

## PlsdivSetSmoothing

This command enables or disables smoothing of the specified oscilloscope channel.

#### Execution Conditions

PlsdivSetSampling command must be executed before this command.

#### Filename

PlsdivSetSmoothing.exe

#### Write Type

String

#### Read Type

String. However, this command does not return any output parameter.

#### Write String

This command needs the following input parameters in this sequence.

**ch** Oscilloscope channel. Numeric value, 0 (channel for gate) or 1 (channel for drain).

**smooth\_stat** Smoothing function on or off. Numeric value, 0 (off) or 1 (on).

**smooth\_num** Number of measurement points used for smoothing. Numeric value, 3 to 4001. The value must be less than the *sampling\_num* parameter value set to the PlsdivSetSampling command.

#### Response

Status code. Numeric value. To read the error message, use PlsdivErrorMessage. If no error is detected by this command execution, 0 is returned.

#### Remarks

The smoothing function averages the time-series data to reduce variation caused by high-frequency component.

Set appropriate *smooth\_num* value while monitoring the waveform. Too much *smooth\_num* value will lose the waveform edges, which disturbs accurate results.

## PlsdivSetTransTime

This command changes the pulse transition time of the gate voltage. This change is effective until the next PlsdivSetTransTime command or the PlsdivUninit command is executed. This command execution is optional.

The transition time is defined as the time from the pulse level 10 % point to the 90 % point. See Figure 6-6.

<b>Remarks</b>	Changing this value may cause measurement errors.
<b>Filename</b>	PlsdivSetTransTime.exe
<b>Write Type</b>	String
<b>Read Type</b>	String. However, this command does not return any output parameter.
<b>Write String</b>	This command needs the following input parameter.  <b>trans_time</b> Transition time, in second. Numeric value, 2 nsec to 200 msec. This value must be less than half of the <i>pulse_width</i> parameter value set to the PlsdivSetPulseWidth command.
<b>Response</b>	Status code. Numeric value. To read the error message, use PlsdivErrorMessage. If no error is detected by this command execution, 0 is returned.

## PlsdivSetVgLevel

This command sets the pulse level and polarity of the gate voltage.

<b>Remarks</b>	Check the pulse waveform on the oscilloscope screen, and adjust the gate pulse level so that the gate pulse and the drain pulse can be monitored.
<b>Filename</b>	PlsdivSetSampling.exe
<b>Write Type</b>	String
<b>Read Type</b>	String. However, this command does not return any output parameter.
<b>Write String</b>	This command needs the following input parameters in this sequence.  <b>vg_high</b> Pulse high level, in V. Numeric value, -4.5 to 4.5. <b>vg_base</b> Pulse base level, in V. Numeric value, -4.5 to 4.5.

## PLSDIV TIS Commands

### PlsdivUninit

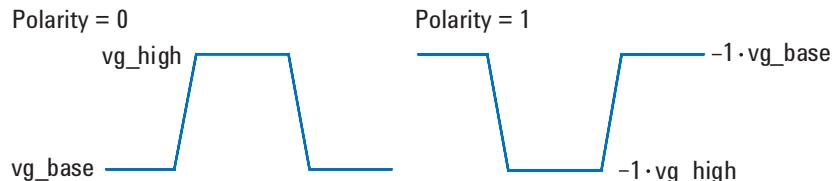

**polarity**      Polarity of pulse. Numeric value, 0 (positive) or 1 (negative).  
See Figure 6-7.

where,  $vg\_high > vg\_base$  and  $55 \text{ mV} < |vg\_high - vg\_base| < 4.5 \text{ V}$  must be satisfied.

To use the gate voltage automatic adjustment function, set  $|vg\_high - vg\_base| < 4.0 \text{ V}$ .

**Figure 6-7**

#### Pulse Level and Polarity

**Response**

Status code. Numeric value. To read the error message, use PlsdivErrorMessage. If no error is detected by this command execution, 0 is returned.

### PlsdivUninit

This command resets the pulsed IV test system (all instruments) and closes GPIB communication to each instrument.

After executing this command, any Plsdiv commands except for PlsdivInit cannot be executed. So, make sure to execute PlsdivInit before executing any command.

**Filename**

PlsdivUninit.exe

**Response**

Status code. Numeric value. To read the error message, use PlsdivErrorMessage. If no error is detected by this command execution, 0 is returned.

## **Status Code and Error Messages**

This chapter lists the status code and error messages of the pulsed IV solution for Agilent B1500A.

- Table 7-1, “Pulsed IV Library (Plsdiv commands, PLSDIV TIS) Error”
- Table 7-2, “Agilent 81110A Pulse Generator Driver Error”
- Table 7-3, “Agilent 54854A Digital Sampling Oscilloscope Driver Error”

If an error occurs, find solutions from error messages and instrument manuals, and solve problems. However, if the problems still remain, perform a self-test.

If the instrument fails in the self-test or the problems still remain, contact your nearest Agilent Technologies Service Center.

For the latest edition of electronic manuals and support information, visit the Agilent Technologies support site (<http://www.home.agilent.com>), and select United States Home > Products & Services > Test & Measurement Equipment > Parametric Test > Semiconductor Parameter/Device Analyzer Series > B1500A Semiconductor Device Analyzer. You can reach the Agilent B1500A support site.

**Table 7-1 Pulsed IV Library (Plsdiv commands, PLSDIV TIS) Error**

Status Code Name	Status Code	Error Number	Error Message
SYSPIV_NO_ERROR	0	0	No error.
SYSPIV_ERROR_NULL_PTR	BFFC1001	-4097	NULL pointer was detected. Specify the variable.
SYSPIV_ERROR_RESET_FAILED	BFFC1002	-4098	Reset failed. Reboot instruments.
SYSPIV_ERROR_UNEXPECTED	BFFC1003	-4099	Unexpected error occurred.
SYSPIV_ERROR_DETECTED	BFFC1004	-4100	Any error was detected.
SYSPIV_NO_LAST_COMMA	BFFC1005	-4101	Last comma is not found.
SYSPIV_INV_ASCII_NUMBER	BFFC1006	-4102	Invalid ASCII number was sent.
SYSPIV_DVRPIVDC_ERROR	BFFC1009	-4105	SMU error. See the message on the screen and instrument manual.
SYSPIV_ERROR_PARAMETER1	BFFC1010	-4112	Invalid value for parameter 1.
SYSPIV_ERROR_PARAMETER2	BFFC1011	-4113	Invalid value for parameter 2.
SYSPIV_ERROR_PARAMETER3	BFFC1012	-4114	Invalid value for parameter 3.
SYSPIV_ERROR_PARAMETER4	BFFC1013	-4115	Invalid value for parameter 4.
SYSPIV_ERROR_PARAMETER5	BFFC1014	-4116	Invalid value for parameter 5.
SYSPIV_ERROR_PARAMETER6	BFFC1015	-4117	Invalid value for parameter 6.
SYSPIV_ERROR_PARAMETER7	BFFC1016	-4118	Invalid value for parameter 7.
SYSPIV_ERROR_PARAMETER8	BFFC1017	-4119	Invalid value for parameter 8.
SYSPIV_ERROR_PARAMETER9	BFFC1018	-4120	Invalid value for parameter 9.
SYSPIV_ERROR_PARAMETER10	BFFC1019	-4121	Invalid value for parameter 10.
SYSPIV_ERROR_PARAMETER11	BFFC101A	-4122	Invalid value for parameter 11.
SYSPIV_ERROR_PARAMETER12	BFFC101B	-4123	Invalid value for parameter 12.

PIVCOMP_ERROR_DRAIN_CH_OFFSET_OUT_OF_LIMIT	BFFC11EC	-4588	Drain voltage monitor channel: Offset is out of the limit. Connect measurement cables properly.
PIVCOMP_ERROR_GATE_DELAY_OUT_OF_LIMIT	BFFC11ED	-4589	Delay time between trigger and gate pulse is out of the limit. Connect measurement cables properly.
PIVCOMP_ERROR_SYS_DELAY_OUT_OF_LIMIT	BFFC11EE	-4590	Delay time between gate pulse and drain pulse is out of the limit. Connect measurement cables properly.
PIVCOMP_ERROR_EQUIV_Z_OUT_OF_LIMIT	BFFC11F0	-4592	Drain current calculation factor is out of the limit. Reinstall the system compensation data.
PIVCOMP_ERROR_PERMISSION_INPUT_Z_FILE	BFFC11F1	-4593	Set read permission for \Program Files\Agilent\PLSDIV\PLSDIVExe\TISEExe\Spara folder, or delete all input_z_chx_yV.s1p files and execute PlsdivInit.
PIVCOMP_ERROR_AN_ERROR_ON_INPUT_Z_FILE	BFFC11F2	-4594	Delete all input_z_chx_yV.s1p files and execute PlsdivInit. If the error still remains, reinstall the pulsed IV software.
PIVCOMP_ERROR_PERMISSION_DRAIN_CABLING_FILE	BFFC11F3	-4595	Set read permission for \Program Files\Agilent\PLSDIV\PLSDIVExe\TISEExe\Spara folder, or delete all drain_cabling.s2p files and execute PlsdivInit.
PIVCOMP_ERROR_AN_ERROR_ON_DRAIN_CABLING_FILE	BFFC11F4	-4596	Delete all drain_cabling.s2p files and execute PlsdivInit. If the error still remains, reinstall the pulsed IV software.
PIVCOMP_ERROR_DRAIN_TRANS_OUT_OF_LIMIT	BFFC11FF	-4607	Drain voltage compensation factor is out of the limit. Reinstall the system compensation data.

## Status Code and Error Messages

**Table 7-2 Agilent 81110A Pulse Generator Driver Error**

Status Code Name	Status Code	Error Number	Error Message
DVRPGU_NO_ERROR	0	0	No error.
DVRPGU_ERROR_SELF_TEST_PASSED	0	0	Selftest passed.
DVRPGU_ERROR_SELF_CAL_PASSED	0	0	Calibration passed.
DVRPGU_INSTR_ERROR_SYSTEM_ERROR	BFFC0E00	-3584	System error occurred.
DVRPGU_INSTR_ERROR_NULL_PTR	BFFC0E01	-3585	NULL pointer was detected.
DVRPGU_INSTR_ERROR_RESET_FAILED	BFFC0E02	-3586	Reset operation failed. Reboot the instrument.
DVRPGU_INSTR_ERROR_UNEXPECTED	BFFC0E03	-3587	Unexpected error occurred.
DVRPGU_INSTR_ERROR_DETECTED	BFFC0E04	-3588	Instrument error occurred.
DVRPGU_INSTR_NO_LAST_COMMA	BFFC0E05	-3589	Nth comma is not found in IDN string.
DVRPGU_INSTR_INV_ASCII_NUMBER	BFFC0E06	-3590	ASCII to numeric conversion error.
DVRPGU_INSTR_ERROR_PARAMETER1	BFFC0E10	-3600	Invalid value for parameter 1.
DVRPGU_INSTR_ERROR_PARAMETER2	BFFC0E11	-3601	Invalid value for parameter 2.
DVRPGU_INSTR_ERROR_PARAMETER3	BFFC0E12	-3602	Invalid value for parameter 3.
DVRPGU_INSTR_ERROR_PARAMETER4	BFFC0E13	-3603	Invalid value for parameter 4.
DVRPGU_INSTR_ERROR_PARAMETER5	BFFC0E14	-3604	Invalid value for parameter 5.
DVRPGU_INSTR_ERROR_PARAMETER6	BFFC0E15	-3605	Invalid value for parameter 6.
DVRPGU_INSTR_ERROR_PARAMETER7	BFFC0E16	-3606	Invalid value for parameter 7.
DVRPGU_INSTR_ERROR_PARAMETER8	BFFC0E17	-3607	Invalid value for parameter 8.
DVRPGU_INSTR_ERROR_PARAMETER9	BFFC0E18	-3608	Invalid value for parameter 9.
DVRPGU_INSTR_ERROR_PARAMETER10	BFFC0E19	-3609	Invalid value for parameter 10.
DVRPGU_INSTR_ERROR_PARAMETER11	BFFC0E1A	-3610	Invalid value for parameter 11.
DVRPGU_INSTR_ERROR_PARAMETER12	BFFC0E1B	-3611	Invalid value for parameter 12.

<b>Status Code Name</b>	<b>Status Code</b>	<b>Error Number</b>	<b>Error Message</b>
DVRPGU_INSTR_ERROR_PARAMETER13	BFFC0E1C	-3612	Invalid value for parameter 13.
DVRPGU_INSTR_ERROR_PARAMETER14	BFFC0E1D	-3613	Invalid value for parameter 14.
DVRPGU_INSTR_ERROR_PARAMETER15	BFFC0E1E	-3614	Invalid value for parameter 15.
DVRPGU_INSTR_ERROR_PARAMETER16	BFFC0E1F	-3615	Invalid value for parameter 16.
DVRPGU_ERROR_NO_CONFIG_FILE	BFFC0E20	-3616	Configuration file is not found. Reinstall the pulsed IV software.
DVRPGU_ERROR_PERMISSION_CONFIG_FILE	BFFC0E21	-3617	Configuration file permission error. Set read permission for this user.
DVRPGU_ERROR_AN_ERROR_ON_CONFIG_FILE	BFFC0E22	-3618	Configuration file open error. Reinstall the pulsed IV software.
DVRPGU_ERROR_KEYWORD_ON_CONFIG_FILE	BFFC0E23	-3619	Configuration file keyword error. Reinstall the pulsed IV software.
DVRPGU_ERROR_GPIB_NUM_ON_CONFIG_FILE	BFFC0E24	-3620	Invalid GPIB description. Reinstall the pulsed IV software.
DVRPGU_ERROR_ADDR_ON_CONFIG_FILE	BFFC0E25	-3621	Invalid BUS address. Reinstall the pulsed IV software.
DVRPGU_ERROR_PGU_TYPE_ON_CONFIG_FILE	BFFC0E26	-3622	Invalid PGU type. Reinstall the pulsed IV software.
DVRPGU_ERROR_CHANNEL_ON_CONFIG_FILE	BFFC0E27	-3623	Invalid channel description. Reinstall the pulsed IV software.
DVRPGU_ERROR_PERIOD_ON_CONFIG_FILE	BFFC0E28	-3624	Invalid period description. Reinstall the pulsed IV software.
DVRPGU_ERROR_WIDTH_ON_CONFIG_FILE	BFFC0E29	-3625	Invalid width description. Reinstall the pulsed IV software.
DVRPGU_ERROR_TRANSITION_ON_CONFIG_FILE	BFFC0E2A	-3626	Invalid transition description. Reinstall the pulsed IV software.
DVRPGU_ERROR_AMP_ON_CONFIG_FILE	BFFC0E2B	-3627	Invalid amplitude description. Reinstall the pulsed IV software.

## Status Code and Error Messages

Status Code Name	Status Code	Error Number	Error Message
DVRPGU_ERROR_OFFSET_ON_CONFIG_FILE	BFFC0E2C	-3628	Invalid offset description. Reinstall the pulsed IV software.
DVRPGU_ERROR_INT_IMP_ON_CONFIG_FILE	BFFC0E2D	-3629	Invalid internal impedance description. Reinstall the pulsed IV software.
DVRPGU_ERROR_EXT_IMP_ON_CONFIG_FILE	BFFC0E2E	-3630	Invalid external impedance description. Reinstall the pulsed IV software.
DVRPGU_ERROR_PGU_TYPE_NOT_MATCH	BFFC0E30	-3632	Instrument IDN does not match. Use the supported instrument.
DVRPGU_ERROR_CH_NOT_AVAILABLE	BFFC0E31	-3633	Specified channel is not installed. Use the channel installed.
DVRPGU_ERROR_DEVICE_IS_BUSY	BFFC0E32	-3634	Device is busy. Reset or reboot the instrument.
DVRPGU_ERROR_DEVICE_NOT_OPENED	BFFC0E33	-3635	Device is not ready. Connect the GPIB cable properly.
DVRPGU_ERROR_SELF_TEST_FAILED	BFFC0E34	-3636	Selftest failed.
DVRPGU_ERROR_SELF_CAL_FAILED	BFFC0E35	-3637	Calibration failed.
DVRPGU_ERROR_PERIOD_TOO_LONG	BFFC0E40	-3648	Period value must be =< 999.5 s or width +3.03 ns.
DVRPGU_ERROR_PERIOD_TOO_SHORT	BFFC0E41	-3649	Period must be >= 6.06 ns.
DVRPGU_ERROR_WIDTH_TOO_LONG	BFFC0E42	-3650	Width value must be =< 999 s.
DVRPGU_ERROR_WIDTH_TOO_SHORT	BFFC0E43	-3651	Width must be >= 3.03 ns.
DVRPGU_ERROR_TRANSITION_TOO_LONG	BFFC0E44	-3652	Transition time must be =< 200 ms or width/2.
DVRPGU_ERROR_TRANSITION_TOO_SHORT	BFFC0E45	-3653	Transition time must be >= 2 ns.
DVRPGU_ERROR_AMP_TOO_LARGE	BFFC0E46	-3654	Amplitude must be =< 10 V for 50 ohm system or 20 V for other cases.
DVRPGU_ERROR_AMP_TOO_SMALL	BFFC0E47	-3655	Amplitude must be >= 100 mV for 50 ohm system or 200 mV for other cases.

Status Code Name	Status Code	Error Number	Error Message
DVRPGU_ERROR_OFFSET_TOO_LARGE	BFFC0E48	-3656	Offset value must be =< +10 V.
DVRPGU_ERROR_OFFSET_TOO_SMALL	BFFC0E49	-3657	Offset value must be >= -10 V.
DVRPGU_ERROR_INT_IMP_INVALID	BFFC0E4A	-3658	Internal impedance must be 50 ohm or 1 Mohm.
DVRPGU_ERROR_EXT_IMP_INVALID	BFFC0E4B	-3659	External impedance must be 50 ohm to 1 Mohm.

DVRSCOPE_ERROR_NO_CONFIG_FILE	BFFC0F20	-3872	Configuration file is not found. Reinstall the pulsed IV software.
DVRSCOPE_ERROR_PERMISSION_CONFIG_FILE	BFFC0F21	-3873	Configuration file permission error. Set read permission for this user.
DVRSCOPE_ERROR_AN_ERROR_ON_CONFIG_FILE	BFFC0F22	-3874	Configuration file open error. Reinstall the pulsed IV software.
DVRSCOPE_ERROR_KEYWORD_ON_CONFIG_FILE	BFFC0F23	-3875	Configuration file keyword error. Reinstall the pulsed IV software.
DVRSCOPE_ERROR_GPIB_NUM_ON_CONFIG_FILE	BFFC0F24	-3876	Invalid GPIB description. Reinstall the pulsed IV software.
DVRSCOPE_ERROR_ADDR_ON_CONFIG_FILE	BFFC0F25	-3877	Invalid BUS address. Reinstall the pulsed IV software.
DVRSCOPE_ERROR_SCOPE_TYPE_ON_CONFIG_FILE	BFFC0F26	-3878	Invalid SCOPE type. Use the supported instrument.
DVRSCOPE_ERROR_SCOPE_TYPE_NOT_MATCH	BFFC0F30	-3888	Instrument IDN does not match. Use the supported instrument.

Status Code Name	Status Code	Error Number	Error Message
DVRSCOPE_ERROR_DEVICE_IS_BUSY	BFFC0F31	-3889	Device is busy. Reset or reboot the instrument.
DVRSCOPE_ERROR_DEVICE_NOT_OPENED	BFFC0F32	-3890	Device is not ready. Connect the GPIB cable properly.
DVRSCOPE_ERROR_SELF_TEST_FAILED	BFFC0F33	-3891	Selftest failed.
DVRSCOPE_ERROR_SOURCE_NAME	BFFC0F40	-3904	Invalid source name. The source name must be CHANNEL or FUNCTION.
DVRSCOPE_ERROR_CH_NUMBER	BFFC0F41	-3905	Channel number must be 1 to 4, or 1 to the number of channels installed.
DVRSCOPE_ERROR_DISP_STAT	BFFC0F42	-3906	Display status must be ON or OFF.
DVRSCOPE_ERROR_SWEEP_TIMEOUT	BFFC0F43	-3907	Connect trigger input cable properly or change timeout value.
DVRSCOPE_ERROR_MARKER_TYPE	BFFC0F44	-3908	Marker name must be A or B.
DVRSCOPE_ERROR_MARKER_POS	BFFC0F45	-3909	Change time value to display the marker in this time frame.
DVRSCOPE_ERROR_SAMPLING_RATE	BFFC0F46	-3910	Sampling rate must be =< 20 GSa/s.
DVRSCOPE_ERROR_SAMPLING_NUMBER	BFFC0F47	-3911	Sampling number must be < 262144.
DVRSCOPE_ERROR_AVERAGING	BFFC0F48	-3912	Averaging number must be 1 to 4095.
DVRSCOPE_ERROR_SMOOTHING	BFFC0F49	-3913	Smoothing number must be less than the sampling number.
DVRSCOPE_ERROR_TIME_SCALE	BFFC0F4A	-3914	Time scale must be 5 ps to 20 s.
DVRSCOPE_ERROR_TIME_OFFSET	BFFC0F4B	-3915	Horizontal offset value must be -4*scale to +4*scale.
DVRSCOPE_ERROR_VSCALE	BFFC0F4C	-3916	Voltage scale must be 1 mV to 1 V in 1-2-5 step.
DVRSCOPE_ERROR_VOFFSET	BFFC0F4D	-3917	Change vertical offset to display the waveform in this screen.

## Status Code and Error Messages

Status Code Name	Status Code	Error Number	Error Message
DVRSCOPE_ERROR_TRIGGER_SOURCE	BFFC0F4E	-3918	Trigger source name must be 1, 2, 3, 4, AUX, or LINE.
DVRSCOPE_ERROR_TRIGGER_SLOPE	BFFC0F4F	-3919	Trigger slope must be POSITIVE or NEGATIVE.
DVRSCOPE_ERROR_TRIGGER_SWEEP	BFFC0F50	-3920	Sweep mode must be AUTO, TRIGGERED, or SINGLE.
DVRSCOPE_ERROR_TRIGGER_SENS	BFFC0F51	-3921	Trigger sensitivity must be LOW or HIGH.
DVRSCOPE_ERROR_TRIGGER_LEVEL	BFFC0F52	-3922	Trigger level must not exceed the displayed scale. Or it must be -5 to +5 V for the external trigger source.
DVRSCOPE_ERROR_TRIGGER_SOURCE_INVALID	BFFC0F53	-3923	Invalid trigger configuration. Not available for the LINE trigger source.
DVRSCOPE_ERROR_SWEEP_TIME_OUT	BFFC0F54	-3924	Change timeout value.
DVRSCOPE_ERROR_SKEW_VAL	BFFC0F55	-3925	Skew value must be -50 us to +150 us.
DVRSCOPE_ERROR_THRESHOLD_TYPE	BFFC0F56	-3926	Threshold type must be UPPER, MIDDLE, or LOW.
DVRSCOPE_ERROR_SLOPE_TYPE	BFFC0F57	-3927	Slope type must be + or -.
DVRSCOPE_ERROR_OCCURANCE_VAL	BFFC0F58	-3928	Number of occurrences must be 1 to 65534.
