

Agilent Technologies

85027C Option C10

Product Supplement

The Agilent 85027C Option C10 is identical to the standard Agilent 85027C, except the W1, Input/DC Power Supply Cable is 10 feet long instead of the standard 4 foot long cable.

There are no changes to the performance specification, as described in the standard Agilent 85027C Operating and Service Manual. Make note that the only change would be to the Supplemental Characteristics for the cable length of the Agilent 85027C Operating and Service Manual.

Inspect the shipping container. If the container or packing material is damaged, keep it until the contents of the shipment have been checked mechanically and electrically. If there is mechanical damage or if the instrument does not pass the performance tests, notify the nearest Agilent Technologies sales or service office. Keep the damaged shipping materials (if any) for inspection by the carrier and an Agilent Technologies representative.

Materials Description

Description	Part Number	Quantity
10 Foot Power Supply Cable	85025-60047*	1
4 Foot Power Supply Cable	85025-60003	-1

The part indicated with an asterisk (*) are unique to this special option. To order replacement parts, please contact the Component Test PGU with the part number. If ordering parts through your local Agilent Technologies Sales or Service Center, specify that asterisk parts are ordered through the Component Test PGU.

Please verify that you have received all of the above items in your shipment. If all items are not received, please contact your local Agilent Technologies Sales or Service Office so they may contact the factory. See table below.
