Agilent Technologies E4428C/38C ESG Signal Generators

This guide applies to the following signal generator models:

E4428C ESG Analog Signal Generator

E4438C ESG Vector Signal Generator

Due to our continuing efforts to improve our products through firmware and hardware revisions, signal generator design and operation may vary from descriptions in this guide. We recommend that you use the latest revision of this guide to ensure you have up-to-date product information. Compare the print date of this guide (see bottom of page) with the latest revision, which can be downloaded from the following website:

1 SCPI Basics

This chapter describes how SCPI information is organized and presented in this guide. An overview of the SCPI language is also provided. This Chapter contains the following major sections:

- [“Command Reference Information” on page 2](#)
- [“SCPI Basics” on page 3](#)

Command Reference Information

SCPI Command Listings

The Table of Contents lists the Standard Commands for Programmable Instruments (SCPI) without the parameters. The SCPI subsystem name will generally have the first part of the command in parenthesis that is repeated in all commands within the subsystem. The title(s) beneath the subsystem name is the remaining command syntax. The following example demonstrates this listing:

```
Communication Subsystem (:SYSTem:COMMunicate)
:PMETer:CHANnel
:SERial:ECHO
```

The following examples show the complete commands from the above Table of Contents listing:

```
:SYSTem:COMMunicate:PMETer:CHANnel
:SYSTem:COMMunicate:SERial:ECHO
```

Key and Data Field Cross Reference

The index is set up so applicable key and data field names can be cross-referenced to the appropriate SCPI command. There are two headings in the index where the key and data field names can be found:

- individual softkey, hardkey, or data field name
- subsystem name

Supported Field

Within each command section, the Supported heading describes which signal generator configurations are supported by the SCPI command. When “All Models” is shown next to this heading, all signal generator configurations are supported by the SCPI command. When “All with Option xxx” is shown next to this heading, only the stated option(s) is supported.

SCPI Basics

This section describes the general use of the SCPI language for the ESG. It is not intended to teach you everything about the SCPI language; the SCPI Consortium or IEEE can provide that level of detailed information. For a list of the specific commands available for the signal generator, refer to the table of contents.

For additional information, refer to the following publications:

- IEEE Standard 488.1-1987, IEEE Standard Digital Interface for Programmable Instrumentation. New York, NY, 1998.
- IEEE Standard 488.2-1992, IEEE Standard Codes, Formats, Protocols and Command Commands for Use with ANSI/IEEE Standard 488.1-1987. New York, NY, 1998.

Common Terms

The following terms are used throughout the remainder of this section:

Command	A command is an instruction in SCPI consisting of mnemonics (keywords), parameters (arguments), and punctuation. You combine commands to form messages that control instruments.
Controller	A controller is any device used to control the signal generator, for example a computer or another instrument.
Event Command	Some commands are events and cannot be queried. An event has no corresponding setting; it initiates an action at a particular time.
Program Message	A program message is a combination of one or more properly formatted commands. Program messages are sent by the controller to the signal generator.
Query	A query is a special type of command used to instruct the signal generator to make response data available to the controller. A query ends with a question mark. Generally you can query any command value that you set.
Response Message	A response message is a collection of data in specific SCPI formats sent from the signal generator to the controller. Response messages tell the controller about the internal state of the signal generator.

Command Syntax

A typical command is made up of keywords prefixed with colons (:). The keywords are followed by parameters. The following is an example syntax statement:

```
[ :SOURce ] :POWer [ :LEVel ] MAXimum | MINimum
```

In the example above, the [:LEVel] portion of the command immediately follows the :POWer portion with no separating space. The portion following the [:LEVel], MINimum | MAXimum, are the parameters (argument for the command statement). There is a separating space (white space) between the command and its parameter.

Additional conventions in syntax statements are shown in [Table 1-1](#) and [Table 1-2](#).

Table 1-1 Special Characters in Command Syntax

Characters	Meaning	Example
	A vertical stroke between keywords or parameters indicates alternative choices. For parameters, the effect of the command varies depending on the choice.	[:SOURce] :AM: MOD DEEP NORMAl DEEP or NORMAl are the choices.
[]	Square brackets indicate that the enclosed keywords or parameters are optional when composing the command. These implied keywords or parameters will be executed even if they are omitted.	[:SOURce] :FREQuency [:CW] ? SOURce and CW are optional items.
< >	Angle brackets around a word (or words) indicate they are not to be used literally in the command. They represent the needed item.	[:SOURce] :FREQuency : START <val> <unit> In this command, the words <val> and <unit> should be replaced by the actual frequency and unit. :FREQuency : START 2.5GHZ
{ }	Braces indicate that parameters can optionally be used in the command once, several times, or not at all.	[:SOURce] :LIST : POWER <val> { , <val> } a single power listing: LIST : POWER 5 a series of power listings: LIST : POWER 5 , 10 , 15 , 20

Table 1-2 Command Syntax

Characters, Keywords, and Syntax	Example
Upper-case lettering indicates the minimum set of characters required to execute the command.	[:SOURce] :FREQuency [:CW] ?, FREQ is the minimum requirement.
Lower-case lettering indicates the portion of the command that is optional; it can either be included with the upper-case portion of the command or omitted. This is the flexible format principle called forgiving listening. Refer to “Command Parameters and Responses” on page 7 for more information.	:FREQuency Either :FREQ, :FREQuency, or :FREQUENCY is correct.
When a colon is placed between two command mnemonics, it moves the current path down one level in the command tree. Refer to “Command Tree” on page 6 more information on command paths.	:TRIGger :OUTPut :POLarity? TRIGger is the root level keyword for this command.
If a command requires more than one parameter, you must separate adjacent parameters using a comma. Parameters are not part of the command path, so commas do not affect the path level.	[:SOURce] :LIST: DWELl <val> { , <val> }
A semicolon separates two commands in the same program message without changing the current path.	:FREQ 2.5GHZ ; :POW 10DBM
White space characters, such as <tab> and <space>, are generally ignored as long as they do not occur within or between keywords. However, you must use white space to separate the command from the parameter, but this does not affect the current path.	:FREQ uency or :POWER :LEVel are not allowed. A <space> between :LEVel and 6.2 is mandatory. :POWER :LEVel 6.2

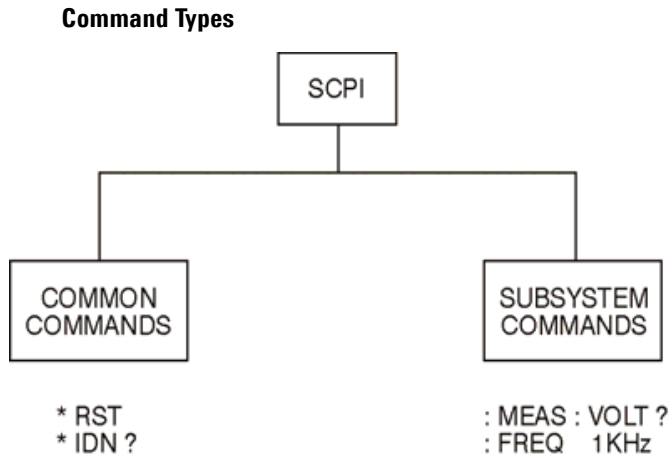

Command Types

Commands can be separated into two groups: common commands and subsystem commands. [Figure 1-1](#), shows the separation of the two command groups.

Common commands are used to manage macros, status registers, synchronization, and data storage and are defined by IEEE 488.2. They are easy to recognize because they all begin with an asterisk. For example *IDN?, *OPC, and *RST are common commands. Common commands are not part of any subsystem and the signal generator interprets them in the same way, regardless of the current path setting.

Subsystem commands are distinguished by the colon (:). The colon is used at the beginning of a command statement and between keywords, as in :FREQUency[:CW?]. Each command subsystem is a set of commands that roughly correspond to a functional block inside the signal generator. For example, the power subsystem (:POWer) contains commands for power generation, while the status subsystem (:STATus) contains commands for controlling status registers.

Figure 1-1

ck709a

Command Tree

Most programming tasks involve subsystem commands. SCPI uses a structure for subsystem commands similar to the file systems on most computers. In SCPI, this command structure is called a command tree and is shown in [Figure 1-2](#).

Figure 1-2

Simplified Command Tree

ck710a

The command closest to the top is the root command, or simply “the root.” Notice that you must follow a particular path to reach lower level commands. In the following example, :POWer represents AA, :ALC

represents BB, :SOURce represents GG. The complete command path is :POWer:ALC:SOURce? (:AA:BB:GG).

Paths Through the Command Tree

To access commands from different paths in the command tree, you must understand how the signal generator interprets commands. The parser, a part of the signal generator firmware, decodes each message sent to the signal generator. The parser breaks up the message into component commands using a set of rules to determine the command tree path used. The parser keeps track of the current path (the level in the command tree) and where it expects to find the next command statement. This is important because the same keyword may appear in different paths. The particular path is determined by the keyword(s) in the command statement.

A message terminator, such as a <new line> character, sets the current path to the root. Many programming languages have output statements that automatically send message terminators.

NOTE The current path is set to the root after the line-power is cycled or when *RST is sent.

Command Parameters and Responses

SCPI defines different data formats for use in program and response messages. It does this to accommodate the principle of forgiving listening and precise talking. For more information on program data types refer to IEEE 488.2.

Forgiving listening means the command and parameter formats are flexible.

For example, with the :FREQuency:REFerence:STATe ON|OFF|1|0 command, the signal generator accepts :FREQuency:REFerence:STATe ON, :FREQuency:REFerence:STATe 1, :FREQ:REF:STAT ON, :FREQ:REF:STAT 1 to turn on the frequency reference mode.

Each parameter type has one or more corresponding response data types. A setting that you program using a numeric parameter returns either real or integer response data when queried. Response data (data returned to the controller) is more concise and restricted, and is called precise talking.

Precise talking means that the response format for a particular query is always the same.

For example, if you query the power state (:POWer:ALC:STATe?) when it is on, the response is always 1, regardless of whether you previously sent :POWer:ALC:STATe 1 or :POWer:ALC:STATe ON. [Table 1-3](#) shows the response for a given parameter type.

Table 1-3 Parameter and Response Types

Parameter Types	Response Data Types
Numeric	Real, Integer
Extended Numeric	Real, Integer
Discrete	Discrete
Boolean	Numeric Boolean
String	String

Numeric Parameters

Numeric parameters are used in both common and subsystem commands. They accept all commonly used decimal representations of numbers including optional signs, decimal points, and scientific notation.

If a signal generator setting is programmed with a numeric parameter which can only assume a finite value, it automatically rounds any entered parameter which is greater or less than the finite value. For example, if a signal generator has a programmable output impedance of 50 or 75 ohms, and you specified 76.1 for the output impedance, the value is rounded to 75. The following are examples of numeric parameters:

- 100 no decimal point required
- 100. fractional digits optional
- 1.23 leading signs allowed
- 4.56E<space>3 space allowed after the E in exponential
- 7.89E-001 use either E or e in exponential
- +256 leading + allowed
- .5 digits left of decimal point optional

Extended Numeric Parameters

Most subsystems use extended numeric parameters to specify physical quantities. Extended numeric parameters accept all numeric parameter values and other special values as well.

The following are examples of extended numeric parameters:

100	any simple numeric value
1.2GHZ	GHZ can be used for exponential (E009)
200MHZ	MHZ can be used for exponential (E006)
-100mV	negative 100 millivolts
10DEG	10 degrees

Extended numeric parameters also include the following special parameters:

DEfault	resets the parameter to its default value
UP	increments the parameter
DOWN	decrements the parameter
MINimum	sets the parameter to the smallest possible value
MAXimum	sets the parameter to the largest possible value

Discrete Parameters

Discrete parameters use mnemonics to represent each valid setting. They have a long and a short form, just like command mnemonics. You can mix upper and lower case letters for discrete parameters.

The following examples of discrete parameters are used with the command
:TRIGger[:SEQuence]:SOURce BUS|IMMediate|EXTernal.

BUS	GPIB, LAN, or RS-232 triggering
IMMediate	immediate trigger (free run)
EXTernal	external triggering

Although discrete parameters look like command keywords, do not confuse the two. In particular, be sure to use colons and spaces properly. Use a colon to separate command mnemonics from each other and a space to separate parameters from command mnemonics.

The following are examples of discrete parameters in commands:

```
TRIGger:SOURce BUS
TRIGger:SOURce IMMediate
TRIGger:SOURce EXTernal
```

Boolean Parameters

Boolean parameters represent a single binary condition that is either true or false. The two-state boolean parameter has four arguments. The following list shows the arguments for the two-state boolean parameter:

ON	boolean true, upper/lower case allowed
OFF	boolean false, upper/lower case allowed
1	boolean true
0	boolean false

String Parameters

String parameters allow ASCII strings to be sent as parameters. Single or double quotes are used as delimiters.

The following are examples of string parameters:

```
'This is valid'  
"This is also valid"  
'SO IS THIS'
```

Real Response Data

Real response data represent decimal numbers in either fixed decimal or scientific notation. Most high-level programming languages that support signal generator input/output (I/O) handle either decimal or scientific notation transparently.

The following are examples of real response data:

```
+4.000000E+010, -9.990000E+002  
-9.990000E+002  
+4.000000000000000E+010  
+1  
0
```

Integer Response Data

Integer response data are decimal representations of integer values including optional signs. Most status register related queries return integer response data.

The following are examples of integer response data:

0	signs are optional
+100	leading + allowed
-100	leading – allowed
256	never any decimal point

Discrete Response Data

Discrete response data are similar to discrete parameters. The main difference is that discrete response data only returns the short form of a particular mnemonic, in all upper case letters.

The following are examples of discrete response data:

```

IMM
EXT
INT
NEG
  
```

Numeric Boolean Response Data

Boolean response data returns a binary numeric value of one or zero.

String Response Data

String response data are similar to string parameters. The main difference is that string response data returns double quotes, rather than single quotes. Embedded double quotes may be present in string response data. Embedded quotes appear as two adjacent double quotes with no characters between them.

The following are examples of string response data:

```

"This is a string"
"one double quote inside brackets: [""]"
>Hello!"
  
```

Program Messages

The following commands will be used to demonstrate the creation of program messages:

```
[ :SOURce ] :FREQuency :START      [ :SOURce ] :FREQuency :STOP  
[ :SOURce ] :FREQuency [ :CW ]     [ :SOURce ] :POWer [ :LEVel ] :OFFSet
```

Example 1

```
:FREQuency :START 500MHZ ; STOP 1000MHZ
```

This program message is correct and will not cause errors; `START` and `STOP` are at the same path level. It is equivalent to sending the following message:

```
FREQuency :START 500MHZ ; FREQuency :STOP 1000MHZ
```

Example 2

```
:POWer 10DBM ; :OFFSet 5DB
```

This program message will result in an error. The message makes use of the default `POWER [:LEVel]` node (root command). When using a default node, there is no change to the current path position. Since there is no command `OFFSet` at the root level, an error results.

The following example shows the correct syntax for this program message:

```
:POWer 10DBM ; :POWer :OFFSet 5DB
```

Example 3

```
:POWer :OFFSet 5DB ; POWer 10DBM
```

This program message results in a command error. The path is dropped one level at each colon. The first half of the message drops the command path to the lower level command `OFFSet`; `POWer` does not exist at this level.

The `POWER 10DBM` command is missing the leading colon and when sent, it causes confusion because the signal generator cannot find `POWER` at the `POWER :OFFSet` level. By adding the leading colon, the current path is reset to the root. The following shows the correct program message:

```
:POWer :OFFSet 5DB ; :POWer 10DBM
```

Example 4

```
FREQ 500MHZ ; POW 4DBM
```

In this example, the keyword short form is used. The program message is correct because it utilizes the default nodes of `:FREQ [:CW]` and `:POW [:LEVel]`. Since default nodes do not affect the current path, it is not necessary to use a leading colon before `FREQ` or `POW`.

File Name Variables

File name variables designate a data file and file path. File name variables are used in the SCPI command syntax whenever files are accessed. The name of the file is always required, but the file path can sometimes be optional or be designated using different formats. The following table shows these different file path formats:

Format	File Name Variable	Example
Format 1	"<file name>"	"Test_Data"
Format 2	"<file name@msus>"	"Test_Data@SEQ"
Format 3	"<msus:file name>"	"SEQ:Test_Data"
Format 4	"</user/directory/file name>"	"/USER/SEQ/Test_Data"

Formats 2–4 offer programming flexibility and are equivalent. Format 1 can only be used with SCPI commands that imply the path name as part of the command syntax. Typically, SCPI load commands that access user-data files do not need to have a file path designated.

See [Table 1-4 on page 14](#) for information on file types and directories.

NOTE The maximum length for a file name is 23 characters, excluding the file path.

Example Using Format 1

```
:CORR:FLAT:LOAD "FLAT_DATA"
```

The preceding example loads user-flatness data from a file called `FLAT_DATA` located in the `USERFLAT` directory. No file path is needed as the command syntax implies the directory where the file is located.

Example Using Format 2

```
:MEM:COPY "IQ_DATA@NVWFM", "Test_DATA@WFM1"
```

The preceding example copies a file named `IQ_DATA` located in the `WAVEFORM` directory to a file named `Test_DATA` in volatile waveform memory (`WFM1`).

Example Using Format 3

```
:MEM:COPY "NVWFM:IQ_DATA", "WFM1:Test_DATA"
```

The preceding example copies a file named `IQ_DATA` located in the `WAVEFORM` directory to a file named `Test_DATA` in volatile waveform memory (`WFM1`).

Example Using Format 4

```
:MEM:COPY "/USER/WAVEFORM/IQ_DATA", "/USER/BBG1/WAVEFORM/IQ_DATA"
```

The preceding example copies a file named IQ_DATA located in the WAVEFORM directory to a file named IQ_DATA in volatile waveform memory (WFM1).

The following examples show commands, with different formats, that can be used to download a waveform file named Test_Data into the signal generator's volatile waveform memory (WFM1):

Command Syntax Format 3

```
:MEMory:DATA "WFM1:Test_Data", #ABC
```

Command Syntax Format 4

```
:MEMory:DATA "/USER/BBG1/WAVEFORM/Test_Data", #ABC
```

These commands are equivalent. The data block, #ABC, is described as follows:

- # This character indicates the beginning of the data block
- A Number of digits in the byte count B
- B Byte count in C
- C Waveform data

Refer to “:DATA” on page 103 and the *E4428C/38C ESG Signal Generators Programming Guide* for more information on data blocks and downloading waveform data.

File Types and Directory Structure

The signal generator uses a computer directory model structure for file storage. The top level directory is called the USER directory. All other directories are subdirectories located under the USER directory. Each subdirectory is dedicated to the type of data stored. For example, the FIR directory is used to store finite impulse filter (FIR) coefficient data whereas the MARKERS directory is used to store marker data.

The following table lists signal generator the subdirectories and file paths where file types are stored.

MSUS (Mass Storage Unit Specifier) Variable

The variable "`<msus>`" enables a command to be file type specific when working with user files. Some commands use it as the only command parameter, while others can use it in conjunction with a file name when a command is not file type specific. When used with a file name, it is similar to Format 2 in the [“File Name Variables”](#) section on [page 13](#). The difference is the file type specifier (`msus`) occupies its own variable and is not part of the file name syntax.

The following examples illustrate the usage of the variable "`<msus>`" when it is the only command parameter:

Command Syntax with the msus variable

```
:MMEMory:CATalog? "<msus>"
```

Command Syntax with the file system

```
:MMEMory:CATalog? "LIST:"
```

The variable "`<msus>`" is replaced with "`LIST:`". When the command is executed, the output displays only the files from the List file system.

The following examples illustrate the usage of the variable "<file name>" with the variable "<msus>":

Command Syntax with the file name and msus variables

```
:MMEMory:DELeTe[:NAME] "<file name>" , [ "<msus>" ]
```

Command Syntax with the file name and file system

```
:MMEMory:DELeTe:NAME "LIST_1" , "LIST: "
```

The command from the above example cannot discern which file system LIST_1 belongs to without a file system specifier and will not work without it. When the command is properly executed, LIST_1 is deleted from the List file system.

The following example shows the same command, but using Format 2 from the [“File Name Variables”](#) section on [page 13](#):

```
:MMEMory:DELeTe:NAME "LIST_1@LIST"
```

When a file name is a parameter for a command that is not file system specific, either format ("<file name>","<msus>" or "<file name@msus>") will work.

Refer to [Table 1-4 on page 14](#) for a listing of the file systems and types.

Quote Usage with SCPI Commands

As a general rule, programming languages require that SCPI commands be enclosed in double quotes as shown in the following example:

```
" :FM:EXTErnal:IMPedance 600 "
```

However when a string is the parameter for a SCPI command, additional quotes or other delimiters may be required to identify the string. Your programming language may use two sets of double quotes, one set of single quotes, or back slashes with quotes to signify the string parameter. The following examples illustrate these different formats:

```
"MEMory:LOAD:LIST "myfile" " " used in BASIC programming languages
```

```
"MEMory:LOAD:LIST \"myfile\" " " used in C, C++, Java, and PERL
```

```
"MEMory:LOAD:LIST 'myfile' " accepted by most programming languages
```

Consult your programming language reference manual to determine the correct format.

Binary, Decimal, Hexadecimal, and Octal Formats

Command values may be entered using a binary, decimal, hexadecimal, or octal format. When the binary, hexadecimal, or octal format is used, their values must be preceded with the proper identifier. The decimal format (default format) requires no identifier and the signal generator assumes this format when a numeric value is entered without one. The following list shows the identifiers for the formats that require them:

- #B identifies the number as a binary numeric value (base-2).
- #H identifies the number as a hexadecimal alphanumeric value (base-16).
- #Q identifies the number as a octal alphanumeric value (base-8).

The following are examples of SCPI command values and identifiers for the decimal value 45:

#B101101	binary equivalent
#H2D	hexadecimal equivalent
#Q55	octal equivalent

The following example sets the RF output power to 10 dBm (or the equivalent value for the currently selected power unit, such as DEUV or DEUVEMF) using the hexadecimal value 000A:

```
:POW #H000A
```

A unit of measure, such as DBM or mV, will not work with the values when using a format other than decimal.

The following example sets the bluetooth board address to FFBF7 (hexadecimal):

```
:RADio:BLUEtooth:ARB:BDADdr #HFFBF7
```

2 Basic Function Commands

This chapter provides SCPI descriptions for subsystems dedicated to signal generator operations common to most ESG Signal Generators. This chapter contains the following major sections:

- “Correction Subsystem ([:SOURce]:CORRection)” on page 20
- “Digital Modulation Subsystem—E4438C ([:SOURce])” on page 22
- “Frequency Subsystem ([:SOURce])” on page 37
- “List/Sweep Subsystem ([:SOURce])” on page 48
- “Power Subsystem ([:SOURce]:POWer)” on page 57

Correction Subsystem ([:SOURce]:CORRection)

:FLATness:LOAD

Supported All Models

```
[ :SOURce ] :CORRection :FLATness :LOAD "<file name>"
```

This command loads a user-flatness correction file. The "<file name>" variable is the name of the file located in the Catalog of USERFLAT Files. The directory path is implied in the command and need not be specified in the variable name. For more information on file name syntax, refer to [“File Name Variables” on page 13](#).

Key Entry Load From Selected File

:FLATness:PAIR

Supported All Models

```
[ :SOURce ] :CORRection :FLATness :PAIR <freq.>[<freq suffix>],  
<corr.>[<corr suffix>]
```

This command sets a frequency and amplitude correction pair.

<corr.> This variable is the power correction.

	Option 506: 100kHz–6GHZ	–136 to 25DB	N/A

Key Entry Configure Cal Array

Remarks The maximum number of points that can be entered is 1601. Options 501, 502, and 504 are specific to the E4438C.

:FLATness:POINts

Supported All Models

```
[ :SOURce ] :CORRection :FLATness :POINts?
```

This query returns the number of points in the user-flatness correction file.

:FLATness:PRESet

Supported All Models

CAUTION The current correction data will be overwritten once this command is executed. Save the current data if needed. Refer to “:FLATness:STORE” on page 21 for storing user-flatness files.

[:SOURCE] :CORREction :FLATness :PRESet

This command presets the user-flatness correction to a factory-defined setting that consists of one point.

Key Entry Preset List

:FLATness:STORE

Supported All Models

[:SOURCE] :CORREction :FLATness :STORE "<file name>"

This command stores the current user-flatness correction data to a file named by the :CORREction:FLATness:STORE. The directory path is implied in the command and need not be specified in the "<file name>" variable.

Key Entry Store To File

Remarks For information on file name syntax, refer to “File Name Variables” on page 13.

:DM:EXTernal:ALC:BANDwidth | BWIDth

Supported All Models

NOTE Refer to the *Programming Compatibility Guide* for information on this command. This command was replaced by the “:ALC:BANDwidth|BWIDth” command shown on [page 57](#) and the “:ALC:BANDwidth” command on [page 58](#).

:DM:EXTernal:HCRest[:STATe]

Supported E4438C

```
[ :SOURce ] :DM:EXTernal:HCRest [ :STATe ] ON | OFF | 1 | 0  
[ :SOURce ] :DM:EXTernal:HCRest [ :STATe ] ?
```

This command changes the operating condition to accommodate I/Q inputs with a high crest factor.

ON(1) This choice turns high crest mode on for externally applied signals with high crest factors. High crest mode allows the signal generator to process these signals with less distortion. For crest factors higher than 4 dB, I/Q drive levels should be reduced by 1 dB for each dB above that level. In high crest mode, the maximum output level is reduced and power level accuracy is degraded.

OFF(0) This choice disables the high crest mode.

[ :SOURce ] :DM:EXTernal:FILTer ?
```

This command selects the filter or through path for I/Q signals routed to the rear panel I and Q outputs. Selecting a filter using this command will automatically set “:DM:EXTernal:FILTer:AUTO” on [page 23](#) to OFF(0) mode.

40e6 This choice applies a 40 MHz baseband filter.

 [:SOURce] :DM:EXTernal:SOURce?

This command selects the I/Q signal source that is routed to the rear panel I and Q output connectors.

EXTernal	This choice routes a portion of the externally applied signals at the 50 ohm I and Q input connectors to the rear panel I and Q output connectors.
INTernal	This choice is for backward compatibility with the appropriate ESG E44xxB and performs the same function as the BBG1 selection.
BBG1	This choice routes a portion of the baseband generator I/Q signals to the rear panel I and Q connectors and requires Option 001/601 or 002/602.
EXT600	This choice routes a portion of the externally applied signals at the 600 ohm I and Q input connectors to the rear panel I and Q output connectors.
OFF	This choice disables the output to the rear panel I and Q output connectors.

SUM	This choice routes a portion of the summed I/Q signals from source one and two, to the rear panel I and Q output connectors. See “:DM:SRATio” on page 35 for setting the summing ratio of the I/Q signals between source one and two.

:DM:IQADjustment:QSKew

Supported E4438C

```
[ :SOURCE ] :DM:IQADjustment:QSKew <val>  
[ :SOURCE ] :DM:IQADjustment:QSKew?
```

This command adjusts the phase angle (quadrature skew) between the I and Q vectors by increasing or decreasing the Q phase angle.

The <val> variable is expressed in degrees with a minimum resolution of 0.1.

If the signal generator is operating at frequencies greater than 3.3 GHz, quadrature skew settings greater than ± 5 degrees will not be within specifications.

Positive skew increases the angle from 90 degrees while negative skew decreases the angle from 90 degrees. When the quadrature skew is zero, the phase angle between the I and Q vectors is 90 degrees.

This command is effective only if the state of the I/Q adjustment function is set to ON. Refer to “:DM:IQADjustment[:STATe]” on page 31.

Example

```
:DM:IQAD:QSK 4.5
```

The preceding example increases the phase angle by 4.5 degrees.

```
[ :SOURce ] :DM:IQADjustment:SKEW[ :DELay ] <val>
```

```
[ :SOURce ] :DM:IQADjustment:SKEW?
```

This command changes the input skew which is a time delay difference between the I and Q signals. Equal and opposite skew is applied to both I and Q and affects the RF Output and I/Q output paths simultaneously. A positive value delays the I signal relative to the Q signal, and a negative value delays the Q signal relative to the I signal.

If the internal I/Q correction path is set to RF or BB the I/Q signals are already optimized and adjusting I/Q skew would add an impairment to the signals. If the internal I/Q correction path is set to Off, then adjusting the I/Q skew could improve the I/Q signals. The I/Q skew adjustment cannot be performed on the MSK, FSK, and C4FM constant envelope modulations.

I/Q skew adjustments are preserved when the instrument state is saved. I/Q skew adjustments are also preserved when instrument settings are changed. If the signal generator is calibrated, the skew adjustments are added to the calibration value used for the given signal generator state. If the signal generator is uncalibrated, the skew adjustments are re-applied directly.

Using I/Q skew while playing a user FIR file greater than 32 symbols will generate an error.

The variable <val> is expressed in seconds. Range limits are determined by the modulation configuration but is limited to a maximum of ± 2 seconds.

Example

```
:DM:IQAD:SKEW .5
```

The preceding example sets the time delay difference between the I and Q signals to 500 milliseconds.

```
*RST +0.00000000E+000

Key Entry **I/Q Timing Skew**

:DM:IQADjustment:SKEW:Path

Supported E4438C

```
[ :SOURce ] :DM:IQADjustment :SKEW:PATH RF BB
[ :SOURce ] :DM:IQADjustment :SKEW?
```

This command selects either the RF or BB (baseband) path as the path to which skew timing corrections will be applied. If there are no factory I/Q timing skew corrections data, then adjusting the I/Q timing skew for the selected path may improve the error vector magnitude (EVM) of the signal. Refer to the “[:DM:IQADjustment:SKEW](#)” on page 30 for more information.

If internal I/Q corrections are available for the RF or external I/Q output (BB) path then the I/Q signals are already optimized and adjusting I/Q skew for either path would add an impairment to the signal.

```
:DM:IQAD:SKEW:PATH RF

This command sets the power level difference (ratio) between the source one and source two signals when the two signals are summed together. A positive ratio value reduces the amplitude for source two, while a negative ratio value reduces the amplitude for source one.

The range for the summing ratio is dependent on the modulator attenuator (mod atten) setting for the signal generator that is summing the signals together. The minimum range is achieved when the modulator attenuator setting is zero and the maximum range is reached when the maximum attenuator value is used. The range can be calculated using the following formula:

$$\pm \text{Range} = 50 \text{ dB} + \text{Mod Atten}$$

[:SOURce] :DM:STATe?

This command enables or disables the I/Q modulator.

ON (1) This choice enables the internal I/Q modulator.

OFF (0) This choice disables the internal I/Q modulator. You can turn off the I/Q modulation with this choice even though a digital modulation format is enabled. With this configuration, the RF output signal will not be modulated, but the I/Q signals may be present at the rear panel I and Q outputs depending on the rear panel output selection.

:FREQuency:MODE

Supported All Models

```
[ :SOURce ] :FREQuency:MODE CW | FIXEd | LIST
[ :SOURce ] :FREQuency:MODE?
```

This command sets the frequency mode of the signal generator to CW or swept.

CW and FIXEd These choices are synonymous with one another and stops a frequency sweep, allowing the ESG to operate at a set frequency. Refer to “[:FREQuency\[:CW\]](#)” on [page 45](#) for setting the frequency in the CW mode and to “[:FREQuency:FIXEd](#)” on [page 40](#) for setting the frequency in the FIXEd mode.

LIST This choice selects the swept frequency mode. If sweep triggering is set to immediate along with continuous sweep mode, executing the command starts the LIST or STEP frequency sweep.

NOTE To perform a frequency and amplitude sweep, you must also select LIST as the power mode. See “[:MODE](#)” on [page 65](#) for selecting the list mode for an amplitude sweep.

:LIST:DWELl

Supported All Models

[:SOURce] :LIST:DWELl <val> { , <val> }

[:SOURce] :LIST:DWELl?

This command sets the dwell time for the current list sweep points.

The variable <val> is expressed in units of seconds with a 0.001 resolution.

NOTE The dwell time (<val>) does not begin until the signal generator has settled for the current frequency and/or amplitude change.

Range 0.001–60

Remarks Dwell time is used when IMMEDIATE is the trigger source. Refer to [“:LIST:TRIGger:SOURce” on page 53](#) for the trigger setting.

The dwell time is the amount of time the sweep is guaranteed to pause after setting the frequency and/or power for the current point.

The setting enabled by this command is not affected by signal generator power-on, preset, or *RST.

:LIST:DWELl:POINts

Supported All Models

[:SOURce] :LIST:DWELl :POINts?

This command queries the current list sweep file for the number of frequency points.

:LIST:MANual

Supported All Models

[:SOURCE] :LIST:MANual <val>

[:SOURCE] :LIST:MANual?

This command sets a list or step sweep point as the current sweep point controlling the frequency and power output.

Range List Sweep: 1–1601 Step Sweep: 2-65535

Key Entry **Manual Point**

Remarks If list or step mode is controlling frequency or power, or both, then the indexed point in the respective list(s) will be used.

Entering a value with this command will have no effect, unless MANual is the selected mode. Refer to “:LIST:MODE” on page 52 for setting the proper mode.

If the point selected is beyond the length of the longest enabled list, then the point will be set to the maximum possible point, and an error will be generated.

:LIST:MODE

Supported All Models

[:SOURce] :LIST:MODE AUTO | MANua1

[:SOURce] :LIST:MODE?

This command sets the operating mode for the current list or step sweep.

AUTO This choice enables the selected sweep type to perform a sweep of all points.

MANua1 This choice enables you to select a single sweep point. The selected point controls the frequency and/or amplitude according to the sweep type. Refer to “:LIST:MANua1” on page 51 for selecting a sweep point.

***RST** AUTO

:LIST:POWer

Supported All Models

[:SOURce] :LIST:POWer <val> { , <val> }

[:SOURce] :LIST:POWer?

This command sets the amplitude for the current list sweep points.

Range Refer to “[:LEVel][:IMMediate][:AMPLitude]” on page 68 for output power ranges.

Remarks The setting enabled by this command is not affected by signal generator power-on, preset, or *RST.

During an amplitude sweep operation, signal generators with Option UNB or Option 506 protect the step attenuator by automatically switching to attenuator hold (OFF) mode. The attenuator is locked at its current setting and the amplitude sweep range is limited to 40 dB.

The maximum number of list sweep points is 1,601.

Key Entry # Points

Power Subsystem (:SOURce):POWER

:ALC:BANDwidth | BWIDth

Supported All Models

```
[ :SOURce ] :POWer:ALC:BA NDwidth | BWIDth 100HZ | 1KHZ | 10KHZ
[ :SOURce ] :POWer:ALC:BA NDwidth | BWIDth?
```

This command sets the bandwidth of the automatic leveling control (ALC) loop. This is one of two commands that replace the :DM:EXTernal:ALC:BA NDwidth | BWIDth NORMal | NARRow command. The NARRow parameter in the old command corresponds to the 100HZ selection. The NORMal parameter in the old command corresponds to the ON parameter in the command “:ALC:BA NDwidth” on page 58.

- | | |
|-------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 100HZ | This choice selects a 100 Hz ALC bandwidth. This bandwidth has the longest settling time, but the least signal degradation and lowest error vector magnitude for digital signals. This is the auto selection for digital modulation. |
| 1KHZ | This choice selects a 1 kHz ALC bandwidth. This bandwidth is the auto selection for pulse modulation and AM modulation to a carrier frequency of 500 kHz. |
| 10KHZ | This choice selects a 10 kHz ALC bandwidth. This bandwidth has the fastest settling time, but the most signal degradation and highest error vector magnitude for digital signals. This is the auto selection for AM modulation above a 500 kHz carrier frequency and with FM/ΦM modulation. |

Example

```
:POW:ALC:BWID 1KHZ
```

The preceding example sets the ALC bandwidth to 1 kHz.

```
*RST                    10000
```

Key Entry **100 Hz 1kHz 10 kHz**

Remarks Use this command when the ALC is set to on. Refer to “:ALC[:STATe]” on page 61 for selecting the ALC on or off state. Refer to the *E4428C/38C ESG Signal Generators User’s Guide* for information on ALC bandwidth.

:ALC:BANDwidth**Supported** All Models

```
[:SOURce]:POWer:ALC:BANDwidth|BWIDth:AUTO ON|OFF|1|0
[:SOURce]:POWer:ALC:BANDwidth|BWIDth:AUTO?
```

This command turns the bandwidth (BW) auto state on or off.

The bandwidth auto function allows the signal generator to automatically select a bandwidth for the automatic leveling control (ALC) circuit. This is one of two commands that replace the `:DM:EXTernal:ALC:BANDwidth|BWIDth NORMAL|NARROW` command. The ON (1) selection in this command corresponds to the NORMAL parameter in the old command. The NARROW parameter in the old command corresponds to the 100HZ parameter used with the command `“:ALC:BANDwidth|BWIDth”` on page 57.

ON (1) This choice allows the signal generator to automatically select an ALC BW. The selection of the ALC BW depends on the signal generator modulation type as shown in the following table.

Modulation Type	Auto ALC Bandwidth Selection
Digital Modulation	100 Hz
Pulse Modulation	1 kHz
AM Modulation	10 kHz ¹ or 1 kHz
FM/ΦM Modulation	10 kHz

1. 10 kHz ALC bandwidth for carrier frequencies above 500 kHz

OFF (0) This choice disables automatic selection of the ALC BW, allowing you to select one of three ALC BWs: 100 Hz, 1 kHz, or 10 kHz. To select the desired ALC bandwidth, use the `“:ALC:BANDwidth|BWIDth”` command shown on page 57.

***RST** 1

Key Entry **Auto**

Remarks For more information on ALC bandwidth, refer to the *E4428C/38C ESG Signal Generators User's Guide*.

:ALC:LEVel

Supported All Models

```
[ :SOURce ] :POWer :ALC :LEVel <value>dB
[ :SOURce ] :POWer :ALC :LEVel ?
```

This command sets the automatic leveling control (ALC) level. Use this command after setting the attenuation auto mode to On. Refer to “:ATTenuation:AUTO” on page 64 for setting the attenuation auto mode.

The ALC is used to maintain the signal generator’s output power level by compensating for power fluctuations due to drift, band changes, or load variations. After you set the ALC level, the signal generator’s output power is monitored and corrected so that the power level setting is maintained.

Example

```
:POW:ALC:LEV 10DB
```

The preceding example sets the ALC to 10 dB.

:ALC:SEARCh

Supported All Models

```
[ :SOURce ] :POWer :ALC :SEARCh ON | OFF | 1 | 0 | ONCE
[ :SOURce ] :POWer :ALC :SEARCh ?
```

This command enables or disables the internal power search calibration. A power search is recommended for pulse-modulated signals with pulse widths less than one microsecond.

ON (1) This choice executes the power search automatically with each change in RF frequency or power.

OFF (0) This choice disables the automatic power search routine.

ONCE This choice executes a single power search of the current RF output signal.

***RST** 0

Key Entry **Power Search Manual Auto** **Do Power Search**

Remarks Use this command when the ALC state is set to OFF (0). Refer to “:ALC[:STATe]” on page 61 for setting the ALC state.

If ON was previously selected, executing ONCE will cause OFF to be the current selection after the power search is completed.

:ALC:SEARch:REFeRence

Supported All Models

```
[ :SOURce ] :POWer :ALC :SEARch :REFeRence FIXed |MODulated  
[ :SOURce ] :POWer :ALC :SEARch :REFeRence ?
```

This command sets either fixed or modulated modes of power search.

FIXed This choice uses a 0.5 volt reference.

MODulated This choice uses the RMS value of the current I/Q modulation.

***RST** MOD

Key Entry **Power Search Reference Fixed Mod**

:ALC:SEARch:SPAN:START

Supported All Models

```
[ :SOURce ] :POWer :ALC :SEARch :SPAN :START  
[ :SOURce ] :POWer :ALC :SEARch :SPAN :START ?
```

This command sets the start frequency for a span power search over a user specified range.

Key Entry **Start Frequency**

Remarks The start frequency has no default value. The start frequency value will be the last value set before powering off the instrument.

:ALC:SEARch:SPAN:STOP:SPAN:STOP

Supported All Models

```
[ :SOURce ] :POWer :ALC :SEARch :SPAN :STOP  
[ :SOURce ] :POWer :ALC :SEARch :SPAN :STOP ?
```

This command sets the stop frequency for a span power search over a user specified range.

Key Entry **Stop Frequency**

Remarks The stop frequency has no default value. The stop frequency value will be the last value set before powering off the instrument.

:ALC:SEARCh:SPAN:TYPE

Supported All Models

```
[ :SOURce ] :POWer :ALC :SEARCh :SPAN :TYPE FULL | USER  
[ :SOURce ] :POWer :ALC :SEARCh :SPAN :TYPE ?
```

This command enables you to select the frequency range for a span power search. You can specify the range (USER) or you can select the full range (FULL) of the signal generator.

Key Entry Span Type User Full

:ALC:SEARCh:SPAN[:STATe]

Supported All Models

```
[ :SOURce ] :POWer :ALC :SEARCh :SPAN [ :STATe ] ON | OFF | 1 | 0  
[ :SOURce ] :POWer :ALC :SEARCh :SPAN [ :STATe ] ?
```

This command enables (1) or disables (0) the span mode, allowing you to perform power searches over a selected range of frequencies. The power search corrections are then stored and used whenever the signal generator is tuned within the selected range.

:ALC[:STATe]

Supported All Models

```
[ :SOURce ] :POWer :ALC [ :STATe ] ON | OFF | 1 | 0  
[ :SOURce ] :POWer :ALC [ :STATe ] ?
```

This command enables or disables the automatic leveling control (ALC) circuit.

***RST** 1

Key Entry ALC Off On

Remarks The purpose of the ALC circuit is to hold output power at a desired level by adjusting the signal generator's power circuits to compensate for power drift. Power drift occurs over time and changes in temperature. Refer to the *E4428C/38C ESG Signal Generators User's Guide* for more information on the ALC.

:ALternate:AMPLitude

Supported All Models except signal generators with Option UNB or 506.

```
[ :SOURce ] :POWer :ALternate :AMPLitude <val>
```

```
[ :SOURce ] :POWer :ALternate :AMPLitude?
```

This command sets the delta value for the alternate amplitude.

The variable <val> is expressed in units of decibels (dB).

***RST** +0.00000000E+000

Range -156 to 156

Key Entry **Alt Amp Delta**

Remarks The actual RF output amplitude is equal to the Alternate Amplitude Delta value plus the RF output amplitude; this sum cannot exceed the minimum and maximum amplitude limits of the signal generator. For example, if the Alternate Amplitude Delta is set to -156 dB and the RF output amplitude is set to 20 dB, the sum is equal to -136 dB.

:ALternate:MANual

Supported All Models

```
[ :SOURce ] :POWer :ALternate :MANual MAIN | DELTa
```

```
[ :SOURce ] :POWer :ALternate :MANual?
```

This command toggles the alternate amplitude manual trigger source between main and alternate (delta).

MAIN The main power is present at the RF output.

DELTA The alternate power is present at the RF output.

***RST** MAIN

Key Entry **Manual Trigger Main Delta**

Remarks This command is effective only if MANual is the selection for the trigger source. Refer to “:ALternate:TRIGger[:SOURce]” on page 63 for more information.

:ALternate:STATe

Supported All Models

```
[ :SOURce ] :POWer:ALternate:STATe ON|OFF|1|0
[ :SOURce ] :POWer:ALternate:STATe?
```

This command enables or disables the alternate amplitude.

***RST** 0

Key Entry **Alt Ampl Off On**

:ALternate:TRIGger[:SOURce]

Supported All Models except with Option UNB or 506

```
[ :SOURce ] :POWer:ALternate:TRIGger [ :SOURce ] INTernal |EXTernal |MANual
[ :SOURce ] :POWer:ALternate:TRIGger [ :SOURce ]?
```

This command sets the trigger source for the alternate amplitude signal.

INTernal This choice is available only for an E4438C with Option 001/601 or 002/602. The baseband generator triggers each timeslot to output a power level set with either the user-selected main or alternate amplitude parameter.

Each timeslot is allowed to output power with a user-selected main or alternate amplitude. This choice requires the Option 001/601 or 002/602 baseband generator option.

This choice requires a baseband generator option. Each timeslot is allowed to output power with a user-selected main or alternate amplitude.

EXTernal This choice requires an external trigger to the TRIG IN rear panel connector to toggle the RF output power between main and alternate amplitudes.

MANual This choice enables the RF output power to be toggled between main and alternate amplitudes using the front-panel **Trigger** hardkey.

***RST** MAN

Key Entry **Int Ext Manual**

:ATTenuation**Supported** All Models

```
[ :SOURce ] :POWer :ATTenuation <val><unit>
[ :SOURce ] :POWer :ATTenuation?
```

This command sets the signal generator's attenuator level. Before setting the attenuator level, set the “:ATTenuation:AUTO” function to Off which will disable ALC control.

In normal operation the attenuator level is selected by the signal generator's automatic loop control (ALC) which maintains the output power by adjusting internal circuits to compensate for any power fluctuations due to drift, band changes, or load variations. In some applications, such as fast pulse modulation, the ALC may not respond quickly enough to compensate for the pulse rise times. In this case you can set the attenuator and override any ALC adjustments.

The output power is the ALC level minus the attenuator setting. The attenuator is set in increments of 5 dB.

Example

```
:POW:ATT 10DB
```

The preceding example sets the attenuator to 10 dB.

```
*RST +115
```

Range 0 to 115 dB

Key Entry **Set Atten**

:ATTenuation:AUTO**Supported** All Models

```
[ :SOURce ] :POWer :ATTenuation :AUTO ON|OFF|1|0
[ :SOURce ] :POWer :ATTenuation :AUTO?
```

This command sets the state of the attenuator auto mode function.

ON (1) This selection allows the signal generator's automatic loop control (ALC) to adjust the attenuator so that a specified RF power level, at the ESG's RF output connector, is maintained.

OFF (0) This choice allows for a user-selected attenuator setting that is not affected by the signal generator's ALC circuitry.

The OFF (0) selection can be used to eliminate power discontinuity normally associated with attenuator switching during power adjustments.

```
*RST 1
```

Key Entry	Atten Hold Off On
Remarks	During an amplitude sweep operation, signal generators with Option UNB or 506 protect the step attenuator from fast amplitude changes by automatically switching to attenuator auto Off mode. The attenuator is locked at its current setting and the amplitude sweep range is limited to 40 dB. Refer to the “:ALC:LEVel” on page 59 for more information.

:MODE

Supported	All Models
	[:SOURCE] :POWER:MODE FIXed LIST [:SOURCE] :POWER:MODE?
	This command sets the signal generator power mode to fixed or swept.
FIXed	This choice stops a power sweep, allowing the signal generator to operate at a fixed power level. Refer to “[:LEVel][:IMMediate][:AMPLitude]” on page 68 for setting the output power level.
LIST	This choice selects the swept power mode. If sweep triggering is set to immediate along with continuous sweep mode, executing the command starts the LIST or STEP power sweep.

NOTE To perform a frequency and amplitude sweep, you must also select LIST as the frequency mode. See “:FREQuency:MODE” on page 41 for selecting the list mode for a frequency sweep.

*RST	FIX
Key Entry	Amplitude Ampl Off

:REFERENCE

Supported	All Models
	[:SOURCE] :POWER:REFErence <val><unit> [:SOURCE] :POWER:REFErence?
	This command sets the power level for the signal generator RF output reference.
*RST	+0.00000000E+000
Range	-400 to 300DBM
Key Entry	Ampl Ref Set

Remarks The RF output power is referenced to the value entered in this command.

:REFEreNce:STATe

Supported All Models

```
[ :SOURce ] :POWer :REFEreNce :STATe ON | OFF | 1 | 0
[ :SOURce ] :POWer :REFEreNce :STATe ?
```

This command enables or disables the RF output reference.

ON(1) This choice will set the power reference state to ON. The unit displayed for commands, “[:ANNotation:AMPLitude:UNIT]” on page 83 and “[:POWer]” on page 168 will be expressed in DB.

OFF(0) This choice will set the power reference state to OFF.

***RST** 0

Key Entry **Ampl Ref Off On**

Remarks Once the reference state is ON, all subsequent output power settings are set relative to the reference value.

Amplitude offsets can be used with the amplitude reference mode.

:STARt

Supported All Models

```
[ :SOURce ] :POWer :STARt <val><unit>
[ :SOURce ] :POWer :STARt ?
```

This command sets the first amplitude point in a step sweep.

***RST** -1.35000000E+002

Range Refer to “[:LEVel][:IMMediate][:AMPLitude]” on page 68 for the output power ranges.

Key Entry **Ampl Start**

Remarks During an amplitude sweep operation, signal generators with Option UNB or 506 protect the step attenuator by automatically switching to attenuator hold (ON) mode. The attenuator is locked at its current setting and the amplitude sweep range is limited to 40 dB.

:STOP

Supported All Models

```
[ :SOURce ] :POWer :STOP <val><unit>  
[ :SOURce ] :POWer :STOP?
```

This command sets the last amplitude point in a step sweep.

***RST** -1.35000000E+002

Range Refer to “[:LEVel][:IMMediate][:AMPLitude]” on page 68 for the output power ranges.

Key Entry **Ampl Stop**

Remarks During an amplitude sweep operation, signal generators with Option UNB or 506 protect the step attenuator by automatically switching to attenuator hold (ON) mode. The attenuator is locked at its current setting and the amplitude sweep range is limited to 40 dB.

[:LEVel][:IMMediate]:OFFSet

Supported All Models

```
[ :SOURce ] :POWer [ :LEVel ] [ :IMMediate ] :OFFSet <val><unit>  
[ :SOURce ] :POWer [ :LEVel ] [ :IMMediate ] :OFFSet?
```

This command sets the power offset value.

***RST** +0.00000000E+000

Range -200DB to 200DB

Key Entry **Ampl Offset**

Remarks This simulates a power level at a test point beyond the RF OUTPUT connector without changing the actual RF output power. The offset value only affects the displayed amplitude setting.

You can enter an amplitude offset any time in either normal operation or amplitude reference mode.

[[:LEVel]][:IMMediate]][:AMPLitude]

Supported All Models

```
[ :SOURce ] :POWer [ :LEVel ] [ :IMMediate ] [ :AMPLitude ] <val><unit>
[ :SOURce ] :POWer [ :LEVel ] [ :IMMediate ] [ :AMPLitude ] ?
```

This command sets the RF output power.

***RST** -1.35000000E+002

Range	Frequency	Standard	Option UNB	Option 506
	250kHz–1GHZ	-136 to 13DBM	-136 to 17DBM	-136 to 14DBM

<val><unit> | UP | DOWN
[ :SOURce ] :POWer [ :LEVel ] [ :IMMediate ] [ :AMPLitude ] :STEP [ :INCRement ] ?
```

This command sets the incremental step value for the amplitude parameter, or increments or decrements the current RF output power level by the specified <val> value.

<val> The increment power value.

UP Increases the current output power by the amount set with <val>. The front-panel up arrow key performs the same function.

DOWN Decreases the current output power by the amount set with <val>. The front-panel down arrow key performs the same function.

Range .02–100dB

Key Entry **Incr Set**

Remarks The value set with this command is not affected by *RST or a power cycle.

Calibration Subsystem (:CALibration)

:DCFM

Supported All

:CALibration:DCFM

This command initiates a DCFM or DC Φ M calibration depending on the currently active modulation. This calibration eliminates any dc or modulation offset of the carrier signal.

NOTE If the calibration is performed with a dc signal applied, any deviation provided by the dc signal will be removed and the new zero reference point will be at the applied dc level. The calibration will have to be performed again when the dc signal is disconnected to reset the carrier signal to the correct zero reference.

Key Entry DCFM/DCFM Cal

Remarks Use this calibration for externally applied signals. While the calibration can also be performed for internally generated signals, dc offset is not a normal characteristic for them.

:IQ

Supported E4438C

:CALibration:IQ

This command initiates an I/Q calibration.

Key Entry Execute Cal

:IQ:DC

Supported E4438C

:CALibration:IQ:DC

This command performs a one to two second adjustment that is not traceable to a standard. However, it will minimize errors associated with offset voltages. This adjustment minimizes errors for the current signal generator setting and at a single frequency. The DC adjustment is volatile and must be repeated with each signal generator setting change. This command can be sent while the RF On/Off is set to Off and the adjustment will still be valid when the RF is enabled.

The I/Q DC adjustment is dependent upon a number of instrument settings. If any of the instrument settings change, the adjustment will become invalid. The dependent instrument settings are:

- RF frequency
- I/Q attenuation level
- Baseband generator settings
- I/Q polarity settings
- Baseband filter settings
- Path settings (Internal I/Q Mux Path 1 or Path 2)
- I/Q calibration (the I/Q DC calibration will be invalidated if any other I/Q calibration is executed or if the **Revert to Factory Default** key is pressed)
- Temperature (± 5 degrees)

The following instrument states will not invalidate the I/Q DC calibration:

- Power level changes
- I/Q Impairments

Key Entry **Execute Cal** (with **Calibration Type User Full** set to DC)

:IQ:DEfault

Supported E4438C

`:CALibration:IQ:DEfault`

This command will restore the original factory calibration data for the internal I/Q modulator.

Key Entry **Revert to Default Cal Settings**

:IQ:FULL

Supported E4438C

`:CALibration:IQ:FULL`

This command performs an adjustment to the I/Q offset, gain and quadrature for the full-frequency range (regardless of the start and stop frequency settings) and stores the results in the signal generator's firmware.

Key Entry **Execute Cal** (with **Calibration Type User Full** set to Full)

Remarks Start and stop frequencies will default to the full frequency range of the signal generator.

:IQ:START

Supported E4438C

:CALibration:IQ:START <val><unit>

:CALibration:IQ:START?

This command sets the start frequency and automatically sets the calibration type to User for an I/Q calibration.

Range Option 501: 100kHz–1GHz
Option 502: 100kHz–2GHz
Option 503: 100kHz–3GHz
Option 504: 100kHz–4GHz
Option 506: 100kHz–6GHz

Key Entry **Start Frequency**

Remarks The setting enabled by this command is not affected by signal generator power-on, preset, or *RST.

:IQ:STOP

Supported E4438C

:CALibration:IQ:STOP <val><unit>

:CALibration:IQ:STOP?

This command sets the stop frequency and automatically sets the calibration type to User for an I/Q calibration.

Range Option 501: 100kHz–1GHz
Option 502: 100kHz–2GHz
Option 503: 100kHz–3GHz
Option 504: 100kHz–4GHz
Option 506: 100kHz–6GHz

Key Entry **Stop Frequency**

Remarks The setting enabled by this command is not affected by signal generator power-on, preset, or *RST.

Communication Subsystem (:SYSTem:COMMunicate)

:GPIB:ADDRes

Supported All

```
:SYSTem:COMMunicate:GPIB:ADDRes <number>  
:SYSTem:COMMunicate:GPIB:ADDRes?
```

This command sets the signal generator's GPIB address.

Range 0–30

Key Entry GPIB Address

Remarks The setting enabled by this command is not affected by signal generator power-on, preset, or *RST.

:GTLocal

Supported All

```
:SYSTem:COMMunicate:GTLocal
```

This command sets the signal generator to local mode which enables front panel operation.

Key Entry Local

:LAN:CONFig

Supported All Models

```
:SYSTem:COMMunicate:LAN:CONFig DHCP|MANual  
:SYSTem:COMMunicate:LAN:CONFig?
```

This command sets the signal generator's internet protocol (IP) address.

MANual The user assigns an IP address to the signal generator.

DHCP The network assigns an IP address to the signal generator.

Example

```
:SYST:COMM:LAN:CONF DHCP
```

The preceding example sets up the signal generator LAN configuration to use a DHCP IP address.

Key Entry LAN Config

Communication Subsystem (:SYSTEM:COMMunicate)

:LAN:GATEway

Supported All

:SYSTEM:COMMunicate:LAN:GATEway "<ipstring>"

:SYSTEM:COMMunicate:LAN:GATEway?

This command sets the gateway for local area network (LAN) access to the signal generator from outside the current sub-network.

Key Entry **Default Gateway**

Remarks Using an empty string restricts access to the signal generator to local hosts on the LAN.

:LAN:HOSTname

Supported All

:SYSTEM:COMMunicate:LAN:HOSTname "<string>"

:SYSTEM:COMMunicate:LAN:HOSTname?

This command sets the signal generator's local area network (LAN) connection hostname.

Key Entry **Hostname**

Remarks The setting enabled by this command is not affected by signal generator power-on, preset, or *RST.

:LAN:IP

Supported All

:SYSTEM:COMMunicate:LAN:IP "<ipstring>"

:SYSTEM:COMMunicate:LAN:IP?

This command sets the signal generator's local area network (LAN) internet protocol (IP) address for your IP network connection.

Key Entry **IP Address**

Remarks The setting enabled by this command is not affected by signal generator power-on, preset, or *RST.

:LAN:SUBNet

Supported All

```
:SYSTem:COMMunicate:LAN:SUBNet "<ipstring>"
```

```
:SYSTem:COMMunicate:LAN:SUBNet?
```

This command sets the signal generator's local area network (LAN) subnet mask address for your internet protocol (IP) network connection.

Key Entry Subnet Mask

Remarks The setting enabled by this command is not affected by signal generator power-on, preset, or *RST.

:PMETer:ADDRess

Supported All

```
:SYSTem:COMMunicate:PMETer:ADDRess <val>
```

```
:SYSTem:COMMunicate:PMETer:ADDRess?
```

This command sets the address for a power meter that is controlled by the signal generator.

Range 0–30

Key Entry Meter Address

Remarks The setting enabled by this command is not affected by signal generator power-on, preset, or *RST.

The power meter is controlled only through a GPIB cable.

Ensure that the power meter address is different from the signal generator address.

:PMETer:CHANnel

Supported All

```
:SYSTem:COMMunicate:PMETer:CHANnel A|B
```

```
:SYSTem:COMMunicate:PMETer:CHANnel?
```

This command sets the measurement channel on the power meter that is controlled by the signal generator.

Key Entry Meter Channel A B

Remarks A single-channel power meter uses channel A and selecting channel B will have no effect.

Communication Subsystem (:SYSTEM:COMMunicate)

The setting enabled by this command is not affected by signal generator power-on, preset, or *RST.

The power meter is controlled only through a GPIB cable.

:PMETer:IDN

Supported All

:SYSTEM:COMMunicate:PMETer:IDN E4418B|E4419B|E4416A|E4417A

:SYSTEM:COMMunicate:PMETer:IDN?

This command sets the model number of the power meter that is controlled by the signal generator.

Key Entry **Power Meter**

Remarks The setting enabled by this command is not affected by signal generator power-on, preset, or *RST.

The power meter is controlled only through a GPIB cable.

:PMETer:TIMEout

Supported All

:SYSTEM:COMMunicate:PMETer:TIMEout <num>[<time suffix>]

:SYSTEM:COMMunicate:PMETer:TIMEout?

This command sets the period of time which the signal generator will wait for a valid reading from the power meter.

The variable <num> has a resolution of 0.001.

Range 1mS–100S

Key Entry **Meter Timeout**

Remarks The setting enabled by this command is not affected by signal generator power-on, preset, or *RST.

The power meter is controlled only through a GPIB cable.

If a time-out occurs, the signal generator reports an error message.

:SERial:BAUD

Supported All

:SYSTem:COMMunicate:SERial:BAUD <number>

:SYSTem:COMMunicate:SERial:BAUD?

This command sets the baud rate for the rear panel RS-232 interface labeled RS-232.

Key Entry **RS-232 Baud Rate**

Remarks The setting enabled by this command is not affected by signal generator power-on, preset, or *RST.

:SERial:ECHO

Supported All

:SYSTem:COMMunicate:SERial:ECHO ON|OFF

:SYSTem:COMMunicate:SERial:ECHO?

This command enables or disables the RS-232 echo.

Key Entry **RS-232 ECHO Off On**

Remarks The setting enabled by this command is not affected by signal generator power-on, preset, or *RST.

:SERial:RESet

Supported All

:SYSTem:COMMunicate:SERial:RESet

This event command resets the RS-232 buffer and will discard any unprocessed SCPI input received by the RS-232 port.

Key Entry **Reset RS-232**

:SERial:TOUT

Supported All

:SYSTEM:COMMunicate:SERial:TOUT <val>

:SYSTEM:COMMunicate:SERial:TOUT?

This command sets the RS-232 serial port time-out value.

If further input is not received within the time-out period specified, while a SCPI command is being processed, the command is aborted and the input buffer is cleared.

The variable <val> is entered in units of seconds.

Range 1–25

Key Entry **RS-232 Timeout**

Remarks The setting enabled by this command is not affected by signal generator power-on, preset, or *RST.

Diagnostic Subsystem (:DIAGnostic[:CPU]:INFORMATION)

:BOARDs

Supported All

:DIAGnostic[:CPU]:INFORMATION:BOARDs?

This query returns a list of the installed boards in the signal generator. The information will be returned in the following format:

"<board name,part number,serial number,version number,status>"

This information format will repeat with as many iterations as the number of detected boards in the signal generator.

Key Entry **Installed Board Info**

:CCOunt:ATTenuator

Supported All

:DIAGnostic[:CPU]:INFORMATION:CCOunt:ATTenuator?

This query returns the cumulative number of times that the attenuator has been switched.

Key Entry **Diagnostic Info**

:CCOunt:PON

Supported All

:DIAGnostic[:CPU]:INFORMATION:CCOunt:PON?

This query returns the cumulative number of times the signal generator has been powered-on.

Key Entry **Diagnostic Info**

:CCOunt:PROTection

Supported All

:DIAGnostic[:CPU]:INFORMATION:CCOunt:PROTection?

This query returns the cumulative number of times the reverse power protection has been cycled.

Key Entry **Diagnostic Info**

:DISPlay:OTIME

Supported All Models

`:DIAGnostic[:CPU]:INFORMATION:DISPlay:OTIME?`

This query returns the cumulative number of hours the display has been on.

Key Entry **Diagnostic Info**

:LICense:AUXiliary

Supported E4438C with Option 001/600 or 002.602

`:DIAGnostic[:CPU]:INFORMATION:LICense:AUXiliary?`

This query returns a list of licenses for software applications associated with the signal generator that have the software license file installed on the PC, as opposed to a license key installed on the signal generator. However this query does not return demo licenses for Arb-based applications.

Key Entry **Auxiliary Software Options**

Remarks If you use the signal generator with a PC that has a copy of a software application for which a license shows with this query, the software automatically accesses and installs the license on the PC.

To access Arb-based demo software licenses, see [“:LICense:WAVEform”](#) . To view option numbers for software applications that use license keys, see [“:OPTions”](#) on page 81.

:LICense:WAVeform

Supported E4438C with Option 001/600 or 002/602

:DIAGnostic[:CPU]:INFORMATION:LICense:WAVeform?

This query returns a list of Arb-based licenses (including demo) for software applications associated with the signal generator that have the software license file installed on the PC, as opposed to a license key installed on the signal generator. These waveform licenses are created by the software application in a license file on the PC. Refer to “:WLICence[:VALue]” on page 82 for more information.

The response format is a series of comma-separated entries enclosed in quotation marks. The first field is the waveform type number and the second is a text description of the license.

Key Entry **Waveform Licenses**

Remarks If a license appears in this list, this means that you can transfer waveform files, created with the associated Arb-based software application to another signal generator if the other signal generator has the same license. For more information, refer to the command, “:LICense:AUXiliary” on page 80.

For a list of option numbers for software applications that use license keys, see “:OPTions”.

:OPTions

Supported All Models

:DIAGnostic[:CPU]:INFORMATION:OPTions?

This query returns a list of internally installed signal generator options.

Key Entry **Options Info**

:OPTions:DETail

Supported All Models

:DIAGnostic[:CPU]:INFORMATION:OPTions:DETail?

This query returns the options that are installed along with the option revision and DSP version if applicable.

Key Entry **Options Info**

Diagnostic Subsystem (:DIAGnostic[:CPU]:INFORMATION)

:OTIME

Supported All Models

:DIAGnostic[:CPU]:INFORMATION:OTIME?

This query returns the cumulative number of hours that the signal generator has been on.

Key Entry **Diagnostic Info**

:REVISION

Supported All Models

:DIAGnostic[:CPU]:INFORMATION:REVISION?

This query returns the CPU bootstrap read only memory (boot ROM) revision date. In addition, the query returns the revision, creation date, and creation time of the main firmware.

Key Entry **Diagnostic Info**

:SDATE

Supported All Models

:DIAGnostic[:CPU]:INFORMATION:SDATE?

This query returns the date and time of the main firmware.

Key Entry **Diagnostic Info**

:WLICence[:VALUE]

Supported E4438C with Option 001/601 or 002/602

:DIAGnostic[:CPU]:INFORMATION:WLICence[:VALUE]? <type_num>

This query returns the number of seconds remaining on the waveform license for the type of waveform designated by the <type_num> variable number. The type variable number is obtained using the “[:LICence:WAVEform](#)” command shown on [page 81](#). Zero is returned for non-existent and expired licenses. The value $2^{32} - 1$ (4,294,967,295) is returned for licenses that do not expire. Refer to the *E4428C/38C ESG Signal Generators Key and Data Field Reference* for information on the waveform licence.

Display Subsystem (:DISPlay)

:ANNotation:AMPLitude:UNIT

Supported All Models

```
:DISPlay:ANNotation:AMPLitude:UNIT DBM|DBUV|DBUVEFMF|V|VEMF|DB  
:DISPlay:ANNotation:AMPLitude:UNIT?
```

This command sets the displayed front panel amplitude units.

If the amplitude reference state is set to on, the query returns units expressed in DB. Setting any other unit will cause a setting conflict error stating that the amplitude reference state must be set to off. Refer to, “:REFerence:STATE” on page 66 for more information.

***RST** DBM

:ANNotation:CLOCK:DATE:FORMat

Supported All Models

```
:DISPlay:ANNotation:CLOCK:DATE:FORMat MDY|DMY  
:DISPlay:ANNotation:CLOCK:DATE:FORMat?
```

This command enables the selection of the date format. The choices are month-day-year (MDY) or day-month-year (DMY) format.

Remarks The setting enabled by this command is not affected by signal generator power-on, preset, or *RST.

:ANNotation:CLOCK[:STATe]

Supported All Models

```
:DISPlay:ANNotation:CLOCK[:STATe] ON|OFF|1|0  
:DISPlay:ANNotation:CLOCK[:STATe]?
```

This command enables or disables the digital clock view in the lower right side of the front panel display.

Remarks The setting enabled by this command is not affected by signal generator power-on, preset, or *RST.

:BRIGhtness

Supported All Models

:DISPlay:BRIGhtness <val>

:DISPlay:BRIGhtness?

This command sets the display brightness (intensity). The brightness can be set to the minimum level (0.02), maximum level (1), or in between by using fractional numeric values (0.03–0.99).

Range 0.02–1

Key Entry **Brightness**

Remarks The setting enabled by this command is not affected by signal generator power-on, preset, or *RST.

:CAPTURE

Supported All Models

:DISPlay:CAPTURE

This event command enables the user to capture the current display and store it in the signal generator's memory.

Remarks The display capture is stored as DISPLAY.BMP in the Binary file system. This file is overwritten with each subsequent display capture. The file can be down-loaded in the following manner:

1. Log on to the signal generator using ftp.
2. Change (cd) to the BIN directory.
3. Retrieve the file by using the get command.

:CONTRast

Supported All Models

:DISPlay:CONTRast <val>

:DISPlay:CONTRast?

This command sets the contrast of the LCD display. The contrast can be set to the maximum level (1), minimum level (0), or in between by using fractional numeric values (0.001–0.999).

Range 0–1

Key Entry Display contrast hardkeys are located below the display.

Remarks The setting enabled by this command is not affected by signal generator power-on, preset, or *RST.

:INVerse

Supported All Models

:DISPlay:INVerse ON|OFF|1|0

:DISPlay:INVerse?

This command sets the display of the source to inverse video mode.

Key Entry **Inverse Video Off On**

Remarks The setting enabled by this command is not affected by signal generator power-on, preset, or *RST.

:REMote

Supported All Models

:DISPlay:REMote ON|OFF|1|0

:DISPlay:REMote?

This command enables or disables the display updating when the signal generator is remotely controlled.

ON (1) This choice updates the signal generator display so you can see the settings as the commands are executed, however, this will degrade the signal generator speed.

OFF (0) This choice turns off the display updating while further optimizing the signal generator for speed.

Key Entry **Update in Remote Off On**

Remarks The setting enabled by this command is not affected by signal generator preset or *RST. However, cycling the signal generator power will reset it to zero.

[:WINDow][:STATe]

Supported All Models

:DISPlay[:WINDow][:STATe] ON|OFF|1|0

:DISPlay[:WINDow][:STATe]?

This command is used to either blank out (OFF or 0) the display screen or turn it on (ON or 1).

Remarks The setting enabled by this command is not affected by *RST. However, presetting the signal generator or cycling the power will turn the display on.

IEEE 488.2 Common Commands

*CLS

Supported All Models

*CLS

The Clear Status (CLS) command clears the Status Byte Register, the Data Questionable Event Register, the Standard Event Status Register, the Standard Operation Status Register and any other registers that are summarized in the status byte.

*ESE

Supported All Models

*ESE <data>

The Standard Event Status Enable (ESE) command sets the Standard Event Status Enable Register.

The variable <data> represents the sum of the bits that will be enabled.

Range 0–255

Remarks The setting enabled by this command is not affected by signal generator preset or *RST. However, cycling the signal generator power will reset this register to zero.

Refer to Chapter 3 of the *E4428C/38C ESG Signal Generators Programming Guide* for more information.

*ESE?

Supported All Models

*ESE?

The Standard Event Status Enable (ESE) query returns the value of the Standard Event Status Enable Register.

Remarks Refer to Chapter 3 of the *E4428C/38C ESG Signal Generators Programming Guide* for more information.

*ESR?

Supported All Models

CAUTION This is a destructive read. The data in the register is latched until it is queried. Once queried, the data is cleared.

*ESR?

The Standard Event Status Register (ESR) query returns the value of the Standard Event Status Register.

Remarks Refer to Chapter 3 of the *E4428C/38C ESG Signal Generators Programming Guide* for more information.

*IDN?

Supported All Models

*IDN?

The Identification (IDN) query outputs an identifying string. The response will show the following information:

<company name>, <model number>, <serial number>, <firmware revision>

Key Entry **Diagnostic Info**

Remarks The identification information can be modified. Refer to [“:IDN” on page 154](#) for more information.

*OPC

Supported All Models

*OPC

The Operation Complete (OPC) command sets bit 0 in the Standard Event Status Register when all pending operations have finished.

***OPC?**

Supported All Models

*OPC?

The Operation Complete (OPC) query returns the ASCII character 1 in the Standard Event Status Register when all pending operations have finished.

***PSC**

Supported

*PSC ON|OFF|1|0

The Power-On Status Clear (PSC) command controls the automatic power-on clearing of the Service Request Enable Register, the Standard Event Status Enable Register, and device-specific event enable registers.

ON (1) This choice enables the power-on clearing of the listed registers.

OFF (0) This choice disables the clearing of the listed registers and they retain their status when a power-on condition occurs.

Remarks The setting enabled by this command is not affected by signal generator power-on, preset, or *RST.

***PSC?**

Supported All Models

*PSC?

The Power-On Status Clear (PSC) query returns the flag setting as enabled by the *PSC command.

***RCL**

Supported All Models

*RCL <reg>, <seq>

The Recall (RCL) command recalls the state from the specified memory register <reg> of the specified sequence <seq>.

Range Registers: 0–99 Sequences: 0–9

Key Entry **RECALL Reg** **Select Seq:**

*RST

Supported All Models

*RST

The Reset (RST) command resets most signal generator functions to factory-defined conditions.

Remarks Each command shows the *RST value if the setting is affected.

*SAV

Supported All Models

*SAV <reg> , <seq>

The Save (SAV) command saves signal generator settings to the specified memory register <reg> of the specified sequence <seq>.

Range *Registers:* 0–99 *Sequences:* 0–9

Key Entry **Save Reg** **Save Seq[n] Reg[nn]**

Remarks The save function does not save all signal generator settings. Refer to the *E4428C/38C ESG Signal Generators User's Guide* for more information on the save function. Refer to “*RCL” on page 88 for information on recalling saved signal generator settings.

*SRE

Supported All Models

*SRE <data>

The Service Request Enable (SRE) command sets the value of the Service Request Enable Register.

The variable <data> is the decimal sum of the bits that will be enabled. Bit 6 (value 64) is ignored and cannot be set by this command.

Range 0–255

Remarks Refer to Chapter 3 of the *E4428C/38C ESG Signal Generators Programming Guide* for more information.

Entering values from 64 to 127 is equivalent to entering values from 0 to 63.

The setting enabled by this command is not affected by signal generator preset or *RST. However, cycling the signal generator power will reset it to zero.

***SRE?**

Supported All Models

*SRE?

The Service Request Enable (SRE) query returns the value of the Service Request Enable Register.

Range 0–63 or 128–191

Remarks Refer to Chapter 3 of the *E4428C/38C ESG Signal Generators Programming Guide* for more information.

***STB?**

Supported All Models

*STB?

The Read Status Bye (STB) query returns the value of the status byte including the master summary status (MSS) bit.

Range 0–255

Remarks Refer to Chapter 3 of the *E4428C/38C ESG Signal Generators Programming Guide* for more information.

***TRG**

Supported All Models

*TRG

The Trigger (TRG) command triggers the device if BUS is the selected trigger source, otherwise, *TRG is ignored.

***TST?**

Supported All Models

*TST?

The Self-Test (TST) query initiates the internal self-test and returns one of the following results:

0 This shows that all tests passed.

1 This shows that one or more tests failed.

Key Entry Run Complete Self Test

***WAI**

Supported All Models

*WAI

The Wait-to-Continue (WAI) command causes the signal generator to wait until all pending commands are completed, before executing any other commands.

Memory Subsystem (:MEMory)

:CATalog:BINary

Supported E4438C with Option 001/601 or 002/602

:MEMory:CATalog:BINary?

This command outputs a list of the binary files. The return data will be in the following form:

```
<mem used>,<mem free>{,"<file listing>"}
```

The signal generator will return the two memory usage parameters and as many file listings as there are files in the directory list. Each file listing parameter will be in the following form:

```
"<file name,file type,file size>"
```

Key Entry Binary

Remarks Refer to [“File Name Variables” on page 13](#) for information on the file name syntax.

:CATalog:BIT

Supported E4438C with Option 001/601 or 002/602

:MEMory:CATalog:BIT?

This command outputs a list of the bit files. The return data will be in the following form:

```
<mem used>,<mem free>{,"<file listing>"}
```

The signal generator will return the two memory usage parameters and as many file listings as there are files in the directory list. Each file listing parameter will be in the following form:

```
"<file name,file type,file size>"
```

Key Entry Bit

Remarks Refer to [“File Name Variables” on page 13](#) for information on the file name syntax.

:CATalog:CDMa

Supported E4438C with Option 401

:MEMory:CATalog:CDMa?

This command outputs a list of the arbitrary waveform CDMA files. The return data will be in the following form:

```
<mem used>,<mem free>{,"<file listing>"}
```

The signal generator will return the two memory usage parameters and as many file listings as there are files in the directory list. Each file listing parameter will be in the following form:

```
"<file name,file type,file size>"
```

Key Entry CDMA

Remarks Refer to [“File Name Variables” on page 13](#) for information on the file name syntax.

:CATalog:DMOD

Supported E4438C with Option 001/601 or 002/602

:MEMory:CATalog:DMOD?

This command outputs a list of the arbitrary waveform digital modulation files. The return data will be in the following form:

```
<mem used>,<mem free>{,"<file listing>"}
```

The signal generator will return the two memory usage parameters and as many file listings as there are files in the directory list. Each file listing parameter will be in the following form:

```
"<file name,file type,file size>"
```

Key Entry DMOD

Remarks Refer to [“File Name Variables” on page 13](#) for information on the file name syntax.

:CATalog:DWCDma

Supported E4438C with Option 400

:MEMory:CATalog:DWCDma?

This command outputs a list of the arbitrary waveform downlink W-CDMA files. The return data will be in the following form:

```
<mem used>,<mem free>{,"<file listing>"}
```

The signal generator will return the two memory usage parameters and as many file listings as there are files in the directory list. Each file listing parameter will be in the following form:

```
"<file name,file type,file size>"
```

Key Entry DWCDMA

Remarks Refer to [“File Name Variables” on page 13](#) for information on the file name syntax.

:CATalog:FCDMa

Supported E4438C with Option 401

:MEMory:CATalog:FCDMa?

This command outputs a list of the arbitrary waveform forward link cdma2000 files. The return data will be in the following form:

```
<mem used>,<mem free>{,"<file listing>"}
```

The signal generator will return the two memory usage parameters and as many file listings as there are files in the directory list. Each file listing parameter will be in the following form:

```
"<file name,file type,file size>"
```

Key Entry FCDMA

Remarks Refer to [“File Name Variables” on page 13](#) for information on the file name syntax.

:CATalog:FIR

Supported E4438C with Option 001/601 or 002/602

:MEMory:CATalog:FIR?

This command outputs a list of the finite impulse response filter files. The return data will be in the following form:

```
<mem used>,<mem free>{,"<file listing>"}
```

The signal generator will return the two memory usage parameters and as many file listings as there are files in the directory list. Each file listing parameter will be in the following form:

```
"<file name,file type,file size>"
```

Key Entry FIR

Remarks Refer to [“File Name Variables” on page 13](#) for information on the file name syntax.

:CATalog:FSK

Supported E4438C with Option 001/601 or 002/602

:MEMory:CATalog:FSK?

This command outputs a list of the FSK files. The return data will be in the following form:

```
<mem used>,<mem free>{,"<file listing>"}
```

The signal generator will return the two memory usage parameters and as many file listings as there are files in the directory list. Each file listing parameter will be in the following form:

```
"<file name,file type,file size>"
```

Key Entry FIR

Remarks Refer to [“File Name Variables” on page 13](#) for information on the file name syntax.

:CATalog:IQ

Supported E4438C with Option 001/601 or 002/602

:MEMory:CATalog:IQ?

This command outputs a list of the IQ files. The return data will be in the following form:

<mem used>,<mem free>{,"<file listing>"}

The signal generator will return the two memory usage parameters and as many file listings as there are files in the directory list. Each file listing parameter will be in the following form:

"<file name,file type,file size>"

Key Entry I/Q

Remarks Refer to [“File Name Variables” on page 13](#) for information on the file name syntax.

:CATalog:LIST

Supported All Models

:MEMory:CATalog:LIST?

This command outputs a list of the list sweep files. The return data will be in the following form:

<mem used>,<mem free>{,"<file listing>"}

The signal generator will return the two memory usage parameters and as many file listings as there are files in the directory list. Each file listing parameter will be in the following form:

"<file name,file type,file size>"

Key Entry List

Remarks Refer to [“File Name Variables” on page 13](#) for information on the file name syntax.

:CATalog:MCDMa

Supported E4438C with Option 401

:MEMory:CATalog:MCDMa?

This command outputs a list of the arbitrary waveform multicarrier IS-95 CDMA files. The return data will be in the following form:

```
<mem used>,<mem free>{,"<file listing>"}
```

The signal generator will return the two memory usage parameters and as many file listings as there are files in the directory list. Each file listing parameter will be in the following form:

```
"<file name,file type,file size>"
```

Key Entry MCDMA

Remarks Refer to [“File Name Variables” on page 13](#) for information on the file name syntax.

:CATalog:MDMod

Supported E4438C with Option 001/601 or 002/602

:MEMory:CATalog:MDMod?

This command outputs a list of the arbitrary waveform multicarrier digital modulation files. The return data will be in the following form:

```
<mem used>,<mem free>{,"<file listing>"}
```

The signal generator will return the two memory usage parameters and as many file listings as there are files in the directory list. Each file listing parameter will be in the following form:

```
"<file name,file type,file size>"
```

Key Entry MDMOD

Remarks Refer to [“File Name Variables” on page 13](#) for information on the file name syntax.

:CATalog:MDWCdma

Supported E4438C with Option 400

:MEMory:CATalog:MDWCdma?

This command outputs a list of the arbitrary waveform multicarrier downlink W-CDMA files. The return data will be in the following form:

```
<mem used>,<mem free>{,"<file listing>"}
```

The signal generator will return the two memory usage parameters and as many file listings as there are files in the directory list. Each file listing parameter will be in the following form:

```
"<file name,file type,file size>"
```

Key Entry MDWCDMA

Remarks Refer to [“File Name Variables” on page 13](#) for information on the file name syntax.

:CATalog:MFCdma

Supported E4438C with Option 401

:MEMory:CATalog:MFCdma?

This command outputs a list of the arbitrary waveform multicarrier forward link cdma2000 files. The return data will be in the following form:

```
<mem used>,<mem free>{,"<file listing>"}
```

The signal generator will return the two memory usage parameters and as many file listings as there are files in the directory list. Each file listing parameter will be in the following form:

```
"<file name,file type,file size>"
```

Key Entry MFCDMA

Remarks Refer to [“File Name Variables” on page 13](#) for information on the file name syntax.

:CATalog:MTONe

Supported E4438C with Option 001/601 or 002/602

:MEMory:CATalog:MTONe?

This command outputs a list of the arbitrary waveform multitone files. The return data will be in the following form:

```
<mem used>,<mem free>{,"<file listing>"}
```

The signal generator will return the two memory usage parameters and as many file listings as there are files in the directory list. Each file listing parameter will be in the following form:

```
"<file name,file type,file size>"
```

Key Entry MTONE

Remarks Refer to [“File Name Variables” on page 13](#) for information on the file name syntax.

:CATalog:RCDMa

Supported E4438C with Option 401

:MEMory:CATalog:RCDMa?

This command outputs a list of the arbitrary waveform files for reverse link cdma2000. The return data will be in the following form:

```
<mem used>,<mem free>{,"<file listing>"}
```

The signal generator will return the two memory usage parameters and as many file listings as there are files in the directory list. Each file listing parameter will be in the following form:

```
"<file name,file type,file size>"
```

Key Entry RCDMA

Remarks Refer to [“File Name Variables” on page 13](#) for information on the file name syntax.

:CATalog:SEQ

Supported E4438C with Option 001/601 or 002/602

:MEMory:CATalog:SEQ?

This command outputs a list of the arbitrary waveform sequence files. The return data will be in the following form:

```
<mem used>,<mem free>{,"<file listing>"}
```

The signal generator will return the two memory usage parameters and as many file listings as there are files in the directory list. Each file listing parameter will be in the following form:

```
"<file name,file type,file size>"
```

Key Entry SEQ

Remarks Refer to [“File Name Variables” on page 13](#) for information on the file name syntax.

:CATalog:SHAPE

Supported E4438C with Option 001/601 or 002/602

:MEMory:CATalog:SHAPE?

This command outputs a list of the burst shape files. The return data will be in the following form:

```
<mem used>,<mem free>{,"<file listing>"}
```

The signal generator will return the two memory usage parameters and as many file listings as there are files in the directory list. Each file listing parameter will be in the following form:

```
"<file name,file type,file size>"
```

Key Entry SHAPE

Remarks Refer to [“File Name Variables” on page 13](#) for information on the file name syntax.

:CATalog:STATe

Supported All Models

:MEMory:CATalog:STATe?

This command outputs a list of the state files. The return data will be in the following form:

```
<mem used>,<mem free>{,"<file listing>"}
```

The signal generator will return the two memory usage parameters and as many file listings as there are files in the directory list. Each file listing parameter will be in the following form:

```
"<file name,file type,file size>"
```

Key Entry State

Remarks Refer to [“File Name Variables” on page 13](#) for information on the file name syntax.

:CATalog:UFLT

Supported All Models

:MEMory:CATalog:UFLT?

This command outputs a list of the user-flatness correction files. The return data will be in the following form:

```
<mem used>,<mem free>{,"<file listing>"}
```

The signal generator will return the two memory usage parameters and as many file listings as there are files in the directory list. Each file listing parameter will be in the following form:

```
"<file name,file type,file size>"
```

Key Entry User Flatness

Remarks Refer to [“File Name Variables” on page 13](#) for information on the file name syntax.

:CATalog:UWCDma

Supported E4438C with Option 400

:MEMory:CATalog:UWCDma?

This command outputs a list of the arbitrary waveform uplink W-CDMA files. The return data will be in the following form:

```
<mem used>,<mem free>{,"<file listing>"}
```

The signal generator will return the two memory usage parameters and as many file listings as there are files in the directory list. Each file listing parameter will be in the following form:

```
"<file name,file type,file size>"
```

Key Entry UWCDMA

Remarks Refer to [“File Name Variables” on page 13](#) for information on the file name syntax.

:CATalog[:ALL]

Supported All Models

:MEMory:CATalog[:ALL]?

This command outputs a list of all the files in the memory subsystem. However it does not include files stored on the Option 001/601 or 002/602 baseband generator. The return data will be in the following form:

```
<mem used>,<mem free>{,"<file listing>"}
```

The signal generator will return the two memory usage parameters and as many file listings as there are files in the memory subsystem. Each file listing parameter will be in the following form:

```
"<file name,file type,file size>"
```

Key Entry All

Remarks Refer to the [Table on page 14](#) for a listing of the file types and [“File Name Variables” on page 13](#) for information on the "<file name>" syntax.

:COPY[:NAME]

Supported All Models

```
:MEMory:COPY[:NAME] "<file name>","<file name>"
```

This command makes a duplicate of the requested file.

Key Entry Copy File

Remarks Refer to “[File Name Variables](#)” on page 13 for information on the file name syntax.

When copying a waveform file from volatile to non-volatile memory, the marker file and file header, associated with the waveform file, will automatically be copied at the same time.

:DATA

Supported E4438C with Option 001/601 or 002/602

```
:MEMory:DATA "<file_name>",<data_block>
```

```
:MEMory:DATA? "<file_name>"
```

This command loads waveform data into signal generator memory using the <data_block> parameter and saves the data to a file designated by the "<file_name>" variable. The query returns the file contents of the file as a datablock.

The waveform file must be located in volatile waveform memory (WFM1) before it can be played by the signal generator’s dual ARB player.

For downloads directly into volatile waveform memory use the path "WFM1:<file_name>". For downloads to non-volatile waveform memory, use the path "NVWFM:<file_name>".

"<file_name>" This variable names the destination file, including the directory path.

<data_block> This parameter represents the data and file length parameters. The data in the file is represented by the <data_block> variable.

Refer to the *E4428C/38C ESG Signal Generators Programming Guide* for more information on programming the status registers.

NOTE ARB waveform files created using the :DATA command cannot be retrieved or uploaded. Attempting to do so will cause the signal generator to display the message: ERROR:221, Access denied. To download ARB data to files for later retrieval, use the “:DATA:UNPRotected” command on [page 114](#).

Memory Subsystem (:MEMory)**Example**

```
:MEM:DATA "NVWFM:IQ_Data" ,#210Qaz37pY9oL
```

The preceding example downloads 10 bytes of data to a file, IQ_Data., in the signal generator's non-volatile memory. The table shown below describes the command parameters.

- | | |
|-------------------|----------------------------------------------------------------------------------------------------|
| • "NVWFM:IQ_Data" | IQ_Data is the file name. The directory path is not needed. The path "/USER/WAVEFORM/" is implied. |
| • #210Qaz37pY9oL | Data block |
| # | This character indicates the beginning of the data block |
| 2 | Number of digits in the byte count |
| 10 | Byte count |
| Qaz37pY9oL | 10 bytes of data |

NOTE The data, Qaz37pY9oL, in the above command are not valid and are shown for example purposes only. Typically, ascii characters representing data are unprintable.

Remarks See [“File Name Variables” on page 13](#) for information on the file name syntax.

:DATA:APPend

Supported E4438C with Option 001/601 or 002/602

```
:MEMory:DATA:APPend "<file_name>" ,<data_block>
```

This commands appends data to an existing file stored in signal generator memory.

"<file_name>" This variable names the destination file and directory path.

<data_block> This parameter represents the data and file length parameters. The data in the file is represented by the <data_block> variable. The file length parameters are used by the signal generator for allocating memory.

Refer to the *E4428C/38C ESG Signal Generators Programming Guide* for more information on downloading and using files.

Example

```
:MEM:DATA:APPend "NVWFM:IQ_Data",#14Y9oL
```

The preceding example downloads and appends the data, Y9oL, to an existing file named IQ_Data stored in the signal generator’s non-volatile memory (NVWFM).

- "NVWFM:IQ_Data" IQ_Data the file name. The directory path is not needed. The path "/USER/WAVEFORM/" is implied.
- #14Y9oL Data block
 - # This character indicates the beginning of the data block
 - 1 Number of digits in the byte count
 - 4 Byte count
 - Y9oL 4 bytes of data

Remarks Refer to “[File Name Variables](#)” on page 13 for information on the file name syntax.

:DATA:BIT

Supported E4438C with Option 001/601 or 002/602

```
:MEMory:DATA:BIT "<file_name>",<bit_count>,<data_block>
:MEMory:DATA:BIT? "<file_name>"
```

This command loads bit data into signal generator memory using the <bit_count> and <data_block> parameters and saves the data to a file designated by the "<file_name>" variable. The query returns the bit count, file length information, and the data.

- "<file_name>" This variable names the destination file and the directory path.
- <bit_count> This number represents the number of bits in the data block.
- <data_block> This parameter represents the data and file length parameters. The data in the file is represented by the <data_block> variable. The file length parameters are used by the signal generator for allocating memory.

Refer to the *E4428C/38C ESG Signal Generators Programming Guide* for more information on downloading and using files.

Example

```
:MEM:DATA:BIT "Test_Data",16,#12Qz
```

The preceding example downloads bit data to the file, Test_Data. The table below describes the command parameters.

Memory Subsystem (:MEMory)

- "Test_Data" Test_Data is the file name. The directory path is not needed. The path "/USER/BIT/" is implied.
- 16 Number of bits in the data block
- #12Qz Data block
 - # This character indicates the beginning of the data block
 - 1 Number of digits in the byte count
 - 2 Byte count
 - Qz 16 bits of data (ascii representation of bit data)

Remarks Refer to [“File Name Variables” on page 13](#) for information on the file name syntax.

:DATA:FIR

Supported E4438C with Option 001/601 or 002/602

:MEMory:DATA:FIR "<file_name>",<osr>,<coefficient>{,<coefficient>}

:MEMory:DATA:FIR? "<file_name>"

This command loads oversample ratio (OSR) and user-defined finite impulse response (FIR) coefficient data into a file in the signal generator’s non-volatile memory (NVWFM). The query returns the oversample ratio and coefficient data.

"<file_name>" This variable is the file name of the destination file. The directory path, /USER/FIR is not required as it is implied by the command.

osr The OSR is the number of filter taps per symbol.

coefficient This variable is the FIR coefficient. The maximum number of coefficients is 1024.

{,<coefficient>} This optional variable is used when you enter additional coefficients.

Refer to the *E4428C/38C ESG Signal Generators Programming Guide* for more information on downloading and using files.

Example

```
:MEM:DATA:FIR "FIR_1",4,0,0,0,0,0,0.000001,0.000012,0.000132,
0.001101,0.006743,0.030588,0.103676,0.265790,0.523849,0.809508,1,1,
0.809508,0.523849,0.265790,0.103676,0.030588,0.006743,0.001101,0.000132,
0.000012,0.000001,0,0,0,0,0
```

The preceding example downloads FIR coefficient and oversampling ratio data to the signal generator’s non-volatile memory in a file named FIR_1. Notice that the signal generator directory

path, /USER/FIR, is not needed as it is implied by the command. Refer to “File Name Variables” on page 13 for information on the file name syntax.

Range *osr*: 1–32
 coefficient: –1000 to 1000

Key Entry **Oversample Ratio**

:DATA:FSK

Supported E4438C with Option 001/601 or 002/602

```
:MEMory:DATA:FSK "<file_name>",<num_states>,<f0>,<f1>,...<f(n)>
[,<diff_state>,<num_diff_states>,<diff1>,...<diff(n)>]
:MEMory:DATA:FSK? "<file_name>"
```

This command loads custom frequency shift keying (FSK) data into a file in the signal generator’s non-volatile memory (NVWFM).

The query returns data in the following form:

```
<num_states>,<f0>,<f1>,...<f(n)>,<diff_state>,<num_diff_states>,<diff1>,...<diff(n)>
```

"<file_name>" This variable string identifies the name of the FSK file. The filename must be enclosed with quotation marks.

<num_states> This variable identifies the number of frequency states.

<f0> This variable identifies the value of the first frequency state.

<f1>,...<f(n)> This variable identifies the value of the second and subsequent frequency states with a frequency resolution of 0.1Hz.

<diff_state> This variable enables or disables differential encoding.

<num_diff_states> This variable identifies the number of differential states.

<diff0> This variable identifies the value of the first differential state.

<diff1>,...<diff(n)> This variable identifies the value of the second and subsequent differential states.

Refer to the *E4428C/38C ESG Signal Generators Programming Guide* for more information on downloading and using files.

Example

```
:MEM:DATA:FSK "4FSK",4,-2kHz,-1kHz,2kHz,1kHz,ON,2,1,0
```

The preceding example downloads a four-level FSK data to a file named 4FSK. There are four states (frequencies): -2kHz, -1kHz, 2kHz, 1kHz; differential encoding is toggled ON, and there are two differential states 1 and 0. The table shown below describes the command parameters.

- "4FSK" 4FSK is the FSK file name. The directory path is not needed. The path "/USER/FSK" is implied.
- 4 Number of states
- -2kHz First frequency state
- -1kHz Second frequency state
- 2kHz Third frequency state
- 1kHz Fourth frequency state
- ON Differential encoding is on
- 2 Number of differential states
- 1 Value of the first differential state.
- 0 Value of the second differential state.

Range *num_diff_states:* 0–256
 num_states: 2–16
 f0–f(n): -20MHZ to 20MHZ
 diff0–diff(n): -128 to 127

Remarks Refer to “[File Name Variables](#)” on page 13 for information on the file name syntax.

:DATA:IQ

Supported E4438C with Option 001/601 or 002/602

```
:MEMory:DATA:IQ "<file_name>",<offsetQ>,<num_states>,<i0>,<q0>,<i1>,<q1>,...<i(n)>,<q(n)>[,<diff_state>,<num_diff_states>,<diff0>,<diff1>,...<diff(n)>]
```

```
:MEMory:DATA:IQ? "<file_name>"
```

This command loads custom I/Q data into a file in the signal generator’s non-volatile waveform memory (NVWFM).

The query returns data in the following form:

<offsetQ>, <num_states>, <i0>, <q0>, <i1>, <q1>, ... <i(n)>, <q(n)>, <diff_state>
 , <num_diff_states>, <diff0>, <diff1>, ... <diff(n)>

"<file_name>" This variable string identifies the name of the I/Q file. The filename must be enclosed with quotation marks.

<offsetQ> This variable enables (1) or disables (0) the Q output delay by 1/2 symbol from the I output.

<num_states> This is the number of symbols.

<i0>...<i(n)> This is the I value of the first and subsequent I symbols.

<q0>...<q(n)> This is the Q value of the first and subsequent Q symbols.

<diff_state> This variable enables and disables differential encoding.

<num_diff_states> This variable identifies the number of differential states.

<diff0> This variable identifies the value of the first differential state.

<diff1, ... diff(n)> This variable identifies the value of the second and subsequent differential states.

Refer to the *E4428C/38C ESG Signal Generators Programming Guide* for more information on downloading and using files.

Example

```
:MEM:DATA:IQ "Test_BPSK",1,2,1,0,0,0
```

The preceding example loads and stores a two-symbol I/Q file named `Test_BPSK` that has a Q offset. The table shown below describes the command parameters.

- "Test_BPSK" `Test_BPSK` is the file name. The directory path is not needed. The path `"/USER/IQ"` is implied.
- 1 Q Offset. The Q output delay is enabled.
- 2 Number of symbols
- 1 Value of the first I symbol
- 0 Value of the first Q symbol.
- 0 Value of the second I symbol
- 0 Value of the second Q symbol

Memory Subsystem (:MEMory)

Range	<i>num_states</i> : 2–256 <i>i0–i(n)</i> : –1 to 1 <i>q0–q(n)</i> : –1 to 1 <i>num_diff_states</i> : 0–256 <i>diff0–diff(n)</i> : –128 to 127
Remarks	Refer to “ File Name Variables ” on page 13 for information on the file name syntax.

:DATA:PRAM:FILE:BLOCK

Supported E4438C with Option 001/601 or 002/602

```
:MEMory:DATA:PRAM:FILE:BLOCK "<file_name>", <data_block>
```

This command loads block-formatted data directly into pattern RAM volatile memory (WFM1). Pattern RAM memory describes how memory (WFM1) is used and is not a distinct piece of memory. A PRAM file is specified as an array of bytes.

"<file_name>" This variable names the destination file. No directory path name is needed.

<data_block> This parameter represents the data and file length parameters. The data in the file is represented by the <data_block> variable. The file length parameters are used by the signal generator for allocating memory.

Pattern Ram files are binary files downloaded directly into waveform memory as an array of bytes. Each byte specifies a data bit (LSB 0), a burst bit (BIT 2), and an Event 1 output bit (BIT 6). Refer to the *E4428C/38C ESG Signal Generators Programming Guide* for more information on pattern RAM downloading.

Example

```
:MEM:DATA:PRAM:FILE:BLOC "PRAM_Data", #14Yq8L
```

The preceding example downloads PRAM data to a file named PRAM_Data into the signal generator’s volatile memory (WFM1).

- "PRAM_Data" PRAM_Data is the file name. PRAM files are saved to the signal generator’s volatile memory (WFM1).
- #14Yq8L Data block
 - # This character indicates the beginning of the data block
 - 1 Number of digits in the byte count
 - 4 Byte count
 - Yq8L 4 bytes of data

NOTE The data, Yq8L, in the above command is not valid and is used for example purposes only. Typically, ASCII characters representing data are unprintable.

Remarks Refer to “File Name Variables” on page 13 for information on the file name syntax.

:DATA:PRAM:FILE:LIST

Supported E4438C with Option 001/601 or 002/602

MEMory:DATA:PRAM:FILE:LIST "<file_name>" , <uint8>[, <uint8> , <...>]

This command loads list-formatted data directly into pattern RAM volatile memory (WFM1). Pattern RAM memory describes how memory (WFM1) is used and is not a distinct piece of memory. A PRAM file is specified as an array of bytes.

NOTE This command should be preceded by a *WAI (Wait-to-Continue) command to ensure that all pending operations are completed, before loading the list.

"<file_name>" This variable names the destination file.

<uint8> This variable is any of the valid 8-bit, unsigned integer values between 0 and 255.

[, <uint8> , <...>] This variable identifies the value of the second and subsequent 8-bit unsigned integer variables.

Pattern Ram files are binary files downloaded directly into waveform memory as an array of bytes. Each byte specifies a data bit (LSB 0), a burst bit (BIT 2), and an Event 1 output bit (BIT 6). Refer to the *E4428C/38C ESG Signal Generators Programming Guide* for more information on pattern RAM downloading.

Example

:MEM:DATA:PRAM:LIST "Pram_Data" , 85 , 21 , 21 , 20 , 20 , 100

The preceding example downloads PRAM data, in list format, to a file named `Pram_Data` in the signal generator’s volatile memory (WFM1).

- "Pram_Data" `Pram_Data` is the file name. PRAM files are saved to the signal generator’s volatile memory (WFM1).
- 85 The first 8-bit integer value
- 21 , 21 , 20 , 20 , 100 Subsequent 8-bit integer values.

Memory Subsystem (:MEMory)

Range	0–255
Remarks	Refer to “File Name Variables” on page 13 for information on the file name syntax.

:DATA:PRAM

NOTE	Refer to the <i>E4428C/38C ESG Signal Generators Programming Compatibility Guide</i> for information on this command. This command is still valid for backward compatibility with earlier signal generator models.
-------------	--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------

:DATA:PRAM:BLOCK

NOTE	Refer to the <i>E4428C/38C ESG Signal Generators Programming Compatibility Guide</i> for information on this command. This command was replaced by “:DATA:PRAM:FILE:BLOCK” on page 110.
-------------	-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------

:DATA:PRAM:LIST

NOTE	Refer to the <i>E4428C/38C ESG Signal Generators Programming Compatibility Guide</i> for information on this command. This command has been replaced by “:DATA:PRAM:FILE:LIST” on page 111.
-------------	---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------

:DATA:SHAPE

Supported E4438C with Option 001/601 or 002/602

```
:MEMory:DATA:SHAPE "<filename>" ,<num_rise_points> ,<rp0> ,<rp1> ,  
...<num_fall_points> ,<fp0> ,<fp1> ,...<fp(n)>  
:MEMory:DATA:SHAPE? "<filename>"
```

This command creates a new burst shape file and stores it in the signal generator non-volatile memory.

- "<filename>" This variable string identifies the name of the burst shape file.
- num_rise_points This variable specifies how many rise points used in the command.
- rp0,...rp(n) This variable defines each successive rise point, where 0 is no power and 1 is full power.
- num_fall_points This variable specifies how many fall points used in the command.

fp0,...fp(n) This variable defines each successive fall point, where 0 is no power and 1 is full power.

Range num_rise_points: 2–256 num_fall_points: 2–256
 rp0–rp(n): 0.0–1.0 fp0–fp(n): 0.0–1.0

:DATA:SHAPE

Supported E4438C with Option 001/601 or 002/602

```
:MEMory:DATA:SHAPE
"<file_name>",<rise_pnts>,<rp0>,<rp1>,...<fall_points>,<fp0>,<fp1>,...<fp(n)>
:MEMory:DATA:SHAPE? "<file_name>"
```

This command loads a burst shape file into the signal generator's non-volatile memory (NVWFM).

"<file_name>" This variable names the destination file and directory path.

rise_pnts This variable indicates the number of rise points used to describe the burst shape rising slope.

rp0,...rp(n) This variable defines each successive rise point, where 0 is no power and 1 is full power.

fall_points This variable indicates the number of fall points used to describe the burst shape falling slope.

fp0,...fp(n) This variable defines each successive fall point, where 1 is full power and 0 is no power.

Refer the *E4428C/38C ESG Signal Generators Programming Guide* for more information on downloading and using files.

Example

```
:MEM:DATA:SHAP "Shape_File",6,0,0.2,0.4,0.6,0.8,1.0,2,0.5,0
```

The preceding example loads shape data to a file named `Shape_File` in the signal generator's non-volatile memory.

- "Shape_File" `Shape_File` is the shape data filename. The directory path is not needed. The path `"/USER/SHAPE/"` is implied.
- 6 Number of rise points describing the burst shape.
- 0,0.2,0.4,0.6,0.8,1.0 Rise point values.
- 2 Number of fall points describing the burst shape.
- 0.5,0 Fall point values.

Memory Subsystem (:MEMory)

Range	<i>num_rise_points</i> : 2–256
	<i>num_fall_points</i> : 2–256
	<i>rp0–rp(n)</i> : 0.0–1.0
	<i>fp0–fp(n)</i> : 0.0–1.0

:DATA:UNPRotected

Supported E4438C with Option 001/601 or 002/602

:MEMory:DATA:UNPRotected "<file_name>" ,<data_block>

This command allows you to download data and store it in a file on the signal generator with the ability to retrieve it. This command is intended for downloading waveform data; however you can use it to download other types of data.

NOTE If you do not use the *UNPRotected* command when downloading a waveform file, you will not be able to retrieve or upload the file. Attempting to do so will cause the signal generator to display the message: `ERROR:221, Access denied`.

"<file_name>" This variable names the destination file and directory path. The file type determines how you must format the "<file_name>" variable as described in the following list.

- **Binary file** The "<file_name>" variable requires only a file name. A file name without a file path is automatically stored in the Binary memory catalog. Refer to [“File Name Variables” on page 13](#) for information on the file name syntax.
- **Encrypted file** The "<file_name>" variable requires a path that includes the SECUREWAVE directory. The securewave directory path is SNVWFM: for non-volatile waveform memory and SWFM1: for volatile waveform memory.
- **All other file types** The "<file_name>" variable requires a path that includes the destination directory for the file type. Refer to the [Table on page 14](#), and [“File Name Variables” on page 13](#) for more information.

<data_block> This parameter represents the data and file length parameters. The data in the file is represented by the <data_block> variable.

Refer to the *E4428C/38C ESG Signal Generators Programming Guide* for more information on downloading and using files.

Example

```
:MEM:DATA:UNPR "NVWFM:Data_File",#18Qz37pY9o
```

The preceding example downloads waveform data to a file named Data_File in the signal generator's non-volatile securewave directory. The table shown below describes the command parameters.

- | | |
|---------------------|------------------------------------------------------------------------------------------------------|
| • "NVWFM:Data_File" | Data_File is the filename. The directory path is not needed. The path "/USER/SECUREWAVE" is implied. |
| • #18Qz37pY9o | Data block |
| # | This character indicates the beginning of the data block |
| 1 | Number of digits in the byte count |
| 8 | Byte count |
| Qz37pY9o | 8 bytes of data |

NOTE The data, Qz37pY9o, in the above command is not valid and is used for example purposes only. Typically, ascii characters representing data are unprintable.

:DElete:ALL

Supported All Models

CAUTION Using this command deletes all user files including binary, list, state, and flatness correction files, and any saved setups which use the front panel table editor. However, this does not include files stored on the Option 001/601 or 002/602 baseband generator. You cannot recover the files after executing this command.

```
:MEMory:DElete:ALL

:MEMory:STAtE:COMMeNt <reg_num>,<seq_num>,"<comment>"
```

```
:MEMory:STAtE:COMMeNt? <reg_num>,<seq_num>
```

This command lets you to add a descriptive comment to the saved state <reg_num>,<seq_num>. Comments can be up to 55 characters long.

Key Entry **Add Comment To Seq[n] Reg[nn]**

:STORe:LIST

Supported All Models

```
:MEMory:STORe:LIST "<file name>"
```

This command stores the current list sweep data to a file.

Key Entry **Store To File**

Mass Memory Subsystem (:MMEMory)

:CATalog

Supported All Models

```
:MMEMory:CATalog? "<msus>"
```

This command outputs a list of the files from the specified file system.

The variable "<msus>" (mass storage unit specifier) represents "<file system>". The file systems and types are shown in [Table 1-4 on page 14](#).

The return data will be in the following form:

```
<mem used>,<mem free>{,"<file listing>"}
```

The signal generator will return the two memory usage parameters and as many file listings as there are files in the specified file system. Each file listing will be in the following format:

```
"<file name,file type,file size>"
```

Key Entry	Binary	List	State	User Flatness	FIR	Shape	Bit	FSK
	IQ	Seq	DMOD	MTONE	MDMOD	CDMA	MCDMA	FCDMA
	MFCDMA	RCDMA	WCDMA	FWCDMA	MFWCDMA	RWCDMA		
	DWCDMA	MDWCDMA	UWCDMA	WFM1	NVMKR	NVWFM		

Remarks Refer to “[MSUS \(Mass Storage Unit Specifier\) Variable](#)” on page 16 for information on the use of the "<msus>" variable.

:COPY

Supported All Models

```
:MMEMory:COPY "<file name>","<file name>"
```

This command makes a duplicate of the requested file.

Key Entry **Copy File**

Remarks Refer to “[File Name Variables](#)” on page 13 for information on the file name syntax.

When copying a waveform file from volatile to non-volatile memory, the marker file and file header, associated with the waveform file, will automatically be copied at the same time.

:DATA

Supported E4438C with Option 001/601 or 002/602

:MMEMory:DATA "<file name>", <datablock>

:MMEMory:DATA? "<file name>"

This command loads <datablock> into the memory location "<file name>".

The query returns the <datablock> associated with the "<file name>".

Remarks Refer to [“File Name Variables” on page 13](#) for information on the file name syntax.

:DElete:NVWFm

Supported E4438C with Option 001/601 or 002/602

:MMEMory:DElete:NVWFm

This command clears the user file system of all non-volatile arbitrary waveform files.

Key Entry Delete All NVWFm Files

:DElete:WFM

Supported E4438C with Option 001/601 or 002/602

:MMEMory:DElete:WFM

This command clears the user file system of all arbitrary waveform files, which is the same function as performed by the command shown in [“:DElete:WFM1”](#).

Key Entry Delete All WFM1 Files

:DElete:WFM1

Supported E4438C with Option 001/601 or 002/602

:MMEMory:DElete:WFM1

This command clears the user file system of all arbitrary waveform files, which is the same function as performed by the command shown in [“:DElete:WFM1”](#).

Key Entry Delete All WFM1 Files

:DElete[:NAME]

Supported All

```
:MMEMory:DElete[:NAME] "<file name>", ["<msus>"]
```

This command clears the user file system of "<file name>" with the option of specifying the file system separately.

The variable "<msus>" (mass storage unit specifier) represents the file system. For a list of the file systems refer to the [Table on page 14](#).

Key Entry Delete File

Remarks If the optional variable "<msus>" is omitted, the file name needs to include the file system extension. Refer to [“File Name Variables” on page 13](#) and [“MSUS \(Mass Storage Unit Specifier\) Variable” on page 16](#) for information on the use of the file variables.

When deleting a waveform file from memory, the marker file and file header, associated with the waveform file, will also be deleted.

:HEADer:CLEar

Supported E4438C with Option 001/601 or 002/602

```
:MMEMory:HEADer:CLEar "<file name>"
```

This command sets the file header field settings to unspecified for the "<file name>" variable.

Key Entry Clear Header

Remarks This command does not require a personality modulation to be on. Refer to [“File Name Variables” on page 13](#) for information on the file name syntax.

:HEADer:DESCription

Supported E4438C with Option 001/601 or 002/602

```
:MMEMory:HEADer:DESCription "<file name>", "<description>"
```

```
:MMEMory:HEADer:DESCription? "<file name>"
```

This command inserts a description for the file header.

Key Entry Edit Description

Remarks The header description is limited to 32 characters. Refer to [“File Name Variables” on page 13](#) for information on the file name syntax.

:LOAD:LIST

Supported All

:MMEMory:LOAD:LIST "<file name>"

This command loads a List sweep file.

Key Entry Load From Selected File

:MOVE

Supported All

:MMEMory:MOVE "<src_file>", "<dest_file>"

This command renames the requested file in the memory catalog.

Key Entry Rename File

Remarks Refer to [“File Name Variables” on page 13](#) for information on the file name syntax.

:STORe:LIST

Supported All

:MMEMory:STORe:LIST "<file name>"

This command stores the current list sweep data to a file.

Key Entry Store To File

Output Subsystem (:OUTPut)

:BLANKing:AUTO

Supported All

:OUTPut:BLANKing:AUTO ON|OFF|1|0

:OUTPut:BLANKing:AUTO?

This command turns the RF output on or off during frequency band changes. Frequency band changes can cause the signal generator's RF output to fluctuate. The output blanking function, when active, turns off the RF output until the frequency settles.

ON(1) The RF output turns off when crossing a frequency band.

OFF(0) The RF output stays on when crossing a frequency band.

*RST 1

Key Entry Output Blanking Off On Auto

Remarks Refer to the signal generator's data sheet for information on frequency switching speeds, settling times, and frequency band information.

:BLANKing:STATe

Supported All

:OUTPut:BLANKing:STATe ON|OFF|1|0

:OUTPut:BLANKing:STATe?

This command enables or disables the RF output blanking state.

ON(1) The RF output turns off during frequency changes.

OFF(0) The RF output stays on during frequency changes.

*RST 1

Remarks Refer to the signal generator's data sheet for information on frequency switching speeds, settling times, and frequency band information.

:MODulation[:STATe]

Supported All

:OUTPut:MODulation[:STATe] ON|OFF|1|0

:OUTPut:MODulation[:STATe]?

This command enables or disables the modulation of the RF output with the currently active modulation type(s).

***RST** 1

Key Entry **Mod On/Off**

Remarks Some modulation types can be simultaneously enabled such as pulse and AM.
An annunciator on the signal generator is always displayed to indicate whether modulation is switched on or off.

[:STATe]

Supported All

:OUTPut[:STATe] ON|OFF|1|0

:OUTPut[:STATe]?

This command enables or disables the RF output.

***RST** 0

Key Entry **RF On/Off**

Remarks Although you can configure and engage various modulations, no signal is available at the RF OUTPUT connector until this command is executed.
An annunciator is always displayed on the signal generator to indicate whether the RF output is switched on or off.

Route Subsystem (:ROUTE:HARDware:DGENERator)

:INPut:BPOLarity

Supported E4438C with Option 001/601 or 002/602

:ROUTE:HARDware:DGENERator:INPut:BPOLarity POSitive|NEGative

:ROUTE:HARDware:DGENERator:INPut:BPOLarity?

This command configures the polarity of the TTL input signal at the BURST GATE IN connector. POSitive refers to normal logic, while NEGative refers to inverted logic.

***RST** POS

Key Entry **Burst Gate In Polarity Neg Pos**

Remarks This command performs the same function as [“:IPOLarity:BGATE”](#) on page 129.

:INPut:CPOLarity

Supported E4438C with Option 001/601 or 002/602

:ROUTE:HARDware:DGENERator:INPut:CPOLarity POSitive|NEGative

:ROUTE:HARDware:DGENERator:INPut:CPOLarity?

This command configures the polarity of the TTL input signal at the DATA CLOCK connector. POSitive refers to normal logic, while NEGative refers to inverted logic.

***RST** POS

Key Entry **Data Clock Polarity Neg Pos**

Remarks This command performs the same function as [“:IPOLarity:CLOCK”](#) on page 130.

:INPut:DPOLarity

Supported E4438C with Option 001/601 or 002/602

:ROUTE:HARDware:DGENERator:INPut:DPOLarity POSitive|NEGative

:ROUTE:HARDware:DGENERator:INPut:DPOLarity?

This command configures the polarity of the TTL input signal at the DATA connector. POSitive refers to normal logic, while NEGative refers to inverted logic.

***RST** POS

Key Entry Data Polarity Neg Pos

Remarks This command performs the same function as “:IPOLarity:DATA” on page 130.

:INPut:SPOLarity

Supported E4438C with Option 001/601 or 002/602

:ROUTE:HARDware:DGENERator:INPut:SPOLarity POSitive|NEGative

:ROUTE:HARDware:DGENERator:INPut:SPOLarity?

This command configures the polarity of the TTL input signal at the SYMBOL SYNC connector. POSitive refers to normal logic, while NEGative refers to inverted logic.

***RST** POS

Key Entry Symbol Sync Polarity Neg Pos

Remarks This command performs the same function as “:IPOLarity:SSYNc” on page 130.

:IPOLarity:BGATe

Supported E4438C with Option 001/601 or 002/602

:ROUTE:HARDware:DGENERator:IPOLarity:BGATe POSitive|NEGative

:ROUTE:HARDware:DGENERator:IPOLarity:BGATe?

This command configures the polarity of the input signal at the BURST GATE IN connector. POSitive refers to normal logic, while NEGative refers to inverted logic.

***RST** POS

Key Entry Burst Gate In Polarity Neg Pos

Remarks This command performs the same function as “:INPut:BPOLarity” on page 128.

:IPOLarity:CLOCK

Supported E4438C with Option 001/601 or 002/602

:ROUTE:HARDware:DGENERator:IPOLarity:CLOCK POSitive|NEGative

:ROUTE:HARDware:DGENERator:IPOLarity:CLOCK?

This command configures the polarity of the TTL input signal at the DATA CLOCK connector. POSitive refers to normal logic, while NEGative refers to inverted logic.

***RST** POS

Key Entry **Data Clock Polarity Neg Pos**

Remarks This command performs the same function as [“:INPut:CPOLarity”](#) on page 128.

:IPOLarity:DATA

Supported E4438C with Option 001/601 or 002/602

:ROUTE:HARDware:DGENERator:IPOLarity:DATA POSitive|NEGative

:ROUTE:HARDware:DGENERator:IPOLarity:DATA?

This command configures the polarity of the TTL input signal at the DATA connector. POSitive refers to normal logic, while NEGative refers the inverted logic.

***RST** POS

Key Entry **Data Polarity Neg Pos**

Remarks This command performs the same function as [“:INPut:DPOLarity”](#) on page 129.

:IPOLarity:SSYNc

Supported E4438C with Option 001/601 or 002/602

:ROUTE:HARDware:DGENERator:IPOLarity:SSYNc POSitive|NEGative

:ROUTE:HARDware:DGENERator:IPOLarity:SSYNc?

This command configures the polarity of the TTL input signal at the SYMBOL SYNC connector. POSitive refers to normal logic, while NEGative refers to inverted logic.

***RST** POS

Key Entry **Symbol Sync Polarity Neg Pos**

Remarks This command performs the same function as [“:INPut:SPOLarity”](#) on page 129.

:OPOLarity:CLOCK

Supported E4438C with Option 001/601 or 002/602

```
:ROUTE:HARDware:DGENERator:OPOLarity:CLOCK POSitive|NEGative
```

```
:ROUTE:HARDware:DGENERator:OPOLarity:CLOCK?
```

This command configures the polarity of the TTL output Data Clock Out signal at the DATA CLK OUT pin on the rear panel AUX I/O connector. POSitive refers to normal logic, while the NEGative refers to inverted logic.

***RST** POS

Key Entry **Data Clock Out Neg Pos**

Remarks This command performs the same function as “:OUTPut:CPOLarity” on [page 132](#).

:OPOLarity:DATA

Supported E4438C with Option 001/601 or 002/602

```
:ROUTE:HARDware:DGENERator:OPOLarity:DATA POSitive|NEGative
```

```
:ROUTE:HARDware:DGENERator:OPOLarity:DATA?
```

This command configures the polarity of the TTL output DATA OUT signal at the DATA OUT pin on the rear panel AUX I/O connector. POSitive refers to normal logic, while NEGative refers to inverted logic.

***RST** POS

Key Entry **Data Out Polarity Neg Pos**

Remarks This command performs the same function as “:OUTPut:DPOLarity” on [page 133](#).

:OPOLarity:SSYNc

Supported E4438C with Option 001/601 or 002/602

:ROUTE:HARDware:DGENERator:OPOLarity:SSYNc POSitive|NEGative

:ROUTE:HARDware:DGENERator:OPOLarity:SSYNc?

This command configures the polarity of the TTL output SYMBOL SYNC signal at the SYM SYNC OUT pin on the rear panel AUX I/O connector. POSitive refers to normal logic, while NEGative refers to inverted logic.

***RST** POS

Key Entry Symbol Sync Out Polarity Neg Pos

Remarks This command performs the same function as [“:OUTPut:SPOLarity” on page 133](#).

:OUTPut:CPOLarity

Supported E4438C with Option 001/601 or 002/602

:ROUTE:HARDware:DGENERator:OUTPut:CPOLarity POSitive|NEGative

:ROUTE:HARDware:DGENERator:OUTPut:CPOLarity?

This command configures the polarity of the TTL output DATA CLOCK OUT signal at the DATA CLK OUT pin on the rear panel AUX I/O connector. POSitive refers to normal logic, while NEGative refers to inverted logic.

***RST** POS

Key Entry Data Clock Polarity Neg Pos

Remarks This command performs the same function as [“:OPOLarity:CLOCK” on page 131](#).

:OUTPut:DCS[:STATe]

Supported E4438C with Option 001/601 or 002/602

```
:ROUTe:HARDware:DGENERator:OUTPut:DCS[:STATe] ON|OFF|1|0
```

```
:ROUTe:HARDware:DGENERator:OUTPut:DCS[:STATe]?
```

This command is used to enable or disable the output DATA OUT, DATA CLK OUT, and SYM SYNC OUT signals from the rear panel AUX I/O connector. Normally, these output signals should be enabled (On). However, disabling these outputs will decrease the spurs that are sometimes present when operating at high symbol rates.

***RST** 1

Key Entry DATA/CLK/SYNC Rear Outputs Off On

:OUTPut:DPOLarity

Supported E4438C with Option 001/601 or 002/602

```
:ROUTe:HARDware:DGENERator:OUTPut:DPOLarity POSitive|NEGative
```

```
:ROUTe:HARDware:DGENERator:OUTPut:DPOLarity?
```

This command configures the polarity of the TTL output signal at the DATA OUT connector. POSitive refers to normal logic, while NEGative refers to inverted logic.

***RST** POS

Key Entry Data Out Polarity Neg Pos

Remarks This command performs the same function as “:OPOLarity:DATA” on page 131.

:OUTPut:SPOLarity

Supported E4438C with Option 001/601 or 002/602

```
:ROUTe:HARDware:DGENERator:OUTPut:SPOLarity POSitive|NEGative
```

```
:ROUTe:HARDware:DGENERator:OUTPut:SPOLarity?
```

This command configures the polarity of the TTL input signal at the SYMBOL SYNC connector. POSitive refers to normal logic, while NEGative refers to inverted logic.

***RST** POS

Key Entry Symbol Sync Out Polarity Neg Pos

Status Subsystem (:STATus)

:OPERation:BASEband:CONDition

Supported E4438C with Option 001/601 or 002/602

:STATus:OPERation:BASEband:CONDition?

This query returns the decimal sum of the bits in the Baseband Operation Condition Register. For example, if the baseband is busy (bit 0), the value 1 is returned.

Range 0–32767

Remarks The data in this register is continuously updated and reflects the current conditions.

Refer to Chapter 3 of the *E4428C/38C ESG Signal Generators Programming Guide* for more information.

:OPERation:BASEband:ENABLE

Supported E4438C with Option 001/601 or 002/602

:STATus:OPERation:BASEband:ENABLE <val>

:STATus:OPERation:BASEband:ENABLE?

This command determines which bits in the Baseband Operation Event Register will set the Baseband is Busy bit (bit 10) in the Standard Operation Condition Register.

The variable <num> is the sum of the decimal values of the bits you want to enable.

Range 0–32767

Remarks Refer to Chapter 3 of the *E4428C/38C ESG Signal Generators Programming Guide* for more information.

:OPERation:BASEband:NTRansition

Supported E4438C with Option 001/601 or 002/602

:STATUS:OPERation:BASEband:NTRansition <val>

:STATUS:OPERation:BASEband:NTRansition?

This command determines which bits in the Baseband Operation Condition Register will set the corresponding bit in the Baseband Operation Event Register when that bit has a negative transition (1 to 0).

The variable <val> is the sum of the decimal values of the bits that you want to enable.

Range 0–32767

Remarks Refer to Chapter 3 of the *E4428C/38C ESG Signal Generators Programming Guide* for more information.

:OPERation:BASEband:PTRansition

Supported E4438C with Option 001/601 or 002/602

:STATUS:OPERation:BASEband:PTRansition <val>

:STATUS:OPERation:BASEband:PTRansition?

This command determines which bits in the Baseband Operation Condition Register will set the corresponding bit in the Baseband Operation Event Register when that bit has a positive transition (0 to 1).

The variable <val> is the sum of the decimal values of the bits that you want to enable.

Range 0–32767

Remarks Refer to Chapter 3 of the *E4428C/38C ESG Signal Generators Programming Guide* for more information.

:OPERation:BASEband[:EVENT]

Supported E4438C with Option 001/601 or 002/602

:STATus:OPERation:BASEband[:EVENT]?

CAUTION This is a destructive read. The data in the register is latched until it is queried. Once queried, the data is cleared.

This query returns the decimal sum of the bits in the Standard Operation Baseband Event Register.

Range 0–32767

Remarks The equivalent PTR and NTR filters must be set before the condition register can set the corresponding bit in the event register.

Refer to Chapter 3 of the *E4428C/38C ESG Signal Generators Programming Guide* for more information.

:OPERation:CONDition

Supported All

:STATus:OPERation:CONDition?

This query returns the decimal sum of the bits for the registers that are set to one and are part of the Standard Operation Status Group. For example, if a sweep is in progress (bit 3), the value 8 is returned.

Range 0–32767

Remarks The data in this register is continuously updated and reflects current conditions.

Refer to Chapter 3 of the *E4428C/38C ESG Signal Generators Programming Guide* for more information.

:OPERation:ENABLE

Supported All

:STATus:OPERation:ENABle <val>

:STATus:OPERation:ENABle?

This command determines which bits in the Standard Operation Event Register will set the Standard Operation Status Summary bit (bit 7) in the Status Byte Register.

The variable <val> is the sum of the decimal values of the bits that you want to enable.

Range 0–32767

Remarks Refer to Chapter 3 of the *E4428C/38C ESG Signal Generators Programming Guide* for more information.

:OPERation:NTRansition

Supported All

:STATus:OPERation:NTRansition <val>

:STATus:OPERation:NTRansition?

This command determines which bits in the Standard Operation Condition Register will set the corresponding bit in the Standard Operation Event Register when that bit has a negative transition (1 to 0).

The variable <val> is the sum of the decimal values of the bits that you want to enable.

Range 0–32767

Remarks Refer to Chapter 3 of the *E4428C/38C ESG Signal Generators Programming Guide* for more information.

:OPERation:PTRansition

Supported All

```
:STATus:OPERation:PTRansition <val>  
:STATus:OPERation:PTRansition?
```

This command determines which bits in the Standard Operation Condition Register will set the corresponding bit in the Standard Operation Event Register when that bit has a positive transition (0 to 1).

The variable <val> is the sum of the decimal values of the bits that you want to enable.

Range 0–32767

Remarks Refer to Chapter 3 of the *E4428C/38C ESG Signal Generators Programming Guide* for more information.

:OPERation[:EVENT]

Supported All

CAUTION This is a destructive read. The data in the register is latched until it is queried. Once queried, the data is cleared.

```
:STATus:OPERation[:EVENT]?
```

This query returns the decimal sum of the bits in the Standard Operation Event Register.

Range 0–32767

Remarks The equivalent PTR or NTR filters must be set before the condition register can set the corresponding bit in the event register.

Refer to Chapter 3 of the *E4428C/38C ESG Signal Generators Programming Guide* for more information.

:PRESet

Supported All

```
:STATus:PRESet
```

This command presets all transition filters, enable registers, and error/event queue enable registers.

Remarks Refer to Chapter 3 of the *E4428C/38C ESG Signal Generators Programming Guide* for more information.

:QUESTionable:BERT:CONDition

Supported E4438C with Option UN7, 300 or both

:STATus:QUESTionable:BERT:CONDition?

This query returns the decimal sum of the bits in the Data Questionable BERT Condition Register. For example, if no clock signal has been input for more than three seconds during the bit error rate measurement (bit 0), then a value of 1 is returned.

Range 0–32767

Remarks The data in this register is continuously updated and reflects the current conditions.

Refer to Chapter 3 of the *E4428C/38C ESG Signal Generators Programming Guide* for more information.

:QUESTionable:BERT:ENABLE

Supported E4438C with Option UN7, 300 or both

:STATus:QUESTionable:BERT:ENABLE <val>

:STATus:QUESTionable:BERT:ENABLE?

This command determines which bits in the Data Questionable BERT Event Register will set the Data Questionable BERT Summary bit (bit 12) in the Data Questionable Condition Register.

The variable <val> is the sum of the decimal values of the bits you want to enable.

Range 0–32767

Remarks Refer to Chapter 3 of the *E4428C/38C ESG Signal Generators Programming Guide* for more information.

:QUESTionable:BERT:NTRansition

Supported E4438C with Option UN7, 300 or both

:STATUS:QUESTionable:BERT:NTRansition <val>

:STATUS:QUESTionable:BERT:NTRansition?

This command determines which bits in the Data Questionable BERT Condition Register will set the corresponding bit in the Data Questionable BERT Event Register when that bit has a negative transition (1 to 0).

The variable <val> is the sum of the decimal values of the bits that you want to enable.

Range 0–32767

Remarks The data in this register is continuously updated and reflects the current conditions.

Refer to Chapter 3 of the *E4428C/38C ESG Signal Generators Programming Guide* for more information.

:QUESTionable:BERT:PTRansition

Supported E4438C with Option UN7, 300 or both

:STATUS:QUESTionable:BERT:PTRansition <val>

:STATUS:QUESTionable:BERT:PTRansition?

This command determines which bits in the Data Questionable BERT Condition Register will set the corresponding bit in the Data Questionable BERT Event Register when that bit has a positive transition (0 to 1).

The variable <val> is the sum of the decimal values of the bits that you want to enable.

Range 0–32767

Remarks Refer to Chapter 3 of the *E4428C/38C ESG Signal Generators Programming Guide* for more information.

:QUESTIONable:BERT[:EVENT]

Supported E4438C with Option UN7, 300 or both

CAUTION This is a destructive read. The data in the register is latched until it is queried. Once queried, the data is cleared.

`:STATUS:QUESTIONable:BERT[:EVENT]?`

This command returns the decimal value of the sum of the bits in the Data Questionable BERT Event Register.

Range 0–32767

Remarks Note that the register requires that the equivalent PTR or NTR filters be set before a condition register bit can set a bit in the Event register.

Refer to Chapter 3 of the *E4428C/38C ESG Signal Generators Programming Guide* for more information.

:QUESTIONable:CALibration:CONDition

Supported All

`:STATUS:QUESTIONable:CALibration:CONDition?`

This query returns the decimal sum of the bits in the Data Questionable Calibration Condition Register. For example, if the DCFM or DCΦM zero calibration fails (bit 0), a value of 1 is returned.

Range 0–32767

Remarks The data in this register is continuously updated and reflects the current conditions.

Refer to Chapter 3 of the *E4428C/38C ESG Signal Generators Programming Guide* for more information.

:QUESTIONable:CALibration:ENABLE

Supported All

`:STATUS:QUESTIONable:CALibration:ENABLE <val>`

`:STATUS:QUESTIONable:CALibration:ENABLE?`

This command determines which bits in the Data Questionable Calibration Event Register will set the calibration summary bit (bit 8) in the Data Questionable Condition Register.

Status Subsystem (:STATUS)

The variable <val> is the sum of the decimal values of the bits that you want to enable.

Range 0–32767

Remarks Refer to Chapter 3 of the *E4428C/38C ESG Signal Generators Programming Guide* for more information.

:QUESTIONable:CALibration:NTRansition

Supported All

```
:STATus:QUESTionable:CALibration:NTRansition <val>  
:STATus:QUESTionable:CALibration:NTRansition?
```

This command determines which bits in the Data Questionable Calibration Condition Register will set the corresponding bit in the Data Questionable Calibration Event Register when that bit has a negative transition (1 to 0).

The variable <val> is the sum of the decimal values of the bits that you want to enable.

Range 0–32767

Remarks Refer to Chapter 3 of the *E4428C/38C ESG Signal Generators Programming Guide* for more information.

:QUESTIONable:CALibration:PTRansition

Supported All

```
:STATus:QUESTionable:CALibration:PTRansition <val>  
:STATus:QUESTionable:CALibration:PTRansition?
```

This command determines which bits in the Data Questionable Calibration Condition Register will set the corresponding bit in the Data Questionable Calibration Event Register when that bit has a positive transition (0 to 1).

The variable <val> is the sum of the decimal values of the bits that you want to enable.

Range 0–32767

Remarks Refer to Chapter 3 of the *E4428C/38C ESG Signal Generators Programming Guide* for more information.

:QUESTIONable:CALibration[:EVENT]

Supported All

CAUTION This is a destructive read. The data in the register is latched until it is queried. Once queried, the data is cleared.

:STATus:QUESTionable:CALibration[:EVENT]?

This command returns the decimal sum of the bits in the Data Questionable Calibration Event Register.

Range 0–32767

Remarks The equivalent PTR or NTR filters must be set before the condition register can set the corresponding bit in the event register.

Refer to Chapter 3 of the *E4428C/38C ESG Signal Generators Programming Guide* for more information.

:QUESTIONable:CONDition

Supported All

:STATus:QUESTionable:CONDition?

This query returns the decimal sum of the bits in the Data Questionable Condition Register. For example, if the reference oscillator oven is cold (bit 4), a value of 16 is returned.

Range 0–32767

Remarks The data in this register is continuously updated and reflects current conditions.

Refer to Chapter 3 of the *E4428C/38C ESG Signal Generators Programming Guide* for more information.

:QUESTionable:ENABle**Supported** All

:STATUS:QUESTionable:ENABle <val>

:STATUS:QUESTionable:ENABle?

This command determines which bits in the Data Questionable Event Register will set the Data Questionable Status Group Summary bit (bit 3) in the Status Byte Register.

The variable <val> is the sum of the decimal values of the bits that you want to enable.

Range 0–32767

Remarks Refer to Chapter 3 of the *E4428C/38C ESG Signal Generators Programming Guide* for more information.

:QUESTionable:FREQuency:CONDition**Supported** All

:STATUS:QUESTionable:FREQuency:CONDition?

This query returns the decimal sum of the bits in the Data Questionable Frequency Condition Register. For example, if the 1 GHz internal reference clock is unlocked (bit 2), a value of 4 is returned.

Range 0–32767

Remarks The data in this register is continuously updated and reflects current conditions.

Refer to Chapter 3 of the *E4428C/38C ESG Signal Generators Programming Guide* for more information.

:QUESTionable:FREQuency:ENABle**Supported** All

:STATUS:QUESTionable:FREQuency:ENABle <val>

:STATUS:QUESTionable:FREQuency:ENABle?

This command determines which bits in the Data Questionable Frequency Event Register will set the frequency summary bit (bit 5) in the Data Questionable Condition Register.

The variable <val> is the sum of the decimal values of the bits that you want to enable.

Range 0–32767

Remarks Refer to Chapter 3 of the *E4428C/38C ESG Signal Generators Programming Guide* for more information.

:QUESTionable:FREQuency:NTRansition

Supported All

```
:STATUS:QUESTionable:FREQuency:NTRansition <val>  
:STATUS:QUESTionable:FREQuency:NTRansition?
```

This command determines which bits in the Data Questionable Frequency Condition Register will set the corresponding bit in the Data Questionable Frequency Event Register when that bit has a negative transition (1 to 0).

The variable <val> is the sum of the decimal values of the bits that you want to enable.

Range 0–32767

Remarks Refer to Chapter 3 of the *E4428C/38C ESG Signal Generators Programming Guide* for more information.

:QUESTionable:FREQuency:PTRansition

Supported All

```
:STATUS:QUESTionable:FREQuency:PTRansition <val>  
:STATUS:QUESTionable:FREQuency:PTRansition?
```

This command determines which bits in the Data Questionable Frequency Condition Register will set the corresponding bit in the Data Questionable Frequency Event Register when that bit has a positive transition (0 to 1).

The variable <val> is the sum of the decimal values of the bits that you want to enable.

Range 0–32767

Remarks Refer to Chapter 3 of the *E4428C/38C ESG Signal Generators Programming Guide* for more information.

:QUESTionable:FREQuency[:EVENT]

CAUTION This is a destructive read. The data in the register is latched until it is queried. Once queried, the data is cleared.

```
:STATUS:QUESTionable:FREQuency[:EVENT]?
```

This query returns the decimal sum of the bits in the Data Questionable Frequency Event Register.

Range 0–32767

Status Subsystem (:STATus)

Remarks The equivalent PTR or NTR filters must be set before the condition register can set the corresponding bit in the event register.

Refer to Chapter 3 of the *E4428C/38C ESG Signal Generators Programming Guide* for more information.

:QUESTionable:MODulation:CONDition

Supported All

:STATus:QUESTionable:MODulation:CONDition?

This command returns the decimal sum of the bits in the Data Questionable Modulation Condition Register. For example, if the modulation is uncalibrated (bit 4), a value of 16 is returned.

Range 0–32767

Remarks The data in this register is continuously updated and reflects current conditions.

Refer to Chapter 3 of the *E4428C/38C ESG Signal Generators Programming Guide* for more information.

:QUESTionable:MODulation:ENABLE

Supported All

:STATus:QUESTionable:MODulation:ENABLE <val>

:STATus:QUESTionable:MODulation:ENABLE?

This command determines which bits in the Data Questionable Modulation Event Register will set the modulation summary bit (bit 7) in the Data Questionable Condition Register.

The variable <val> is the sum of the decimal values of the bits that you want to enable.

Range 0–32767

Remarks Refer to Chapter 3 of the *E4428C/38C ESG Signal Generators Programming Guide* for more information.

:QUESTionable:MODulation:NTRansition

Supported All

```
:STATUS:QUESTionable:MODulation:NTRansition <val>
:STATUS:QUESTionable:MODulation:NTRansition?
```

This command determines which bits in the Data Questionable Modulation Condition Register will set the corresponding bit in the Data Questionable Modulation Event Register when that bit has a negative transition (1 to 0).

The variable <val> is the sum of the decimal values of the bits that you want to enable.

Range 0–32767

Remarks Refer to Chapter 3 of the *E4428C/38C ESG Signal Generators Programming Guide* for more information.

:QUESTionable:MODulation:PTRansition

Supported All

```
:STATUS:QUESTionable:MODulation:PTRansition <val>
:STATUS:QUESTionable:MODulation:PTRansition?
```

This command determines which bits in the Data Questionable Modulation Condition Register will set the corresponding bit in the Data Questionable Modulation Event Register when that bit has a positive transition (0 to 1).

The variable <val> is the sum of the decimal values of the bits that you want to enable.

Range 0–32767

Remarks Refer to Chapter 3 of the *E4428C/38C ESG Signal Generators Programming Guide* for more information.

:QUESTionable:MODulation[:EVENT]

This command determines which bits in the Data Questionable Condition Register will set the corresponding bit in the Data Questionable Event Register when that bit has a negative transition (1 to 0).

The variable <val> is the sum of the decimal values of the bits that you want to enable.

Range 0–32767

Remarks Refer to Chapter 3 of the *E4428C/38C ESG Signal Generators Programming Guide* for more information.

:QUESTionable:POWer:CONDition

Supported All

```
:STATus:QUESTionable:POWer:CONDition?
```

This query returns the decimal sum of the bits in the Data Questionable Power Condition Register. For example, if the RF output signal is unlevelled (bit 1), a value of 2 is returned.

Range 0–32767

Remarks The data in this register is continuously updated and reflects current conditions.

Refer to Chapter 3 of the *E4428C/38C ESG Signal Generators Programming Guide* for more information.

:QUESTionable:POWer:ENABle

Supported All

```
:STATus:QUESTionable:POWer:ENABle <val>  
:STATus:QUESTionable:POWer:ENABle?
```

This command determines which bits in the Data Questionable Power Event Register will set the power summary bit (bit 3) in the Data Questionable Condition Register.

The variable <val> is the sum of the decimal values of the bits that you want to enable.

Range 0–32767

Remarks Refer to Chapter 3 of the *E4428C/38C ESG Signal Generators Programming Guide* for more information.

:QUESTionable:POWer:NTRansition

Supported All

```
:STATus:QUESTionable:POWer:NTRansition <val>  
:STATus:QUESTionable:POWer:NTRansition?

This command determines which bits in the Data Questionable Power Condition Register will set the corresponding bit in the Data Questionable Power Event Register when that bit has a positive transition (0 to 1).

The variable <val> is the sum of the decimal values of the bits that you want to enable.

Range 0–32767

Status Subsystem (:STATUS)

Remarks Refer to Chapter 3 of the *E4428C/38C ESG Signal Generators Programming Guide* for more information.

:QUESTionable:POWer[:EVENT]

Supported All

CAUTION This is a destructive read. The data in the register is latched until it is queried. Once queried, the data is cleared.

`:STATUS:QUESTionable:POWer[:EVENT]?`

This query returns the decimal sum of the bits in the Data Questionable Power Event Register.

Range 0–32767

Remarks The equivalent PTR or NTR filters must be set before the condition register can set the corresponding bit in the event register.

Refer to Chapter 3 of the *E4428C/38C ESG Signal Generators Programming Guide* for more information.

:QUESTionable:PTRansition

Remarks The equivalent PTR or NTR filters must be set before the condition register can set the corresponding bit in the event register.

Refer to Chapter 3 of the *E4428C/38C ESG Signal Generators Programming Guide* for more information.

System Subsystem (:SYSTem)

:CAPability

Supported All

:SYSTem:CAPability?

This query returns the signal generator's capabilities and outputs the appropriate specifiers:

```
(RFSOURCE WITH( (AM|FM|PULM|PM|LFO)&(FSSWEEP|FLIST)&(PSSWEEP|PLIST)
&TRIGGER&REFERENCE))
```

This is a list of the SCPI-defined basic functionality of the signal generator and the additional capabilities it has in parallel (a&b) and singularly (a|b).

:DATE

Supported All

:SYSTem:DATE <year>, <month>, <day>

:SYSTem:DATE?

This command sets the date as shown in the lower right area of the signal generator display.

<year> This variable requires a four digit integer.

The query returns the date in the following format:

```
<+year>, <+month>, <+day>
```

Range <month>: 1–12 <day>: 1–31

Key Entry **Time/Date**

:ERRor[:NEXT]

Supported All

:SYSTem:ERRor[:NEXT]?

This query returns the most recent error message from the signal generator error queue. If there are no error messages, the query returns the following output:

```
+0, "No error"
```

When there is more than one error message, the query will need to be sent for each message.

Key Entry **Error Info** **View Next Error Message**

Remarks The ESG deletes the error messages after viewing the last message.

:ERRor:SCPI[:SYNTax]

Supported All

:SYSTem:ERRor:SCPI[:SYNTax] ON|OFF|1|0

:SYSTem:ERRor:SCPI[:SYNTax]?

This command enables or disables the reporting of SCPI syntax errors to the error queue.

***RST** 1

:FILEsystem:SAFEmode

Supported All

:SYSTem:FILEsystem:SAFEmode ON|OFF|1|0

:SYSTem:FILEsystem:SAFEmode?

This command selects the safe mode for file handling. When safe mode is set to OFF, volatile waveform files can be edited and saved while the signal generator plays the file without signal interruption. However, it is possible with complex waveforms, for corruption of memory to occur which will be reported as an error on the front-panel display and require a reboot of the signal generator to resolve.

Example

```
:SYST:FILE:SAVE ON
```

The preceding example enables the safe mode setting and waveform files cannot be edited without signal disruption while the signal generator plays them.

***RST** On

:HELP:MODE**Supported** All

:SYSTem:HELP:MODE SINGLE|CONTInuous

:SYSTem:HELP:MODE?

This command sets the help function mode of the signal generator.

SINGLE Help is provided only for the next key that you press.

CONTInuous Help is provided for each key you press. In addition, the function of the key is executed.

When the help dialog box is displayed, pressing the **Help** hardkey in either mode will turn help off.

Key Entry **Help Mode Single Cont****Remarks** The setting enabled by this command is not affected by signal generator power-on, preset, or *RST.**:IDN****Supported** All

:SYSTem:IDN "string"

This command modifies the identification string that the *IDN? query returns. Sending an empty string returns the query output of *IDN? to its factory shipped setting. The maximum string length is 72 characters.

Remarks Modification of the *IDN? query output enables the signal generator to identify itself as another signal generator when used as a replacement.

The display diagnostic information, shown by pressing the **Diagnostic Info** softkey, is not affected by this command.

:LANGuage**Supported** All

:SYSTem:LANGuage "SCPI"|"COMP"|"NADC"|"PDC"|"PHS"|"8648"

:SYSTem:LANGuage?

This command sets the remote language for the signal generator.

SCPI This choice provides compatibility for SCPI commands.

COMP This choice provides compatibility for the 8656B, 8657A/B signal generator which is supported by using the GPIB interface.

NADC	This choice provides compatibility for the 8657D NADC personality which is supported only through a GPIB interface (E4438C only).
PDC	This choice provides compatibility for the 8657D PDC personality which is supported only through a GPIB interface (E4438C only).
PHS	This choice provides compatibility for the 8657J PHS personality which is supported only through a GPIB interface (E4438C only).
8648	This choice provides compatibility for the 8648A/B/C/D signal generator which is supported only through a GPIB interface.
Key Entry	SCPI 8656B,8657A/B 8657D NADC 8657D PDC 8657J PHS 8648A/B/C/D
Remarks	The setting enabled by this command is not affected by signal generator power-on, preset, or *RST. For more information on supported SCPI commands and programming codes, refer to the <i>Programming Compatibility Guide</i> .

:PON:TYPE

Supported All

:SYSTem: PON:TYPE PRESet | LAST
:SYSTem: PON:TYPE?

This command sets the defined conditions for the signal generator at power on.

PRESet	This choice sets the conditions to factory- or user-defined as determined by the choice for the preset type. Refer to “:PRESet:TYPE” on page 157 for selecting the type of preset.
LAST	This choice retains the settings at the time the signal generator was last powered down.

NOTE When LAST is selected, no signal generator interaction can occur for at least 3 seconds prior to cycling the power for the current settings to be saved.

Key Entry **Power On Last Preset**

Remarks The setting enabled by this command is not affected by signal generator power-on, preset, or *RST.

:PRESet

Supported All

SYSTem:PRESet

This command returns the signal generator to a set of defined conditions. It is equivalent to pressing the front panel **Preset** hardkey.

Key Entry **Preset**

Remarks The defined conditions are either factory- or user-defined. Refer to “:PRESet:TYPE” on page 157 for selecting the type of defined conditions.

:PRESet:ALL

Supported All

:SYSTem:PRESet:ALL

This command sets all states of the signal generator back to their factory default settings, including states that are not normally affected by signal generator power-on, preset, or *RST.

:PRESet:LANGUage

Supported All

:SYSTem:PRESet:LANGUage "SCPI" | "COMP" | "NADC" | "PDC" | "PHS" | "8648"
:SYSTem:PRESet:LANGUage?

This command sets the remote language that is available when the signal generator is preset.

SCPI	This choice provides compatibility for SCPI commands.
COMP	This choice provides compatibility for the 8656B, 8657A/B signal generator which is supported by using the GPIB interface.
NADC	This choice provides compatibility for the 8657D NADC personality which is supported only through a GPIB interface (E4438C only).
PDC	This choice provides compatibility for the 8657D PDC personality which is supported only through a GPIB interface (E4438C only).
PHS	This choice provides compatibility for the 8657J PHS personality which is supported only through a GPIB interface (E4438C only).
8648	This choice provides compatibility for the 8648A/B/C/D signal generator which is supported only through a GPIB interface.

:PRESet:PERSistent

Supported All
:SYSTem:PRESet:PERSistent

This command sets the states that are not affected by signal generator power-on, preset, or *RST to their factory default settings.

Key Entry **Restore Sys Defaults**

:PRESet:PN9

Supported E4438C Option with Option 001/601 or 002/602
:SYSTem:PRESet:PN9 NORMAl | QUICk
:SYSTem:PRESet:PN9?

This command sets the preset length of the PN9 sequence for personalities that require software PRBS generation.

NORMAL This choice produces a maximal length PN9 sequence.
QUICK This choice produces a truncated (216 bits) PN9 sequence.
***RST** NORM

Key Entry **PN9 Mode Preset**

:PRESet:TYPE

Supported All
:SYSTem:PRESet:TYPE NORMAl | USER
:SYSTem:PRESet:TYPE?

This command toggles the preset state between factory- and user-defined conditions.

Key Entry **Preset Normal User**

Remarks Refer to **“:PRESet[:USER]:SAVE”** for saving the USER choice preset settings.
The setting enabled by this command is not affected by signal generator power-on, preset, or *RST.

:PRESet[:USER]:SAVE**Supported** All

:SYSTem:PRESet[:USER]:SAVE

This command saves your user-defined preset conditions to a state file.

Key Entry Save User Preset

Remarks Only one user-defined preset file can be saved. Subsequent saved user-defined preset files will overwrite the previously saved file.

:SECurity:DISPlay**Supported** All Models

```
:SYSTem:SECurity:DISPlay ON|OFF|1|0
:SYSTem:SECurity:DISPlay?
```

This command enables or disables the secure display mode.

On(1) This selection turns the signal generator display back on, showing the current settings. Cycling the signal generator power also restores the display, however the current settings may change depending on the power-on configuration choice. See “:PON:TYPE” on page 155 for information on the power-on choices available.

OFF(0) This selection blanks the signal generator’s display, hiding the settings and disabling the front panel keys. While in this mode, the display shows
*** SECURE DISPLAY ACTIVATED ***.

For more information about security functions, refer to the *E4428C/38C ESG Signal Generators User’s Guide*.

Example

:SYST:SEC:DISP OFF

The preceding example enables the secure display mode.

***RST** 1**Range** N/A**Key Entry** Activate Security Display

:SECurity:ERASeall

Supported All Models

:SYSTEM:SECurity:ERASall

This command removes all user files, flatness correction files, and baseband generator files. In addition, all table editor files are returned to their original factory values.

This command differs from the :DELeTe:ALL command, which does not reset table editors to factory values. For more information about security functions, refer to the *E4428C/38C ESG Signal Generators User's Guide*.

Key Entry Erase All

:SECurity:LEVel

Supported All Models

:SYSTEM:SECurity:LEVel NONE|ERASe|OVERwrite|SANitize
:SYSTEM:SECurity:LEVel?

This command selects the security level operation for the signal generator.

NONE	This selection causes the signal generator to reset to factory default settings.
ERASe	This selection removes all user files, table editor files, flatness correction files, and baseband generator files.
OVERwrite	This selection removes all user files, table editor files, flatness correction files, and baseband generator files. The memory is then overwritten with random data.
SRAM	All addressable locations will be overwritten with random characters.
Hard Disk	All addressable locations will be overwritten with random characters.
Flash Memory	The flash blocks will be erased.
SANitize	This selection removes all user files, table editor files, flatness correction files, and baseband generator files using the same techniques as the OVERwrite selection for SRAM and flash memory. For the hard disk, the signal generator overwrites all addressable locations with a single character, its complement, and then with a random character.

Once you select the security level, you must execute the command from “:SECurity:LEVel:STATe” to arm the security level.

NOTE Once you select a security level and arm it, you cannot change the level.

For other cleaning and security operation descriptions, see “:SECurity:ERASeall” on page 159, “:SECurity:OVERwrite” on page 161, and “:SECurity:SANitize” on page 161. For more information about security functions, refer to the *E4428C/38C ESG Signal Generators User’s Guide*.

Example

```
:SYST:SEC:LEV NONE
```

The preceding example sets the secure mode so it resets the signal generator to factory settings after completing the security operation.

Key Entry **None** **Erase** **Overwrite** **Sanitize**

:SECurity:LEVel:STATe

Supported All Models

CAUTION Ensure that you select the security level prior to executing this command with the ON (1) selection. Once you enable the state, you cannot reduce the security level.

```
:SYSTem:SECurity:LEVel:STATe ON|OFF|1|0
:SYSTem:SECurity:LEVel:STATe?
```

This command arms and executes the current security level parameter.

On (1) This selection arms and prevents any changes to the current security level. Refer to “:SECurity:LEVel” on page 159 for setting the security level.

OFF (0) This selection performs the actions required for the current security level setting. Cycling the signal generator power also performs the same function.

For more information about security functions, refer to the *E4428C/38C ESG Signal Generators User’s Guide*.

Example

```
:SYST:SEC:LEV:STAT ON
```

The preceding example arms the secure mode selected with the SYSTem:SECurity:LEVel command.

Key Entry **Enter Secure Mode**

:SECurity:OVERwrite

Supported All Models

:SYSTem:SECurity:OVERwrite

This command removes all user files, table editor files values, flatness correction files, and baseband generator files. The memory is then overwritten with random data as described below. For more information about security functions, refer to the *E4428C/38C ESG Signal Generators User's Guide*.

SRAM All addressable locations will be overwritten with random characters.

HARD DISK All addressable locations will be overwritten with random characters.

FLASH MEMORY The flash blocks will be erased.

Key Entry Erase and Overwrite All

:SECurity:SANitize

Supported All Models

:SYSTem:SECurity:SANitize

This command removes all user files, table editor files values, flatness correction files, and baseband generator files. The memory is then overwritten with a sequence of data as described below. For more information about security functions, refer to the *E4428C/38C ESG Signal Generators User's Guide*.

SRAM All addressable locations will be overwritten with random characters.

HARD DISK All addressable locations will be overwritten with a single character and then a random character.

FLASH MEMORY The flash blocks will be erased.

Key Entry Erase and Sanitize All

:SSAVer:DELay

Supported All

:SYSTem:SSAVer:DELay <val>

:SYSTem:SSAVer:DELay?

This command sets the amount of time before the display light or display light and text is switched off. This will occur if there is no input via the front panel during the delay period.

The variable <val> is a whole number measured in hours.

Range 1–12

Key Entry **Screen Saver Delay:**

Remarks The setting enabled by this command is not affected by signal generator power-on, preset, or *RST.

Refer to “:SSAVer:MODE” on page 162 for selecting the screen saver mode.

:SSAVer:MODE

Supported All

:SYSTem:SSAVer:MODE LIGHT | TEXT

:SYSTem:SSAVer:MODE?

This command toggles the screen saver mode between light only or light and text.

LIGHT This choice enables only the light to turn off during the screen saver operation while leaving the text visible on the darkened screen.

TEXT This choice enables both the display light and text to turn off during the screen saver operation.

Key Entry **Screen Saver Mode**

Remarks The setting enabled by this command is not affected by signal generator power-on, preset, or *RST.

:SSAVer:STAtE

Supported All

:SYSTem:SSAVer:STAtE ON | OFF | 1 | 0

:SYSTem:SSAVer:STAtE?

This command enables or disables the display screen saver.

Key Entry **Screen Saver Off On**

Remarks The setting enabled by this command is not affected by signal generator power-on, preset, or *RST.

:TIME

Supported All

:SYSTem:TIME <hour>, <minute>, <second>

:SYSTem:TIME?

This command sets the time displayed in the lower right area of the signal generator's display.

Range <hour>: 0–23 <minute>: 0–59 <second>: 0–59

Key Entry Time/Date

:VERSion

Supported All

:SYSTem:VERSion?

This command returns the SCPI version number with which the signal generator complies.

Trigger Subsystem

:ABORt

Supported All

:ABORt

This command causes the List or Step sweep in progress to abort. If INIT:CONT[:ALL] is set to ON, the sweep will immediately re-initiate. The pending operation flag affecting *OPC, *OPC?, and *WAI will undergo a transition once the sweep has been reset.

:INITiate:CONTinuous[:ALL]

Supported All

:INITiate:CONTinuous[:ALL] ON|OFF|1|0

:INITiate:CONTinuous[:ALL]?

This command selects either a continuous or single list or step sweep. Execution of this command does not affect a sweep in progress.

ON (1) This choice selects continuous sweep where, after the completion of the previous sweep, the current sweep will restart automatically or wait until the appropriate trigger source is received.

OFF (0) This choice selects a single sweep. Refer to “:INITiate:IMMediate[:ALL]” on [page 165](#) for single sweep triggering information.

*RST 0

Key Entry Sweep Repeat Single Cont

Remarks Execution of this command will not affect a sweep in progress.

:INITiate[:IMMediate][:ALL]

Supported All

```
:INITiate[:IMMediate][:ALL]
```

This command either sets or sets and starts a single List or Step sweep, depending on the trigger type. The command performs the following:

- arms a single sweep when BUS, EXTERNAL, or KEY is the trigger source selection
- arms and starts a single sweep when IMMEDIATE is the trigger source selection

This command is ignored if a sweep is in progress. See “:INITiate:CONTinuous[:ALL]” on page 164 for setting continuous or single sweep. See “:TRIGger[:SEQuence]:SOURce” on page 166 to select the trigger source.

In some atypical cases, the :INIT command could be ignored if it immediately follows an *OPC? command. If the :INIT command is ignored, then use a 10ms sleep function before sending the command.

Key Entry **Single Sweep**

:TRIGger:OUTPut:POLarity

Supported All

```
:TRIGger:OUTPut:POLarity POSitive|NEGative
:TRIGger:OUTPut:POLarity?
```

Sets the TTL signal level present at the TRIGGER OUT connector to either high (5 vdc) or low (0 vdc). The trigger out is asserted after the frequency and/or power is set while the sweep is waiting for its step trigger. In addition, the swept-sine sends a pulse to the TRIGGER OUT at the beginning of each sweep.

Example

```
:TRIG:OUTP:POL NEG
```

The preceding example enables the continuous mode as the sweep type.

***RST** POS

Key Entry **Trigger Out Polarity Neg Pos**

:TRIGger[:SEQuence]:SLOPe

Supported All

:TRIGger[:SEQuence]:SLOPe POSitive|NEGative

:TRIGger[:SEQuence]:SLOPe?

This command sets the polarity of the ramp or sawtooth waveform slope present at the TRIG IN connector that will trigger a list or step sweep.

***RST** POS

Key Entry Trigger In Polarity Neg Pos

:TRIGger[:SEQuence]:SOURce

Supported All

:TRIGger[:SEQuence]:SOURce BUS|IMMediate|EXTernal|KEY

:TRIGger[:SEQuence]:SOURce?

This command sets the sweep trigger source for a list or step sweep.

BUS This choice enables GPIB triggering using the *TRG or GET command or LAN and RS-232 triggering using the *TRG command.

IMMediate This choice enables immediate triggering of the sweep event.

EXTernal This choice enables the triggering of a sweep event by an externally applied signal at the TRIG IN connector.

KEY This choice enables triggering through front panel interaction by pressing the **Trigger** hardkey.

***RST** IMM

Remarks The wait for the BUS, EXTernal, or KEY trigger can be bypassed by sending the :TRIGger[:SEQuence][:IMMediate] command.

Example

```
:TRIG:SOUR BUS
```

The preceding example sets the sweep trigger source to BUS.

***RST** IMM

Key Entry Bus Free Run Ext Trigger Key

:TRIGger[:SEQuence][:IMMediate]

Supported All Models

`:TRIGger[:SEQuence][:IMMediate]`

This event command causes an armed List or Step sweep to immediately start without the selected trigger occurring.

In some atypical cases, the `:TRIG` command could be ignored if it immediately follows an `*OPC?` command. If the `:TRIG` command is ignored, then use a 10ms sleep function before sending the command.

Unit Subsystem (:UNIT)

:POWer

Supported All

```
:UNIT:POWer DBM|DBuV|DBuVemf|V|Vemf|DB  
:UNIT:POWer?
```

This command terminates an amplitude value in the selected unit of measure.

If the amplitude reference state is set to on, the query returns units expressed in DB and the DB choice will be displayed. Setting any other unit will cause a setting conflict error stating that the amplitude reference state must be set to off. Refer to, “[:REFerence:STATe](#)” on page 66 for more information.

***RST** DBM

Key Entry dBm dBuV dBuVemf mV uV mVemf uVemf DB

Remarks All power values in this chapter are shown with DBM as the unit of measure. If a different unit of measure is selected, replace DBM with the newly selected unit whenever it is indicated for the value.

4 Analog Commands

This chapter provides SCPI descriptions for subsystems dedicated to analog commands common to all ESG signal generator models. This chapter contains the following major sections:

- “Amplitude Modulation Subsystem ([:SOURce])” on page 170
- “Frequency Modulation Subsystem ([:SOURce])” on page 177
- “Low Frequency Output Subsystem ([:SOURce]:LFOOutput)” on page 184
- “Phase Modulation Subsystem ([:SOURce])” on page 189
- “Pulse Modulation Subsystem ([:SOURce]:PULM)” on page 197

Amplitude Modulation Subsystem ([:SOURce])

:AM[1]|2...

Supported All Models

[:SOURce] :AM[1] | 2 . . .

This prefix enables the selection of the AM path and is part of most SCPI commands associated with this subsystem. The two paths are equivalent to the **AM Path 1 2** softkey.

AM[1] **AM Path 1 2** with 1 selected

AM2 **AM Path 1 2** with 2 selected

When just AM is shown in a command, this means the command applies globally to both paths.

Each path is set up separately. When a SCPI command uses AM[1], only path one is affected. Consequently, when AM2 is selected, only path two is set up. However, the depth of the signals for the two paths can be coupled.

Depth coupling links the depth value of AM[1] to AM2. Changing the deviation value for one path will change it for the other path.

These two paths can be on at the same time provided the following conditions have been met:

- DUALsine or SWEPTSine is not the selection for the waveform type
- each path uses a different source (Internal 1, Ext1, or Ext2)

:AM:INTernal:FREQuency:STEP[:INCRement]

Supported All Models

[:SOURce] :AM: INTernal : FREQuency : STEP[: INCRement] <num>

[:SOURce] :AM: INTernal : FREQuency : STEP[: INCRement] ?

This command sets the step increment for the amplitude modulation internal frequency.

The variable <num> is expressed in units of Hertz.

Range 0.5–1E6

Key Entry **Incr Set**

Remarks The value set by this command is used with the UP and DOWN choices for the AM frequency setting. Refer to “:AM[1]|2:INTERNAL[1]:FREQUENCY” on page 172 for more information.

The setting enabled by this command is not affected by signal generator power-on, preset, or *RST.

:AM:WIDeband:STATe

Supported All Models

[:SOURce] :AM:WIDeband:STATe ON | OFF | 1 | 0

[:SOURce] :AM:WIDeband:STATe?

This command enables or disables the wideband amplitude modulation for the selected path.

***RST** 0

Key Entry **AM Off On**

Remarks The RF carrier is modulated when the modulation state of the signal generator is set to ON, see “:MODulation[:STATe]” on page 127 for more information.

Whenever amplitude modulation is enabled, the AM annunciator is turned on in the display

:AM[1] | 2:EXTeRnal[1] | 2:COUPling

Supported All Models

[:SOURce] :AM[1] | 2:EXTeRnal[1] | 2:COUPling AC | DC

[:SOURce] :AM[1] | 2:EXTeRnal[1] | 2:COUPling?

This command sets the coupling for the amplitude modulation source through the selected external input connector.

AC This choice will only pass ac signal components.

DC This choice will pass both ac and dc signal components.

***RST** DC

Key Entry **Ext Coupling DC AC**

Remarks The command does not change the currently active source or switch the current modulation on or off. The modulating signal may be the sum of several signals, either internal or external sources.

Amplitude Modulation Subsystem ([:SOURce])**:AM[1]|2:INTernal[1]:FREQuency****Supported** All Models

```
[ :SOURce ] :AM[ 1 ] | 2 :INTernal[ 1 ] :FREQuency <val><unit> | UP | DOWN
[ :SOURce ] :AM[ 1 ] | 2 :INTernal[ 1 ] :FREQuency?
```

This command sets the internal amplitude modulation rate for the following applications:

- the first tone of a dual-sine waveform
- the start frequency for a swept-sine waveform
- the frequency rate for all other waveforms

***RST** +4.00000000E+002

Range Dual Sine, Swept-Sine & Sine: 0.1HZ–100kHZ
All Other Waveforms: 0.1HZ–20kHZ

Key Entry **AM Tone 1 Rate** **AM Start Rate** **AM Rate**

:AM[1]|2:INTernal[1]:FREQuency:ALternate**Supported** All Models

```
[ :SOURce ] :AM[ 1 ] | 2 :INTernal[ 1 ] :FREQuency:ALternate <val><unit>
[ :SOURce ] :AM[ 1 ] | 2 :INTernal[ 1 ] :FREQuency:ALternate?
```

This command sets the frequency for the alternate signal.

***RST** +4.00000000E+002

Range Dual-Sine: 0.1HZ–100kHZ Swept-Sine: 0.1HZ–100kHZ

Key Entry **AM Tone 2 Rate** **AM Stop Rate**

Remarks The alternate signal frequency is the second tone of a dual-sine or the stop frequency of a swept-sine waveform.

Refer to “:AM[1]2:INTernal[1]:FUNctioN:SHAPE” on page 173 for the waveform selection.

:AM[1]|2:INteRnal[1]:FREQuency:ALteRnate:AMPLitude:PERCent

Supported All Models

```
[ :SOURce ] :AM[1] | 2 :INteRnal[1] :FREQuency:ALteRnate:AMPLitude:
PERCent <val><unit>
[ :SOURce ] :AM[1] | 2 :INteRnal[1] :FREQuency:ALteRnate:AMPLitude:PERCent?
```

This command sets the amplitude of the second tone for a dual-sine waveform as a percentage of the total amplitude. For example, if the second tone makes up 30% of the total amplitude, then the first tone is 70% of the total amplitude.

***RST** +5.00000000E+001

Range 0–100PCT

Key Entry **AM Tone 2 Ampl Percent Of Peak**

Remarks Refer to “[:AM\[1\]2:INteRnal\[1\]:FUNctIon:SHAPE](#)” on page 173 for the waveform selection.

:AM[1]|2:INteRnal[1]:FUNctIon:SHAPE

Supported All Models

```
[ :SOURce ] :AM[1] | 2 :INteRnal[1] :FUNctIon:SHAPE SINE|TRIangle|SQUare|RAMP|
NOISe|DUALsine|SWEPTsine
[ :SOURce ] :AM[1] | 2 :INteRnal[1] :FUNctIon:SHAPE?
```

This command sets the AM waveform type.

***RST** SINE

Key Entry **Sine Triangle Square Ramp Noise Dual-Sine Swept-Sine**

:AM[1]|2:INteRnal[1]:SWEep:TIME

Supported All Models

```
[ :SOURce ] :AM[1] | 2 :INteRnal[1] :SWEep:TIME <val><unit>
[ :SOURce ] :AM[1] | 2 :INteRnal[1] :SWEep:TIME?
```

This command sets the sweep rate for the amplitude-modulated, swept-sine waveform.

***RST** +1.00000000E–001

Range 1mS–65.535S

Key Entry **AM Sweep Time**

:AM[1]|2:INTernal[1]:SWEep:TRIGger**Supported** All Models

```
[ :SOURce ] :AM[ 1 ] | 2 :INTernal [ 1 ] :SWEep :TRIGger BUS | IMMEDIATE | EXTernal | KEY
[ :SOURce ] :AM[ 1 ] | 2 :INTernal [ 1 ] :SWEep :TRIGger ?
```

This command sets the trigger source for the amplitude modulated swept-sine waveform.

BUS This choice enables GPIB triggering using the *TRG or GET command or LAN and RS-232 triggering using the *TRG command.

IMMEDIATE This choice enables immediate triggering of the sweep event.

EXTernal This choice enables the triggering of a sweep event by an externally applied signal at the TRIG IN connector.

KEY This choice enables triggering through front panel interaction by pressing the **Trigger** hardkey.

***RST** IMM

Key Entry **Bus** **Free Run** **Ext** **Trigger Key**

Remarks Refer to “:AM[1]|2:INTernal[1]:FUNCTION:SHAPE” on page 173 for the waveform selection.

:AM[1]|2:SOURce**Supported** All Models

```
[ :SOURce ] :AM[ 1 ] | 2 :SOURce INT[ 1 ] | EXT[ 1 ] | EXT2
[ :SOURce ] :AM[ 1 ] | 2 :SOURce ?
```

This command sets the source to generate the amplitude modulation.

INT This choice selects the internal source to provide an ac-coupled signal.

EXT This choice selects the EXT 1 INPUT or the EXT 2 INPUT connector to provide an externally applied signal that can be ac- or dc-coupled.

***RST** INT

Key Entry **Internal** **Ext1** **Ext2**

Remarks A $1.0 V_p$ input is required for calibrated AM depth settings.

The externally applied, ac-coupled input signal is tested for a voltage level and a display annunciator will report a high or low condition if that voltage is $> \pm 3\%$ of $1 V_p$.

:AM[1]|2:STATe

Supported All Models

[:SOURce] :AM[1] | 2 :STATe ON | OFF | 1 | 0

[:SOURce] :AM[1] | 2 :STATe?

This command enables or disables the amplitude modulation for the selected path.

***RST** 0

Key Entry **AM Off On**

Remarks The RF carrier is modulated when you have set the signal generator's modulation state to ON, see [“:MODulation\[:STATe\]” on page 127](#) for more information.

Whenever amplitude modulation is enabled, the AM annunciator is turned on in the display.

The two paths for amplitude modulation can be simultaneously enabled. Refer to [“:AM\[1\]2...” on page 170](#) for more information.

:AM[1]|2[:DEPTH]

Supported All Models

[:SOURce] :AM[1] | 2 [:DEPTH] [:LINear] <val><unit> | UP | DOWN

[:SOURce] :AM[1] | 2 [:DEPTH] [:LINear]?

This commands sets the amplitude modulation depth in percent.

***RST** +1.00000000E-001

Range 0.00–100PCT

Key Entry **AM Depth**

Remarks The value of AM depth applies only to whichever AM path configuration (AM[1]2) you have currently selected. AM Depth is fixed for wideband AM.

When the depth values are coupled, a change made to one path is applied to both. Refer to [“:AM\[1\]2\[:DEPTH\]:TRACK” on page 176](#) for AM depth value coupling.

Refer to [“:AM\[:DEPTH\]:STEP\[:INCRement\]” on page 176](#) for setting the value associated with UP and DOWN choices.

:AM[1] | 2[:DEPTh]:TRACK**Supported** All Models

[:SOURce]:AM[1] | 2[:DEPTh][:LINear]:TRACK ON|OFF|1|0

[:SOURce]:AM[1] | 2[:DEPTh][LINear]:TRACK?

This command enables or disables the coupling of the AM depth values between the paths (AM[1] and AM2).

ON (1) This choice will link the depth value of AM[1] with AM2; AM2 will assume the AM[1] depth value. For example, if AM[1] depth is set to 15% and AM2 is set to 11%, enabling the depth tracking will cause the AM2 depth value to change to 15%. This applies regardless of the path (AM[1] or AM2) selected in this command

OFF (0) This choice disables the coupling and both paths will have independent depth values.

RST** 0**Key Entry** **AM Depth Couple Off On*Remarks** When the depth values are coupled, a change made to one path is applied both.**:AM[:DEPTh]:STEP[:INCRement]****Supported** All Models

[:SOURce]:AM[:DEPTh]:STEP[:INCRement] <val><unit>

[:SOURce]:AM[:DEPTh]:STEP[:INCRement]?

This command sets the AM depth step increment.

Range 0.1–100PCT**Key Entry** **Incr Set**

Remarks The value set by this command is used with the UP and DOWN choices for the AM depth setting. Refer to “:AM[1]2[:DEPTh]” on page 175 for more information.

The setting enabled by this command is not affected by signal generator power-on, preset, or *RST.

Frequency Modulation Subsystem ([:SOURce])

:FM[1] | 2...

Supported All Models

[[:SOURce]:FM[1] | 2...]

This prefix enables the selection of the FM path and is part of most SCPI commands associated with this subsystem. The two paths are equivalent to the **FM Path 1 2** softkey.

FM[1] **FM Path 1 2** with 1 selected

FM2 **FM Path 1 2** with 2 selected

When just FM is shown in a command, this means the command applies globally to both paths.

Each path is set up separately. When a SCPI command uses FM[1], only path one is affected. Consequently, when FM2 is selected, only path two is set up. However, the deviation of the signals for the two paths can be coupled.

Deviation coupling links the deviation value of FM[1] to FM2. Changing the deviation value for one path will change it for the other path.

These two paths can be on at the same time provided the following conditions have been met:

- DUALsine or SWEPTSine is not the selection for the waveform type
- each path uses a different source (Internal 1, Ext1, or Ext2)
- FM2 must be set to a deviation less than FM[1]

:FM:INTernal:FREQuency:STEP[:INCRement]**Supported** All Models

[:SOURce]:FM:INTernal:FREQuency:STEP[:INCRement] <num>

[:SOURce]:FM:INTernal:FREQuency:STEP[:INCRement]?

This command sets the step increment for the internal frequency modulation.

The variable <num> sets the entered value in units of Hertz.

***RST** +5.00000000E+002**Range** 0.5–1E6**Key Entry** **Incr Set**

Remarks The value set by this command is used with the UP and DOWN choices for the FM frequency setting. Refer to “:FM[1]2:INTernal[1]:FREQuency” on page 179 for more information.

The setting enabled by this command is not affected by signal generator power-on, preset, or *RST.

:FM[1]|2:EXTernal[1]|2:COUPLing**Supported** All Models

[:SOURce]:FM[1]|2:EXTernal[1]|2:COUPLing AC|DC

[:SOURce]:FM[1]|2:EXTernal[1]|2:COUPLing?

This command sets the coupling for the frequency modulation source through the selected external input connector.

AC This choice will only pass ac signal components.

DC This choice will pass both ac and dc signal components.

***RST** DC**Key Entry** **Ext Coupling DC AC**

Remarks The command does not change the currently active source or switch the current modulation on or off. The modulating signal may be the sum of several signals, either internal or external sources.

[:SOURce] :FM[1] | 2 :INTernal [1] :FREQuency:ALternate?

This command sets the frequency for the alternate signal.

***RST** +4.00000000E+002

Range Dual-Sine: 0.5HZ–1MHZ Swept-Sine: 1HZ–1MHZ

Key Entry **FM Tone 2 Rate** **FM Stop Rate**

Remarks The alternate signal frequency is the second tone of a dual-sine or the stop frequency of a swept-sine waveform.

Refer to “:FM[1]2:INTernal[1]:FUNctio:n:SHAPE” on page 180 for the waveform selection.

:FM[1] | 2:INTernal[1]:FREQuency:ALternate:AMPLitude:PERCent**Supported** All Models[:SOURce]:FM[1] | 2:INTernal[1]:FREQuency:ALternate:AMPLitude:

Supported All Models

[:SOURce] :FM[1] | 2 [:DEVIation] :TRACk ON|OFF|1|0

[:SOURce] :FM[1] | 2 [:DEVIation] :TRACk ?

This command enables or disables the deviation coupling between the paths (FM[1] and FM2).

ON (1) This choice will link the deviation value of FM[1] with FM2; FM2 will assume the FM[1] deviation value. For example, if FM[1] deviation is set to 500 Hz and FM2 is set to 2 kHz, enabling the deviation tracking will cause the FM2 deviation value to change to 500 Hz. This applies regardless of the path (FM[1] or FM2) selected in this command

OFF (0) This choice disables the coupling and both paths will have independent deviation values.

:SOURce

Supported All Models

```
[ :SOURce ] :LFOutput :SOURce INT[1] | FUNCTION  
[ :SOURce ] :LFOutput :SOURce ?
```

This command sets the low frequency source for the LF output.

INT[1] This choice enables you to output a signal where the frequency and shape of the signal is set by the internal source as it is being used by a modulation. For example, if the internal source is currently assigned to an AM path configuration and AM is turned on, the signal output at the LF OUTPUT connector will have the frequency and shape of the amplitude modulating signal.

FUNCTION This choice enables the selection of an internal function generator.

Phase Modulation Subsystem ([:SOURce])

:PM[1]|2...

Supported All Models

[[:SOURce]:PM[1]|2...]

This prefix enables the selection of the Φ M path and is part of most SCPI commands associated with this subsystem. The two paths are equivalent to the Φ M Path 1 2 softkey.

PM[1] Φ M Path 1 2 with 1 selected

PM2 Φ M Path 1 2 with 2 selected

When just PM is shown in a command, this means the command applies globally to both paths.

Each path is set up separately. When a SCPI command uses PM[1], only path one is affected. Consequently, when PM2 is selected, only path two is set up. However, the deviation of the signals for the two paths can be coupled.

Deviation coupling links the deviation value of PM[1] to PM2. Changing the deviation value for one path will change it for the other path.

These two paths can be on at the same time provided the following conditions have been met:

- DUALsine or SWEPTsine is not the selection for the waveform type
- each path uses a different source (Internal 1, Ext1, or Ext2)
- PM2 must be set to a deviation less than or equal to PM[1]

[:SOURce]:PM:INTernal:FREQuency:STEP[:INCRement] <num>

[:SOURce]:PM:INTernal:FREQuency:STEP[:INCRement]?

This command sets the step increment of the phase modulation internal frequency.

The variable <num> sets the entered value in units of Hertz.

Range 0.5–1E6**Key Entry** **Incr Set**

Remarks The value set by this command is used with the UP and DOWN choices for the FM frequency command. Refer to “:PM[1]2:INTernal[1]:FREQuency” on [page 191](#) for more information.

The setting enabled by this command is not affected by signal generator power-on, preset, or *RST.

:MDEStination:ALCHold

Supported E4438C with Option 403

CAUTION Incorrect automatic level control (ALC) sampling can create a sudden unlevelled condition that may create a spike in the RF output potentially damaging a DUT or connected instrument. Ensure that you set markers to let the ALC sample over an amplitude that accounts for the high power levels within the signal.

[ :SOURce ]:RADio:AWGN:ARB:MDEStination:ALCHold?
```

This command enables or disables the marker ALC hold function for the selected marker. For setting markers, see “[:MARKer:\[SET\]](#)” on page 300.

Use the ALC hold function when you have a waveform signal that has idle periods, or when the increased dynamic range encountered with RF blanking is not desired. The ALC leveling circuitry responds to the marker signal during the marker pulse (marker signal high), averaging the modulated signal level during this period.

The ALC hold function operates during the low periods of the marker signal. The marker polarity determines when the marker signal is high. For a positive polarity, this is during the marker points. For a negative polarity, this is when there are no marker points. For setting a marker’s polarity, see “[:MPOLarity:MARKer1|2|3|4](#)” on page 366.

NOTE Do not use the ALC hold for more than 100 ms, because it can affect the waveform’s output amplitude.

The marker signal has a minimum of a two-sample delay in its response relative to the waveform signal response. To compensate for the marker signal delay, offset marker points from the waveform sample point at which you want the ALC sampling to begin.

The ALC hold setting is part of the file header information, so saving the setting to the file header saves the current marker routing for the waveform file.

NOTE A waveform file that has unspecified settings in the file header uses the previous waveform’s routing settings.

For more information on the marker ALC hold function, see the *E4428C/38C ESG Signal Generators User’s Guide*. For setting the marker points, see “:MARKer:[SET]” on page 300.

NONE This terminates the marker ALC hold function.

M1–M4 These are the marker choices. The ALC hold feature uses only one marker at a time.

CAUTION The pulse function incorporates ALC hold. Incorrect automatic level control (ALC) sampling can create a sudden unlevelled condition that may create a spike in the RF output potentially damaging a DUT or connected instrument. Ensure that you set markers to let the ALC sample over an amplitude that accounts for the high power levels within the signal.

```
[ :SOURce ] :RADio :ARB :MDEStination :PULSe NONE | M1 | M2 | M3 | M4
[ :SOURce ] :RADio :ARB :MDEStination :PULSe ?
```

This command enables or disables the marker pulse/RF blanking function for the selected marker.

This function automatically uses the ALC hold function, so there is no need to select both the ALC hold and the pulse/RF blanking for the same marker.

NOTE Do not use ALC hold for more than 100 ms, because it can affect the waveform’s output amplitude.

The signal generator blanks the RF output when the marker signal goes low. The marker polarity determines when the marker signal is low. For a positive polarity, this is during the marker points. For a negative polarity, this is when there are no marker points. For setting a marker’s polarity, see “:MPOLarity:MARKer1|2|3|4” on page 330.

NOTE Set marker points prior to using this function. Enabling this function without setting marker points may create a continuous low or high marker signal, depending on the marker polarity. This causes either no RF output or a continuous RF output. See “:MARKer:[SET]” on page 300 for setting the marker points.

The marker signal has a minimum of a two-sample delay in its response relative to the waveform signal response. To compensate for the marker signal delay, offset marker points from the waveform sample point at which you want the RF blanking to begin. The RF blanking setting is part of the file header information, so saving the setting to the file header saves the current marker routing for the waveform file.

NOTE A waveform file that has unspecified settings in the file header uses the previous waveform’s routing settings. This could create the situation where there is no RF output signal, because the previous waveform used RF blanking.

For more information on the marker RF blanking function, see the *E4428C/38C ESG Signal Generators User’s Guide*.

NONE This terminates the marker RF blanking/pulse function.

M1–M4 These are the marker choices. The RF blanking/pulse feature uses only one marker at a time.

[ :SOURce ] :RADio:CDMA:ARB:MDEStination:ALCHold NONE |M1 |M2 |M3 |M4
[:SOURce]:RADio:CDMA:ARB:MDEStination:ALCHold?
```

This command enables or disables the marker ALC hold function for the selected marker. For setting markers, see “:MARKer:[SET]” on page 300.

Use the ALC hold function when you have a waveform signal that has idle periods, or when the increased dynamic range encountered with RF blanking is not desired. The ALC leveling circuitry responds to the marker signal during the marker pulse (marker signal high), averaging the modulated signal level during this period.

The ALC hold function operates during the low periods of the marker signal. The marker polarity determines when the marker signal is high. For a positive polarity, this is during the marker points. For a negative polarity, this is when there are no marker points. For setting a marker’s polarity, see “:MPOLarity:MARKer1|2|3|4” on page 224.

NOTE Do not use the ALC hold for more than 100 ms, because it can affect the waveform’s output amplitude.

The marker signal has a minimum of a two-sample delay in its response relative to the waveform signal response. To compensate for the marker signal delay, offset marker points from the waveform sample point at which you want the ALC sampling to begin.

The ALC hold setting is part of the file header information, so saving the setting to the file header saves the current marker routing for the waveform file.

NOTE A waveform file that has unspecified settings in the file header uses the previous waveform’s routing settings.

For more information on the marker ALC hold function, see the *E4428C/38C ESG Signal Generators User’s Guide*. For setting the marker points, see “[:MARKer:[SET]]” on page 300.

This command enables or disables the marker pulse/RF blanking function for the selected marker.

This function automatically uses the ALC hold function, so there is no need to select both the ALC hold and the pulse/RF blanking for the same marker.

NOTE Do not use ALC hold for more than 100 ms, because it can affect the waveform’s output amplitude.

The signal generator blanks the RF output when the marker signal goes low. The marker polarity determines when the marker signal is low. For a positive polarity, this is during the marker points. For a negative polarity, this is when there are no marker points. For setting a marker's polarity, see “:MPOLarity:MARKer1|2|3|4” on page 224.

NOTE Set marker points prior to using this function. Enabling this function without setting marker points may create a continuous low or high marker signal, depending on the marker polarity. This causes either no RF output or a continuous RF output. See “:MARKer:[SET]” on page 300 for setting the marker points.

The marker signal has a minimum of a two-sample delay in its response relative to the waveform signal response. To compensate for the marker signal delay, offset marker points from the waveform sample point at which you want the RF blanking to begin. [:SOURce] :RADio :CDMA :ARB :SETup?

This command selects a pre-defined CDMA channel setup or multicarrier, and turns multicarrier off or on (see the MCARrier choice description).

FWD9 This CDMA setup consists of 9 forward channels (pilot, paging, sync, and 6 traffic channels) at IS-97-defined power levels.

FWD32 This CDMA setup consists of 32 forward channels (pilot, paging, sync, and 29 traffic channels) at IS-97-defined power levels.

FWD64 This CDMA setup consists of 64 forward channels (pilot, 7 paging, sync, and 55 traffic channels) at IS-97-defined power levels.

PILot This choice selects single pilot channel.

REVerse	A single reverse link traffic channel.
MCARrier	This choice selects multicarrier and turns it on. Selecting any other setup such as FWD9 or FWD64 turns multicarrier off. To select the multicarrier setup, see “:SETup:MCARrier” on page 228.

This command defines the channel parameters of the CDMA signal. This allows for customizing of the channel type, the channel parameters, and the data value.

The variable <power_value> is expressed in units of decibels (dB).

IS97	This choice sets the channel power levels to IS-97-defined power levels.
EQUAL	This choice sets the channel power levels so that all channels are of equal power and the total power equals 0 dBm.
SCALE	This choice scales all of the current channel powers so that the total power equals 0 dB while keeping the previous power ratios between the individual channels.
NONE	This choice bypasses the power level setting.
PILOt	This choice selects a single traffic channel.
SYNC	This choice selects a sync channel.
PAGing	This choice selects a paging channel.
TRAFFic	This choice selects a traffic channel.
RANDom	This choice selects a randomly generated data value.

This command stores the current custom CDMA state, using a designated file name, to the signal generator non-volatile memory.

Along with the contents of the CDMA channel table editor (channel types, Walsh code, power levels, PN offset, and data), this command stores the following information to the signal generator non-volatile memory:

- FIR filter
- FIR filter file name
- FIR filter alpha
- FIR filter BbT
- FIR filter channel (EVM or ACP)
- chip rate
- waveform length
- oversample ratio
- ARB reference clock source (internal or external)

:TRIGger:TYPE

Supported E4438C with Option 401

```
[ :SOURCE ]:RADio:CDMA:ARB:TRIGger:TYPE CONTInuous | SINGle | GATE  
[ :SOURCE ]:RADio:CDMA:ARB:TRIGger:TYPE?
```

This command sets the trigger mode (type) that controls the waveform’s playback.

Triggers control the playback by telling the ESG when to play the modulating signal (waveform). Depending on the trigger settings for the ESG, the waveform playback can occur once, continuously, or the ESG may start and stop playing the waveform repeatedly (GATE mode).

A trigger signal comprises both positive and negative signal transitions (states), which are also called high and low periods. You can configure the ESG to trigger on either state of the trigger signal. It is common to have multiple triggers, also referred to as trigger occurrences or events, occur when the signal generator requires only a single trigger. In this situation, the ESG recognizes the first trigger and ignores the rest.

When you select a trigger mode, you may lose the signal (carrier plus modulating) from the RF output until you trigger the waveform. This is because the ESG sets the I and Q signals to zero volts prior to the first trigger event, which suppresses the carrier. After the first trigger event, the waveform’s final I and Q levels determine whether you will see the carrier signal or not (zero = no carrier, other values = carrier visible). At the end of most files, the final I and Q points are set to a value other than zero.

There are four parts to configuring the trigger:

- Choosing the trigger type, which controls the waveform’s transmission.
- Setting the waveform’s response to triggers:
 - CONTInuous, see “:TRIGger:TYPE:CONTInuous[:TYPE]” on page 232
 - SINGle, see “:RETRigger” on page 225
 - GATE, selecting the mode also sets the response
- Selecting the trigger source (see “:TRIGger[:SOURCE]” on page 233), which determines how the ESG receives its trigger signal, internally or externally. The GATE choice requires an external trigger.
- Setting the trigger polarity when using an external source:
 - CONTInuous and SINGle see “:TRIGger[:SOURCE]:EXTErnal:SLOPe” on page 235
 - GATE, see “:TRIGger:TYPE:GATE:ACTive” on page 233

For more information on triggering, see the *E4428C/38C ESG Signal Generators User’s Guide*.

The following list describes the trigger type command choices:

CONTInuous Upon triggering, the waveform repeats continuously.

CDMA ARB Subsystem—Option 401 ([:SOURCE]:RADio:CDMA:ARB)

SINGLE	Upon triggering, the waveform segment or sequence plays once.
GATE	An external trigger signal repeatedly starts and stops the waveform’s playback (transmission). The time duration for playback depends on the duty period of the trigger signal and the gate polarity selection (see “:TRIGger:TYPE:GATE:ACTive” on page 233). The waveform plays during the inactive state and stops during the active polarity selection state. The active state can be set high or low. The gate mode works only with an external trigger source.

NOTE The ARB gating behavior described above is opposite to the gating behavior for real-time custom mode.

[ :SOURCE ] :RADio:CDMA:ARB:TRIGger:TYPE:CONTInuous [ :TYPE ] ?
```

This commands selects the waveform’s response to a trigger signal while using the continuous trigger mode.

For more information on triggering and to select the continuous trigger mode, see [“:TRIGger:TYPE” on page 231](#).

The following list describes the waveform’s response to each of the command choices:

FREE	Turning the ARB format on immediately triggers the waveform. The waveform repeats until you turn the format off, select another trigger, or choose another waveform file.
TRIGger	The waveform waits for a trigger before play begins. When the waveform receives the trigger, it plays continuously until you turn the format off, select another trigger, or choose another waveform file.
RESet	The waveform waits for a trigger before play begins. When the waveform receives the trigger, it plays continuously. Subsequent triggers reset the waveform to the beginning. For a waveform sequence, this means to the beginning of the first segment in the sequence.

:TRIGger:TYPE:GATE:ACTive

Supported E4438C with Option 401

```
[ :SOURce ] :RADio:CDMA:ARB:TRIGger:TYPE:GATE:ACTive LOW|HIGH
[ :SOURce ] :RADio:CDMA:ARB:TRIGger:TYPE:GATE:ACTive?
```

This command selects the active state (gate polarity) of the gate while using the gating trigger mode.

The LOW and HIGH selections correspond to the low and high states of an external trigger signal. For example, when you select HIGH, the active state occurs during the high of the trigger signal. When the active state occurs, the ESG stops the waveform playback at the last played sample point, then restarts the playback at the next sample point when the inactive state occurs. For more information on triggering and to select gating as the trigger mode, see “:TRIGger:TYPE” on page 231.

The following list describes the ESG’s gating behavior for the polarity selections:

- LOW The waveform playback stops when the trigger signal goes low (active state) and restarts when the trigger signal goes high (inactive state).
- HIGH The waveform playback stops when the trigger signal goes high (active state) and restarts when the trigger signal goes low (inactive state).

This command sets the trigger source.

For more information on triggering, see “:TRIGger:TYPE” on page 231. The following list describes the command choices:

- KEY This choice enables manual triggering by pressing the front-panel **Trigger** hardkey.
- EXT An externally applied signal triggers the waveform. This is the only choice that works with gating. The following conditions affect an external trigger:

- The input connector selected for the trigger signal. You have a choice between the rear-panel PATTERN TRIG IN connector or the PATT TRIG IN 2 pin on the rear-panel AUXILIARY I/O connector. To make the connector selection, see “[:TRIGger[:SOURCE]:EXTErnal[:SOURCE]]” on page 236.

For more information on the connectors and on connecting the cables, see the *E4428C/38C ESG Signal Generators User’s Guide*.

- The trigger signal polarity:
 - gating mode, see “[:TRIGger:TYPE:GATE:ACTive]” on page 233
 - continuous and single modes, see “[:TRIGger[:SOURCE]:EXTErnal:SLOPe]” on page 235
- The time delay between when the ESG receives a trigger and when the waveform responds to the trigger. There are two parts to setting the delay:
 - setting the amount of delay, see “[:TRIGger[:SOURCE]:EXTErnal:DELay]” on page 234
 - turning the delay on, see “[:TRIGger[:SOURCE]:EXTErnal:DELay:STATe]” on page 235

BUS This choice enables triggering over the GPIB or LAN using the *TRG or GET commands or the AUXILIARY INTERFACE (RS-232) using the *TRG command.

```

```
[ :SOURCE ] :RADio:CDMA:ARB:TRIGger [ :SOURCE ] :EXTErnal:DELay?
```

This command sets the amount of time to delay the ESG’s response to an external trigger.

The delay is a path (time) delay between when the ESG receives the trigger and when it responds to the trigger. For example, configuring a trigger delay of two seconds, causes the ESG to wait two seconds after receipt of the trigger before the ESG plays the waveform.

The delay does not occur until you turn it on (see “[:TRIGger[:SOURCE]:EXTErnal:DELay:STATe]” on page 235). You can set the delay value either before or after turning it on.

For more information on configuring an external trigger source and to select external as the trigger source, see “[:TRIGger[:SOURCE]]” on page 233.

```

This command sets the polarity for an external trigger signal while using the continuous, single triggering mode. To set the polarity for gating, see “:TRIGger:TYPE:GATE:ACTive” on page 233.

The POSitive and NEGative selections correspond to the high (positive) and low (negative) states of the external trigger signal. For example, when you select POSitive, the waveform responds (plays) during the high state of the trigger signal. When the ESG receives multiple trigger occurrences when only one is required, the signal generator uses the first trigger and ignores the rest.

[:SOURce]:RADio:CDMA2000:ARB:MDEStination:ALCHold?
```

This command enables or disables the marker ALC hold function for the selected marker. For setting markers, see “:MARKer:[SET]” on page 300.

Use the ALC hold function when you have a waveform signal that incorporates idle periods, or when the increased dynamic range encountered with RF blanking is not desired. The ALC leveling circuitry responds to the marker signal during the marker pulse (marker signal high), averaging the modulated signal level during this period.

The ALC hold function operates during the low periods of the marker signal. The marker polarity determines when the marker signal is high. For a positive polarity, this is during the marker points. For a negative polarity, this is when there are no marker points. For setting a marker’s polarity, see “:MPOLarity:MARKer1|2|3|4” on page 258.

NOTE Do not use the ALC hold for more than 100 ms, because it can affect the waveform’s output amplitude.

The marker signal has a minimum of a two-sample delay in its response relative to the waveform signal response. To compensate for the marker signal delay, offset marker points from the waveform sample point at which you want the ALC sampling to begin.

The ALC hold setting is part of the file header information, so saving the setting to the file header saves the current marker routing for the waveform file.

NOTE A waveform file that has unspecified settings in the file header uses the previous waveform’s routing settings.

For more information on the marker ALC hold function, see the *E4428C/38C ESG Signal Generators User’s Guide*. For setting the marker points, see “:MARKer:[SET]” on page 300.

- NONE This terminates the marker ALC hold function.

Ensure that you set markers to let the ALC sample over an amplitude that accounts for the high power levels within the signal.

[ :SOURce ] :RADio :CDMA2000 :ARB :MDEStination :PULSe?
```

This command enables or disables the marker pulse/RF blanking function for the selected marker.

This function automatically uses the ALC hold function, so there is no need to select both the ALC hold and pulse/RF blanking functions for the same marker.

NOTE Do not use ALC hold for more than 100 ms, because it can affect the waveform’s output amplitude.

The signal generator blanks the RF output when the marker signal goes low. The marker polarity determines when the marker signal is low. For a positive polarity, this is during the marker points. For a negative polarity, this is when there are no marker points. For setting a marker’s polarity, see “:MPOLarity:MARKer1|2|3|4” on page 258.

NOTE Set marker points prior to using this function. Enabling this function without setting marker points may create a continuous low or high marker signal, depending on the marker polarity. This causes either no RF output or a continuous RF output. See “:MARKer:[SET]” on page 300 for setting the marker points.

The marker signal has a minimum of a two-sample delay in its response relative to the waveform signal response. To compensate for the marker signal delay, offset marker points from the waveform sample point at which you want the RF blanking to begin. The RF blanking setting is part of the file header information, so saving the setting to the file header saves the current marker routing for the waveform file.

NOTE A waveform file that has unspecified settings in the file header uses the previous waveform’s routing settings. This could create the situation where there is no RF output signal, because the previous waveform used RF blanking.

For more information on the marker RF blanking function, see the *E4428C/38C ESG Signal Generators User’s Guide*.

NONE This terminates the marker RF blanking/pulse function.

M1–M4 These are the marker choices. The RF blanking/pulse feature uses only one marker at a time.

```
[ :SOURCE ] :RADIO :CDMA :ARB :TRIGger :TYPE CONTinuous | SINGle | GATE  
[ :SOURCE ] :RADIO :CDMA :ARB :TRIGger :TYPE ?
```

This command sets the trigger mode (type) that controls the waveform's playback.

Triggers control the playback by telling the ESG when to play the modulating signal (waveform). Depending on the trigger settings for the ESG, the waveform playback can occur once, continuously, or the ESG may start and stop playing the waveform repeatedly (GATE mode).

A trigger signal comprises both positive and negative signal transitions (states), which are also called high and low periods. You can configure the ESG to trigger on either state of the trigger signal. It is common to have multiple triggers, also referred to as trigger occurrences or events, occur when the signal generator requires only a single trigger. In this situation, the ESG recognizes the first trigger and ignores the rest.

When you select a trigger mode, you may lose the signal (carrier plus modulating) from the RF output until you trigger the waveform. This is because the ESG sets the I and Q signals to zero volts prior to the first trigger event, which suppresses the carrier. After the first trigger event, the waveform's final I and Q levels determine whether you will see the carrier signal or not (zero = no carrier, other values = carrier visible). At the end of most files, the final I and Q points are set to a value other than zero.

There are four parts to configuring the trigger:

- Choosing the trigger type, which controls the waveform's transmission.
- Setting the waveform's response to triggers:
 - CONTInuous, see “:TRIGger:TYPE:CONTInuous[:TYPE]” on page 263
 - SINGle, see “:RETRigger” on page 259
 - GATE, selecting the mode also sets the response
- Selecting the trigger source (see “:TRIGger[:SOURce]” on page 264), which determines how the ESG receives its trigger signal, internally or externally. The GATE choice requires an external trigger.
- Setting the trigger polarity when using an external source:
 - CONTInuous and SINGle see “:TRIGger[:SOURce]:EXTernal:SLOPe” on page 266
 - GATE, see “:TRIGger:TYPE:GATE:ACTive” on page 264

For more information on triggering, see the *E4428C/38C ESG Signal Generators User's Guide*.

The following list describes the trigger type command choices:

CONTInuous	Upon triggering, the waveform repeats continuously.
SINGle	Upon triggering, the waveform segment or sequence plays once.

GATE An external trigger signal repeatedly starts and stops the waveform’s playback (transmission). The time duration for playback depends on the duty period of the trigger signal and the gate polarity selection (see “:TRIGger:TYPE:GATE:ACTive” on page 264). The waveform plays during the inactive state and stops during the active polarity selection state. The active state can be set high or low. The gate mode works only with an external trigger source.

NOTE The ARB gating behavior described above is opposite to the gating behavior for real-time custom mode.

[ :SOURce ] :RADio:CDMA2000:ARB:TRIGger:TYPE:CONTInuous [ :TYPE ] ?
```

This commands selects the waveform’s response to a trigger signal while using the continuous trigger mode.

For more information on triggering and to select the continuous trigger mode, see “:TRIGger:TYPE” on page 261.

The following list describes the waveform’s response to each of the command choices:

FREE	Turning the ARB format on immediately triggers the waveform. The waveform repeats until you turn the format off, select another trigger, or choose another waveform file.
TRIGger	The waveform waits for a trigger before play begins. When the waveform receives the trigger, it plays continuously until you turn the format off, select another trigger, or choose another waveform file.
RESet	The waveform waits for a trigger before play begins. When the waveform receives the trigger, it plays continuously. Subsequent triggers reset the waveform to the beginning. For a waveform sequence, this means to the beginning of the first segment in the sequence.

```
[ :SOURCE ] :RADio:CDMA2000:ARB:TRIGger:TYPE:GATE:ACTive LOW|HIGH
[ :SOURCE ] :RADio:CDMA2000:ARB:TRIGger:TYPE:GATE:ACTive?
```

This command selects the active state (gate polarity) of the gate while using the gating trigger mode.

The LOW and HIGH selections correspond to the low and high states of an external trigger signal. For example, when you select HIGH, the active state occurs during the high of the trigger signal. When the active state occurs, the ESG stops the waveform playback at the last played sample point, then restarts the playback at the next sample point when the inactive state occurs. For more information on triggering and to select gating as the trigger mode, see “:TRIGger:TYPE” on page 261.

The following list describes the ESG’s gating behavior for the polarity selections:

LOW The waveform playback stops when the trigger signal goes low (active state) and restarts when the trigger signal goes high (inactive state).

HIGH The waveform playback stops when the trigger signal goes high (active state) and restarts when the trigger signal goes low (inactive state).

This command sets the trigger source.

For more information on triggering, see “:TRIGger:TYPE” on page 261. The following list describes the command choices:

KEY This choice enables manual triggering by pressing the front-panel **Trigger** hardkey.

EXT An externally applied signal triggers the waveform. This is the only choice that works with gating. The following conditions affect an external trigger:

- The input connector selected for the trigger signal. You have a choice between the rear-panel PATTERN TRIG IN connector or the PATT TRIG IN 2 pin on the rear-panel AUXILIARY I/O connector. To make the connector selection, see “:TRIGger[:SOURCE]:EXTernal[:SOURCE]” on page 267.

For more information on the connectors and on connecting the cables, see the *E4428C/38C ESG Signal Generators User's Guide*.

- The trigger signal polarity:
 - gating mode, see “:TRIGger:TYPE:GATE:ACTive” on page 264
 - continuous and single modes, see “:TRIGger[:SOURce]:EXTernal:SLOPe” on page 266
- The time delay between when the ESG receives a trigger and when the waveform responds to the trigger. There are two parts to setting the delay:
 - setting the amount of delay, see “:TRIGger[:SOURce]:EXTernal:DELay” on page 265
 - turning the delay on, see “:TRIGger[:SOURce]:EXTernal:DELay:STATe” on page 266

[ :SOURce ] :RADio:CDMA2000:ARB:TRIGger [ :SOURce ] :EXTernal:DELay?
```

This command sets the amount of time to delay the ESG's response to an external trigger.

The delay is a path (time) delay between when the ESG receives the trigger and when it responds to the trigger. For example, configuring a trigger delay of two seconds, causes the ESG to wait two seconds after receipt of the trigger before the ESG plays the waveform.

The delay does not occur until you turn it on (see “:TRIGger[:SOURce]:EXTernal:DELay:STATe” on page 266). You can set the delay value either before or after turning it on.

For more information on configuring an external trigger source and to select external as the trigger source, see “:TRIGger[:SOURce]” on page 264.

This command sets the polarity for an external trigger signal while using the continuous, single triggering mode. To set the polarity for gating, see “:TRIGger:TYPE:GATE:ACTive” on page 264.

The POSitive and NEGative selections correspond to the high (positive) and low (negative) states of the external trigger signal. For example, when you select POSitive, the waveform responds (plays) during the high state of the trigger signal. When the ESG receives multiple trigger occurrences when only one is required, the signal generator uses the first trigger and ignores the rest.

:MDEStination:ALCHold

Supported E4438C with Option 403

CAUTION Incorrect automatic level control (ALC) sampling can create a sudden unlevelled condition that may create a spike in the RF output potentially damaging a DUT or connected instrument. Ensure that you set markers to let the ALC sample over an amplitude that accounts for the high power levels within the signal.

```
[ :SOURCE ]:RADio:DMODulation:ARB:MDEStination:ALCHold NONE | M1 | M2 | M3 | M4
[ :SOURCE ]:RADio:DMODulation:ARB:MDEStination:ALCHold?
```

This command enables or disables the marker ALC hold function for the selected marker. For setting markers, see “[:MARKer:SET]” on page 300.

Use the ALC hold function when you have a waveform signal that incorporates idle periods, or when the increased dynamic range encountered with RF blanking is not desired. The ALC leveling circuitry responds to the marker signal during the marker pulse (marker signal high), averaging the modulated signal level during this period.

The ALC hold function operates during the low periods of the marker signal. The marker polarity determines when the marker signal is high. For a positive polarity, this is during the marker points. For a negative polarity, this is when there are no marker points. For setting a marker’s polarity, see “[:MPOlarity:MARKer1|2|3|4]” on page 278.

NOTE Do not use the ALC hold for more than 100 ms, because it can affect the waveform’s output amplitude.

The marker signal has a minimum of a two-sample delay in its response relative to the waveform signal response. To compensate for the marker signal delay, offset marker points from the waveform sample point at which you want the ALC sampling to begin.

The ALC hold setting is part of the file header information, so saving the setting to the file header saves the current marker routing for the waveform file.

NOTE A waveform file that has unspecified settings in the file header uses the previous waveform's routing settings.

For more information on the marker ALC hold function, see the *E4428C/38C ESG Signal Generators User's Guide*. For setting the marker points, see “:MARKer:[SET]” on page 300.

NONE This terminates the marker ALC hold function.

M1–M4 These are the marker choices. The ALC hold feature uses only one marker at a time.

:MDESTination:PULSe

Supported E4438C with Option 001/601 or 002/602

CAUTION The pulse function incorporates ALC hold. Incorrect automatic level control (ALC) sampling can create a sudden unlevelled condition that may create a spike in the RF output potentially damaging a DUT or connected instrument. Ensure that you set markers to let the ALC sample over an amplitude that accounts for the high power levels within the signal.

```
[ :SOURce ] :RADio :DMODulation :ARB :MDESTination :PULSe NONE | M1 | M2 | M3 | M4
[ :SOURce ] :RADio :DMODulation :ARB :MDESTination :PULSe ?
```

This command enables or disables the marker pulse/RF blanking function for the selected marker.

This function automatically uses the ALC hold function, so there is no need to select both the ALC hold and pulse/RF blanking functions for the same marker.

NOTE Do not use ALC hold for more than 100 ms, because it can affect the waveform’s output amplitude.

The signal generator blanks the RF output when the marker signal goes low. The marker polarity determines when the marker signal is low. For a positive polarity, this is during the marker points. For a negative polarity, this is when there are no marker points. For setting a marker’s polarity, see “:MPOLarity:MARKer1|2|3|4” on page 278.

NOTE Set marker points prior to using this function. Enabling this function without setting marker points may create a continuous low or high marker signal, depending on the marker polarity. This causes either no RF output or a continuous RF output. See “:MARKer:[SET]” on page 300 for setting the marker points.

The marker signal has a minimum of a two-sample delay in its response relative to the waveform signal response. To compensate for the marker signal delay, offset marker points from the waveform sample point at which you want the RF blanking to begin. The RF blanking setting is part of the file header information, so saving the setting to the file header saves the current marker routing for the waveform file.

NOTE A waveform file that has unspecified settings in the file header uses the previous waveform’s routing settings. This could create the situation where there is no RF output signal, because the previous waveform used RF blanking.

For more information on the marker RF blanking function, see the *E4428C/38C ESG Signal Generators User’s Guide*.

NONE This terminates the marker RF blanking/pulse function.

M1–M4 These are the marker choices. The RF blanking/pulse feature uses only one marker at a time.

Key Entry **Symbol Rate**

Remarks When user-defined filters are selected using the command in section “:FILTer” on page 269, the upper bit rate will be restricted in line with the following symbol rate restriction:

- FIR filter length > 32 symbols: upper limit is 12.5 Mps

- FIR filter length > 16 symbols: upper limit is 25 Msps

When internal FIR filters are used, the limits of the above table always apply. For higher symbol rates, the FIR filter length will be truncated as follows:

- Above 12.5 Msps, the FIR length will be truncated to 32 symbols
- Above 25 Msps, the FIR length will be truncated to 16 symbols

This will impact the relative timing of the modulated data, as well as the actual filter response.

To change the modulation type, refer to “:MODulation[:TYPE]” on page 277.

:TRIGger:TYPE

Supported E4438C with Option 001/601 or 002/602

```
[ :SOURce ] :RADio:DMODulation:ARB:TRIGger:TYPE CONTInuous | SINGle | GATE
[ :SOURce ] :RADio:DMODulation:ARB:TRIGger:TYPE?
```

This command sets the trigger mode (type) that controls the waveform’s playback.

Triggers control the playback by telling the ESG when to play the modulating signal (waveform). Depending on the trigger settings for the ESG, the waveform playback can occur once, continuously, or the ESG may start and stop playing the waveform repeatedly (GATE mode).

A trigger signal comprises both positive and negative signal transitions (states), which are also called high and low periods. You can configure the ESG to trigger on either state of the trigger signal. It is common to have multiple triggers, also referred to as trigger occurrences or events, occur when the signal generator requires only a single trigger. In this situation, the ESG recognizes the first trigger and ignores the rest.

When you select a trigger mode, you may lose the signal (carrier plus modulating) from the RF output until you trigger the waveform. This is because the ESG sets the I and Q signals to zero volts prior to the first trigger event, which suppresses the carrier. After the first trigger event, the waveform’s final I and Q levels determine whether you will see the carrier signal or not (zero = no carrier, other values = carrier visible). At the end of most files, the final I and Q points are set to a value other than zero.

There are four parts to configuring the trigger:

- Choosing the trigger type, which controls the waveform’s transmission.
- Setting the waveform’s response to triggers:
 - CONTInuous, see “:TRIGger:TYPE:CONTInuous[:TYPE]” on page 286
 - SINGle, see “:RETRigger” on page 279
 - GATE, selecting the mode also sets the response

Dmodulation Subsystem—Option 001/601 or 002/602 (:SOURce]:RADio:DMODulation:ARB)

- Selecting the trigger source (see “:TRIGger[:SOURce]” on page 288), which determines how the ESG receives its trigger signal, internally or externally. The GATE choice requires an external trigger.
- Setting the trigger polarity when using an external source:
 - CONTInuous and SINGle see “:TRIGger[:SOURce]:EXTErnal:SLOPe” on page 290
 - GATE, see “:TRIGger:TYPE:GATE:ACTIve” on page 287

For more information on triggering, see the *E4428C/38C ESG Signal Generators User’s Guide*.

The following list describes the trigger type command choices:

CONTInuous	Upon triggering, the waveform repeats continuously.
SINGle	Upon triggering, the waveform segment or sequence plays once.
GATE	An external trigger signal repeatedly starts and stops the waveform’s playback (transmission). The time duration for playback depends on the duty period of the trigger signal and the gate polarity selection (see “:TRIGger:TYPE:GATE:ACTIve” on page 287). The waveform plays during the inactive state and stops during the active polarity selection state. The active state can be set high or low. The gate mode works only with an external trigger source.

NOTE The ARB gating behavior described above is opposite to the gating behavior for real-time custom mode.

FREE	Turning the ARB format on immediately triggers the waveform. The waveform repeats until you turn the format off, select another trigger, or choose another waveform file.
TRIGger	The waveform waits for a trigger before play begins. When the waveform receives the trigger, it plays continuously until you turn the format off, select another trigger, or choose another waveform file.
RESet	The waveform waits for a trigger before play begins. When the waveform receives the trigger, it plays continuously. Subsequent triggers reset the waveform to the beginning. For a waveform sequence, this means to the beginning of the first segment in the sequence.

[ :SOURCE ] :RADio:DMODulation:ARB:TRIGger:TYPE:GATE:ACTive?

This command selects the active state (gate polarity) of the gate while using the gating trigger mode.

The LOW and HIGH selections correspond to the low and high states of an external trigger signal. For example, when you select HIGH, the active state occurs during the high of the trigger signal. When the active state occurs, the ESG stops the waveform playback at the last played sample point, then restarts the playback at the next sample point when the inactive state occurs. For more information on triggering and to select gating as the trigger mode, see “:TRIGger:TYPE” on page 285.

The following list describes the ESG's gating behavior for the polarity selections:

[ :SOURCE ] :RADio:DMODulation:ARB:TRIGger [ :SOURCE ] :EXTErnal:DELay <val>
[ :SOURCE ] :RADio:DMODulation:ARB:TRIGger [ :SOURCE ] :EXTErnal:DELay?
```

This command sets the amount of time to delay the ESG's response to an external trigger.

The delay is a path (time) delay between when the ESG receives the trigger and when it responds to the trigger. For example, configuring a trigger delay of two seconds, causes the ESG to wait two seconds after receipt of the trigger before the ESG plays the waveform.

The delay does not occur until you turn it on (see “:TRIGger[:SOURCE]:EXTErnal:DELay:STATE” on page 289). You can set the delay value either before or after turning it on.

For more information on configuring an external trigger source and to select external as the trigger source, see “:TRIGger[:SOURCE]” on page 288.

The unit of measurement for the variable <val> is in seconds (nsec–sec).

This command sets the polarity for an external trigger signal while using the continuous, single triggering mode. To set the polarity for gating, see “**:TRIGger:TYPE:GATE:ACTive**” on page 287.

The POSitive and NEGative selections correspond to the high (positive) and low (negative) states of the external trigger signal. For example, when you select POSitive, the waveform responds (plays) during the high state of the trigger signal. When the ESG receives multiple trigger occurrences when only one is required, the signal generator uses the first trigger and ignores the rest.

```
[:SOURce]:RADio:ARB:GENerate:SINE [ "<file_name>" ][ , <osr> ], [ <scale> ], [ I | Q | IQ ]
```

This command creates a sine wave waveform file and saves it in the signal generator’s volatile waveform memory (WFM1).

"<file_name>" This variable names the file used to save the generated sine wave data.

<osr> This variable sets the oversample ratio, which must be an even number and ≥ 4 . The <osr> variable is expressed in samples. If the oversample ratio is < 60 (the minimum number of samples or I/Q points required for a waveform), multiple waveform periods are generated to create a waveform file with ≥ 60 samples. The number of periods created is $60 \div \text{<osr>}$ (quotient will round up to an integer value). A waveform with an oversample ratio ≥ 60 has one period.

<scale>	This variable sets the scale factor for the waveform. The scale factor is a real number from zero to one.
I Q IQ	Selects I, Q, or I and Q paths for the waveform data. Sinewave data is generated and applied to the I path if the I path is selected; Q data are set to zeros. Sine data is generated and applied to the Q path if the Q path is selected; I data are set to zeros. If the I and Q paths are selected, sinewave data are applied to the I and Q paths.

Example

```
:RAD:ARB:GEN:SINE "Sine_Wave",60,.5,IQ
```

The preceding example generates an I/Q sine wave and saves the data to a file named Sine_Wave. The oversampling ratio is 60, the scaling is set for 50%, and the data is applied to both the I and Q paths.

The signal generator's baseband option and available baseband memory determine the maximum number of samples for the waveform.

```
[ :SOURce ] :RADio :ARB :HEADer :RMS "<file_name>", <val> | UNSPECIFIED
[ :SOURce ] :RADio :ARB :HEADer :RMS? "<file_name>"
```

This command sets the file header RMS value for the selected waveform file. The ESG uses the RMS value with the dual ARB's real-time noise function.

The signal generator reads the RMS value from the file header when real-time noise is enabled and the dual ARB turned on.

When the waveform file is saved from volatile waveform memory (WFM1) to non-volatile waveform memory (NVWFM), the RMS value, auto-calculated or user-defined, is also saved.

"<file_name>" This variable names the waveform file to which the RMS value will be applied. The file name variable can designate a file in the WFM1, NVWFM, or SEQ directories. For information on the file name syntax, refer to “File Name Variables” on page 13.

<val> This variable is the user-measured RMS value for the specified waveform. The following figure shows the RMS calculation.

$$\sqrt{\sum_{n=1}^N (i_n^2 + q_n^2) \times \frac{1}{N}}$$

N = # of Samples

UNSPecified Using this variable in the command clears the RMS value and sets it to unspecified. An unspecified RMS value causes the signal generator to calculate the value when real-time noise is applied to the waveform during play back by the dual ARB player. The RMS calculation includes rise times and does not include consecutive zero level samples. DC offsets and noise are also included in the RMS measurement. Because the signal generator calculation uses so many parameters, you may achieve better results calculating your own RMS value.

Examples

```
[ :SOURCE ]:RADio:ARB:HEADER:RMS "WFM1:Sine_Wave", .835
```

The first example shows a user-measured RMS value for the Sine_Wave waveform file in the waveform’s file header.

```

```

In the second example, the signal generator calculates the RMS value.

This command enables or disables the operating state of the high crest mode.

ON(1) This choice turns high crest mode on for arbitrary I/Q waveforms with high crest factors (such as downloaded Signal Studio for 802.11 signals). High crest mode reduces the ALC vernier level by 7.5 dB, allowing the signal generator to process these signals with less distortion and improved EVM. For crest factors higher than 4 dB, I/Q drive levels should be reduced by 1 dB for each dB above that level. In high crest mode, the maximum output level is reduced and power level accuracy is degraded.

This command clears a single marker point or a range of marker points on a waveform segment for the selected marker (1–4). The dual ARB player and all of the ARB modulation formats use this command.

"<file_name>" This variable specifies the name of the waveform file in volatile waveform memory (WFM1). Use the AUTOGEN_WAVEFORM file when clearing marker points for an active ARB format. The ESG automatically creates a file, using current settings, and names it AUTOGEN_WAVEFORM whenever an ARB format is turned on (except dual ARB); the same file name is used for all ARB formats. When all ARB formats are off, this file is still in waveform memory (WFM1) and available for use by the dual ARB player. For information on the file name syntax, see “[File Name Variables](#)” on page 13.

<marker> This variable selects the marker number; an integer value from one to four.

<first_point> This variable defines the first point in a range of points. The number must be greater than or equal to one, and less than or equal to the total number of waveform points.

If you enter a value for either the first marker point or the last marker point that would make the first marker point occur after the last, the last marker point automatically adjusts to match the first marker point.

<last_point> This variable defines the last point in a range of points. The number must be greater than or equal to the first point, and less than or equal to the total number of waveform points.

To clear a single marker point, use the same marker point for the first and last point variables. For more information on markers and ARB files, refer to the *E4428C/38C ESG Signal Generators User's Guide*.

Supported E4438C with Option 001/601 or 002/602

```
[ :SOURCE ]:RADio:ARB:MARKer:ROTate "<file_name>", <rotate_count>
```

This command shifts the marker points for all markers in a waveform segment earlier or later by the value of the <rotate_count> variable. The dual ARB player and all of the ARB formats use this command.

You can use a positive or negative value. When a marker point is close to the end of the waveform and the <rotate_count> value is greater than the number of remaining marker points, but less than the total number of marker points, the marker points that would move beyond the end of the waveform wrap to the beginning of the waveform. For example, if a marker point resides at sample point 195 out of 200, and the <rotate_count> value is twenty-five, the marker point wraps to the beginning of the waveform and continues out to the twentieth waveform point.

To set the marker points in a waveform, refer to “:MARKer:[SET]” on page 300.

"<file_name>" This variable specifies the name of the waveform file in volatile waveform memory (WFM1). Use the AUTOGEN_WAVEFORM file when rotating marker points for the currently active ARB format and then save the file using a different file name. The ESG automatically creates a file, using current settings, and names it AUTOGEN_WAVEFORM whenever an ARB format is turned on (except dual ARB); the same file name is used for all ARB formats. When all ARB formats are off, this file is still in waveform memory (WFM1) and available for use by the dual ARB player. For information on the file name syntax, see “File Name Variables” on page 13.

Example

```

```

The preceding example shifts all markers set in the Test_Data file 100 points later. If the first set point in the file is at 50, then after sending this command, the first set point will be 150 (assuming the Test_Data file has at least 150 points) and no later set points wrapped around to the beginning of the file.

```
[ :SOURCE ]:RADio:ARB:MARKer:[SET] "<file_name>", <marker>, <first_point>, <last_point>, <skip_count>
```

This command sets a single marker point or a range of marker points on a waveform segment for the selected marker (1–4). The dual ARB player and all of the ARB formats use this command.

The ESG provides four independent markers. Each marker routes an output signal to the rear-panel event connector number (BNC—EVENT 1 and EVENT 2 or AUXILIARY I/O—EVENT 3 and EVENT 4) that corresponds to the marker number. A marker consists of marker points placed at defined sample points in a waveform segment. This means that a marker point cannot be less than one or greater than the last sample point in the waveform. Marker points are cumulative, so multiple command executions with different range values, without first clearing the existing points, places additional marker points on the waveform. Because of this cumulative behavior, it is a good practice to clear existing marker points prior to setting new points. This will eliminate unexpected marker pulses. Refer to “:MARKer:CLEar” on page 298 and “:MARKer:CLEar:ALL” on page 299 for information on clearing marker points.

For waveforms generated on the signal generator (baseband generator), the ESG automatically places a marker point at the first waveform sample for markers one and two.

NOTE You can set markers for either positive or negative polarity. The following discussions for this command assume positive marker polarity. When using negative marker polarity, the marker pulses occur during the periods of no marker points.

There are three ways to place marker points using this command:

- consecutive marker points over a range that collectively create a single marker pulse that spans the range
- equally spaced marker points over a range, so that a marker pulse occurs at each sample point that coincides with a marker point (Using this method, you can configure a clock signal by setting the <skip_count> variable to one.)
- a single marker point placed at a specific sample point in the waveform, which outputs a single pulse relative to the marker point location (To configure a single marker point, set the first and last points to the same number.)

For more information on markers, refer to the *E4428C/38C ESG Signal Generators User's Guide*.

The following list describes the command variables:

"<file_name>" This variable specifies the name of the waveform file in volatile waveform memory (WFM1). Use the AUTOGEN_WAVEFORM file when setting marker points for the currently active ARB format and then save the file using a different file name. The ESG automatically creates a file, using current settings, and names it AUTOGEN_WAVEFORM whenever an ARB format is turned on (except dual ARB); the same file name is used for all ARB formats. When all ARB formats are off, this file is still in waveform memory (WFM1) and available for use by the

dual ARB player. For information on the file name syntax, see “File Name Variables” on page 13.

- <marker> This variable selects the marker number; an integer value from one to four.
- <first_point> This variable defines the first point in the range over which the marker is placed. This number must be greater than or equal to one, and less than or equal to the total number of waveform points.

If you enter a value for either the first marker point or the last marker point that would make the first marker point occur after the last, the last marker point is automatically adjusted to match the first marker point.
- <last_point> This variable defines the last point in the range over which the marker will be placed. This value must be greater than or equal to the first point, and less than or equal to the total number of waveform points.
- <skip_count> This variable defines the marker point pattern across the range. A zero value means the marker points occur consecutively across the range. A value greater than zero creates a repeating marker point pattern across the range, where the gap between the marker points is equal to the <skip_count> value. The gaps begin after the first marker point. Each marker point in the pattern, which is only one point wide, produces a marker pulse.

:MDEStination:ALCHold

Supported E4438C with Option 001/601 or 002/602

CAUTION Incorrect automatic level control (ALC) sampling can create a sudden unlevelled condition that may create a spike in the RF output potentially damaging a DUT or connected instrument. Ensure that you set markers to let the ALC sample over an amplitude that accounts for the high power levels within the signal.

```
[ :SOURCE ]:RADio:ARB:MDEStination:ALCHold NONE | M1 | M2 | M3 | M4  
[ :SOURCE ]:RADio:ARB:MDEStination:ALCHold?
```

This command enables or disables the marker ALC hold function for the selected marker. For setting markers, see “[:MARKer:SET]” on page 300.

Use the ALC hold function when you have a waveform signal that incorporates idle periods, or when the increased dynamic range encountered with RF blanking is not desired. The ALC leveling circuitry responds to the marker signal during the marker pulse (marker signal high), averaging the modulated signal level during this period.

The ALC hold function operates during the low periods of the marker signal. The marker polarity determines when the marker signal is high. For a positive polarity, this is during the marker points. For a negative polarity, this is when there are no marker points. For setting a marker’s polarity, see “[:MPOlarity:MARKer1|2|3|4]” on page 306.

NOTE Do not use the ALC hold for more than 100 ms, because it can affect the waveform’s output amplitude.

The marker signal has a minimum of a two-sample delay in its response relative to the waveform signal response. To compensate for the marker signal delay, offset marker points from the waveform sample point at which you want the ALC sampling to begin.

The ALC hold setting is part of the file header information, so saving the setting to the file header saves the current marker routing for the waveform file.

NOTE A waveform file that has unspecified settings in the file header uses the previous waveform’s routing settings.

For more information on the marker ALC hold function, see the *E4428C/38C ESG Signal Generators User’s Guide*. For setting the marker points, see “:MARKer:[SET]” on page 300.

CAUTION The pulse function incorporates ALC hold. Incorrect automatic level control (ALC) sampling can create a sudden unlevelled condition that may create a spike in the RF output potentially damaging a DUT or connected instrument. Ensure that you set markers to let the ALC sample over an amplitude that accounts for the high power levels within the signal.

[:SOURce] :RADio:ARB:MDEStination:PULSe NONE | M1 | M2 | M3 | M4
 [:SOURce] :RADio:ARB:MDEStination:PULSe?

This command enables or disables the marker pulse/RF blanking function for the selected marker.

This function automatically uses the ALC hold function, so there is no need to select both the ALC hold and pulse/RF blanking functions for the same marker.

NOTE Do not use ALC hold for more than 100 ms, because it can affect the waveform’s output amplitude.

The signal generator blanks the RF output when the marker signal goes low. The marker polarity determines when the marker signal is low. For a positive polarity, this is during the marker points. For a negative polarity, this is when there are no marker points. For setting a marker’s polarity, see “:MPOLarity:MARKer1|2|3|4” on page 306.

NOTE Set marker points prior to using this function. Enabling this function without setting marker points may create a continuous low or high marker signal, depending on the marker polarity. This causes either no RF output or a continuous RF output. See “:MARKer:[SET]” on page 300 for setting the marker points.

The marker signal has a minimum of a two-sample delay in its response relative to the waveform signal response. To compensate for the marker signal delay, offset marker points from the waveform sample point at which you want the RF blanking to begin. The RF blanking setting is part of the file header information, so saving the setting to the file header saves the current marker routing for the waveform file.

NOTE A waveform file that has unspecified settings in the file header uses the previous waveform’s routing settings. This could create the situation where there is no RF output signal, because the previous waveform used RF blanking.

For more information on the marker RF blanking function, see the *E4428C/38C ESG Signal Generators User’s Guide*.

This command creates a waveform sequence. A waveform sequence is made up of segments and other sequences. Any number of segments, up to a segment count limit of 32768, can be used to create a sequence. The count limit is determined by the number of segments in the waveform sequence. Repeated segments are included in the count limit.

For example, using the figure below, suppose a waveform is created using two sequences: Sequence_A and Sequence_B. Sequence_A consists of Sequence_B and Segment_Q with Sequence_B repeated four times. The total segment count for this waveform sequence would be eleven.

The query returns the contents and segment settings of the waveform sequence file

The segments and sequences play in the same order as placed into the waveform sequence by the command. Once you create the file, you cannot edit the segment settings or add further waveform segments unless you use the signal generator's front panel. Using the same waveform sequence name overwrites the existing file with that name. To use a segment's marker settings, you must enable the segment's markers within the segment or within the waveform sequence. A sequence is stored in the catalog of SEQ files USER/SEQ or SEQ: directory.

When you create a waveform sequence, the ESG also creates a file header for the sequence. This file header takes priority over segment or nested sequence file headers. Refer to the *E4428C/38C ESG Signal Generators User's Guide* for more information on file headers. To save the file header, see [":HEADer:SAVE" on page 295](#).

- "<file_name>" This variable names the waveform *sequence* file. For information on the file name syntax, see ["File Name Variables" on page 13](#).
- "<waveform1>" This variable specifies the name of an existing waveform *segment* or sequence file. A waveform segment or the waveform segments in a specified sequence must reside in volatile memory, WFM1, before it can be played by the dual ARB player. For information on the file name syntax, see ["File Name Variables" on page 13](#), and for more information on waveform segments, see the *E4428C/38C ESG Signal Generators User's Guide*.
- "<waveform2>" This variable specifies the name of a second existing waveform *segment* or sequence file. The same conditions required for waveform1 apply for this segment or sequence. Additional segments and other sequences can be inserted into the file.
- <reps> This variable sets the number of times a segment or sequence plays (repeats) before the next segment or sequence plays.

NONE	This choice disables all four markers for the waveform. Disabling markers means that the waveform sequence ignores the segment's or sequence's marker settings.
M1, M2, M3, M4	These choices, either individually or a combination of them, enable the markers for the waveform segment or sequence. Markers not specified are ignored for that segment or sequence.
ALL	This choice enables all four markers in the waveform segment or sequence.

Example

```

NOTE A carriage return or line feed is never included in a SCPI command. The example above contains a carriage return so that the text will fit on the page.

The preceding example creates a waveform sequence file named Test_Data. This file consists of the factory-supplied waveform segments, ramp_test_wfm and sine_test_wfm. The waveform is stored in the signal generator's SEQ: directory.

:TRIGger:TYPE

Supported E4438C with Option 001/601 or 002/602

```
[ :SOURce ] :RADio :ARB :TRIGger :TYPE CONTInuous | SINGle | GATE | SADVance
[ :SOURce ] :RADio :ARB :TRIGger :TYPE?
```

This command sets the trigger mode (type) that controls the waveform's playback.

Triggers control the playback by telling the ESG when to play the modulating signal (waveform). Depending on the trigger settings for the ESG, the waveform playback can occur once, continuously, or the ESG may start and stop playing the waveform repeatedly (GATE mode).

A trigger signal comprises both positive and negative signal transitions (states), which are also called high and low periods. You can configure the ESG to trigger on either state of the trigger signal. It is common to have multiple triggers, also referred to as trigger occurrences or events, occur when the

signal generator requires only a single trigger. In this situation, the ESG recognizes the first trigger and ignores the rest.

When you select a trigger mode, you may lose the signal (carrier plus modulating) from the RF output until you trigger the waveform. This is because the ESG sets the I and Q signals to zero volts prior to the first trigger event, which suppresses the carrier. After the first trigger event, the waveform's final I and Q levels determine whether you will see the carrier signal or not (zero = no carrier, other values = carrier visible). At the end of most files, the final I and Q points are set to a value other than zero.

There are four parts to configuring the trigger:

- Choosing the trigger type, which controls the waveform's transmission.
- Setting the waveform's response to triggers:
 - CONTInuous, see [“:TRIGger:TYPE:CONTInuous\[:TYPE\]” on page 315](#)
 - SINGle, see [“:RETRigger” on page 309](#)
 - GATE, selecting the mode also sets the response
- Selecting the trigger source (see [“:TRIGger\[:SOURce\]” on page 318](#)), which determines how the ESG receives its trigger signal, internally or externally. The GATE choice requires an external trigger.
- Setting the trigger polarity when using an external source:
 - CONTInuous and SINGle see [“:TRIGger\[:SOURce\]:EXTernal:SLOPe” on page 320](#)
 - GATE, see [“:TRIGger:TYPE:GATE:ACTive” on page 315](#)

For more information on triggering, see the *E4428C/38C ESG Signal Generators User's Guide*.

The following list describes the trigger type command choices:

CONTInuous	Upon triggering, the waveform repeats continuously.
SINGle	Upon triggering, the waveform segment or sequence plays once.
GATE	An external trigger signal repeatedly starts and stops the waveform's playback (transmission). The time duration for playback depends on the duty period of the trigger signal and the gate polarity selection (see “:TRIGger:TYPE:GATE:ACTive” on page 315). The waveform plays during the inactive state and stops during the active polarity selection state. The active state can be set high or low. The gate mode works only with an external trigger source.

NOTE The ARB gating behavior described above is opposite to the gating behavior for real-time custom mode.

This command sets the trigger source.

For more information on triggering, see “:TRIGger:TYPE” on page 313. The following list describes the command choices:

KEY This choice enables manual triggering by pressing the front-panel **Trigger** hardkey.

EXT An externally applied signal triggers the waveform. This is the only choice that works with gating. The following conditions affect an external trigger:

- The input connector selected for the trigger signal. You have a choice between the rear-panel PATTERN TRIG IN connector or the PATT TRIG IN 2 pin on the rear-panel AUXILIARY I/O connector. To make the connector selection, see “:TRIGger[:SOURce]:EXTErnal[:SOURce]” on page 320.

For more information on the connectors and on connecting the cables, see the *E4428C/38C ESG Signal Generators User’s Guide*.

- The trigger signal polarity:
 - gating mode, see “:TRIGger:TYPE:GATE:ACTive” on page 315
 - continuous and single modes, see “:TRIGger[:SOURce]:EXTErnal:SLOPe” on page 320
- The time delay between when the ESG receives a trigger and when the waveform responds to the trigger. There are two parts to setting the delay:
 - setting the amount of delay, see “:TRIGger[SOURce]:EXTErnal:DELAy” on page 319
 - turning the delay on, see “:TRIGger[:SOURce]:EXTErnal:DELAy:STATe” on page 319

This command sets the amount of time to delay the ESG's response to an external trigger.

The delay is a path (time) delay between when the ESG receives the trigger and when it responds to the trigger. For example, configuring a trigger delay of two seconds, causes the ESG to wait two seconds after receipt of the trigger before the ESG plays the waveform.

The delay does not occur until you turn it on (see “:TRIGger[:SOURCE]:EXTErnal:DELay:STATe” on page 319). You can set the delay value either before or after turning it on.

For more information on configuring an external trigger source and to select external as the trigger source, see “:TRIGger[:SOURCE]” on page 318.

 [:SOURce] :RADio:ARB:TRIGger [:SOURce] :EXTernal:SLOPe?

This command sets the polarity for an external trigger signal while using the continuous, single triggering mode. To set the polarity for gating, see “:TRIGger:TYPE:GATE:ACTive” on page 315.

The POSitive and NEGative selections correspond to the high (positive) and low (negative) states of the external trigger signal. For example, when you select POSitive, the waveform responds (plays) during the high state of the trigger signal. When the ESG receives multiple trigger occurrences when only one is required, the signal generator uses the first trigger and ignores the rest.

For more information on configuring an external trigger source and to select external as the trigger source, see “:TRIGger[:SOURce]” on page 318.

```
[ :SOURCE ]:RADio:ARB:WAVeform "WFM1:file_name" | "SEQ:file_name"  

[:SOURCE]:RADio:ARB:WAVeform?
```

This command selects a waveform file or sequence, for the dual ARB player to play. The file must be present in volatile memory, WFM1, or in the SEQ directory. If a file is in non-volatile memory (NVWFM), use the command “:COPY[:NAME]” on page 103 to copy the file to WFM1.

"WFM1:file_name" This variable names a waveform file residing in volatile memory (WFM1:). For information on the file name syntax, see “File Name Variables” on page 13.

"SEQ:file_name" This variable names a sequence file residing in the catalog of sequence files. For more information on the file name syntax, see “File Name Variables” on page 13.

Example

```
:RAD:ARB:WAV "WFM1:Test_Data"
```

The preceding example selects the file Test_Data from the list of files in volatile waveform memory, WFM1, and applies its file header settings.

```
[ :SOURCE ]:RADio:ARB:WAVeform:NHEAders "WFM1:file_name" | "SEQ:filename"  

[:SOURCE]:RADio:ARB:WAVeform:NHEAders?
```

This command, for the dual ARB mode, allows for a fast selection of a segment or sequence waveform file. No header information or settings are applied to the segment or sequence waveform file when this command is used. This will improve the access or loading speed of the waveform file to approximately 100 mS for a single segment. The file must be in volatile waveform memory (WFM1), or in the SEQ directory. If a file is in non-volatile waveform memory (NVWFM), use the command “:COPY[:NAME]” on page 103 to copy files to WFM1.

"WFM1:file_name" This variable names a waveform file residing in volatile memory:WFM1. For information on the file name syntax, see “File Name Variables” on page 13.

"SEQ:filename" This variable names a sequence file residing in the catalog of sequence files. For more information on the file name syntax, see “File Name Variables” on page 13.

:MDEStination:ALCHold

Supported E4438C with Option 001/601 or 002/602

CAUTION Incorrect automatic level control (ALC) sampling can create a sudden unlevelled condition that may create a spike in the RF output potentially damaging a DUT or connected instrument. Ensure that you set markers to let the ALC sample over an amplitude that accounts for the high power levels within the signal.

```
[ :SOURce ] :RADio:MTONE:ARB:MDEStination:ALCHold NONE | M1 | M2 | M3 | M4
[ :SOURce ] :RADio:MTONE:ARB:MDEStination:ALCHold?
```

This command enables or disables the marker ALC hold function for the selected marker. For setting markers, see “:MARKer:[SET]” on page 300.

Use the ALC hold function when you have a waveform signal that incorporates idle periods, or when the increased dynamic range encountered with RF blanking is not desired. The ALC leveling circuitry responds to the marker signal during the marker pulse (marker signal high), averaging the modulated signal level during this period.

The ALC hold function operates during the low periods of the marker signal. The marker polarity determines when the marker signal is high. For a positive polarity, this is during the marker points. For a negative polarity, this is when there are no marker points. For setting a marker’s polarity, see “:MPOLarity:MARKer1|2|3|4” on page 330.

NOTE Do not use the ALC hold for more than 100 ms, because it can affect the waveform’s output amplitude.

The marker signal has a minimum of a two-sample delay in its response relative to the waveform signal response. To compensate for the marker signal delay, offset marker points from the waveform sample point at which you want the ALC sampling to begin.

The ALC hold setting is part of the file header information, so saving the setting to the file header saves the current marker routing for the waveform file.

NOTE A waveform file that has unspecified settings in the file header uses the previous waveform’s routing settings.

For more information on the marker ALC hold function, see the *E4428C/38C ESG Signal Generators User’s Guide*. For setting the marker points, see “:MARKer:[SET]” on page 300.

NONE	This terminates the marker ALC hold function.

:MDEStination:PULSe

Supported E4438C with Option 001/601 or 002/602

CAUTION The pulse function incorporates ALC hold. Incorrect automatic level control (ALC) sampling can create a sudden unlevelled condition that may create a spike in the RF output potentially damaging a DUT or connected instrument. Ensure that you set markers to let the ALC sample over an amplitude that accounts for the high power levels within the signal.

```
[ :SOURCE ] :RADio:MTONe:ARB:MDEStination:PULSe NONE | M1 | M2 | M3 | M4
[ :SOURCE ] :RADio:MTONe:ARB:MDEStination:PULSe?
```

This command enables or disables the marker pulse/RF blanking function for the selected marker.

This function automatically incorporates the ALC hold function, so there is no need to select both the ALC hold and pulse/RF blanking functions for the same marker.

NOTE Do not use ALC hold for more than 100 ms, because it can affect the waveform’s output amplitude.

The signal generator blanks the RF output when the marker signal goes low. The marker polarity determines when the marker signal is low. For a positive polarity, this is during the marker points. For a negative polarity, this is when there are no marker points. For setting a marker’s polarity, see “:MPOLarity:MARKer1|2|3|4” on page 330.

NOTE Set marker points prior to using this function. Enabling this function without setting marker points may create a continuous low or high marker signal, depending on the marker polarity. This causes either no RF output or a continuous RF output. See “:MARKer:[SET]” on page 300 for setting the marker points.

The marker signal has a minimum of a two-sample delay in its response relative to the waveform signal response. To compensate for the marker signal delay, offset marker points from the waveform sample point at which you want the RF blanking to begin. The RF blanking setting is part of the file header information, so saving the setting to the file header saves the current marker routing for the waveform file.

NOTE A waveform file that has unspecified settings in the file header uses the previous waveform’s routing settings. This could create the situation where there is no RF output signal, because the previous waveform used RF blanking.

For more information on the marker RF blanking function, see the *E4428C/38C ESG Signal Generators User’s Guide*.

NONE This terminates the marker RF blanking/pulse function.

M1–M4 These are the marker choices. The RF blanking/pulse feature uses only one marker at a time.

```

```
[ :SOURce ]:RADio:WCDMa:TGPP:ARB:FILTer?
```

This command selects the pre-modulation filter type.

WCDMA This choice selects a 0.22 Nyquist filter optimized for ACP.

AC4Fm This choice selects a predefined Association of Public Safety Communications Officials (APCO) specified compatible 4-level frequency modulation (C4FM) filter.

IS2000SR3DS This choice selects an IS-2000 standard, spread rate 3 direct spread filter.

UGGaussian This choice selects a backwards compatible GSM Gaussian filter (Gaussian filter with a fixed BbT value of 0.300) for the ESG E44xxB Option UN3 or UN4.

"<user FIR>" This variable is any FIR filter file that you have stored in memory. The variable needs no directory path indicating the location of the file, such as FIR: or /USER/FIR. The command assumes the FIR directory. Refer to [“File Name Variables” on page 13](#) for more information on file names.

This command will sort carriers by frequency offset and auto-increment timing offsets. The new values will start with the current timing offset for the lowest frequency carrier and increment by one for each subsequent carrier.

[:SOURCE]:RADIO:WCDMA:TGPP:ARB:LINK:DOWN:SETup:STORe "<file name>"

This command stores the current downlink setup information into the memory catalog with the entered file name.

Along with the contents of the W-CDMA channel table editor (channel types, Walsh code, power levels, PN offset, and data), this command stores the following information to the signal generator memory:

- FIR filter
- FIR filter file name
- FIR filter alpha
- FIR filter BbT
- FIR filter channel (EVM or ACP)
- I/Q mapping
- increment scramble code
- increment timing offset
- link
- spread type
- spread rate
- ARB reference clock source (internal or external)

```

This command sets up the W-CDMA downlink channel type parameters.

Use INIT to clear the table editor and define the parameters for the first channel; use APPend to add new channels. To edit an existing channel, use its channel number <chan_num>.

The <power>, <TFCI_power>, <TPC_power>, and <pilot_power> variables are expressed in units of decibels (dB).

The channel type, symbol rate, spread code, power, timing offset, TFCI value, TPC value, scramble code, scramble type, scramble offset, data type, TFCI power, TPC power, pilot power, and the number of pilot bits are returned when a query is initiated. The output format is as follows:

```

<TPC> , <scramble_code> , <scramble_type> , <scramble_code> , <scramble_offset> ,
<data_type> , <TFCI_power> , <TPC_power> , <pilot_power> , <pilot_bits>
```

INIT	This choice clears the current information and creates a new one-row table, allowing for further definition using additional parameters.
APPend	This choice adds a row to an existing table.
<chan_num>	This variable sets the physical channel number.
<chan_type>	This variable sets the channel type.
<timing_offset>	This variable sets the symbol offset.
<TFCI>	This variable sets the transport format combination indicator.
<TPC>	This variable sets the transmit power control.
STANdard	This choice sets the scramble type to standard.
RALternate	This choice sets the scramble type to right alternate.
LALternate	This choice sets the scramble type to left alternate.
RANDom	This choice sets a randomly generated pseudo-random sequence pattern as output data.
PN9	This choice sets an internally generated 9-bit pseudo-random sequence pattern as output data.
PINDicator	This choice sets the paging indicator channel (PICH).
<data_val>	This variable sets the data value.
<TFCI_power>	This variable sets the transport format combination indicator power offset.
<TPC_power>	This variable sets the transport power control power offset.
<pilot_power>	This variable sets the pilot power offset.
<pilot_bits>	This variable sets the number of pilot bits that will be in the dedicated physical channel (DPCH).

CAUTION Incorrect automatic level control (ALC) sampling can create a sudden unlevelled condition that may create a spike in the RF output potentially damaging a DUT or connected instrument. Ensure that you set markers to let the ALC sample over an amplitude that accounts for the high power levels within the signal.

```
[ :SOURCE ] :RADio:WCDMa:TGPP:ARB:MDEStination:ALCHold NONE | M1 | M2 | M3 | M4
[ :SOURCE ] :RADio:WCDMa:TGPP:ARB:MDEStination:ALCHold?
```

This command enables or disables the marker ALC hold function for the selected marker. For setting markers, see “[:MARKer:\[SET\]](#)” on page 300.

Use the ALC hold function when you have a waveform signal that incorporates idle periods, or when the increased dynamic range encountered with RF blanking is not desired. The ALC leveling circuitry responds to the marker signal during the marker pulse (marker signal high), averaging the modulated signal level during this period.

The ALC hold function operates during the low periods of the marker signal. The marker polarity determines when the marker signal is high. For a positive polarity, this is during the marker points. For a negative polarity, this is when there are no marker points. For setting a marker’s polarity, see “[:MPOlarity:MARKer1|2|3|4](#)” on page 366.

NOTE Do not use the ALC hold for more than 100 ms, because it can affect the waveform’s output amplitude.

The marker signal has a minimum of a two-sample delay in its response relative to the waveform signal response. To compensate for the marker signal delay, offset marker points from the waveform sample point at which you want the ALC sampling to begin.

The ALC hold setting is part of the file header information, so saving the setting to the file header saves the current marker routing for the waveform file.

NOTE A waveform file that has unspecified settings in the file header uses the previous waveform’s routing settings.

For more information on the marker ALC hold function, see the *E4428C/38C ESG Signal Generators User’s Guide*. For setting the marker points, see “:MARKer:[SET]” on page 300.

NONE This terminates the marker ALC hold function.

M1–M4 These are the marker choices. The ALC hold feature uses only one marker at a time.

***RST** NONE

Key Entry	None	Marker 1	Marker 2	Marker 3	Marker 4
Remarks	N/A				

:MDEStination:PULSe

Supported E4438C with Option 400

CAUTION The pulse function uses the ALC hold. Incorrect automatic level control (ALC) sampling can create a sudden unlevelled condition that may create a spike in the RF output potentially damaging a DUT or connected instrument. Ensure that you set markers to let the ALC sample over an amplitude that accounts for the high power levels within the signal.

```
[ :SOURce ] :RADio:WCDMa:TGPP:ARB:MDEStination:PULSe NONE | M1 | M2 | M3 | M4
[ :SOURce ] :RADio:WCDMa:TGPP:ARB:MDEStination:PULSe?
```

This command enables or disables the marker pulse/RF blanking function for the selected marker.

This function automatically uses the ALC hold function, so there is no need to select both the ALC hold and the pulse/RF blanking for the same marker.

NOTE Do not use ALC hold for more than 100 ms, because it can affect the waveform’s output amplitude.

The signal generator blanks the RF output when the marker signal goes low. The marker polarity determines when the marker signal is low. For a positive polarity, this is during the marker points. For a negative polarity, this is when there are no marker points. For setting a marker’s polarity, see “:MPOLarity:MARKer1|2|3|4” on page 366.

NOTE Set marker points prior to using this function. Enabling this function without setting marker points may create a continuous low or high marker signal, depending on the marker polarity. This causes either no RF output or a continuous RF output. See “:MARKer:[SET]” on page 300 for setting the marker points.

The marker signal has a minimum of a two-sample delay in its response relative to the waveform signal response. To compensate for the marker signal delay, offset marker points from the waveform sample point at which you want the RF blanking to begin. The RF blanking setting is part of the file header information, so saving the setting to the file header saves the current marker routing for the waveform file.

NOTE A waveform file that has unspecified settings in the file header uses the previous waveform’s routing settings. This could create the situation where there is no RF output signal, because the previous waveform used RF blanking.

For more information on the marker RF blanking function, see the *E4428C/38C ESG Signal Generators User’s Guide*.

NONE This terminates the marker RF blanking/pulse function.

M1–M4 These are the marker choices. The RF blanking/pulse feature uses only one marker at a time.

This command sets the retrigger mode.

ON	This choice specifies that if a trigger occurs while a waveform is initiated, the waveform will retrigger at the end of the previous waveform sequence and play once more.
OFF	This choice specifies that if a trigger occurs while a waveform is initiated, the action will be ignored.
IMMEDIATE	This choice specifies that if a trigger occurs while a waveform is playing, the waveform will reset and replay from the start immediately upon receiving a trigger.

```

```
[ :SOURce ] :RADio:WCDMa:TGPP:ARB:TRIGger:TYPE?
```

This command sets the trigger mode (type) that controls the waveform’s playback.

Triggers control the playback by telling the ESG when to play the modulating signal (waveform). Depending on the trigger settings for the ESG, the waveform playback can occur once, continuously, or the ESG may start and stop playing the waveform repeatedly (GATE mode).

A trigger signal comprises both positive and negative signal transitions (states), which are also called high and low periods. You can configure the ESG to trigger on either state of the trigger signal. It is common to have multiple triggers, also referred to as trigger occurrences or events, occur when the signal generator requires only a single trigger. In this situation, the ESG recognizes the first trigger and ignores the rest.

When you select a trigger mode, you may lose the signal (carrier plus modulating) from the RF output until you trigger the waveform. This is because the ESG sets the I and Q signals to zero volts prior to the first trigger event, which suppresses the carrier. After the first trigger event, the waveform’s final I and Q levels determine whether you will see the carrier signal or not (zero = no carrier, other values = carrier visible). At the end of most files, the final I and Q points are set to a value other than zero.

There are four parts to configuring the trigger:

- Choosing the trigger type, which controls the waveform’s transmission.
- Setting the waveform’s response to triggers:
 - CONTInuous, see “:TRIGger:TYPE:CONTInuous[:TYPE]” on page 370
 - SINGle, see “:RETRigger” on page 367
 - GATE, selecting the mode also sets the response
- Selecting the trigger source (see “:TRIGger[:SOURCE]” on page 371), which determines how the ESG receives its trigger signal, internally or externally. The GATE choice requires an external trigger.
- Setting the trigger polarity when using an external source:
 - CONTInuous and SINGle see “:TRIGger[:SOURCE]:EXTernal:SLOPe” on page 373
 - GATE, see “:TRIGger:TYPE:GATE:ACTive” on page 370

For more information on triggering, see the *E4428C/38C ESG Signal Generators User’s Guide*.

The following list describes the trigger type command choices:

CONTInuous	Upon triggering, the waveform repeats continuously.
SINGle	Upon triggering, the waveform segment or sequence plays once.
GATE	An external trigger signal repeatedly starts and stops the waveform’s playback (transmission). The time duration for playback depends on the duty period of the trigger signal and the gate polarity selection (see “:TRIGger:TYPE:GATE:ACTive” on page 370). The waveform plays during the inactive state and stops during the active polarity selection state. The active state can be set high or low. The gate mode works only with an external trigger source.

NOTE The ARB gating behavior described above is opposite to the gating behavior for real-time custom mode.

```

This command selects the waveform's response to a trigger signal while using the continuous trigger mode.

For more information on triggering and to select the continuous trigger mode, see [“:TRIGger:TYPE” on page 368](#).

The following list describes the waveform's response to each of the command choices:

FREE	Turning the ARB format on immediately triggers the waveform. The waveform repeats until you turn the format off, select another trigger, or choose another waveform file.
TRIGger	The waveform waits for a trigger before play begins. When the waveform receives the trigger, it plays continuously until you turn the format off, select another trigger, or choose another waveform file.
RESet	The waveform waits for a trigger before play begins. When the waveform receives the trigger, it plays continuously. Subsequent triggers reset the waveform to the beginning. For a waveform sequence, this means to the beginning of the first segment in the sequence.

[ :SOURCE ] :RADio:WCDMa:TGPP:ARB:TRIGger:TYPE:GATE:ACTive LOW | HIGH
[ :SOURCE ] :RADio:WCDMa:TGPP:ARB:TRIGger:TYPE:GATE:ACTive ?
```

This command selects the active state (gate polarity) of the gate while using the gating trigger mode.

The LOW and HIGH selections correspond to the low and high states of an external trigger signal. For example, when you select HIGH, the active state occurs during the high of the trigger signal. When the active state occurs, the ESG stops the waveform playback at the last played sample point, then restarts the playback at the next sample point when the inactive state occurs. For more information on triggering and to select gating as the trigger mode, see [“:TRIGger:TYPE” on page 368](#).

The following list describes the ESG's gating behavior for the polarity selections:

LOW	The waveform playback stops when the trigger signal goes low (active state) and restarts when the trigger signal goes high (inactive state).
HIGH	The waveform playback stops when the trigger signal goes high (active state) and restarts when the trigger signal goes low (inactive state).

This command sets the trigger source.

For more information on triggering, see “[:TRIGger:TYPE](#)” on page 368. The following list describes the command choices:

KEY	This choice enables manual triggering by pressing the front-panel Trigger hardkey.
EXT	An externally applied signal triggers the waveform. This is the only choice that works with gating. The following conditions affect an external trigger:

- The input connector selected for the trigger signal. You have a choice between the rear-panel PATTERN TRIG IN connector or the PATT TRIG IN 2 pin on the rear-panel AUXILIARY I/O connector. To make the connector selection, see “[:TRIGger\[:SOURCE\]:EXternal\[:SOURCE\]](#)” on page 373.

For more information on the connectors and on connecting the cables, see the *E4428C/38C ESG Signal Generators User’s Guide*.

- The trigger signal polarity:
 - gating mode, see “[:TRIGger:TYPE:GATE:ACTive](#)” on page 370
 - continuous and single modes, see “[:TRIGger\[:SOURCE\]:EXternal:SLOPe](#)” on page 373
- The time delay between when the ESG receives a trigger and when the waveform responds to the trigger. There are two parts to setting the delay:
 - setting the amount of delay, see “[:TRIGger\[:SOURCE\]:EXternal:DELAy](#)” on page 372
 - turning the delay on, see “[:TRIGger\[:SOURCE\]:EXternal:DELAy:STATe](#)” on page 372

[ :SOURce ] :RADio:WCDMa:TGPP:ARB:TRIGger [ :SOURce ] :EXTeRnal:DELay?
```

This command sets the amount of time to delay the ESG's response to an external trigger.

The delay is a path (time) delay between when the ESG receives the trigger and when it responds to the trigger. For example, configuring a trigger delay of two seconds, causes the ESG to wait two seconds after receipt of the trigger before the ESG plays the waveform.

The delay does not occur until you turn it on (see “[:TRIGger\[:SOURce\]:EXTeRnal:DELay:STATe](#)” on [page 372](#)). You can set the delay value either before or after turning it on.

For more information on configuring an external trigger source and to select external as the trigger source, see “[:TRIGger\[:SOURce\]](#)” on [page 371](#).

```

This command sets the polarity for an external trigger signal while using the continuous, single triggering mode. To set the polarity for gating, see “:TRIGger:TYPE:GATE:ACTive” on page 370.

The POSitive and NEGative selections correspond to the high (positive) and low (negative) states of the external trigger signal. For example, when you select POSitive, the waveform responds (plays) during the high state of the trigger signal. When the ESG receives multiple trigger occurrences when only one is required, the signal generator uses the first trigger and ignores the rest.

6 Digital Signal Interface Module Commands

This chapter provides SCPI descriptions for commands available with the N5102A Digital Signal Interface Module. Refer to the *E4428C/38C ESG Signal Generators User's Guide* and *E4428C/38C ESG Signal Generators Key and Data Field Reference* for more information on the N5102A module.

- [“Digital Subsystem—Option 003 and 004 \(:SOURce\)”](#) on page 376

Digital Subsystem—Option 003 and 004 ([:SOURce])

:DIGital:CLOCK:CPS 1|2|4

Supported E4438C Option with option 003 or 004 or both

```
:DIGital:CLOCK:CPS 1|2|4
```

```
:DIGital:CLOCK:CPS?
```

This command selects the number of clock cycles per sample. The command is used with parallel or parallel interleaved port configurations. If this command is executed with a serial port configuration or an IF signal type, the parameter value is changed, but it is not used by the interface module until the port configuration is changed to parallel or parallel interleaved, *and* the signal type is changed to IQ.

The query returns the currently set value. Regardless of the port configuration, you must query all four states (clocks per sample, port configuration, data direction, and signal type) to know the interface module's current setup.

Example

```
:DIG:CLOC:CPS 2
```

The preceding example sets two clock cycles for each sample.

***RST** 1

Key Entry **Clocks Per Sample**

:DIGital:CLOCK:PHASe

Supported E4438C Option with option 003 or 004 or both

```
:DIGital:CLOCK:PHASe <val>
```

```
:DIGital:CLOCK:PHASe?
```

This command sets the phase for the clock relative to the leading edge transition of the data. At 0 degrees the clock and leading edge of the data signal are aligned. Any phase value between 0 and 360 degrees can be used in the command, however, the signal generator rounds up or down to get 90, 180, 270 and 0 degree settings. For example, entering 140 degrees will cause the signal generator to use the 180 degree setting.

If this command is executed when the clock rate is less than 10 MHz or greater than 200 MHz, the resolution changes to 180 degrees, and the maximum phase defaults to 180 degrees.

Example

```
:DIG:CLOC:PHAS 90DEG
```

The preceding example sets the clock phase to 90 degrees. The clock signal leading edge transition will be delayed by 1/4 of a clock period relative to the leading edge data transition.

Supported E4438C Option with option 003 or 004 or both

```
:DIGital:CLOCK:POLarity POSitive|NEGative  
:DIGital:CLOCK:POLarity?
```

This command sets the alignment for the clock signal to positive or negative. Positive selects the leading edge transition of the clock signal to align with the leading edge data transition and negative selects the falling edge transition of the clock signal to align with the leading edge of the data.

Example

```
:DIG:CLOC:POL NEG
```

The preceding example sets the clock falling edge transition to align with the leading edge data transition.

***RST** POS

:DIGital:CLOCK:RATE

Supported E4438C Option with option 003 or 004 or both

```
:DIGital:CLOCK:RATE <val>  
:DIGital:CLOCK:RATE?
```

This command sets the clock rate. If an external clock is used, the rate set with this command must match the external clock rate. Only clock phase settings of 0 or 180 degrees are valid for a clock rate setting below 10 MHz or above 200 MHz. The variable <val> is expressed in hertz

Example

```
:DIG:CLOC:RATE 200MHZ
```

The preceding example sets the clock rate to 200 megahertz.

***RST** +1.00000000E+008

:DIGital:CLOCK:REFErence:FREQuency

Supported E4438C Option with option 003 or 004 or both

```
:DIGital:CLOCK:REFErence:FREQuency <freq>  
:DIG:CLOC:REF:FREQ?
```

This command allows you to specify the frequency of the external reference supplied to the Freq Ref connector. This command is valid only when the clock source is set to internal.

If this command is executed when the clock source is not set to internal, the parameter value is changed, but it is not used by the signal generator until the clock source is changed to internal.

Because a query returns the currently set value, regardless of the clock source, you must query both states (reference frequency and clock source) to know the signal generator's current setup.

Example

```
:DIG:CLOC:REF:FREQ 50MHZ
```

The preceding example specifies a 50 megahertz external reference frequency.

:DIGital:CLOCK:SKEW

Supported E4438C Option with option 003 or 004 or both

```
:DIGital:CLOCK:SKEW <val>  
:DIGital:CLOCK:SKEW?
```

This command sets the clock signal skew value. The skew is a fine-tune adjustment for the course tune clock phase function and helps to align the clock with valid data states. This is useful at high clock rates and available only for clock frequencies above 10 megahertz. The variable <val> is expressed in nanoseconds.

Example

```
:DIG:CLOC:SKEW 2NS

The preceding example sets the clock skew to 2 nanoseconds.

:DIGital:DATA:ALIGNment

Supported E4438C Option with option 003 or 004 or both

```
:DIGital:DATA:ALIGNment MSB|LSB  
:DIGital:DATA:ALIGNment?
```

This command selects the bit alignment for a word less than 16 bits in length. The MSB (most significant bit) selection maintains the MSB of the word on the same data line while the LSB (least significant bit) will move depending on the word size. The opposite effect occurs when the alignment is set to LSB.

:DIGital:DATA:IGain?
```

This command adjust the gain of the I data in the N5102A module. The adjustment does not affect the Q data.

The variable <val> is expressed as a percentage delta from 100%. The offset is an adjustment to the analog level that is represented by the digital sample. The analog voltage is limited to a 16-bit data sample.

Example

```
:DIG:DATA:IG 10

Supported E4438C Option with option 003 or 004 or both

```
:DIGital:DATA:INEGate OFF|ON|0|1  
:DIGital:DATA:INEGate?
```

This command enables or disables the negation of the I data sample. Negation changes the sample by expressing it in two's complement form, multiplying by negative one, and converting back to the selected numeric format. This can be done for I samples, Q samples, or both.

The sample or word represents a quantized analog voltage level. This analog voltage can be added or multiplied. For a 16-bit sample, the range is from 0 to 65535 in offset binary or -32768 to +32767 in 2's complement mode.

***RST** +0.00000000E+000

Range -100 through 100

Key Entry **Q Offset**

:DIGital:DATA:ROTation

Supported E4438C Option with option 003

```
:DIGital:DATA:ROTation <val>  
:DIGital:DATA:ROTation?
```

This command rotates the IQ data in the IQ plane. This command is valid for the N5102A output mode. The variable <val> is expressed in degrees with a range from 0 to 360.

Example

```
:DIG:DATA:ROT 45
```

The preceding example rotates the IQ constellation 45 degrees.

***RST** +1.00000000E+000

Range 0–360

Key Entry **Rotation**

:DIGital:DATA:SCALing

Supported E4438C Option with option 003

:DIGital:DATA:SCALing <val>

:DIGital:DATA:SCALing?

This command enables scaling of the I and Q data to the level indicated by the <val> variable. This command is valid for the N5102A output mode. The variable <val> is expressed as a percentage.

Example

:DIG:DATA:SCAL 50

The preceding example scales the I and Q data to amplitude to 50%.

***RST** +1.00000000E+002

Range -100 through 100

Key Entry **Scaling**

:DIGital:DATA:SIZE

Supported E4438C Option with option 003 or 004 or both

:DIGital:DATA:SIZE <val>

:DIGital:DATA:SIZE?

This command selects the number of bits in each sample. A sample can have a maximum word length of 16 bits.

Example

:DIG:DATA:SIZE 8

The preceding example sets the sample word size to eight bits.

***RST** +1.600000000E+001

Range 4–16

Key Entry **Word Size**

:DIGital:DATA:STYPe

Supported E4438C Option with option 003

```
:DIGital:DATA:STYPe IQ|IF  
:DIGital:DATA:STYPe?
```

This command selects the output format for the IQ data. The IQ selection outputs digital I and Q data. Whereas the IF (intermediate frequency) selection modulates the I and Q data onto the IF frequency. The IF is calculated as 1/4 the clock sample rate. This command is valid only for the N5102A output mode.

IQ This choice outputs I and Q digital data.

IF This choice outputs a modulated signal.

Example

```
:DIG:DATA:STYP IF
```

The preceding example sets the I and Q output data to modulate the intermediate frequency.

***RST** IQ

Key Entry **Signal Type**

:DIGital:DATA:TYPE

Supported E4438C Option with option 003 or 004 or both

```
:DIGital:DATA:TYPE SAMPlEs|PFSSamPlEs  
:DIGital:DATA:TYPE?
```

This command selects filtered baseband data or unfiltered baseband data as the transmitted data type.

If this command is executed while an ARB modulation format is active, the parameter choice is changed, but it is not *used* by the interface module until a real-time modulation format is turned on.

Because a query returns the current choice, regardless of whether or not an ARB format is active, you must query both states (data type and the modulation format) to know the signal generator's current setup.

SAMPlEs This choice selects DAC samples as the data transmitted.

PFSSamPlEs This choice selects pre-filtered samples which are unfiltered I and Q data.

Example

```
:DIG:DATA:TYPE PFS
```

The preceding example sets the data type to pre-filtered I and Q data.

```
*RST          SAMP
```

Key Entry **Data Type**

:DIGital:DIAGnostic:LOOPback

Supported E4438C Option with option 003 or 004 or both

```
:DIGital:DIAGnostic:LOOPback? DIGBus|CABLe|N5102A|DEVIce
```

This command selects and executes a loop back test that validates the integrity of digital data. Refer to the E4428C/38C ESG Signal Generators Key and Data Field Reference for more information.

DIGBus This choice selects a loop back test using the Digital Bus Loop Back Fixture test board.

CABLe This choice selects a loop back test on the ESG Digital Bus connector at the signal generator side.

N5102A This choice selects a loop back test for the N5102A module.

DEVIce This choice selects a loop back test using the LOOP BACK TEST SINGLE ENDED IO DUAL 40 PIN board.

Example

```
:DIG:DIAG:LOOP? DEV
```

The preceding example runs the diagnostic test on the Single Ended IO Dual 40 Pin device and returns a pass or fail condition.

```
*RST          Device Intfc
```

Key Entry **Loop Back Test Type**

:DIGital:LOGic[:TYPE]

Supported E4438C Option with option 003 or 004 or both

```
:DIGital:LOGic[:TYPE] LVDS|LVTT1|CMOS15|CMOS18|CMOS25|CMOS33  
:DIGital:LOGic[:TYPE]?
```

This command selects the logic data type used by the device being tested.

LVDS This choice selects low voltage differential signaling as the logic data type.

Digital Signal Interface Module Commands

Digital Subsystem—Option 003 and 004 ([:SOURce])

LVTT1	This choice selects a low voltage TTL signal as the logic data type.
CMOS15	This choice selects a 1.5 volt CMOS signal as the logic data type.
CMOS18	This choice selects a 1.8 volt CMOS signal as the logic data type.
CMOS25	This choice selects a 2.5 volt CMOS signal as the logic data type.
CMOS33	This choice selects a 3.3 volt CMOS signal as the logic data type.

Example

```
:DIG:LOG CMOS15
```

The preceding example selects 1.5 volt CMOS as the logic data type.

```
*RST CMOS33
```

Key Entry **Logic Type**

:DIGital:PCONfig

Supported E4438C Option with option 003 or 004 or both

```
:DIGital:PCONfig PARallel|SERial|PINTIQ|PINTI  
:DIGital:PCONfig?
```

This command selects the data transmission type used for communication between the N5102A module and the device under test. Refer to the E4428C/38C ESG Signal Generators Key and Data Field Reference for more information.

PARallel	This choice selects parallel data transmission.
SERial	This choice selects serial data transmission.
PINTIQ	This choice selects parallel interleaving data transmission. The I data is transmitted on the rising clock edge and the Q data on the falling edge.
PINTI	This choice selects parallel interleaving data transmission. The Q data is transmitted on the rising clock edge and the I data on the falling edge.

Example

```
:DIG:PCON PINTI
```

The preceding example selects parallel interleaving format

```
*RST PAR
```

Key Entry **Port Config**

:DIGital:PRESet:PTHRough

Supported E4438C Option with option 003 or 004 or both

```
:DIGital:PRESet:PTHRough
```

This command sets up the preset condition for the N5102A module and allows transmission of data through the module with no modifications. The command is valid only when a modulation format is active.

Example

```
:DIG:PRESet:PTHR
```

The preceding example sets the N5102A module to a preset condition and allows data to pass through unmodified.

Key Entry **Pass Through Preset**

:DIGital[:STATe]

Supported E4438C Option with option 003 or 004 or both

```
:DIGital[:STATe] 0|1|OFF|ON  
:DIGital[:STATe]?
```

This command enables or disables the operating state of the N5102A module.

Example

```
:DIG ON
```

The preceding example turns on the N5102A module.

***RST** **OFF**

Key Entry **N5102A Off On**

7 Bit Error Rate Test (BERT) Commands

This chapter provides SCPI description for commands dedicated to BERT testing using the E4438C ESG Vector Signal Generator. This chapter contains the following sections:

- “Calculate Subsystem–Option UN7 and 300 (:CALCulate:BERT)” on page 394
- “Data Subsystem–Option UN7 and 300 (:DATA)” on page 404
- “Input Subsystem–Option UN7 (:INPut:BERT[: BASeband])” on page 412
- “Measure Subsystem–Option 300 (:MEASure[:SCALar]:BERT:BTS:LOOPback)” on page 418
- “Sense Subsystem–Options UN7 and 300 ([:SOURce]:SENSE:BERT)” on page 421

Calculate Subsystem—Option UN7 and 300 (:CALCulate:BERT)

:BTS:LOOPback:EDGE:ETCH:F43:COMParator:CRITeria:ERATe

Supported E4438C with Option 300

:CALCulate:BERT:BTS:LOOPback:EDGE:ETCH:F43:COMParator:CRITeria:
ERATe <val>

:CALCulate:BERT:BTS:LOOPback:EDGE:ETCH:F43:COMParator:CRITeria:ERATe?

This command sets the error rate pass/fail threshold value.

The variable <val> is a decimal notation representing a percentage value.

***RST** +1.00000000E-001

Range 0.0–1.0

Key Entry Error Rate

:BTS:LOOPback:EDGE:ETCH:F43:COMParator:CRITeria[:SElect]

Supported E4438C with Option 300

:CALCulate:BERT:BTS:LOOPback:EDGE:ETCH:F43:COMParator:
CRITeria[:SElect] ERATe[NOLimit]

:CALCulate:BERT:BTS:LOOPback:EDGE:ETCH:F43:COMParator:CRITeria[:SElect]?

This command determines which of the following pass/fail limit (comparator) criteria is applied to the measurement.

ERATe This choice reports, on the front panel display of the signal generator, the pass or fail status compared to the specified threshold for the error rate.

NOLimit This choice disables the pass/fail indication.

***RST** NOLimit

Key Entry **Error Rate** **No Limits**

:BTS:LOOPback:EDGE:MCS5:COMParator:CRITeria:ERATe

Supported E4438C with Option 300

```
:CALCulate:BERT:BTS:LOOPback:EDGE:MCS5:COMParator:CRITeria:ERATe <val>
:CALCulate:BERT:BTS:LOOPback:EDGE:MCS5:COMParator:CRITeria:ERATe?
```

This command sets the error rate pass/fail threshold value.

The variable <val> is a decimal notation representing a percentage value.

***RST** +1.00000000E-001

Range 0.0–1.0

Key Entry **Error Rate**

:BTS:LOOPback:EDGE:MCS5:COMParator:CRITeria[:SElect]

Supported E4438C with Option 300

```
:CALCulate:BERT:BTS:LOOPback:EDGE:MCS5:COMParator:
CRITeria[:SElect] ERATe|NOLimit
:CALCulate:BERT:BTS:LOOPback:EDGE:MCS5:COMParator:CRITeria[:SElect]?
```

This command determines which of the following pass/fail limit (comparator) criteria is applied to the measurement.

ERATe This choice reports, on the front panel display of the signal generator, the pass or fail status compared to the specified threshold for the error rate.

NOLimit This choice disables the pass/fail indication.

***RST** NOLimit

Key Entry **Error Rate** **No Limits**

:BTS:LOOPback:EDGE:MCS9:COMParator:CRITeria:ERATe

Supported E4438C with Option 300

```
:CALCulate:BERT:BTS:LOOPback:EDGE:MCS9:COMParator:
CRITeria[:SElect] ERATe|NOLimit
:CALCulate:BERT:BTS:LOOPback:EDGE:MCS9:COMParator:CRITeria[:SElect]?
```

This command determines which of the following pass/fail limit (comparator) criteria is applied to the measurement.

ERATe This choice reports, on the front panel display of the signal generator, the pass or fail status compared to the specified threshold for the error rate.

NOLimit This choice disables the pass/fail indication.

***RST** NOLimit

Key Entry **Error Rate** **No Limits**

:BTS:LOOPback:EDGE:UNCoded:COMParator:CRITeria:ERATe

Supported E4438C with Option 300

```

Calculate Subsystem—Option UN7 and 300 (:CALCulate:BERT)

:BTS:LOOPback:GSM:COMParator:CRITeria:CIB

Supported E4438C with Option 300

:CALCulate:BERT:BTS:LOOPback:GSM:COMParator:CRITeria:CIB <val>

:CALCulate:BERT:BTS:LOOPback:GSM:COMParator:CRITeria:CIB?

This command sets the Class II residual bit error rate pass/fail threshold value.

The variable <val> is a decimal notation representing a percentage value.

***RST** +4.00000000E-003

Range 0.0–1.0

Key Entry **Class Ib RBER**

:BTS:LOOPback:GSM:COMParator:CRITeria:CII

:CALCulate:BERT:BTS:LOOPback:GSM:COMParator:CRITeria:FERasure <val>

:CALCulate:BERT:BTS:LOOPback:GSM:COMParator:CRITeria:FERasure?

This command sets the frame erasure rate pass/fail threshold value.

The variable <val> is a decimal notation representing a percentage value.

***RST** +1.00000000E-003

Range 0.0–1.0

Key Entry **Frame Erasure**

:BTS:LOOPback:GSM:COMParator:CRITeria[:SElect]

CLIB|CLII|ANY|NOLimit
:CALCulate:BERT:BTS:LOOPback:GSM:COMParator:CRITeria[:SElect]?
```

This command determines which of the following pass/fail limit (comparator) criteria is applied to the measurement.

- FERasure This choice reports, on the front panel display of the signal generator, the pass or fail status compared to the specified threshold for frame erasure ratio.
- CLIB This choice reports, on the front panel display of the signal generator, the pass or fail status compared to the specified threshold for the number of Class Ib errors detected in the measurement.
- CLII This choice reports, on the front panel display of the signal generator, the pass or fail status compared to the specified threshold for the number of Class II errors detected in the measurement.
- ANY This choice reports, on the front panel display of the signal generator, the pass or fail status compared to all of the specified comparator criteria.
- NOLimit This choice disables the pass/fail indication.

[:BAsEband]:COMParator:MODE

Supported E4438C with Option UN7

```
:CALCulate:BERT[:BAsEband]:COMParator:MODE CEND|FHOLD
:CALCulate:BERT[:BAsEband]:COMParator:MODE?
```

This command selects the pass/fail judgement mode of the comparator function.

- CEND This choice selects the cycle end mode and each BER measurement result is compared with the limit value to make a pass/fail assessment at the end of a cycle.
- FHOLD This choice selects the fail hold mode and only one fail judgement is allowed during that BER measurement loop. Any failed judgement after the first failure is ignored.

Data Subsystem—Option UN7 and 300 (:DATA)

:BERT:BTS:LOOPback:EDGE:ETCH:F43[:DATA]

Supported E4438C with Option 300

```
:DATA:BERT:BTS:LOOPback:EDGE:ETCH:F43[:DATA]? IEC|IEBC|DEFc|BCO|IER|IABer|ALL|TEC|TEBC|TDEFc|TBCO|TER|TABer|TALL|JUDGe|STOP|SCAuse
```

This data query returns the measurement result value for each variable.

IEC|IEBC|DEFc|BCO|IER|IABer are intermediate values, so during the measurement, these variables are updated as well as the display information.

At the end of the measurement, the final values are stored to: TEC|TEBC|TDEFc|TBCO|TER|TABer variables. These variables and JUDGe|STOP|SCAuse are not updated until the next BER measurement is completed.

IEC	This choice provides the intermediate error count with the following range: <Integer> 0 to 1500000.
IEBC	This choice provides the intermediate non-erased bit error blocks with the following range: <Integer> 0 to 1500000.
DEFc	This choice provides the intermediate downlink error frame count with the following range: <Integer> 0 to 750000.
BCO	This choice provides the intermediate block or bit count with the following range: <Integer> 0 to 1500000 (block).
IER	This choice provides the intermediate error ratio with the following range: <Real> 0 to 1 (0 to 100%).
IABer	This choice provides the intermediate average BER within blocks that have errors. The range is as follows: <Real> 0 to 1.
ALL	This choice returns all intermediate values (IEC, IEBC, DEFc, BCO, IER, and IABer) at the same time.
TEC	This choice provides the total error count with the following range: <Integer> 0 to 1500000 (block).
TEBC	This choice provides the total non-erased bit error blocks count with the following range: <Integer> 0 to 1500000.
TDEFc	This choice provides the total downlink error frame count with the following range: <Integer> 0 to 65535.

TBCO	This choice provides the total block count with the following range: <Integer> 0 to 1500000 (block).
TER	This choice provides the total error ratio with the following range: <Real> 0 to 1 (0 to 100%).
TABer	This choice provides the total average BER within blocks that have errors. The range is as follows: <Real> 0 to 1.
TALL	This choice returns all total values (TEC, TEBC, TDEFc, TBCO, TER, TABer, JUDGE, STOP, and SCAuse) at the same time. If accidental TCH synchronization loss caused the measurement to stop, TSLoss is returned.
JUDGE	This choice provides the pass or fail string. If pass/fail criteria is NOLimit, NONE is returned.
STOP	This choice checks to see if the stop threshold is met and returns one of the following values: <Enumerated set> TRUE FALSE. When threshold to stop criteria is NONE, FALSE is returned.
SCAuse	This choice provides the stop cause by returning one of the following values: <Enumerated set> NONE Ebit EBlock TSL. If accidental TCH synchronization loss caused the measurement to stop, TSL is returned.

:BERT:BTS:LOOPback:EDGE:MCS5[:DATA]

:DATA:BERT:BTS:LOOPback:EDGE:MCS5[:DATA]? IEC|IEBC|DEFc|BCO|IER|IABer|ALL|TEC|TEBC|TDEFc|TBCO|TER|TABer|TALL|JUDGE|STOP|SCAuse

This data query returns the measurement result value for each variable.

IEC|IEBC|DEFc|BCO|IER|IABer are intermediate values, so during the measurement, these variables are updated as well as the display information. ALL returns all intermediate values at the same time.

At the end of the measurement, the final values are stored to: TEC|TEBC|TDEFc|TBCO|TER|TABer variables. These variables and JUDGE|STOP|SCAuse are not updated until the next BER measurement is completed.

For more information on the parameters, refer to [page 404](#).

This command selects a pre-defined output signal configuration for pins on the AUX I/O rear panel connector. Refer to [Table 7-1](#) for the output pin configuration and signal type.

ERRor This choice selects the bit error rate (BER) information output.

REFerence This choice selects the reference information output.

Bit Error Rate Test (BERT) Commands
Data Subsystem—Option UN7 and 300 (:DATA)

PN9 This choice selects a pseudo-random data output.

Table 7-1 AUX I/O pin configurations

Pin#	ERRor	REference	PN9
1	BER Meas End	BER Data Out	PN9 Data
4	BER Sync Loss	Sync Start	No signal
20	BER Test Out	BER Clock Out	PN9 Clock
21	BER Error Out	BER Error Out	BER Error Out
22	BER No Data	Reference Data	No signal

- BER Meas End A signal at this pin indicates the status of the bit error rate (BER) measurements. BER measurements are being executed when the signal is high.
- BER Sync loss A low signal at this pin indicates that the synchronization is lost. This signal is valid only when the signal at the BER Meas End pin is high.
- BER Test Out A signal at this pin indicates the test result of the bit error rate measurements. The result is guaranteed at the falling edge of the BER Meas End signal. The result is pass when the signal is low; the result is fail when the signal is high. The signal is also high when the pass/fail judgment is set to off.
- BER Error Out A signal at this pin indicates the number of the error bits. The output is normally low. One pulse signal (pulse width matches the input clock) indicates one error bit. Pulses for the error bits of one measurement cycle are not synchronized with the rear panel connector BER CLK IN signal and are output when the BER Meas End signal is high.
- BER No Data A low signal at this pin indicates the no data status. The no data status is reported when there has been no clock inputs for more than 3 seconds or there has been no data change for more than 200 bits. This signal is valid only when the signal of the BER Meas End output signal is high.
- BER Clock Out The BER Clock Out signal monitors the rear panel BER CLK IN signal after polarity control, delay control, and gate control (if applicable) have taken place.
- BER Data Out This is a data stream for the bit error rate measurements. The clock signal is used to trigger the reading of the data.
- Sync Start This signal indicates the timing when the PN generator starts to generate a PN sequence. This signal can also indicate if the hardware is triggering a PN synchronization or making a measurement when the signal is high.

PN9 Clock	This signal is the clock signal for the PN9 Data. The falling edge of the PN9 Clock indicates the center of PN9 Data. The PN9 Clock rate is 37.5Mbits per second.		
PN9 Data	This signal is PN9 data for the self-loopback test.		
Reference Data	This signal uses the pseudo-random bit stream as the reference signal.

Supported E4438C with Option UN7

:INPut:BERT[:BASEband]:CGATe:DELay:TIME <val><unit>

:INPut:BERT[:BASEband]:CGATe:DELay:TIME?

This command sets the delay time of the gate signal. The gate delay time must be the multiple of the minimum resolution value and if not, the delay resolution is automatically rounded to the nearest multiplied value of the gate time delay value.

The variable <val> is expressed in units of seconds (s), milliseconds (ms), microseconds (μ s), and nanoseconds (ns).

:BTS:LOOPback:EDGE:MEASurement:STOP

Supported E4438C with Option 300

:SENSE:BERT:BTS:LOOPback:EDGE:MEASurement:STOP

This command immediately stops any current measurement and releases the PRBS synchronization. After the synchronization is released, a new PRBS synchronization is attempted.

Key Entry **Stop Measurement**

:BTS:LOOPback:EDGE:MEASurement:TSLot

Supported E4438C with Option 300

```
:SENSE:BERT:BTS:LOOPback:EDGE:MEASurement:TSLot 0|1|2|3|4|5|6|7
:SENSE:BERT:BTS:LOOPback:EDGE:MEASurement:TSLot?
```

This command specifies the timeslot number in which the measurement is to be performed.

The following EDGE timeslot configuration conditions will generate error message “-221 Settings Conflict”:

- If the specified timeslot does not have one of the BLER/BER measurable channel types, which are uncoded, E-TCH/43.2NT, MCS-9, and MCS-5.
- If the specified timeslot type is not set to “NORMAL.”

***RST** +0

Supported E4438C with Option 300

:SENSE:BERT:BTS:LOOPback:EDGE:SINVert ON|OFF|1|0
:SENSE:BERT:BTS:LOOPback:EDGE:SINVert?

This command sets the operating state of the spectrum inverting function.

ON This choice specifies that the EDGE demodulator invert the spectrum of the received RF signal.

OFF This choice leaves the spectrum of the received RF signal unaffected.

***RST** 1

Key Entry **Spectrum Invert Off On**

:BTS:LOOPback:EDGE:SYNC:AGAI

Supported E4438C with Option 300

:SENSE:BERT:BTS:LOOPback:EDGE:SYNC:AGAI

This command adjusts the input signal level of the internal demodulator. Use this adjustment when switching from BCH synchronization to PDCH synchronization.

Key Entry **Adjust Gain**

Remarks This command is ignored unless the status displays "Waiting for PDCH."

:BTS:LOOPback:EDGE:SYNC:RF

Supported E4438C with Option 300

:SENSE:BERT:BTS:LOOPback:EDGE:SYNC:RF

This command releases the current synchronization with the BTS and immediately starts to try to synchronize to either a BCH or PDCH signal as selected with the SYNC[:SOURCE] command. This command will also stop the current measurement.

Key Entry **Synchronize to BCH/PDCH**

:BTS:LOOPback:EDGE:SYNC[:SOURCE]

Supported E4438C with Option 300

:SENSe:BERT:BTS:LOOPback:EDGE:SYNC[:SOURCE] BCH|PDCH
 :SENSe:BERT:BTS:LOOPback:EDGE:SYNC[:SOURCE]?

This command specifies the synchronization source from the BTS under test.

BCH This choice specifies the traffic channel as the synchronization source.

PDCH This choice specifies the packet data channel as the synchronization source.

***RST** BCH

:BTS:LOOPback:EDGE:TRIGger[:SOURCE]

Supported E4438C with Option 300

:SENSe:BERT:BTS:LOOPback:EDGE:TRIGger[:SOURCE] IMMEDIATE|KEY|EXT|BUS
 :SENSe:BERT:BTS:LOOPback:EDGE:TRIGger[:SOURCE]?

This command determines the trigger source for the EDGE loopback bit error rate measurement.

IMMEDIATE This choice begins the measurement directly after synchronization has been achieved.

KEY This choice begins the measurement when the front panel **Trigger** key is pressed, provided that synchronization has been achieved. If synchronization has not occurred, the trigger is ignored.

EXT This choice begins the measurement as soon as a trigger signal is applied to the rear panel connector provided that synchronization has been achieved. If synchronization has not occurred, the trigger is ignored.

BUS This choice enables GPIB triggering using the *TRG or GET command or LAN and RS-232 triggering using the *TRG command.

***RST** KEY

Key Entry Immediate Trigger Key Ext Bus

Remarks An inherent variable delay will always exist when starting a measurement because the measurement must await the start of the next speech frame after the trigger. The delay can vary between 0 and 23 ms (5 frames) depending on where the trigger falls within the TDMA multiframe.

A trigger is ignored unless the EDGE loopback operating state is turned on.

:BTS:LOOPback:GSM:MCS1:STOP:CRITeria[:SElect]

Supported E4438C with Option 300

```
:SENSE:BERT:BTS:LOOPback:GSM:MCS1:STOP:CRITeria[:SElect] EBLock|NONE
:SENSE:BERT:BTS:LOOPback:GSM:MCS1:STOP:CRITeria[:SElect]?
```

This command determines which of the following threshold criteria is used to prematurely stop the measurement prior to the normal measurement end. In each case, the measurement will terminate no later than 200 ms after the threshold is exceeded.

EBLock This choice enables you to specify the number of erased blocks.

NONE This choice disables the stop measurement threshold criteria function.

***RST** NONE

Key Entry **Block Erasure No Thresholds**

:BTS:LOOPback:GSM:MEASurement:STOP

Supported E4438C with Option 300

```
:SENSE:BERT:BTS:LOOPback:GSM:MEASurement:STOP
```

This command stops any current measurement and releases the current PRBS synchronization. After the synchronization is released, a new PRBS synchronization is attempted.

Key Entry **Stop Measurement**

:BTS:LOOPback:GSM:MEASurement:TSLot

Supported E4438C with Option 300

```
:SENSE:BERT:BTS:LOOPback:GSM:MEASurement:TSLot 0|1|2|3|4|5|6|7
:SENSE:BERT:BTS:LOOPback:GSM:MEASurement:TSLot?
```

This command specifies the timeslot number in which the measurement is to be performed. This command couples the selected timeslot number with the GSM configuration.

The following GSM timeslot configuration conditions will generate error message “-221 Settings Conflict”:

- If the specified timeslot E field fails to designate either MPN9 or MPN15.
- If the specified timeslot is not set to “Normal.”

***RST** +0

Key Entry **Timeslot**

Remarks Changing the timeslot configuration with GSM on will not generate error messages if GSM BERT is off and the timeslot is off.

:BTS:LOOPback:GSM:MEASurement[:MODE]

Supported E4438C with Option 300

```
:SENSE:BERT:BTS:LOOPback:GSM:MEASurement[:MODE] BER|SSEarch
:SENSE:BERT:BTS:LOOPback:GSM:MEASurement[:MODE]?
```

This command specifies the measurement mode.

BER This choice specifies BER% as the measurement mode.

SSEarch This choice specifies sensitivity search as the measurement mode.

***RST** BER

Key Entry **Measurement Mode BER% Search**

Remarks If the BER% measurement is already running, this command will abort the BER% measurement.

:BTS:LOOPback:GSM:PAMPlitude

Supported E4438C with Option 300

```
:SENSE:BERT:BTS:LOOPback:GSM:PAMPlitude <val>
:SENSE:BERT:BTS:LOOPback:GSM:PAMPlitude?
```

This command specifies the threshold amplitude for pass/fail comparator results when performing a sensitivity search.

The variable <val> is expressed in units of dBm.

***RST** -1.04000000E+002

:BTS:LOOPback:GSM:SFRame:COUNT

Supported E4438C with Option 300

```
:SENSE:BERT:BTS:LOOPback:GSM:SFRame:COUNT <val>
:SENSE:BERT:BTS:LOOPback:GSM:SFRame:COUNT?
```

This command specifies the total number of frames to be measured for the final measurements during the sensitivity search.

***RST** +100

Range 1-6000000

Key Entry Frame Count

:BTS:LOOPback:GSM:SFRame:INITial

```
:SENSE:BERT:BTS:LOOPback:GSM:SFRame:INITial <val>  
:SENSE:BERT:BTS:LOOPback:GSM:SFRame:INITial?
```

This command specifies the number of frames to be measured while sensitivity search is running rough searching to gain search speed. It is the first phase of sensitivity search.

***RST** +26

Range 1–6000000

Key Entry Initial Frame Count

:BTS:LOOPback:GSM:SINVert

Supported E4438C with Option 300

```
:SENSE:BERT:BTS:LOOPback:GSM:SINVert ON|OFF|1|0  
:SENSE:BERT:BTS:LOOPback:GSM:SINVert?
```

This command sets the operating state of the spectrum inverting function.

ON This choice specifies that the GSM demodulator invert the spectrum of the received RF signal.

OFF This choice leaves the spectrum of the received RF signal unaffected.

***RST** 1

Key Entry Spectrum Invert Off On

:BTS:LOOPback:GSM:STOP:CRITeria:CIB

:SENSE:BERT:BTS:LOOPback:GSM:STOP:CRITeria[:SElect]?

This command sets the threshold criteria used to prematurely stop the measurement prior to the normal measurement end. In each case, the measurement will terminate no later than 200 ms after the threshold is exceeded.

FERasure	This selection ends the measurement when the number of erased frames exceeds the specified threshold.		
CIB	This selection ends the measurement when the number of Class Ib errors detected exceeds the specified threshold.		
CII	This selection ends the measurement when the number of Class II errors detected exceeds the specified threshold.		
ANY	This selection ends the measurement when any of the above stop measurement threshold criteria is exceeded.

:BTS:LOOPback:GSM:SYNC:RF

Supported E4438C with Option 300

:SENSE:BERT:BTS:LOOPback:GSM:SYNC:RF

This command releases the current synchronization with the BTS and immediately starts to try to synchronize to either a BCH or TCH signal as selected with the SYNC[:SOURCE] command. This command will also stop the current measurement.

Key Entry **Synchronize to BCH/TCH**

Remarks The test equipment can use a BCH signal from the BTS to determine the required transmit timeslot, frame and multiframe timing. The BCH signal is always transmitted in timeslot 0 and contains multiframe information. Use BCH when a BCH subset is present which contains SCH bursts with a properly coded T2 parameter.

Use TCH when providing a TCH/FS training sequence from the BTS. However, only one timeslot from the BTS can be active at a time and you must specify to the receiver which timeslot is being received since it has no absolute reference (unlike a BCH signal, which is always transmitted in timeslot 0).

:BTS:LOOPback:GSM:SYNC[:SOURce]

Supported E4438C with Option 300

:SENSe:BERT:BTS:LOOPback:GSM:SYNC[:SOURce] BCH|TCH
 :SENSe:BERT:BTS:LOOPback:GSM:SYNC[:SOURce]?

This command specifies the synchronization source from the BTS under test.

BCH This choice specifies the broadcast channel as the synchronization source.

TCH This choice specifies the traffic channel as the synchronization source.

***RST** BCH

Key Entry Sync Source BCH TCH

:BTS:LOOPback:GSM:TRIGger[:SOURce]

Supported E4438C with Option 300

:SENSe:BERT:BTS:LOOPback:GSM:TRIGger[:SOURce] IMMEDIATE|KEY|EXT|BUS
 :SENSe:BERT:BTS:LOOPback:GSM:TRIGger[:SOURce]?

This command determines the trigger source for the GSM loopback bit error rate measurement.

IMMEDIATE This choice begins the measurement directly after synchronization has been achieved.

KEY This choice begins the measurement when the front panel **Trigger** key is pressed, provided that synchronization has been achieved. If synchronization has not occurred, the trigger is ignored.

EXT This choice begins the measurement as soon as a trigger signal is applied to the rear panel connector provided that synchronization has been achieved. If synchronization has not occurred, the trigger is ignored.

BUS This choice enables GPIB triggering using the *TRG or GET command or LAN and RS-232 triggering using the *TRG command.

***RST** KEY

Key Entry Immediate Trigger Key Ext Bus Aux

Remarks An inherent variable delay will always exist when starting a measurement because the measurement must await the start of the next speech frame after the trigger. The delay can vary between 0 and 23 ms (5 frames) depending on where the trigger falls within the TDMA multiframe.

A trigger is ignored unless the GSM loopback operating state is turned on.

:BTS:LOOPback:GSM:ULINK:OFFSet

Supported E4438C with Option 300

```
:SENSE:BERT:BTS:LOOPback:GSM:ULINK:OFFSet <value>
:SENSE:BERT:BTS:LOOPback:GSM:ULINK:OFFSet?
```

This command specifies the amount of compensation for the insertion of equipment such as fading simulators into the uplink RF path.

:BTS:LOOPback:GSM[:STATe]

Supported E4438C with Option 300

```
:SENSE:BERT:BTS:LOOPback:GSM[:STATe] ON|OFF|1|0
:SENSE:BERT:BTS:LOOPback:GSM[:STATe]?
```

This command enables (1) or disables (0) the operating state of the GSM loopback bit error rate function. Although you can configure the measurement parameters while the operating state is off, any command triggers sent will be ignored until the operating state is turned on.

***RST** 0

Key Entry GSM BERT Off On

```
:SENSE:BERT[:BASEband]:PRBS:FUNcTion:SPIgnore:DATA ALL_0|ALL_1
:SENSE:BERT[:BASEband]:PRBS:FUNcTion:SPIgnore:DATA?
```

This command selects the bit parameter of the special pattern ignore function.

ALL_0 This choice ignores a bit pattern of 160 or more consecutive 0's.

ALL_1 This choice ignores a bit pattern of 160 or more consecutive 1's.

***RST** ALL_0

Key Entry Spcl Pattern 0's 1's

Remarks This command is valid only when the special pattern ignore function is enabled (On). Refer to “[[:BASEband]:PRBS:FUNcTion:SPIgnore[:STATe]]”. The special pattern of 160 or more 1's or 0's can appear at any position in the bit stream.

[:BASEband]:PRBS:FUNCTION:SPIgnore[:STATE]

```
:SENSE:BERT[:BASEband]:PRBS:FUNCTION:SPIgnore[:STATE] ON|OFF|1|0
:SENSE:BERT[:BASEband]:PRBS:FUNCTION:SPIgnore[:STATE]?
```

This command enables (1) or disables (0) the special pattern ignore function.

ON This choice detects 160 or more consecutive bits of 0's or 1's in the incoming bit stream and ignores these bits when making BER measurements. To select 0's or 1's refer to [“\[:BASEband\]:PRBS:FUNCTION:SPIgnore:DATA”](#)

OFF This choice disables the special pattern ignore mode for the BER measurement.

Remarks When the stop mode criteria is set to EBIT, the signal generator monitors the error bits and when it exceeds the set value, the signal generator stops the current BER measurement and waits for the next trigger.

EBIT must be the selection for this command to work. To select EBIT refer to “[:BASEband]:STOP:CRITeria[:SElect]”.

[:BASEband]:STOP:CRITeria[:SElect]

Supported E4438C with Option UN7

```
:SENSE:BERT[:BASEband]:STOP:CRITeria[:SElect] EBIT|NONE  
:SENSE:BERT[:BASEband]:STOP:CRITeria[:SElect]?

8 Receiver Test Digital Commands

This chapter provides SCPI descriptions for commands dedicated to digital real-time testing using the E4438C ESG Vector Signal Generator. This chapter contains the following sections:

- “All Subsystem–Option 001/601or 002/602 ([:SOURce])” on page 458
- “AWGN Real-Time Subsystem–Option 403 ([:SOURce]:RADio:AWGN:RT)” on page 459
- “Bluetooth Subsystem–Option 406 ([:SOURce]:RADio:BLUEtooth:ARB)” on page 460
- “CDMA2000 BBG Subsystem–Option 401 ([:SOURce]:RADio:CDMA2000[:BBG])” on page 475
- “Custom Subsystem–Option 001/601or 002/602 ([:SOURce]:RADio:CUSTom)” on page 544
- “DECT Subsystem–Option 402 ([:SOURce]:RADio:DECT)” on page 569
- “EDGE Subsystem–Option 402 ([:SOURce]:RADio:EDGE)” on page 618

All Subsystem–Option 001/601or 002/602 ([:SOURce])

:RADio:ALL:OFF

Supported E4438C with Option 001/601or 002/602

[:SOURce] :RADio :ALL :OFF

This command disables all digital modulation personalities on a particular baseband.

Remarks This command does not affect analog modulation.

AWGN Real-Time Subsystem—Option 403 (:SOURce):RADio:AWGN:RT)

:BWIDth

Supported E4438C with Option 403

[:SOURce] :RADio:AWGN:RT:BWIDth <val>

[:SOURce] :RADio:AWGN:RT:BWIDth?

This command adjusts the real-time AWGN bandwidth value.

The variable <val> is expressed in units of Hertz (Hz–MHz).

***RST** +1.00000000E+006

Range 5E4–8E7

Bluetooth Subsystem—Option 406 ([:SOURCE]:RADio:BLUEtooth:ARB)

:AMADdr

Supported E4438C with Option 406406

[:SOURCE] :RADio:BLUEtooth:ARB:AMADdr <val>

[:SOURCE] :RADio:BLUEtooth:ARB:AMADdr?

This command sets the 3-bit active member address (AM_ADDR).

***RST** +1

Range 0–7

Key Entry **AM_ADDR**

Remarks In a piconet, one or more slaves are connected to a single master; a temporary 3-bit address (AM_ADDR) is used to identify each active slave.

:BDADdr

Supported E4438C with Option 406

[:SOURCE] :RADio:BLUEtooth:ARB:BDADdr <val>

[:SOURCE] :RADio:BLUEtooth:ARB:BDADdr?

This command sets the unique hexadecimal Bluetooth device address (BD_ADDR) with up to 48 bits.

***RST** #H0000000000008

Range #H0–#HFFFFFFFFFFFF

Key Entry **BD_ADDR**

Remarks The address is derived from the IEEE802 standard.

:BURSt[:STATe]

Supported E4438C with Option 406

[:SOURCE] :RADio:BLUEtooth:ARB:BURSt [:STATe] ON | OFF | 1 | 0

[:SOURCE] :RADio:BLUEtooth:ARB:BURSt [:STATe]?

This command enables or disables the burst function.

ON(1) This choice will ramp up the signal power prior to transmitting the packet and ramp it down after the end of the packet transmission.

OFF(0)	This choice provides a linked series of packet transmissions with no power ramping.
*RST	1
Key Entry	Burst Off On

:CGDelay

Supported E4438C with Option 406

```
[ :SOURCE ] :RADIO:BLUETOOTH:ARB:CGDelay <val>
[ :SOURCE ] :RADIO:BLUETOOTH:ARB:CGDelay?
```

This command sets the number of symbols to shift the output symbol clock (EVENT 1 rear panel connector) and gate (EVENT 2 rear panel connector) signals relative to the Bluetooth signal. The shifting of these signals is used to compensate for any packet delay through the DUT during BER tests.

*RST +0.00000000E+000

Range 0.0–24999.9

Key Entry **Clock/Gate Delay**

Remarks This command is only effective with a continuous PN9 (CPN9) payload data and is intended for bit error rate testing (BERT, Option UN7). Refer to “:DATA” on [page 461](#) for selecting the CPN9 data choice.

When the clock and gate delay is set to zero (0), the rising edge of the symbol clock lines up with the middle of each symbol and the gate is high during the user payload field (PN9 data).

:DATA

Supported E4438C with Option 406

```
[ :SOURCE ] :RADIO:BLUETOOTH:ARB:DATA TPN9 | CPN9 | <val>
[ :SOURCE ] :RADIO:BLUETOOTH:ARB:DATA?
```

This command sets the user payload data type; user payload data is the voice or data information (less the payload header) that is carried in a packet.

TPN9 This choice places a truncated PN9 sequence consisting of 216 bits into a single packet.

CPN9 This choice places 8 continuous PN9 sequences into 19 packets, followed by one packet with no user payload. This ensures that the SEQN bit is properly alternated which is a requirement to filter out packet re-transmission at the destination.

Bluetooth Subsystem—Option 406 ([:SOURCE]:RADIO:BLUETOOTH:ARB)

<val>	This variable lets you set your own 8 bit data pattern for a single packet. A change in the user payload data type resets the eight bit pattern to a value of 00000000.		
*RST	TPN9		
Range	<val>: #B0–#B11111111 or 0–255		
Key Entry	Truncated PN9	Continuous PN9	8 Bit Pattern
Remarks	The PN9 sequence (511 bits) is standard based. The sequence begins with the first one of nine consecutive ones.		

:IQ:EXTERNAL:FILTER

Supported E4438C with Option 406

```
[ :SOURCE ] : RADIO : BLUETOOTH : ARB : IQ : EXTERNAL : FILTER 40e6 | THROUGH
[ :SOURCE ] : RADIO : BLUETOOTH : ARB : IQ : EXTERNAL : FILTER ?
```

This command selects the filter or through path for I/Q signals routed to the rear panel I and Q outputs. Selecting a filter with this command will automatically set “:IQ:EXTERNAL:FILTER:AUTO” on [page 462](#) to OFF (0) mode.

40e6	This choice applies a 40 MHz baseband filter.
THROUGH	This choice bypasses filtering.
*RST	THR
Key Entry	40.000 MHz Through

:IQ:EXTERNAL:FILTER:AUTO

```
[ :SOURCE ] : RADIO : BLUETOOTH : ARB : IQ : EXTERNAL : FILTER : AUTO ON | OFF | 1 | 0
[ :SOURCE ] : RADIO : BLUETOOTH : ARB : IQ : EXTERNAL : FILTER : AUTO ?
```

This command enables or disables the automatic selection of the filters for I/Q signals routed to the rear panel I/Q outputs.

ON (1)	This choice will automatically select a digital modulation filter optimized for the current signal generator settings.
OFF (0)	This choice disables the auto feature which lets you select a digital modulation filter or through path. Refer to “:IQ:EXTERNAL:FILTER” on page 462 for selecting a filter or through path.
*RST	1
Key Entry	I/Q Output Filter Manual Auto

:HEADer:CLEAr

Supported E4438C with Option 406

[:SOURCE] :RADIO:BLUETOOTH:ARB:HEADer:CLEAr

This command clears the header information from the header file used by this format.

Key Entry Clear Header

Remarks The **Bluetooth Off On** softkey must be set to On for this command to function.

:HEADer:SAVE

Supported E4438C with Option 406

[:SOURCE] :RADIO:BLUETOOTH:ARB:HEADer:SAVE

This command saves the header information to the header file used by this format.

Key Entry Save Setup To Header

Remarks The **Bluetooth Off On** must be set to On for this command to function.

:IMPairments

Supported E4438C with Option 406

[:SOURCE] :RADIO:BLUETOOTH:ARB:IMPairments ON|OFF|1|0
[:SOURCE] :RADIO:BLUETOOTH:ARB:IMPairments?

This command enables or disables the Bluetooth signal impairment function.

ON(1) This choice enables the current impairment settings.

OFF(0) This choice disables the impairments.

***RST** 0

Key Entry Impairments Off On

:IMPAIRMENTS:AWGN

Supported E4438C with Option 406

```
[ :SOURCE ] : RADIO : BLUETOOTH : ARB : IMPAIRMENTS : AWGN ON | OFF | 1 | 0
[ :SOURCE ] : RADIO : BLUETOOTH : ARB : IMPAIRMENTS : AWGN ?
```

This choice enables or disables the additive white gaussian noise (AWGN) impairment.

***RST** 0

Key Entry **AWGN Off On**

Remarks The AWGN impairment is not added to the signal until the Bluetooth signal impairment function is enabled. Refer to “:IMPAIRMENTS” for enabling the impairments.

:IMPAIRMENTS:AWGN:CNR

Supported E4438C with Option 406

```
[ :SOURCE ] : RADIO : BLUETOOTH : ARB : IMPAIRMENTS : AWGN : CNR <val>
[ :SOURCE ] : RADIO : BLUETOOTH : ARB : IMPAIRMENTS : AWGN : CNR ?
```

This command sets the carrier to noise ratio expressed in a 1 MHz bandwidth for the additive white gaussian noise (AWGN) impairment.

The variable <val> is expressed in units of decibels (dB).

***RST** +21

Range 10–40

Key Entry **C/N[1MHz]**

Remarks The value set by this command does not affect the Bluetooth signal until both the AWGN impairment and the Bluetooth signal impairment function are enabled. Refer to “:IMPAIRMENTS:AWGN” on page 464 for more information.

:IMPairments:AWGN:NSEed

Supported E4438C with Option 406

[:SOURCE]:RADio:BLUetooth:ARB:IMPairments:AWGN:NSEed <val>

[:SOURCE]:RADio:BLUetooth:ARB:IMPairments:AWGN:NSEed?

This command sets the noise seed value for the additive white gaussian noise (AWGN) impairment.

***RST** +1

Range 1–65535

Key Entry **Noise Seed**

Remarks A change in the seed value changes the noise pattern.

The value set by this command does not affect the Bluetooth signal until both the AWGN impairment and the Bluetooth signal impairment function are enabled. Refer to “:IMPairments:AWGN” on page 464 for more information.

Supported E4438C with Option 406

[:SOURCE]:RADio:BLUetooth:ARB:IMPairments:DDEVIation <val>

[:SOURCE]:RADio:BLUetooth:ARB:IMPairments:DDEVIation?

This command sets the maximum linear or sinusoidal carrier frequency drift deviation during the Bluetooth packet transmission.

The variable <val> is expressed in units of kilohertz (–kHz to kHz) with a minimum resolution of 1 kHz.

***RST** +0.00000000E+000

Range –1E5 to –1E3, 0, 1E3 to 1E5

Key Entry **Drift Deviation**

Remarks Refer to “:IMPairments:FDType” on page 466 for selecting either a linear or sinusoidal frequency drift.

The value set by this command does not affect the Bluetooth signal until the Bluetooth signal impairment function is enabled. Refer to “:IMPairments” on page 463 for more information.

:IMPairments:FDType

Supported E4438C with Option 406

```
[ :SOURCE ] :RADIO:BLUETOOTH:ARB:IMPairments:FDType LINear | SINE
[ :SOURCE ] :RADIO:BLUETOOTH:ARB:IMPairments:FDType?
```

This command sets the carrier frequency drift impairment type that will occur during the length of the Bluetooth packet transmission.

LINear This choice enables the carrier frequency to drift linearly from the signal generator carrier frequency setting to the value entered for the frequency drift.

SINE This choice enables the carrier frequency to drift sinusoidally above and below the signal generator carrier frequency setting. For example, if the carrier signal generator setting is 2.4 GHz and the drift value was 100 kHz, the carrier frequency would sinusoidally drift to 2.4001 GHz, back to 2.4 GHz and continue drifting to frequency values less than 2.4 GHz until the packet transmission ends. With a negative drift value, the carrier frequency deviation would begin drifting toward 2.3999 GHz at the beginning of the drift cycle.

***RST** SINE

Key Entry **Freq Drift Type Linear Sine**

Remarks To set a drift value, refer to [“:IMPairments:DDEViation” on page 465](#).

The value set by this command does not affect the Bluetooth signal until the Bluetooth signal impairment function is enabled. Refer to [“:IMPairments” on page 463](#) for more information.

The carrier frequency value on the signal generator display does not change during the drift impairment.

:IMPairments:FOffset

Supported E4438C with Option 406

```
[ :SOURCE ] :RADIO:BLUETOOTH:ARB:IMPairments:FOffset <val>
[ :SOURCE ] :RADIO:BLUETOOTH:ARB:IMPairments:FOffset?

Key Entry	Mod Index
Remarks	The value set by this command does not affect the Bluetooth signal until the Bluetooth signal impairment function is enabled. Refer to “:IMPairments” on page 463 for more information. Only the peak-to-peak frequency deviation is changed by this command; the bit rate (1 MHz) remains constant. The modulation index is derived from the following formula:

$$\text{Mod Index} = \frac{\text{Peak-to-Peak Frequency Deviation}}{\text{Bit Rate}}$$

:IMPairments:STError

This command sets the symbol timing error impairment value for the Bluetooth waveform.

The variable <val> is expressed in units of parts per million (ppm) and in units of hertz (Hz). A 20 ppm timing error corresponds to a 20 Hz shift in the symbol rate. The range value indicated below applies to both units of measurement.

***RST** +0

Range -50 to 50

Key Entry **Symbol Timing Err**

Remarks The value set by this command does not affect the Bluetooth signal until the Bluetooth signal impairment function is enabled. Refer to “:IMPairments” on page 463 for more information.

:IQ:MODulation:ATTen

```
[ :SOURCE ]:RADio:BLUetooth:ARB:IQ:MODulation:ATTen <val>
```

```
[ :SOURCE ]:RADio:BLUetooth:ARB:IQ:MODulation:ATTen?
```

This command attenuates the I/Q signals being modulated through the signal generator RF path.

The variable <val> is expressed in units of decibels (dB).

ON (1) This choice enables the attenuation auto mode which optimizes the modulator attenuation for the current conditions.

OFF (0) This choice holds the attenuator at its current setting or at a selected value. Refer to “:IQ:MODulation:ATTen” on page 468 for setting the attenuation value.

This command specifies the filter type for the reverse link.

IS95 This choice selects a filter that meets the criteria of the IS-95 standard.

IS95_EQ This choice selects a filter which is a combination of the IS-95 filter (above) and the equalizer filter described in the IS-95 standard. This filter is only used for IS-95 baseband filtering.

IS95_MOD This choice selects a filter that meets the criteria of the IS-95 error function (for improved adjacent channel performance) with lower passband rejection than the filter specified in the IS-95 standard.

IS95_MOD_EQ This choice selects a filter which is a combination of the equalizer filter described in the IS-95 standard and a filter that meets the criteria of the IS-95 error function (for improved adjacent channel performance), with lower passband rejection.

AC4Fm This choice selects a predefined Association of Public Safety Communications Officials (APCO) specified compatible 4-level frequency modulation (C4FM) filter.

UGGaussian This choice selects a backwards compatible GSM Gaussian filter (Gaussian filter with a fixed BbT value of 0.300) for the ESG E44xxB Option UN3 or UN4.

This command toggles the data (bit) clock input to the baseband generator board to either internal or external. This command is independent in each mode and works for both non-burst (continuous) and burst modes. This allows for a matrix of selections between burst/non-burst, internal/external data generation, internal/external data clock, and external bit/symbol data clock.

[:SOURCE]:RADio:CUSTom:BRATe?

This command sets the bit rate in bits per second (bps–Mbps). The maximum bit rate is dependent on the modulation type and filter as shown in the following tables.

The IQ digital data stream is shaped by a FIR filter. The filter length and associated latency and frequency response are dependent on the bit rate as shown in the following tables. The signal generator selects the filter length.

For higher bit rates, the signal generator may truncate the FIR filter length (if the minimum filter size allows it). This will impact the relative timing of the modulated data, as well as the actual filter response (see the symbol rate command “:SRATe” on page 561). Refer to “:FILTer” on page 557 for information on filter symbol widths.

To change the modulation type, refer to “:MODulation[:TYPE]” on page 560.

When the bit rate is changed, the ESG reconfigures the baseband generator. The time required to reconfigure the baseband generator is inversely proportional to the bit rate: lower bit rates require more time.

Supported E4438C with Option 001/601 or 002/602

[:SOURCE] :RADIo :CUSTom :CHANnel EVM | ACP

[:SOURCE] :RADIo :CUSTom :CHANnel ?

This command optimizes the Nyquist and root Nyquist filters to minimize error vector magnitude (EVM) or to minimize adjacent channel power (ACP).

EVM This choice provides the most ideal passband.

ACP This choice improves stopband rejection.

***RST** ACP

Key Entry **Optimize FIR For EVM ACP**

Remarks To change the current filter type, refer to “:FILTer” on page 557.

```
[ :SOURCE ]:RADio:CUSTom:DATA:PRAM?
```

This command selects a pattern RAM (PRAM) file as the pattern data type for a custom communications format.

"<file_name>" This variable designates the PRAM file in WFM1. Refer to [“File Name Variables” on page 13](#) for information on the file name syntax.

Key Entry **PRAM File**

Remarks Selecting this data source forces the burst source to INTERNAL to allow framing control.

The PRAM file must reside in the signal generator’s volatile memory (WFM1) in order to be accessed by this command. For more information on PRAM files, refer to [“:DATA:PRAM:FILE:BLOCK” on page 110](#).

:DENCode

Supported E4438C with Option 001/601 or 002/602

[:SOURCE] :RADIO :CUSTOM :DENCode ?

This command enables or disables the differential data encoding function.

***RST** 0

Key Entry **Diff Data Encode Off On**

Remarks Executing this command encodes the data bits prior to modulation; each modulated bit is 1 if the data bit is different from the previous one, or 0 if the data bit is the same as the previous one.

:EDATa:DELaY

Supported E4438C with Option 001/601 or 002/602

[:SOURCE] :RADIO :CUSTOM :EDATa :DELaY ?

This query returns the amount of delay (in symbols) from the external data input to the beginning of the symbol on the I OUT and Q OUT rear panel connectors and the front panel RF OUTPUT connector.

Remarks When the format is turned off, the delay value is unchanged; the query will return the same delay value if the format is on or off.

:EDCLock

Supported E4438C with Option 001/601 or 002/602

[:SOURCE] :RADIO :CUSTOM :EDCLock SYMBOL | NORMal

[:SOURCE] :RADIO :CUSTOM :EDCLock ?

This command sets the external data clock use.

SYMBOL This choice specifies that a continuous symbol clock signal must be provided to the SYMBOL SYNC input connector.

NORMal This choice specifies that the DATA CLOCK input connector requires a bit clock. The SYMBOL SYNC input connector requires a (one-shot or continuous) symbol sync signal.

***RST** NORM

Key Entry **Ext Data Clock Normal Symbol**

Remarks Both choices have no effect in internal clock mode. Refer to “:BBCLock” on page 545 to select EXT as the data clock type.

:EREFerence

Supported E4438C with Option 001/601 or 002/602

```
[ :SOURCE ] :RADio:CUSTom:EREFerence INTernal | EXTernal
[ :SOURCE ] :RADio:CUSTom:EREFerence?
```

This command selects either an internal or external bit-clock reference for the data generator.

***RST** INT

Key Entry **BBG Ref Ext Int**

Remarks If the EXTernal choice is selected, the external frequency value must be applied to the BASEBAND GEN REF IN rear panel connector.

Refer to “:EREFerence:VALue” on page 556 to enter the external reference frequency.

:EREFerence:VALue

Supported E4438C with Option 001/601 or 002/602

```
[ :SOURCE ] :RADio:CUSTom:EREFerence:VALue <val>
[ :SOURCE ] :RADio:CUSTom:EREFerence:VALue?

This command conveys the expected reference frequency value of an externally applied reference to the signal generator.

The variable <val> is expressed in units of Hertz (Hz–MHz).

***RST** +1.30000000E+007

Range 2.5E5–1E8

Key Entry **Ext BBG Ref Freq**

Remarks The value specified by this command is effective only when you are using an external ARB reference applied to the BASEBAND GEN REF IN rear panel connector.

Refer to “:EREFerence” on page 556 to select EXTernal as the reference for the bit clock reference of the data generator.

:FILTer

Supported E4438C with Option 001/601or 002/602

```

IS95_EQ | IS95_MOD | IS95_MOD_EQ | AC4Fm | UGGaussian | "<user FIR>"
[ :SOURCE ] :RADio :CUSTom :FILTer?
```

This command selects the pre-modulation filter type.

IS95	This choice selects a filter that meets the criteria of the IS-95 standard.
IS95_EQ	This choice selects a filter which is a combination of the IS-95 filter (above) and the equalizer filter described in the IS-95 standard. This filter is only used for IS-95 baseband filtering.
IS95_MOD	This choice selects a filter that meets the criteria of the IS-95 error function (for improved adjacent channel performance) with lower passband rejection than the filter specified in the IS-95 standard.
IS95_MOD_EQ	This choice selects a filter which is a combination of the equalizer filter described in the IS-95 standard and a filter that meets the criteria of the IS-95 error function (for improved adjacent channel performance), with lower passband rejection.
AC4Fm	This choice selects a predefined Association of Public Safety Communications Officials (APCO) specified compatible 4-level frequency modulation (C4FM) filter.
UGGaussian	This choice selects a backwards compatible GSM Gaussian filter (Gaussian filter with a fixed BbT value of 0.300) for the ESG E44xxB Option UN3 or UN4.
"<user FIR>"	This variable is any filter file that you have stored into memory. Refer to “File Name Variables” on page 13 for information on the file name syntax.

The following table shows the filter type and minimum number of symbols. Refer to [“:SRATe” on page 561](#) for information on symbol rate. User-defined filters are not truncated. Internal filters are typically run with 16 or 32 symbols unless the minimum size is larger.

[:SOURce] :RADio :CUSTom : IQ : SCALe <val>
[:SOURce] :RADio :CUSTom : IQ : SCALe?

This command sets the amplitude of the I/Q outputs for better adjacent channel power (ACP); lower scaling values equate to better ACP.

The variable <val> is expressed in units of percent.

***RST** +70

Range 1–200

Key Entry **I/Q Scaling**

Remarks This command has no effect with MSK or FSK modulation.

:MODulation:FSK[:DEViation]

[ :SOURce ] :RADio :CUSTom :MODulation :FSK [ :DEViation ] <val>
```

```
[ :SOURce ] :RADio :CUSTom :MODulation :FSK [ :DEViation ] ?
```

This command sets the symmetric FSK frequency deviation value.

The variable <val> is expressed in units of Hertz and the maximum range value equals the current symbol rate value multiplied by four, limited to 20 MHz.

***RST** +4.00000000E+002

This command sets the rotation direction of the phase modulation vector.

NORMal This choice selects normal phase polarity.

INVerted This choice inverts the internal Q signal.

***RST** NORM

Key Entry **Phase Polarity Normal Invert**

:SRATe

Supported E4438C with Option 001/601 or 002/602

```
[ :SOURCE ] :RADio :CUSTom :SRATe <val>
[ :SOURCE ] :RADio :CUSTom :SRATe ?
```

This command sets the transmission symbol rate. Symbol rate is the bit rate divided by the bits per symbol. A change in the symbol rate affects the bit rate. Refer to “:BRATe” on page 546 for information on bit rate.

The variable <val> is expressed in units of symbols per second (sps–Mps) and the maximum symbol rate depends on the filter. Refer to “:FILTer” on page 557 for minimum filter symbol widths.

The filter may have to be truncated down to 32 or 16 symbols wide to achieve the highest symbol rate. The signal generator’s internal filters are not truncated below their minimum filter length and user-defined FIR filters are not truncated. If the filter cannot be truncated then the symbol rate is limited to the maximum rate of the narrowest filter size possible.

The relative timing of the modulated data, as well as the actual filter response is affected when the filter is truncated.

When the symbol rate changes, the ESG reconfigures the baseband generator. The time required to reconfigure the baseband generator is inversely proportional to the symbol rate: lower symbol rates require more time.

To change the modulation type, refer to “:MODulation[:TYPE]” on page 560.

This command selects a predefined setup for Custom (with the appropriate defaults) and/or clears the selection.

NONE This choice clears the current predefined Custom format.

AC4Fm This choice sets up an Association of Public Safety Communications Officials (APCO) compliant, compatible 4-level frequency modulation (C4FM) format.

ACQPsk This choice sets up an Association of Public Safety Communications Officials (APCO) compliant, compatible quadrature phase shift keying (CQPSK) format.

BLUEtooth This choice sets up a Bluetooth (2-level frequency shift keying) format.

CDPD This choice sets up a minimum shift keying Cellular Digital Packet Data (CDPD) format.

:TRIGger:TYPE

Supported E4438C with Option 001/601 or 002/602

```
[ :SOURce ] :RADio :CUSTom :TRIGger :TYPE CONTInuous | SINGLE | GATE
[ :SOURce ] :RADio :CUSTom :TRIGger :TYPE ?
```

This command sets the trigger type.

CONTInuous The framed data sequence repeats continuously; the sequence restarts every time the previous playback is completed. To customize continuous triggering, refer to “:TRIGger:TYPE:CONTInuous[:TYPE]” on page 564.

SINGLE The framed data sequence plays once for every trigger received.

GATE An external trigger signal interrupts the playback while the gating signal is in the inactive state. Playback resumes when the external control signal returns to the active state. The active state can be set to high or low.

***RST** CONT

Key Entry **Continuous** **Single** **Gated**

:TRIGger:TYPE:CONTInuous[:TYPE]

Supported E4438C with Option 001/601or 002/602

```
[ :SOURCE ] :RADio:CUSTom:TRIGger:TYPE:CONTInuous [ :TYPE ] FREE | TRIGger | RESet
[ :SOURCE ] :RADio:CUSTom:TRIGger:TYPE:CONTInuous [ :TYPE ] ?
```

This commands selects the waveform's response to a trigger signal while using the continuous trigger mode.

For more information on triggering and to select the continuous trigger mode, see [“:TRIGger:TYPE” on page 563](#).

The following list describes the waveform's response to each of the command choices:

FREE	Turning the ARB format on immediately triggers the waveform. The waveform repeats until you turn the format off, select another trigger, or choose another waveform file.
TRIGger	The waveform waits for a trigger before play begins. When the waveform receives the trigger, it plays continuously until you turn the format off, select another trigger, or choose another waveform file.
RESet	The waveform waits for a trigger before play begins. When the waveform receives the trigger, it plays continuously. Subsequent triggers reset the waveform to the beginning. For a waveform sequence, this means to the beginning of the first segment in the sequence.

:TRIGger:TYPE:GATE:ACTive

Supported E4438C with Option 001/601or 002/602

```
[ :SOURCE ] :RADio:CUSTom:TRIGger:TYPE:GATE:ACTive LOW | HIGH
[ :SOURCE ] :RADio:CUSTom:TRIGger:TYPE:GATE:ACTive ?
```

This command selects the active state (gate polarity) of the gate while using the gating trigger mode.

The LOW and HIGH selections correspond to the low and high states of an external trigger signal. For example, when you select HIGH, the active state occurs during the high of the trigger signal. When the active state occurs, the ESG stops the waveform playback at the last played sample point, then restarts the playback at the next sample point when the inactive state occurs. For more information on triggering and to select gating as the trigger mode, see [“:TRIGger:TYPE” on page 563](#).

The following list describes the ESG's gating behavior for the polarity selections:

LOW	The waveform playback stops when the trigger signal goes low (active state) and restarts when the trigger signal goes high (inactive state).
HIGH	The waveform playback stops when the trigger signal goes high (active state) and restarts when the trigger signal goes low (inactive state).

:TRIGger[:SOURce]

Supported E4438C with Option 001/601 or 002/602

```
[ :SOURce ] :RADio:CUSTom:TRIGger [ :SOURce ] KEY | EXT | BUS
[ :SOURce ] :RADio:CUSTom:TRIGger [ :SOURce ] ?
```

This command sets the trigger source.

For more information on triggering, see “:TRIGger:TYPE” on page 563. The following list describes the command choices:

KEY	This choice enables manual triggering by pressing the front-panel Trigger hardkey.
EXT	An externally applied signal triggers the waveform. This is the only choice that works with gating. The following conditions affect an external trigger:

- The input connector selected for the trigger signal. You have a choice between the rear-panel PATTERN TRIG IN connector or the PATT TRIG IN 2 pin on the rear-panel AUXILIARY I/O connector. To make the connector selection, see “:TRIGger[:SOURce]:EXTernal[:SOURce]” on page 567.

For more information on the connectors and on connecting the cables, see the *E4428C/38C ESG Signal Generators User's Guide*.

- The trigger signal polarity:
 - gating mode, see “:TRIGger:TYPE:GATE:ACTive” on page 564
 - continuous and single modes, see “:TRIGger[:SOURce]:EXTernal:SLOPe” on page 567
- The time delay between when the ESG receives a trigger and when the waveform responds to the trigger. There are two parts to setting the delay:
 - setting the amount of delay, see “:TRIGger[:SOURce]:EXTernal:DELay” on page 566
 - turning the delay on, see “:TRIGger[:SOURce]:EXTernal:DELay:STATe” on page 566

BUS This choice enables triggering over the GPIB or LAN using the *TRG or GET commands or the AUXILIARY INTERFACE (RS-232) using the *TRG command.

:TRIGger[:SOURCE]:EXTernal:DELay

Supported E4438C with Option 001/601or 002/602

```
[ :SOURCE ] :RADio:CUSTom:TRIGger[ :SOURCE ] :EXTernal:DELay <val>
```

```
[ :SOURCE ] :RADio:CUSTom:TRIGger[ :SOURCE ] :EXTernal:DELay?
```

This command sets the number of bits to delay the ESG's response to an external trigger.

The bit delay is a delay between when the ESG receives the trigger and when it responds to the trigger. The delay uses the clocks of the bit-clock to time the delay. After the ESG receives the trigger and the set number of delay bits (clocks) occurs, the ESG transmits the data pattern.

The delay occurs after you enable the state. See “[:TRIGger\[:SOURCE\]:EXTernal:DELay:STATE](#)” on page 566. You can set the number of bits either before or after enabling the state.

For more information on configuring an external trigger source and to select external as the trigger source, see “[:TRIGger\[:SOURCE\]](#)” on page 565.

```

```
[ :SOURCE ] :RADio:CUSTom:TRIGger[ :SOURCE ] :EXTernal:DELay:STATe?
```

This command enables or disables the operating state of the external trigger delay function.

For setting the delay time, see “[:TRIGger\[:SOURCE\]:EXTernal:DELay](#)” on page 566, and for more information on configuring an external source, see “[:TRIGger\[:SOURCE\]](#)” on page 565.

***RST** 0

:TRIGger[:SOURce]:EXTErnal:SLOPe

Supported E4438C with Option 001/601 or 002/602

```
[ :SOURce ] :RADio :CUSTom :TRIGger [ :SOURce ] :EXTErnal :SLOPe POSitive | NEGative
[ :SOURce ] :RADio :CUSTom :TRIGger [ :SOURce ] :EXTErnal :SLOPe?
```

This command sets the polarity for an external trigger signal while using the continuous, single triggering mode. To set the polarity for gating, see “:TRIGger:TYPE:GATE:ACTive” on page 564.

The POSitive and NEGative selections correspond to the high (positive) and low (negative) states of the external trigger signal. For example, when you select POSitive, the waveform responds (plays) during the high state of the trigger signal. When the ESG receives multiple trigger occurrences when only one is required, the signal generator uses the first trigger and ignores the rest.

For more information on configuring an external trigger source and to select external as the trigger source, see “:TRIGger[:SOURce]” on page 565.

EPTRIGGER1 | EPTRIGGER2
[ :SOURce ] :RADio :CUSTom :TRIGger [ :SOURce ] :EXTErnal [ :SOURce ]?
```

This command selects which PATTERN TRIG IN connection the ESG uses to accept an externally applied trigger signal when external is the trigger source selection.

For more information on configuring an external trigger source and to select external as the trigger source, see “:TRIGger[:SOURce]” on page 565. For more information on the rear-panel connectors, see the *E4428C/38C ESG Signal Generators User’s Guide*.

The following list describes the command choices:

EPT1	This choice is synonymous with EPTRIGGER1 and selects the PATTERN TRIG IN rear-panel connector.
EPT2	This choice is synonymous with EPTRIGGER2 and selects the PATT TRIG IN 2 pin on the rear-panel AUXILIARY I/O connector.
EPTRIGGER1	This choice is synonymous with EPT1 and selects the PATTERN TRIG IN rear-panel connector.
EPTRIGGER2	This choice is synonymous with EPT2 and selects the PATT TRIG IN 2 pin on the rear-panel AUXILIARY I/O connector.

Supported E4438C with Option 402

```
[ :SOURce ] :RADio :DECT :BBCLock INT[1] | EXT[1]
[ :SOURce ] :RADio :DECT :BBCLock ?
```

This command toggles the data (bit) clock input to the baseband generator board to either internal or external. This command is independent in each mode and works for both non-burst (continuous) and burst modes. This allows for a matrix of selections between burst/non-burst, internal/external data generation, internal/external data clock, and external bit/symbol data clock.

INT[1] This choice selects the signal generator internal data clock.

EXT[1] This choice selects an external data clock input.

***RST** INT

```
[ :SOURCE ] :RADIO :DECT :BRATe <val><units>
```

```
[ :SOURCE ] :RADIO :DECT :BRATe ?
```

This command sets the bit rate in bits per second (bps–Mbps). The maximum bit rate is dependent on the modulation type and filter as shown in the following tables

The IQ digital data stream is shaped by a FIR filter. The filter length and associated latency and frequency response are dependent on the bit rate as shown in the following tables. The signal generator selects a filter length.

For higher bit rates, the FIR filter length may be truncated (if the minimum filter size allows it) which will impact the relative timing of the modulated data, as well as the actual filter response (see the symbol rate command “:SRATe” on page 654). Refer to “:FILTer” on page 581 for information on filter symbol widths.

To change the modulation type, refer to “:MODulation[:TYPE]” on page 584.

When the bit rate is changed, the ESG reconfigures the baseband generator. The time required to reconfigure the baseband generator is inversely proportional to the bit rate: lower bit rates require more time.

Supported E4438C with Option 402

[:SOURCE] :RADio:DECT:EDCLock SYMBOL | NORMAl

[:SOURCE] :RADio:DECT:EDCLock?

This command sets the external data clock use.

SYMBOL This choice specifies that a continuous symbol clock signal must be provided to the SYMBOL SYNC input connector.

NORMAl This choice specifies that the DATA CLOCK input connector requires a bit clock. The SYMBOL SYNC input connector requires a (one-shot or continuous) symbol sync signal.

***RST** NORM

[ :SOURce ] :RADio :DECT :FILTer?
```

This command specifies the pre-modulation filter type.

IS95 This choice selects a filter that meets the criteria of the IS-95 standard.

IS95_EQ This choice selects a filter which is a combination of the IS-95 filter (above) and the equalizer filter described in the IS-95 standard. This filter is only used for IS-95 baseband filtering.

IS95_MOD This choice selects a filter that meets the criteria of the IS-95 error function (for improved adjacent channel performance) with lower passband rejection than the filter specified in the IS-95 standard.

IS95_MOD_EQ This choice selects a filter which is a combination of the equalizer filter described in the IS-95 standard and a filter that meets the criteria of the IS-95 error function (for improved adjacent channel performance), with lower passband rejection.

AC4Fm This choice selects a predefined Association of Public Safety Communications Officials (APCO) specified compatible 4-level frequency modulation (C4FM) filter.

DECT Subsystem–Option 402 [:SOURce]:RADio:DECT)

UGaussian	This choice selects a backwards compatible GSM Gaussian filter (Gaussian filter with a fixed BbT value of 0.300) for the ESG E44xxB Option UN3 or UN4.

:IQ:SCALe

Supported E4438C with Option 402

[:SOURce] :RADio :DECT :IQ :SCALe <val>

[:SOURce] :RADio :DECT :IQ :SCALe?

This command sets the amplitude of the I/Q outputs for better adjacent channel power (ACP); lower scaling values equate to better ACP.

The variable <val> is expressed in units of percent.

***RST** +100

This command recalls the secondary frame configuration, overwriting the current state.

Key Entry **Recall Secondary Frame State**

Remarks To save a secondary frame state, refer to “[:SECOndary:SAVE]” on page 608.

A secondary frame is not active until the secondary state is enabled. To activate a secondary frame, refer to “[:SECOndary[:STATE]]” on page 609.

:SECOndary:SAVE

Supported E4438C with Option 402

```
[ :SOURCE ] :RADIo:DECT:SECOndary:SAVE

```
[ :SOURCE ] :RADio :DECT :SOUT?
```

This command sets the synchronization location (within the pattern of data) and the type of output at the EVENT 1 rear panel connector.

FRAME This choice outputs a 1-bit signal, synchronized to the bit selected by the synchronization output offset command, for a framed data pattern.

SLOT This choice outputs a 1-bit signal, synchronized to the bit selected by the synchronization output offset command, for a selected timeslot.

ALL This choice outputs a 1-bit signal, synchronized to the bit selected by the synchronization output offset command, for all active timeslots.

[:SOURce] :RADio:DECT:SRATe <val>

[:SOURce] :RADio:DECT:SRATe?

This command sets the transmission symbol rate. Symbol rate is the bit rate divided by the bits per symbol. A change in the symbol rate affects the bit rate. Refer to [“:BRATe” on page 570](#) for information on bit rate.

The variable <val> is expressed in units of symbols per second (sps–Mps) and the maximum symbol rate depends on the filter. Refer to [“:FILTer” on page 581](#) for minimum filter symbol width

The filter may have to be truncated down to 32 or 16 symbols wide to achieve the highest symbol rate. The signal generator’s internal filters are not truncated below their minimum filter length and user-defined FIR filters are not truncated. If the filter cannot be truncated then the symbol rate is limited to the maximum rate of the narrowest filter size possible.

The relative timing of the modulated data, as well as the actual filter response is affected when the filter is truncated.

When the symbol rate changes, the ESG reconfigures the baseband generator. The time required to reconfigure the baseband generator is inversely proportional to the symbol rate: lower symbol rates require more time.

To change the modulation type, refer to [“:MODulation\[:TYPE\]” on page 584](#).

Supported E4438C with Option 402

```
[ :SOURCE ] :RADio:DECT:TRIGger:TYPE CONTinuous | SINGle | GATE
[ :SOURCE ] :RADio:DECT:TRIGger:TYPE?
```

This command sets the trigger type.

CONTinuous The framed data sequence repeats continuously; the sequence restarts every time the previous playback is completed. To customize continuous triggering, refer to “:TRIGger:TYPE:CONTinuous[:TYPE]” on page 613.

SINGle The framed data sequence plays once for every trigger received.

GATE An external trigger signal interrupts the playback while the gating signal is in the inactive state. Playback resumes when the external control signal returns to the active state. The active state can be set to high or low.

[:SOURCE] :RADio:DECT:TRIGger:TYPE:CONTInuous [:TYPE] FREE | TRIGger | RESet
 [:SOURCE] :RADio:DECT:TRIGger:TYPE:CONTInuous [:TYPE] ?

This commands selects the waveform’s response to a trigger signal while using the continuous trigger mode.

For more information on triggering and to select the continuous trigger mode, see “:TRIGger:TYPE” on page 612.

The following list describes the waveform’s response to each of the command choices:

FREE Turning the ARB format on immediately triggers the waveform. The waveform repeats until you turn the format off, select another trigger, or choose another waveform file.

TRIGger The waveform waits for a trigger before play begins. When the waveform receives the trigger, it plays continuously until you turn the format off, select another trigger, or choose another waveform file.

RESet The waveform waits for a trigger before play begins. When the waveform receives the trigger, it plays continuously. Subsequent triggers reset the waveform to the beginning. For a waveform sequence, this means to the beginning of the first segment in the sequence.

:TRIGger:TYPE:GATE:ACTive

Supported E4438C with Option 402

```
[ :SOURCE ] :RADio:DECT:TRIGger:TYPE:GATE:ACTive LOW|HIGH
[ :SOURCE ] :RADio:DECT:TRIGger:TYPE:GATE:ACTive?
```

This command selects the active state (gate polarity) of the gate while using the gating trigger mode.

The LOW and HIGH selections correspond to the low and high states of an external trigger signal. For example, when you select HIGH, the active state occurs during the high of the trigger signal. When the active state occurs, the ESG stops the waveform playback at the last played sample point, then restarts the playback at the next sample point when the inactive state occurs. For more information on triggering and to select gating as the trigger mode, see “:TRIGger:TYPE” on page 612.

The following list describes the ESG’s gating behavior for the polarity selections:

LOW The waveform playback stops when the trigger signal goes low (active state) and restarts when the trigger signal goes high (inactive state).

HIGH The waveform playback stops when the trigger signal goes high (active state) and restarts when the trigger signal goes low (inactive state).

:TRIGger[:SOURCE]

Supported E4438C with Option 402

```
[ :SOURCE ] :RADio:DECT:TRIGger [ :SOURCE ] KEY|EXT|BUS
[ :SOURCE ] :RADio:DECT:TRIGger [ :SOURCE ] ?
```

This command sets the trigger source.

For more information on triggering, see “:TRIGger:TYPE” on page 612. The following list describes the command choices:

KEY This choice enables manual triggering by pressing the front-panel **Trigger** hardkey.

EXT An externally applied signal triggers the waveform. This is the only choice that works with gating. The following conditions affect an external trigger:

- The input connector selected for the trigger signal. You have a choice between the rear-panel PATTERN TRIG IN connector or the PATT TRIG IN 2 pin on the rear-panel AUXILIARY I/O connector. To make the connector selection, see “:TRIGger[:SOURCE]:EXTernal[:SOURCE]” on page 616.

For more information on the connectors and on connecting the cables, see the *E4428C/38C ESG Signal Generators User’s Guide*.

- The trigger signal polarity:
 - gating mode, see “:TRIGger:TYPE:GATE:ACTive” on page 614
 - continuous and single modes, see “:TRIGger[:SOURce]:EXTErnal:SLOPe” on page 616
- The time delay between when the ESG receives a trigger and when the waveform responds to the trigger. There are two parts to setting the delay:
 - setting the amount of delay, see “:TRIGger[:SOURce]:EXTErnal:DELAy” on page 615
 - turning the delay on, see “:TRIGger[:SOURce]:EXTErnal:DELAy:STATe” on page 617

BUS This choice enables triggering over the GPIB or LAN using the *TRG or GET commands or the AUXILIARY INTERFACE (RS-232) using the *TRG command.

[ :SOURce ] :RADio:DECT:TRIGger [ :SOURce ] :EXTErnal:DELAy?
```

This command sets the number of bits to delay the ESG’s response to an external trigger.

The bit delay is a delay between when the ESG receives the trigger and when it responds to the trigger. The delay uses the clocks of the bit-clock to time the delay. After the ESG receives the trigger and the set number of delay bits (clocks) occurs, the ESG transmits the data pattern.

The delay occurs after you enable the state. See “:TRIGger[:SOURce]:EXTErnal:DELAy:STATe” on page 617. You can set the number of bits either before or after enabling the state.

For more information on configuring an external trigger source and to select external as the trigger source, see “:TRIGger[:SOURce]” on page 614.

```
[ :SOURCE ]:RADio:DECT:TRIGger[ :SOURCE ]:EXTErnal:SLOPe POSitive|NEGative
[ :SOURCE ]:RADio:DECT:TRIGger[ :SOURCE ]:EXTErnal:SLOPe?
```

This command sets the polarity for an external trigger signal while using the continuous, single triggering mode. To set the polarity for gating, see “[:TRIGger:TYPE:GATE:ACTive](#)” on page 614.

The POSitive and NEGative selections correspond to the high (positive) and low (negative) states of the external trigger signal. For example, when you select POSitive, the waveform responds (plays) during the high state of the trigger signal. When the ESG receives multiple trigger occurrences when only one is required, the signal generator uses the first trigger and ignores the rest.

For more information on configuring an external trigger source and to select external as the trigger source, see “[:TRIGger\[:SOURCE\]](#)” on page 614.

This command selects which PATTERN TRIG IN connection the ESG uses to accept an externally applied trigger signal when external is the trigger source selection.

For more information on configuring an external trigger source and to select external as the trigger source, see “[:TRIGger\[:SOURCE\]](#)” on page 614. For more information on the rear-panel connectors, see the *E4428C/38C ESG Signal Generators User’s Guide*.

The following list describes the command choices:

EPT1	This choice is synonymous with EPTRIGGER1 and selects the PATTERN TRIG IN rear-panel connector.
EPT2	This choice is synonymous with EPTRIGGER2 and selects the PATT TRIG IN 2 pin on the rear-panel AUXILIARY I/O connector.

This command toggles the data (bit) clock input to the baseband generator board to either internal or external. This command is independent in each mode and works for both non-burst (continuous) and burst modes. This allows for a matrix of selections between burst/non-burst, internal/external data generation, internal/external data clock, and external bit/symbol data clock.

INT[1] This choice selects the signal generator internal data clock.

```
[ :SOURce ] :RADio :EDGE :BURSt :SHAPE [ :TYPE ] SINE | "<file name>"  
[ :SOURce ] :RADio :EDGE :BURSt :SHAPE [ :TYPE ] ?
```

This command sets the burst shape type.

SINE This choice selects a burst shape defined by the burst rise and fall *RST values.

"<file name>" This choice selects a user-defined file from signal generator memory.

***RST** SINE

Key Entry **Sine** **User File**

Remarks Refer to “[File Name Variables](#)” on page 13 for information on the file name syntax.

:BURSt[:STATe]

```
[ :SOURce ] :RADio :EDGE :BURSt [ :STATe ] ON | OFF | 1 | 0  
[ :SOURce ] :RADio :EDGE :BURSt [ :STATe ] ?
```

This command enables or disables the burst function.

ON (1) This choice enables the transmission of framed data. If all timeslots which are switched on are up traffic channels or custom, you will be bursting the timeslots that are on; there will be no RF carrier during the off timeslots.

If you have switched on any timeslot that you have configured as a down traffic channel, the RF carrier is not switched off between any of the timeslots. The off timeslots are transmitted as a continuous series of ones for the time period of the off timeslots.

OFF (0) This choice enables the transmission of unframed data.

Supported E4438C with Option 402

```
[ :SOURCE ] :RADIO :EDGE :DATA :PRAM "<file_name>"
```

```
[ :SOURCE ] :RADIO :EDGE :DATA :PRAM?
```

This command selects a pattern RAM (PRAM) file as the pattern data type for the EDGE (Enhanced Data GSM Environment) format.

"<file_name>" This variable designates the PRAM file in WFM1. Refer to [“File Name Variables” on page 13](#) for information on the file name syntax.

Key Entry **PRAM File**

Remarks Selecting this data source forces the burst source to INTERNAL to allow framing control.

The PRAM file must reside in the signal generator’s volatile memory (WFM1) in order to be accessed by this command. For more information on PRAM files, refer to [“:DATA:PRAM:FILE:BLOCK” on page 110](#)

:EDATa:DELay

Supported E4438C with Option 402

[:SOURCE] :RADio :EDGE :EDATa :DELay?

This query returns the amount of delay (in symbols) from the external data input to the beginning of the symbol on the I OUT and Q OUT rear panel connectors and the front panel RF OUTPUT connector.

***RST** +0.00000000E+000

Remarks When the EDGE format is turned off, the delay value is unchanged; the query will return the same delay value if the format is on or off.

:EDCLock

Supported E4438C with Option 402

[:SOURCE] :RADio :EDGE :EDCLock SYMBol | NORMal

[:SOURCE] :RADio :EDGE :EDCLock?

This command sets the external data clock use.

SYMBol This choice specifies that a continuous symbol clock signal must be provided to the SYMBOL SYNC input connector.

NORMal This choice specifies that the DATA CLOCK input connector requires a bit clock. The SYMBOL SYNC input connector requires a (one-shot or continuous) symbol sync signal.

***RST** NORM

Key Entry **Ext Data Clock Normal Symbol**

IS95_EQ | IS95_MOD | IS95_MOD_EQ | EDGE | AC4Fm | UGGaussian | "<user FIR>"
[ :SOURCE ] :RADIO :EDGE :FILTER ?
```

This command selects the pre-modulation filter type.

IS95 This choice selects a filter that meets the criteria of the IS-95 standard.

IS95_EQ This choice selects a filter which is a combination of the IS-95 filter (above) and the equalizer filter described in the IS-95 standard. This filter is only used for IS-95 baseband filtering.

IS95_MOD This choice selects a filter that meets the criteria of the IS-95 error function (for improved adjacent channel performance) with lower passband rejection than the filter specified in the IS-95 standard.

IS95_MOD_EQ This choice selects a filter which is a combination of the equalizer filter described in the IS-95 standard and a filter that meets the criteria of the IS-95 error function (for improved adjacent channel performance), with lower passband rejection.

EDGE This choice selects Laurant's decomposition of a Gaussian filter with a 0.300 fixed BbT.

AC4Fm This choice selects a predefined Association of Public Safety Communications Officials (APCO) specified compatible 4-level frequency modulation (C4FM) filter.

UGGaussian This choice selects a backwards compatible GSM Gaussian filter (Gaussian filter with a fixed BbT value of 0.300) for the ESG E44xxB Option UN3 or UN4.

```

This command selects the data pattern type or the multiframe channel (structure) for the selected GMSK timeslot.

There are two types of multiframe structures, a 26 and a 52 frame structure. The 26 frame structure has the following attributes:

- frame 12 contains the slow associated control channel (SACCH)
- frame 25 is idle and incorporates RF blanking

The 52 frame structure has the following attributes:

- frames 12 and 38 contain tail and control bits with the payload bits set to zero.
- Frames 25 and 51 are idle and incorporate RF blanking.

PN9, PN15 These choices are standard PN sequences. For bursted data, the PN sequences continuously repeat from one timeslot in a frame to the matching timeslot in the next frame.

FIX4 This choice selects a repeating 4-bit pattern.

"<file name>" This choice selects a user-defined data file from signal generator memory. The file must supply enough bits to fill the desired number of timeslots. In timeslots where there is not enough bits to fill the encryption fields, the ESG ignores the data.

P4 This choice selects a data pattern with four ones followed by four zeros. The pattern repeats as needed to fill the encryption fields.

P8 This choice selects a data pattern with eight ones followed by eight zeros. The pattern repeats as needed to fill the encryption fields.

P16 This choice selects a data pattern with 16 ones followed by 16 zeros. The pattern repeats as needed to fill the encryption fields.

P32 This choice selects a data pattern with 32 ones followed by 32 zeros. The pattern repeats as needed to fill the encryption fields.

P64 This choice selects a data pattern with 64 ones followed by 64 zeros. The pattern repeats as needed to fill the encryption fields.

TCHFS This multiframe choice selects a traffic channel with full rate speech (TCH/FS).

This command specifies the stealing bit (1-bit S field) for the selected GMSK timeslot. The single bit defines the value for both stealing (S) fields.

The stealing flag field accepts values in binary, hexadecimal, or decimal format, however the query returns only hexadecimal values.

This command changes the 26-bit training sequence (TS) for the selected GMSK timeslot.

The query returns the current training sequence hexadecimal value. Use the following table to match the hexadecimal values to the training sequences of TSC0–TSC7.

Training Sequence	Hexadecimal Value

This command turns bursting (ramping) on or off between the selected timeslot and the next higher numbered adjacent timeslot.

ON (1) This choice turns ramping off between timeslots.

OFF (0) This choice turns ramping on between timeslots.

*RST 0

Key Entry **Multislot Off On**

Remarks Turning multislot on between an EDGE and GMSK timeslot may produce undesired spectral content. The undesired spectral content is a byproduct of the transition between two different modulation types without ramping.

This command selects the data pattern type or the multiframe channel (structure) for the selected normal timeslot.

There are two types of multiframe structures, a 26 and a 52 frame structure. The 26 frame structure has the following attributes:

- frame 12 contains the slow associated control channel (SACCH)
- frame 25 is idle and incorporates RF blanking

The 52 frame structure has the following attributes:

- frames 12 and 38 contain tail and control bits with the payload bits set to zero.

- Frames 25 and 51 are idle and incorporate RF blanking.

| PN9–23 | These choices are standard PN sequences. For bursted data, the PN sequences continuously repeat from one timeslot in a frame to the matching timeslot in the next frame. |
| FIX4 | This choice selects a repeating 4-bit binary pattern. |
| "<filename>" | This choice selects a user-defined data file from signal generator memory. The file must supply enough bits to fill the desired number of timeslots. In timeslots where there are not enough bits to fill the encryption fields, the ESG ignores the data. |
| EXT | This choice selects an external user signal as the modulating data stream. Connect the externally supplied serial data signal to the front panel DATA BNC connector. |

Symbol Rate

Remarks

When user-defined filters are selected using the command in section “[:FILTer](#)” on [page 630](#), the upper bit rate will be restricted in line with the following symbol rate restriction:

- FIR filter length > 32 symbols: upper limit is 12.5 Msps
- FIR filter length > 16 symbols: upper limit is 25 Msps

When internal FIR filters are used, the limits of the above table always apply. For higher symbol rates, the FIR filter length will be truncated as follows:

- Above 12.5 Msps, the FIR length will be truncated to 32 symbols
- Above 25 Msps, the FIR length will be truncated to 16 symbols

This will impact the relative timing of the modulated data, as well as the actual filter response.

When the symbol rate is changed, the ESG will reconfigure the baseband generator. The time required to reconfigure the baseband generator is inversely proportional to the symbol rate: lower symbol rates require more time.

To change the modulation type, refer to “:MODulation[:TYPE]” on page 633.

NOTE In the EDGE format with a GMSK modulated timeslot, the maximum symbol rate is 25 Msps for up to 16 symbol wide filters. For 32 symbol wide filters, the limit is 12.5 Msps.

:TRIGger:TYPE

Supported E4438C with Option 402

```
[ :SOURCE ] :RADIO:EDGE:TRIGger:TYPE CONTInuous | SINGLE | GATE
[ :SOURCE ] :RADIO:EDGE:TRIGger:TYPE?
```

This command sets the trigger type.

CONTInuous The framed data sequence repeats continuously; the sequence restarts every time the previous playback is completed. To customize continuous triggering, refer to “:TRIGger:TYPE:CONTInuous[:TYPE]” on page 656.

SINGLE The framed data sequence plays once for every trigger received.

GATE An external trigger signal interrupts the playback while the gating signal is in the inactive state. Playback resumes when the external control signal returns to the active state. The active state can be set to high or low.

:TRIGger:TYPE:CONTInuous[:TYPE]

Supported E4438C with Option 402

```
[ :SOURCE ] :RADIO:EDGE:TRIGger:TYPE:CONTInuous [ :TYPE ] FREE | TRIGger | RESet
[ :SOURCE ] :RADIO:EDGE:TRIGger:TYPE:CONTInuous [ :TYPE ]?
```

This commands selects the waveform’s response to a trigger signal while using the continuous trigger mode.

For more information on triggering and to select the continuous trigger mode, see “:TRIGger:TYPE” on page 656.

The following list describes the waveform’s response to each of the command choices:

FREE	Turning the ARB format on immediately triggers the waveform. The waveform repeats until you turn the format off, select another trigger, or choose another waveform file.
TRIGger	The waveform waits for a trigger before play begins. When the waveform receives the trigger, it plays continuously until you turn the format off, select another trigger, or choose another waveform file.
RESet	The waveform waits for a trigger before play begins. When the waveform receives the trigger, it plays continuously. Subsequent triggers reset the waveform to the beginning. For a waveform sequence, this means to the beginning of the first segment in the sequence.

:TRIGger:TYPE:GATE:ACTive

Supported E4438C with Option 402

```
[ :SOURce ] :RADio :EDGE :TRIGger :TYPE :GATE :ACTive LOW | HIGH
[ :SOURce ] :RADio :EDGE :TRIGger :TYPE :GATE :ACTive ?
```

This command selects the active state (gate polarity) of the gate while using the gating trigger mode.

The LOW and HIGH selections correspond to the low and high states of an external trigger signal. For example, when you select HIGH, the active state occurs during the high of the trigger signal. When the active state occurs, the ESG stops the waveform playback at the last played sample point, then restarts the playback at the next sample point when the inactive state occurs. For more information on triggering and to select gating as the trigger mode, see “:TRIGger:TYPE” on page 656.

The following list describes the ESG’s gating behavior for the polarity selections:

LOW	The waveform playback stops when the trigger signal goes low (active state) and restarts when the trigger signal goes high (inactive state).
HIGH	The waveform playback stops when the trigger signal goes high (active state) and restarts when the trigger signal goes low (inactive state).
*RST	HIGH

:TRIGger[:SOURCE]

Supported E4438C with Option 402

[[:SOURCE]:RADio:EDGE:TRIGger[:SOURCE] KEY|EXT|BUS

[[:SOURCE]:RADio:EDGE:TRIGger[:SOURCE]?

This command sets the trigger source.

For more information on triggering, see “:TRIGger:TYPE” on page 656. The following list describes the command choices:

KEY This choice enables manual triggering by pressing the front-panel **Trigger** hardkey.

EXT An externally applied signal triggers the waveform. This is the only choice that works with gating. The following conditions affect an external trigger:

- The input connector selected for the trigger signal. You have a choice between the rear-panel PATTERN TRIG IN connector or the PATT TRIG IN 2 pin on the rear-panel AUXILIARY I/O connector. To make the connector selection, see “:TRIGger[:SOURCE]:EXTErnal[:SOURCE]” on page 661.

For more information on the connectors and on connecting the cables, see the *E4428C/38C ESG Signal Generators User’s Guide*.

- The trigger signal polarity:
 - gating mode, see “:TRIGger:TYPE:GATE:ACTive” on page 657
 - continuous and single modes, see “:TRIGger[:SOURCE]:EXTErnal:SLOPe” on page 660
- The time delay between when the ESG receives a trigger and when the waveform responds to the trigger. There are two parts to setting the delay:
 - setting the amount of delay, see “:TRIGger[:SOURCE]:EXTErnal:DELAy” on page 659
 - turning the delay on, see “:TRIGger[:SOURCE]:EXTErnal:DELAy:STATe” on page 660

BUS This choice enables triggering over the GPIB or LAN using the *TRG or GET commands or the AUXILIARY INTERFACE (RS-232) using the *TRG command.

:TRIGger[:SOURCE]:EXternal:DELay

Supported E4438C with Option 402

```
[ :SOURCE ] :RADio:EDGE:TRIGger[ :SOURCE ] :EXternal:DELay <val>  
[ :SOURCE ] :RADio:EDGE:TRIGger[ :SOURCE ] :EXternal:DELay?
```

This command sets the number of bits to delay the ESG's response to an external trigger.

The bit delay is a delay between when the ESG receives the trigger and when it responds to the trigger. The delay uses the clocks of the bit-clock to time the delay. After the ESG receives the trigger and the set number of delay bits (clocks) occurs, the ESG transmits the data pattern.

The delay occurs after you enable the state. See “[:TRIGger\[:SOURCE\]:EXternal:DELay:STATE](#)” on [page 660](#). You can set the number of bits either before or after enabling the state.

For more information on configuring an external trigger source and to select external as the trigger source, see “[:TRIGger\[:SOURCE\]](#)” on [page 658](#).

Example

```
:RAD:CUST:TRIG:EXT:DELay 200000
```

The preceding example sets the delay for an external trigger for 200K bits.

***RST** +0

Range 0–1048575

Key Entry **Ext Delay Bits**

Remarks For most TDMA formats, there is one bit per symbol. However, there are 3 bits per symbol for the EDGE format. If the selected number of delay bits is not a multiple of the number of bits per symbol, the entered value is rounded down to the next whole symbol value.

:TRIGger[:SOURCE]:EXternal:DELay:FINE

Supported E4438C with Option 416

```
[ :SOURCE ] :RADio:EDGE:TRIGger[ :SOURCE ] :EXternal:DELay:FINE <val>  
[ :SOURCE ] :RADio:EDGE:TRIGger[ :SOURCE ] :EXternal:DELay:FINE?
```

This command sets the fine trigger delay for synchronizing the ESG.

The fine delay value is added to the coarse delay setting (see “[:TRIGger\[:SOURCE\]:EXternal:DELay](#)” on [page 659](#)).

The variable <val> is expressed as a fraction of one symbol. For the EDGE format, there are 3 bits per symbol.

[:SOURCE] :RADio:EDGE:TRIGger[:SOURCE] :EXTErnal:SLOPe POSitive|NEGative
[:SOURCE] :RADio:EDGE:TRIGger[:SOURCE] :EXTErnal:SLOPe?

This command sets the polarity for an external trigger signal while using the continuous, single triggering mode. To set the polarity for gating, see “:TRIGger:TYPE:GATE:ACTive” on page 657.

The POSitive and NEGative selections correspond to the high (positive) and low (negative) states of the external trigger signal. For example, when you select POSitive, the waveform responds (plays) during the high state of the trigger signal. When the ESG receives multiple trigger occurrences when only one is required, the signal generator uses the first trigger and ignores the rest.

For more information on configuring an external trigger source and to select external as the trigger source, see “:TRIGger[:SOURCE]” on page 658.

```

This command sets the data type for the selected data mode.

***RST** PN9

Key Entry PN9 PN15 FIX4 User file

Remarks This command is only effective when the data mode is RAW or ENCOded. To set the data mode, refer to "DMODE".

:DMODE

Supported E4438C with Option 409

```
[ :SOURCE ] :RADio[1] | 2 | 3 | 4 :GPS :DMODE RAW | ENCOded | TLM
[ :SOURCE ] :RADio[1] | 2 | 3 | 4 :GPS :DMODE ?
```

This command sets the data mode.

RAW This choice modulates data onto the C/A (coarse acquisition) code at 50-bits per second. No parity bits are computed by the signal generator. Every 6 seconds, 300-bits from the source data are transmitted.

ENCOded This choice modulates data onto the C/A (coarse acquisition) code at 50-bits per second. The signal generator computes 6 parity bits for every 24 data bits from the selected data source. Every six seconds, 240-bits of the source data are transmitted along with 60-bits of computed parity.

TLM This choice transmits a standard default navigation data transmission which includes a telemetry word (TLM), a handover word (HOW), and default navigation data. The signal generator transmits an incrementing time-of-week (TOW) as part of the HOW.

***RST** RAW

Key Entry **Data Mode Raw Enc TLM**

Remarks Since the TLM mode transmits default navigation data, there is no data selection for this mode.

This command sets the pre-modulation filter type.

IS95 This choice selects a filter that meets the criteria of the IS-95 standard.

IS95_EQ This choice selects a filter which is a combination of the IS-95 filter (above) and the equalizer filter described in the IS-95 standard. This filter is only used for IS-95 baseband filtering.

GPS Subsystem—Option 409 ([:SOURCE]:RADio[1] | 2 | 3 | 4:GPS)

IS95_MOD	This choice selects a filter that meets the criteria of the IS-95 error function (for improved adjacent channel performance) with lower passband rejection than the filter specified in the IS-95 standard.
IS95_MOD_EQ	This choice selects a filter which is a combination of the equalizer filter described in the IS-95 standard and a filter that meets the criteria of the IS-95 error function (for improved adjacent channel performance) with lower passband rejection.
AC4Fm	This choice selects a predefined Association of Public Safety Communications Officials (APCO) specified compatible 4-level frequency modulation (C4FM) filter.
UGGaussian	This choice selects a backwards compatible GSM Gaussian filter (Gaussian filter with a fixed BbT value of 0.300) for the ESG E44xxB Option UN3 or UN4.

This command toggles the data (bit) clock input to the baseband generator board to either internal or external. This command is independent in each mode and works for both non-burst (continuous) and burst modes. This allows for a matrix of selections between burst/non-burst, internal/external data generation, internal/external data clock, and external bit/symbol data clock.

INT[1] This choice selects the signal generator internal data clock.

[:SOURCE] :RADIO:GSM:BBT <val>

[:SOURCE] :RADIO:GSM:BBT?

This command changes the bandwidth-multiplied-by-bit-time (BbT) filter parameter.

Remarks This command is effective only after choosing a Gaussian filter. It does not have an effect on other types of filters.

To change the current filter type, refer to “:FILTer” on page 684.

:BRATe

Supported E4438C with Option 402

[:SOURCE] :RADIO:GSM:BRATe <val>

[:SOURCE] :RADIO:GSM:BRATe?

This command sets the bit rate in bits per second (bps–Mbps). The maximum bit rate is dependent on the modulation type and filter as shown in the following tables.

NOTE When using multiframe, limit the symbol rate to no more than 271 ksps. Although higher rates may work, they are not supported. See “:SRATe” on page 702 for data stated as symbol rates.

The IQ digital data stream is shaped by a FIR filter. The filter length and associated latency and frequency response are dependent on the bit rate as shown in the following tables. The signal generator selects a filter length.

For higher bit rates, the FIR filter length may be truncated (if the minimum filter size allows it) which will impact the relative timing of the modulated data, as well as the actual filter response (see the symbol rate command “:SRATe” on page 863). Refer to “:FILTer” on page 684 for information on filter symbol widths.

To change the modulation type, refer to “:MODulation[:TYPE]” on page 687.

When the bit rate is changed, the ESG reconfigures the baseband generator. The time required to reconfigure the baseband generator is inversely proportional to the bit rate: lower bit rates require more time.

Supported E4438C with Option 402

[:SOURce] :RADio:GSM: BURSt: PN9 NORMal | QUICk
 [:SOURce] :RADio:GSM: BURSt: PN9?

This command controls the software PN9 generation.

NORMal This choice produces a maximum length PN9 sequence.

QUICk This choice produces a truncated PN9 sequence.

***RST** NORM

```
[ :SOURce ] :RADio:GSM: BURSt :SHAPe :FALL :DELay <val>  
[ :SOURce ] :RADio:GSM: BURSt :SHAPe :FALL :DELay?
```

This command sets the burst shape fall delay.

The variable <val> is expressed in bits. The minimum and maximum values depend upon modulation type and symbol rate.

***RST** +0.00000000E+000

Range -11.0625 to 99

Key Entry **Fall Delay**

Remarks The setting enabled by this command is not affected by signal generator power-on, preset, or *RST.

To change the modulation type, refer to “:MODulation[:TYPE]” on page 687. Refer to “:SRATe” on page 863 for a list of the minimum and maximum symbol rate values.

“:BURSt:SHAPe:FDELay” on page 675 performs the same function; in compliance with the SCPI standard, both commands are listed.

For concept information on burst shaping, refer to the *E4428C/38C ESG Signal Generators User’s Guide*.

:BURSt:SHAPe:FALL:TIME

Supported E4438C with Option 402

```
[ :SOURce ] :RADio:GSM: BURSt :SHAPe :FALL :TIME <val>  
[ :SOURce ] :RADio:GSM: BURSt :SHAPe :FALL :TIME?

Key Entry Rise Time

Remarks The setting enabled by this command is not affected by signal generator power-on, preset, or *RST.

To change the modulation type, refer to “:MODulation[:TYPE]” on page 687. Refer to “:SRATE” on page 863 for a list of the minimum and maximum symbol rate values.

“:BURSt:SHAPe:RISE:TIME” on page 678 performs the same function; in compliance with the SCPI standard, both commands are listed.

:BURSt:SHAPe[:TYPE]

Supported E4438C with Option 402

```
[ :SOURCE ] :RADIO :GSM :BURSt :SHAPe [ :TYPE ] SINE | "<file name>"
[ :SOURCE ] :RADIO :GSM :BURSt :SHAPe [ :TYPE ] ?
```

This command specifies the burst shape as either SINE or a user-defined file ("<file name>").

SINE This choice selects a state that is defined by the burst rise and fall *RST values, as the default burst shape type.

"<file name>" This choice selects a user designated file from signal generator memory (non-volatile).

***RST** SINE

Key Entry **Sine User File**

:BURSt[:STATe]

Supported E4438C with Option 402

```
[ :SOURCE ] :RADIO :GSM :BURSt [ :STATe ] ON | OFF | 1 | 0
[ :SOURCE ] :RADIO :GSM :BURSt [ :STATe ] ?
```

This command enables or disables the burst function.

ON (1) This choice enables the transmission of framed data. If all timeslots which are switched on are up traffic channels or custom, you will be bursting the timeslots that are on; there will be no RF carrier during the off timeslots.

If you have switched on any timeslot that you have configured as a down traffic channel, the RF carrier is not switched off between any of the timeslots. The off timeslots are transmitted as a continuous series of ones for the time period of the off timeslots.

OFF (0) This choice enables the transmission of unframed data.

GSM Subsystem—Option 402 ([:SOURCE]:RADio:GSM)

***RST** 0
Key Entry Data Format Pattern Framed

:CHANnel

Supported E4438C with Option 402

```
[ :SOURCE ] :RADio:GSM:CHANnel EVM|ACP
[ :SOURCE ] :RADio:GSM:CHANnel?
```

This command optimizes the Nyquist and root Nyquist filters to minimize error vector magnitude (EVM) or to minimize adjacent channel power (ACP).

EVM This choice provides the most ideal passband.

ACP This choice improves stopband rejection.

***RST** ACP

Key Entry **Optimize FIR For Evm ACP**

Remarks To change the current filter type, refer to “:FILTer” on page 684.

:DATA

Supported E4438C with Option 402

```
[ :SOURCE ] :RADio:GSM:DATA PN9|PN11|PN15|PN20|PN23|FIX4|"<file name>"|
EXT|P4|P8|P16|P32|P64|PRAM
[ :SOURCE ] :RADio:GSM:DATA?
```

This command sets the data pattern type (pseudo-random number sequence, 4-bit pattern, sequence of 1's and 0's, data from an external source, or a user file) for unframed data transmission.

***RST** PN23

Key Entry	PN9	PN11	PN15	PN20	PN23	FIX4	User File	Ext

	64 1's & 64 0's	PRAM File						

Remarks Refer to “File Name Variables” on page 13 for information on the file name syntax.

:DATA:PRAM

Supported E4438C with Option 402

```
[ :SOURCE ]:RADIO:GSM:DATA:PRAM "<file_name>"
```

```
[ :SOURCE ]:RADIO:GSM:DATA:PRAM?
```

This command selects a pattern RAM (PRAM) file as the pattern data type for the GSM (Global System for Mobile communication) format.

"<file_name>" This variable designates the PRAM file in WFM1. Refer to [“File Name Variables” on page 13](#) for information on the file name syntax.

Key Entry **PRAM File**

Remarks Selecting this data source forces the burst source to INTERNAL to allow framing control.

The PRAM file must reside in the signal generator’s volatile memory (WFM1) in order to be accessed by this command. For more information on PRAM files, refer to [“:DATA:PRAM:FILE:BLOCK” on page 110](#).

:DATA:FIX4

Supported E4438C with Option 402

```
[ :SOURCE ]:RADIO:GSM:DATA:FIX4 <val>
```

```
[ :SOURCE ]:RADIO:GSM:DATA:FIX4?
```

This command sets the binary, 4-bit repeating sequence data pattern for unframed transmission according to the modulation type, symbol rate, filter, and burst shape selected for the GSM modulation format.

***RST** #B0000

Range #B0000–#B1111 or 0–15

Key Entry **FIX4**

Remarks FIX4 must already be defined as the data type.

:DEFault

Supported E4438C with Option 402

```
[ :SOURCE ]:RADIO:GSM:DEFault
```

This command returns all of the GSM format parameters to their factory default conditions. It does not affect any other signal generator parameters.

Key Entry Restore GSM Factory Default

:DENCode

Supported E4438C with Option 402

```
[ :SOURCE ] :RADIO:GSM:DENCode ON|OFF|1|0  
[ :SOURCE ] :RADIO:GSM:DENCode?
```

This command enables or disables the differential data encoding function. Once this function is enabled, data bits are encoded prior to modulation; each modulated bit is 1 if the data bit is different from the previous one, or 0 if the data bit is the same as the previous one.

***RST** 1

Key Entry **Diff Data Encode Off On**

EDATa:DELaY

Supported E4438C with Option 402

```
[ :SOURCE ] :RADIO:GSM:EDATa:DELaY?
```

This query returns the amount of delay (in symbols) from the external data input to the beginning of the symbol on the I OUT and Q OUT rear panel connectors and the front panel RF OUTPUT connector.

Remarks When the format is turned off, the delay value is unchanged; the query will return the same delay value if the format is on or off.

:EDCLock

Supported E4438C with Option 402

```
[ :SOURCE ] :RADIO:GSM:EDCLock SYMBol|NORMal  
[ :SOURCE ] :RADIO:GSM:EDCLock?
```

This command sets the external data clock use.

SYMBol This choice specifies that a continuous symbol clock signal must be provided to the SYMBOL SYNC input connector.

NORMal This choice specifies that the DATA CLOCK input connector requires a bit clock. The SYMBOL SYNC input connector requires a (one-shot or continuous) symbol sync signal.

***RST** NORM

Key Entry **Ext Data Clock Normal Symbol**

Remarks Both choices have no effect in internal clock mode. Refer to “:BBCLock” on [page 671](#) to select EXT as the data clock type.

:EREFerence

Supported E4438C with Option 402

[:SOURce] :RADio :GSM :EREFerence INT | EXT

[:SOURce] :RADio :GSM :EREFerence ?

This command selects either an internal or external bit-clock reference for the data generator.

***RST** INT

Key Entry **BBG Ref Ext Int**

Remarks If the EXT choice is selected, the external source's frequency value must be applied to the BASEBAND GEN REF IN rear panel connector. The external reference and external data clock are not applicable at the same time. If both are selected, then the external reference takes precedence.

:EREFerence:VALue

Supported E4438C with Option 402

[:SOURce] :RADio :GSM :EREFerence :VALue <val>

[:SOURce] :RADio :GSM :EREFerence :VALue ?

This command sets the expected bit-clock reference frequency value for an externally applied reference signal.

The variable <val> is expressed in units of hertz (Hz–MHz).

***RST** +1.30000000E+007

Range 2.5E5–1E8

Key Entry **Ext BBG Ref Freq**

Remarks The value specified by this command is effective only when you are using an external reference applied to the BASEBAND GEN REF IN rear panel connector.

Refer to “:EREFerence” on page 683 to select EXT (external source) as the reference for the bit-clock reference.

:FILTer

Supported E4438C with Option 402

```
[ :SOURCE ]:RADIO:GSM:FILTer RNYQuist | NYQuist | GAUSSian | RECTangle |
IS95 | IS95_EQ | IS95_MOD | IS95_MOD_EQ | AC4Fm | UGGaussian | "<user FIR>"
[ :SOURCE ]:RADIO:GSM:FILTer?
```

This command selects the pre-modulation filter type.

- IS95 This choice selects a filter that meets the criteria of the IS-95 standard.
- IS95_EQ This choice selects a filter which is a combination of the IS-95 filter (above) and the equalizer filter described in the IS-95 standard. This filter is only used for IS-95 baseband filtering.
- IS95_MOD This choice selects a filter that meets the criteria of the IS-95 error function (for improved adjacent channel performance) with lower passband rejection than the filter specified in the IS-95 standard.
- IS95_MOD_EQ This choice selects a filter which is a combination of the equalizer filter described in the IS-95 standard and a filter that meets the criteria of the IS-95 error function (for improved adjacent channel performance), with lower passband rejection.
- AC4Fm This choice selects a predefined Association of Public Safety Communications Officials (APCO) specified compatible 4-level frequency modulation (C4FM) filter.
- UGGaussian This choice selects a backwards compatible GSM Gaussian filter (Gaussian filter with a fixed BbT value of 0.300) for the ESG E44xxB Option UN3 or UN4.
- "<user FIR>" This variable is any filter file that you have stored into memory.

:IQ:SCALE

Supported E4438C with Option 402

```
[ :SOURCE ] :RADIo:GSM:IQ:SCALE <val>
```

```
[ :SOURCE ] :RADIo:GSM:IQ:SCALE?
```

This command sets the amplitude of the I/Q outputs for better adjacent channel power (ACP); lower scaling values equate to better ACP.

The variable <val> is expressed in units of percent.

***RST** +100

Range 1–200

Key Entry **I/Q Scaling**

Remarks This command has no effect with MSK or FSK modulation.

:MODulation:FSK[:DEVIation]

Supported E4438C with Option 402

```
[ :SOURCE ] :RADIo:GSM:MODulation:FSK[ :DEVIation ] <val>
```

```
[ :SOURCE ] :RADIo:GSM:MODulation:FSK[ :DEVIation ]?
```

This command sets the symmetric FSK frequency deviation value.

The variable <val> is expressed in units of Hertz and the maximum range value equals the current symbol rate value multiplied by four, limited to 20 MHz.

***RST** +4.00000000E+002

Range 0–2E7

Key Entry **Freq Dev**

Remarks To change the modulation type, refer to “:MODulation[:TYPE]” on page 687.

Refer to “:SRATE” on page 863 for a list of the minimum and maximum symbol rate values.

To set an asymmetric FSK deviation value, refer to the *E4428C/38C ESG Signal Generators User’s Guide* for more information.

:MODulation:MSK[:PHASe]

Supported E4438C with Option 402

```
[ :SOURCE ]:RADIO:GSM:MODulation:MSK[:PHASe] <val>  
[ :SOURCE ]:RADIO:GSM:MODulation:MSK[:PHASe]?

:MODulation:UFSK

Supported E4438C with Option 402

```
[ :SOURCE ]:RADIO:GSM:MODulation:UFSK "<file name>"  
[ :SOURCE ]:RADIO:GSM:MODulation:UFSK?
```

This command selects a user-defined FSK file from the signal generator memory.

Key Entry **User FSK**

Remarks The user-defined FSK file is held in signal generator memory until the command that selects user FSK as the modulation type is sent. See “[:MODulation\[:TYPE\]](#)” on page 687 to change the current modulation type.

See “[File Name Variables](#)” on page 13 for information on the file name syntax.

:MODulation:UIQ

Supported E4438C with Option 402

```
[ :SOURCE ]:RADIO:GSM:MODulation:UIQ "<file name>"  
[ :SOURCE ]:RADIO:GSM:MODulation:UIQ?
```

This command selects a user-defined I/Q file from the signal generator memory.

Key Entry **User I/Q**

Remarks The user-defined I/Q file is held in signal generator memory until the command that selects user I/Q as the modulation type is sent. Refer to “[:MODulation\[:TYPE\]](#)” on page 687 to change the current modulation type.

See “[File Name Variables](#)” on page 13 for information on the file name syntax.

Supported E4438C with Option 402

```
[ :SOURCE ]:RADIo:GSM:POLarity[ :ALL ] NORMal | INVerted
[ :SOURCE ]:RADIo:GSM:POLarity[ :ALL ]?
```

This command sets the rotation direction of the phase modulation vector.

NORMal This choice selects normal phase polarity.

INVerted This choice inverts the internal Q signal.

***RST** NORM

Key Entry **Phase Polarity Normal Invert**

Remarks This command is useful for lower sideband mixing applications.

:SECondary:RECall

Supported E4438C with Option 402

[:SOURCE] :RADio:GSM:SECondary:RECall

This command recalls the secondary frame configuration, overwriting the current state.

Key Entry **Recall Secondary Frame State**

Remarks To save a secondary frame state, refer to “:SECondary:SAVE” on page 688.

A secondary frame is not active until the secondary state is enabled. To activate a secondary frame, refer to “:SECondary[:STATE]” on page 689.

:SECondary:SAVE

Supported E4438C with Option 402

[:SOURCE] :RADio:GSM:SECondary:SAVE

This command saves the current frame configuration as the secondary frame with the filename GSM_SECONDARY_FRAME.

Key Entry **Save Secondary Frame State**

Remarks To recall the secondary frame state (saved in non-volatile signal generator memory), refer to “:SECondary:RECall” on page 688.

:SECondary:TRIGger[:SOURCE]

Supported E4438C with Option 402

[:SOURCE] :RADio:GSM:SECondary:TRIGger [:SOURCE] KEY | EXT | BUS
[:SOURCE] :RADio:GSM:SECondary:TRIGger [:SOURCE] ?

This command selects the type of triggering for the secondary frame.

KEY This choice enables triggering by pressing the front panel **Trigger** hardkey.

EXT This choice enables triggering using an externally applied signal at the PATT TRIG IN rear panel connector or the PATT TRIG IN 2 pin on the rear panel AUX I/O connector. To select the appropriate connector, refer to “:TRIGger[:SOURCE]:EXTernal[:SOURCE]” on page 708.

BUS This choice enables GPIB triggering using the *TRG or GET command or LAN and RS-232 triggering using the *TRG command.

Key Entry **Trigger Key Ext Bus**

[ :SOURCE ]:RADio:GSM:SLOT0|[1]|2|3|4|5|6|7:NORMal:ENCRyption?
```

This command creates and configures an encrypted data field for a normal timeslot.

- PN9 This choice uses a standard PN9 bit pattern. In the case of TDMA bursted data, a PN9 repeats continuously, running from one timeslot to the matching timeslot in the next frame.
- PN15 This choice uses a standard PN15 bit pattern. In the case of TDMA bursted data, a PN15 repeats continuously, running from one timeslot to the matching timeslot in the next frame.
- FIX4 This choice uses a fixed 4-bit pattern. The selected 4-bit pattern will be repeated as necessary to fill the selected data to set the desired pattern.
- User File This choice selects a user-supplied file to be used as the bit pattern. In the case of TDMA bursted data, enough bits must be supplied to fill the desired number of timeslots (left over bit are ignored). User files contain 8 data bits per byte.
- EXT This choice uses an external user signal as the modulating data stream. Serial data is supplied via the front panel DATA BNC connector.
- P4 This choice selects a data pattern with 4 1's followed by 4 0's. The selected pattern will be repeated as necessary to fill the selected data area.
- P8 This choice selects a data pattern with 8 1's followed by 8 0's. The selected pattern will be repeated as necessary to fill the selected data area.
- P16 This choice selects a data pattern with 16 1's followed by 16 0's. The selected pattern will be repeated as necessary to fill the selected data area.
- P32 This choice selects a data pattern with 32 1's followed by 32 0's. The selected pattern will be repeated as necessary to fill the selected data area.
- P64 This choice selects a data pattern with 64 1's followed by 64 0's. The selected pattern will be repeated as necessary to fill the selected data area.
- TCHFS This choice selects traffic channel with full rate speech (TCH/FS). This channel would be represented by a 26 frame multiframe with an SACCH and IDLE frame.

TCHHS	This choice selects traffic channel with half rate speech (TCH/HS). This is when a complex coding scheme is used that can allow two mobile stations to share the same timeslot. On an ESG this is represented by having one timeslot with a normal burst and user definable training sequence and the same timeslot on an alternate frame using a dummy burst. This represents the situation where TCH/HS is being used in one timeslot and the other timeslot is not being used.
CS-1	This choice selects the CS-1 channel, a packet data traffic channel with block type 1 as per 3GPP standard GSM 05.03.
CS4	This choice selects the CS-4 channel, a packet data traffic channel with block type 4 as per 3GPP standard GSM 05.03.
DMCS1	This choice selects the downlink MCS-1 channel, a packet data traffic channel with block type 5 as per 3GPP standard GSM 05.03.
UMCS1	This choice selects the uplink MCS-1 channel, a packet data traffic channel with block type 5 as per 3GPP standard GSM 05.03.
BCH1	This choice selects a non-combined broadcast channel. BCH1 can only be set in timeslot zero and can be the only multiframe type in a frame. This means that BCH1 will conflict with the following parameters: TCH/FS, TCH/HS, CS-1, CS-4, DMCS-1 and UMCS-1.
BCH2	This choice selects a combined broadcast channel. BCH2 can only be set in timeslot zero and can be the only multiframe type in a frame. This means that BCH2 will conflict with the following parameters: TCH/FS, TCH/HS, CS-1, CS-4, DMCS-1, and UMCS-1.

[ :SOURCE ] :RADio:GSM:SRATe <val>  
[ :SOURCE ] :RADio:GSM:SRATe?
```

This command sets the transmission symbol rate. Symbol rate is the bit rate divided by the bits per symbol. A change in the symbol rate affects the bit rate. Refer to “:BRATe” on page 672 for information on bit rate.

The variable <val> is expressed in units of symbols per second (sps–Mspm) and the maximum symbol rate depends on the filter. Refer to “:FILTer” on page 684 for minimum filter symbol width.

NOTE When using multiframe, limit the symbol rate to no more than 271 kspm. Although higher rates may work, they are not supported.

The filter may have to be truncated down to 32 or 16 symbols wide to achieve the highest symbol rate. The signal generator’s internal filters are not truncated below their minimum filter length and user-defined FIR filters are not truncated. If the filter cannot be truncated then the symbol rate is limited to the maximum rate of the narrowest filter size possible.

The relative timing of the modulated data, as well as the actual filter response is affected when the filter is truncated.

When the symbol rate changes, the ESG reconfigures the baseband generator. The time required to reconfigure the baseband generator is inversely proportional to the symbol rate: lower symbol rates require more time.

To change the modulation type, refer to “:MODulation[:TYPE]” on page 687.

This commands selects the waveform’s response to a trigger signal while using the continuous trigger mode. See “**:TRIGger:TYPE**” on page 704 for more information on triggering modes.

The following list describes the waveform’s response to each of the command choices:

FREE Turning the ARB format on immediately triggers the waveform. The waveform repeats until the format is turned off or another trigger or waveform is selected.

TRIGger The waveform waits for a trigger before play begins. When the waveform receives the trigger, it plays continuously until you turn the format off, select another trigger, or choose another waveform file.

RESet The waveform waits for a trigger before play begins. When the waveform receives the trigger, it plays continuously. Subsequent triggers reset the waveform to the beginning. For a waveform sequence, this means to the beginning of the first segment in the sequence.

:TRIGger:TYPE:GATE:ACTive

Supported E4438C with Option 402

```
[ :SOURCE ] :RADio:GSM:TRIGger:TYPE:GATE:ACTive LOW|HIGH  
[ :SOURCE ] :RADio:GSM:TRIGger:TYPE:GATE:ACTive?
```

This command selects the active state (gate polarity) of the gate while using the gating trigger mode.

The LOW and HIGH selections correspond to the low and high states of an external trigger signal. For example, when you select HIGH, the active state occurs during the high of the trigger signal. When the active state occurs, the ESG stops the waveform playback at the last played sample point, then restarts the playback at the next sample point when the inactive state occurs. For more information on triggering and to select gating as the trigger mode, see “:TRIGger:TYPE” on page 704.

The following list describes the signal generator’s gating behavior for the external trigger signal polarity selections:

LOW	The waveform playback stops when the trigger signal goes low (active state) and restarts when the trigger signal goes high (inactive state).
HIGH	The waveform playback stops when the trigger signal goes high (active state) and restarts when the trigger signal goes low (inactive state).

This command sets the trigger source.

For more information on triggering, see “:TRIGger:TYPE” on page 704. The following list describes the command choices:

KEY	This choice enables manual triggering by pressing the front-panel Trigger hardkey.
EXT	An externally applied signal triggers the waveform. This is the only choice that works with gating. The following conditions affect an external trigger: <ul style="list-style-type: none">• The input connector selected for the trigger signal. You have a choice between the rear-panel PATTERN TRIG IN connector or the PATT TRIG IN 2 pin on the rear-panel AUXILIARY I/O connector. To make the connector selection, see “:TRIGger[:SOURCE]:EXTernal[:SOURCE]” on page 708.

:TRIGger[:SOURCE]:EXTernal:DELay

Supported E4438C with Option 402

This command sets the number of bits to delay the signal generator's response to an external trigger.

The bit delay is a delay between when the ESG receives the trigger and when it responds to the trigger. The delay uses the clocks of the bit-clock to time the delay. After the ESG receives the trigger and the set number of delay bits (clocks) occurs, the ESG transmits the data pattern.

The delay occurs after you enable the state. See “:TRIGger[:SOURCE]:EXTernal:DELay:STATe” on page 707. You can set the number of bits either before or after enabling the state.

For more information on configuring an external trigger source and to select external as the trigger source, see “:TRIGger[:SOURCE]” on page 705.

[ :SOURCE ] :RADIo:GSM:TRIGger [ :SOURCE ] :EXtErnal:DELay:FINe?
```

This command sets the fine trigger delay for synchronizing the ESG.

The fine delay value is added to the coarse delay setting (see “:TRIGger[:SOURCE]:EXtErnal:DELay” on page 706).

The variable <val> is expressed as a fraction of one symbol.

[ :SOURCE ] :RADIo:GSM:TRIGger [ :SOURCE ] :EXtErnal:SLOPe?
```

This command sets the polarity for an external trigger signal while using the continuous, single triggering mode. To set the polarity for gating, see “:TRIGger:TYPE:GATE:ACTive” on page 705.

The POSitive and NEGative selections correspond to the high (positive) and low (negative) states of the external trigger signal. For example, when you select POSitive, the waveform responds (plays) during the high state of the trigger signal. When the ESG receives multiple trigger occurrences when only one is required, the signal generator uses the first trigger and ignores the rest.

HSDPA over W-CDMA Subsystem—Option 418 ([:SOURCE]:RADio:WCDMa:HSDPa[:BBG])

The commands in this subsystem support the remote functionality of the Signal Studio for HSDPA over W-CDMA software. For a complete description of terms and HSDPA functionality, refer to the software online help. Commands used for configuring the carrier signal and performing general signal generator functions are located in different SCPI command subsystems found within the SCPI Command Reference volumes.

There are two methods to determine the SCPI commands for a setup. One method is to locate each individual command listed in this subsystem and others within the *SCPI Command Reference* volumes. The other method is to use the HSDPA software UI. After downloading a UI setup to the ESG, the software lets you export a SCPI file that contains the commands used in the UI setup. Refer to the HSDPA software online help for information on this feature.

File Overview

The ESG's memory catalog (signal generator memory) uses several file types, each assigned with a unique syntax to recall the file. This section provides information on using files with SCPI commands.

This subsystem uses the following two command variables to represent two different file types stored in signal generator memory:

"<file name>" Bit file

"<user FIR>" FIR file

For more information on managing and using files, refer to the resources in the following list:

- [“File Name Variables” on page 13](#) for information on the file name syntax
- [Table 1-4 on page 14](#) for a listing of the different file types
- *E4428C/38C ESG Signal Generators Programming Guide* for information on downloading bit files
- *E4428C/38C ESG Signal Generators User's Guide* for information on creating and editing bit and FIR files using the signal generator

NOTE To create or edit HSDPA files with the ESG, use the table editors located in the Real Time W-CDMA modulation format. Access the bit table editor through the Data field and then select **User File** as the data source. Access the FIR filter table editor through the Filter field and then select **Define User FIR** as the filter type.

HSDPA over W-CDMA Subsystem—Option 418 [:SOURCE]:RADIO:WCDMA:HSDPA[:BBG]

The HSDPA software interface downloads user files (bit and FIR file types) to the ESG when **USER** is the software data or filter type selection. You can see these files on the ESG by pressing **Utility > Memory Catalog > Catalog Type** and then selecting the file type, or by using the SCPI commands located in the Memory subsystem. User files are located on the ESG in the following directory path: /USER/<file type directory>/<file name>. **Table 9-1** shows the software naming convention for the different files created by the HSDPA software.

Managing ESG Setting Conflicts and Error Messages

The ESG reports setting conflicts as error messages. When a setting conflict occurs, an error number and a brief message appear at the bottom of the ESG display. You can view the full text of the error message in either of two ways: by using the front panel of the ESG, or by executing SCPI commands.

Front Panel Press **Utility > Error Info**.

SCPI Execute the SCPI error commands described in the “[System Subsystem \(:SYSTem\)](#)” on page 152.

For more information on Error messages, refer to the *E4428C/38C ESG Signal Generators Programming Guide* for remote viewing or the *E4428C/38C ESG Signal Generators User’s Guide* for front panel viewing.

:DLINK:APPLY

```
[ :SOURCE ] : RADio : WCDMa : HSDPa [ :BBG ] : DLINK : APPLY
[ :SOURCE ] : RADio : WCDMa : HSDPa [ :BBG ] : DLINK : APPLY?
```

This command applies changes to the channel setup and data for active downlink physical and transport channels, immediately starting the channel coding generation process. A progress bar may appear on the ESG display indicating that the new signal parameters are being applied. Signal parameters are also applied when the HSDPA modulation format is turned on.

Use the query to determine whether or not execution of this command is required. It returns the following responses:

```
0                      Command execution is not required.
1                      Command execution is required.
```

NOTE The apply query response is valid only when downlink HSDPA format is active.

The apply function will not work if there is a conflict with range values and coupled parameters. For example, if all the physical channel codes are not orthogonal to each other, the new settings are not applied to the signal when this command is executed. Resolve any conflicts before reapplying the changes. The ESG reports an error when conflicts occur.

:DLINK:AWGN:CN

Supported E4438C with Option 418

Remarks Setting the command parameter while the signal is active also requires executing the apply command. Refer to “:DLINK:APPLY” on page 712.

 The channel code is coupled with the slot format and all other physical channel codes. Set the channel code to not exceed limits of the slot format and ensure that all physical channel codes are orthogonal to each other. If any channel codes fail to meet this criteria, the apply function (downlink apply command) will not work.

```

```
[ :SOURCE ] : RADIO : WCDMA : HSDPA [ : BBG ] : DLINK : DPCH : SFORmat ?

This command configures the downlink DPCH slot format.

***RST** 0

Range 0–16

Remarks Setting the command parameter while the signal is active also requires executing the apply command. Refer to “[:DLINK:APPLY](#)” on page 712.

The slot format is coupled with the channel code, so a change in one value may require a change in the other. If the channel code exceeds the limits of the slot format or if it is not orthogonal with all other physical channel codes, the apply function (downlink apply command) will not work.

:DLINK:DPCH:SSCOffset

```

```
[ :SOURCE ] :RADIO:WCDMA:HSDPA[:BBG]:DLINK:DPCH:TFCI?
```

This command sets the TFCI 10-bit pattern for the downlink DPCH.

The variable <val> accepts values in binary, hexadecimal, or decimal format, however the query returns only binary values.

***RST** +0

Range 0–1023

Remarks Setting the command parameter while the signal is active also requires executing the apply command. Refer to [“:DLINK:APPLY” on page 712](#).

Setting the TFCI bits is optional; they describe the type of service in use, for example voice or data.

:DLINK:DPCH:TOFFset

Supported E4438C with Option 418

```
[ :SOURCE ] :RADIO:WCDMA:HSDPA[:BBG]:DLINK:DPCH:TOFFset <val>
```

```
[ :SOURCE ] :RADIO:WCDMA:HSDPA[:BBG]:DLINK:DPCH:TOFFset?

```

```
[ :SOURCE ] :RADio:WCDMa:HSDPa [ :BBG ] :DLINK:DPCH:TPC:PATtern?
```

This command configures the downlink DPCH TPC pattern for increasing or decreasing, or increasing and decreasing the UE power level.

UDOWn The TPC pattern repetitively steps up and down.

DUP The TPC pattern repetitively steps down and up.

UALL The TPC pattern consecutively steps up.

DALL The TPC pattern consecutively steps down.

"<file name>" This variable represents a TPC pattern file stored in signal generator memory. The pattern must contain at least one bit or the apply function (downlink apply command) will not work. Refer to “[File Overview](#)” on page 710 for more information on files.

***RST** UDOW

Remarks Setting the command parameter while the signal is active also requires executing the apply command. Refer to “[:DLINK:APPLY](#)” on page 712.

Each step in a TPC pattern signals an increase or decrease of 1 dB in the UE output power level.

:DLINK:DPCH:TRPosition

Supported E4438C with Option 418

```
[ :SOURCE ] :RADIo:WCDMA:HSDPa[ :BBG ] :DLINK:DPCH:TRPosition?

[ :SOURCE ] :RADIo:WCDMa:HSDPa [ :BBG ] :DLINK:HSBurst?
```

This command sets the handling of the off slot periods for the downlink HSDPA channels.

ON|1 This choice turns off the ESG ALC feature and uses DTX during the off slots.

OFF|0 This choice continuously transmits the HSDPA channels filling the off slots with dummy bits.

***RST** 0

[:SOURCE]:RADio:WCDMa:HSDPa[:BBG]:DLINK:HSDPa:AMC:CPATtern?

This command sets a simulated UE CQI pattern that determines HSDPA1's response including the modulation type (QPSK or 16QAM) and the constellation version for 16QAM per the set UE category.

ALL_<val> These choices configure a simulated UE ACK response with a single CQI value for 1,280 subframes.

"<file name>" This variable represents a CQI pattern file stored in signal generator memory. Create this file either by using the AMC CQI pattern Data Type Entry window and downloading the file to the ESG, or by using the ESG Real Time W-CDMA table editor to create a bit file with the following bit patterns:

- CQI value of 1–30 using an 8-bit pattern, 00000001 to 00011110
- DTX is represented by 11111111

HSDPA over W-CDMA Subsystem—Option 418 ([:SOURce]:RADio:WCDMa:HSDPa[:BBG])

In the file, do not use delimiters between subframes; enter subframe bits as a binary string.

When creating a pattern, you can determine the number of active subframes from 1 to 1,280. The subframes are numbered 0 to 1,279. A subframe is active when it contains 8-bits. If a subframe contains at least 1-bit but less than 8-bits, the apply function (downlink apply command) will not work.

```

This command sets the HSDPA1 feedback control type.

NONE This choice turns off the feedback control.

HARQ This choice provides UE feedback using the HARQ process. This selection provides the capability of configuring a simulated UE ACK/NACK response, setting the maximum number of HARQ transmissions, and providing up to eight different RV parameters.

AMC This choice provides UE feedback using adaptive modulation coding. This selection provides the capability of configuring a simulated UE CQI response aligned with a UE category input.

"<file name>"
[:SOURCE]:RADIO:WCDMA:HSDPA[:BBG]:DLINK:HSDPA:HARQ:APATtern?
```

This command sets a simulated UE ACK/NACK pattern that determines HSDPA1's HARQ response.

ACK_ALL This choice configures 1,280 subframes for a simulated ACK only response.

"<file name>" This variable represents an ACK pattern file stored in signal generator memory. Create this file either by using the HARQ ACK/NACK pattern Data Type Entry window and download the file to the ESG, or by using the ESG Real Time W-CDMA table editor to create a bit file with the following bit patterns:

- An ACK response is represented by 00.
- A NACK response is represented by 01.
- DTX is represented by 10.

In the file, do not use delimiters between subframes; enter subframe bits as a binary string.

When creating a pattern, you can determine the number of active subframes from 1 to 1,280. The subframes are numbered 0 to 1,279. A subframe is active when it contains 2-bits. If a subframe contains only 1-bit, the apply function (downlink apply command) will not work.

[:SOURCE]:RADIO:WCDMA:HSDPA[:BBG]:DLINK:HSDPA:HARQ:MNHTrans?
```

This command configures the HSDPA1 maximum number of HARQ transmissions for the HARQ function.

HSDPA over W-CDMA Subsystem—Option 418 ([:SOURCE]:RADIO:WCDMA:HSDPA[:BBG])

Use the command for UE performance testing or for specifying an arbitrary number of HARQ transmissions. When the software encounters a UE NACK response that is set by the HARQ ACK pattern command (see “:DLINK:HSDPA:HARQ:APATtern”), the software re-sends the same packet payload until either the maximum number of HARQ transmissions is reached or a simulated ACK response is encountered. Whenever the software re-sends the same packet payload, it also transmits another RV parameter that is configured by the RV sequence command.

***RST** 1

```

```
[ :SOURCE ] :RADIO:WCDMA:HSDPA[:BBG]:DLINK:HSDPA:HARQ:RVSequence[1]|2|3|4|5|6|7|8?
```

This command sets the HSDPA1 RV parameter sequence used with the maximum number of HARQ transmission setting. You can set eight different RV parameters for the RV sequence.

During simulated ACK responses, the software uses the first RV parameter. When the software encounters a simulated NACK response, it sends data using the next RV parameter. The software keeps incrementing to the next RV parameter in the sequence until it receives a simulated ACK response. When the software encounters an ACK response, the RV sequence resets to the first RV parameter.

```

This command selects which method sets the inter-TTI pattern for the selected HSDPA.

FIX This choice enables a static pattern. To configure the pattern, see “[:DLINK:HSDPa\[1\]|2|3|4:ITTI](#)”.

"<file name>" This variable represents an inter-TTI pattern file stored in signal generator memory. Creating and using a file provides the option of having a flexible inter-TTI pattern where you can vary the distance between HS-PDSCH transmissions. To create a file, use one or a combination of the following methods:

- To create a file internal to the software, use the inter-TTI user pattern editor.
- To create a file external to the software, use a text editor.

For more information, see the Signal Studio for HSDPA over W-CDMA software online help.

The file name follows the form <project name>–ITTIx, where 'x' is the HSDPA number from one to four. The inter-TTI pattern must contain at least one bit, or the apply function (downlink apply command) will not work.

```
[ :SOURCE ] :RADIO:WCDMA:HSDPA[:BBG]:ULINK:APPLY
[ :SOURCE ] :RADIO:WCDMA:HSDPA[:BBG]:ULINK:APPLY?
```

This command applies changes to the channel setup and data for active physical and transport channels, immediately starting the channel coding generation process. A progress bar may appear on the ESG display indicating that the new signal parameters are being applied. Turning on the HSDPA modulation format also applies the signal parameters.

The query response determines whether or not there is a need to execute the command. It returns the following responses:

0 Command execution is not required.

1 Command execution is required.

NOTE The query response is only valid while the HSDPA format is active.

When there is a setting conflict (ESG reports an error) with the range values or coupled parameters, or both, executing the uplink apply command does not apply the new changes until the conflicts are resolved. After resolving the setting conflicts, execute the command to apply the new settings.

:ULINK:FILTer:BBT

Supported E4438C with Option 418

```
[ :SOURCE ] : RADio : WCDMa : HSDPa [ :BBG ] : ULINK : FILTer : BBT <val>
[ :SOURCE ] : RADio : WCDMa : HSDPa [ :BBG ] : ULINK : FILTer : BBT?
```

This command sets the uplink Gaussian filter BbT value.

***RST** +5.00000000E-001

Range 0–1

Remarks Setting the command parameter while the signal is active also requires executing the apply command. Refer to “:ULINK:APPLY” on page 749.

Executing this command while a filter other than the Gaussian filter is selected changes the parameter value, but it is not used by the signal generator until the Gaussian filter is selected.

:ULINK:FILTer:CHANnel

Supported E4438C with Option 418

```
[ :SOURCE ] : RADio : WCDMa : HSDPa [ :BBG ] : ULINK : FILTer : CHANnel EVM|ACP
[ :SOURCE ] : RADio : WCDMa : HSDPa [ :BBG ] : ULINK : FILTer : CHANnel?
```

This command optimizes an uplink filter for minimized EVM or for minimized ACP.

EVM This choice provides the most ideal passband.

ACP This choice improves stopband rejection for the root Nyquist and Nyquist filters.

***RST** EVM

Remarks Setting the command parameter while the signal is active also requires executing the apply command. Refer to “:ULINK:APPLY” on page 749.

To change the filter selection, refer to “:ULINK:FILTer” on page 763.

:ULINK:FOFFset

Supported E4438C with Option 418

```
[ :SOURCE ]:RADIO:WCDMA:HSDPA[:BBG]:ULINK:FOFFset <val>
[ :SOURCE ]:RADIO:WCDMA:HSDPA[:BBG]:ULINK:FOFFset?
```

This command sets the CFN starting frame within the SFN by setting a frame offset relative to SFN zero.

***RST** 0

Range 0–255

Remarks The command adds delays to the internal frame counter by specifying the starting frame number count. When the frame offset (FOFFset) is set to 0, the frame number starts at the system sync trigger. When the FOFFset is set to 2, the signal generator triggers two frames after the SFN RST. For additional information, refer to 3GPP TS25.402 for SFN and CFN relationship.

:ULINK:HSDPcch:APATtern

Supported E4438C with Option 418

```
[ :SOURCE ]:RADIO:WCDMA:HSDPA[:BBG]:ULINK:HSDPcch:APATtern NONE|ACK_ALL|
"<file name>"
[ :SOURCE ]:RADIO:WCDMA:HSDPA[:BBG]:ULINK:HSDPcch:APATtern?
```

This command sets the HS-DPCCH ACK/NACK transmission pattern for each of the 1280 sub-frames that make up the pattern.

NONE This choice sets all subframes to DTX.

"<file name>" This variable represents an ACK pattern file stored in signal generator memory. The file must contain 2,560-bits of data (2-bits per subframe) or the apply function (uplink apply command) will not work.

- An ACK response is represented by 00.
- A NACK response is represented by 01.
- DTX is represented by 10.

Enter the 2,560-bits into the file as a binary string.

Refer to [“File Overview” on page 710](#) for more information on files.

***RST** NONE

Remarks Setting the command parameter while the signal is active also requires executing the apply command. Refer to [“:ULINK:APPLY” on page 749](#).

HSDPA over W-CDMA Subsystem—Option 418 ([:SOURCE]:RADIO:WCDMA:HSDPA[:BBG])**:ULINK:HSDPcch:APOWer**

```

```
[ :SOURCE ] :RADIO:WCDMA:HSDPA[ :BBG ] :ULINK:HSDPcch:APOWer?
```

This command sets the HS-DPCCH ACK part power level.

The variable <val> is expressed in decibels (dB).

***RST** -2.69000000E+000

Range -40 to 0

Remarks Setting the command parameter while the signal is active also requires executing the apply command. Refer to “:ULINK:APPLY” on page 749.

:ULINK:HSDPcch:CCODE

Supported E4438C with Option 418

```
[ :SOURCE ]RADIO:WCDMA:HSDPA[ :BBG ] :ULINK:HSDPcch:CCODE?

```
"<file name>"
```

```
[ :SOURCE ] :RADIO:WCDMA:HSDPA[ :BBG ] :ULINK:HSDPcch:CPATtern?
```

This command sets the HS-DPCCH CQI transmission pattern for each of the 1280 sub-frames that make up the pattern.

NONE This choice sets all subframes to DTX.

"<file name>" This variable represents a bit file stored in signal generator memory. The file must contain 10,240-bits of data (8-bits per subframe) or the apply function (uplink apply command) will not work.

- A CQI response range is one to thirty using 8-bits, 00000001 to 00011110.
- DTX is represented by 11111111.

Enter the 10,240-bits into the file as a binary string.

Refer to “File Overview” on page 710 for more information on files.

[ :SOURCE ] :RADio:WCDMa:HSDPa[:BBG]:ULINK:HSDPcch[:STATe]?
```

This command turns the HS-DPCCH on or off.

***RST** 1

Remarks Setting the command parameter while the signal is active also requires executing the apply command. Refer to “:ULINK:APPLY” on page 749.

:ULINK:POLarity

Supported E4438C with Option 418

```
[ :SOURCE ] :RADio:WCDMa:HSDPa[:BBG]:ULINK:POLarity NORMal|INVerted|INVert
[ :SOURCE ] :RADio:WCDMa:HSDPa[:BBG]:ULINK:POLarity?
```

This command selects the phase polarity of the uplink signal.

NORMal This choice selects normal polarity.

INVerted, INVert These choices perform the same function, inverting the internal Q signal.

***RST** NORM

Remarks Setting the command parameter while the signal is active also requires executing the apply command. Refer to “:ULINK:APPLY” on page 749.

:ULINK:SCRamblecode

Supported E4438C with Option 418

This command sets the uplink DPCH delay, measured in slots.

***RST** +0

Range 0–119

Remarks Calculate the delay between downlink and uplink DPCH, in slots, using the following formulas. Total Delay = (T0) + (TOFFset) + ((SDElay) * 2560 chips)

- T0 = 1024 chips
- TOFFset is set by “:ULINK:TOFFset” on page 770

Slot Delay = (Total Delay – T0) / 2560

:ULINK:SFNRst:POLarity

NEGative
[ :SOURce ]:RADio:WCDMa:HSDPa[ :BBG ]:ULINK:SFNRst:POLarity?
```

This command sets the polarity of the system frame number reset signal for the uplink synchronization source.

POSitive This choice sets the signal to trigger when the trigger signal is high.

NEGative This choice sets the signal to trigger when the trigger signal is low.

***RST** POS

Remarks This command is applicable only when SFN_RST is the sync source selection. See “:ULINK:SYNC[:SOURce]” on page 770 for selecting the sync source.

HSDPA over W-CDMA Subsystem—Option 418 ([:SOURCE]:RADIO:WCDMA:HSDPA[:BBG])**:ULINK:SYNC:MODE****Supported** E4438C with Option 418

```
[ :SOURCE ] :RADIO:WCDMA:HSDPA[ :BBG ] :ULINK:SYNC:MODE SINGLE | CONTINUOUS
[ :SOURCE ] :RADIO:WCDMA:HSDPA[ :BBG ] :ULINK:SYNC:MODE?

Supported E4438C with Option 402

```
[ :SOURce ] :RADio [ :NADC ] :ALPha <val>  
[ :SOURce ] :RADio [ :NADC ] :ALPha?
```

This command changes the Nyquist or root Nyquist filter's alpha value.

The filter alpha value can be set to a minimum level (0), a maximum level (1), or in between by using fractional numeric values (0.001–0.999).

***RST** +3.50000000E–001

Range 0.000–1.000

Key Entry **Filter Alpha**

Remarks This command is effective only after choosing a root Nyquist or Nyquist filter; it does not effect other types of filters. To change the current filter type, refer to [“:FILTer” on page 785](#).

:BBCLock

Supported E4438C with Option 402

```
[ :SOURce ] :RADio [ :NADC ] :BBCLock INT[1] | EXT[1]  
[ :SOURce ] :RADio [ :NADC ] :BBCLock?
```

This command toggles the data (bit) clock input to the baseband generator board to either internal or external. This command is independent in each mode and works for both non-burst (continuous) and burst modes. This allows for a matrix of selections between burst/non-burst, internal/external data generation, internal/external data clock, and external bit/symbol data clock.

INT[1] This choice selects the signal generator internal data clock.

EXT[1] This choice selects an external data clock input.

***RST** INT

Key Entry **BBG Data Clock Ext Int**

Remarks A data clock or continuous symbol sync input must be supplied when external mode is used.

:BBT

Supported E4438C with Option 402

```
[ :SOURCE ] :RADio [ :NADC ] :BBT <val>  
[ :SOURCE ] :RADio [ :NADC ] :BBT?
```

This command changes the bandwidth-multiplied-by-bit-time (BbT) filter parameter.

The filter BbT value can be set to the maximum level (1) or in between the minimum level (0.100) and maximum level by using fractional numeric values (0.101–0.999).

***RST** +5.00000000E–001

Range 0.100–1.000

Key Entry Filter BbT

Remarks This command is effective only after choosing a Gaussian filter. It does not have an effect on other types of filters. To change the current filter type, refer to [“:FILTer” on page 785](#).

:BRATe

Supported E4438C with Option 402

```
[ :SOURCE ] :RADio [ :NADC ] :BRATe <val>  
[ :SOURCE ] :RADio [ :NADC ] :BRATe?
```

This command sets the bit rate in bits per second (bps–Mbps). The maximum bit rate is dependent on the modulation type and filter as shown in the following tables

The IQ digital data stream is shaped by a FIR filter. The filter length and associated latency and frequency response are dependent on the bit rate as shown in the following tables. The signal generator selects a filter length.

For higher bit rates, the FIR filter length may be truncated (if the minimum filter size allows it) which will impact the relative timing of the modulated data, as well as the actual filter response (see the symbol rate command [“:SRATe” on page 863](#)). Refer to [“:FILTer” on page 785](#) for information on filter symbol widths.

To change the modulation type, refer to [“:MODulation\[:TYPE\]” on page 788](#).

When the bit rate is changed, the ESG reconfigures the baseband generator. The time required to reconfigure the baseband generator is inversely proportional to the bit rate: lower bit rates require more time.

:BURSt:PN9

Supported E4438C with Option 402

[:SOURCE] :RADIO [:NADC] :BURSt :PN9 NORMal | QUICk
 [:SOURCE] :RADIO [:NADC] :BURSt :PN9?

This command controls the software PN9 generation.

NORMal This choice produces a maximum length PN9 sequence.

QUICk This choice produces a truncated PN9 sequence.

***RST** NORM

Key Entry **PN9 Mode Normal Quick**

Remarks Use Normal mode for bit-error-rate tests where a maximum length PN9 sequence is required.

Key Entry **Rise Time**

Remarks The setting enabled by this command is not affected by signal generator power-on, preset, or *RST.

To change the modulation type, refer to “:MODulation[:TYPE]” on page 788. Refer to “:SRATE” on page 863 for a list of the minimum and maximum symbol rate values.

“:BURSt:SHAPE:RISE:TIME” on page 779 performs the same function; in compliance with the SCPI standard, both commands are listed.

For concept information on burst shaping, refer to the *E4428C/38C ESG Signal Generators User’s Guide*.

:BURSt[:STATe]

Supported E4438C with Option 402

```
[ :SOURce ] :RADio [ :NADC ] :BURSt [ :STATe ] ON | OFF | 1 | 0
```

```
[ :SOURce ] :RADio [ :NADC ] :BURSt [ :STATe ]?
```

This command enables or disables the burst function.

ON (1) This choice enables the transmission of framed data. If all timeslots which are switched on are up traffic channels or custom, you will be bursting the timeslots that are on; there will be no RF carrier during the off timeslots.

If you have switched on any timeslot that you have configured as a down traffic channel, the RF carrier is not switched off between any of the timeslots. The off timeslots are transmitted as a continuous series of ones for the time period of the off timeslots.

OFF (0) This choice enables the transmission of unframed data.

***RST** 0
Key Entry **Data Format Pattern Framed**

:BURSt:SHAPE[:TYPE]

Supported E4438C with Option 402

```
[ :SOURce ] :RADio [ :NADC ] :BURSt :SHAPE [ :TYPE ] SINE | "<file name>"
[ :SOURce ] :RADio [ :NADC ] :BURSt :SHAPE [ :TYPE ] ?
```

This command specifies the burst shape as either SINE or a user-defined file ("<file name>").

SINE This choice selects a state that is defined by the burst rise and fall *RST values, as the default burst shape type.

"<file name>" This choice selects a user designated file from signal generator memory (non-volatile).

***RST** SINE

Key Entry **Sine User File**

:CHANnel

Supported E4438C with Option 402

```
[ :SOURce ] :RADio [ :NADC ] :CHANnel EVM | ACP
[ :SOURce ] :RADio [ :NADC ] :CHANnel ?
```

This command optimizes the Nyquist and root Nyquist filters to minimize error vector magnitude (EVM) or to minimize adjacent channel power (ACP).

EVM This choice provides the most ideal passband.

ACP This choice improves stopband rejection.

***RST** ACP

Key Entry **Optimize FIR For EVM ACP**

Remarks To change the current filter type, refer to [“:FILTer” on page 785](#).

:DATA

Supported E4438C with Option 402

```
[ :SOURCE ] :RADIO [ :NADC ] :DATA PN9 | PN11 | PN15 | PN20 | PN23 | FIX4 | "<file name>" |
EXT | P4 | P8 | P16 | P32 | P64 | PRAM
[ :SOURCE ] :RADIO [ :NADC ] :DATA?
```

This command sets a pseudo-random number sequence, 4-bit pattern, sequence of 1's and 0's, data from an external source, or a user file as the data pattern for unframed transmission.

***RST** PN23

Key Entry	PN9	PN11	PN15	PN20	PN23	FIX4	User File	Ext
	4 1's & 4 0's	8 1's & 8 0's	16 1's & 16 0's	16 1's & 16 0's	32 1's & 32 0's		32 1's & 32 0's	
	64 1's & 64 0's	PRAM File						

Remarks Refer to [“File Name Variables” on page 13](#) for information on the file name syntax.

:DATA:PRAM

Supported E4438C with Option 402

```
[ :SOURCE ] :RADIO [ :NADC ] :DATA :PRAM "<file_name>"
[ :SOURCE ] :RADIO [ :NADC ] :DATA :PRAM?
```

This command selects a pattern RAM (PRAM) file as the pattern data type for the NADC (North American Digital Cellular) format.

"<file_name>" This variable designates the PRAM file in WFM1. Refer to [“File Name Variables” on page 13](#) for information on the file name syntax.

Key Entry **PRAM File**

Remarks Selecting this data source forces the burst source to INTERNAL to allow framing control. The PRAM file must reside in the signal generator's volatile memory (WFM1) in order to be accessed by this command. For more information refer to [“:DATA:PRAM:FILE:BLOCK” on page 110](#)

:DATA:FIX4

Supported E4438C with Option 402

```
[ :SOURCE ] :RADIO [ :NADC ] :DATA :FIX4 <val>  
[ :SOURCE ] :RADIO [ :NADC ] :DATA :FIX4?
```

This command sets the binary, 4-bit repeating sequence data pattern for unframed transmission according to the modulation type, symbol rate, filter, and burst shape selected for the NADC (North American Digital Cellular) modulation format.

***RST** #B0000

Range #B0000–#B1111 or 0–15

Key Entry **FIX4**

Remarks FIX4 must already be defined as the data type.

:DEFAULT

Supported E4438C with Option 402

```
[ :SOURCE ] :RADIO [ :NADC ] :DEFAULT
```

This command returns all of the NADC (North American Digital Cellular) modulation format parameters to factory settings. It does not affect any other signal generator parameters.

Key Entry **Restore NADC Factory Default**

:EDATa:DELaY

Supported E4438C with Option 402

```
[ :SOURCE ] :RADIO [ :NADC ] :EDATa :DELaY?
```

This query returns the amount of delay (in symbols) from the external data input to the beginning of the symbol on the I OUT and Q OUT rear panel connectors and the front panel RF OUTPUT connector.

Remarks When the format is turned off, the delay value is unchanged; the query will return the same delay value if the format is on or off.

:EDCLock

Supported E4438C with Option 402

[:SOURce] :RADio [:NADC] :EDCLock SYMBOL | NORMAl

[:SOURce] :RADio [:NADC] :EDCLock?

This command sets the external data clock use.

SYMBOL This choice specifies that a continuous symbol clock signal must be provided to the SYMBOL SYNC input connector.

NORMAl This choice specifies that the DATA CLOCK input connector requires a bit clock. The SYMBOL SYNC input connector requires a (one-shot or continuous) symbol sync signal.

***RST** NORM

Key Entry Ext Data Clock Normal Symbol

Remarks Both choices have no effect in internal clock mode. Refer to “:BBCLock” on page 772 to select EXT as the data clock type.

:EREFerence

Supported E4438C with Option 402

[:SOURce] :RADio [:NADC] :EREFerence INT | EXT

[:SOURce] :RADio [:NADC] :EREFerence?

This command selects either an internal or external bit-clock reference for the data generator.

***RST** INT

Key Entry BBG Ref Ext Int

Remarks If the EXT choice is selected, the external source’s frequency value must be applied to the BASEBAND GEN REF IN rear panel connector. The external reference and external data clock are not applicable at the same time. If both are selected, then the external reference takes precedence.

Refer to, “:EREFerence:VALue” on page 785 to enter the external reference frequency setting.

:EREFerence:VALue

Supported E4438C with Option 402

```
[ :SOURCE ] :RADIO [ :NADC ] :EREFerence:VALue <val>
```

```
[ :SOURCE ] :RADIO [ :NADC ] :EREFerence:VALue?
```

This command sets the expected bit-clock reference frequency value for an externally applied reference signal.

The variable <val> is expressed in units of hertz (Hz–MHz).

***RST** +1.30000000E+007

Range 2.5E5–1E8

Key Entry **Ext BBG Ref Freq**

Remarks The value specified by this command is effective only when you are using an external reference applied to the BASEBAND GEN REF IN rear panel connector.

Refer to “:EREFerence” on page 784 to select EXT (external source) as the reference for the bit-clock.

:FILTer

Supported E4438C with Option 402

```
[ :SOURCE ] :RADIO [ :NADC ] :FILTer RNYQuist | NYQuist | GAUSSian | RECTangle | IS95 |
```

```
IS95_EQ | IS95_MOD | IS95_MOD_EQ | AC4Fm | UGGaussian | "<user FIR>"
```

```
[ :SOURCE ] :RADIO [ :NADC ] :FILTer?
```

This command selects the pre-modulation filter type.

IS95 This choice selects a filter that meets the criteria of the IS-95 standard.

IS95_EQ This choice selects a filter which is a combination of the IS-95 filter (above) and the equalizer filter described in the IS-95 standard. This filter is only used for IS-95 baseband filtering.

IS95_MOD This choice selects a filter that meets the criteria of the IS-95 error function (for improved adjacent channel performance) with lower passband rejection than the filter specified in the IS-95 standard.

IS95_MOD_EQ This choice selects a filter which is a combination of the equalizer filter described in the IS-95 standard and a filter that meets the criteria of the IS-95 error function (for improved adjacent channel performance), with lower passband rejection.

AC4Fm This choice selects a predefined Association of Public Safety Communications Officials (APCO) specified compatible 4-level frequency modulation (C4FM) filter.

NADC Subsystem—Option 402 ([:SOURce]:RADio[:NADC])

UGaussian	This choice selects a backwards compatible GSM Gaussian filter (Gaussian filter with a fixed BbT value of 0.300) for the ESG E44xxB Option UN3 or UN4.
"<user FIR>"	This variable is any filter file that you have stored into memory.
*RST	RNYQ
Key Entry	Root Nyquist Nyquist Gaussian Rectangle IS-95 IS-95 w/EQ IS-95 Mod IS-95 Mod w/EQ APCO 25 C4FM UN3/4 GSM Gaussian User FIR
Remarks	Refer to “File Name Variables” on page 13 for information on the file name syntax.

:FRATe

Supported	E4438C with Option 402
	[:SOURce] :RADio [:NADC] :FRATe FULL HALF
	[:SOURce] :RADio [:NADC] :FRATe?

This command toggles between a full- or half-rate traffic channel.

FULL	Selects two equally spaced timeslots of the frame. Since there are six timeslots per frame, timeslots 1, 2, and 3 are paired with timeslots 4, 5, and 6, respectively.
HALF	Selects one timeslot of the frame (6 individual timeslots per frame).
*RST	FULL
Key Entry	Rate Full Half

:IQ:SCALE

Supported	E4438C with Option 402
	[:SOURce] :RADio [:NADC] :IQ:SCALE <val>
	[:SOURce] :RADio [:NADC] :IQ:SCALE?

This command sets the amplitude of the I/Q outputs for better adjacent channel power (ACP); lower scaling values equate to better ACP.

The variable <val> is expressed in units of percent.

*RST	+100
Range	1–200
Key Entry	I/Q Scaling
Remarks	This command has no effect with MSK or FSK modulation.

:MODulation:FSK[:DEViation]

Supported E4438C with Option 402

```
[ :SOURCE ]:RADio[ :NADC ]:MODulation:FSK[ :DEViation ] <val>  
[ :SOURCE ]:RADio[ :NADC ]:MODulation:FSK[ :DEViation ]?
```

This command sets the symmetric FSK frequency deviation value. The variable <val> is expressed in units of Hertz and the maximum range value equals the current symbol rate value multiplied by four, limited to 20 MHz

***RST** +4.00000000E+002

Range 0–2E7

Key Entry **Freq Dev**

Remarks To change the modulation type, refer to “:MODulation[:TYPE]” on page 788.

Refer to “:SRATe” on page 863 for a list of the minimum and maximum symbol rate values.

To set an asymmetric FSK deviation value, refer to the *E4428C/38C ESG Signal Generators User’s Guide for more information*.

:MODulation:MSK[:PHASe]

Supported E4438C with Option 402

```
[ :SOURCE ]:RADio[ :NADC ]:MODulation:MSK[ :PHASe ] <val>  
[ :SOURCE ]:RADio[ :NADC ]:MODulation:MSK[ :PHASe ]?
```

This command sets the MSK phase deviation value. The variable <val> is expressed in units of degrees.

***RST** +9.00000000E+001

Range 0–100

Key Entry **Phase Dev**

:MODulation:UFSK

Supported E4438C with Option 402

```
[ :SOURCE ]:RADio[ :NADC ]:MODulation:UFSK "<file name>"  
[ :SOURCE ]:RADio[ :NADC ]:MODulation:UFSK?
```

This command selects a user-defined FSK file from the signal generator memory.

Receiver Test Digital Commands (continued)
NADC Subsystem—Option 402 ([:SOURCE]:RADio[:NADC])

Key Entry **User FSK**

Remarks The user-defined FSK file is held in signal generator memory until the command that selects user FSK as the modulation type is sent. Refer to “:MODulation[:TYPE]” on page 788 to change the current modulation type.

Refer to “File Name Variables” on page 13 for information on the file name syntax.

:MODulation:UIQ

Supported E4438C with Option 402

```
[ :SOURCE ] :RADio [ :NADC ] :MODulation :UIQ "<file name>"
[ :SOURCE ] :RADio [ :NADC ] :MODulation :UIQ?
```

This command selects a user-defined I/Q file from the signal generator memory.

Key Entry **User I/Q**

Remarks The user-defined I/Q file is held in signal generator memory until the command that selects user I/Q as the modulation type is sent. Refer to “:MODulation[:TYPE]” on page 788 to change the current modulation type.

Refer to “File Name Variables” on page 13 for information on the file name syntax.

:MODulation[:TYPE]

Supported E4438C with Option 402

```
[ :SOURCE ] :RADio [ :NADC ] :MODulation [ :TYPE ] BPSK | QPSK | IS95QPSK | GRAYQPSK |

:REPeat

Supported E4438C with Option 402

```
[ :SOURCE ] :RADIO [ :NADC ] :REPeat SINGLE | CONTInuous  
[ :SOURCE ] :RADIO [ :NADC ] :REPeat?
```

This command sets the rotation direction of the phase modulation vector.

SINGLE This choice outputs one occurrence of the selected frame.

CONTInuous This choice outputs a continuous stream of the selected frame.

***RST** SING

Key Entry **Frame Repeat Single Cont**

:POLarity[:ALL]

Supported E4438C with Option 402

```
[ :SOURCE ] :RADIO [ :NADC ] :POLarity [ :ALL ] NORMal | INVerted  
[ :SOURCE ] :RADIO [ :NADC ] :POLarity [ :ALL ]?
```

This command sets the rotation direction of the phase modulation vector.

NORMal This choice selects normal phase polarity.

INVerted This choice inverts the internal Q signal.

***RST** NORM

Key Entry **Polarity Normal Invert**

:SECOndary:RECall

Supported E4438C with Option 402

```
[ :SOURCE ] :RADIO [ :NADC ] :SECOndary:RECall
```

This command recalls the secondary frame configuration, overwriting the current state.

Key Entry **Recall Secondary Frame State**

Remarks To save a secondary frame state, refer to “:SECOndary:SAVE” on page 790.

A secondary frame is not active until the secondary state is enabled. To activate a secondary frame, refer to “:SECOndary[:STATE]” on page 790.

:SECondary:SAVE

Supported E4438C with Option 402

[:SOURce] :RADio [:NADC] :SECondary :SAVE

This command saves the current frame configuration as the secondary frame with the filename NADC_SECONDARY_FRAME.

Key Entry **Save Secondary Frame State**

Remarks To recall the secondary frame (saved in non-volatile signal generator memory), refer to “[:SECondary:RECall](#)” on page 789.

:SECondary:TRIGger[:SOURce]

Supported E4438C with Option 402

[:SOURce] :RADio [:NADC] :SECondary :TRIGger [:SOURce] KEY | EXT | BUS
[:SOURce] :RADio [:NADC] :SECondary :TRIGger [:SOURce] ?

This command selects the type of triggering for the secondary frame.

KEY This choice enables triggering by pressing the front panel **Trigger** hardkey.

EXT This choice enables triggering using an externally applied signal at the PATT TRIG IN rear panel connector or the PATT TRIG IN 2 pin on the rear panel AUX I/O connector. To select the appropriate connector, refer to “[:TRIGger\[:SOURce\]:EXTernal\[:SOURce\]](#)” on page 804.

BUS This choice enables GPIB triggering using the *TRG or GET command or LAN and RS-232 triggering using the *TRG command.

Key Entry **Trigger Key Ext Bus**

:SECondary[:STATe]

Supported E4438C with Option 402

[:SOURce] :RADio [:NADC] :SECondary [:STATe] ON | OFF | 1 | 0
[:SOURce] :RADio [:NADC] :SECondary [:STATe] ?

This command enables or disables the ability to switch to the secondary frame.

***RST** 0

Key Entry **Secondary Frame Off On**

Remarks A frame must already be saved as the secondary frame in order to turn the secondary state function on.

 To save a frame as the secondary frame, refer to “:SECONdary:SAVE” on page 790.

:SLOT[1]|2|3|4|5|6:DCUStom

Remarks Refer to “File Name Variables” on page 13 for information on the file name syntax.

:SLOT[1]|2|3|4|5|6:DCUStom:FIX4

Supported E4438C with Option 402

```
[ :SOURce ] :RADIo [ :NADC ] :SLOT [ 1 ] | 2 | 3 | 4 | 5 | 6 :DCUStom:FIX4 <val>
[ :SOURce ] :RADIo [ :NADC ] :SLOT [ 1 ] | 2 | 3 | 4 | 5 | 6 :DCUStom:FIX4?
```

This command sets the binary, 4-bit repeating sequence data pattern that is used in the selected downlink custom timeslot.

***RST** #B0000

Range #B0000–#B1111 or 0–15

Key Entry **FIX4**

Remarks FIX4 must already be defined as the data type.

:SLOT[1]|2|3|4|5|6:DTCHannel:CDLocator

:SOUT

Supported E4438C with Option 402

```
[ :SOURCE ] :RADIO [ :NADC ] :SOUT FRAME | SLOT | ALL
[ :SOURCE ] :RADIO [ :NADC ] :SOUT?
```

This command sets the synchronization location (within the pattern of data) and the type of output at the EVENT 1 rear panel connector.

FRAME This choice outputs a 1-bit signal, synchronized to the bit selected by the synchronization output offset command, for a framed data pattern.

SLOT This choice outputs a 1-bit signal, synchronized to the bit selected by the synchronization output offset command, for a selected timeslot.

ALL This choice outputs a 1-bit signal, synchronized to the bit selected by the synchronization output offset command, for all active timeslots.

```
[ :SOURCE ] :RADIO [ :NADC ] :SRATe <val>
```

```
[ :SOURCE ] :RADIO [ :NADC ] :SRATe?
```

This command sets the transmission symbol rate. Symbol rate is the bit rate divided by the bits per symbol. A change in the symbol rate affects the bit rate. Refer to “:BRATe” on page 672 for information on bit rate.

The variable <val> is expressed in units of symbols per second (sps–MSPS) and the maximum symbol rate depends on the filter. Refer to “:FILTer” on page 785 for minimum filter symbol width.

The filter may have to be truncated down to 32 or 16 symbols wide to achieve the highest symbol rate. The signal generator’s internal filters are not truncated below their minimum filter length and user-defined FIR filters are not truncated. If the filter cannot be truncated then the symbol rate is limited to the maximum rate of the narrowest filter size possible.

The relative timing of the modulated data, as well as the actual filter response is affected when the filter is truncated.

When the symbol rate changes, the ESG reconfigures the baseband generator. The time required to reconfigure the baseband generator is inversely proportional to the symbol rate: lower symbol rates require more time.

To change the modulation type, refer to “:MODulation[:TYPE]” on page 788.

:TRIGger:TYPE

Supported E4438C with Option 402

[:SOURCE] :RADio [:NADC] :TRIGger :TYPE CONTInuous | SINGle | GATE
 [:SOURCE] :RADio [:NADC] :TRIGger :TYPE?

This command sets the trigger type.

CONTInuous	The framed data sequence repeats continuously; the sequence restarts every time the previous playback is completed. To customize continuous triggering, refer to “:TRIGger:TYPE:CONTInuous[:TYPE]” on page 801.		
SINGle	The framed data sequence plays once for every trigger received.		
GATE	An external trigger signal interrupts the playback while the gating signal is in the inactive state. Playback resumes when the external control signal returns to the active state. The active state can be set to high or low.		
*RST	CONT		
Key Entry	Continuous	Single	Gated

:TRIGger:TYPE:CONTInuous[:TYPE]

Supported E4438C with Option 402

```
[ :SOURce ] :RADio [ :NADC ] :TRIGger :TYPE :CONTInuous [ :TYPE ] FREE | TRIGger | RESet
[ :SOURce ] :RADio [ :NADC ] :TRIGger :TYPE :CONTInuous [ :TYPE ] ?
```

This commands selects the waveform’s response to a trigger signal while using the continuous trigger mode.

For more information on triggering and to select the continuous trigger mode, see “:TRIGger:TYPE” on page 800.

The following list describes the waveform’s response to each of the command choices:

FREE	Turning the ARB format on immediately triggers the waveform. The waveform repeats until you turn the format off, select another trigger, or choose another waveform file.		
TRIGger	The waveform waits for a trigger before play begins. When the waveform receives the trigger, it plays continuously until you turn the format off, select another trigger, or choose another waveform file.		
RESet	The waveform waits for a trigger before play begins. When the waveform receives the trigger, it plays continuously. Subsequent triggers reset the waveform to the beginning. For a waveform sequence, this means to the beginning of the first segment in the sequence.

:TRIGger:TYPE:GATE:ACTive

Supported E4438C with Option 402

```
[ :SOURCE ] :RADio [ :NADC ] :TRIGger :TYPE :GATE :ACTive LOW | HIGH  
[ :SOURCE ] :RADio [ :NADC ] :TRIGger :TYPE :GATE :ACTive ?
```

This command selects the active state (gate polarity) of the gate while using the gating trigger mode.

The LOW and HIGH selections correspond to the low and high states of an external trigger signal. For example, when you select HIGH, the active state occurs during the high of the trigger signal. When the active state occurs, the ESG stops the waveform playback at the last played sample point, then restarts the playback at the next sample point when the inactive state occurs. For more information on triggering and to select gating as the trigger mode, see “:TRIGger:TYPE” on page 800.

The following list describes the signal generator’s external trigger signal gating behavior for the polarity selections:

LOW	The waveform playback stops when the trigger signal goes low (active state) and restarts when the trigger signal goes high (inactive state).
HIGH	The waveform playback stops when the trigger signal goes high (active state) and restarts when the trigger signal goes low (inactive state).

```
[ :SOURCE ] :RADio [ :NADC ] :TRIGger [ :SOURCE ] KEY | EXT | BUS  
[ :SOURCE ] :RADio [ :NADC ] :TRIGger [ :SOURCE ] ?
```

This command sets the trigger source.

For more information on triggering, see “:TRIGger:TYPE” on page 800. The following list describes the command choices:

KEY	This choice enables manual triggering by pressing the front-panel Trigger hardkey.
EXT	An externally applied signal triggers the waveform. This is the only choice that works with gating. The following conditions affect an external trigger: <ul style="list-style-type: none">The input connector selected for the trigger signal. You have a choice between the rear-panel PATTERN TRIG IN connector or the PATT TRIG IN 2 pin on the rear-panel AUXILIARY I/O connector. To make the connector selection, see “:TRIGger[:SOURCE]:EXTernal[:SOURCE]” on page 804.

For more information on the connectors and on connecting the cables, see the *E4428C/38C ESG Signal Generators User's Guide*.

- The trigger signal polarity:
 - gating mode, see “[:TRIGger:TYPE:GATE:ACTive” on page 802
 - continuous and single modes, see “[:TRIGger[:SOURce]:EXTernal:SLOPe” on page 804
- The time delay between when the ESG receives a trigger and when the waveform responds to the trigger. There are two parts to setting the delay:
 - setting the amount of delay, see “[:TRIGger[:SOURce]:EXTernal:DELay” on page 803
 - turning the delay on, see “[:TRIGger[:SOURce]:EXTernal:DELay:STATe” on page 804

BUS This choice enables triggering over the GPIB or LAN using the *TRG or GET commands or the AUXILIARY INTERFACE (RS-232) using the *TRG command.

[:TRIGger[:SOURce]:EXTernal:DELay

Supported E4438C with Option 402

[ :SOURce ] :RADio[ :NADC ] :TRIGger[ :SOURce ] :EXTernal :DELay?
```

This command sets the number of bits to delay the ESG's response to an external trigger.

The bit delay is a delay between when the ESG receives the trigger and when it responds to the trigger. The delay uses the clocks of the bit-clock to time the delay. After the ESG receives the trigger and the set number of delay bits (clocks) occurs, the ESG transmits the data pattern.

The delay occurs after you enable the state. See “[:TRIGger[:SOURce]:EXTernal:DELay:STATe” on page 804. You can set the number of bits either before or after enabling the state.

For more information on configuring an external trigger source and to select external as the trigger source, see “[:TRIGger[:SOURce]” on page 802.

[ :SOURCE ] :RADio [ :NADC ] :TRIGger [ :SOURCE ] :EXtErnal :SLOPe?
```

This command sets the polarity for an external trigger signal while using the continuous, single triggering mode. To set the polarity for gating, see “:TRIGger:TYPE:GATE:ACTive” on page 802.

The POSitive and NEGative selections correspond to the high (positive) and low (negative) states of the external trigger signal. For example, when you select POSitive, the waveform responds (plays) during the high state of the trigger signal. When the ESGESG receives multiple trigger occurrences when only one is required, the signal generator uses the first trigger and ignores the rest.

For more information on configuring an external trigger source and to select external as the trigger source, see “:TRIGger[:SOURCE]” on page 802.

:ALPha

Supported E4438C with Option 402

```
[ :SOURce ] :RADio :PDC :ALPha <val>  
[ :SOURce ] :RADio :PDC :ALPha ?
```

This command changes the Nyquist or root Nyquist filter’s alpha value.

Supported E4438C with Option 402

```
[ :SOURce ] :RADio :PDC :BBCLock INT[1] | EXT[1]  
[ :SOURce ] :RADio :PDC :BBCLock ?
```

This command toggles the data (bit) clock input to the baseband generator board to either internal or external. This command is independent in each mode and works for both non-burst (continuous) and burst modes. This allows for a matrix of selections between burst/non-burst, internal/external data generation, internal/external data clock, and external bit/symbol data clock.

INT[1] This choice selects the signal generator internal data clock.

EXT[1] This choice selects an external data clock input.

***RST** INT

To change the current filter type, refer to “:FILTer” on page 818.

:BRATe

Supported E4438C with Option 402

[:SOURCE] :RADio :PDC :BRATe <val>

[:SOURCE] :RADio :PDC :BRATe?

This command sets the bit rate in bits per second (bps–Mbps). The maximum bit rate is dependent on the modulation type and filter as shown in the following tables

The IQ digital data stream is shaped by a FIR filter. The filter length and associated latency and frequency response are dependent on the bit rate as shown in the following tables. The signal generator selects a filter length.

For higher bit rates, the FIR filter length may be truncated (if the minimum filter size allows it) which will impact the relative timing of the modulated data, as well as the actual filter response (see the symbol rate command “:SRATe” on page 863). Refer to “:FILTer” on page 818 for information on filter symbol widths.

To change the modulation type, refer to “:MODulation[:TYPE]” on page 821.

When the bit rate is changed, the ESG reconfigures the baseband generator. The time required to reconfigure the baseband generator is inversely proportional to the bit rate: lower bit rates require more time.

Supported E4438C with Option 402

[:SOURce] :RADio:PDC:BURSt:SHAPe:RISE:TIME <val>

[:SOURce] :RADio:PDC:BURSt:SHAPe:RISE:TIME?

This command sets the period of time where the burst increases from a minimum power to full power.

The variable <val> is expressed in bits. The minimum and maximum values depend upon modulation type and symbol rate.

***RST** +1.00000000E+001

:BURSt:SHAPe[:TYPE]

Supported E4438C with Option 402

```
[ :SOURce ] :RADio :PDC :BURSt :SHAPe [ :TYPE ] SINE | "<file name>"
[ :SOURce ] :RADio :PDC :BURSt :SHAPe [ :TYPE ] ?
```

This command specifies the burst shape as either SINE or a user-defined file ("<file name>").

SINE This choice selects a state that is defined by the burst rise and fall *RST values, as the default burst shape type.

"<file name>" This choice selects a user designated file from signal generator memory.

***RST** SINE

Key Entry **Sine** **User File**

:BURSt[:STATe]

Supported E4438C with Option 402

```
[ :SOURce ] :RADio :PDC :BURSt [ :STATe ] ON | OFF | 1 | 0
[ :SOURce ] :RADio :PDC :BURSt [ :STATe ] ?
```

This command enables or disables the burst function.

ON (1) This choice enables the transmission of framed data. If all timeslots which are switched on are up traffic channels or custom, you will be bursting the timeslots that are on; there will be no RF carrier during the off timeslots.

If you have switched on any timeslot that you have configured as a down traffic channel, the RF carrier is not switched off between any of the timeslots. The off timeslots are transmitted as a continuous series of ones for the time period of the off timeslots.

OFF (0) This choice enables the transmission of unframed data.

***RST** 0

Key Entry **Data Format Pattern Framed**

:CHANnel

Supported E4438C with Option 402

```
[ :SOURCE ] : RADIo : PDC : CHANnel EVM | ACP
[ :SOURCE ] : RADIo : PDC : CHANnel ?
```

This command optimizes the Nyquist and root Nyquist filters to minimize error vector magnitude (EVM) or to minimize adjacent channel power (ACP).

EVM This choice provides the most ideal passband.

ACP This choice improves stopband rejection.

***RST** EVM

Key Entry **Optimize FIR For EVM ACP**

Remarks To change the current filter type, refer to “[:FILTer](#)” on page 818.

:DATA

Supported E4438C with Option 402

```
[ :SOURCE ] : RADIo : PDC : DATA PN9 | PN11 | PN15 | PN20 | PN23 | FIX4 | "<file name>" |
EXT | P4 | P8 | P16 | P32 | P64 | PRAM
[ :SOURCE ] : RADIo : PDC : DATA ?
```

This command sets the data pattern type (pseudo-random number sequence, 4-bit pattern, sequence of 1’s and 0’s, data from an external source, or a user file) for unframed data transmission.

***RST** PN23

Key Entry	PN9	PN11	PN15	PN20	PN23	FIX4	User File	Ext

	64 1’s & 64 0’s	PRAM File						

Remarks Refer to “[File Name Variables](#)” on page 13 for information on the file name syntax.

:DATA:PRAM

Supported E4438C with Option 402

```
[ :SOURCE ]:RADio:PDC:DATA:PRAM "<file_name>"
```

```
[ :SOURCE ]:RADio:PDC:DATA:PRAM?
```

This command selects a pattern RAM (PRAM) file as the pattern data type for the PDC (Personal Digital Cellular) format.

"<file_name>" This variable designates the PRAM file in WFM1. Refer to [“File Name Variables” on page 13](#) for information on the file name syntax.

Key Entry **PRAM File**

Remarks Selecting this data source forces the burst source to INTERNAL to allow framing control.

The PRAM file must reside in the ESG’s volatile memory (WFM1) in order to be accessed by this command. See [“:DATA:PRAM:FILE:BLOCK” on page 110](#).

:DATA:FIX4

Supported E4438C with Option 402

```
[ :SOURCE ]:RADio:PDC:DATA:FIX4 <val>
```

```
[ :SOURCE ]:RADio:PDC:DATA:FIX4?
```

This command sets the binary, 4-bit repeating sequence data pattern for unframed transmission according to the protocols (modulation type, symbol rate, filter, and burst shape) selected for the PDC format.

***RST** #B0000

Range #B0000–#B1111 or 0–15

Key Entry **FIX4**

Remarks FIX4 must already be defined as the data type.

:DEFault

Supported E4438C with Option 402

```
[ :SOURCE ]:RADio:PDC:DEFault
```

This command returns all of the PDC modulation format parameters to factory settings. It does not affect any other signal generator parameters.

Key Entry **Restore PDC Factory Default**

:EDATa:DELay

Supported E4438C with Option 402

[:SOURce] :RADio:PDC:EDATa:DELay?

This query returns the amount of delay (in symbols) from the external data input to the beginning of the symbol on the I OUT and Q OUT rear panel connectors and the front panel RF OUTPUT connector.

Remarks When the format is turned off, the delay value is unchanged; the query will return the same delay value if the format is on or off.

:EDCLock

Supported E4438C with Option 402

[:SOURce] :RADio:PDC:EDCLock SYMBol | NORMal

[:SOURce] :RADio:PDC:EDCLock?

This command sets the external data clock use.

SYMBol This choice specifies that a continuous symbol clock signal must be provided to the SYMBOL SYNC input connector.

NORMal This choice specifies that the DATA CLOCK input connector requires a bit clock. The SYMBOL SYNC input connector requires a (one-shot or continuous) symbol sync signal.

***RST** NORM

Key Entry Ext Data Clock Normal Symbol

Remarks Both choices have no effect in internal clock mode. Refer to “:BBCLock” on page 806 to select EXT as the data clock type.

:EREFerence

Supported E4438C with Option 402

[:SOURce] :RADio:PDC:EREFerence INT | EXT

[:SOURce] :RADio:PDC:EREFerence?

This command selects either an internal or external bit-clock reference for the data generator.

***RST** INT

Key Entry BBG Ref Ext Int

Receiver Test Digital Commands (continued)
PDC Subsystem—Option 402 ([:SOURCE]:RADio:PDC)

Remarks If the EXT choice is selected, the external source's frequency value must be applied to the BASEBAND GEN REF IN rear panel connector. The external reference and external data clock are not applicable at the same time. If both are selected, then the external reference takes precedence.

Refer to, “:EREFerence:VALue” on page 818 to enter the external reference frequency setting.

:EREFerence:VALue

Supported E4438C with Option 402

```
[ :SOURCE ]:RADio:PDC:EREFerence:VALue <val>  
[ :SOURCE ]:RADio:PDC:EREFerence:VALue?
```

This command sets the expected bit-clock reference frequency value for an externally applied reference signal.

The variable <val> is expressed in units of hertz (Hz–MHz).

***RST** +1.30000000E+007

Range 2.5E5–1E8

Key Entry Ext BBG Ref Freq

Remarks The value specified by this command is effective only when you are using an external reference applied to the BASEBAND GEN REF IN rear panel connector.

Refer to “:EREFerence” on page 817 to select EXT (external source) as the reference for the bit-clock.

:FILTer

Supported E4438C with Option 402

```

IS95|IS95_EQ|IS95_MOD|IS95_MOD_EQ|AC4Fm|UGGaussian|"<user FIR>"  
[ :SOURCE ]:RADio:PDC:FILTer?
```

This command selects the pre-modulation filter type.

IS95 This choice selects a filter that meets the criteria of the IS-95 standard.

IS95_EQ This choice selects a filter which is a combination of the IS-95 filter (above) and the equalizer filter described in the IS-95 standard. This filter is only used for IS-95 baseband filtering.

IS95_MOD This choice selects a filter that meets the criteria of the IS-95 error function (for improved adjacent channel performance) with lower passband rejection than the filter specified in the IS-95 standard.

IS95_MOD_EQ	This choice selects a filter which is a combination of the equalizer filter described in the IS-95 standard and a filter that meets the criteria of the IS-95 error function (for improved adjacent channel performance), with lower passband rejection.																		
AC4Fm	Selects a predefined Association of Public Safety Communications Officials (APCO) specified compatible 4-level frequency modulation (C4FM) filter.																		
UGGaussian	This choice selects a backwards compatible GSM Gaussian filter (Gaussian filter with a fixed BbT value of 0.300) for the ESG E44xxB Option UN3 or UN4.																		
"<user FIR>"	This variable is any filter file that you have stored into memory.

:FRATe

Supported E4438C with Option 402

```
[ :SOURCE ]:RADio:PDC:FRATe FULL|HALF
[ :SOURCE ]:RADio:PDC:FRATe?
```

This command toggles between a full- or half-rate traffic channel.

FULL Selects two equally spaced timeslots of the frame. Since there are six timeslots per frame, timeslots 1, 2, and 3 are paired with timeslots 4, 5, and 6, respectively.

HALF Selects one timeslot of the frame (6 individual timeslots per frame).

***RST** FULL

Key Entry **Rate Full Half**

:IQ:SCALE

Supported E4438C with Option 402

```
[ :SOURCE ]:RADio:PDC:IQ:SCALE <val>
[ :SOURCE ]:RADio:PDC:IQ:SCALE?
```

This command sets the amplitude of the I/Q outputs for better adjacent channel power (ACP); lower scaling values equate to better ACP.

The variable <val> is expressed in units of percent.

PDC Subsystem—Option 402 ([:SOURce]:RADio:PDC)

*RST	+100
Range	1–200
Key Entry	I/Q Scaling
Remarks	This command has no effect with MSK or FSK modulation.

:MODulation:FSK[:DEVIation]

```
[ :SOURce ] :RADio :PDC :MODulation :FSK [ :DEVIation ] <val>
[ :SOURce ] :RADio :PDC :MODulation :FSK [ :DEVIation ] ?
```

This command sets the symmetric FSK frequency deviation value.

The variable <val> is expressed in units of Hertz and the maximum range value equals the current symbol rate value multiplied by four, limited to 20 MHz.

***RST** +4.00000000E+002

Range 0–2E7

Key Entry **Freq Dev**

Remarks To change the modulation type, refer to “:MODulation[:TYPE]” on page 821.
 Refer to “:SRATe” on page 863 for minimum and maximum symbol rate values.
 To set an asymmetric FSK deviation value, refer to the *E4428C/38C ESG Signal Generators User’s Guide* for more information.

:MODulation:MSK[:PHASe]

Supported E4438C with Option 402

```
[ :SOURce ] :RADio :PDC :MODulation :MSK [ :PHASe ] <val>
[ :SOURce ] :RADio :PDC :MODulation :MSK [ :PHASe ] ?

```
[ :SOURce ]:RADio:PDC:MODulation:UFSK "<file name>"
```

```
[ :SOURce ]:RADio:PDC:MODulation:UFSK?
```

This command selects a user-defined FSK file from the signal generator memory.

Key Entry **User FSK**

Remarks The user-defined FSK file is held in signal generator memory until the command that selects user FSK as the modulation type is sent. Refer to [“:MODulation\[:TYPE\]” on page 821](#) to change the current modulation type.

Refer to [“File Name Variables” on page 13](#) for information on the file name syntax.

:MODulation:UIQ

Supported E4438C with Option 402

```
[ :SOURce ]:RADio:PDC:MODulation:UIQ "<file name>"
```

```
[ :SOURce ]:RADio:PDC:MODulation:UIQ?

This command recalls the secondary frame configuration, overwriting the current state.

Key Entry **Recall Secondary Frame State**

Remarks To save a secondary frame state, refer to “[:SECondary:SAVE](#)” on page 822.

A secondary frame is not active until the secondary state is enabled. To activate a secondary frame, refer to “[:SECondary\[:STATE\]](#)” on page 823.

:SECondary:SAVE

Supported E4438C with Option 402

```
[ :SOURCE ] :RADio :PDC :SECondary :SAVE

:SRATe

Supported	E4438C with Option 402
	[:SOURce] :RADio:PDC:SRATe <val>
	[:SOURce] :RADio:PDC:SRATe?

This command sets the transmission symbol rate. Symbol rate is the bit rate divided by the bits per symbol. A change in the symbol rate affects the bit rate. Refer to “:BRATe” on page 672 for information on bit rate.

The variable <val> is expressed in units of symbols per second (sps–MSPS) and the maximum symbol rate depends on the filter. Refer to “:FILTer” on page 818 for minimum filter symbol width.

The filter may have to be truncated down to 32 or 16 symbols wide to achieve the highest symbol rate. The signal generator’s internal filters are not truncated below their minimum filter length and user-defined FIR filters are not truncated. If the filter cannot be truncated then the symbol rate is limited to the maximum rate of the narrowest filter size possible.

The relative timing of the modulated data, as well as the actual filter response is affected when the filter is truncated.

When the symbol rate changes, the ESG reconfigures the baseband generator. The time required to reconfigure the baseband generator is inversely proportional to the symbol rate: lower symbol rates require more time.

To change the modulation type, refer to “:MODulation[:TYPE]” on page 821.

```
[ :SOURCE ] :RADio:PDC:TRIGger:TYPE CONTInuous | SINGle | GATE  
[ :SOURCE ] :RADio:PDC:TRIGger:TYPE?
```

This command sets the trigger type.

CONTInuous The framed data sequence repeats continuously; the sequence restarts every time the previous playback is completed. To customize continuous triggering, refer to “:TRIGger:TYPE:CONTInuous[:TYPE]” on page 834.

SINGle The framed data sequence plays once for every trigger received.

GATE An external trigger signal interrupts the playback while the gating signal is in the inactive state. Playback resumes when the external control signal returns to the active state. The active state can be set to high or low.

```
[ :SOURCE ] :RADio:PDC:TRIGger:TYPE:CONTInuous[ :TYPE ] FREE | TRIGger | RESet  
[ :SOURCE ] :RADio:PDC:TRIGger:TYPE:CONTInuous[ :TYPE ]?

This commands selects the waveform’s response to a trigger signal while using the continuous trigger mode.

For more information on triggering and to select the continuous trigger mode, see “:TRIGger:TYPE” on page 834.

The following list describes the waveform’s response to each of the command choices:

FREE Turning the ARB format on immediately triggers the waveform. The waveform repeats until you turn the format off, select another trigger, or choose another waveform file.

TRIGger The waveform waits for a trigger before play begins. When the waveform receives the trigger, it plays continuously until you turn the format off, select another trigger, or choose another waveform file.

RESet The waveform waits for a trigger before play begins. When the waveform receives the trigger, it plays continuously. Subsequent triggers reset the waveform to the beginning. For a waveform sequence, this means to the beginning of the first segment in the sequence.

Supported E4438C with Option 402

```
[ :SOURCE ]:RADio:PDC:TRIGger:TYPE:GATE:ACTive LOW|HIGH
[ :SOURCE ]:RADio:PDC:TRIGger:TYPE:GATE:ACTive?
```

This command selects the active state (gate polarity) of the gate while using the gating trigger mode.

The LOW and HIGH selections correspond to the low and high states of an external trigger signal. For example, when you select HIGH, the active state occurs during the high of the trigger signal. When the active state occurs, the ESG stops the waveform playback at the last played sample point, then restarts the playback at the next sample point when the inactive state occurs. For more information on triggering and to select gating as the trigger mode, see “:TRIGger:TYPE” on page 834.

The following list describes the ESG’s gating behavior for the polarity selections:

LOW	The waveform playback stops when the trigger signal goes low (active state) and restarts when the trigger signal goes high (inactive state).
HIGH	The waveform playback stops when the trigger signal goes high (active state) and restarts when the trigger signal goes low (inactive state).

Supported E4438C with Option 402

```
[ :SOURCE ]:RADio:PDC:TRIGger[:SOURCE] KEY|EXT|BUS
[ :SOURCE ]:RADio:PDC:TRIGger[:SOURCE]?

This command sets the trigger source.

For more information on triggering, see “:TRIGger:TYPE” on page 834. The following list describes the command choices:

KEY	This choice enables manual triggering by pressing the front-panel Trigger hardkey.
-----	-------------------------------------------------------------------------------------------

- EXT** An externally applied signal triggers the waveform. This is the only choice that works with gating. The following conditions affect an external trigger:
- The input connector selected for the trigger signal. You have a choice between the rear-panel PATTERN TRIG IN connector or the PATT TRIG IN 2 pin on the rear-panel AUXILIARY I/O connector. To make the connector selection, see “[:TRIGger[:SOURce]:EXTErnal[:SOURce]]” on page 838.
 For more information on the connectors and on connecting the cables, see the *E4428C/38C ESG Signal Generators User’s Guide*.
 - The trigger signal polarity:
 - gating mode, see “[:TRIGger:TYPE:GATE:ACTive]” on page 835
 - continuous and single modes, see “[:TRIGger[:SOURce]:EXTErnal:SLOPe]” on page 837
 - The time delay between when the ESG receives a trigger and when the waveform responds to the trigger. There are two parts to setting the delay:
 - setting the amount of delay, see “[:TRIGger[:SOURce]:EXTErnal:DELay]” on page 836
 - turning the delay on, see “[:TRIGger[:SOURce]:EXTErnal:DELay:STATe]” on page 837
- BUS** This choice enables triggering over the GPIB or LAN using the *TRG or GET commands or the AUXILIARY INTERFACE (RS-232) using the *TRG command.

[ :SOURce ] :RADio:PDC:TRIGger [ :SOURce ] :EXTErnal:DELay <val>
[ :SOURce ] :RADio:PDC:TRIGger [ :SOURce ] :EXTErnal:DELay?
```

This command sets the number of bits to delay the ESG’s response to an external trigger.

The bit delay is a delay between when the ESG receives the trigger and when it responds to the trigger. The delay uses the clocks of the bit-clock to time the delay. After the ESG receives the trigger and the set number of delay bits (clocks) occurs, the ESG transmits the data pattern.

The delay occurs after you enable the state. See “[:TRIGger[:SOURce]:EXTErnal:DELay:STATe]” on page 837. You can set the number of bits either before or after enabling the state.

For more information on configuring an external trigger source and to select external as the trigger source, see “:TRIGger[:SOURce]” on page 835.

[ :SOURce ]:RADio:PDC:TRIGger[ :SOURce ]:EXTErnal:SLOPE?
```

This command sets the polarity for an external trigger signal while using the continuous, single triggering mode. To set the polarity for gating, see “:TRIGger:TYPE:GATE:ACTive” on page 835.

The POSitive and NEGative selections correspond to the high (positive) and low (negative) states of the external trigger signal. For example, when you select POSitive, the waveform responds (plays) during the high state of the trigger signal. When the ESGESG receives multiple trigger occurrences when only one is required, the signal generator uses the first trigger and ignores the rest.

For more information on configuring an external trigger source and to select external as the trigger source, see “:TRIGger[:SOURce]” on page 835.

[:SOURce] :RADio :PHS :BBCLock INT[1] | EXT[1]

[:SOURce] :RADio :PHS :BBCLock?

This command toggles the data (bit) clock input to the baseband generator board to either internal or external. This command is independent in each mode and works for both non-burst (continuous) and burst modes. This allows for a matrix of selections between burst/non-burst, internal/external data generation, internal/external data clock, and external bit/symbol data clock.

INT[1] This choice selects the signal generator internal data clock.

```

```
[ :SOURCE ]:RADio:PHS:BRATe?

This command sets the bit rate in bits per second (bps–Mbps). The maximum bit rate is dependent on the modulation type and filter as shown in the following tables

The IQ digital data stream is shaped by a FIR filter. The filter length and associated latency and frequency response are dependent on the bit rate as shown in the following tables. The signal generator selects a filter length.

For higher bit rates, the FIR filter length may be truncated (if the minimum filter size allows it) which will impact the relative timing of the modulated data, as well as the actual filter response (see the symbol rate command “:SRATe” on page 863). Refer to “:FILTer” on page 857 for information on filter symbol widths.

To change the modulation type, refer to “:MODulation[:TYPE]” on page 860.

When the bit rate is changed, the ESG reconfigures the baseband generator. The time required to reconfigure the baseband generator is inversely proportional to the bit rate: lower bit rates require more time.

:BURSt:PN9

Supported E4438C with Option 402

[:SOURce] :RADio:PHS: BURSt: PN9 NORMal | QUICk
[:SOURce] :RADio:PHS: BURSt: PN9?

This command controls the software PN9 generation.

NORMal This choice produces a maximum length PN9 sequence.

QUICk This choice produces a truncated PN9 sequence.

*RST NORM

Key Entry **PN9 Mode Normal Quick**

Remarks Use Normal mode for bit-error-rate tests where a maximum length PN9 sequence is required.

:BURSt:SCRamble:SEED

Supported E4438C with Option 402

```
[ :SOURce ] :RADio :PHS :BURSt :SCRamble :SEED <16-bit val>  
[ :SOURce ] :RADio :PHS :BURSt :SCRamble :SEED?
```

This command select a 16-bit scramble seed value for scrambling.

***RST** #H3FF

Range #H0–#H3FF

Key Entry **Scramble Seed**

Remarks Although values may be set using this command, it does not active that scramble function.

To enable the scrambling function, refer to “:BURSt:SCRamble[:STATe]” on [page 842](#).

:BURSt:SCRamble[:STATe]

Supported E4438C with Option 402

```
[ :SOURce ] :RADio :PHS :BURSt :SCRamble [ :STATe ] ON | OFF | 1 | 0  
[ :SOURce ] :RADio :PHS :BURSt :SCRamble [ :STATe ] ?
```

This command enables or disables the operating state of the scramble function.

ON (1) This choice scrambles data on the related fields, using the seed setting.

OFF (0) This choice disables the scramble function.

***RST** 0

Key Entry **Scramble Off On**

[:SOURce] :RADio:PHS: BURSt: SHAPe: FALL: DELay <val>

[:SOURce] :RADio:PHS: BURSt: SHAPe: FALL: DELay?

This command sets the burst shape fall delay.

The variable <val> is expressed in bits.

***RST** +0.00000000E+000

Range -22.1250 to 99

Key Entry **Fall Delay**

Remarks The setting enabled by this command is not affected by signal generator power-on, preset, or *RST.

To change the modulation type, refer to “:MODulation[:TYPE]” on page 860. Refer to “:SRATE” on page 863 for a list of the minimum and maximum symbol rate values.

“:BURSt:SHAPe:FDELay” on page 844 performs the same function; in compliance with the SCPI standard, both commands are listed.

For concept information on burst shaping, refer to the *E4428C/38C ESG Signal Generators User’s Guide*.

:BURSt:SHAPe:FALL:TIME

Supported E4438C with Option 402

[:SOURce] :RADio:PHS: BURSt: SHAPe: FALL: TIME <val>

[:SOURce] :RADio:PHS: BURSt: SHAPe: FALL: TIME?

This command sets the burst shape fall time.

The variable <val> is expressed in bits.

***RST** +4.00000000E+001

Range 0.1250–255.8750

Key Entry **Fall Time**

Remarks The setting enabled by this command is not affected by signal generator power-on, preset, or *RST.

To change the modulation type, refer to “:MODulation[:TYPE]” on page 860. Refer to “:SRATE” on page 863 for a list of the minimum and maximum symbol rate values.

“:BURSt:SHAPe:FTIME” on page 845 performs the same function; in compliance with the SCPI standard, both commands are listed.

For concept information on burst shaping, refer to the *E4428C/38C ESG Signal Generators User’s Guide*.

:BURSt:SHAPe:FDElay

Supported E4438C with Option 402

```
[ :SOURce ] :RADio :PHS :BURSt :SHAPe :FDElay <val>  
[ :SOURce ] :RADio :PHS :BURSt :SHAPe :FDElay?
```

This command sets the burst shape fall delay.

The variable <val> is expressed in bits.

***RST** +0.00000000E+000

Range -22.1250 to 99

Key Entry **Fall Delay**

Remarks The setting enabled by this command is not affected by signal generator power-on, preset, or *RST.

To change the modulation type, refer to “:MODulation[:TYPE]” on page 860. Refer to “:SRATE” on page 863 for a list of the minimum and maximum symbol rate values.

“:BURSt:SHAPe:FALL:DElay” on page 843 performs the same function; in compliance with the SCPI standard, both commands are listed.

For concept information on burst shaping, refer to the *E4428C/38C ESG Signal Generators User’s Guide*.

:BURSt:SHAPe:FTIME

Supported E4438C with Option 402

[:SOURce] :RADio:PHS: BURSt: SHAPe: FTIME <val>

[:SOURce] :RADio:PHS: BURSt: SHAPe: FTIME?

This command sets the burst shape fall time.

The variable <val> is expressed in bits.

***RST** +4.00000000E+001

Range 0.1250–255.8750

Key Entry **Fall Time**

Remarks The setting enabled by this command is not affected by signal generator power-on, preset, or *RST.

To change the modulation type, refer to “:MODulation[:TYPE]” on page 860. Refer to “:SRATE” on page 863 for a list of the minimum and maximum symbol rate values.

“:BURSt:SHAPe:FALL:TIME” on page 843 performs the same function; in compliance with the SCPI standard, both commands are listed.

For concept information on burst shaping, refer to the *E4428C/38C ESG Signal Generators User’s Guide*.

:BURSt:SHAPe:RDELay

Supported E4438C with Option 402

[:SOURce] :RADio:PHS: BURSt: SHAPe: RDELay <val>

[:SOURce] :RADio:PHS: BURSt: SHAPe: RDELay?

This command sets the burst shape rise delay.

The variable <val> is expressed in bits.

***RST** +0.00000000E+000

Range –18.1250 to 99

Key Entry **Rise Delay**

Remarks The setting enabled by this command is not affected by signal generator power-on, preset, or *RST.

To change the modulation type, refer to “:MODulation[:TYPE]” on page 860. Refer to “:SRATE” on page 863 for a list of the minimum and maximum symbol rate values.

“:BURSt:SHAPe:RISE:DELay” on page 846 performs the same function; in compliance with the SCPI standard, both commands are listed.

For concept information on burst shaping, refer to the *E4428C/38C ESG Signal Generators User’s Guide*.

:BURSt:SHAPe:RISE:DELay

Supported E4438C with Option 402

```
[ :SOURce ] :RADio :PHS :BURSt :SHAPe :RISE :DELay <val>  
[ :SOURce ] :RADio :PHS :BURSt :SHAPe :RISE :DELay?

This command sets the burst shape rise delay.

The variable <val> is expressed in bits.

***RST** +0.00000000E+000

Range –18.1250 to 99

Key Entry **Rise Delay**

Remarks The setting enabled by this command is not affected by signal generator power-on, preset, or *RST.

To change the modulation type, refer to “:MODulation[:TYPE]” on page 860. Refer to “:SRATE” on page 863 for minimum and maximum symbol rate values.

“:BURSt:SHAPe:RDELay” on page 845 performs the same function; in compliance with the SCPI standard, both commands are listed.

See the *E4428C/38C ESG Signal Generators User’s Guide* for concept information.

:BURSt:SHAPe:RISE:TIME

Supported E4438C with Option 402

[:SOURce] :RADio:PHS:BURSt:SHAPe:RISE:TIME <val>

[:SOURce] :RADio:PHS:BURSt:SHAPe:RISE:TIME?

This command sets the burst shape rise time. The variable <val> is expressed in bits.

***RST** +4.00000000E+001

Range 0.1250–22.500

Key Entry **Rise Time**

Remarks The setting enabled by this command is not affected by signal generator power-on, preset, or *RST.

To change the modulation type, refer to “:MODulation[:TYPE]” on page 860. Refer to “:SRATe” on page 863 for a list of the minimum and maximum symbol rate values. The command “:BURSt:SHAPe:RTIME” on page 847 performs the same function. See the *E4428C/38C ESG Signal Generators User’s Guide* for more information.

:BURSt:SHAPe:RTIME

Supported E4438C with Option 402

[:SOURce] :RADio:PHS:BURSt:SHAPe:RTIME <val>

[:SOURce] :RADio:PHS:BURSt:SHAPe:RTIME?

This command sets the burst shape rise time. The variable <val> is expressed in bits.

***RST** +4.00000000E+001

Range 0.1250–22.500

Key Entry **Rise Time**

Remarks The setting enabled by this command is not affected by signal generator power-on, preset, or *RST.

To change the modulation type, refer to “:MODulation[:TYPE]” on page 860. Refer to “:SRATe” on page 863 for a list of the minimum and maximum symbol rate values.

“:BURSt:SHAPe:RISE:TIME” on page 847 performs the same function; in compliance with the SCPI standard, both commands are listed.

For concept information on burst shaping, refer to the *E4428C/38C ESG Signal Generators User’s Guide*.

:BURSt:SHAPe[:TYPE]

Supported E4438C with Option 402

```
[ :SOURCE ]:RADio:PHS:BURSt:SHAPe[:TYPE] SINE | "<file name>"  
[ :SOURCE ]:RADio:PHS:BURSt:SHAPe[:TYPE]?
```

This command specifies the burst shape as either SINE or a user-defined file ("<file name>").

SINE This choice selects a state that is defined by the burst rise and fall *RST values, as the default burst shape type.

"<file name>" This choice selects a user designated file from signal generator memory (non-volatile).

***RST** SINE

Key Entry **Sine User File**

:BURSt[:STATe]

Supported E4438C with Option 402

```
[ :SOURCE ]:RADio:PHS:BURSt[:STATe] ON | OFF | 1 | 0  
[ :SOURCE ]:RADio:PHS:BURSt[:STATe]?
```

This command enables or disables the burst function.

ON (1) This choice enables the transmission of framed data. If all timeslots which are switched on are up traffic channels or custom, you will be bursting the timeslots that are on; there will be no RF carrier during the off timeslots.

If you have switched on any timeslot that you have configured as a down traffic channel, the RF carrier is not switched off between any of the timeslots. The off timeslots are transmitted as a continuous series of ones for the time period of the off timeslots.

OFF (0) This choice enables the transmission of unframed data.

***RST** 0

Key Entry **Data Format Pattern Framed**

:CHANnel

Supported E4438C with Option 402

[:SOURCE] :RADio:PHS:CHANnel EVM|ACP

[:SOURCE] :RADio:PHS:CHANnel?

This command optimizes the Nyquist and root Nyquist filters to minimize error vector magnitude (EVM) or to minimize adjacent channel power (ACP).

EVM This choice provides the most ideal passband.

ACP This choice improves stopband rejection.

***RST** EVM

Key Entry **Optimize FIR For EVM ACP**

Remarks To change the current filter type, refer to “[:FILTer](#)” on page 857.

:DATA

Supported E4438C with Option 402

[:SOURCE] :RADio:PHS:DATA PN9|PN11|PN15|PN20|PN23|FIX4|

"<file name>"|EXT|P4|P8|P16|P32|P64|PRAM

[:SOURCE] :RADio:PHS:DATA?

This command sets the data pattern type (pseudo-random number sequence, 4-bit pattern, sequence of 1's and 0's, data from an external source, or a user file) for unframed data transmission.

***RST** PN23

Key Entry	PN9	PN11	PN15	PN20	PN23	FIX4	User File	Ext

Remarks Refer to “[File Name Variables](#)” on page 13 for information on the file name syntax.

:DATA:PRAM

Supported E4438C with Option 402

```
[ :SOURCE ]:RADIO:PHS:DATA:PRAM "<file_name>"
```

```
[ :SOURCE ]:RADIO:PHS:DATA:PRAM?
```

This command selects a pattern RAM (PRAM) file as the pattern data type for the PHS (Personal Handy-phone System) format.

"<file_name>" This variable designates the PRAM file in WFM1. Refer to [“File Name Variables” on page 13](#) for information on the file name syntax.

Key Entry **PRAM File**

Remarks Selecting this data source forces the burst source to INTERNAL to allow framing control.

The PRAM file must reside in the signal generator’s volatile memory (WFM1) in order to be accessed by this command. For more information on PRAM files, refer to [“:DATA:PRAM:FILE:BLOCK” on page 110](#).

:DATA:FIX4

Supported E4438C with Option 402

```
[ :SOURCE ]:RADIO:PHS:DATA:FIX4 <val>
```

```
[ :SOURCE ]:RADIO:PHS:DATA:FIX4?
```

This command sets the binary, 4-bit repeating sequence data pattern for unframed transmission according to the protocols (modulation type, symbol rate, filter, and burst shape) selected for the PHS format.

***RST** #B0000

Range #B0000–#B1111 or 0–15

Key Entry **FIX4**

Remarks FIX4 must already be defined as the data type.

:DEFault

Supported E4438C with Option 402

```
[ :SOURCE ]:RADIO:PHS:DEFault
```

This command returns all of the PHS modulation format parameters to factory settings. It does not affect any other signal generator parameters.

Key Entry **Restore PHS Factory Default**

:DLINK:SLOT[1] | 2 | 3 | 4:CUSTom

Supported E4438C with Option 402

```
[ :SOURce ] :RADio :PHS :DLINK :SLOT [ 1 ] | 2 | 3 | 4 :CUSTom :FIX4 <val>
[ :SOURce ] :RADio :PHS :DLINK :SLOT [ 1 ] | 2 | 3 | 4 :CUSTom :FIX4?
```

This command sets the binary, 4-bit repeating sequence data pattern that is used in the selected downlink custom timeslot.

***RST** #B0000

Range #B0000–#B1111 or 0–15

Key Entry **FIX4**

Remarks FIX4 must already be defined as the data type.

:EDATa:DELaY

Supported E4438C with Option 402

[:SOURCE] :RADio:PHS:EDATa:DELaY?

This query returns the amount of delay (in symbols) from the external data input to the beginning of the symbol on the I OUT and Q OUT rear panel connectors and the front panel RF OUTPUT connector.

Remarks When the format is turned off, the delay value is unchanged; the query will return the same delay value if the format is on or off.

:EDCLock

Supported E4438C with Option 402

[:SOURCE] :RADio:PHS:EDCLock SYMBol|NORMal
 [:SOURCE] :RADio:PHS:EDCLock?

This command sets the external data clock use.

SYMBol This choice specifies that a continuous symbol clock signal must be provided to the SYMBOL SYNC input connector.

NORMal This choice specifies that the DATA CLOCK input connector requires a bit clock. The SYMBOL SYNC input connector requires a (one-shot or continuous) symbol sync signal.

:EREFerence

Supported E4438C with Option 402

[:SOURCE] :RADio :PHS :EREFerence INT | EXT

[:SOURCE] :RADio :PHS :EREFerence ?

This command selects either an internal or external bit-clock reference for the data generator.

***RST** INT

Key Entry **BBG Ref Ext Int**

Remarks If the EXT choice is selected, the external source’s frequency value must be applied to the BASEBAND GEN REF IN rear panel connector. The external reference and external data clock are not applicable at the same time. If both are selected, then the external reference takes precedence.

Refer to, “:EREFerence:VALue” on page 856 to enter the external reference frequency setting.

:EREFerence:VALue

Supported E4438C with Option 402

[:SOURCE] :RADio :PHS :EREFerence :VALue <val>

[:SOURCE] :RADio :PHS :EREFerence :VALue ?

This command sets the expected bit-clock reference frequency value for an externally applied reference signal.

The variable <val> is expressed in units of hertz (Hz–MHz).

***RST** +1.30000000E+007

Range 2.5E5–1E8

Key Entry **Ext BBG Ref Freq**

Remarks The value specified by this command is effective only when you are using an external reference applied to the BASEBAND GEN REF IN rear panel connector.

Refer to “:EREFerence” on page 856 to select EXT (external source) as the reference for the bit-clock.

```

This command selects the pre-modulation filter type.

- IS95 This choice selects a filter that meets the criteria of the IS-95 standard.
- IS95_EQ This choice selects a filter which is a combination of the IS-95 filter (above) and the equalizer filter described in the IS-95 standard. This filter is only used for IS-95 baseband filtering.
- IS95_MOD This choice selects a filter that meets the criteria of the IS-95 error function (for improved adjacent channel performance) with lower passband rejection than the filter specified in the IS-95 standard.
- IS95_MOD_EQ This choice selects a filter which is a combination of the equalizer filter described in the IS-95 standard and a filter that meets the criteria of the IS-95 error function (for improved adjacent channel performance), with lower passband rejection.
- AC4Fm This choice selects a predefined Association of Public Safety Communications Officials (APCO) specified compatible 4-level frequency modulation (C4FM) filter.
- UGGaussian This choice selects a backwards compatible GSM Gaussian filter (Gaussian filter with a fixed BbT value of 0.300) for the ESG E44xxB Option UN3 or UN4.
- "<user FIR>" This variable is any filter file that you have stored into memory.

[ :SOURce ] :RADio:PHS:SOUT?
```

This command sets the synchronization location (within the pattern of data) and the type of output at the EVENT 1 rear panel connector.

FRAME This choice outputs a 1-bit signal, synchronized to the bit selected by the synchronization output offset command, for a framed data pattern.

SLOT This choice outputs a 1-bit signal, synchronized to the bit selected by the synchronization output offset command, for a selected timeslot.

ALL This choice outputs a 1-bit signal, synchronized to the bit selected by the synchronization output offset command, for all active timeslots.

```
[ :SOURce ] :RADio:PHS:SRATe <val>
```

```
[ :SOURce ] :RADio:PHS:SRATe?
```

This command sets the transmission symbol rate. Symbol rate is the bit rate divided by the bits per symbol. A change in the symbol rate affects the bit rate. Refer to [“:BRATe” on page 773](#) for information on bit rate.

The variable <val> is expressed in units of symbols per second (sps–MSPS) and the maximum symbol rate depends on the filter. Refer to [“:FILTer” on page 857](#) for minimum filter symbol width.

The filter may have to be truncated down to 32 or 16 symbols wide to achieve the highest symbol rate. The signal generator’s internal filters are not truncated below their minimum filter length and user-defined FIR filters are not truncated. If the filter cannot be truncated then the symbol rate is limited to the maximum rate of the narrowest filter size possible.

The relative timing of the modulated data, as well as the actual filter response is affected when the filter is truncated.

When the symbol rate changes, the ESG reconfigures the baseband generator. The time required to reconfigure the baseband generator is inversely proportional to the symbol rate: lower symbol rates require more time.

To change the modulation type, refer to [“:MODulation\[:TYPE\]” on page 860](#).

:TRIGger:TYPE

Supported E4438C with Option 402

[:SOURce] :RADio:PHS:TRIGger:TYPE CONTinuous | SINGle | GATE
 [:SOURce] :RADio:PHS:TRIGger:TYPE?

This command sets the trigger type.

CONTinuous The framed data sequence repeats continuously; the sequence restarts every time the previous playback is completed. To customize continuous triggering, refer to “:TRIGger:TYPE:CONTinuous[:TYPE]” on page 865.

SINGle The framed data sequence plays once for every trigger received.

GATE An external trigger signal interrupts the playback while the gating signal is in the inactive state. Playback resumes when the external control signal returns to the active state. The active state can be set to high or low.

[:SOURce] :RADio :PHS :TRIGger :TYPE :CONTInuous [:TYPE] FREE | TRIGger | RESet
 [:SOURce] :RADio :PHS :TRIGger :TYPE :CONTInuous [:TYPE] ?

This commands selects the waveform’s response to a trigger signal while using the continuous trigger mode.

For more information on triggering and to select the continuous trigger mode, see “:TRIGger:TYPE” on page 864.

The following list describes the waveform’s response to each of the command choices:

FREE Turning the ARB format on immediately triggers the waveform. The waveform repeats until you turn the format off, select another trigger, or choose another waveform file.

TRIGger The waveform waits for a trigger before play begins. When the waveform receives the trigger, it plays continuously until you turn the format off, select another trigger, or choose another waveform file.

RESet The waveform waits for a trigger before play begins. When the waveform receives the trigger, it plays continuously. Subsequent triggers reset the waveform to the beginning. For a waveform sequence, this means to the beginning of the first segment in the sequence.

:TRIGger:TYPE:GATE:ACTive

Supported E4438C with Option 402

```
[ :SOURCE ] :RADio:PHS:TRIGger:TYPE:GATE:ACTive LOW|HIGH  
[ :SOURCE ] :RADio:PHS:TRIGger:TYPE:GATE:ACTive?
```

This command selects the active state (gate polarity) of the gate while using the gating trigger mode.

The LOW and HIGH selections correspond to the low and high states of an external trigger signal. For example, when you select HIGH, the active state occurs during the high of the trigger signal. When the active state occurs, the ESG stops the waveform playback at the last played sample point, then restarts the playback at the next sample point when the inactive state occurs. For more information on triggering and to select gating as the trigger mode, see “:TRIGger:TYPE” on page 864.

The following list describes the ESG’s gating behavior for the polarity selections:

LOW The waveform playback stops when the trigger signal goes low (active state) and restarts when the trigger signal goes high (inactive state).

HIGH The waveform playback stops when the trigger signal goes high (active state) and restarts when the trigger signal goes low (inactive state).

:TRIGger[:SOURCE]:EXTErnal:DELAy

Supported E4438C with Option 402

```
[ :SOURCE ] :RADio:PHS:TRIGger[:SOURCE]:EXTErnal:DELAy <val>  
[ :SOURCE ] :RADio:PHS:TRIGger[:SOURCE]:EXTErnal:DELAy?
```

This command sets the number of bits to delay the ESG’s response to an external trigger.

The bit delay is a delay between when the ESG receives the trigger and when it responds to the trigger. The delay uses the clocks of the bit-clock to time the delay. After the ESG receives the trigger and the set number of delay bits (clocks) occurs, the ESG transmits the data pattern.

The delay occurs after you enable the state. See “:TRIGger[:SOURCE]:EXTErnal:DELAy:STATE” on page 867. You can set the number of bits either before or after enabling the state.

For more information on configuring an external trigger source and to select external as the trigger source, see “:TRIGger[:SOURCE]” on page 868.

[ :SOURce ] :RADio:PHS:TRIGger [ :SOURce ] :EXTErnal:SLOPe?
```

This command sets the polarity for an external trigger signal while using the continuous, single triggering mode. To set the polarity for gating, see “:TRIGger:TYPE:GATE:ACTive” on page 866.

The POSitive and NEGative selections correspond to the high (positive) and low (negative) states of the external trigger signal. For example, when you select POSitive, the waveform responds (plays) during the high state of the trigger signal. When the ESGESG receives multiple trigger occurrences when only one is required, the signal generator uses the first trigger and ignores the rest.

:ALPha

Supported E4438C with Option 402

[:SOURce] :RADio:TETRa:ALPha <val>

[:SOURce] :RADio:TETRa:ALPha?

This command changes the Nyquist or root Nyquist filter's alpha value.

The filter alpha value can be set to a minimum level (0), a maximum level (1), or in between by using fractional numeric values (0.001–0.999).

***RST** +3.50000000E-001

:BBCLock

Supported E4438C with Option 402

[:SOURce] :RADio:TETRa:BBCLock INT[1] | EXT[1]

[:SOURce] :RADio:TETRa:BBCLock?

This command toggles the data (bit) clock input to the baseband generator board to either internal or external. This command is independent in each mode and works for both non-burst (continuous) and burst modes. This allows for a matrix of selections between burst/non-burst, internal/external data generation, internal/external data clock, and external bit/symbol data clock.

INT[1] This choice selects the signal generator internal data clock.

EXT[1] This choice selects an external data clock input.

***RST** INT

Key Entry **BBG Data Clock Ext Int**

Remarks A data clock or continuous symbol sync input must be supplied when external mode is used.

TETRA Subsystem—Option 402 ([:SOURCE]:RADio:TETRa)**:BBT**

Supported E4438C with Option 402

```
[ :SOURCE ] :RADio:TETRa:BBT <val>
```

```
[ :SOURCE ] :RADio:TETRa:BBT?
```

This command changes the bandwidth-multiplied-by-bit-time (BbT) filter parameter.

The filter BbT value can be set to the maximum level (1) or in between the minimum level (0.100) and maximum level by using fractional numeric values (0.101–0.999).

***RST** +5.00000000E–001

Range 0.100–1.000

Key Entry Filter BbT

Remarks This command is effective only after choosing a Gaussian filter. It does not have an effect on other types of filters.

To change the current filter type, refer to “:FILTer” on page 889.

Supported E4438C with Option 402

```
[ :SOURCE ] :RADio:TETRa:BRATe <val>
```

```
[ :SOURCE ] :RADio:TETRa:BRATe?
```

This command sets the bit rate in bits per second (bps–Mbps). The maximum bit rate is dependent on the modulation type and filter as shown in the following tables

The IQ digital data stream is shaped by a FIR filter. The filter length and associated latency and frequency response are dependent on the bit rate as shown in the following tables. The signal generator selects a filter length.

For higher bit rates, the FIR filter length may be truncated (if the minimum filter size allows it) which will impact the relative timing of the modulated data, as well as the actual filter response (see the symbol rate command “:SRATe” on page 863). Refer to “:FILTer” on page 889 for information on filter symbol widths. To change the modulation type, refer to “:MODulation[:TYPE]” on page 892.

When the bit rate is changed, the ESG reconfigures the baseband generator. The time required to reconfigure the baseband generator is inversely proportional to the bit rate: lower bit rates require more time.

```
[ :SOURCE ] :RADIO :TETRA :BURSt :SHAPE [ :TYPE ] SINE | "<file name>"
[ :SOURCE ] :RADIO :TETRA :BURSt :SHAPE [ :TYPE ] ?
```

This command specifies the burst shape as either SINE or a user-defined file ("<file name>").

SINE This choice selects a state that is defined by the burst rise and fall *RST values as the default burst shape type.

"<file name>" This choice selects a user designated file from signal generator memory (non-volatile).

***RST** SINE

Key Entry **Sine User File**

:BURSt[:STATe]

```
[ :SOURCE ] :RADIO :TETRA :BURSt [ :STATe ] ON | OFF | 1 | 0
[ :SOURCE ] :RADIO :TETRA :BURSt [ :STATe ] ?
```

This command enables or disables the burst function.

ON (1) This choice enables the transmission of framed data. If all timeslots which are switched on are up traffic channels or custom, you will be bursting the timeslots that are on; there will be no RF carrier during the off timeslots.

If you have switched on any timeslot that you have configured as a down traffic channel, the RF carrier is not switched off between any of the timeslots. The off timeslots are transmitted as a continuous series of ones for the time period of the off timeslots.

OFF (0) This choice enables the transmission of unframed data.

This command optimizes the Nyquist and root Nyquist filters to minimize error vector magnitude (EVM) or to minimize adjacent channel power (ACP).

EVM This choice provides the most ideal passband.

ACP This choice improves stopband rejection.

***RST** EVM

Key Entry **Optimize FIR For EVM ACP**

TETRA Subsystem—Option 402 ([:SOURCE]:RADIO:TETRA)**:DATA:PRAM**

Supported E4438C with Option 402

```
[ :SOURCE ] :RADIO :TETRA :DATA :PRAM "<file_name>"
```

```
[ :SOURCE ] :RADIO :TETRA :DATA :PRAM?
```

This command selects a pattern RAM (PRAM) file as the pattern data type for the TETRA (Trans-European Trunked Radio) format.

"<file_name>" This variable designates the PRAM file in WFM1. Refer to [“File Name Variables” on page 13](#) for information on the file name syntax.

Key Entry **PRAM File**

Remarks Selecting this data source forces the burst source to INTERNAL to allow framing control.

The PRAM file must reside in the signal generator’s volatile memory (WFM1) in order to be accessed by this command. For more information on PRAM files, refer to [“:DATA:PRAM:FILE:BLOCK” on page 110](#).

:EDATa:DELay

Supported E4438C with Option 402

[:SOURCE] :RADio:TETRa:EDATa:DELay?

This query returns the amount of delay (in symbols) from the external data input to the beginning of the symbol on the I OUT and Q OUT rear panel connectors and the front panel RF OUTPUT connector.

Remarks When the format is turned off, the delay value is unchanged; the query will return the same delay value if the format is on or off.

:EDCLock

Supported E4438C with Option 402

[:SOURCE] :RADio:TETRa:EDCLock SYMBOL | NORMal

[:SOURCE] :RADio:TETRa:EDCLock?

This command sets the external data clock use.

SYMBOL This choice specifies that a continuous symbol clock signal must be provided to the SYMBOL SYNC input connector.

NORMal This choice specifies that the DATA CLOCK input connector requires a bit clock. The SYMBOL SYNC input connector requires a (one-shot or continuous) symbol sync signal.

***RST** NORM

Key Entry **Ext Data Clock Normal Symbol**

Remarks Both choices have no effect in internal clock mode. Refer to “:BBCLock” on [page 875](#) to select EXT as the data clock type.

Supported E4438C with Option 402

[:SOURCE] :RADio :TETRa :EREFerence INT | EXT

[:SOURCE] :RADio :TETRa :EREFerence?

This command selects either an internal or external bit-clock reference for the data generator.

***RST** INT

Key Entry **BBG Ref Ext Int**

Remarks If the EXT choice is selected, the external source's frequency value

must be applied to the BASEBAND GEN REF IN rear panel connector. The external reference and external data clock are not applicable at the same time. If both are selected, then the external reference takes precedence.

Refer to, “[:EREFerence:VALue](#)” on [page 888](#) to enter the external reference frequency setting.

:EREFerence:VALue

Supported E4438C with Option 402

[:SOURCE] :RADio :TETRa :EREFerence:VALue <val>

[:SOURCE] :RADio :TETRa :EREFerence:VALue?

This command sets the expected bit-clock reference frequency value for an externally applied reference signal.

The variable <val> is expressed in units of hertz (Hz–MHz).

***RST** +1.30000000E+007

Range 2.5E5–1E8

Key Entry **Ext BBG Ref Freq**

Remarks The value specified by this command is effective only when you are using an external reference applied to the BASEBAND GEN REF IN rear panel connector.

Refer to “[:EREFerence](#)” on [page 888](#) to select EXT (external source) as the reference for the bit-clock.

This command selects the pre-modulation filter type.

- IS95 This choice selects a filter that meets the criteria of the IS-95 standard.
- IS95_EQ This choice selects a filter which is a combination of the IS-95 filter (above) and the equalizer filter described in the IS-95 standard. This filter is only used for IS-95 baseband filtering.
- IS95_MOD This choice selects a filter that meets the criteria of the IS-95 error function (for improved adjacent channel performance) with lower passband rejection than the filter specified in the IS-95 standard.
- IS95_MOD_EQ This choice selects a filter which is a combination of the equalizer filter described in the IS-95 standard and a filter that meets the criteria of the IS-95 error function (for improved adjacent channel performance), with lower passband rejection.
- AC4Fm This choice selects a predefined Association of Public Safety Communications Officials (APCO) specified compatible 4-level frequency modulation (C4FM) filter.
- UGGaussian This choice selects a backwards compatible GSM Gaussian filter (Gaussian filter with a fixed BbT value of 0.300) for the ESG E44xxB Option UN3 or UN4.
- "<user FIR>" This variable is any filter file that you have stored into memory.

[:SOURCE] :RADio:TETRa:IQ:SCALe <val>

[:SOURCE] :RADio:TETRa:IQ:SCALe?

This command sets the amplitude of the I/Q outputs for better adjacent channel power (ACP); lower scaling values equate to better ACP.

The variable <val> is expressed in units of percent.

***RST** +65

Range 1–200

Key Entry **I/Q Scaling**

Remarks This command has no effect with MSK or FSK modulation.

:MODulation:FSK[:DEVIation]

Supported E4438C with Option 402

[:SOURCE] :RADio:TETRa:MODulation:FSK[:DEVIation] <val>

[:SOURCE] :RADio:TETRa:MODulation:FSK[:DEVIation]?

This command sets the symmetric FSK frequency deviation value.

The variable <val> is expressed in units of Hertz and the maximum range value equals the current symbol rate value multiplied by four, limited to 20 MHz.

***RST** +4.00000000E+002

Range 0–2E7

Key Entry **Freq Dev**

Remarks To change the modulation type, refer to “:MODulation[:TYPE]” on page 892.

Refer to “:SRATe” on page 863 for a list of the minimum and maximum symbol rate values.

To set an asymmetric FSK deviation value, refer to the *E4428C/38C ESG Signal Generators User’s Guide* for more information.

```
[ :SOURce ]:RADio:TETRa:MODulation:UFSK "<file name>"  
[ :SOURce ]:RADio:TETRa:MODulation:UFSK?
```

This command selects a user-defined FSK file from the signal generator memory.

Key Entry **User FSK**

Remarks The user-defined FSK file is held in signal generator memory until the command that selects user FSK as the modulation type is sent. Refer to [“:MODulation\[:TYPE\]” on page 892](#) to change the current modulation type.

Refer to [“File Name Variables” on page 13](#) for information on the file name syntax.

:SECondary:RECall

Supported E4438C with Option 402

[:SOURCE] :RADio:TETRa:SECondary:RECall

This command recalls the secondary frame configuration, overwriting the current state.

Key Entry **Recall Secondary Frame State**

Remarks To save a secondary frame state, refer to “:SECondary:SAVE” on page 893.

A secondary frame is not active until the secondary state is enabled. To activate a secondary frame, refer to “:SECondary[:STATe]” on page 894.

:SECondary:SAVE

Supported E4438C with Option 402

[:SOURCE] :RADio:TETRa:SECondary:SAVE

This command saves the current frame configuration as the secondary frame with the file name TETRa_SECONDARY_FRAME.

Key Entry **Save Secondary Frame State**

Remarks To recall the secondary frame (saved in non-volatile signal generator memory), refer to “:SECondary:RECall” on page 893.

	[:SOURCE] :RADio:TETRa:SRATe <val> [:SOURCE] :RADio:TETRa:SRATe?
	This command sets the transmission symbol rate. Symbol rate is the bit rate divided by the bits per symbol. A change in the symbol rate affects the bit rate. Refer to “:BRATe” on page 876 for information on bit rate.
	The variable <val> is expressed in units of symbols per second (sps–MSPs) and the maximum symbol rate depends on the filter. Refer to “:FILTer” on page 889 for minimum filter symbol width.
	The filter may have to be truncated down to 32 or 16 symbols wide to achieve the highest symbol rate. The signal generator’s internal filters are not truncated below their minimum filter length and user-defined FIR filters are not truncated. If the filter cannot be truncated then the symbol rate is limited to the maximum rate of the narrowest filter size possible.

The relative timing of the modulated data, as well as the actual filter response is affected when the filter is truncated.

When the symbol rate changes, the ESG reconfigures the baseband generator. The time required to reconfigure the baseband generator is inversely proportional to the symbol rate: lower symbol rates require more time.

To change the modulation type, refer to “:MODulation[:TYPE]” on page 892.

```
[ :SOURce ] :RADio :TETRa :TRIGger :TYPE CONTinuous | SINGLE | GATE

This command sets the trigger type.

CONTinuous The framed data sequence repeats continuously; the sequence restarts every time the previous playback is completed. To customize continuous triggering, refer to [“:TRIGger:TYPE:CONTinuous\[:TYPE\]” on page 912](#).

SINGLE The framed data sequence plays once for every trigger received.

GATE An external trigger signal interrupts the playback while the gating signal is in the inactive state. Playback resumes when the external control signal returns to the active state. The active state can be set to high or low.

This commands selects the waveform’s response to a trigger signal while using the continuous trigger mode.

For more information on triggering and to select the continuous trigger mode, see [“:TRIGger:TYPE” on page 912](#).

The following list describes the waveform’s response to each of the command choices:

FREE Turning the ARB format on immediately triggers the waveform. The waveform repeats until you turn the format off, select another trigger, or choose another waveform file.

TRIGger The waveform waits for a trigger before play begins. When the waveform receives the trigger, it plays continuously until you turn the format off, select another trigger, or choose another waveform file.

RESet The waveform waits for a trigger before play begins. When the waveform receives the trigger, it plays continuously. Subsequent triggers reset the waveform to the beginning. For a waveform sequence, this means to the beginning of the first segment in the sequence.

Supported E4438C with Option 402

[:SOURCE] :RADio:TETRa:TRIGger:TYPE:GATE:ACTive LOW|HIGH
 [:SOURCE] :RADio:TETRa:TRIGger:TYPE:GATE:ACTive?

This command selects the active state (gate polarity) of the gate while using the gating trigger mode.

The LOW and HIGH selections correspond to the low and high states of an external trigger signal. For example, when you select HIGH, the active state occurs during the high of the trigger signal. When the active state occurs, the ESG stops the waveform playback at the last played sample point, then restarts the playback at the next sample point when the inactive state occurs. For more information on triggering and to select gating as the trigger mode, see “:TRIGger:TYPE” on page 912.

The following list describes the ESG’s gating behavior for the polarity selections:

LOW The waveform playback stops when the trigger signal goes low (active state) and restarts when the trigger signal goes high (inactive state).

HIGH The waveform playback stops when the trigger signal goes high (active state) and restarts when the trigger signal goes low (inactive state).

KEY This choice enables manual triggering by pressing the front-panel **Trigger** hardkey.**EXT** An externally applied signal triggers the waveform. This is the only choice that works with gating. The following conditions affect an external trigger:

- The input connector selected for the trigger signal. You have a choice between the rear-panel PATTERN TRIG IN connector or the PATT TRIG IN 2 pin on the rear-panel AUXILIARY I/O connector. To make the connector selection, see “:TRIGger[:SOURce]:EXTErnal[:SOURce]” on page 916.

For more information on the connectors and on connecting the cables, see the *E4428C/38C ESG Signal Generators User’s Guide*.

- The trigger signal polarity:
 - gating mode, see “:TRIGger:TYPE:GATE:ACTive” on page 913
 - continuous and single modes, see “:TRIGger[:SOURce]:EXTErnal:SLOPe” on page 916
- The time delay between when the ESG receives a trigger and when the waveform responds to the trigger. There are two parts to setting the delay:
 - setting the amount of delay, see “:TRIGger[:SOURce]:EXTErnal:DELAy” on page 915
 - turning the delay on, see “:TRIGger[:SOURce]:EXTErnal:DELAy:STATe” on page 915

[ :SOURCE ] :RADio:TETRa:TRIGger [ :SOURCE ] :EXtErnal:DELay <val>  
[ :SOURCE ] :RADio:TETRa:TRIGger [ :SOURCE ] :EXtErnal:DELay?
```

This command sets the number of bits to delay the ESG's response to an external trigger.

The bit delay is a delay between when the ESG receives the trigger and when it responds to the trigger. The delay uses the clocks of the bit-clock to time the delay. After the ESG receives the trigger and the set number of delay bits (clocks) occurs, the ESG transmits the data pattern.

The delay occurs after you enable the state. See “[:TRIGger\[:SOURCE\]:EXtErnal:DELay:STATe](#)” on [page 915](#). You can set the number of bits either before or after enabling the state.

The POSitive and NEGative selections correspond to the high (positive) and low (negative) states of the external trigger signal. For example, when you select POSitive, the waveform responds (plays) during the high state of the trigger signal. When the ESG receives multiple trigger occurrences when only one is required, the signal generator uses the first trigger and ignores the rest.

:DLINK:AWGN:TICPower

Supported E4438C with Option 400 and 403

[:SOURCE] :RADIO:WCDMA:TGPP [:BBG] :DLINK:AWGN:TICPower?

This query returns the total in-channel power (carrier with noise) as defined by the 3GPP standard.

***RST** +0

Field Entry Total Pwr

Remarks The total in-channel power is a sum of carrier power and in-channel noise power. Changing the noise related parameters such as C/N, Eb/No, and Eb Ref will cause a recalculation of the total in-channel power.

The maximum value returned by this query depends on the power option that is installed in the signal generator.

[:SOURCE]:RADIO:WCDMA:TGPP[:BBG]:DLINK:CARB:CMODE:DATA PN9 | PN15

[:SOURCE]:RADIO:WCDMA:TGPP[:BBG]:DLINK:CARB:CMODE:DATA?

This command sets the dedicated physical channel (DPCH) data pattern in compressed mode (CM).

***RST** PN9**Key Entry** **PN9 PN15**

Remarks The data pattern contains one frame of each normal DPCH frame with a chosen slot structure. CM is enabled via spread factor reduction using a single frame method.

[ :SOURCE ] :RADio:WCDMa:TGPP [ :BBG ] :DLINK:CARB:CMODE:PRATio?
```

This command sets the playback ratio for the downlink compressed mode.

***RST** 2

Range 0–4096

Field Entry Playback Ratio

Remarks The value that is set represents the number of normal frames played between each compressed frame.

For example: 1:30

30 represents the un-compressed (normal) DPCH frames. The 30 frames will be played and then 1 compressed DPCH frame. The sequence then repeats.

This command selects the compressed mode (CM) method.

SF2 This choice selects a compressed mode method that reduces the spread factor (SF) by 2. This is done by reducing the spreading factor in half. When the dedicated physical data channel's (DPDCH) symbol rate is 960 kbps, the frame is not compressed because it uses the lowest SF value and cannot be reduced.

PUNCTure This choice selects a compressed mode method that punctures the convolutional encoder to a lower rate which reduces the number of symbols to be transmitted.

[:SOURCE] :RADio:WCDMa:TGPP [:BBG] :DLINK:TSETup REFSensitivity | MAXinput | ACS | BLOCking | SPURious | INTermod | PERFreq

This command configures the test setup for the downlink channels.

REFSensitivity This choice selects reference sensitivity. This is the minimum receiver input power measured at the antenna connector.

MAXinput This choice selects maximum input interference. The receiver is stressed with high-levels of interference from unwanted signals.

ACS This choice selects adjacent channel selectivity (ACS). This is the receiver ability to receive a wanted signal at the assigned channel frequency with the presence of adjacent signals.

ACS is the ratio of the receiver filter attenuation (on the assigned channel) to the receive filter attenuation on the adjacent channel(s).

BLOCking This choice selects the blocking characteristics. This is a measure of the receiver ability to receive a wanted signal at the assigned channel frequency in the presence of an unwanted interferer on frequencies other than those of the adjacent channels.

SPURious This choice selects spurious emission power. The emissions are generated or amplified by a receiver.

INTermod This choice selects intermodulation. Third order intermodulation (TIO) or higher mixing of the two interfering RF signals signal in the band of the desired channel.

PERFreq This choice selects the performance requirement of the dedicated channel. This is a static propagation conditions that is determined by the maximum block error rate (BLER) allowed when the receiver input signal is at a specified Eb/No limit.

Transport Channel Mode	Signal Generator Behavior
FLEXible	Changing the block size causes the signal generator to recalculate the block set size. The block size, number of blocks and the block set size values are interdependent as shown in the following formula: $\text{block size} = \text{block set size} \div \text{number of blocks}$
FIXed	There are two signal generator behaviors in this mode: <ul style="list-style-type: none"> change the block size to zero, and it remains zero regardless of the block set size and number of blocks values change the block size to a value other than zero, and the signal generator recalculates the block size as a quotient of the block set size and the number of blocks (block set size \div number of blocks), ignoring the value entered by the command

This command sets the number of blocks (NBLocks) transmitted by the selected downlink dedicated transport channel (DCH). The transport channel position affects the behavior of this command as described below.

Transport Channel Mode	Signal Generator Behavior
FLEXible	Changing the number of blocks causes the signal generator to recalculate the block set size; <i>block size</i> remains constant. The equation is as follows: $\text{number of blocks} \leq \text{block set size} \div \text{block size}$
FIXed	Changing the number of blocks causes the signal generator to recalculate the block size; <i>block set size</i> remains constant. This command selects a position for the data transmitted by the downlink dedicated transport channel (DCH).

The transport position selection, flexible or fixed, determines how the three block settings, block set size, block size, and number of blocks, for the transport channel are determined.

FLEXible This choice allows the signal generator to automatically set the block set size. The relationship between block set size, block size, and number of blocks is as follows:
 $\text{block set size} = \text{number of blocks} \times \text{block size}$

FIXed This choice allows a user-defined block set size. The relationship between block set size, block size, and number of blocks is as follows:
 $\text{block set size} \geq \text{number of blocks} \times \text{block size}$

Supported E4438C with Option 400

```
[ :SOURCE ] :RADio:WCDMa:TGPP[ :BBG ] :ULINK:PMODE:TPControl:POWer:MAXimum?
```

This query returns the maximum power (in dB; relative to Max Power) of the dedicated physical channel (DPCH).

Max Power is a grayed out field that will always be 0.00 dB. The value of this field is a relative value to the maximum amplitude set for the signal generator. For example, if the signal generator amplitude is set to -20 dBm, the Min Power set to -40 dB, and the Init Power is set to -10 dB, then the absolute initial power level will be -30 dBm (10 dBm below the signal generator amplitude) and the absolute minimum power will be -60 dBm (40 dBm below the signal generator amplitude).

NUMBER <val>|INFINITY

[:SOURCE]:RADIO:WCDMA:TGPP[:BBG]:ULINK:PRACH[:SINGLE]:NUMBER?

This command specifies the number of the physical random access channel (PRACH) patterns to repeat after the PRACH start trigger has been received.

INFINITY This choice means the repeating number will continue while the PRACH mode is selected and the start trigger is ignored.

***RST** 1**Range** 1–2147447836**Field Entry** Number of PRACH

RPS0 none

RPS1 This choice assigns the chip clock signal.

RPS6	This choice assigns the 10ms frame pulse signal.
RPS7	This choice assigns the trigger sync reply signal.
RPS11	This choice assigns the message-data raw data signal. In the multiple PRACH mode, RPS11 outputs the message-data raw data signal of PRACH#1. If the PRACH#1 is not “on”, no signal output is output.
RPS12	This choice assigns the message-data raw clock signal. In the multiple PRACH mode, RPS12 outputs the message-data raw clock signal of PRACH#1. If the PRACH#1 is not “on”, no signal output is output.
RPS14	This choice assigns the message-ctrl raw data clock signal. In the multiple PRACH mode, RPS14 outputs the message-control raw data clock signal of PRACH#1. If the PRACH#1 is not “on”, no signal output is output.
RPS15	This choice assigns the preamble raw data signal. In the multiple PRACH mode, RPS15 outputs the preamble raw data signal of PRACH#1. If the PRACH#1 is not “on”, no signal output is output.
RPS16	This choice assigns the preamble raw data clock signal. In the multiple PRACH mode, RPS16 outputs the preamble raw data clock signal of PRACH#1. If the PRACH#1 is not “on”, no signal output is output.
RPS17	This choice assigns the sub channel timing signal. Sub channel timing is used on the single PRACH mode.
RPS19	This choice assigns the PRACH processing signal. This signal indicates the PRACH is generating.
RPS20	This choice assigns the 80ms frame pulse signal.
RPS21	This choice assigns the preamble pulse signal. This signal indicates the preamble timing of all configured PRACHes. One pulse for one preamble. In the multiple PRACH mode, this output relates to PRACH#1. If the PRACH#1 in not “on”, no signal is output.
RPS22	This choice assigns the message pulse signal. This signal indicates the message part timing of all configured PRACHes. In the multiple PRACH mode, this output relates to PRACH#1. If the PRACH#1 in not “on”, no signal is output.
RPS23	This choice assigns the PRACH pulse signal. This signal indicates the start timing of all configured PRACHes. In the multiple PRACH mode, this output relates to PRACH#1. If the PRACH#1 in not “on”, no signal is output.
RPS24	This choice assigns the ESG synchronization signal. This signal is used for the multiple EAG synchronization on the multiple PRACH mode.

Wideband CDMA Base Band Generator Subsystem—Option 400 ([:SOURCE]:RADio:WCDMa:TGPP[:BBG])

RPS25 This choice assigns the PRACH start trigger echo back signal. The PRACH start trigger echo back signal is used for the multiple ESG connection on the multiple PRACH mode.

[ :SOURCE ] :RADIO:WCDMA:TGPP [ :BBG ] :ULINK:TGAP:PSI [ 1 ] :CMMethod?
```

This command selects the compressed mode (CM) method.

SF2 This choice selects a compressed mode method that reduced the spread factor (SF) by 2. This is done by increasing the data rate by reducing the spreading factor in half. When the dedicated physical data channel's (DPDCH) symbol rate is 960 kbps, the frame is not compressed because it uses the lowest SF value and it cannot be reduced.

HIGHER This choice selects a higher layer scheduling method. The emulated higher layer scheduling method mode keeps the same physical layer data rate even when a transmission gap is created.

:ULINK[:TGRoup [1]]:RACH[1]:PPERcentage**Supported** E4438C with Option 400

[:SOURCE]:RADio:WCDMa:TGPP[:BBG]:ULINK[:TGRoup[1]]:RACH[1]:PPERcentage?

This query returns the percentage of the total bits removed from or added to the fully coded channel.

RST** –2.12500000E+002**Field Entry** Puncture**:ULINK[:TGRoup[1]]:RACH[1]:RMArch*Supported** E4438C with Option 400

[:SOURCE]:RADio:WCDMa:TGPP[:BBG]:ULINK:RACH[1]:RMArch?

This query returns the rate match parameters of each random access channel (RACH).

***RST** +1

:ULINK[:TGRoup[1]]:RACH[1]:TTI**Supported** E4438C with Option 400[:SOURCE]:RADio:WCDMa:TGPP[:BBG]:ULINK[:TGRoup[1]]:RACH[1]:
TTI 10000|20000

[:SOURCE]:RADio:WCDMa:TGPP[:BBG]:ULINK[:TGRoup[1]]:RACH[1]:TTI?

This command sets the transmission time interval (TTI) period for the random access channel (RACH).

The choices are expressed in units of milliseconds (msec) where 20000=20 msec.

***RST** 20000**Field Entry** TTI

Remarks If the parameter set by this command is changed while the signal is active, the apply command must be executed for the change to occur. Refer to [“:ULINK:APPLY”](#) on page 973.

:ULINK[:TGRoup[1]]:RACH[1][:STATe]**Supported** E4438C with Option 400

[:SOURCE]:RADio:WCDMa:TGPP[:BBG]:ULINK[:TGRoup[1]]:RACH[1][:STATe]?

This query returns the state of the random access channel (RACH).

[:SOURCE]:RADio:WCDMa:TGPP[:BBG][:STATe] ON|OFF|1|0

[:SOURCE]:RADio:WCDMa:TGPP[:BBG][:STATe]?

This command enables or disables W-CDMA functionality.
