

# Agilent E8247C/57C PSG CW and Analog Signal Generators

**Data Sheet** 

All specifications and characteristics apply over a 0 to 55 °C range (unless otherwise stated) and apply after a 45 minute warm-up time. Supplemental characteristics, denoted as typical or nominal, provide additional (non-warranted) information.

### **PSG Signal Generators**

|         | Option 520        | Option 540        |
|---------|-------------------|-------------------|
|         | 250 kHz to 20 GHz | 250 kHz to 40 GHz |
| CW only | E8247C            | E8247C            |
| Analog  | E8257C            | E8257C            |
| Vector  | E8267C            |                   |

(See E8267C data sheet for PSG vector signal generator specifications)

### **Definitions**

**Specifications (spec):** represent warranted performance.

**Typical (typ):** performance is not warranted. It applies at 25 °C. A minimum of 80% of all products meet typical performance.

**Nominal (nom):** values are not warranted. They represent the value of a parameter that is most likely to occur; the expected or mean value. They are included to facilitate the application of the product.

Standard (std): No options are included when referring to the signal generator unless noted otherwise.

### **Table of Contents**

| Specifications                             | 3  |

| Input impedance                       | $50~\Omega$ (nominal)                                |  |

<sup>1.</sup> Useable to 100 kHz.

Useable to 100 kHz.
 In ramp sweep mode (Option 007), resolution is limited with narrow spans and slow sweep speeds.
Refer to ramp sweep specifications for more information.
 To within 0.1 ppm of final frequency above 250 MHz or within 100 Hz below 250 MHz.
 To optimize phase noise use 5 dBm ± 2 dB.

### **Digital sweep**

| Step sweep of frequency or amplitude or both (start to stop)  |  |  |
|---|--|--|
| List sweep of frequency or amplitude or both (arbitrary list) |  |  |
|   |  |  |
| Within instrument frequency range                             |  |  |
| Within attenuator hold range                                  |  |  |
| 1 ms to 60 s  |  |  |
| 2 to 1601 (step sweep)  |  |  |
| 2 to 1601 per table (list sweep)                              |  |  |
| Auto, external, single, or GPIB                               |  |  |
|   |  |  |

|                           |   |  |                                    |                        |

During Ramp sweep operation, AM and Pulse Modulation are useable but not specified; FM, Phase Modulation, Wideband AM and I/Q modulation are not useable.

Minimum settable sweep span is proportional to carrier frequency and sweep time. Actual sweep span
may be slightly different than desired setting for spans less than [0.00004% of carrier frequency or
140 Hz] x [sweep time in seconds]. Actual span will always be displayed correctly.

Typical accuracy for sweep times > 100 ms can be calculated from the equation:
 [(0.005% of span)/(sweep time in seconds)] ± timebase. Accuracy is not specified for sweep times < 10 ms.</li>

<sup>4.</sup> For Master/Slave operation use Agilent Technologies part #8120-8806 Master/Slave interface cable.

<sup>5.</sup> When measuring low-pass devices in AC mode, dynamic range may be reduced up to 10dB below 3.2 GHz

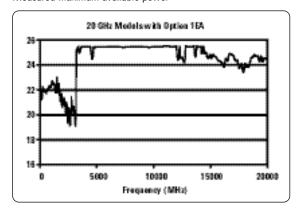

GPIB system interface is not supported with 8757A/C/E, only with 8757D. As a result, some features of 8757A/C/E, such as frequency display, pass-through mode, and alternate sweep, do not function with PSG signal generators.

### Output

| Power <sup>1</sup> (dBm)             |                            |                         |

(Same as max power sweep range)

<sup>1.</sup> Maximum power specification is warranted from 15 to 35° C, and is typical from 0 to 15° C. Maximum power over the 35 to 55° C range typically degrades less than 2 dB.

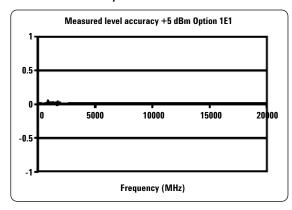

<sup>2.</sup> To within 0.1 dB of final amplitude within one attenuator range

Specifications apply in CW and List/Step sweep modes over the 15 to 35° C temperature range.
 Degradation outside this range, for power levels > -10 dBm, is typically < 0.3 dB. In Ramp sweep mode (with Option 007), specifications are typical. For instruments with Type-N connectors (Option 1ED), specifications are degraded typically 0.2 dB above 18 GHz.</li>

Specifications for harmonics beyond maximum instrument frequencies are typical.

Specifications for sub-harmonics beyond maximum instrument frequencies are typical.

Performance is typical for spurs at frequencies above the maximum operating frequency of the instrument. Specifications apply for CW mode only. Performance typically is –60 dBc between 200 and 250 MHz.
 For instruments with serial number prefixes below MY4330 or US4330, the specification is –136 dBc/Hz.

| Rates (3 dB bandwidth          | n, 30% depth) dc/10 Hz to 1              | 00 kHz (typical) (useable to 1 MHz)               |
| <b>Distortion</b> (1 kHz rate, | linear mode, THD)                        |   |
| 30% AM                         | < 1.5%                                   |   |
| 90% AM                         | < 4 %                                    |   |
| Paths                          | AM1 and AM                               | 2 are summed internally for composite             |
|                                | modulation. E                            | ither path may be switched to any one of          |
|                                | the modulation                           | n sources: Ext1, Ext2, internal1, internal2.      |

### **External modulation inputs**

(Ext1 & Ext2) (E8257C only)

| Modulation types                              | AM, FM, and $\Phi$ M                     |
|---|--|
| Input impedance                               | 50 or 600 $\Omega$ (nominal) switched    |
| High/low indicator                            |  |
| (100 Hz to 10 MHz BW, ac coupled inputs only) | Activated when input level error exceeds |
|   | 3% (nominal)                             |

## **Simultaneous modulation** (E8257C only)

All modulation types may be simultaneously enabled except: FM with  $\Phi$ M, and linear AM with exponential AM. AM, FM, and  $\Phi$ M can sum simultaneous inputs from any two sources (Ext1, Ext2, internal1, or internal2) Any given source (Ext1, Ext2, internal1, or internal2) may be routed to only one activated modulation type.

## **Internal modulation source** (E8257C only)

Dual function generators provides two independent signals (internal1 and internal2) for use with AM, FM,  $\Phi$ M, or LF Out. Waveforms Sine, square, positive ramp, negative ramp, triangle, Gaussian noise, uniform noise, swept sine, dual sine 3 Rate range Sine 0.5 Hz to 1 MHz Square, ramp, triangle 0.5 Hz to 100 kHz Resolution 0.5 Hz Accuracy Same as timebase LF out Output Internal1 or internal2. Also provides monitoring of internal 1 or internal 2 when used for AM, FM, or  $\Phi$ M. Amplitude 0 to 3  $V_{peak}$ , (nominal) into 50  $\Omega$ Output impedance  $50 \Omega$  (nominal) Swept sine mode: (frequency, phase continuous) Operating modes Triggered or continuous sweeps Frequency range 1 Hz to 1 MHz Sweep rate 0.5 Hz to 100 kHz sweeps/s, equivalent to sweep times 10 us to 2 s Resolution 0.5 Hz (0.5 sweep/s)

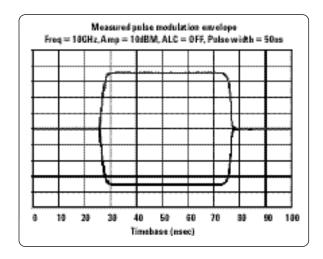

For f<sub>c</sub> < 2 MHz AM is usable but not specified. AM specifications apply with ALC on, and envelope peaks < maximum specified power. For instruments without Option 1E1 attenuator, specs apply for carrier amplitude > -2 dBm.

<sup>2.</sup> For AM depth settings > 90% or > 20 dB, deep AM mode or 1 kHz ALC BW is recommended.

<sup>3.</sup> Internal2 is not available when using swept sine or dual sine modes.

## Pulse modulation<sup>1</sup> (E8257C only)

With ALC off, specs apply after the execution of power search. For instruments without a step attenuator, specs apply between 0 and +10 dBm. For instruments with the step attenuator, specs apply with Atten Hold Off, or ALC level between 0 and +10 dBm.

<sup>2.</sup> Power search is a calibration routine that improves level accuracy in ALC-off mode. Un-pulsed RF power will be present typically up to 50 ms when executing power search.

<sup>3.</sup> With attenuator in 0 dB position. Video feed-through decreases with attenuator setting.

## Internal pulse generator (E8257C only)

|  | (Repetition frequency: 0.024 Hz to 14.28 MHz)           |
| Pulse width (Tw )                      | 10 ns to 42 s   |
| Delay (Td )                            |   |
| Free-run mode                          | 0 to $\pm 42$ s   |
| Triggered with delay and doublet modes | 75 ns to 42s with $\pm 10$ ns jitter                    |
| Resolution                             | 10 ns (width, delay, and PRI)                           |

### **Remote programming**

| Interfaces         | GPIB (IEEE-488.2,1987) with listen and talk, RS-232,     |
|--------------------|--|
|                    | and 10BaseT LAN interface.                               |
| Control languages  | SCPI version 1997.0. Also will emulate most applicable   |
|                    | Agilent 836xxB, Agilent 837xxB, and Agilent 8340/41B     |
|                    | commands, providing general compatibility with ATE       |
|                    | systems which include these signal generators.           |
| IEEE-488 functions | SH1, AH1, T6, TE0, L4, LE0, SR1, RL1, PP0, DC1,          |
|                    | DTO, CO, E2.   |
| ISO compliant      | This family of signal generators is manufactured in an   |
|                    | ISO-9001 registered facility in concurrence with Agilent |
|                    | Technologies commitment to quality.                      |

### **General specifications**

| Power requirements                        | 90 to 132 VAC 50 to 60 Hz or 365 to 435 Hz;               |
|---|---|
|   | 195 to 267 VAC 50 to 60 Hz, (automatically selected),     |
|   | 300 W maximum.  |
| Operating temperature range               | 0 to 55 °C  |
| Storage temperature range <sup>1</sup>    | −40 to 71 °C  |
| Shock and vibration                       |   |
| Operating random vibration                | 5 to 500 Hz, 0.21 g rms                                   |
| Survival swept sine vibration             | 5 to 500 Hz, 0.75 g                                       |
| Survival random vibration                 | 5 to 500 Hz, 2.09 g rms                                   |
| Functional shock (half-sine, 30 g, 11 ms) | Meets the requirements of MIL-PRF-28800F for class        |
| and bench drop test                       | 3 equipment.  |
| EMC                                       | Meets the conducted and radiated interference             |
|   | and immunity requirements of IEC/EN 61326-1.              |
|   | Meets radiated emission requirements of                   |
|   | CISPR Pub 11/1997 Group 1 class A.                        |
| Storage registers                         | Memory is shared by instrument states, user data files,   |
|   | sweep list files, and waveform sequences. Depending       |
|   | on the number and size of these files, up to 800 storage  |
|   | registers and 10 register sequences are available.        |
| Security                                  | Display blanking.   |
| Compatibility                             | Agilent Technologies 83550 Series millimeter heads,       |
|   | Agilent Technologies 8757D Scalar Network Analyzers,      |
|   | Agilent Technologies EPM Series Power Meters.             |
| Self-test                                 | Internal diagnostic routine tests most modules            |
|   | (including microcircuits) in a preset condition. For each |
|   | module, if its node voltages are within acceptable limits |
|   | then the module "passes" the test.                        |
| Weight                                    | < 22 kg (48 lb.) net, < 30 kg (68 lb.) shipping.          |
| Dimensions                                | 178 mm H x 426 mm W x 498 mm D                            |
|   | (7" H x 16.8" W x 19.6" D in.).                           |
| Recommended calibration cycle             | 24 months   |

<sup>1.</sup> Storage below –20 °C instrument states may be lost.

## Input/Output Descriptions

### **Front panel connectors**

(All connectors are BNC female unless otherwise noted.)<sup>1</sup>

| RF output                              | Nominal output impedance 50 $\Omega$ .                    |
|--|---|
| For 20 GHz models                      | Precision APC-3.5 male, or Type-N with Option 1ED.        |
| For 40 GHz models                      | Precision 2.4 mm male; plus 2.4 - 2.4 mm and              |
|  | 2.4 - 2.9 mm female adaptors also included.               |
| ALC input                              | Used for negative external detector leveling. Nominal     |
|  | input impedance 120 k $\Omega$ , damage level ±15 V.      |
| LF output (E8257C only)                | Outputs the internally generated LF source.               |
|  | Nominal output impedance 50 $\Omega$ .                    |
| External input 1 (E8257C only)         | Drives either AM, FM, or $\Phi$ M. Nominal input          |
|  | impedance 50 or 600 $\Omega$ , damage levels are          |
|  | $5 V_{rms}$ and $10 V_{peak}$ .                           |
| External input 2 (E8257C only)         | Drives either AM, FM, or $\Phi$ M. Nominal input          |
|  | impedance 50 or 600 $\Omega$ , damage levels are          |
|  | $5 V_{rms}$ and $10 V_{peak}$ .                           |
| Pulse/trigger gate input (E8257C only) | Accepts input signal for external fast pulse modulation.  |
|  | Also accepts external trigger pulse input for internal    |
|  | pulse modulation. Nominal impedance 50 $\Omega$ . Damage  |
|  | levels are $5 V_{rms}$ and $10 V_{peak}$ .                |
| Pulse video out (E8257C only)          | Outputs a signal that follows the RF output in all pulse  |
|  | modes. TTL-level compatible, nominal source               |
|  | impedance 50 $\Omega$ .                                   |
| Pulse sync out (E8257C only)           | Outputs a synchronizing pulse, nominally 50 ns width,     |
|  | during internal and triggered pulse modulation. TTL-level |
|  | compatible, nominal source impedance 50 $\Omega$ .        |
|  |   |

### **Rear panel connectors**

(All connectors are BNC female unless otherwise noted.)<sup>1</sup>

| Auxiliary interface (Dual mode) | Used for RS-232 serial communication and for  |
|---------------------------------|---|
| , , ,                           | Master/Slave source synchronization. (9-pin   |
|                                 | subminiature female connector).   |
| GPIB                            | Allows communication with compatible devices.   |
| LAN                             | Allows 10BaseT LAN communication  |
| 10 MHz input                    | Accepts an external reference (timebase) input (at 1, 2, 2.5, 5, 10 MHz for standard and 10 MHz only for Option UNR) Nominal input impedance 50 $\Omega$ .  |
| 10 MHz autout                   | Damage levels > +10 dBm   |
| 10 MHz output                   | Outputs internal or external reference signal. Nominal output impedance 50 $\Omega$ . Nominal output power +8 dBm   |
| Sweep output (Dual mode)        | Supplies a voltage proportional to the RF power or frequency sweep ranging form 0 volts at the start of sweep to +10 volts (nominal) at the end of sweep, regardless of sweep width.  |
|                                 | When connected to an Agilent 8757D Scalar Network Analyzer (Option 007), generates a selectable number of equally spaced 1 us pulses (nominal) across a ramp (analog) sweep. Number of pulses can be set form 101 to 1601 by remote control from the 8757D. |
|                                 | Output impedance: < 1 $\Omega$ , can drive 2000 $\Omega$ .  |

Digital inputs and output are 3.3 V CMOS unless indicated otherwise. Inputs will accept 5 V CMOS, 3V CMOS, or TTL voltage levels.
 Digital inputs and output are 3.3 V CMOS unless indicated otherwise. Inputs will accept 5 V CMOS,

Digital inputs and output are 3.3 V CMOS unless indicated otherwise. Inputs will accept 5 V CMOS 3V CMOS, or TTL voltage levels.

| Stop sweep In/Out          | Open-collector, TTL-compatible input/output. In ramp sweep operation, provides low level (nominally 0 V) during sweep retrace and bandcross intervals, and high level during the forward portion of the sweep. Sweep will stop when grounded externally, sweep will resume when allowed to go high. |
|----------------------------|---|
| Trigger output (Dual mode) | Outputs a TTL signal. High at start of dwell, or when waiting for point trigger; low when dwell is over or point trigger is received, In ramp sweep mode, provides 1601 equally-spaced 1us pulses (nominal) across a ramp sweep. When using LF Out, provides 2 us pulse at start of LF sweep.       |
| Trigger input              | Accepts $\overline{\Pi L}$ signal for triggering point-to-point in manual sweep mode, or to trigger start of LF sweep. Damage levels $\geq +10 \text{ V}$ or $\leq -4 \text{ V}$ .  |
| Source module interface    | Provides bias, flatness correction, and leveling connections to the Agilent model 83550 Series mm-wave source modules.  |
| Source settled             | Provides an output trigger that indicates when the signal generator has settled to a new frequency or power level. High indicates source not settled, Low indicates source settled.   |
| Z-axis Blank/Markers       | During Ramp Sweep, supplies + 5 V (nominal) level during retrace and bandswitch intervals. Supplies – 5V (nominal) level when the RF frequency is at a marker frequency.  |
| EFC                        | $> 0.25$ ppm for $-5$ to $+5$ V. Input impedance: $> 1$ M $\Omega$  |

## **Options, Accessories, and Related Products**

| Model/option   | Description  |
|----------------|--|
| E8247C/57C-520 | Frequency range 250 kHz to 20 GHz                                |
| E8247C/57C-540 | Frequency range 250 kHz to 40 GHz                                |
| E8247C/57C-UNR | Enhanced close-in phase noise                                    |
| E8257C-1E6     | Narrow pulse modulation below 3.2 GHz                            |
| E8247C/57C-007 | Ramp (analog) sweep  |
| E8247C/57C-1ED | Type-N (f) connector (20 MHz models only)                        |
| E8247C/57C-1EM | Moves all connectors to rear panel                               |
| E8247C/57C-1CM | Rack mount kit   |
| E8247C/57C-1CN | Front handle kit   |
| E8247C/57C-1CP | Rack mount kit with front handle kit                             |
| E8247C/57C-H30 | Frequency upconversion of RF signals                             |
| E8247C/57C-HEH | Inprove low band harmonics (from 10 MHz to 2.0 GHz)              |
| 83554A         | Millimeter-wave source module (26.5 to 40 GHz)                   |
| 83555A         | Millimeter-wave source module (33 to 50 GHz)                     |
| 83556A         | Millimeter-wave source module (40 to 60 GHz)                     |
| 83557A         | Millimeter-wave source module (50 to 75 GHz)                     |
| 83558A         | Millimeter-wave source module (75 to 110 GHz)                    |
| 8120-8806      | Master/slave interface cable                                     |
| 9211-2656      | Standard transit case  |
| 9211-7481      | Tote-style transit case (includes wheels and telescoping handle) |

### Agilent Technologies' Test and Measurement Support, Services, and Assistance

Agilent Technologies aims to maximize the value you receive, while minimizing your risk and problems. We strive to ensure that you get the test and measurement capabilities you paid for and obtain the support you need. Our extensive support resources and services can help you choose the right Agilent products for your applications and apply them successfully. Every instrument and system we sell has a global warranty. Two concepts underlie Agilent's overall support policy: "Our Promise" and "Your Advantage."

#### **Our Promise**

Our Promise means your Agilent test and measurement equipment will meet its advertised performance and functionality. When you are choosing new equipment, we will help you with product information, including realistic performance specifications and practical recommendations from experienced test engineers. When you receive your new Agilent equipment, we can help verify that it works properly and help with initial product operation.

#### Your Advantage

Your Advantage means that Agilent offers a wide range of additional expert test and measurement services, which you can purchase according to your unique technical and business needs. Solve problems efficiently and gain a competitive edge by contracting with us for calibration, extra-cost upgrades, out-of-warranty repairs, and onsite education and training, as well as design, system integration, project management, and other professional engineering services. Experienced Agilent engineers and technicians worldwide can help you maximize your productivity, optimize the return on investment of your Agilent instruments and systems, and obtain dependable measurement accuracy for the life of those products.

#### **Agilent T&M Software and Connectivity**

Agilent's Test and Measurement software and connectivity products, solutions and developer network allows you to take time out of connecting your instruments to your computer with tools based on PC standards, so you can focus on your tasks, not on your connections. Visit <a href="https://www.agilent.com/find/connectivity">www.agilent.com/find/connectivity</a> for more information.

For more information on Agilent Technologies' products, applications or services, please contact your local Agilent office. The complete list is available at:
