**Situation:**

The 20 GHz PSGs use an E4413A Power Sensor to measure Maximum Leveled Power and Power Level Accuracy. For power levels greater than 0 dBm the calibration factor uncertainty increases 0.5% per dB, which is too high for the application.

The E4413A and the E9304A Power Sensors are also limited to a maximum power of +20 dBm, which may not be adequate in the future.

**Solution/Action:**

Beginning with the next release of the PSG Calibration software in November 2005, an E9300A H25 power sensor will be required for testing 20 GHz PSGs.

The software will also support the E9304A H19, 9 kHz to 18 GHz, -50 dBm to +30 dBm. The E9300A H25 and the E9304A H19 are capable of measuring +30 dBm.
