Manual Printing History

The manual's printing date and part number indicate its current edition. The printing date changes when a new edition is printed (minor corrections and updates that are incorporated at reprint do not cause the date to change). The manual part number changes when extensive technical changes are incorporated.

August 2004 First Edition (part number: E5052-90002)

Typeface Conventions

Sample (bold)	Boldface type is used when a term is defined or emphasized.
<i>Sample (Italic)</i>	Italic type is used for emphasis and for titles of manuals and other publications.
[Sample]	Indicates the hardkey whose key label is “Sample”.
[Sample] - Item	Indicates a series of key operations in which you press the [Sample] key, make the item called “Item” on the displayed menu blink by using the [↓] or in other ways, and then press the [Enter] key.

Documentation Map

The following manuals are available for the Agilent E5052A.

- **User’s Guide (Part Number E5052-900x0, attached to Option ABA)**
This manual describes most of the basic information needed to use the E5052A. It provides a function overview, detailed operation procedure for each function (from preparation for measurement to analysis of measurement results), measurement examples, specifications, and supplemental information. For programming guidance on performing automatic measurement with the E5052A, please see the *Programming Manual*.
- **Programmer’s Guide (Part Number E5052-900x1, attached to Option ABA)**
This manual provides programming information for performing automatic measurement with the E5052A. It includes an outline of remote control, procedures for detecting measurement start (trigger) and end (sweep end), application programming examples, a command reference, and related information.
- **VBA Programmer’s Guide (Part Number E5052-900x2, attached to Option ABA)**
This manual describes programming information for performing automatic measurement with internal controller. It includes an outline of VBA programming, some sample programming examples, a COM object reference, and related information.

NOTE

The number position shown by “x” in the part numbers above indicates the edition number.

Making Effective Use of This Manual

This chapter provides an overview of this manual as well as useful information to help you navigate through the manual. It also briefly describes how to use this manual, focusing on how you can look up particular COM objects and code their corresponding commands.

Contents of This Manual

This is a VBA programming guide with Agilent E5052A single source analyzer. This guide describes programming method mainly aiming at learning how to write a program that controls the E5052A using COM objects, focusing on the macro function of the E5052A and sample usage with the built-in VBA.

Controlling the E5052A using an external controller is not covered by this guide; it is described in *Programmer's Guide*.

Description in this guide assumes that the reader has learned manual operation of the E5052A. For detailed information on each feature, see *User's Guide*.

The chapter-by-chapter contents of this manual are as follows.

- o Chapter 1, "Making Effective Use of This Manual," on page 19

This chapter provides an overview of this manual as well as useful information to help you navigate through the manual. It also briefly describes how to use this manual, focusing on how you can look up particular COM objects and code their corresponding commands.

- o Chapter 2, "Introduction to VBA Programming," on page 23

This chapter introduces you to the E5052A's VBA macro function, explains how you can implement your system using the VBA macro function, and provides an overview of the COM objects that come with the E5052A.

- o Chapter 3, "Operation Basics of the E5052A's VBA," on page 29

This chapter provides descriptive information on basic operations for creating VBA programs within the E5052A's VBA environment. Topics include launching Visual Basic Editor as well as creating, saving, and running VBA programs.

- o Chapter 4, "Controlling the E5052A," on page 63

This chapter explains how to use the E5052A's VBA to control the E5052A itself.

- o Chapter 5, "User Defined Window," on page 79

- o Chapter 6, "Controlling Peripherals," on page 85

This chapter explains how to control peripherals connected to the E5052A with GPIB by using the software (VISA library) installed in the E5052A.

- o Chapter 7, "COM Object Reference," on page 91

This chapter describes the COM object model of the Agilent E5052A and the COM object reference in alphabetical order. If you want to look up COM objects by corresponding front panel keys, see "COM object list by front panel key."

- o Appendix A, "Manual Changes," on page 379

This appendix contains the information required to adapt this manual to the versions or configurations of the Agilent E5052A which were manufactured earlier than the printing date of this manual.

How to Use This Manual

Chapter 3, “Operation Basics of the E5052A’s VBA,” on page 29 provides the basic operation of VBA for coding VBA programs.

Chapter 4, “Controlling the E5052A,” on page 63 and Chapter 6, “Controlling Peripherals,” on page 85 will help you to develop your custom programs.

For more information on individual COM object, see Chapter 7, “COM Object Reference,” on page 91.

Looking Up COM Objects

Chapter 7, “COM Object Reference,” on page 91 contains a complete reference of COM objects. You can look up a particular COM object in any of the following ways:

Lookup by Abbreviated COM Object Name

The COM object reference is organized alphabetically according to the abbreviated name used as the title for each COM object’s description.

Lookup by Soft key

Chapter 7, “COM Object Reference,” provides a complete list of COM objects that correspond to the soft key and indicates the page numbers where the COM objects appear in the COM object reference (see “List by softkey” on page 328).

How to Code the Corresponding Commands

The description of each function may contain the corresponding SCPI commands. If SCPI command exists for each measurement window, use xx.

Example: SCPI. CALCulate. xx. TRACe. DATA. FDATa

The parameters for each measurement window are as follows:

- **FP:** Frequency/Power measurement
- **PN:** Phase noise measurement
- **SP:** Spectrum monitor measurement
- **TR:** Transient measurement
- **USER:** User window

NOTE

Some SCPI commands may not make use of particular measuring windows.

Introduction to VBA Programming

This chapter introduces you to the E5052A's VBA macro function, explains how you can implement your system using the VBA macro function, and provides an overview of the COM objects that come with the E5052A.

Introduction to the E5052A Macro Function

The E5052A has a built-in macro function that allows a single instruction to substitute for multiple instructions. You can have the E5052A automatically execute your own macro program that contains a series of VBA (Visual Basic for Application) statements.

VBA is based on the VB (Visual Basic) programming language. Although VBA is similar to VB, they are not the same. Although some of the VB features were eliminated from VBA, new application-specialized features were added. In particular, the E5052A's VBA has features for controlling the E5052A. For details of the differences between VBA and VB, refer to Microsoft official guides and various books on VBA.

For information on the basic operating procedures of the E5052A's VBA, see Chapter 3, “Operation Basics of the E5052A's VBA,” on page 29. This manual is not meant to be an in-depth guide to VBA programming basics and the syntax of VBA functions and commands. Such in-depth information is covered in VBA Help, Microsoft official guides, and various books on VBA.

The macro function allows you to control the E5052A itself as well as various peripherals. You can do the following:

1. Automate repetitive tasks

You can use the E5052A's macro function to combine several processes into one. Automating repetitive tasks provides higher efficiency and eliminates human error. Once you have contained repetitive tasks in sub-procedures, you can later call the procedures from other programs, thus allowing effective reuse of programming assets.

2. Implement a user interface

The E5052A VBA supports user forms (see “User form” on page 33) that facilitate creating a visual user interface. User forms guide users through common tasks such as performing measurement and entering data without requiring familiarity with the E5052A, thus minimizing the possibility of human error.

Overview of Control System Based on Macro Function

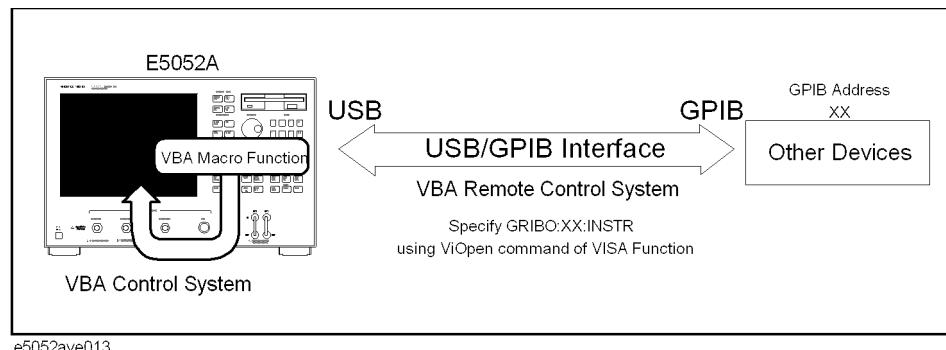

This section explains how you can use the E5052A's built-in VBA macro function to implement a system that controls the E5052A and peripherals and describes the command sets that are available for such purposes.

Implementing a control system

Macro-based control systems are classified into two types: As shown in Figure 2-1, a VBA control system controls the E5052A itself while a VBA remote control system controls peripherals. When you use the macro function to control peripherals, you must connect the E5052A with the peripherals through USB/GPIB interface and configure them to communicate over VISA (Virtual Instrument Software Architecture). For information on programming using the VISA library, refer to "Programming with VISA" on page 87.

Figure 2-1

Configuration example of control system using macro environment

Required equipment

1. E5052A
2. Peripherals and/or other purpose-specific instruments
3. USB/GPIB interface

NOTE

To use the VBA remote control system, you need to set the USB/GPIB interface correctly. For details, refer to the *User's Guide*.

NOTE

Do not connect two or more USB/GPIB interfaces.

Control methods

The command set you can use differs depending on whether you use the macro function to control the E5052A or a peripheral.

Controlling the E5052A

When you want to control the E5052A itself, you can create a program using COM objects within the E5052A VBA environment. E5052ACOM objects that come with the E5052A include three objects specific to the COM interface and COM objects that correspond to SCPI commands. For information on objects, refer to “COM Object Model” on page 92.

For information on using the E5052A’s COM objects, see Chapter 7, “COM Object Reference,” on page 91. For information on using SCPI commands, see the “SCPI Command Reference” in the *Programmer’s Guide*.

Controlling Peripherals

When you want to control a peripheral, you can create a program by using VISA library functions within the E5052A VBA environment.

For information on using the VISA library, see Chapter 6, “Controlling Peripherals,” on page 85. For a complete description of VISA functions, refer to the VISA library’s online help. You can access this online help by double-clicking a file named visa.hlp contained in the CD-ROM (Agilent part No. E5052-9050x).

For information on the GPIB commands available with a particular peripheral, refer to the documentation that comes with the peripheral.

NOTE

The number position shown by “x” in the part numbers above indicates the edition number.

E5052A Overview of COM Objects

The VBA environment provides COM objects that support users in controlling the E5052A. This section provides an overview of COM objects as well as important considerations for using the E5052A's COM objects. For more information on the E5052A's COM objects and a comparison with SCPI commands, refer to Chapter 7, "COM Object Reference," on page 91.

The definitions and specifications of COM are beyond the scope of this guide. Such in-depth information is covered in a variety of books on COM.

About COM objects

When you control the E5052A through the macro function, you can use COM objects as components of your application. The functionality of the E5052A's COM objects is expressed through properties and methods.

Properties

A property allows you to read or write a setting or attribute of an object. With the E5052A, you can use properties to set or read the settings of the E5052A.

You can find properties in the description of syntax in Chapter 7, "COM Object Reference," on page 91). They set and obtain the values for a command.

Methods

A method allows you to manipulate an object in a particular way. With the E5052A, you can use methods to perform specific tasks.

You can find methods in the description of syntax in Chapter 7, "COM Object Reference," on page 91, which only describes commands.

Events

An event means an operation from outside that the program can recognize, such as clicking a mouse button. Without using user forms, the E5052A lets you perform an entire procedure assigned to a specific softkey as an event by simply pressing that softkey. This is particularly useful, for example, when the user wants an interruption in a VBA program that gives an option of whether to proceed. For more information, refer to "Executing a Procedure with a Softkey (user menu function)" on page 68.

Using COM objects to control the E5052A

When you want to control the E5052A, you can use COM objects alone or in conjunction with SCPI commands and the [Parse](#) on page 96 object. The latter method is slightly slower than the former because the [Parse](#) on page 96 object is used to parse the messages of SCPI commands. For instructions on using the E5052A's VBA Editor to create a program that uses COM objects, refer to Chapter 3, “Operation Basics of the E5052A's VBA,” on page 29.

Major control difference between COM objects and SCPI commands

For information on the major control differences between using COM objects and SCPI commands, refer to “[SCPI Objects](#)” on page 93.

Operation Basics of the E5052A's VBA

This chapter provides descriptive information on basic operations for creating VBA programs within the E5052A's VBA environment. Topics include launching Visual Basic Editor as well as creating, saving, and running VBA programs.

Displaying Visual Basic Editor

This section describes how to launch Visual Basic Editor.

Step 1. From the E5052A measurement screen, launch Visual Basic Editor using the following method:

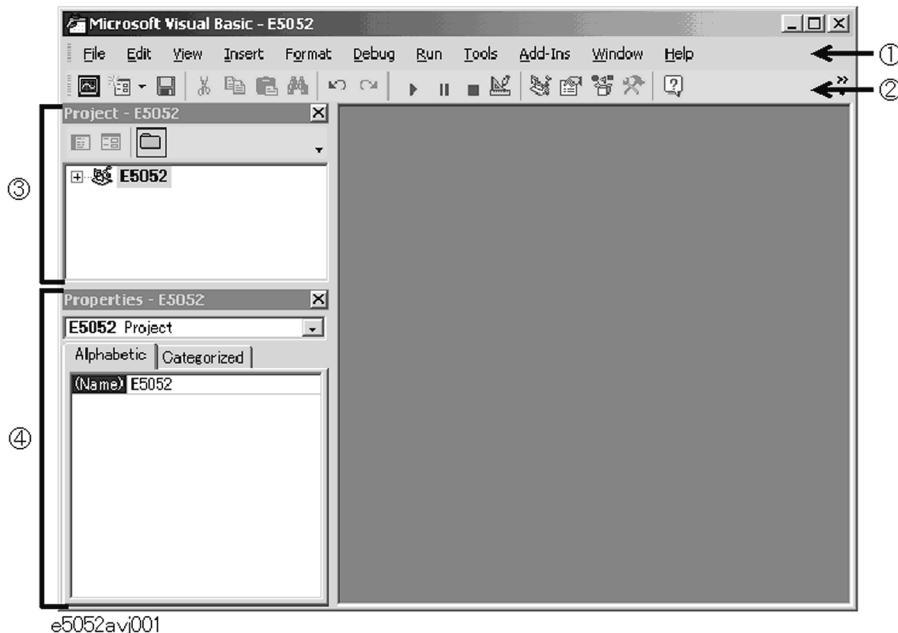

- [Macro Setup] - VBA Editor Menu - Open Editor

Initial Screen of Visual Basic Editor

When you launch Visual Basic Editor, it displays the initial screen, which contains a number of windows as shown in Figure 3-1. This section provides information on the names and functions of the main display areas.

Figure 3-1

Example of Visual Basic Editor initial screen

1. Menu Bar

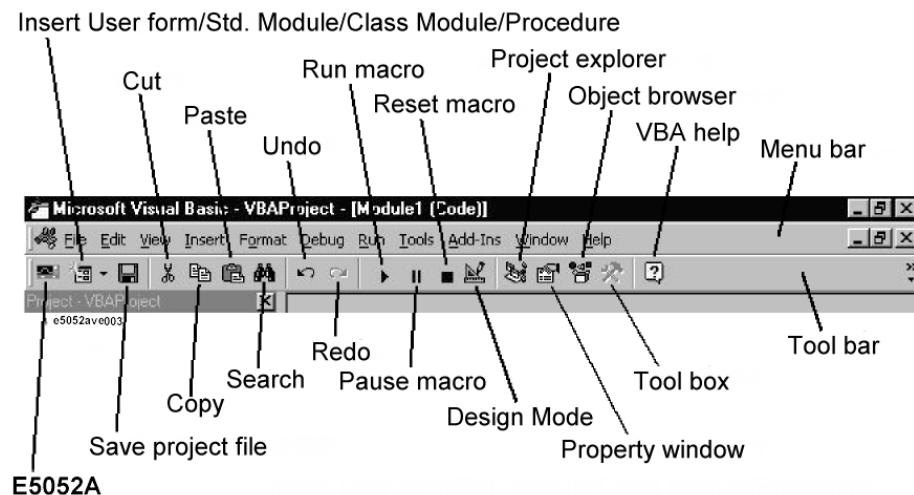

Clicking one of the menu labels brings up the corresponding menu. The menu bar can be used as the primary method for navigating through the E5052A's VBA environment.

2. Toolbar

The toolbar provides access to commonly used commands via icon buttons; these commands are a subset of the commands accessible from the menu bar. For descriptions of the buttons on the standard toolbar, see Figure 3-2.

Figure 3-2

Buttons on the standard toolbar

3. Project Explorer

Within the E5052A's VBA environment, you can develop your application as a project that consists of a number of files (modules). Project Explorer shows a list of all files (modules) that make up a project. The list also includes files (modules) created or loaded in Visual Basic Editor. For information on modules, refer to “A Project and Three Types of Modules” on page 33.

Step 1. To display the project explorer, do one of the following:

- On the **View** menu, click **Project Explorer**.
- Press **[Ctrl] + [R]** on the keyboard.
- On the toolbar, click the “Project Explorer” icon (Figure 3-2).

4. Property Window

A property window shows the settings (label, font, color, size, etc.) of a control (such as a command button or text box) placed on the user form. For information on user forms, refer to “User form” on page 33.

You can also set properties by programming in the code window.

Step 1. To display the property window, do one of the following:

- On the **View** menu, click **Properties Window**.
- Press **[F4]** on the keyboard.
- On the toolbar, click the “Property Window” icon (Figure 3-2).

Closing Visual Basic Editor

This section describes how to quit Visual Basic Editor.

Operation Basics of the E5052A's VBA

Switching to the E5052A Measurement Screen

Step 1. Close Visual Basic Editor using one of the following methods:

- On Visual Basic Editor's **File** menu, click **Close and Return to Application**.
- Within Visual Basic Editor, press **[Alt] + [Q]** on the keyboard.
- **[Macro Setup] - VBA Editor Menu - Close Editor** (E5052A Measurement Screen)

NOTE

Whenever you launch Visual Basic Editor, it automatically displays the project files you used in the previous session. However, once you turn off the power to the E5052A, the project files kept in memory will be lost; therefore, it is strongly recommended that you save your VBA programs before turning off the power.

Switching to the E5052A Measurement Screen

You can switch to the E5052A measurement screen without closing Visual Basic Editor.

Step 1. To switch to the E5052A measurement screen, do one of the following:

- On the **View** menu, click **Application**.
- Press **[Alt] + [F11]** on the keyboard.
- On the toolbar, click the “E5052A” icon (Figure 3-2).
- Press the **[Focus]** key on the E5052A front panel.

Necessary Preparation Before Coding

A Project and Three Types of Modules

Project Explorer (Figure 3-1) displays a list of files (modules) that are used in the E5052A VBA. This section describes a project composed of a number of files (modules) and three types of modules (“user form,” “standard,” and “class”). Each type of module performs its respective tasks as described below.

Project

When you develop an application within the E5052A’s VBA environment, you use a number of VBA program files (modules) and manage them as one project. The project is saved with the file extension “.vba”.

User form

A user form contains controls such as buttons and text boxes. You can code event-driven procedures that are invoked when a particular event occurs on a particular control, thereby creating a user interface. The user form is saved with the file extension “.frm”.

Standard module

A standard module contains a collection of one or more procedures (subprograms enclosed between Sub and End Sub). One typical use of a standard module is to contain shared subroutines and globally called functions. The standard module is saved with the file extension “.bas”.

Class module

A class module contains both data and procedures and acts as one object. Once you have created a class module that serves as an object, you can create any number of instances of that object by naming each instance as an object variable. While each procedure must be unique in a standard module, you can have multiple instances of an object created through a class module. The class module is saved with the file extension “.cls”.

Operation Basics of the E5052A's VBA Necessary Preparation Before Coding

Displaying a Code Window

The code windows appear in the Visual Basic Editor when you insert modules in a project. A code window offers a practical environment for coding (programming).

The E5052A's VBA environment does not allow you to manage multiple projects. You can replace the current project in the Visual Basic Editor by loading a saved project file. This can be done by the following method from the E5052A measurement screen.

- [Macro Setup] - VBA Editor Menu - New Project

NOTE

When you replace the current project with a new project, a message asking whether to save the current project may appear. If you want to save the project, click the **Yes** button to display a dialog box for saving the file (Figure 3-6 on page 41). For more on saving a project, see “Saving a project file” on page 41.

Inserting the user form

Within Visual Basic Editor, do one of the following to add a user form to your project (this brings up the window shown in Figure 3-3):

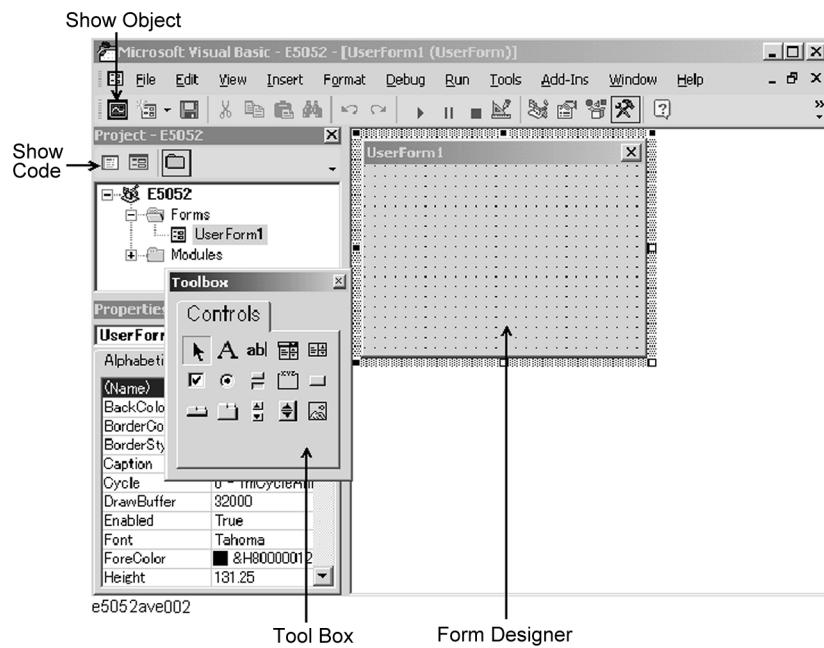

- On the **Insert** menu, click **UserForm**.
- On the toolbar, click the “Insert User Form/Standard Module/Class Module/Procedure” icon (Figure 3-2) and then click **UserForm**.
- In Project Explorer (Figure 3-1), right-click the “E5052” icon and then click **Insert - UserForm**.

NOTE

Adding a user form does not automatically open the code window for that user form. To open the code window, click the “Show Code” icon (Figure 3-3) in Project Explorer (Figure 3-1) or double-click a control placed on the user form.

Figure 3-3

Adding a user form

Operation Basics of the E5052A's VBA Necessary Preparation Before Coding

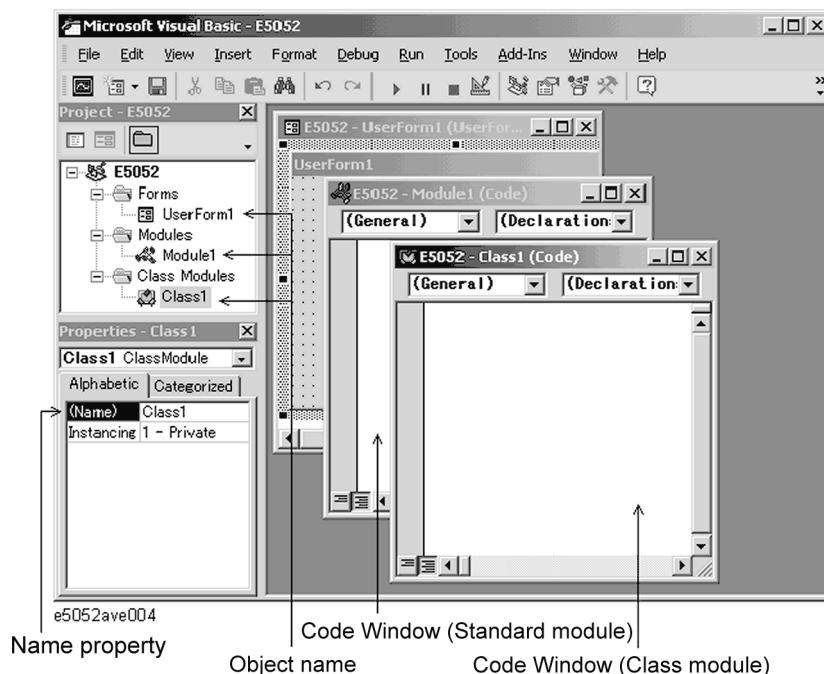

Inserting the standard module

Within Visual Basic Editor, do one of the following to add a standard module to your project (this brings up the window shown in Figure 3-4):

- On the **Insert** menu, click **Module**.
- On the toolbar, click the “Insert User Form/Standard Module/Class Module/Procedure” icon (Figure 3-2) and then click **Module**.
- In Project Explorer (Figure 3-1), right-click the “E5052” icon and then click **Insert - Module**.

Figure 3-4

Adding a standard module/class module

Inserting the class module

Within Visual Basic Editor, do one of the following to add a class module to your project (this brings up the window shown in Figure 3-4):

- On the **Insert** menu, click **Class Module**.
- On the toolbar, click the “Insert User Form/Standard Module/Class Module/Procedure” icon (Figure 3-2) and then click **Class Module**.
- In Project Explorer (Figure 3-1), right-click the “E5052” icon and then click **Insert - Class Module**.

Deleting Modules

You can delete any unnecessary module from the project within Visual Basic Editor. The following procedure assumes that you want to delete a class module named “Class1”.

- Step 1.** In Project Explorer (Figure 3-1), click the “Class1” class module under the “Class

Modules” icon to highlight it.

Step 2. Delete the “Class1” class module using one of the following methods:

- On the **File** menu, click **Remove Class1...**
- Click the right mouse button and then click **Remove Class1...**

Step 3. When you are prompted to confirm whether to export (save) “Class1,” click **No**.
Alternatively, you can click **Yes** if you want to save the module.

Coding a VBA Program

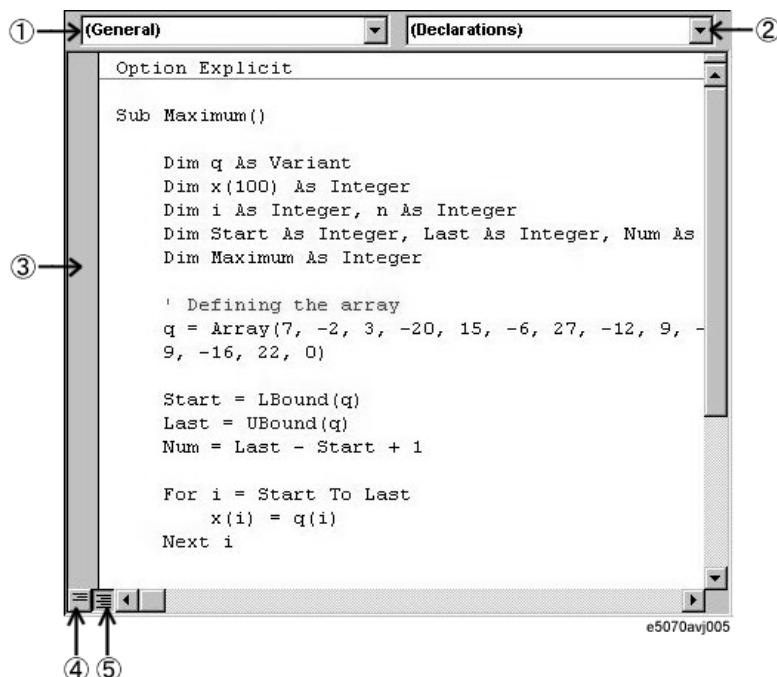

This section provides descriptive information on the user interface elements of a code window that lets you code a VBA program and walks you through a sample program (procedure) that finds the maximum value contained in an array. This should help you gain insight into how to create your own programs.

User Interface Elements of a Code Window

A code window is where you code a VBA program. When you are working with a user form, you can open the code window for that user form by double-clicking a control (such as a button or text box) placed on the form. Similarly, when you are working with a standard or class module, you can open the code window associated with that module by double-clicking the module's icon in Project Explorer (Figure 3-1).

Figure 3-5

Code window for a standard module

1. Object box

Provides a list of objects currently used within the code window.

2. Procedure box

Provides a list of procedures that reside within the code window. When you are working with a user form, this provides a list of events (actions such as click or double-click).

3. Margin indicator bar

Primarily intended for use when debugging a program.

4. Show Procedure button

Displays only the procedure at the cursor position.

5. Show Module button

Displays the entire program contained in the code window.

Operation Basics of the E5052A's VBA Coding a VBA Program

Auto-complete Feature

When you use COM objects in the E5052A Visual Basic Editor, the editor's auto-complete feature allows you to easily type in keywords without misspelling them.

The following procedure assumes that you are entering the SCPI.INITiate.FP.CONTinuous object.

- Step 1.** In a standard module, type **sub main** and press the **[Enter]** key. **End Sub** is automatically added.
- Step 2.** Typing **scpi** followed by a dot (.) brings up a list of classes under the SCPI class.
- Step 3.** Typing **in** automatically moves the focus to INITiate in the list box.
- Step 4.** Typing **INITiate** followed by a dot (.) brings up a list of classes under the SCPI class.
- Step 5.** Typing **f** automatically moves the focus to FP in the list box.
- Step 6.** Typing **FP** followed by a dot (.) brings up a list of classes under the SCPI class.
- Step 7.** Typing **c** automatically moves the focus to **CONTinuous** in the list box.
- Step 8.** **=** is typed to bring up a list box for setting a Boolean value (**True/False**).
- Step 9.** Typing **t** automatically moves the focus to **True**.
- Step 10.** Pressing the **[Enter]** key completes the statement: SCPI.INITiate.FP.CONTinuous = True.

Saving a VBA Program

You can save VBA programs either as one complete project or on a module-by-module basis.

Saving a project file

When you decide to save your program as one complete project, you can gather the files (modules) making up the project into a single package. A project is saved as a .vba file. You can save your program to a project file by using one of the following two methods:

Saving a project from Visual Basic Editor

Step 1. Open the Save As dialog box by doing one of the following:

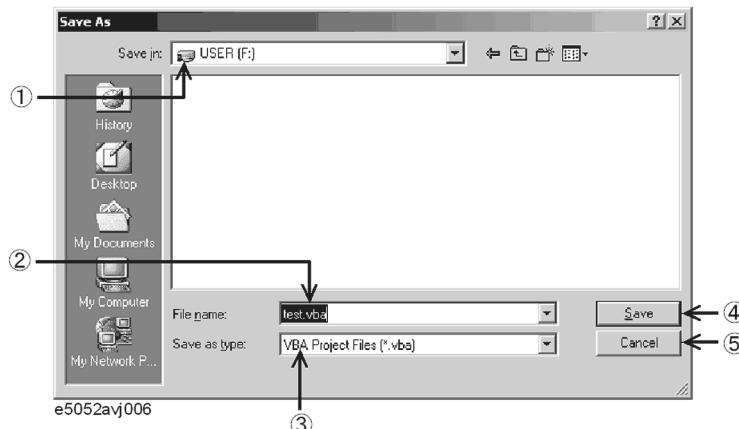

- On the **File** menu, click **Save xxx.VBA**. “xxx” represents the file name.
- On the toolbar, click the “Save Project File” icon (Figure 3-2).
- Press **[Ctrl] + [S]** on the keyboard.

Step 2. The Save As dialog box (Figure 3-6) appears. Specify the file name and location (drive or folder) and click **Save**.

The Save As dialog box has the following user interface elements:

Figure 3-6

Save As dialog box

- 1. Save in:** Specify the location (drive or folder) where you want to save the file.
- 2. File name:** Type in the file name.
- 3. Save as type:** Select the type of the file you are saving. Normally, you should select **VBA Project Files (*.vba)**.
- 4. Save:** Clicking this button saves the project.
- 5. Cancel:** Clicking this button closes the Save As dialog box without saving the file and brings you back to the main screen.

Saving a project from the E5052A measurement screen

- Step 1.** Display the E5052A measurement screen by following the instructions given in “Switching to the E5052A Measurement Screen” on page 32.
- Step 2.** Open the Save As dialog box using the following key sequence:
 - **[Macro Setup] - VBA Editor Menu - Save Project**
- Step 3.** The Save As dialog box (Figure 3-6) appears. Specify the file name and location (drive or folder) and click **Save**.

Saving a module (exporting)

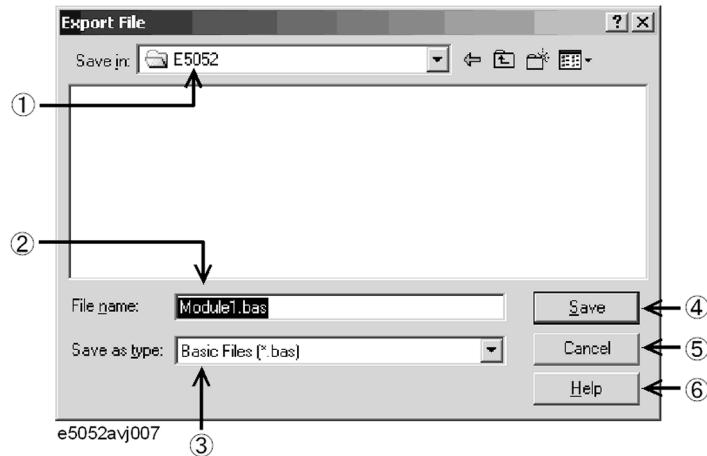

Alternatively, you can save each module (user form, standard, or class) of your VBA program individually. To save a module, you must use Visual Basic Editor. User forms are saved as .frm files, standard modules as .bas files, and class modules as .cls files.

- Step 1.** In Project Explorer (Figure 3-1), click the file name that appears under the desired module icon to highlight it.
- Step 2.** Open the Export File dialog box by doing one of the following:
 - On the **File** menu, click **Export File....**
 - Click the right mouse button, and click **Export File....**
 - Press **[Ctrl] + [E]** on the keyboard.
- Step 3.** The Save As dialog box (Figure 3-7) appears. Specify the file name and location (drive or folder) and click **Save**.

The Export File dialog box has the following user interface elements:

Figure 3-7

Export File dialog box

- 1. Save in:** Specify the location (drive or folder) where you want to save the file.
- 2. File name:** Type in the file name.
- 3. Save as type:** Select the type of module you are saving. The type that corresponds to the module you are saving is selected by default. Normally, you should use the default.
- 4. Save:** Clicking this button saves the module.
- 5. Cancel:** Clicking this button closes the Export File dialog box and brings you back to the main screen.
- 6. Help:** Brings up VBA Online Help.

Loading a VBA Program

Once you have saved a project or module file, you can load it later whenever necessary.

Loading a project

You can load a saved project file either from the E5052A measurement screen or by specifying that the project file be automatically loaded when the power is turned on.

Loading a project from the E5052A measurement screen

Step 1. Access the Open dialog box using the following key sequence:

- **[Macro Setup] - VBA Editor Menu - Load Project**

NOTE

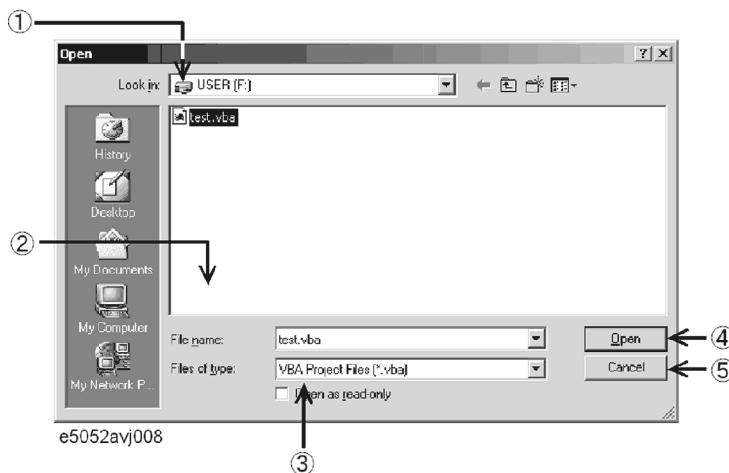

When another project is already loaded on the Visual Basic Editor, a message asking whether you want to save the current project may appear. If you want to save the project, click the **Yes** button to display a dialog box for saving (Figure 3-6 on page 41). For saving the project, see “Saving a project file” on page 41.

Step 2. The Open dialog box (Figure 3-8) appears. Specify the file name and location (drive or folder) of the file you want to load and click **Open**.

The Open dialog box has the following user interface elements:

Figure 3-8

Open dialog box

- 1. Look in:** Specify the location (drive or folder) where the project resides.
- 2. File name:** Specify the file name of the project you want to load.
- 3. Files of type:** Select the type of file you want to load. Normally, you should select **VBA Project Files (*.vba)**.
- 4. Open:** Clicking this button loads the project.
- 5. Cancel:** Clicking this button closes the Open dialog box without loading a

project and brings you back to the main screen.

Automatically loading a project at power-on

Once you have saved a project file that satisfies the following conditions, the project will automatically load whenever the power is turned ON.

Auto-loaded project	Condition
Directory where the project resides.	A:\(A:\) or F:\(F:\)
Project file name	autoload.vba ^{*1}

*1. Upper/lower case insensitive.

NOTE

If there is the file named “autoload.vba” in both the A drive and the F drive, the file in the A drive is used.

Loading a module (importing)

To load a saved module into a project, you must use Visual Basic Editor.

Step 1. In Project Explorer (Figure 3-1), click the file name that appears under the desired module icon to highlight it.

Step 2. Open the Import File dialog box by doing one of the following:

- On the **File** menu, click **Import File....**
- In Project Explorer (Figure 3-1), right-click the E5052 icon and then click **Import File....**
- Press **[Ctrl] + [M]** on the keyboard.

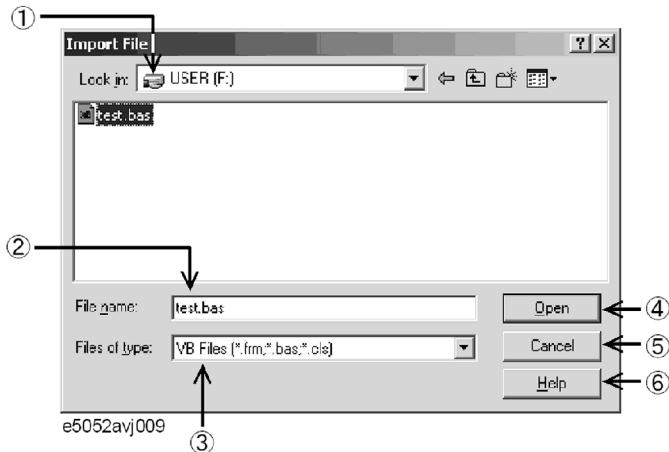

Step 3. The Import File dialog box (Figure 3-9) appears. Specify the file name and location (drive or folder) of the file (module) you want to load and click **Open**.

Operation Basics of the E5052A's VBA Loading a VBA Program

The Import File dialog box has the following user interface elements:

Figure 3-9

1. **Look in:** Specify the location (drive or folder) where the module resides.
2. **File name:** Specify the file name of the module you want to load.
3. **Files of type:** Select the type of file you want to load. Normally, you should select **VB Files [<*.frm;*.bas;*.cls]**.
4. **Open:** Clicking this button loads the module.
5. **Cancel:** Clicking this button closes the Import File dialog box without loading a module and brings you back to the main screen.
6. **Help:** Brings up VBA Online Help.

Running a VBA Program

The E5052A provides two methods to execute a VBA program: executing a program that you previously loaded and loading and executing a program in a batch process. The execution status of the VBA program is indicated in the instrument status bar, as shown in Figure 3-10. “Run” indicates that the program is running while “Stop” indicates that the program is stopped.

Figure 3-10

Instrument status bar indicating the status of the VBA program

Running a previous loaded VBA program

Running a program from Visual Basic Editor

The E5052A allows you to run a previously loaded VBA program by using one of the four methods listed in Step 1. below.

Step 1. Open the Macros dialog box (Figure 3-11) by doing one of the following:

- On the **Run** menu, click **Run Sub/UserForm**.
- On the **Tools** menu, click **Macros...**.
- On the toolbar, click the “Run Macro” icon (Figure 3-2).
- Press **[F5]** on the keyboard.

NOTE

Doing the above steps with the cursor positioned within a procedure in the code window immediately runs the program without displaying the Macros dialog box.

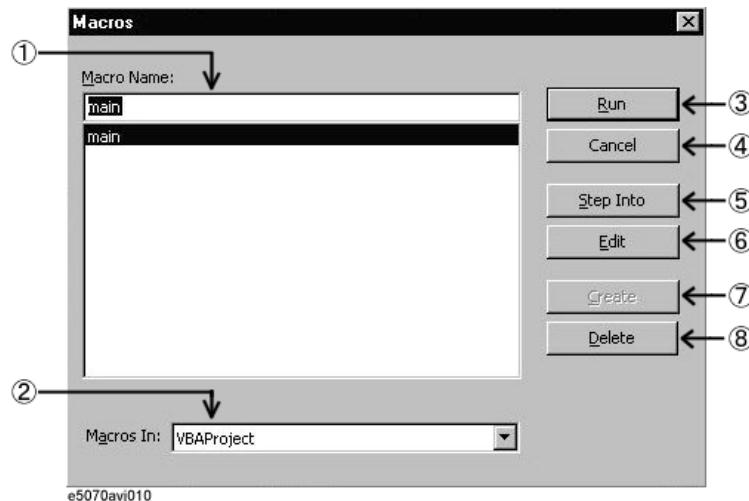

Step 2. In the Macros dialog box, select the VBA program (procedure name) you want to run and click the **Run** button.

Operation Basics of the E5052A's VBA Running a VBA Program

The Macros dialog box has the following user interface elements:

Figure 3-11

- 1. Macro Name:** Select the VBA program (procedure name) you want to run from the list box so that its name appears here.
- 2. Macro In:** Specify the project that contains the VBA program you want to run. Normally, use the default.
- 3. Run:** Clicking this button runs the selected VBA program (procedure).
- 4. Cancel:** Clicking this button closes the Macros dialog box without running a VBA program and brings you back to the main screen.
- 5. Step Into:** Clicking this button brings up Visual Basic Editor and puts it into step-in mode, where the selected VBA program is run step by step. This mode is primarily intended for use when debugging a VBA program. For more information on step-in mode, see “Debug toolbar” on page 53.
- 6. Edit:** Displays the code of the selected VBA program. You can use this for re-editing your code.
- 7. Create:** This button is normally dimmed.
- 8. Delete:** Clicking this button deletes the selected VBA program. Take care not to inadvertently delete your VBA program before saving it.

NOTE

The Macros dialog provides access to subprograms (procedures enclosed between Sub and End Sub) created in a standard module.

Running a program from the E5052A measurement screen

You can run a program from the E5052A measurement screen by using the method below.

Step 1. Display the E5052A measurement screen following the instructions given in “Switching to the E5052A Measurement Screen” on page 32.

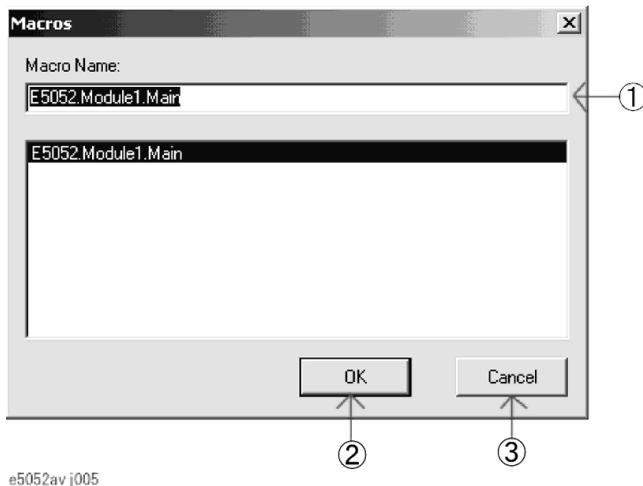

Step 2. Run the VBA program (procedure) using the following key sequence:

- **[Macro Setup] - Select Macro**

Step 3. In the Macros dialog box (Figure 3-12), select the VBA program (procedure name) you want to run, and click the **OK** button.

Figure 3-12

1. Macro Name: Select the VBA program (procedure name) you want to run from the list box so its name appears here.

2. OK: Clicking this button runs the selected VBA program (procedure).

3. Cancel: Clicking this button closes the Macros dialog box and brings you back to the main screen.

NOTE

The Macros dialog provides access to subprograms (procedures enclosed between Sub and End Sub) created in a standard module.

Stopping a VBA Program

Breaking a running macro via the dialog box

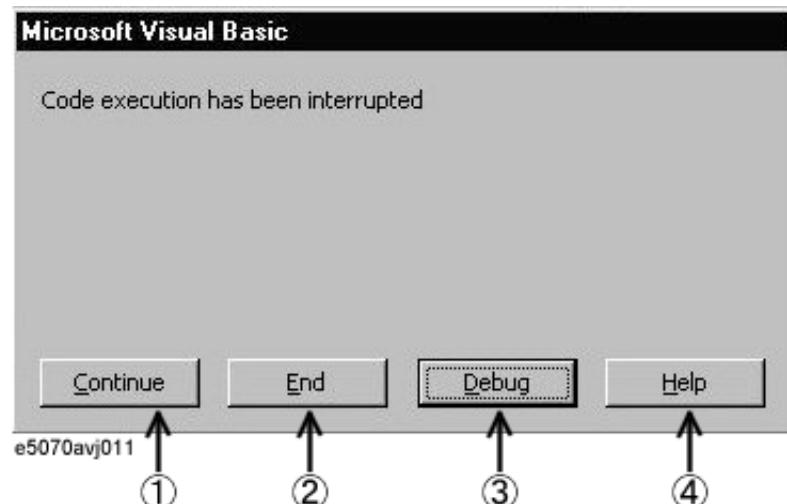

This section describes how to break a procedure during the execution of a VBA program by displaying the dialog box shown in Figure 3-13, which permits a forced interrupt.

Step 1. To break the running VBA program, do one of the following:

- On the **Run** menu, click **Break**.
- On the toolbar, click the “Break Macro” icon (Figure 3-2).
- Press **[Ctrl] + [Break]** on the keyboard.
- **[Macro Setup] - Stop** (E5052A measurement screen)
- Press the **[Macro Break]** key on the E5052A front panel.

Step 2. The dialog box shown in Figure 3-13 is displayed after the forced interrupt, and the program is suspended.

Figure 3-13 Dialog box that appears when a VBA program is suspended

1. **Continue:** Resumes the execution of the program.
2. **End:** Terminates the VBA program.
3. **Debug:** Displays a run-time error.
4. **Help:** Brings up VBA Online Help.

Abruptly terminating a VBA program

This section describes how to abruptly terminate a running procedure.

Step 1. To terminate the running VBA program, do one of the following:

- On the **Run** menu, click **Reset**.
- On the toolbar, click the “Reset Macro” icon (Figure 3-2).
- Insert an *End* statement into your code.

Errors and Debugging

Types of errors

Errors in VBA programs are classified as either syntax errors or run-time errors.

Syntax errors

A syntax error is generated when Visual Basic Editor detects an invalid statement that violates the Visual Basic syntax rules. For example, misspelled keywords generate syntax errors. An error dialog box appears that indicates the error message and highlights the invalid statement in red. To get detailed information on the error, click the HELP button in the error dialog box to display the help topic related to the error. You cannot run the macro until you correct the syntax error.

The E5052A VBA environment is by default configured to automatically check for syntax errors, but you can disable the auto syntax check feature by using the following steps:

- Step 1.** On the **Tools** menu, click **Options....**
- Step 2.** On the **Editor** tab, clear the **Auto Syntax Check** check box to remove the mark.
- Step 3.** Click the **OK** button.

Run-time errors

A run-time error is generated when a VBA program attempts to execute an invalid statement at run time. When a run-time error is generated, the program is stopped at the invalid statement, and the error dialog box shown in Figure 3-13 appears. You can terminate the program by clicking the **END** button in the error dialog box. Also, you can click the **DEBUG** button in the error dialog box to identify the statement that caused the error. In this case, the statement in question is highlighted in yellow.

NOTE

Some run-time errors may occur under particular conditions, even though the program runs without error under normal conditions. For example, the “Marker search failed” error occurs when a program analyzing results while using the Marker Target Search feature fails to perform the search because the marker is not in the appropriate position. To avoid the interruption of a program due to such errors, you should handle these errors appropriately within the program.

Using a debug tool

The E5052A's VBA environment provides a variety of debug tools to help you identify logical errors. Detailed information on using the debug tools is covered in the VBA Online Help and the wide selection of books on VBA.

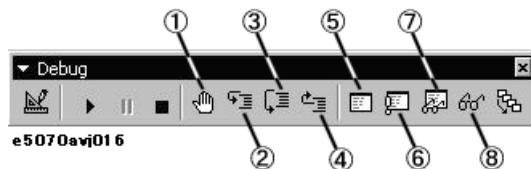

Debug toolbar

The debug toolbar (Figure 3-14) provides tool buttons that allow you to easily access various debug tools. To display the debug toolbar, do the following:

- Step 1. On the **View** menu, click **Toolbars - Debug**.

Figure 3-14

Debug toolbar

1. Set/clear break points (keyboard: [F9])
Puts a break point at the cursor position or clears an existing break point.
2. Step-in (keyboard: [F8])
Runs the VBA program step by step. If the current program contains a call to another procedure, that procedure is also run step by step.
3. Step-over (keyboard: [Shift]+[F8])
Runs the VBA program step by step. If the current program contains a call to another procedure, that procedure is run as one line.
4. Step-out (keyboard: [Ctrl]+[Shift]+[F8])
Executes the remaining lines of the function where the execution point is currently placed.
5. Local window
Opens the local window that shows the current values of local variables.
6. Immediate window (keyboard: [Ctrl]+[G])
Opens the immediate window that evaluates entered values of variables or expressions.
7. Watch window
Opens the watch window that displays the current value of a specified expression.
8. Quick watch (keyboard: [Shift]+[F9])
Displays the current value of a specified expression in a dialog box.

Operation Basics of the E5052A's VBA Errors and Debugging

Setting a break point

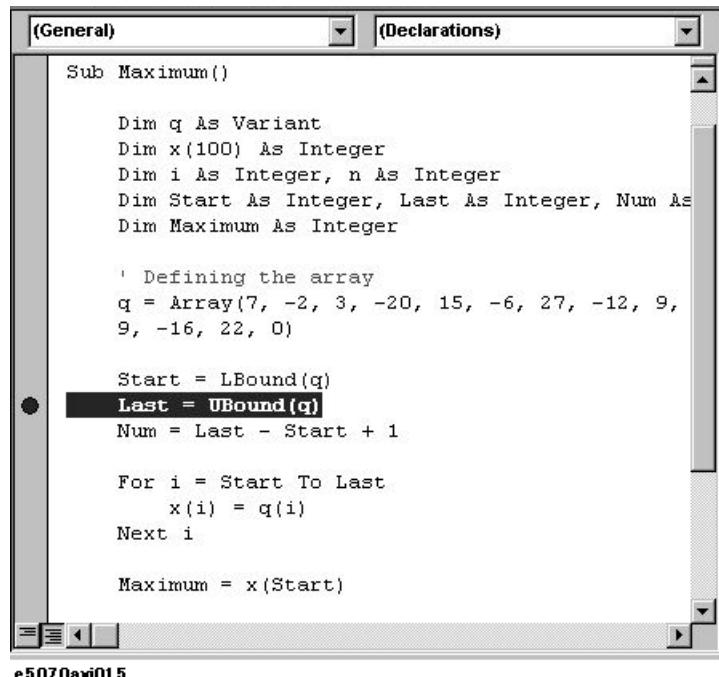

By placing a break point at a particular statement in a VBA program, you can automatically suspend the program when its execution reaches that statement.

Step 1. To set a break point as shown in Figure 3-15, do one of the following (when you put a break point at a line, the line is highlighted in amber):

- Place the cursor at the desired line of code, and click the “Set/clear break points” button (Figure 3-14: 1) on the debug toolbar.
- Click anywhere in the margin indicator bar of the code window.

Figure 3-15

Setting a break point

The screenshot shows a Microsoft Word document with VBA code embedded in a code editor window. The code defines a subroutine Maximum() that initializes variables q, x, i, n, Start, Last, and Num. It then defines an array q with specific values and sets Start to LBound(q). The line **Last = UBound(q)** is highlighted with a dark gray background, indicating it is a break point. The code continues with a loop to calculate Maximum as x(Start).

```
Sub Maximum()
    Dim q As Variant
    Dim x(100) As Integer
    Dim i As Integer, n As Integer
    Dim Start As Integer, Last As Integer, Num As Integer
    Dim Maximum As Integer

    ' Defining the array
    q = Array(7, -2, 3, -20, 15, -6, 27, -12, 9,
              9, -16, 22, 0)

    Start = LBound(q)
    Last = UBound(q)
    Num = Last - Start + 1

    For i = Start To Last
        x(i) = q(i)
    Next i

    Maximum = x(Start)

```

Monitoring variable or property values

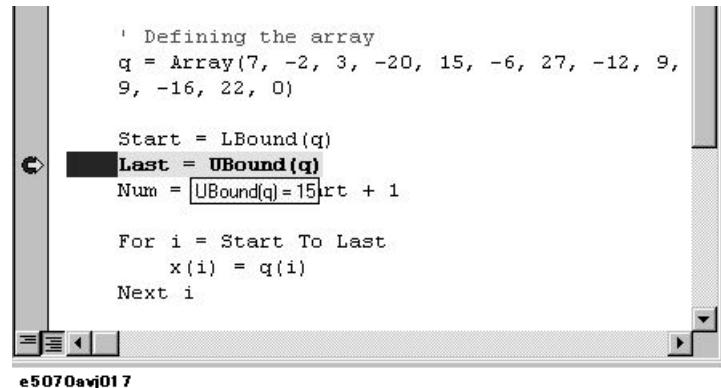

With your VBA program suspended, you can use the following debug tool to monitor variables or properties. To do this, you must set a break point, run the VBA program, and suspend it.

Data Hint

When you point to the variable or expression of interest, Data Hint shows the current value, as shown in Figure 3-16.

Figure 3-16

Data Hint

```
' Defining the array
q = Array(7, -2, 3, -20, 15, -6, 27, -12, 9,
9, -16, 22, 0)

Start = LBound(q)
Last = UBound(q)
Num = UBound(q) = 15rt + 1

For i = Start To Last
    x(i) = q(i)
Next i
```

Immediate window

To display the immediate window, click the “Immediate Window” button (Figure 3-14:6) on the debug toolbar.

In the immediate window, enter a question mark (?) followed by the variable or expression whose value you want to check and then press the Enter key. The current value appears in the line that follows, as shown in Figure 3-17.

Figure 3-17

Watch window

To display the watch window (Figure 3-18), click the “Watch Window” button (Figure 3-14: 7) on the debug toolbar.

Figure 3-18

Watch window

Step 1. To open the Add Watch dialog box (Figure 3-19), do the following:

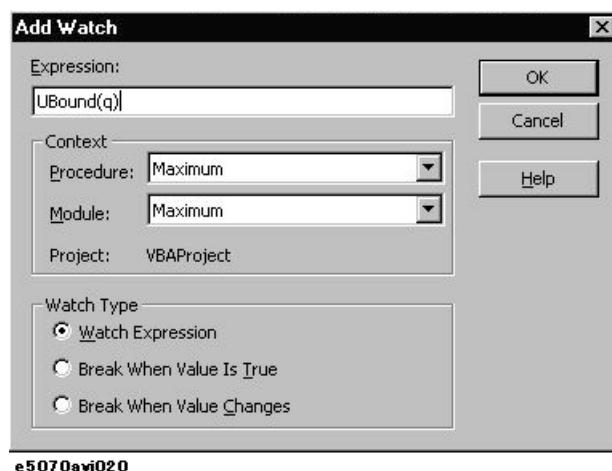

- On the **Debug** menu, click **Add Watch....**

Step 2. As shown in Figure 3-19, you can specify an expression of interest as a watch expression to always monitor its value.

Step 3. Click the **OK** button.

Figure 3-19

Add Watch dialog box

Quick watch

In the code window, select a variable or expression whose value you want to watch. On the debug toolbar, click the “Quick Watch” button (Figure 3-14:8) to open the Quick Watch dialog box (Figure 3-20). The dialog box displays the current value of your specified variable or expression.

Also, you can click the **Add** button in the Quick Watch dialog box to specify the current expression as a watch expression.

Printing Output Values in the Echo Window

The echo window, which appears in the lower part of the E5052A measurement screen, can be used to display a message or the return value (data) of an object.

Entering values output to the echo window

You can use the COM object shown below to enter values output in the echo window. For more information on each object, see Chapter 7, “COM Object Reference.”

- SCPI.DISPlay.ECHO.DATA on page 200

Opening the echo window

You can use the COM object shown below to open the echo window. For more information on each object, see Chapter 7, “COM Object Reference.”

- SCPI.DISPlay.ECHO.STATE on page 201

Alternatively, you can also open the echo window by using the following key sequence:

- [Macro Setup] - Echo Window Menu - Echo Window (ON)

Clearing output values in the echo window

You can use the COM object shown below to clear output values in the echo window. For more information on this object, see Chapter 7, “COM Object Reference.”

- SCPI.DISPlay.ECHO.CLEar on page 200

Alternatively, you can also clear output values in the echo window by using the following key sequence:

- [Macro Setup] - Echo Window Menu - Clear Echo

Changing character size in echo window

You can use the COM object shown below to change the character size that appears in the echo window. For more information on this object, see Chapter 7, “COM Object Reference.”

- SCPI.DISPlay.ECHO.FSIZe on page 201
- [Macro Setup] - Echo Window Menu - Echo Font Size

Using VBA Online Help

VBA Online Help provides useful topics such as VBA terminology or how to use a particular feature. In VBA Online Help, you can find a topic of interest through the Contents tab or by entering specific keywords.

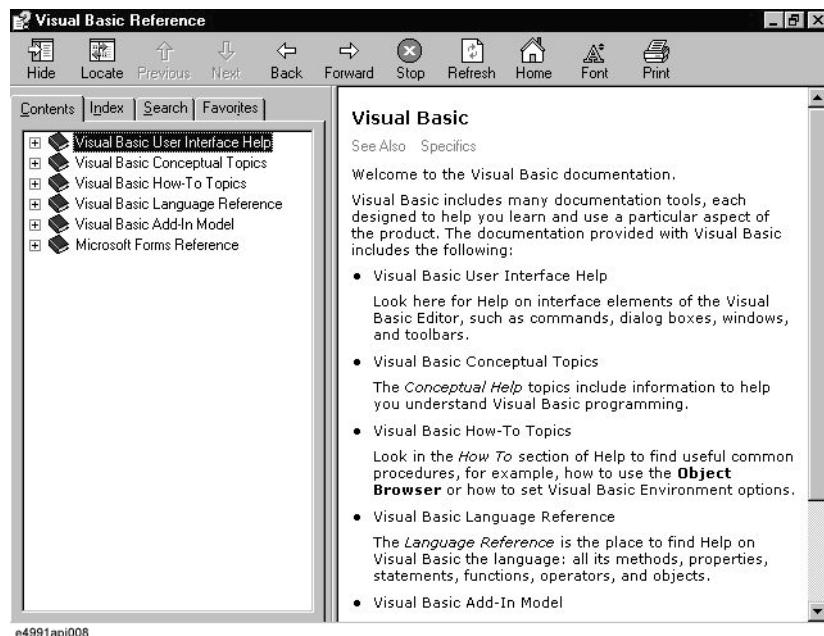

Accessing VBA Online Help

Step 1. From Visual Basic Editor, do one of the following to access the VBA Online Help screen (Figure 3-21):

- On the **Help** menu, click **Microsoft Visual Basic Help**.
- Press **[F1]** on the keyboard.
- On the toolbar, click the “VBA Help” icon (Figure 3-2).

Figure 3-21

VBA Online Help screen

Using the Contents Tab

Step 1. Clicking the **Contents** tab in the VBA Online Help screen brings up the items listed below. The E5052A VBA Online Help has a hierarchical table of contents. Click an item to expand it, and then find your particular topic of interest.

- Visual Basic User Interface Help
- Visual Basic Conceptual Topics
- Visual Basic How-To Topics
- Visual Basic Language Reference

Operation Basics of the E5052A's VBA Using VBA Online Help

- Visual Basic Add-In Model
- Microsoft Forms Reference

When you need information on using Visual Basic Editor, use User Interface Help and How-To Topics as primary sources of information. Formats of VBA programs are covered in Visual Basic Conceptual Topics. Properties and methods supported by VBA are covered in Visual Basic Language Reference and Visual Basic Add-In Model. Information on using user forms is covered in Microsoft Forms Reference.

Using the Index Tab

Step 1. In the VBA Online Help screen, click the Index tab, and enter a keyword(s) into the text box. For example, you may wish to search for “Sub” or “With” when you are writing your own code.

Looking up a keyword in the code within Visual Basic Editor

When you want to know the usage or meaning of a keyword contained in a sample program or some other code, you can quickly access the help topic on that keyword by moving the cursor to the keyword and pressing **[F1]**.

Using Advanced Techniques

Accessing a list of E5052A COM objects

The VBA environment provides COM objects that support the user in controlling the E5052A. When you are developing a program using E5052A COM objects, you can access a list of E5052A COM objects by opening Object Browser within Visual Basic Editor.

Step 1. To open Object Browser, do one of the following:

- On the **View** menu, click **Object Browser**.
- On the toolbar, click the “Object Browser” icon (Figure 3-2).

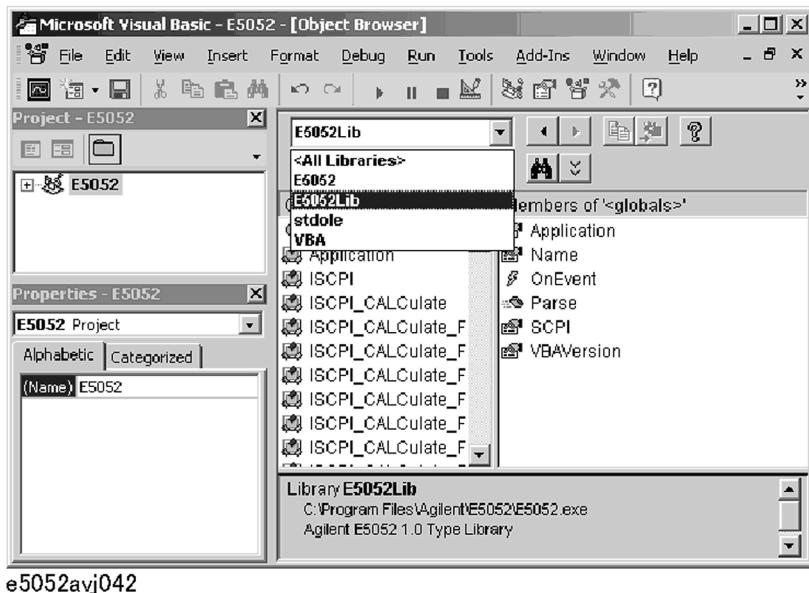

Step 2. Select **E50b52LIB** from the Project/Library box to display the E5052A library as shown in Figure 3-22.

NOTE

Some COM objects in the Object Browser’s list are **not** used for controlling the E5052A VBA; these COM objects are not described in the Chapter 7, “COM Object Reference.”

Figure 3-22

How to use Object Browser

Operation Basics of the E5052A's VBA Using Advanced Techniques

Using automatic library references

For libraries that satisfy the following conditions, the library reference will be automatically set whenever a new project is created and loaded ([Macro Setup] - VBA Editor Menu - New Project).

Automatically referenced libraries	Condition
Directory where the library resides.	F:\Agilent (F:\Agilent)
Extensions of libraries	olb, tlb, dll, or ocx

To check the library reference setting, you must use Visual Basic Editor.

Perform the following to check the library reference setting.

- On the **Tools** menu, click **References....**

The library reference setting is enabled if the library name is checked.

NOTE

A project sets the library reference when the project is created. Therefore, if an existing project is loaded, libraries added after the development of the project are not automatically set in the library reference.

Controlling the E5052A

This chapter explains how to use the E5052A's VBA to control the E5052A itself.

Detecting End of Measurement

This section explains how to trigger the instrument to start a new measurement cycle and how to detect the end of a measurement cycle. For a detailed description of trigger detection, the trigger system, and the concept of triggering, see the Chapter on “Making a Measurement” in the *Programmer’s Guide*.

You can detect the end of measurement by using either “Using the Status Register” on page 64 or “Using Event Interruption feature” on page 65.

Using the Status Register

The status of the E5052A can be monitored through the status register. For a complete description of the status report mechanism, including the specifications of each bit of the status register, see the Appendix on “Status Reporting System” in the *Programmer’s Guide*.

If your program is based on SPCI commands, you can use SRQ (Service Request) interrupts to detect the end of measurement. For more information, see the Section on “Waiting for the End of Measurement” in the *Programmer’s Guide*.

The following is a sample program that demonstrates how to use an SRQ to detect the end of measurement.

In this program, you can start a measurement cycle by pressing the command button on the user form (cmdExec), and a message box will appear when the measurement finishes.

- | | |
|------------------|--|
| Lines 40 to 50 | The trigger system switches to "Idle" state and clears the operation status event register. |
| Lines 60 to 70 | These lines configure the instrument so that operation status event register’s bit 4 is set to 1 only when the operation status condition register’s bit 4 is changed from 1 to 0 (negative transition). |
| Lines 90 to 110 | The trigger source is set to “Bus Trigger” to start a measurement cycle. |
| Lines 130 to 160 | These lines repeat until the end of measurement is detected. |
| | Line 140: The control is returned to Windows so that other applications may be executed. |
| Line 180 | A message box appears when the end of measurement is detected. |

Example 4-1

Using an SRQ to Detect the End of Measurement

```
10| Private Sub cmdExec_Click()
20|     Dim i As Long
30|
40|     SCPI.ABORT
50|     SCPI.IEEE4882.CLS
60|     SCPI.STATus.OPERation.PTRansition = 0
70|     SCPI.STATus.OPERation.NTRansition = 16
80|
90|     SCPI.TRIGger.SP.Source = "bus"
100|    SCPI.INITiate.SP.CONTinuous = True
```

```
110|     SCPI.IEEE4882.TRG
120|
130|     Do While i = 0
140|         DoEvents
150|         i = SCPI.STATus.OPERation.EVENT
160|     Loop
170|
180|     MsgBox "end"
190|
200| End Sub
```

NOTE

The E5052A's VBA program is executed as a part of E5052A's applications. Therefore, if any executed VBA program takes a long time before returning control to Windows, all processing operations other than VBA are suspended during this time. To prevent this, use DoEvents to return the control to E5052A applications.

Using Event Interruption feature

The E5052A provides an event interruption feature to allow you to detect the end of measurement. By enabling the E5052 Event softkey, you can obtain an end of sweep event.

For details, refer to the section on “Executing a Procedure with a Softkey (user menu function)” on page 68.

NOTE

To obtain an end of sweep event, you must create and execute a VBA program.

Reading/Writing Measurement Data

This section describes how to process the E5052A’s internal data. You can use these internal data arrays: unformatted data arrays, unformatted memory arrays, formatted data arrays, formatted memory arrays, and X-axis data arrays. For more information on the internal data arrays, see the section on “Internal Data Processing” in the *Programmer’s Guide*.

To read/write a formatted data array, formatted memory array, unformatted data array, or unformatted memory array, use the following objects:

- SCPI.CALClate.xx.TRACe.DATA.FDATA
- SCPI.CALClate.xx.TRACe.DATA.FMEMory
- SCPI.CALClate.xx.TRACe.DATA.UDATA
- SCPI.CALClate.xx.TRACe.DATA.UMEMory

To read an X-axis data array, use the following object:

- SCPI.CALClate.xx.DATA.XDATA

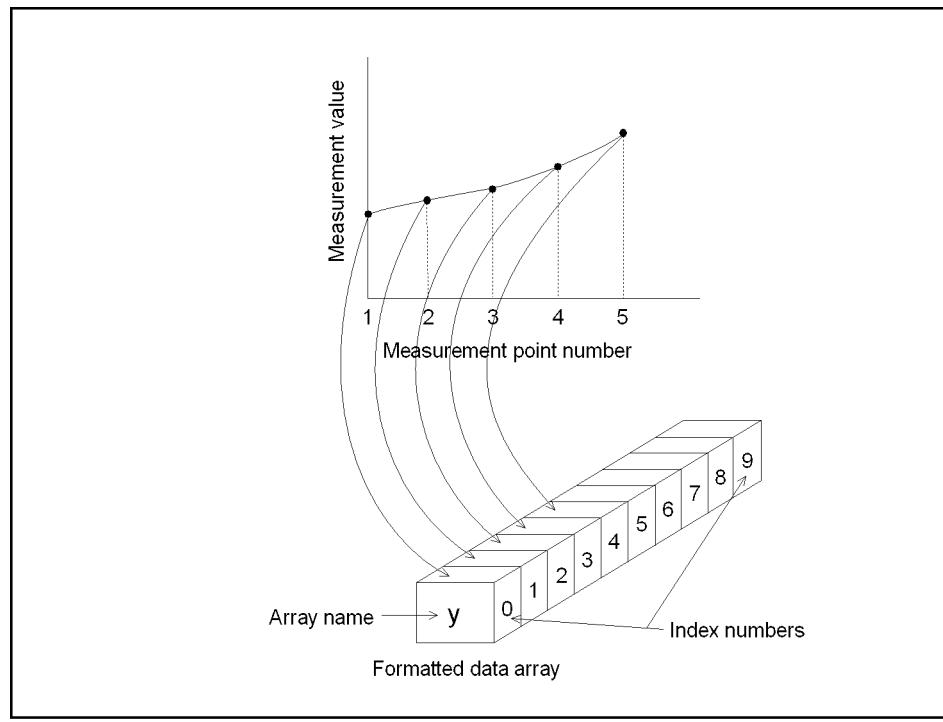

To read a raw data array, use the following object:

- SCPI.CALClate.xx.DATA.RDATA

The E5052A VBA allows you to deal with multiple pieces of data through variables of the Double-precision Dynamic Array type. For example, a formatted data array that includes five measurement points is stored as shown in Figure 4-1. For more information on contained data, see the section on “Reading/Writing Measurement Data” in the *Programmer’s Guide*.

Figure 4-1

Example of storing data into a Variant variable

e5052ave038

NOTE

When you use one of the objects listed above, the base index number of the array is always 0 even if the declaration section contains the "Option Base 1" statement, which specifies the use of the base array index of 1.

Executing a Procedure with a Softkey (user menu function)

The E5052A lets you perform procedures assigned to specific softkeys ([Macro Setup] - User Menu - User Label 1/2/3/4/5/6/7/8) without using user forms for the event activated by pressing the softkey. This function is called the user menu function.

NOTE You must create and execute a VBA program when using the user menu function.

Preparing to use the User Menu Function

Before using the user menu function, perform the following preparation.

Settings for Softkey Label Name

When you want to change the softkey label names for the user menu function, you need to code within the VBA program. For details, refer to “Sample Program of Settings for Softkey Label and Softkey Enabled/Disabled (object name: Module1)” on page 70.

For more information on this object, see Chapter 7, “COM Object Reference.”

- SCPI.PROGram.SKEY.ITEM(1-8).LABel on page 257

Enabling/Disabling Softkey

When you want to enable or disable the softkey for the user menu function, you need to code within the VBA program. For details, refer to “Sample Program of Settings for Softkey Label and Softkey Enabled/Disabled (object name: Module1)” on page 70. For more information on this object, see Chapter 7, “COM Object Reference.”.

Use the following COM objects to enable or disable the softkey. For more information on this object, see Chapter 7, “COM Object Reference.”.

- SCPI.PROGraM.SKEY.ITEM(1-8).ENABLE on page 256

How to use the User Menu Function

To execute the procedure assigned to a softkey, you need to generate an event by pressing the softkey.

For this, you need to code within the VBA program to execute a procedure. For more information, refer to “Sample Program Executing User Menu (object name: Class1)” on page 71.

Use the following function to execute a procedure in the user menu.

Step 1. Enable the softkey to generate an event.

- **[Macro Setup] - E5052 Event ON**

Step 2. Press the softkey.

- **[Macro Setup] - User Menu - User Label No.**

“**No.**” represents the button number. You can set the label for “**User Label No.**” as you like. For details, refer to the “Enabling/Disabling Softkey.” section.

NOTE

You can use the user menu function only when the VBA program is running. For information on how to verify whether the VBA is running, refer to “Running a VBA Program” on page 47.

Controlling the E5052A
Executing a Procedure with a Softkey (user menu function)

Simple usage example

The following is a simple example that uses a standard module and a class module.

Object name	Module type	Function
Module1	Standard module	Sets the softkey labels and enables interrupts from the softkeys
Class1	Class module	Specifies the processing to be followed when an event occurs

The program (object name: Module1) is described in detail below:

- Line 60 The instance of the class module specified by Class1 is assigned to clsEvent (Object creation).
- Lines 80 to 140 Set the first and second softkey (*id*: 1 to 2) to enabled and set the third to eighth softkey (*id*: 3 to 8) to disabled.
- Lines 160 to 170 Set the first softkey label (*id*: 1) to "Preset" and the second softkey label (*id*: 2) to "Exit".
- Lines 190 to 210 Processing repeated until the event occurs.
- Line 200 Detects an event when a specific softkey is pressed and enables the interrupt from the event.

Example 4-2

Sample Program of Settings for Softkey Label and Softkey Enabled/Disabled (object name: Module1)

```
10| Sub Main()
20|
30|     Dim clsEvent As Class1
40|     Dim I As Long, J As Long
50|
60|     Set clsEvent = New class1
70|
80|     For I = 1 To 2
90|         SCPI.PROGRAM.SKEY.Item(I).ENABLE = True
100|    Next I
110|
120|    For J = 3 To 8
130|        SCPI.PROGRAM.SKEY.Item(J).ENABLE = False
140|    Next J
150|
160|    SCPI.PROGRAM.SKEY.Item(1).LABEL = "Preset"
170|    SCPI.PROGRAM.SKEY.Item(2).LABEL = "Exit"
180|
190|    Do
200|        DoEvents
210|    Loop
220|
230|    Set clsEvent = Nothing
240|
250| End Sub
```

The program (object name: Class1) is described in detail below:

Lines 50 to 130 An event occurs when the softkey is pressed from the user menu.

Lines 70 to 80: E5052A are reset to the initial setting when the first softkey is pressed.

Lines 90 to 120: The program ends with a message box displayed when the second softkey is pressed.

Lines 140 to 150 An event occurs when the triggered sweep ends.

Line 150: A message box appears when the sweep ends.

Lines 190 to 210 Implement the object.

Lines 230 to 250 Release the object.

240|         Set app = Nothing
250|     End Sub

```

NOTE

The E5052A's VBA program is executed as a part of E5052A's applications. Therefore, if any executed VBA program takes a long time before returning control to Windows, all processing operations other than VBA are suspended during this time. To prevent this, use DoEvents to return the control to E5052A applications.

Controlling the E5052A
Executing a Procedure with a Softkey (user menu function)

Argument for event occurrence

The arguments for event occurrence are described below. An event represents app_OnEvent, which is described in Example 4-3 of the “Simple usage example”.

Event	First argument	Second argument
User menu	UserLabel	Softkey label NO. (1-8)
End of sweep	SweepEnd	Measurement window (FP/PN/SP/TR/USER)
Request for service	RQS	Nothing

NOTE

OnEvent(id1 As String, id2 As String) is a event handler of the events from the application and can refer to the instance (data) of the class. By declaring the object a variable “app” in the class module, it can be utilized as a procedure to obtain the event occurrence.

Within the event handler (lines 30-170), the processing should be the minimum necessary before an event ends. Nesting is also not allowed.

Controlling VBA Externally

This section describes how to control the E5052A's VBA externally.

Executing VBA Using External Controller

You can execute VBA from an external PC by running either macros or the user menu.

Running Macro

To start VBA from an external PC, use the following command:

- SCPI.MMEmory.LOAD.PROGram on page 249
- SCPI.PROGram.COM.EVENt on page 255
- SCPI.PROGram.SElected.STATE on page 256

Running User Menu

To execute the user menu from an external PC, use the following command: This command executes the first of the menu.

To execute the user menu, you must execute the user menu function in advance. For more information, refer to “Running User Menu” on page 73.

- SCPI.PROGram.SKEY.Item(1).IMMEDIATE

Receiving the Termination of VBA Using External Controller

To allow the external controller to receive the termination of VBA from the E5052A, you may either confirm the operational status of VBA or use the user-defined register.

Confirming VBA’s Operational Status

To confirm the operational status of VBA, use the following command:

- SCPI.PROGram.SElected.STATE on page 256

Using User-defined Register

To use the user-defined register, use the following command: For more information, refer to “Using User-defined Register” on page 74.

- SCPI.STATus.OPERation.BIT12.CLEar on page 287
- SCPI.STATus.OPERation.BIT12.CONDITION on page 287
- SCPI.STATus.OPERation.BIT12.ENABLE on page 288
- SCPI.STATus.OPERation.BIT12.EVENT on page 288
- SCPI.STATus.OPERation.BIT12.NTRansition on page 288
- SCPI.STATus.OPERation.BIT12.PTRansition on page 289
- SCPI.STATus.OPERation.BIT12.SET on page 289

**Controlling the E5052A
Controlling VBA Externally**

Using User-defined Register

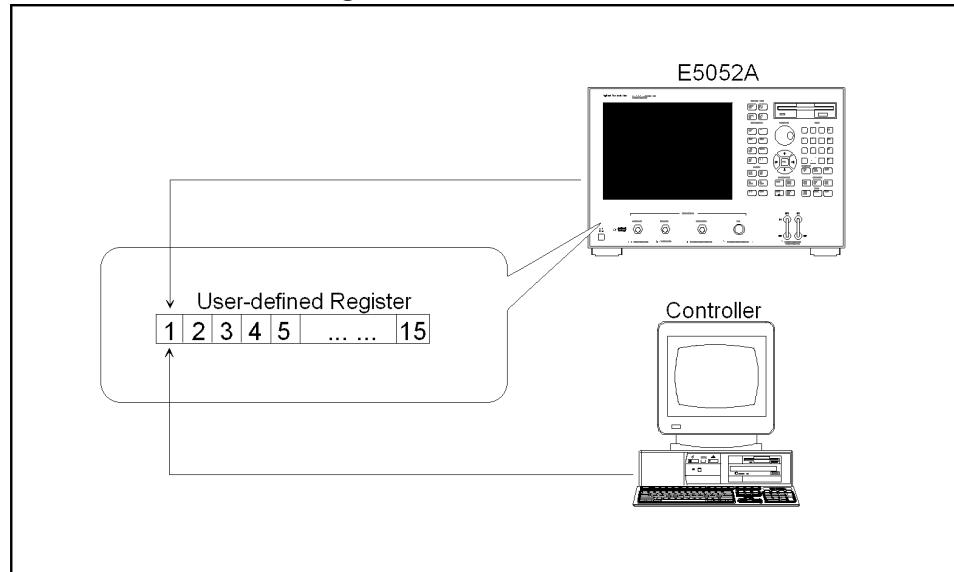

The E5052A does not control the individual status flag of the user-defined register. In order to start the E5052A VBA using the external controller to obtain the end bit, the user must make the user-defined register to be controlled within the program.

The user can assign any register number to the user-defined register which he/she wants to use. Available register numbers are 1 to 15 (0 to 14 bit).

If you use the user-defined register, you must specify the same register number for both the external controller side and the E5052A's program side. (Figure 4-2)

Figure 4-2

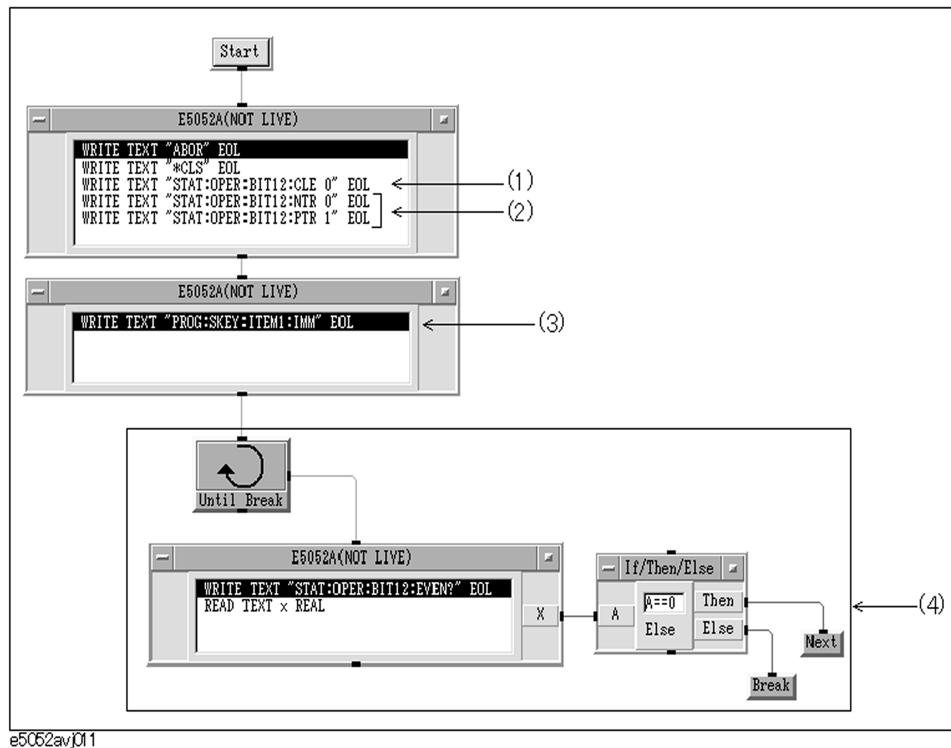

Reference of User-defined Register

e5052ave010
The following is a sample program.

- (1) Clears the first condition register to be used (bit 0).
- (2) These lines configure the instrument so that the operation use-defined status event register's bit 0 is set to 1, when the operation use-defined condition register's bit 0 is changed from 0 to 1.
- (3) Executes the user menu.
- (4) Repeats until the termination of VBA is detected.

Figure 4-3 A Sample Program to Control User-defined Register (On the Controller Side)

Lines 30 to 90 An event occurs when the softkey is pressed from the user menu.

Lines 50 to 60: E5052A will be reset to the initial setting, when the first softkey is pressed.

Lines 70 to 80: The message box will appear, when the second softkey is pressed.

Lines 100 to 110 An event will occur when the triggered sweep ends.

Line 110: A message box will appear when the sweep ends.

Line 130 Sets a flag to the first of the user-defined register (bit 0).

Line 140 This procedure terminates the program.

Example 4-4

A Sample Program to Control User-defined Register (On the E5052A Side)

```

10|Private Sub app_OnEvent(ByVal ReasonStr As String, ByVal
OptionStr As String)
20|    Select Case ReasonStr
30|        Case "UserLabel"
40|            Select Case OptionStr
50|                Case 1
60|                    SCPI.SYSTEM.PRESet
70|                Case 2
80|                    MsgBox "Program ended"
90|            End Select
100|        Case "SweepEnd"
110|            MsgBox "Sweep ended"
120|    End Select

```

Controlling the E5052A Controlling VBA Externally

```
130|      SCPI.STATUS.OPERATION.BIT12.SET = 0
140|      End
150|End Sub
```

NOTE

For more information on the user-defined register, refer to the status reporting system described in the appendix of the programmer's guide

Using User-defined Variables

The E5052A has an area for which the users may set any value. The areas are divided for each data type.

An area can be used up to 10 (1 to 10) for each command.

The values set by a command cannot be removed by executing preset.

- SCPI.PROGram.VARiable.ARRay(1-10).DATA on page 257
- SCPI.PROGram.VARiable.ARRay(1-10).POINts on page 258
- SCPI.PROGram.VARiable.DOUBle(1-10) on page 258
- SCPI.PROGram.VARiable.INTeger(1-10) on page 259
- SCPI.PROGram.VARiable.STRing(1-10) on page 259

NOTE

These commands do not refer to or change the results within the E5052A.

User Defined Window

Overview

The E5052A's user defined window provides graphics utility for tailoring the measurement and interpreting the results. Users can operate scale, trace, and marker functions as same as that of E5052A's other instrument mode.

How to use the User Defined Window

This section explains how to use the user defined window on the E5052A.

Printing Measurement Data in the User Define Window

The E5052A's user defined window enables the display traces by copying the data array to the trace array of the user defined window. Users can access all the data array of the user defined window via either VBA COM commands or SCPI commands. Up to 8 traces can be displayed in the E5052A's user defined window.

The example 5-1 shows a sample procedure that demonstrates how to display traces that users define data array both in X-axis and Y-axis.

- | | |
|------------------|--|
| Lines 20 to 30 | Defines data array to be displayed in the trace of user defined window. |
| Line 50 | Selects and specifies the user defined window as active window. |
| Lines 80 to 90 | Copies formatted data trace from the frequency-power measurement results to the data array defined in the VBA program. |
| Line 110 | Specifies trace 1 as active trace |
| Line 140 | Copies data array to X-axis data on trace 1 |
| Line 170 | Copies data array to Y-axis data on trace 1 |
| Lines 200 to 210 | Sets display unit of X-axis and Y-axis respectively. |
| Line 240 | Execute autoscale |
| Line 260 | Returns to the E5052A application |

Example 5-1

Measurement Data in the User Define Window

```
10| Sub Main()
20|     Dim aryXdata() As Double
30|     Dim aryYdata() As Double
40|
50|     SCPI.DISPlay.USER.STATE = True
60|     SCPI.DISPlay.WINDOW.ACTive = "USER1"
70|
80|     aryXdata = SCPI.CALCulate.FP.DATA.XDATA
90|     aryYdata = SCPI.CALCulate.FP.TRACE(1).DATA.FDATA
100|
110|    SCPI.DISPlay.USER.TRACe(1).STATE = True
120|
130|    'x data
140|    SCPI.CALCulate.USER.TRACe(1).DATA.XDATA = aryXdata
150|
160|    'y data
170|    SCPI.CALCulate.USER.TRACe(1).DATA.FDATA = aryYdata
180|
190|    'Unit
200|    SCPI.DISPlay.USER.TRACe(1).X.UNIT = "V"
210|    SCPI.DISPlay.USER.TRACe(1).Y.UNIT = "Hz"
220|
230|    'Auto scale
240|    SCPI.DISPlay.USER.ALLTrace.Y.SCALE.AUTO
250|
260|    DoEvents
270|
280| End Sub
```

NOTE

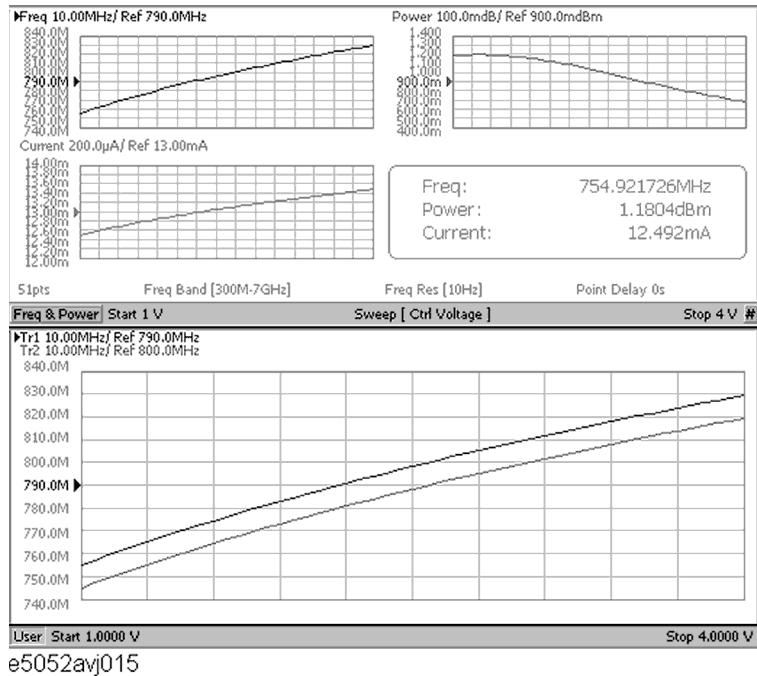

The E5052A's VBA program is executed as an application. Therefore, if any executed VBA program takes a long time before returning control to the E5052A, all processing operations other than VBA are suspended during this time. To prevent this, use DoEvents to return the control to the E5052A.

NOTE

The value in the X-data array for the user defined window has to have incremental order, that means (the value at N point) < (the value at N+1 point). When the error message, "Illegal parameter value" is received, check the values of the X-data array data on point-to-point to ensure this rule.

Controlling Peripherals

This chapter explains how to control peripherals connected to the E5052A with GPIB by using the software (VISA library) installed in the E5052A.

Overview

The E5052A macro function (E5052A VBA) can be used not only to automate measurements but also to control external measurement instruments connected via the USB/GPIB interface cable by acting as a self-contained system controller (see "Overview of Control System Based on Macro Function" on page 25).

The E5052A macro function (E5052A VBA) performs communications via the COM interface when controlling the E5052A itself, but it communicates via VISA (Virtual Instrument Software Architecture) when controlling external measurement instruments.

To control peripherals connected to the E5052A via the USB/GPIB interface cable, the following preparation is required.

Preparation

Importing definition files

To use the VISA library in the E5052A macro (E5052A VBA), you need to import two definition files into your project with the Visual Basic editor to define the VISA functions and perform other tasks. You can find the source file of this program saved under the following name on the sample program disk. For importing the module, see "Loading a module (importing)" on page 45

- visa32.bas
- vpptype.bas

Programming with VISA

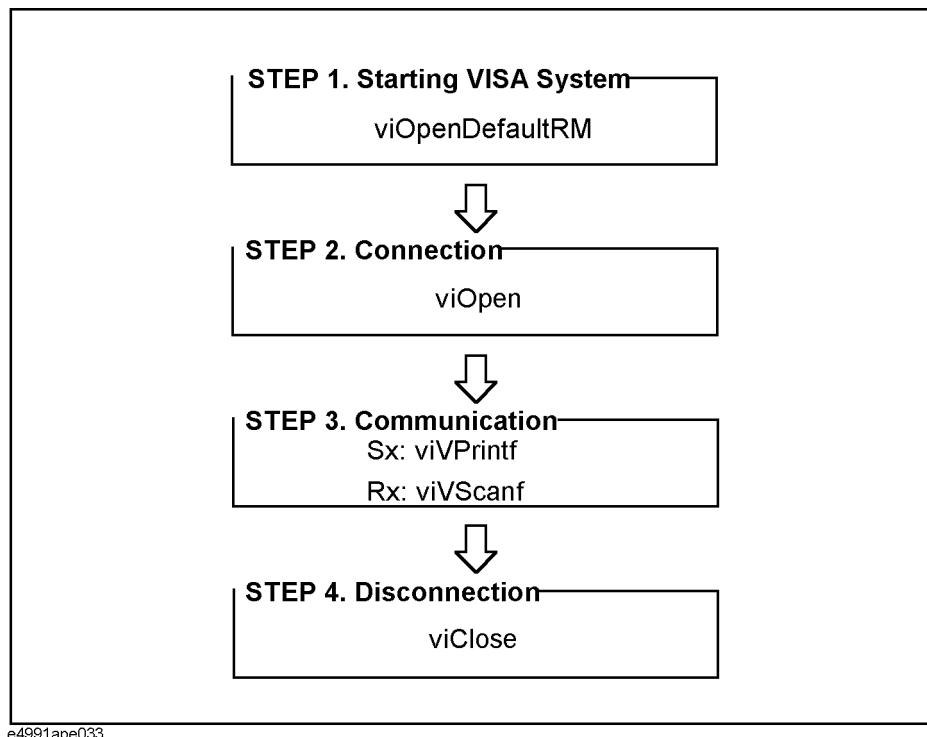

Figure 6-1 shows the flow of controlling the instrument with VISA. When developing a VISA program in the Visual Basic language, a special programming notice (in the readme text file listed below) must be reviewed.

For details on the use of the VISA library and the programming notice for using the VISA library with the E5052A macro (E5052A VBA), refer to the following files on the CD-ROM (Agilent part number: E5052-9050x).

- visa.hlp (on-line help for the VISA library)
- vbreadme.txt (notes on using the VISA library with VB)

NOTE

The number position shown by “x” in the part numbers above indicates the edition number.

Figure 6-1**Flow of instrument control with VISA**

STEP 1. Starting Up VISA System

VISA's viOpenDefaultRM function initializes and starts up the VISA system. The function viOpenDefaultRM should always be used when initiating VISA functions. The parameter of this function is startup information.

Syntax

viOpenDefaultRM(*param*)

Parameter

	<i>param</i>
Description	Startup information (output)
Data type	Long integer type

STEP 2. Connection

VISA's viOpen function makes connection with the specified instrument. The viOpen function returns a value so that the VISA functions can apply it to the specified instrument. The parameters of this function are startup information, the address information of the specified instrument, access mode, timeout, and connection information.

Syntax

viOpen(*param1*, *param2*, *param3*, *param4*, *param5*)

Parameter

	<i>param1</i>
Description	Startup information (input)
Data type	Long integer type

	<i>param2</i>
Description	Address information of specified instrument (input)
Data type	Character string type
Syntax	GPIB[<i>board</i>] ^{*1} :: <i>primary address</i> ^{*2} ::INSTR

*1. GPIB0 for E5052A

*2. GPIB address of instrument controlled by E5052A

	<i>param3</i>
Description	Access mode (Enter 0)

	<i>param4</i>
Description	Timeout (Enter 0)

	<i>param5</i>
Description	Connection information (output)
Data type	Long integer type

STEP 3. Communication

VISA's viVPrintf function sends a program message (GPIB command) to the specified instrument. The parameters of this function are connection information, the program message, and the variable to be formatted.

NOTE

To input/output GPIB commands, the viVPrintf function and the viVScanf function are mainly used, but other VISA functions are also available. For more information, refer to visa.hlp (online help for the VISA library).

Syntax

viVPrintf(*param1*, *param2*, *param3*)

Parameter

	<i>param1</i>
Description	Connection information (input)
Data type	Long integer type

	<i>param2</i>
Description	Program message (input) ^{*1}
Data type	Character string type

*1. When sending a program message of the GPIB command, a message terminator is required at the end of the message.

	<i>param3</i>
Description	A variable to be formatted ^{*1}
Data type	Specified data type

*1. If not applicable, enter 0.

VISA's viVScanf function receives the result from the specified instrument and stores it in the output variable. The parameters of this function are connection information, the format parameter for the output variable, and the output variable.

Syntax

viVScanf(*param1*, *param2*, *param3*)

Controlling Peripherals Programming with VISA

Parameter

	<i>param1</i>
Description	Connection information (input)
Data type	Long integer type

	<i>param2</i>
Description	Format parameter for output variable
Data type	Character string type

	<i>param3</i>
Description	Output variable (output)
Data type	Character string type

STEP 4. Disconnection

VISA's viClose function disconnects communication and terminates the VISA system. The parameter of this function is startup information.

Syntax

viClose(*param*)

Parameter

	<i>param</i>
Description	Startup information (input)
Data type	Long integer type

COM Object Reference

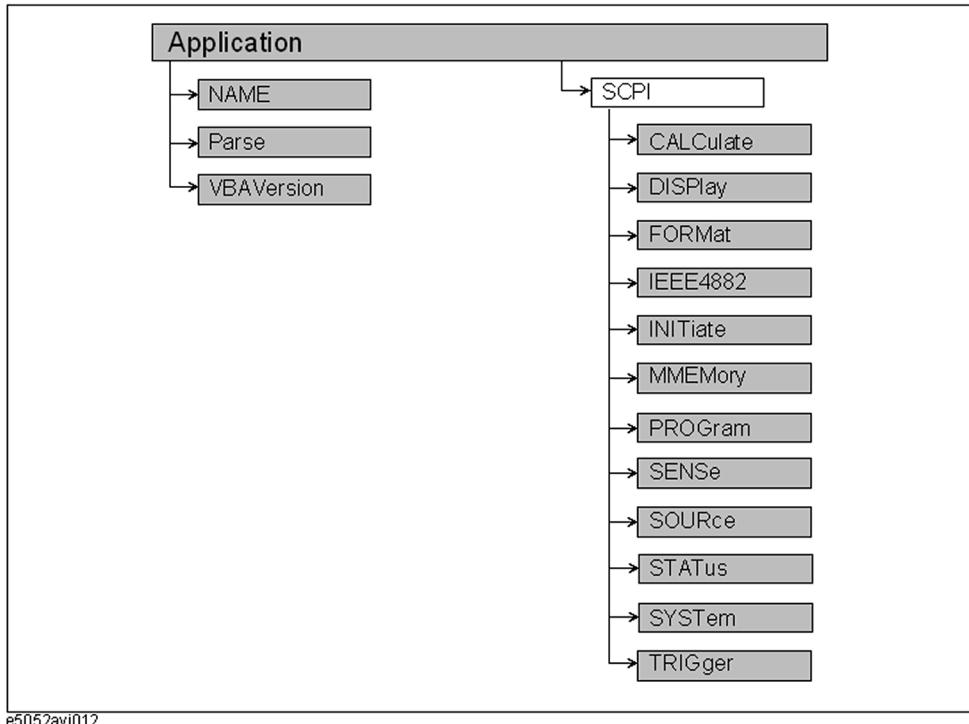

This chapter describes the COM object model of the Agilent E5052A and the COM object reference in alphabetical order. If you want to look up COM objects by corresponding front panel keys, see “COM object list by front panel key.”

COM Object Model

The COM objects provided for the E5052A are structured hierarchically as shown in Figure 7-1.

Figure 7-1

E5052A COM object model

Application Objects

The Application objects are at the top of the hierarchy of the E5052A COM object model. They consist of 3 objects dedicated to the COM interface and SCPI objects corresponding to SCPI commands. For information on the basic use of the 3 objects dedicated to the COM interface, see “Application Objects” on page 92.

SCPI Objects

The SCPI objects are created to realize the SCPI commands of the E5052A with the COM interface. For information on the basic use of the SCPI objects, see “SCPI Objects” on page 93.

The conversion rules from the SCPI commands when writing SCPI object messages are as follows:

- SCPI must be at the beginning. Notice that the IEEE common commands start with SCPI.IEEE4882. and "*" is omitted.
- Replace colons (:) used as the hierarchical separator symbol with dots (.) .
- The number written in the object message is specified with ().
- You cannot omit the command message in the syntax.

SCPI command	COM object
OUTPUT 717;":SENS:SP:AVER:CONT 16"	→ SCPI.SENSE.SP.AVERage.COUNT = 16
OUTPUT 717;":SENS:SP:AVER:STAT?" ENTER 717;A\$	→ A = SCPI.SENSE.SP.AVERage.STATE
OUTPUT 717;"*CLS"	→ SCPI.IEEE4882.CLS

Notational Rules of COM Objects

This section describes the rules for the description of the COM objects in this chapter.

Syntax

Part with heading “Syntax” describes the syntax to send a COM object from the E5052A VBA to the E5052A. The syntax consists of the object part and the set/read part, with an equal “=” inserted between them. Variables are indicated by italicized letters. Variables with () are indices. For indices with () having their preset values, you can omit “(variable),” and, if omitted, the preset values are automatically set.

There are the following 3 types of syntax for coding using objects.

"Object (property) = *variable*": to set the stat of the E5052A.

variable=object (property): to read the stat of the E5052A.

"Object (method)": to make the E5052A perform some processing.

Description

Part with heading “Description” describes how to use the COM object or the operation when executed. COM objects used only to read the state of the E5052A are indicated with “Read only” and ones used only to set the state of the E5052A “No read.”

Variable

Part with heading “Variable” describes necessary variables when using the object. It gives the description, data type, allowable range, preset value, unit, resolution, and notes for *variable* (*italic*) shown in the syntax.

Variables declared as the string data type (String) are case insensitive. For variables of the string type that indicate arguments (written as *Param* in the syntax), you can omit lower-case letters.

The data types of the E5052A COM objects include 5 types as shown in Table 7-1. Before using variables, declare the data type of each variable. If you do not declare the data type of a variable, it is automatically dealt as the variant type.

Table 7-1 Data type

Data type	Name	Consumed memory	Range
Long	Long integer type	4 bytes	-2,147,483,648 to 2,147,483,647
Double	Double precision floating point type	8 bytes	For a negative value: -1.79769313486232E+308 to -4.94065645841247E-324 For a positive value: -1.79769313486232E+308 to -4.94065645841247E-324
Boolean	Boolean type	2 bytes	-1 (True) or 0 (False)
String	Character string type *1	1 byte/alphanumeric character	Up to approximately 2 billion characters
Variant	Variant type	16 bytes	No limitation

*1. For a fixed length string, declare the number of characters.

Examples

Part with heading “Examples” describes a simple example of how to use the object for coding with E5052A VBA.

Equivalent Key

Part with heading “Equivalent key” shows the operational procedure of the front panel keys that has the same effect as this object.

- | | |
|-------------------------|---|
| [Key] | Indicates that you press the key named Key. |
| [Key] -> Item | Indicates a series of key operation in which you press the [Key] key, move the focus to the button called Item on the displayed menu using the [←→] key and so on, and then press the [Enter] key. |

Application Objects

The Application objects are at the top of the hierarchy of the E5052A COM object model. They consist of 3 objects dedicated to the E5052A COM interface and SCPI objects corresponding to SCPI commands. This section describes the objects dedicated to the E5052A COM interface.

NAME

Object type

Property

Syntax

App = NAME

Description

Reads out the application name of VBA. “E5052A” is always read out. (Read only)

Variable

	<i>App</i>
Description	Application name
Data type	Character string type (String)

Equivalent key

No equivalent key is available on the front panel.

Parse

Object type

Method

Syntax

Parse(*Scpi*)

Return = Parse(*Scpi?*)

Description

Executes an SCPI command of the E5052A. For information on the SCPI commands, see Chapter “SCPI Command Reference” in the *E5052A Programmer’s Guide*.

The **Parse** object is a little slower in the execution speed than the COM object which has the same function as the SCPI command because it must parse the message string of the SCPI command.

Variable

	<i>Scpi</i>
Description	SCPI command
Data type	Character string type (String)

	<i>Return</i>
Description	Response (query) of the SCPI command

	<i>Return</i>
Data type	Character string type (String)

Equivalent key No equivalent key is available on the front panel.

VBAVersion

Object type Property

Syntax *Vers* = VBAVersion

Description Reads out the version information of VBA installed in the E5052A. (Read only)

Variable

	<i>Vers</i>
Description	VBA version information
Data type	Character string type (String)

Equivalent key From the **Help** menu of the Visual Basic editor, click **About Microsoft Visual Basic....**

SCPI Objects

SCPI objects are a collection of the COM interface having one-on-one correspondence with the SCPI commands. This section describes the SCPI objects provided for the E5052A.

SCPI.ABORt

Syntax	SCPI.ABORt
Description	Abort measurement (No Query)
Equivalent key	No equivalent key is available on the front panel.

SCPI.CALCulate.FP(1-1).ALLTrace.ACTive

Syntax	SCPI.CALCulate.FP(1-1).ALLTrace.ACTive = <long> <long> = SCPI.CALCulate.FP(1-1).ALLTrace.ACTive
Description	Selects active trace
Variable	

	<Long>
Range	1 to 3
Preset value	1
Unit	-
Resolution	-

Equivalent key	No equivalent key is available on the front panel.
----------------	--

SCPI.CALCulate.FP(1-1).ALLTrace.BDMarker.X.COUPle.STATE

Syntax	SCPI.CALCulate.FP(1-1).ALLTrace.BDMarker.X.COUPle.STATE = <boolean> <boolean> = SCPI.CALCulate.FP(1-1).ALLTrace.BDMarker.X.COUPle.STATE
Description	Turns on/off bandmarker X coupling function
Variable	

	Param
True or -1	Set bandmarker X coupling function mode to 'ON'

	Param
False or 0(Preset value)	Set bandmarker X coupling function mode to 'OFF'

Equivalent key FP Menu -> Marker Function -> Couple

SCPI.CALCulate.FP(1-1).ALLTrace.MARKer.COUPle.STATE

Syntax SCPI.CALCulate.FP(1-1).ALLTrace.MARKer.COUPle.STATE = <boolean>
 <boolean> = SCPI.CALCulate.FP(1-1).ALLTrace.MARKer.COUPle.STATE

Description Turns on/of marker coupling function

Variable

	Param
True or -1	Set marker coupling function mode to 'ON'
False or 0(Preset value)	Set marker coupling function mode to 'OFF'

Equivalent key FP Menu -> Marker -> Couple

SCPI.CALCulate.FP(1-1).ALLTrace.MARKer.DISCrete.STATE

Syntax SCPI.CALCulate.FP(1-1).ALLTrace.MARKer.DISCrete.STATE = <boolean>
 <boolean> = SCPI.CALCulate.FP(1-1).ALLTrace.MARKer.DISCrete.STATE

Description Enables/disables marker discrete function

Variable

	Param
True or -1	Enable marker discrete function
False or 0(Preset value)	Disable marker discrete function

Equivalent key FP Menu -> Marker -> More Functions -> Discrete

**SCPI.CALCulate.FP(1-1).ALLTrace.MARKer.REference.N
UMBer****Syntax**

SCPI.CALCulate.FP(1-1).ALLTrace.MARKer.REference.NUMBer = <long>

<long> = SCPI.CALCulate.FP(1-1).ALLTrace.MARKer.REference.NUMBer

Description

Sets/reads marker reference number

Variable

	<Long>
Range	1 to 6
Preset value	1
Unit	-
Resolution	-

Equivalent key

FP Menu -> Marker -> More Functions -> Ref Marker

**SCPI.CALCulate.FP(1-1).ALLTrace.MARKer.REference.S

SCPI.CALCulate.FP(1-1).ALLTrace.MARKer.REference.STATE = <boolean>

<boolean> = SCPI.CALCulate.FP(1-1).ALLTrace.MARKer.REference.STATE

Description

Turns on/off delta marker mode

Variable

	Param
True or -1	Set delta marker mode to 'ON'
False or 0(Preset value)	Set delta marker mode to 'OFF'

Equivalent key

FP Menu -> Marker -> More Functions -> Ref Marker Mode

SCPI.CALCulate.FP(1-1).DATA.RDATa**Syntax**

SCPI.CALCulate.FP(1-1).DATA.RDATa = <variant>

<variant> = SCPI.CALCulate.FP(1-1).DATA.RDATa

Description

Sets/reads the measurement raw data

Variable

	<Variant>
Range	1...3003
Preset value	-
Unit	-
Resolution	-

Equivalent key No equivalent key is available on the front panel.

SCPI.CALCulate.FP(1-1).DATA.TDATA

Syntax <variant> = SCPI.CALCulate.FP(1-1).DATA.TDATA

Description Sets/Reads tester mode data

Variable

	<Variant>
Range	1...3
Preset value	-
Unit	-
Resolution	-

Equivalent key No equivalent key is available on the front panel.

SCPI.CALCulate.FP(1-1).DATA.XDATA

Syntax <variant> = SCPI.CALCulate.FP(1-1).DATA.XDATA

SCPI.CALCulate.USER(1-1).TRACe(1-8).MATH.FUNCTion = <string>

<string> = SCPI.CALCulate.USER(1-1).TRACe(1-8).MATH.FUNCTion

Description

Selects math operation type

Variable

	Param
NORMal(Preset value)	Set math operation type to 'NORMal'
SUBTract	Set math operation type to 'SUBTract'
DIVide	Set math operation type to 'DIVide'
ADD	Set math operation type to 'ADD'
MULTiply	Set math operation type to 'MULTiply'

Equivalent key USER Menu -> Trace View -> Data Math

SCPI.CALCulate.USER(1-1).TRACe(1-8).MATH.MEMorize

Syntax SCPI.CALCulate.USER(1-1).TRACe(1-8).MATH.MEMorize

Description Copy data to memory (No Query)

Equivalent key No equivalent key is available on the front panel.

SCPI.CALCulate.USER(1-1).TRACe(1-8).SMOothing.APERture

Syntax SCPI.CALCulate.USER(1-1).TRACe(1-8).SMOothing.APERture = <double>

<double> = SCPI.CALCulate.USER(1-1).TRACe(1-8).SMOothing.APERture

Description Sets/reads smoothing aperture value

Variable

	<Double>
Range	50m to 25
Preset value	1.5
Unit	%
Resolution	10m

Equivalent key USER Menu -> Trace View -> Aperture

SCPI.CALCulate.USER(1-1).TRACe(1-8).SMOothing.STATE

Syntax SCPI.CALCulate.USER(1-1).TRACe(1-8).SMOothing.STATE = <boolean>

<boolean> = SCPI.CALCulate.USER(1-1).TRACe(1-8).SMOothing.STATE

Description Turns on/off smoothing function

Variable

	Param
True or -1	Set smoothing function to 'ON'
False or 0(Preset value)	Set smoothing function to 'OFF'

COM Object Reference
SCPI.CONTrol.HANDler.A.DATA

Equivalent key USER Menu -> Trace View -> Smoothing

SCPI.CONTrol.HANDler.A.DATA

Syntax SCPI.CONTrol.HANDler.A.DATA

Description Outputs data using port A (No Query)

Variable

	<Long>
Range	0 to 255
Preset value	-
Unit	-
Resolution	-

Equivalent key No equivalent key is available on the front panel.

SCPI.CONTrol.HANDler.B.DATA

Syntax SCPI.CONTrol.HANDler.B.DATA

Description Outputs data using port B (No Query)

Variable

	<Long>
Range	0 to 255
Preset value	-
Unit	-
Resolution	-

Equivalent key No equivalent key is available on the front panel.

SCPI.CONTrol.HANDler.C.DATA

Syntax SCPI.CONTrol.HANDler.C.DATA = <long>

<long> = SCPI.CONTrol.HANDler.C.DATA

Description Inputs/Outputs data using port C

Variable

	<Long>
Range	0 to 15
Preset value	-
Unit	-
Resolution	-

Equivalent key No equivalent key is available on the front panel.

SCPI.CONTrol.HANDler.C.MODE

Syntax

SCPI.CONTrol.HANDler.C.MODE = <string>

<string> = SCPI.CONTrol.HANDler.C.MODE

Description

Selects input/output mode on port C

Variable

	Param
INPut(Preset value)	Set input/output mode on port C to 'INPut'
OUTPut	Set input/output mode on port C to 'OUTPut'

Equivalent key No equivalent key is available on the front panel.

SCPI.CONTrol.HANDler.D.DATA

Syntax

SCPI.CONTrol.HANDler.D.DATA = <long>

<long> = SCPI.CONTrol.HANDler.D.DATA

Description

Inputs/Outputs data using port D

Variable

	<Long>
Range	0 to 15
Preset value	-
Unit	-

Description Selects input/output mode on port D

Variable

	Param
INPut(Preset value)	Set input/output mode on port D to 'INPut'
OUTPut	Set input/output mode on port D to 'OUTPut'

Equivalent key No equivalent key is available on the front panel.

SCPI.CONTrol.HANDler.E.DATA

Syntax
SCPI.CONTrol.HANDler.E.DATA = <long>
<long> = SCPI.CONTrol.HANDler.E.DATA

Description Inputs/outputs data using port E(port C + port D; 16 bits)

Variable

	<Long>
Range	0 to 255
Preset value	-
Unit	-
Resolution	-

Equivalent key No equivalent key is available on the front panel.

SCPI.CONTrol.HANDler.F.DATA

Syntax SCPI.CONTrol.HANDler.F.DATA

Description Inputs/outputs data using port F(port A + port C; 16 bits) (No Query)

Variable

	<Long>
Range	0 to 65535

	<Long>
Preset value	-
Unit	-
Resolution	-

Equivalent key No equivalent key is available on the front panel.

SCPI.CONTrol.HANDler.OUTPut(1-2).DATA

Syntax

SCPI.CONTrol.HANDler.OUTPut(1-2).DATA = <long>

<long> = SCPI.CONTrol.HANDler.OUTPut(1-2).DATA

Description

Sets/Reads OUTPUT1 and/or OUTPUT2

Variable

	<Long>
Range	0 to 1
Preset value	-
Unit	-
Resolution	-

Equivalent key No equivalent key is available on the front panel.

SCPI.DISPlay.CLOCk

Syntax

SCPI.DISPlay.CLOCk = <boolean>

<boolean> = SCPI.DISPlay.CLOCk

Description

Turns on/off internal clock display

Variable

	Param
True or -1(Preset value)	Set internal clock display mode to 'ON'
False or 0	Set internal clock display mode to 'OFF'

Equivalent key PN Menu -> System -> Misc Setup -> Clock Setup -> Show Clock

SCPI.DISPlay.FP(1-1).ALLTrace.PERSistence.CLEar

Description
Clears persistence mode in all traces (No Query)

Equivalent key
No equivalent key is available on the front panel.

SCPI.DISPlay.FP(1-1).ALLTrace.YSCALE.AUTO

Syntax
SCPI.DISPlay.FP(1-1).ALLTrace.YSCALE.AUTO

Description
Execute autoscale all (No Query)

Equivalent key FP Menu -> Scale -> Auto Scale All

SCPI.DISPlay.FP(1-1).ANNAnnotation.MARKer.POSition

Syntax SCPI.DISPlay.FP(1-1).ANNAnnotation.MARKer.POSition = <string>
 <string> = SCPI.DISPlay.FP(1-1).ANNAnnotation.MARKer.POSition

Description Sets/reads the marker information position

Variable

	Param
LEFT(Preset value)	Set the marker information position to 'LEFT'
RIGHT	Set the marker information position to 'RIGHT'

Equivalent key FP Menu -> Display -> Marker Information

SCPI.DISPlay.FP(1-1).ANNAnnotation.MEASurement.STATE

Syntax SCPI.DISPlay.FP(1-1).ANNAnnotation.MEASurement.STATE = <boolean>
 <boolean> = SCPI.DISPlay.FP(1-1).ANNAnnotation.MEASurement.STATE

Description Turns on/off measurement conditions

Variable

	Param

Equivalent key FP Menu -> Display -> Edit Title Label

SCPI.DISPlay.FP(1-1).LABel.STATE

Syntax

SCPI.DISPlay.FP(1-1).LABel.STATE = <boolean>
 <boolean> = SCPI.DISPlay.FP(1-1).LABel.STATE

Description

Show/Hide window title label

Variable

	Param
True or -1	Set window title label to 'ON'
False or 0(Preset value)	Set window title label to 'OFF'

Equivalent key

FP Menu -> Display -> Title Label

SCPI.DISPlay.FP(1-1).MAXimize

Syntax

SCPI.DISPlay.FP(1-1).MAXimize = <boolean>
 <boolean> = SCPI.DISPlay.FP(1-1).MAXimize

Description

Maximize active trace

Variable

	Param
True or -1	Maximize selected active trace
False or 0(Preset value)	Restore all the trace

Equivalent key

No equivalent key is available on the front panel.

SCPI.DISPlay.FP(1-1).STATE

Syntax

SCPI.DISPlay.FP(1-1).STATE = <boolean>
 <boolean> = SCPI.DISPlay.FP(1-1).STATE

Description

Turns on/off frequency, power, and DC current measurement mode

Variable

	Param
True or -1(Preset value)	Set FP measurement mode to 'ON'

COM Object Reference
SCPI.DISPlay.FP(1-1).TABLE.STATE

SCPI.DISPlay.FP(1-1).TRACe(1-3).MODE

Syntax SCPI.DISPlay.FP(1-1).TRACe(1-3).MODE = <string>
 <string> = SCPI.DISPlay.FP(1-1).TRACe(1-3).MODE

Description Shows data and/or memory trace

Variable

	Param
OFF	Hides data and memory trace
DATA(Preset value)	Shows data trace only
MEMory	Shows memory trace only
BOTH	Shows both data and memory trace

Equivalent key FP Menu -> Trace View -> Display Trace

SCPI.DISPlay.FP(1-1).TRACe(1-3).PERSistence.CLEAR

Syntax SCPI.DISPlay.FP(1-1).TRACe(1-3).PERSistence.CLEAR

Description Clear persistence mode (No Query)

Equivalent key FP Menu -> Trace View -> Clear Persistent Data

SCPI.STATUS.OPERATION.BIT12.CLEAR

Syntax SCPI.STATUS.OPERATION.BIT12.CLEAR

Description Clears operation-program status condition register (No Query)

Variable

	<Long>
Range	-
Preset value	-
Unit	-
Resolution	-

Equivalent key No equivalent key is available on the front panel.

SCPI.STATUS.OPERATION.BIT12.CONDITION

Syntax <long> = SCPI.STATUS.OPERATION.BIT12.CONDITION

Description Reads operation-program status register (Query Only)

Equivalent key No equivalent key is available on the front panel.

SCPI.STATus.OPERation.BIT12.ENABLE

Syntax SCPI.STATus.OPERation.BIT12.ENABLE = <long>
 <long> = SCPI.STATus.OPERation.BIT12.ENABLE

Description Sets/reads operation-program status enable register

Variable

	<Long>
Range	0 to 65535
Preset value	0
Unit	-
Resolution	-

Equivalent key No equivalent key is available on the front panel.

SCPI.STATus.OPERation.BIT12.EVENT

Syntax <long> = SCPI.STATus.OPERation.BIT12.EVENT

Description Reads operation-program status event register (Query Only)

Equivalent key No equivalent key is available on the front panel.

SCPI.STATus.OPERation.BIT12.NTRansition

Syntax SCPI.STATus.OPERation.BIT12.NTRansition = <long>
 <long> = SCPI.STATus.OPERation.BIT12.NTRansition

Description Sets/reads operation-program status negative transition filter value

Variable

	<Long>
Range	0 to 65535
Preset value	0
Unit	-
Resolution	-

Equivalent key No equivalent key is available on the front panel.

SCPI.STATUS.OPERATION.BIT12.PTRansition**Syntax**

```
SCPI.STATUS.OPERATION.BIT12.PTRansition = <long>
```

```
<long> = SCPI.STATUS.OPERATION.BIT12.PTRansition
```

Description

Sets/reads operation-program status positive transition filter value

Variable

	<Long>
Range	0 to 65535
Preset value	32767
Unit	-
Resolution	-

Equivalent key

No equivalent key is available on the front panel.

SCPI.STATUS.OPERATION.BIT12.SET**Syntax**

```
SCPI.STATUS.OPERATION.BIT12.SET
```

Description

Sets operation-program status condition register (No Query)

Variable

	<Long>
Range	-
Preset value	-
Unit	-
Resolution	-

Equivalent key

No equivalent key is available on the front panel.

SCPI.STATUS.OPERATION.CONDITION**Syntax**

```
<long> = SCPI.STATUS.OPERATION.CONDITION
```

Description

Reads operation status conditional register value (Query Only)

Equivalent key

No equivalent key is available on the front panel.

SCPI.STATus.OPERation.ENABLE

Syntax SCPI.STATus.OPERation.ENABLE = <long>
 <long> = SCPI.STATus.OPERation.ENABLE

Description Set/reads operation status enable register

Variable

	<Long>
Range	0 to 65535
Preset value	0
Unit	-
Resolution	-

Equivalent key No equivalent key is available on the front panel.

SCPI.STATus.OPERation.EVENT

Syntax <long> = SCPI.STATus.OPERation.EVENT

Description Reads operation status event register (Query Only)

Equivalent key No equivalent key is available on the front panel.

SCPI.STATus.OPERation.NTRansition

Syntax SCPI.STATus.OPERation.NTRansition = <long>
 <long> = SCPI.STATus.OPERation.NTRansition

Description Sets/reads operation status negative transition filter value

Variable

	<Long>
Range	0 to 65535
Preset value	0
Unit	-
Resolution	-

Equivalent key No equivalent key is available on the front panel.

SCPI.STATUS.OPERATION.PTRANSITION

Syntax

SCPI.STATUS.OPERATION.PTRANSITION = <long>

<long> = SCPI.STATUS.OPERATION.PTRANSITION

Description

Sets/reads operation status positive transition filter value

Variable

	<Long>
Range	0 to 65535
Preset value	32767
Unit	-
Resolution	-

Equivalent key

No equivalent key is available on the front panel.

SCPI.STATUS.PRESET

Syntax

SCPI.STATUS.PRESET

Description

Reset status registers (No Query)

Equivalent key

No equivalent key is available on the front panel.

SCPI.STATUS.QUESTIONABLE.CONDITION

Syntax

<long> = SCPI.STATUS.QUESTIONABLE.CONDITION

Description

Reads questionable status conditional register value (Query Only)

Equivalent key

No equivalent key is available on the front panel.

SCPI.STATUS.QUESTIONABLE.CURRENT.ENABLE

Syntax

SCPI.STATUS.QUESTIONABLE.CURRENT.ENABLE = <long>

<long> = SCPI.STATUS.QUESTIONABLE.CURRENT.ENABLE

Description

Sets/reads questionable-current status enable register

Variable

	<Long>
Range	0 to 65535

COM Object Reference
SCPI.STATUS.QUESTIONABLE.CURRENT.EVENT

	<Long>
Preset value	0
Unit	-

Range	0 to 65535
Preset value	0
Unit	-
Resolution	-

Equivalent key No equivalent key is available on the front panel.

SCPI.STATUS.QUESTIONABLE.EVENT

Syntax <long> = SCPI.STATUS.QUESTIONABLE.EVENT

Description Reads questionable status event register value (Query Only)

Equivalent key No equivalent key is available on the front panel.

SCPI.STATUS.QUESTIONABLE.MISC.ENABLE

Syntax SCPI.STATUS.QUESTIONABLE.MISC.ENABLE = <long>

<long> = SCPI.STATUS.QUESTIONABLE.MISC.ENABLE

Description Sets/reads questionable-misc status enable register

Variable

	<Long>
Range	0 to 65535
Preset value	0
Unit	-
Resolution	-

Equivalent key No equivalent key is available on the front panel.

SCPI.STATUS.QUESTIONABLE.MISC.EVENT

Syntax <long> = SCPI.STATUS.QUESTIONABLE.MISC.EVENT

Description Reads questionable-misc status event register value (Query Only)

Equivalent key No equivalent key is available on the front panel.

SCPI.STATUS.QUESTIONABLE.NTRANSITION

Syntax SCPI.STATUS.QUESTIONABLE.NTRANSITION = <long>

<long> = SCPI.STATUS.QUESTIONABLE.NTRANSITION

Description Sets/reads questionable status negative transition filter value

Variable

	<Long>
Range	0 to 65535
Preset value	0
Unit	-
Resolution	-

Equivalent key No equivalent key is available on the front panel.

SCPI.STATUS.QUESTIONABLE.PHASE.ENABLE

Syntax SCPI.STATUS.QUESTIONABLE.PHASE.ENABLE = <long>

<long> = SCPI.STATUS.QUESTIONABLE.PHASE.ENABLE

COM Object Reference
SCPI.STATUS.QUESTIONABLE.PHASE.EVENT

Description Sets/reads questionable-phase status enable register

Variable

	<Long>
Range	0 to 65535
Preset value	0
Unit	-
Resolution	-

Equivalent key No equivalent key is available on the front panel.

SCPI.STATUS.QUESTIONABLE.PHASE.EVENT

Syntax <long> = SCPI.STATUS.QUESTIONABLE.PHASE.EVENT

Description Reads questionable-phase status event register (Query Only)

Equivalent key No equivalent key is available on the front panel.

SCPI.STATUS.QUESTIONABLE.POWER.ENABLE

Syntax SCPI.STATUS.QUESTIONABLE.POWER.ENABLE = <long>

<long> = SCPI.STATUS.QUESTIONABLE.POWER.ENABLE

Description Sets/reads questionable-power status enable register

Variable

	<Long>
Range	0 to 65535
Preset value	0
Unit	-
Resolution	-

Equivalent key No equivalent key is available on the front panel.

SCPI.STATUS.QUESTIONABLE.POWER.EVENT

Syntax <long> = SCPI.STATUS.QUESTIONABLE.POWER.EVENT

Description Reads questionable-power status event register value (Query Only)

Equivalent key No equivalent key is available on the front panel.

SCPI.STATUS.QUESTIONable.PTRansition

Syntax

SCPI.STATUS.QUESTIONable.PTRansition = <long>

<long> = SCPI.STATUS.QUESTIONable.PTRansition

Description

Sets/reads questionable status positive transition filter value

Variable

	<Long>
Range	0 to 65535
Preset value	32767
Unit	-
Resolution	-

Equivalent key

No equivalent key is available on the front panel.

SCPI.STATUS.QUESTIONable.REference.ENABLE

Syntax

SCPI.STATUS.QUESTIONable.REference.ENABLE = <long>

<long> = SCPI.STATUS.QUESTIONable.REference.ENABLE

Description

Sets/reads questionable-reference signal status enable register

Variable

	<Long>
Range	0 to 65535
Preset value	0
Unit	-
Resolution	-

Equivalent key

No equivalent key is available on the front panel.

SCPI.STATUS.QUESTIONable.REference.EVENT

Syntax

<long> = SCPI.STATUS.QUESTIONable.REference.EVENT

Description

Reads questionable-reference signal status event register value (Query Only)

Equivalent key

No equivalent key is available on the front panel.

SCPI.SYSTEM.BACKlight.STATE

COM Object Reference
SCPI.SYSTem.BEEPer.COMplete.IMMEDIATE

Syntax SCPI.SYSTem.BACKlight.STATe = <boolean>
 <boolean> = SCPI.SYSTem.BACKlight.STATe

Description Turns on/off backlight

Variable

	Param
True or -1(Preset value)	Turns on the LCD's backlight
False or 0	Turns off the LCD's backlight

Equivalent key PN Menu -> System -> Backlight
 SP Menu -> System -> Backlight
 FP Menu -> System -> Backlight
 TR Menu -> System -> Backlight

SCPI.SYSTem.BEEPer.COMplete.STATE

Syntax SCPI.SYSTem.BEEPer.COMplete.STATE = <boolean>
 <boolean> = SCPI.SYSTem.BEEPer.COMplete.STATE

Description Turns on/off the beep for operation completion

Variable

	Param
True or -1(Preset value)	Set the beep for operation completion to 'ON'
False or 0	Set the beep for operation completion to 'OFF'

Equivalent key	PN Menu -> System -> Misc Setup -> Beeper -> Beep Complete SP Menu -> System -> Misc Setup -> Beeper -> Beep Complete FP Menu -> System -> Misc Setup -> Beeper -> Beep Complete TR Menu -> System -> Misc Setup -> Beeper -> Beep Complete USER Menu -> System -> Misc Setup -> Beeper -> Beep Complete

Equivalent key No equivalent key is available on the front panel.

SCPI.SYSTem.KLOCK.KBD

Syntax SCPI.SYSTem.KLOCK.KBD = <boolean>
<boolean> = SCPI.SYSTem.KLOCK.KBD

Description Sets/reads front panel and keyboard lock state

Variable

	Param
True or -1	Set front panel and keyboard lock state to 'ON'
False or 0(Preset value)	Set front panel and keyboard lock state to 'OFF'

Equivalent key No equivalent key is available on the front panel.

SCPI.SYSTem.KLOCK.MOUSE

Syntax SCPI.SYSTem.KLOCK.MOUSE = <boolean>
<boolean> = SCPI.SYSTem.KLOCK.MOUSE

Description Set/Get touch screen and mouse lock state

Variable

	Param
True or -1	Set touch screen and mouse lock state to 'ON'
False or 0(Preset value)	Set touch screen and mouse lock state to 'OFF'

Equivalent key No equivalent key is available on the front panel.

SCPI.SYSTem.POFF

Syntax SCPI.SYSTem.POFF

Description Power off the instrument (No Query)

Equivalent key No equivalent key is available on the front panel.

SCPI.SYSTem.PRESET

Syntax SCPI.SYSTem.PRESET

COM Object Reference
SCPI.SYSTem.TIME[_Q] hour, minute, second

Description Preset instrument state. same as '*RST;::INIT:instr:CONT ON'('instr' is all instrument).

SCPI.TRIGger.EXternal.SLOPe

Syntax

```
SCPI.TRIGger.EXternal.SLOPe = <string>
<string> = SCPI.TRIGger.EXternal.SLOPe
```

Description External trigger polarity

Variable

	Param
NEGative(Preset value)	Set External trigger polarity to 'NEGative'
POSitive	Set External trigger polarity to 'POSitive'

Equivalent key

- PN Menu -> Trigger -> Ext Trig Polarity
- SP Menu -> Trigger -> Ext Trig Polarity
- FP Menu -> Trigger -> Ext Trig Polarity
- TR Menu -> Trigger -> Ext Trig Polarity

SCPI.TRIGger.FP(1-1).MODE

Syntax

```
SCPI.TRIGger.FP(1-1).MODE = <string>
<string> = SCPI.TRIGger.FP(1-1).MODE
```

Description Sets/reads the trigger mode in the frequency, power, and DC current mode

Variable

	Param
ANALyzer(Preset value)	Set trigger mode to 'ANALyzer'
TESTer	Set trigger mode to 'TESTer'

Equivalent key

- FP Menu -> Trigger -> Mode

SCPI.TRIGger.FP(1-1).SOURce

Syntax

```
SCPI.TRIGger.FP(1-1).SOURce = <string>

INTernal(Preset value)	Set trigger source to 'INTernal'
EXTernal	Set trigger source to 'EXTernal'
MANual	Set trigger source to 'MANual'
BUS	Set trigger source to 'BUS'

Equivalent key FP Menu -> Trigger -> Source

SCPI.TRIGger.MODE

Syntax SCPI.TRIGger.MODE = <string>
<string> = SCPI.TRIGger.MODE

Description Selects the active measurement mode

Variable

	Param
PN1(Preset value)	Set measurement mode to 'PN1'
SP1	Set measurement mode to 'SP1'
FP1	Set measurement mode to 'FP1'
TR1	Set measurement mode to 'TR1'

Equivalent key PN Menu -> Trigger -> Trigger to Phase Noise
SP Menu -> Trigger -> Trigger to Spectrum Monitor

SCPI.TRIGger.PN(1-1).SOURce

Syntax SCPI.TRIGger.PN(1-1).SOURce = <string>
<string> = SCPI.TRIGger.PN(1-1).SOURce

Description Selects trigger source

Variable

	Param
INTernal(Preset value)	Set trigger source to 'INTernal'
EXTernal	Set trigger source to 'EXTernal'
MANual	Set trigger source to 'MANual'
BUS	Set trigger source to 'BUS'

Equivalent key

PN Menu -> Trigger -> Source

SCPI.TRIGger.SP(1-1).SOURce

Syntax

SCPI.TRIGger.SP(1-1).SOURce = <string>

<string> = SCPI.TRIGger.SP(1-1).SOURce

Description

Selects trigger source

Variable

	Param
INTernal(Preset value)	Set trigger source to 'INTernal'
EXTernal	Set trigger source to 'EXTernal'
MANual	Set trigger source to 'MANual'
BUS	Set trigger source to 'BUS'

Syntax SCPI.TRIGger.TR(1-1).NARRow.VIDEO.THreshold = <double>
<double> = SCPI.TRIGger.TR(1-1).NARRow.VIDEO.THreshold

Description Sets/reads video trigger threshold level relative to max input level

Variable

	<Double>
Range	-100 to 0
Preset value	-20
Unit	dB
Resolution	1

Equivalent key TR Menu -> Setup -> Video Trigger -> Minimum Power Level

SCPI.TRIGger.TR(1-1).SOURce

Syntax SCPI.TRIGger.TR(1-1).SOURce = <string>
<string> = SCPI.TRIGger.TR(1-1).SOURce

Description Selects trigger source

Variable

	Param
INTernal(Preset value)	Set trigger source to 'INTernal'
EXTernal	Set trigger source to 'EXTernal'
MANual	Set trigger source to 'MANual'
BUS	Set trigger source to 'BUS'
WVIDeo	Set trigger source to 'WVIDeo'

	Param
NVIDeo	Set trigger source to 'NVIDeo'

Equivalent key TR Menu -> Trigger -> Source

SCPI.TRIGger.TR(1-1).WIDE.VIDEO.FREQuency.CENTer

Syntax SCPI.TRIGger.TR(1-1).WIDE.VIDEO.FREQuency.CENTer = <double>
 <double> = SCPI.TRIGger.TR(1-1).WIDE.VIDEO.FREQuency.CENTer

Description Sets/reads the video trigger frequency value in the wideband mode

Variable

	<Double>
Range	50M to 7.2G
Preset value	1G
Unit	Hz
Resolution	-

Equivalent key TR Menu -> Setup -> Video Trigger -> Wide Freq

Manual Changes

This appendix contains the information required to adapt this manual to the versions or configurations of the Agilent E5052A which were manufactured earlier than the printing date of this manual.

Manual Changes

The information in this manual applies directly to your Agilent E5052A model that has the applicable firmware version and serial number prefix listed on the title page of this manual. If your model is not listed there, this manual is not applicable to it as is written. To adapt this manual to your E5052A, refer to Table A-1 and Table A-2.

Table A-1 Manual Changes by Serial Number

Serial Prefix or Number	Make Manual Changes

Table A-2 Manual Changes by Firmware Version

Version	Make Manual Changes

Agilent Technologies uses a two-part, ten-character serial number that is stamped on the serial number plate (Figure A-1). The first five characters are the serial prefix and the last five digits are the suffix.
