## Manual Printing History

The manual's printing date and part number indicate its current edition. The printing date changes when a new edition is printed (minor corrections and updates that are incorporated at reprint do not cause the date to change). The manual part number changes when extensive technical changes are incorporated.

August 2004	First Edition (part number: E5052-90002)
October 2004	Second Edition (part number: E5052-90012, changes for firmware version A.01.10)
February 2005	Third Edition (part number: E5052-90022, changes for firmware version A.01.50)
August 2005	Third Fourth (part number: E5052-90032, changes for firmware version A.02.00)

## Typeface Conventions

Sample (bold)	Boldface type is used when a term is defined or emphasized.
<i>Sample (Italic)</i>	Italic type is used for emphasis and for titles of manuals and other publications.
<b>[Sample]</b>	Indicates the hardkey whose key label is “Sample”.
<b>[Sample] - Item</b>	Indicates a series of key operations in which you press the <b>[Sample]</b> key, make the item called “Item” on the displayed menu blink by using the <b>[↓]</b> or in other ways, and then press the <b>[Enter]</b> key.

## Documentation Map

The following manuals are available for the Agilent E5052A.

- **User’s Guide (Part Number E5052-900x0, attached to Option ABA)**  
This manual describes most of the basic information needed to use the E5052A. It provides a function overview, detailed operation procedure for each function (from preparation for measurement to analysis of measurement results), measurement examples, specifications, and supplemental information. For programming guidance on performing automatic measurement with the E5052A, please see the *Programming Manual*.
- **Programmer’s Guide (Part Number E5052-900x1, attached to Option ABA)**  
This manual provides programming information for performing automatic measurement with the E5052A. It includes an outline of remote control, procedures for detecting measurement start (trigger) and end (sweep end), application programming examples, a command reference, and related information.
- **VBA Programmer’s Guide (Part Number E5052-900x2, attached to Option ABA)**  
This manual describes programming information for performing automatic measurement with internal controller. It includes an outline of VBA programming, some sample programming examples, a COM object reference, and related information.

# Making Effective Use of This Manual

This chapter provides an overview of this manual as well as useful information to help you navigate through the manual. It also briefly describes how to use this manual, focusing on how you can look up particular COM objects and code their corresponding commands.

## Contents of This Manual

This is a VBA programming guide with Agilent E5052A single source analyzer. This guide describes programming method mainly aiming at learning how to write a program that controls the E5052A using COM objects, focusing on the macro function of the E5052A and sample usage with the built-in VBA.

Controlling the E5052A using an external controller is not covered by this guide; it is described in *Programmer's Guide*.

Description in this guide assumes that the reader has learned manual operation of the E5052A. For detailed information on each feature, see *User's Guide*.

The chapter-by-chapter contents of this manual are as follows.

- o Chapter 1, "Making Effective Use of This Manual," on page 23

This chapter provides an overview of this manual as well as useful information to help you navigate through the manual. It also briefly describes how to use this manual, focusing on how you can look up particular COM objects and code their corresponding commands.

- o Chapter 2, "Introduction to VBA Programming," on page 27

This chapter introduces you to the E5052A's VBA macro function, explains how you can implement your system using the VBA macro function, and provides an overview of the COM objects that come with the E5052A.

- o Chapter 3, "Operation Basics of the E5052A's VBA," on page 33

This chapter provides descriptive information on basic operations for creating VBA programs within the E5052A's VBA environment. Topics include launching Visual Basic Editor as well as creating, saving, and running VBA programs.

- o Chapter 4, "Controlling the E5052A," on page 69

This chapter explains how to use the E5052A's VBA to control the E5052A itself.

- o Chapter 5, "User Defined Window," on page 87

- o Chapter 6, "Controlling Peripherals," on page 93

This chapter explains how to control peripherals connected to the E5052A with GPIB by using the software (VISA library) installed in the E5052A.

- o Chapter 7, "COM Object Reference," on page 99

This chapter describes the COM object model of the Agilent E5052A and the COM object reference in alphabetical order. If you want to look up COM objects by corresponding front panel keys, see "COM object list by front panel key."

- o Appendix A, "Manual Changes," on page 495

This appendix contains the information required to adapt this manual to the versions or configurations of the Agilent E5052A which were manufactured earlier than the printing date of this manual.

## How to Use This Manual

Chapter 3, “Operation Basics of the E5052A’s VBA,” on page 33 provides the basic operation of VBA for coding VBA programs.

Chapter 4, “Controlling the E5052A,” on page 69 and Chapter 6, “Controlling Peripherals,” on page 93 will help you to develop your custom programs.

For more information on individual COM object, see Chapter 7, “COM Object Reference,” on page 99.

## Looking Up COM Objects

Chapter 7, “COM Object Reference,” on page 99 contains a complete reference of COM objects. You can look up a particular COM object in any of the following ways:

Lookup by Abbreviated COM Object Name

The COM object reference is organized alphabetically according to the abbreviated name used as the title for each COM object’s description.

Lookup by Soft key

Chapter 7, “COM Object Reference,” provides a complete list of COM objects that correspond to the soft key and indicates the page numbers where the COM objects appear in the COM object reference (see “List by softkey” on page 425).

## How to Code the Corresponding Commands

The description of each function may contain the corresponding SCPI commands. If SCPI command exists for each measurement window, use xx.

*Example: SCPI.CALCulate.xx.TRACe.DATA.FDATA*

The parameters for each measurement window are as follows:

- **FP:** Frequency/Power measurement
- **PN:** Phase noise measurement
- **SP:** Spectrum monitor measurement
- **TR:** Transient measurement
- **USER:** User window

---

### NOTE

Some SCPI commands may not make use of particular measuring windows.

## Introduction to VBA Programming

This chapter introduces you to the E5052A's VBA macro function, explains how you can implement your system using the VBA macro function, and provides an overview of the COM objects that come with the E5052A.

## Introduction to the E5052A Macro Function

The E5052A has a built-in macro function that allows a single instruction to substitute for multiple instructions. You can have the E5052A automatically execute your own macro program that contains a series of VBA (Visual Basic for Application) statements.

VBA is based on the VB (Visual Basic) programming language. Although VBA is similar to VB, they are not the same. Although some of the VB features were eliminated from VBA, new application-specialized features were added. In particular, the E5052A's VBA has features for controlling the E5052A. For details of the differences between VBA and VB, refer to Microsoft official guides and various books on VBA.

For information on the basic operating procedures of the E5052A's VBA, see Chapter 3, “Operation Basics of the E5052A's VBA,” on page 33. This manual is not meant to be an in-depth guide to VBA programming basics and the syntax of VBA functions and commands. Such in-depth information is covered in VBA Help, Microsoft official guides, and various books on VBA.

The macro function allows you to control the E5052A itself as well as various peripherals. You can do the following:

1. Automate repetitive tasks

You can use the E5052A's macro function to combine several processes into one. Automating repetitive tasks provides higher efficiency and eliminates human error. Once you have contained repetitive tasks in sub-procedures, you can later call the procedures from other programs, thus allowing effective reuse of programming assets.

2. Implement a user interface

The E5052A VBA supports user forms (see “User form” on page 37) that facilitate creating a visual user interface. User forms guide users through common tasks such as performing measurement and entering data without requiring familiarity with the E5052A, thus minimizing the possibility of human error.

## Overview of Control System Based on Macro Function

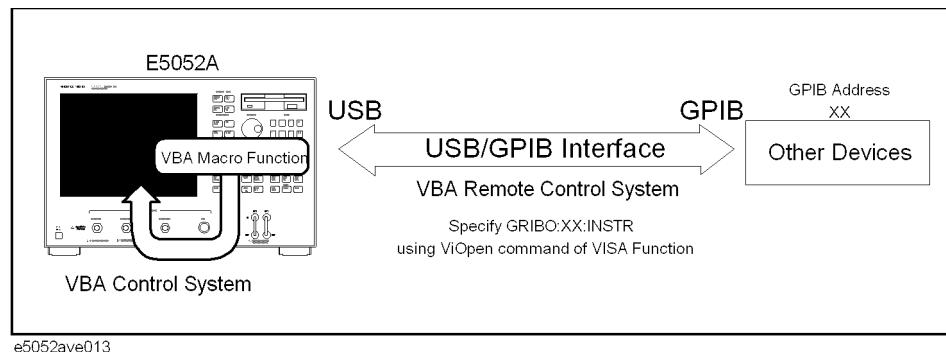

This section explains how you can use the E5052A's built-in VBA macro function to implement a system that controls the E5052A and peripherals and describes the command sets that are available for such purposes.

### Implementing a control system

Macro-based control systems are classified into two types: As shown in Figure 2-1, a VBA control system controls the E5052A itself while a VBA remote control system controls peripherals. When you use the macro function to control peripherals, you must connect the E5052A with the peripherals through USB/GPIB interface and configure them to communicate over VISA (Virtual Instrument Software Architecture). For information on programming using the VISA library, refer to "Programming with VISA" on page 95.

**Figure 2-1**

**Configuration example of control system using macro environment**

### Required equipment

1. E5052A
2. Peripherals and/or other purpose-specific instruments
3. USB/GPIB interface

**NOTE**

To use the VBA remote control system, you need to set the USB/GPIB interface correctly. For details, refer to the *User's Guide*.

**NOTE**

Do not connect two or more USB/GPIB interfaces.

## **Control methods**

The command set you can use differs depending on whether you use the macro function to control the E5052A or a peripheral.

### **Controlling the E5052A**

When you want to control the E5052A itself, you can create a program using COM objects within the E5052A VBA environment. E5052ACOM objects that come with the E5052A include three objects specific to the COM interface and COM objects that correspond to SCPI commands. For information on objects, refer to “COM Object Model” on page 100.

For information on using the E5052A’s COM objects, see Chapter 7, “COM Object Reference,” on page 99. For information on using SCPI commands, see the “SCPI Command Reference” in the *Programmer’s Guide*.

### **Controlling Peripherals**

When you want to control a peripheral, you can create a program by using VISA library functions within the E5052A VBA environment.

For information on using the VISA library, see Chapter 6, “Controlling Peripherals,” on page 93. For a complete description of VISA functions, refer to the VISA library’s online help. You can access this online help by double-clicking a file named visa.hlp contained in the CD-ROM (Agilent part No. E5052-9050x).

For information on the GPIB commands available with a particular peripheral, refer to the documentation that comes with the peripheral.

---

#### **NOTE**

The number position shown by “x” in the part numbers above indicates the edition number.

## E5052A Overview of COM Objects

The VBA environment provides COM objects that support users in controlling the E5052A. This section provides an overview of COM objects as well as important considerations for using the E5052A's COM objects. For more information on the E5052A's COM objects and a comparison with SCPI commands, refer to Chapter 7, "COM Object Reference," on page 99.

The definitions and specifications of COM are beyond the scope of this guide. Such in-depth information is covered in a variety of books on COM.

### About COM objects

When you control the E5052A through the macro function, you can use COM objects as components of your application. The functionality of the E5052A's COM objects is expressed through properties and methods.

#### Properties

A property allows you to read or write a setting or attribute of an object. With the E5052A, you can use properties to set or read the settings of the E5052A.

You can find properties in the description of syntax in Chapter 7, "COM Object Reference," on page 99). They set and obtain the values for a command.

#### Methods

A method allows you to manipulate an object in a particular way. With the E5052A, you can use methods to perform specific tasks.

You can find methods in the description of syntax in Chapter 7, "COM Object Reference," on page 99, which only describes commands.

#### Events

An event means an operation from outside that the program can recognize, such as clicking a mouse button. Without using user forms, the E5052A lets you perform an entire procedure assigned to a specific softkey as an event by simply pressing that softkey. This is particularly useful, for example, when the user wants an interruption in a VBA program that gives an option of whether to proceed. For more information, refer to "Executing a Procedure with a Softkey (user menu function)" on page 76.

## **Using COM objects to control the E5052A**

When you want to control the E5052A, you can use COM objects alone or in conjunction with SCPI commands and the **Parse** on page 106 object. The latter method is slightly slower than the former because the **Parse** on page 106 object is used to parse the messages of SCPI commands. For instructions on using the E5052A's VBA Editor to create a program that uses COM objects, refer to Chapter 3, “Operation Basics of the E5052A's VBA,” on page 33.

## **Major control difference between COM objects and SCPI commands**

For information on the major control differences between using COM objects and SCPI commands, refer to “SCPI Objects” on page 101.

## Operation Basics of the E5052A's VBA

This chapter provides descriptive information on basic operations for creating VBA programs within the E5052A's VBA environment. Topics include launching Visual Basic Editor as well as creating, saving, and running VBA programs.

## Displaying Visual Basic Editor

This section describes how to launch Visual Basic Editor.

**Step 1.** From the E5052A measurement screen, launch Visual Basic Editor using the following method:

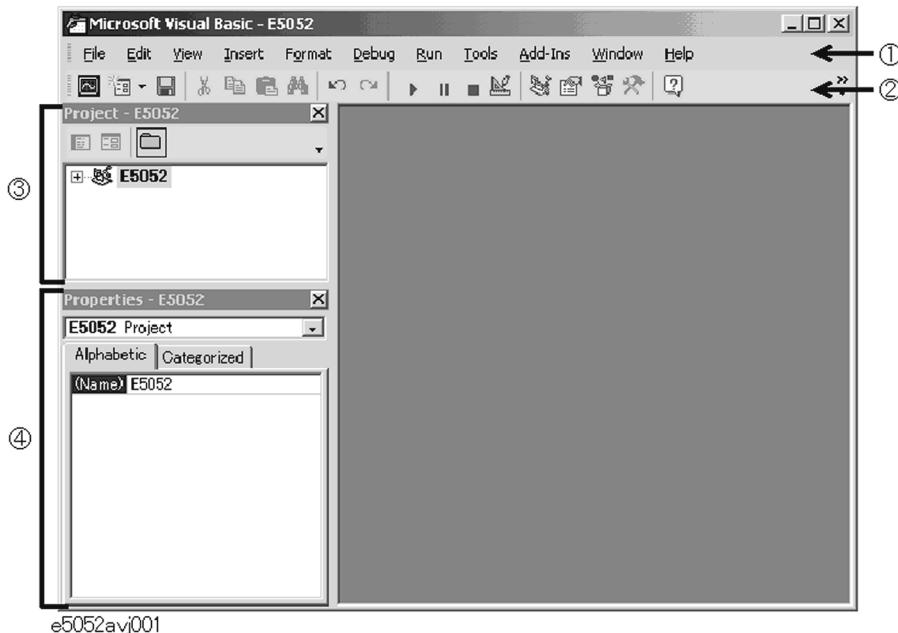

- [Macro Setup] - VBA Editor Menu - Open Editor

## Initial Screen of Visual Basic Editor

When you launch Visual Basic Editor, it displays the initial screen, which contains a number of windows as shown in Figure 3-1. This section provides information on the names and functions of the main display areas.

Figure 3-1

Example of Visual Basic Editor initial screen

### 1. Menu Bar

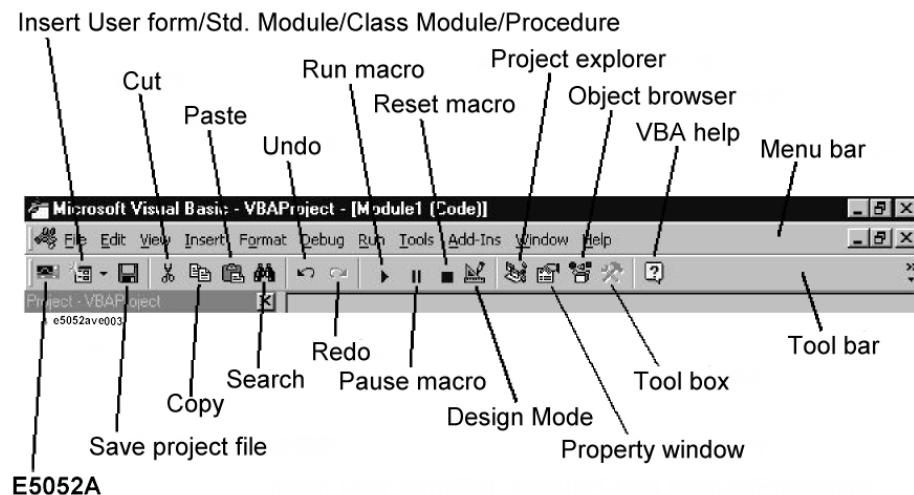

Clicking one of the menu labels brings up the corresponding menu. The menu bar can be used as the primary method for navigating through the E5052A's VBA environment.

### 2. Toolbar

The toolbar provides access to commonly used commands via icon buttons; these commands are a subset of the commands accessible from the menu bar. For descriptions of the buttons on the standard toolbar, see Figure 3-2.

Figure 3-2

Buttons on the standard toolbar

### 3. Project Explorer

Within the E5052A's VBA environment, you can develop your application as a project that consists of a number of files (modules). Project Explorer shows a list of all files (modules) that make up a project. The list also includes files (modules) created or loaded in Visual Basic Editor. For information on modules, refer to “A Project and Three Types of Modules” on page 37.

**Step 1.** To display the project explorer, do one of the following:

- On the **View** menu, click **Project Explorer**.
- Press **[Ctrl] + [R]** on the keyboard.
- On the toolbar, click the “Project Explorer” icon (Figure 3-2).

### 4. Property Window

A property window shows the settings (label, font, color, size, etc.) of a control (such as a command button or text box) placed on the user form. For information on user forms, refer to “User form” on page 37.

You can also set properties by programming in the code window.

**Step 1.** To display the property window, do one of the following:

- On the **View** menu, click **Properties Window**.
- Press **[F4]** on the keyboard.
- On the toolbar, click the “Property Window” icon (Figure 3-2).

## Closing Visual Basic Editor

This section describes how to quit Visual Basic Editor.

## Operation Basics of the E5052A's VBA

### Switching to the E5052A Measurement Screen

**Step 1.** Close Visual Basic Editor using one of the following methods:

- On Visual Basic Editor's **File** menu, click **Close and Return to Application**.
- Within Visual Basic Editor, press **[Alt] + [Q]** on the keyboard.
- **[Macro Setup] - VBA Editor Menu - Close Editor** (E5052A Measurement Screen)

---

#### NOTE

Whenever you launch Visual Basic Editor, it automatically displays the project files you used in the previous session. However, once you turn off the power to the E5052A, the project files kept in memory will be lost; therefore, it is strongly recommended that you save your VBA programs before turning off the power.

---

## Switching to the E5052A Measurement Screen

You can switch to the E5052A measurement screen without closing Visual Basic Editor.

**Step 1.** To switch to the E5052A measurement screen, do one of the following:

- On the **View** menu, click **Application**.
- Press **[Alt] + [F11]** on the keyboard.
- On the toolbar, click the “E5052A” icon (Figure 3-2).
- Press the **[Focus]** key on the E5052A front panel.

## Necessary Preparation Before Coding

### A Project and Three Types of Modules

Project Explorer (Figure 3-1) displays a list of files (modules) that are used in the E5052A VBA. This section describes a project composed of a number of files (modules) and three types of modules (“user form,” “standard,” and “class”). Each type of module performs its respective tasks as described below.

#### Project

When you develop an application within the E5052A's VBA environment, you use a number of VBA program files (modules) and manage them as one project. The project is saved with the file extension “.vba”.

#### User form

A user form contains controls such as buttons and text boxes. You can code event-driven procedures that are invoked when a particular event occurs on a particular control, thereby creating a user interface. The user form is saved with the file extension “.frm”.

#### Standard module

A standard module contains a collection of one or more procedures (subprograms enclosed between Sub and End Sub). One typical use of a standard module is to contain shared subroutines and globally called functions. The standard module is saved with the file extension “.bas”.

#### Class module

A class module contains both data and procedures and acts as one object. Once you have created a class module that serves as an object, you can create any number of instances of that object by naming each instance as an object variable. While each procedure must be unique in a standard module, you can have multiple instances of an object created through a class module. The class module is saved with the file extension “.cls”.

## Operation Basics of the E5052A's VBA Necessary Preparation Before Coding

### Displaying a Code Window

The code windows appear in the Visual Basic Editor when you insert modules in a project. A code window offers a practical environment for coding (programming).

The E5052A's VBA environment does not allow you to manage multiple projects. You can replace the current project in the Visual Basic Editor by loading a saved project file. This can be done by the following method from the E5052A measurement screen.

- [Macro Setup] - VBA Editor Menu - New Project

---

#### NOTE

When you replace the current project with a new project, a message asking whether to save the current project may appear. If you want to save the project, click the **Yes** button to display a dialog box for saving the file (Figure 3-6 on page 45). For more on saving a project, see “Saving a project file” on page 45.

### Inserting the user form

Within Visual Basic Editor, do one of the following to add a user form to your project (this brings up the window shown in Figure 3-3):

- On the **Insert** menu, click **UserForm**.
- On the toolbar, click the “Insert User Form/Standard Module/Class Module/Procedure” icon (Figure 3-2) and then click **UserForm**.
- In Project Explorer (Figure 3-1), right-click the “E5052” icon and then click **Insert - UserForm**.

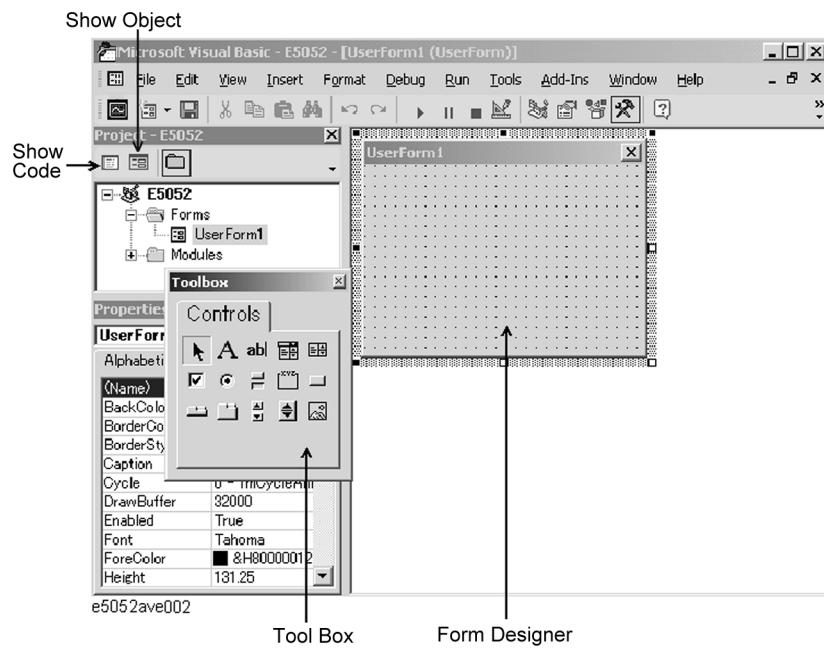

---

#### NOTE

Adding a user form does not automatically open the code window for that user form. To open the code window, click the “Show Code” icon (Figure 3-3) in Project Explorer (Figure 3-1) or double-click a control placed on the user form.

Figure 3-3

Adding a user form

## Operation Basics of the E5052A's VBA Necessary Preparation Before Coding

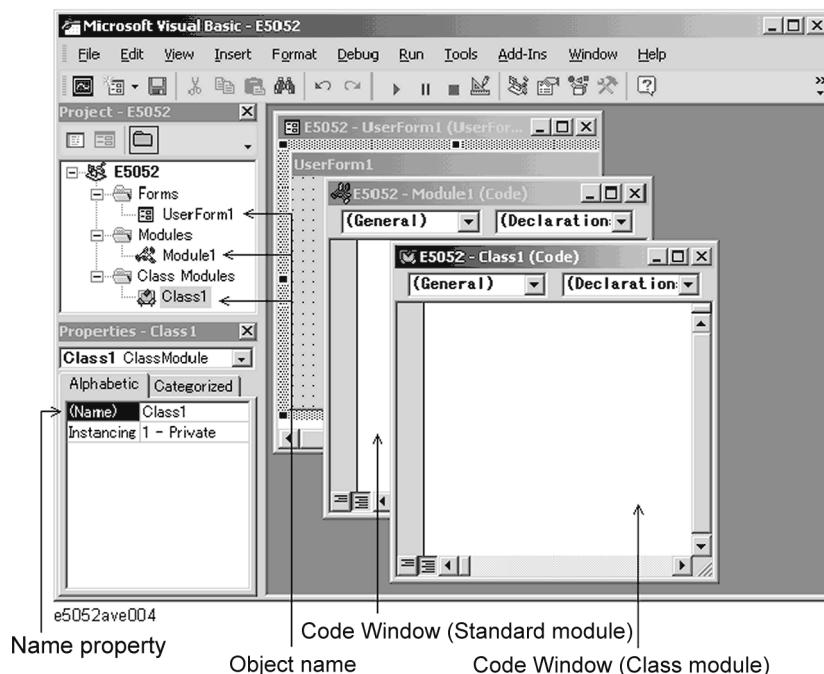

### Inserting the standard module

Within Visual Basic Editor, do one of the following to add a standard module to your project (this brings up the window shown in Figure 3-4):

- On the **Insert** menu, click **Module**.
- On the toolbar, click the “Insert User Form/Standard Module/Class Module/Procedure” icon (Figure 3-2) and then click **Module**.
- In Project Explorer (Figure 3-1), right-click the “E5052” icon and then click **Insert - Module**.

Figure 3-4

### Adding a standard module/class module

### Inserting the class module

Within Visual Basic Editor, do one of the following to add a class module to your project (this brings up the window shown in Figure 3-4):

- On the **Insert** menu, click **Class Module**.
- On the toolbar, click the “Insert User Form/Standard Module/Class Module/Procedure” icon (Figure 3-2) and then click **Class Module**.
- In Project Explorer (Figure 3-1), right-click the “E5052” icon and then click **Insert - Class Module**.

### Deleting Modules

You can delete any unnecessary module from the project within Visual Basic Editor. The following procedure assumes that you want to delete a class module named “Class1”.

- Step 1.** In Project Explorer (Figure 3-1), click the “Class1” class module under the “Class

Modules” icon to highlight it.

**Step 2.** Delete the “Class1” class module using one of the following methods:

- On the **File** menu, click **Remove Class1...**
- Click the right mouse button and then click **Remove Class1...**

**Step 3.** When you are prompted to confirm whether to export (save) “Class1,” click **No**.  
Alternatively, you can click **Yes** if you want to save the module.

## Coding a VBA Program

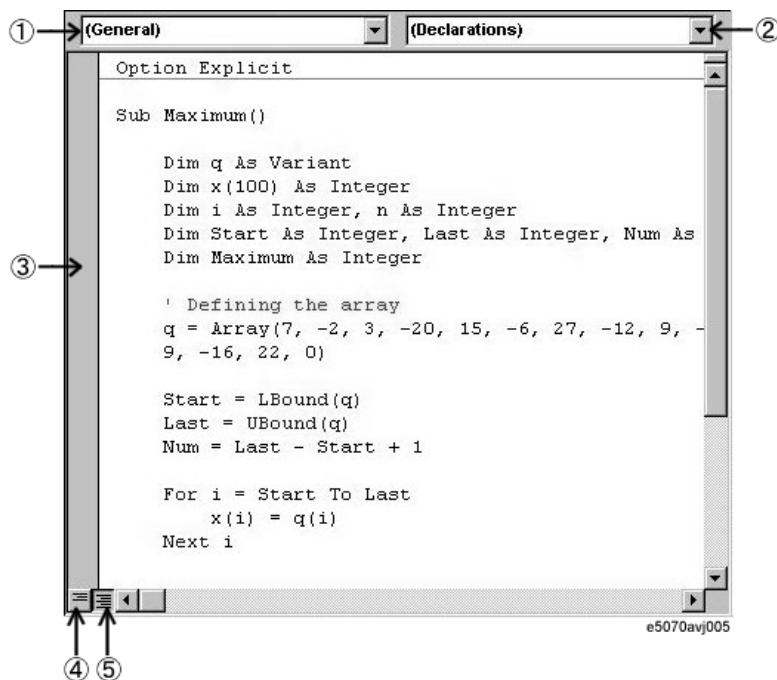

This section provides descriptive information on the user interface elements of a code window that lets you code a VBA program and walks you through a sample program (procedure) that finds the maximum value contained in an array. This should help you gain insight into how to create your own programs.

### User Interface Elements of a Code Window

A code window is where you code a VBA program. When you are working with a user form, you can open the code window for that user form by double-clicking a control (such as a button or text box) placed on the form. Similarly, when you are working with a standard or class module, you can open the code window associated with that module by double-clicking the module's icon in Project Explorer (Figure 3-1).

Figure 3-5

Code window for a standard module

#### 1. Object box

Provides a list of objects currently used within the code window.

#### 2. Procedure box

Provides a list of procedures that reside within the code window. When you are working with a user form, this provides a list of events (actions such as click or double-click).

#### 3. Margin indicator bar

Primarily intended for use when debugging a program.

**4. Show Procedure button**

Displays only the procedure at the cursor position.

**5. Show Module button**

Displays the entire program contained in the code window.

### Auto-complete Feature

When you use COM objects in the E5052A Visual Basic Editor, the editor's auto-complete feature allows you to easily type in keywords without misspelling them.

The following procedure assumes that you are entering the SCPI.INITiate.FP.CONTinuous object.

- Step 1.** In a standard module, type **sub main** and press the **[Enter]** key. **End Sub** is automatically added.
- Step 2.** Typing **scpi** followed by a dot (.) brings up a list of classes under the SCPI class.
- Step 3.** Typing **in** automatically moves the focus to INITiate in the list box.
- Step 4.** Typing **INITiate** followed by a dot (.) brings up a list of classes under the SCPI class.
- Step 5.** Typing **f** automatically moves the focus to FP in the list box.
- Step 6.** Typing **FP** followed by a dot (.) brings up a list of classes under the SCPI class.
- Step 7.** Typing **c** automatically moves the focus to **CONTinuous** in the list box.
- Step 8.** **=** is typed to bring up a list box for setting a Boolean value (**True/False**).
- Step 9.** Typing **t** automatically moves the focus to **True**.
- Step 10.** Pressing the **[Enter]** key completes the statement: SCPI.INITiate.FP.CONTinuous = True.

## Saving a VBA Program

You can save VBA programs either as one complete project or on a module-by-module basis.

### Saving a project file

When you decide to save your program as one complete project, you can gather the files (modules) making up the project into a single package. A project is saved as a .vba file. You can save your program to a project file by using one of the following two methods:

#### Saving a project from Visual Basic Editor

**Step 1.** Open the Save As dialog box by doing one of the following:

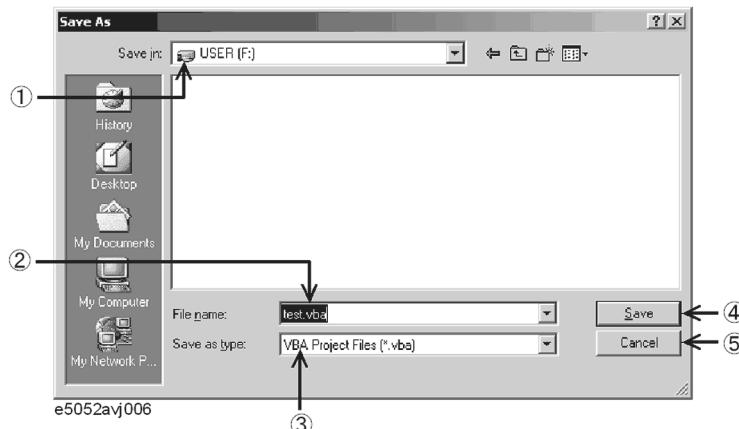

- On the **File** menu, click **Save xxx.VBA**. “xxx” represents the file name.
- On the toolbar, click the “Save Project File” icon (Figure 3-2).
- Press **[Ctrl] + [S]** on the keyboard.

**Step 2.** The Save As dialog box (Figure 3-6) appears. Specify the file name and location (drive or folder) and click **Save**.

The Save As dialog box has the following user interface elements:

Figure 3-6

Save As dialog box

- 1. Save in:** Specify the location (drive or folder) where you want to save the file.
- 2. File name:** Type in the file name.
- 3. Save as type:** Select the type of the file you are saving. Normally, you should select **VBA Project Files (\*.vba)**.
- 4. Save:** Clicking this button saves the project.
- 5. Cancel:** Clicking this button closes the Save As dialog box without saving the file and brings you back to the main screen.

### Saving a project from the E5052A measurement screen

- Step 1.** Display the E5052A measurement screen by following the instructions given in “Switching to the E5052A Measurement Screen” on page 36.
- Step 2.** Open the Save As dialog box using the following key sequence:
- **[Macro Setup] - VBA Editor Menu - Save Project**
- Step 3.** The Save As dialog box (Figure 3-6) appears. Specify the file name and location (drive or folder) and click **Save**.

### Saving a module (exporting)

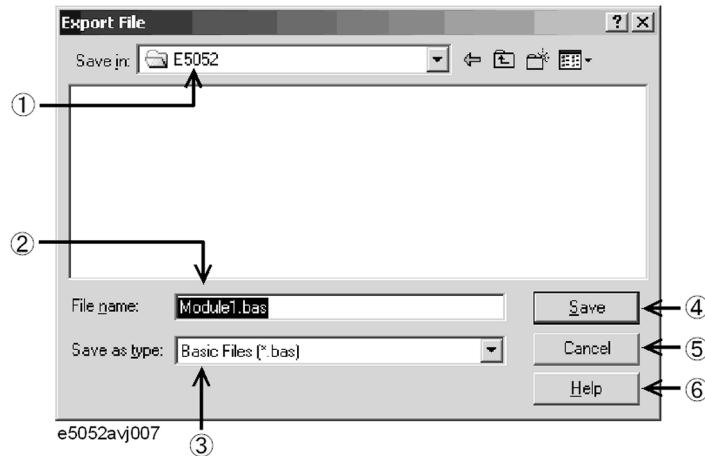

Alternatively, you can save each module (user form, standard, or class) of your VBA program individually. To save a module, you must use Visual Basic Editor. User forms are saved as .frm files, standard modules as .bas files, and class modules as .cls files.

- Step 1.** In Project Explorer (Figure 3-1), click the file name that appears under the desired module icon to highlight it.
- Step 2.** Open the Export File dialog box by doing one of the following:
- On the **File** menu, click **Export File....**
  - Click the right mouse button, and click **Export File....**
  - Press **[Ctrl] + [E]** on the keyboard.
- Step 3.** The Save As dialog box (Figure 3-7) appears. Specify the file name and location (drive or folder) and click **Save**.

The Export File dialog box has the following user interface elements:

Figure 3-7

Export File dialog box

- 1. Save in:** Specify the location (drive or folder) where you want to save the file.
- 2. File name:** Type in the file name.
- 3. Save as type:** Select the type of module you are saving. The type that corresponds to the module you are saving is selected by default. Normally, you should use the default.
- 4. Save:** Clicking this button saves the module.
- 5. Cancel:** Clicking this button closes the Export File dialog box and brings you back to the main screen.
- 6. Help:** Brings up VBA Online Help.

## Loading a VBA Program

Once you have saved a project or module file, you can load it later whenever necessary.

### Loading a project

You can load a saved project file either from the E5052A measurement screen or by specifying that the project file be automatically loaded when the power is turned on.

#### Loading a project from the E5052A measurement screen

**Step 1.** Access the Open dialog box using the following key sequence:

- **[Macro Setup] - VBA Editor Menu - Load Project**

---

**NOTE**

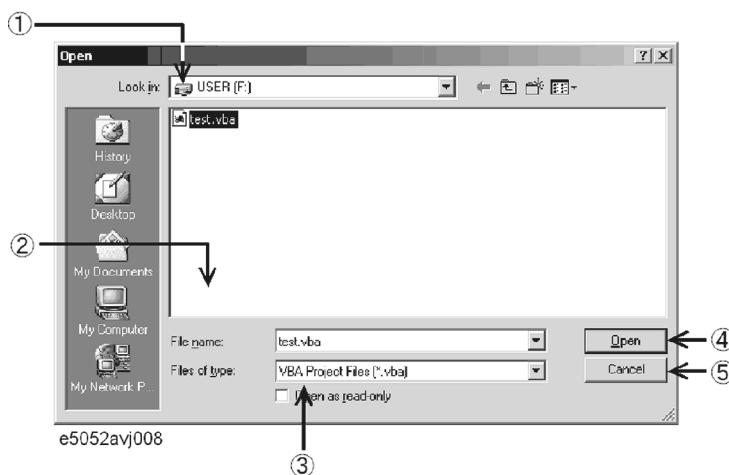

When another project is already loaded on the Visual Basic Editor, a message asking whether you want to save the current project may appear. If you want to save the project, click the **Yes** button to display a dialog box for saving (Figure 3-6 on page 45). For saving the project, see “Saving a project file” on page 45.

**Step 2.** The Open dialog box (Figure 3-8) appears. Specify the file name and location (drive or folder) of the file you want to load and click **Open**.

The Open dialog box has the following user interface elements:

**Figure 3-8**

**Open dialog box**

- 1. Look in:** Specify the location (drive or folder) where the project resides.
- 2. File name:** Specify the file name of the project you want to load.
- 3. Files of type:** Select the type of file you want to load. Normally, you should select **VBA Project Files (\*.vba)**.
- 4. Open:** Clicking this button loads the project.
- 5. Cancel:** Clicking this button closes the Open dialog box without loading a

project and brings you back to the main screen.

#### Automatically loading a project at power-on

Once you have saved a project file that satisfies the following conditions, the project will automatically load whenever the power is turned ON.

Auto-loaded project	Condition
Directory where the project resides.	A:\(A:\) or F:\(F:\)
Project file name	autoload.vba <sup>*1</sup>

<sup>\*1</sup>1.Upper/lower case insensitive.

---

**NOTE**

If there is the file named “autoload.vba” in both the A drive and the F drive, the file in the A drive is used.

---

#### Loading a module (importing)

To load a saved module into a project, you must use Visual Basic Editor.

**Step 1.** In Project Explorer (Figure 3-1), click the file name that appears under the desired module icon to highlight it.

**Step 2.** Open the Import File dialog box by doing one of the following:

- On the **File** menu, click **Import File....**
- In Project Explorer (Figure 3-1), right-click the E5052 icon and then click **Import File....**
- Press **[Ctrl] + [M]** on the keyboard.

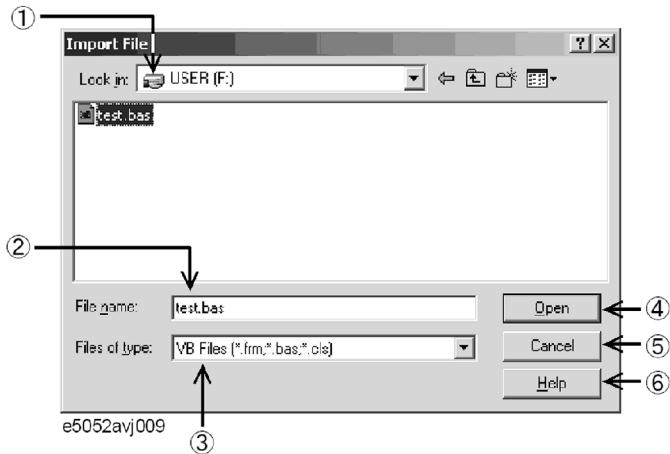

**Step 3.** The Import File dialog box (Figure 3-9) appears. Specify the file name and location (drive or folder) of the file (module) you want to load and click **Open**.

## Operation Basics of the E5052A's VBA Loading a VBA Program

The Import File dialog box has the following user interface elements:

Figure 3-9

Import File dialog box

1. **Look in:** Specify the location (drive or folder) where the module resides.
2. **File name:** Specify the file name of the module you want to load.
3. **Files of type:** Select the type of file you want to load. Normally, you should select **VB Files [<\*.frm;\*.bas;\*.cls]**.
4. **Open:** Clicking this button loads the module.
5. **Cancel:** Clicking this button closes the Import File dialog box without loading a module and brings you back to the main screen.
6. **Help:** Brings up VBA Online Help.

## Running a VBA Program

The E5052A provides two methods to execute a VBA program: executing a program that you previously loaded and loading and executing a program in a batch process. The execution status of the VBA program is indicated in the instrument status bar, as shown in Figure 3-10. “Run” indicates that the program is running while “Stop” indicates that the program is stopped.

Figure 3-10

Instrument status bar indicating the status of the VBA program

## Running a previous loaded VBA program

### Running a program from Visual Basic Editor

The E5052A allows you to run a previously loaded VBA program by using one of the four methods listed in Step 1. below.

**Step 1.** Open the Macros dialog box (Figure 3-11) by doing one of the following:

- On the **Run** menu, click **Run Sub/UserForm**.
- On the **Tools** menu, click **Macros...**.
- On the toolbar, click the “Run Macro” icon (Figure 3-2).
- Press **[F5]** on the keyboard.

**NOTE**

Doing the above steps with the cursor positioned within a procedure in the code window immediately runs the program without displaying the Macros dialog box.

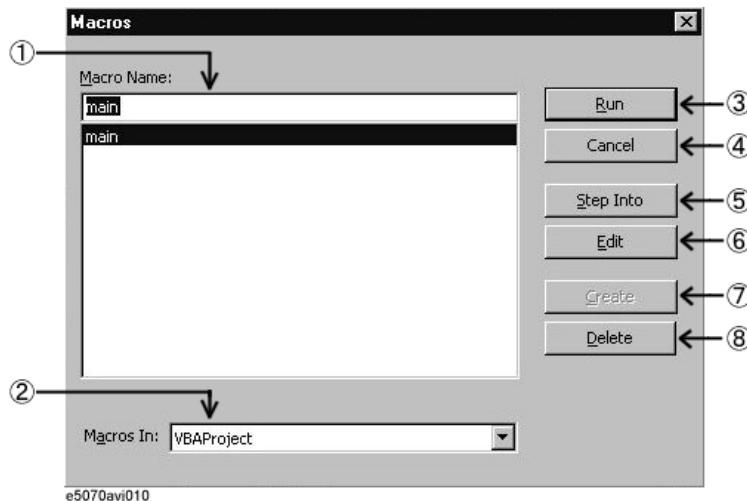

**Step 2.** In the Macros dialog box, select the VBA program (procedure name) you want to run and click the **Run** button.

## Operation Basics of the E5052A's VBA Running a VBA Program

The Macros dialog box has the following user interface elements:

Figure 3-11

Macros dialog box

- 1. Macro Name:** Select the VBA program (procedure name) you want to run from the list box so that its name appears here.
- 2. Macro In:** Specify the project that contains the VBA program you want to run. Normally, use the default.
- 3. Run:** Clicking this button runs the selected VBA program (procedure).
- 4. Cancel:** Clicking this button closes the Macros dialog box without running a VBA program and brings you back to the main screen.
- 5. Step Into:** Clicking this button brings up Visual Basic Editor and puts it into step-in mode, where the selected VBA program is run step by step. This mode is primarily intended for use when debugging a VBA program. For more information on step-in mode, see “Debug toolbar” on page 58.
- 6. Edit:** Displays the code of the selected VBA program. You can use this for re-editing your code.
- 7. Create:** This button is normally dimmed.
- 8. Delete:** Clicking this button deletes the selected VBA program. Take care not to inadvertently delete your VBA program before saving it.

---

**NOTE**

The Macros dialog provides access to subprograms without a parameter (procedures enclosed between **Sub( )** and **End Sub**) created in a standard module.

### Running a program from the E5052A measurement screen

You can run a program from the E5052A measurement screen by using the method below.

**Step 1.** Display the E5052A measurement screen following the instructions given in “Switching to the E5052A Measurement Screen” on page 36.

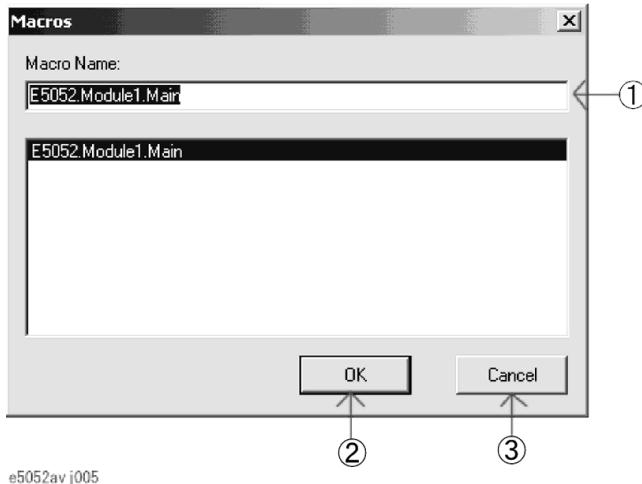

**Step 2.** Run the VBA program (procedure) using the following key sequence:

- **[Macro Setup] - Select Macro**

**Step 3.** In the Macros dialog box (Figure 3-12), select the VBA program (procedure name) you want to run, and click the **OK** button.

Figure 3-12

Macros dialog box

**1. Macro Name:** Select the VBA program (procedure name) you want to run from the list box so its name appears here.

**2. OK:** Clicking this button runs the selected VBA program (procedure).

**3. Cancel:** Clicking this button closes the Macros dialog box and brings you back to the main screen.

---

**NOTE**

The Macros dialog provides access to subprograms without a parameter (procedures enclosed between **Sub( )** and **End Sub**) created in a standard module.

### Loading and executing program in batch process

---

**NOTE**

This feature is available for E5052A Rev. 1.50 or later.

This section describes how to load and execute a program (VBA project) in a batch process by pressing the softkey corresponding to the program name.

**Step 1.** Save the VBA program (VBA project file) into the following folder.

F:\VBA

## Operation Basics of the E5052A's VBA

### Stopping a VBA Program

---

**NOTE** This feature is available only for programs saved in F:\VBA. This feature is not available for programs saved in subfolders of F:\VBA.

---

**NOTE** When copying a VBA program to F:\VBA from another folder, copy all the files necessary to execute the program to appropriate folders. When copying a factory-installed VBA program into F:\VBA, choose only its VBA project file.

---

**Step 2.** Press **[Macro Setup] - Load & Run**.

**Step 3.** Press the softkey corresponding to the VBA project file name of the program you want to execute. The pressed VBA project is loaded and the program whose procedure name is set to "Main" (subprogram enclosed between Sub Main() and End Sub) and whose object name (Name property as displayed in the property window) is set to "Module" is executed.

---

**NOTE** When "Main" program of "Module1" doesn't exist, the "Illegal program name" error is displayed.

---

**NOTE** There is no limit to the number of VBA project files that can be saved in F:\VBA. However, the maximum number of programs that can be displayed as softkeys is 50.

- File names of the VBA projects saved in F:\VBA are displayed as softkeys in alphabetical order.
- The maximum number of characters that can be displayed in a softkey is 12. If a file name has 13 or more characters, "..." is added to the 12th character from the beginning of the program name and displayed. In this case a .vba extension is omitted.

## Stopping a VBA Program

### Breaking a running macro via the dialog box

This section describes how to break a procedure during the execution of a VBA program by displaying the dialog box shown in Figure 3-13, which permits a forced interrupt.

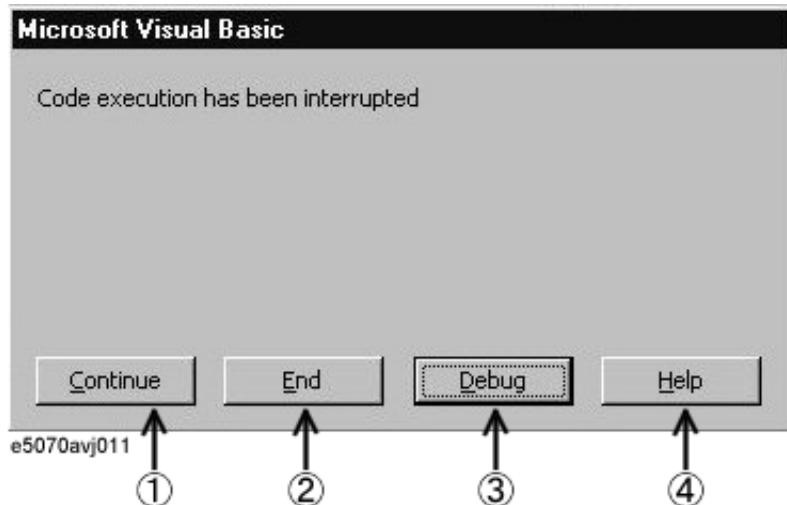

**Step 1.** To break the running VBA program, do one of the following:

- On the **Run** menu, click **Break**.
- On the toolbar, click the "Break Macro" icon (Figure 3-2).
- Press **[Ctrl] + [Break]** on the keyboard.
- **[Macro Setup] - Stop** (E5052A measurement screen)
- Press the **[Macro Break]** key on the E5052A front panel.

- Step 2.** The dialog box shown in Figure 3-13 is displayed after the forced interrupt, and the program is suspended.

Figure 3-13

Dialog box that appears when a VBA program is suspended

1. **Continue:** Resumes the execution of the program.
2. **End:** Terminates the VBA program.
3. **Debug:** Displays a run-time error.
4. **Help:** Brings up VBA Online Help.

### Abruptly terminating a VBA program

This section describes how to abruptly terminate a running procedure.

- Step 1.** To terminate the running VBA program, do one of the following:

- On the **Run** menu, click **Reset**.
- On the toolbar, click the “Reset Macro” icon (Figure 3-2).
- Insert an *End* statement into your code.

## Errors and Debugging

### Types of errors

Errors in VBA programs are classified as either syntax errors or run-time errors.

#### Syntax errors

A syntax error is generated when Visual Basic Editor detects an invalid statement that violates the Visual Basic syntax rules. For example, misspelled keywords generate syntax errors. An error dialog box appears that indicates the error message and highlights the invalid statement in red. To get detailed information on the error, click the HELP button in the error dialog box to display the help topic related to the error. You cannot run the macro until you correct the syntax error.

The E5052A VBA environment is by default configured to automatically check for syntax errors, but you can disable the auto syntax check feature by using the following steps:

- Step 1.** On the **Tools** menu, click **Options....**
- Step 2.** On the **Editor** tab, clear the **Auto Syntax Check** check box to remove the  mark.
- Step 3.** Click the **OK** button.

#### Run-time errors

A run-time error is generated when a VBA program attempts to execute an invalid statement at run time. When a run-time error is generated, the program is stopped at the invalid statement, and the error dialog box shown in Figure 3-13 appears. You can terminate the program by clicking the **END** button in the error dialog box. Also, you can click the **DEBUG** button in the error dialog box to identify the statement that caused the error. In this case, the statement in question is highlighted in yellow.

---

#### NOTE

Some run-time errors may occur under particular conditions, even though the program runs without error under normal conditions. For example, the “Marker search failed” error occurs when a program analyzing results while using the Marker Target Search feature fails to perform the search because the marker is not in the appropriate position. To avoid the interruption of a program due to such errors, you should handle these errors appropriately within the program.

---

### About the error evacuation at the time of execution

Below, the program which performs a target search is explained at an example.

Line 20 An error processing routine when an error occurs is confirmed.

Line 30 A target search is performed.

\*When an error occurs, a program is performed from the 80th line.

Line 40 An error processing routine when an error occurs is repealed.

Line 60 It slips out of the present sub program.

Line 80 The place of an error processing routine is shown.

Line 90 "Search Error" is displayed on a screen.

Line 100 It goes back to the next line where the error occurred..

### Example 3-1

### The error evacuation program at the time of execution

```
10| Sub Main()
20| On Error GoTo SearchError
30| SCPI.CALCulate.FP.TRACE.MARKer.SEARCh.EXECute.TARGET
40| On Error GoTo 0
50|
60| Exit Sub
70|
80| SearchError:
90|   MsgBox "Search Error"
100|  Resume Next
110| End Sub
```

## Using a debug tool

The E5052A's VBA environment provides a variety of debug tools to help you identify logical errors. Detailed information on using the debug tools is covered in the VBA Online Help and the wide selection of books on VBA.

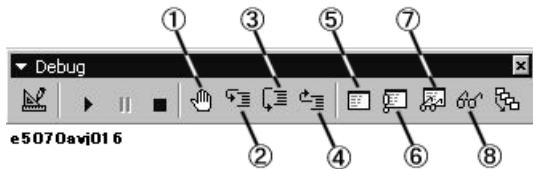

### Debug toolbar

The debug toolbar (Figure 3-14) provides tool buttons that allow you to easily access various debug tools. To display the debug toolbar, do the following:

- Step 1. On the **View** menu, click **Toolbars - Debug**.

Figure 3-14

Debug toolbar

1. Set/clear break points (keyboard: [F9])  
Puts a break point at the cursor position or clears an existing break point.
2. Step-in (keyboard: [F8])  
Runs the VBA program step by step. If the current program contains a call to another procedure, that procedure is also run step by step.
3. Step-over (keyboard: [Shift]+[F8])  
Runs the VBA program step by step. If the current program contains a call to another procedure, that procedure is run as one line.
4. Step-out (keyboard: [Ctrl]+[Shift]+[F8])  
Executes the remaining lines of the function where the execution point is currently placed.
5. Local window  
Opens the local window that shows the current values of local variables.
6. Immediate window (keyboard: [Ctrl]+[G])  
Opens the immediate window that evaluates entered values of variables or expressions.
7. Watch window  
Opens the watch window that displays the current value of a specified expression.
8. Quick watch (keyboard: [Shift]+[F9])  
Displays the current value of a specified expression in a dialog box.

### Setting a break point

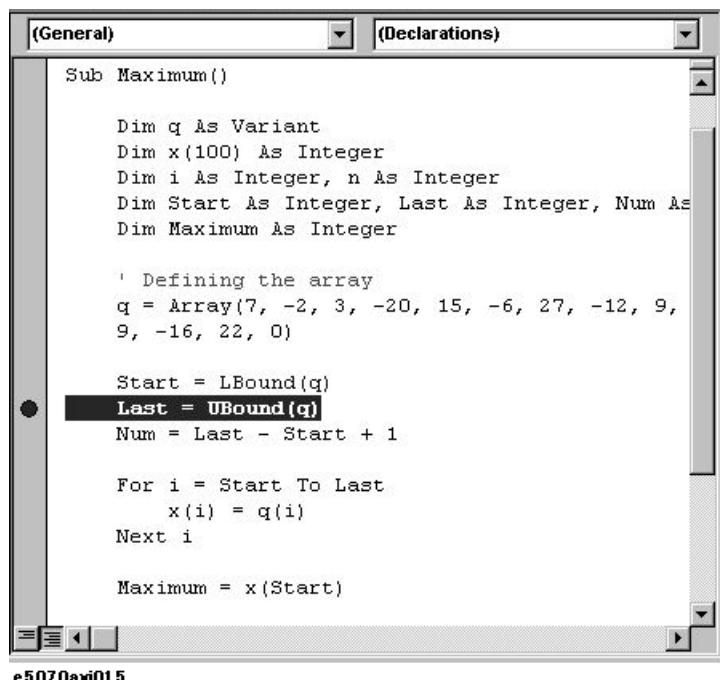

By placing a break point at a particular statement in a VBA program, you can automatically suspend the program when its execution reaches that statement.

**Step 1.** To set a break point as shown in Figure 3-15, do one of the following (when you put a break point at a line, the line is highlighted in amber):

- Place the cursor at the desired line of code, and click the “Set/clear break points” button (Figure 3-14: 1) on the debug toolbar.
- Click anywhere in the margin indicator bar of the code window.

Figure 3-15

Setting a break point

```
Sub Maximum()
    Dim q As Variant
    Dim x(100) As Integer
    Dim i As Integer, n As Integer
    Dim Start As Integer, Last As Integer, Num As Integer
    Dim Maximum As Integer

    ' Defining the array
    q = Array(7, -2, 3, -20, 15, -6, 27, -12, 9,
    9, -16, 22, 0)

    Start = LBound(q)
    Last = UBound(q)
    Num = Last - Start + 1

    For i = Start To Last
        x(i) = q(i)
    Next i

    Maximum = x(Start)
```

## Operation Basics of the E5052A's VBA Errors and Debugging

### Monitoring variable or property values

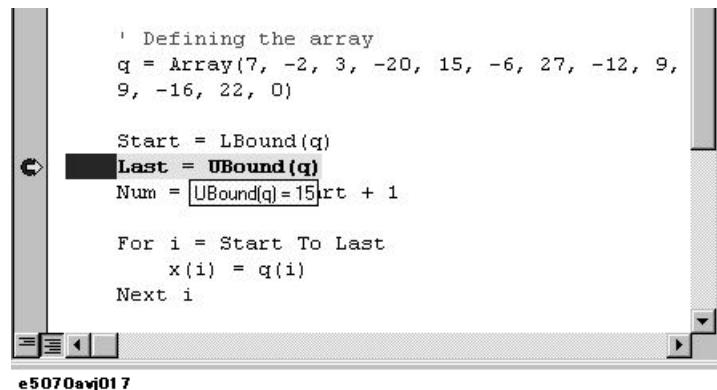

With your VBA program suspended, you can use the following debug tool to monitor variables or properties. To do this, you must set a break point, run the VBA program, and suspend it.

#### Data Hint

When you point to the variable or expression of interest, Data Hint shows the current value, as shown in Figure 3-16.

Figure 3-16

#### Data Hint

```
' Defining the array
q = Array(7, -2, 3, -20, 15, -6, 27, -12, 9,
9, -16, 22, 0)

Start = LBound(q)
Last = UBound(q)
Num = UBound(q)=15

For i = Start To Last
    x(i) = q(i)
Next i
```

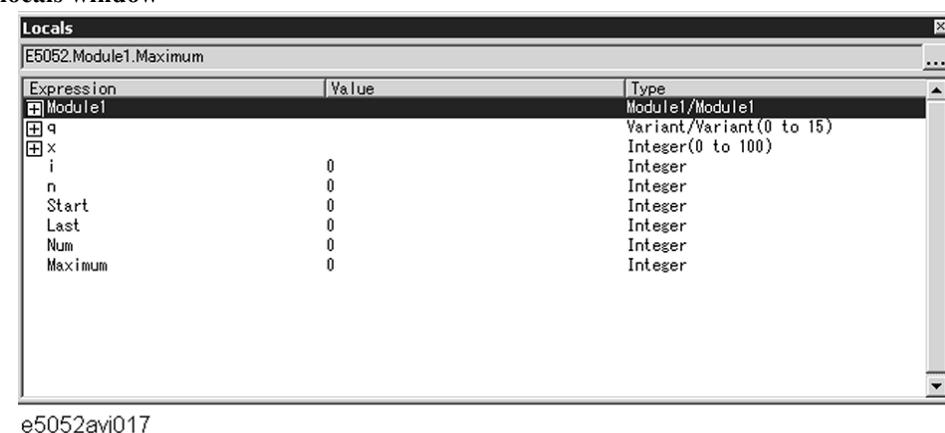

#### Locals window

To display the immediate window, click the “Local Window” button (Figure 3-14:5) on the debug toolbar.

All the local variable values in the module under execution are displayed., as shown in Figure 3-17.

Figure 3-17

#### locals window

Expression	Value	Type
+ Module1		Module/Module1
+ q		Variant/Variant(0 to 15)
+ x		Integer(0 to 100)
i	0	Integer
n	0	Integer
Start	0	Integer
Last	0	Integer
Num	0	Integer
Maximum	0	Integer

### Immediate window

To display the immediate window, click the “Immediate Window” button (Figure 3-14:6) on the debug toolbar.

In the immediate window, enter a question mark (?) followed by the variable or expression whose value you want to check and then press the Enter key. The current value appears in the line that follows, as shown in Figure 3-18.

Figure 3-18

### Immediate window

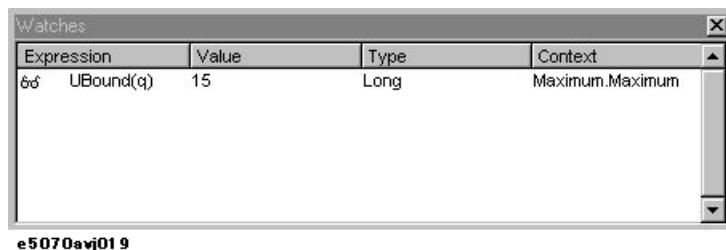

## Operation Basics of the E5052A's VBA Errors and Debugging

### Watch window

To display the watch window (Figure 3-19), click the “Watch Window” button (Figure 3-14: 7) on the debug toolbar.

Figure 3-19

Watch window

**Step 1.** To open the Add Watch dialog box (Figure 3-20), do the following:

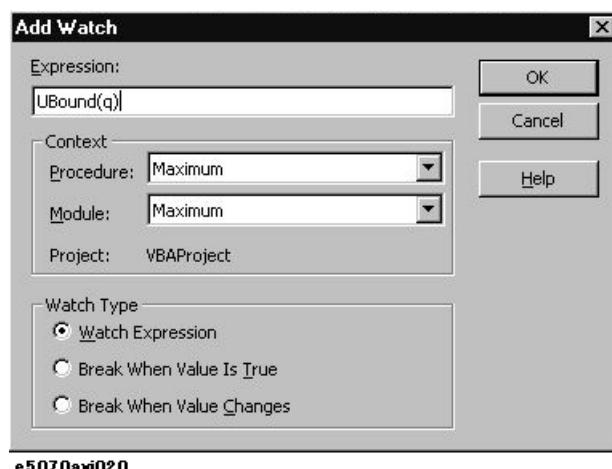

- On the **Debug** menu, click **Add Watch....**

**Step 2.** As shown in Figure 3-20, you can specify an expression of interest as a watch expression to always monitor its value.

**Step 3.** Click the **OK** button.

Figure 3-20

Add Watch dialog box

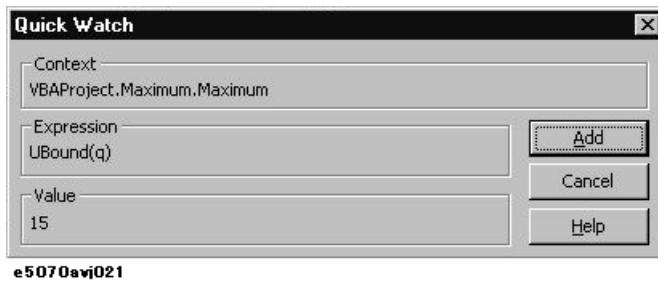

### Quick watch

In the code window, select a variable or expression whose value you want to watch. On the debug toolbar, click the “Quick Watch” button (Figure 3-14:8) to open the Quick Watch dialog box (Figure 3-21). The dialog box displays the current value of your specified variable or expression.

Also, you can click the **Add** button in the Quick Watch dialog box to specify the current expression as a watch expression.

## Printing Output Values in the Echo Window

The echo window, which appears in the lower part of the E5052A measurement screen, can be used to display a message or the return value (data) of an object.

### Entering values output to the echo window

You can use the COM object shown below to enter values output in the echo window. For more information on each object, see Chapter 7, “COM Object Reference.”

- SCPI.DISPlay.ECHO.DATA on page 241

### Opening the echo window

You can use the COM object shown below to open the echo window. For more information on each object, see Chapter 7, “COM Object Reference.”

- SCPI.DISPlay.ECHO.STATE on page 242

Alternatively, you can also open the echo window by using the following key sequence:

- [Macro Setup] - Echo Window Menu - Echo Window (ON)

### Clearing output values in the echo window

You can use the COM object shown below to clear output values in the echo window. For more information on this object, see Chapter 7, “COM Object Reference.”

- SCPI.DISPlay.ECHO.CLEar on page 240

Alternatively, you can also clear output values in the echo window by using the following key sequence:

- [Macro Setup] - Echo Window Menu - Clear Echo

### Changing character size in echo window

You can use the COM object shown below to change the character size that appears in the echo window. For more information on this object, see Chapter 7, “COM Object Reference.”

- SCPI.DISPlay.ECHO.FSIZe on page 241
- [Macro Setup] - Echo Window Menu - Echo Font Size

## Using VBA Online Help

VBA Online Help provides useful topics such as VBA terminology or how to use a particular feature. In VBA Online Help, you can find a topic of interest through the Contents tab or by entering specific keywords.

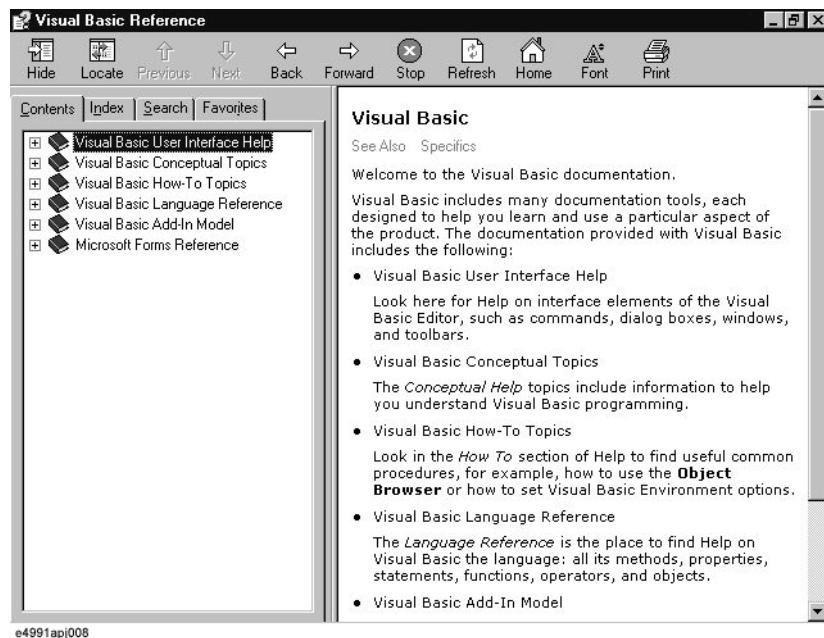

### Accessing VBA Online Help

**Step 1.** From Visual Basic Editor, do one of the following to access the VBA Online Help screen (Figure 3-22):

- On the **Help** menu, click **Microsoft Visual Basic Help**.
- Press **[F1]** on the keyboard.
- On the toolbar, click the “VBA Help” icon (Figure 3-2).

Figure 3-22

VBA Online Help screen

### Using the Contents Tab

**Step 1.** Clicking the **Contents** tab in the VBA Online Help screen brings up the items listed below. The E5052A VBA Online Help has a hierarchical table of contents. Click an item to expand it, and then find your particular topic of interest.

- Visual Basic User Interface Help
- Visual Basic Conceptual Topics
- Visual Basic How-To Topics
- Visual Basic Language Reference

## **Operation Basics of the E5052A's VBA Using VBA Online Help**

- Visual Basic Add-In Model
- Microsoft Forms Reference

When you need information on using Visual Basic Editor, use User Interface Help and How-To Topics as primary sources of information. Formats of VBA programs are covered in Visual Basic Conceptual Topics. Properties and methods supported by VBA are covered in Visual Basic Language Reference and Visual Basic Add-In Model. Information on using user forms is covered in Microsoft Forms Reference.

### **Using the Index Tab**

**Step 1.** In the VBA Online Help screen, click the Index tab, and enter a keyword(s) into the text box. For example, you may wish to search for “Sub” or “With” when you are writing your own code.

### **Looking up a keyword in the code within Visual Basic Editor**

When you want to know the usage or meaning of a keyword contained in a sample program or some other code, you can quickly access the help topic on that keyword by moving the cursor to the keyword and pressing **[F1]**.

## Using Advanced Techniques

### Accessing a list of E5052A COM objects

The VBA environment provides COM objects that support the user in controlling the E5052A. When you are developing a program using E5052A COM objects, you can access a list of E5052A COM objects by opening Object Browser within Visual Basic Editor.

**Step 1.** To open Object Browser, do one of the following:

- On the **View** menu, click **Object Browser**.
- On the toolbar, click the “Object Browser” icon (Figure 3-2).

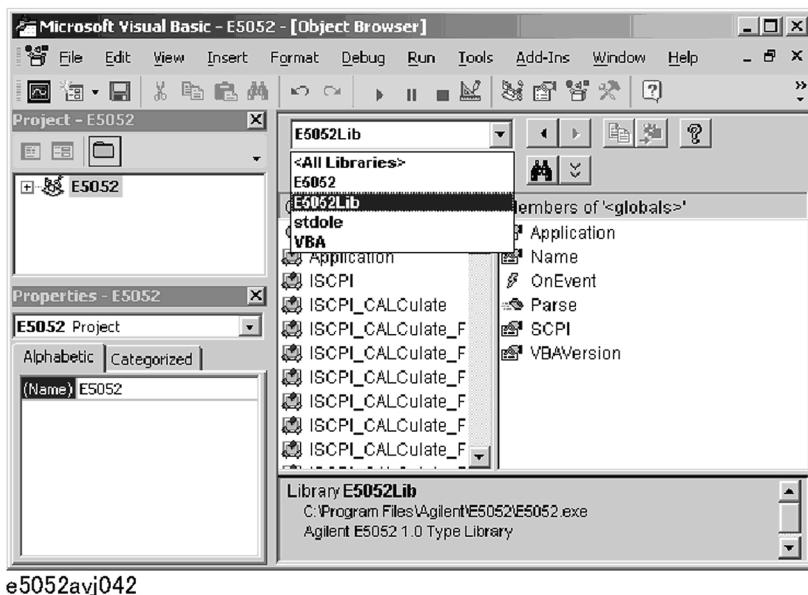

**Step 2.** Select **E5052LIB** from the Project/Library box to display the E5052A library as shown in Figure 3-23.

#### NOTE

Some COM objects in the Object Browser’s list are **not** used for controlling the E5052A VBA; these COM objects are not described in the Chapter 7, “COM Object Reference.”

Figure 3-23

#### How to use Object Browser

## Operation Basics of the E5052A's VBA Using Advanced Techniques

### Using automatic library references

For libraries that satisfy the following conditions, the library reference will be automatically set whenever a new project is created and loaded ([Macro Setup] - VBA Editor Menu - New Project).

Automatically referenced libraries	Condition
Directory where the library resides.	F:\Agilent (F:\Agilent)
Extensions of libraries	olb, tlb, dll, or ocx

To check the library reference setting, you must use Visual Basic Editor.

Perform the following to check the library reference setting.

- On the **Tools** menu, click **References....**

The library reference setting is enabled if the library name is checked.

---

#### NOTE

A project sets the library reference when the project is created. Therefore, if an existing project is loaded, libraries added after the development of the project are not automatically set in the library reference.

## 4

## Controlling the E5052A

This chapter explains how to use the E5052A's VBA to control the E5052A itself.

## Detecting End of Measurement

This section explains how to trigger the instrument to start a new measurement cycle and how to detect the end of a measurement cycle. For a detailed description of trigger detection, the trigger system, and the concept of triggering, see the Chapter on “Making a Measurement” in the *Programmer’s Guide*.

You can detect the end of measurement by using either “Using the Status Register” on page 70 or “Using Event Interruption feature” on page 71.

---

**NOTE**

The OPC command can not detect the end of measurement.

### Using the Status Register

The status of the E5052A can be monitored through the status register. For a complete description of the status report mechanism, including the specifications of each bit of the status register, see the Appendix on “Status Reporting System” in the *Programmer’s Guide*.

If your program is based on SPC1 commands, you can use SRQ (Service Request) interrupts to detect the end of measurement. For more information, see the Section on “Waiting for the End of Measurement” in the *Programmer’s Guide*.

The following is a sample program that demonstrates how to use an SRQ to detect the end of measurement.

In this program, you can start a measurement cycle by pressing the command button on the user form (cmdExec), and a message box will appear when the measurement finishes.

- |                  |  |
|------------------|--|
| Line 40          | The trigger continuous mode is turned “OFF”  |
| Lines 50 to 60   | The trigger system switches to "Idle" state and clears the operation status event register.  |
| Lines 70 to 80   | These lines configure the instrument so that operation status event register’s bit 4 is set to 1 only when the operation status condition register’s bit 4 is changed from 1 to 0 (negative transition). |
| Lines 100 to 120 | The trigger source is set to “Bus Trigger” to start a measurement cycle.   |
| Lines 140 to 170 | These lines repeat until the end of measurement is detected.   |
|                  | Line 150: The control is returned to Windows so that other applications may be executed.   |
| Line 190         | A message box appears when the end of measurement is detected.   |

**Example 4-1**

### Using an Status Register to Detect the End of Measurement

```
10| Private Sub cmdExec_Click()
20|     Dim i As Long
30|
40|     SCPI.INITiate.SP.CONTinuous = False
50|     SCPI.ABORT
```

```
60|     SCPI.IEEE4882.CLS
70|     SCPI.STATus.OPERation.PTRansition = 0
80|     SCPI.STATus.OPERation.NTRansition = 16
90|
100|    SCPI.TRIGger.SP.Source = "bus"
110|    SCPI.INITiate.SP.CONTinuous = True
120|    SCPI.IEEE4882.TRG
130|
140|    Do While i = 0
150|        DoEvents
160|        i = SCPI.STATus.OPERation.EVENT
170|    Loop
180|
190|    MsgBox "end"
200|
210| End Sub
```

---

**NOTE**

The E5052A's VBA program is executed as a part of E5052A's applications. Therefore, if any executed VBA program takes a long time before returning control to Windows, all processing operations other than VBA are suspended during this time. To prevent this, use DoEvents to return the control to E5052A applications.

### Using Event Interruption feature

The E5052A provides an event interruption feature to allow you to detect the end of measurement. By enabling the E5052 Event softkey, you can obtain an end of sweep event.

For details, refer to the section on “Executing a Procedure with a Softkey (user menu function)” on page 76.

---

**NOTE**

To obtain an end of sweep event, you must create and execute a VBA program.

## Reading/Writing Measurement Data

This section describes how to process the E5052A's internal data. You can use these internal data arrays: unformatted data arrays, unformatted memory arrays, formatted data arrays, formatted memory arrays, and X-axis data arrays. For more information on the internal data arrays, see the section on "Internal Data Processing" in the *Programmer's Guide*.

To read/write a formatted data array, formatted memory array, unformatted data array, or unformatted memory array, use the following objects:

- SCPI.CALCulate.xx.TRACe.DATA.FDATA
- SCPI.CALCulate.xx.TRACe.DATA.FMEMory
- SCPI.CALCulate.xx.TRACe.DATA.UDATA
- SCPI.CALCulate.xx.TRACe.DATA.UMEMory

There are an unformatted data array and memory array where the phase noise measurement alone is contained with the unit of dBc.

- SCPI.CALCulate.PN(1-1).TRACe(1-1).DATA.PDATA on page 144
- SCPI.CALCulate.PN(1-1).TRACe(1-1).DATA.PMEMory on page 145

To read an X-axis data array, use the following object:

- SCPI.CALCulate.xx.DATA.XDATA

For the transient measurement, you can use two types of object as follows.

- SCPI.CALCulate.TR(1-1).NARRow.DATA.XDATA on page 188
- SCPI.CALCulate.TR(1-1).WIDE.DATA.XDATA on page 211

To read a raw data array, use the following object:

- SCPI.CALCulate.xx.DATA.RDATA

For the transient measurement, you can use two types of object as follows.

- SCPI.CALCulate.TR(1-1).NARRow.DATA.RDATA on page 187
- SCPI.CALCulate.TR(1-1).WIDE.DATA.RDATA on page 210

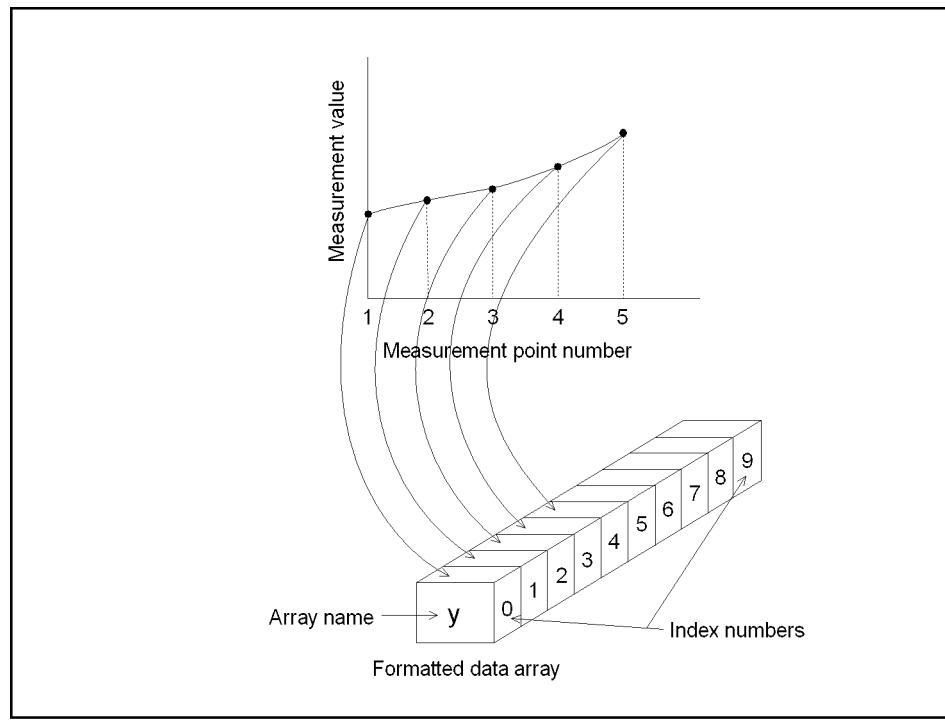

There is a raw array where the phase noise measurement alone is contained with the unit of dBc.

- SCPI.CALCulate.PN(1-1).DATA.PDATA on page 136

The E5052A VBA allows you to deal with multiple pieces of data through variables of the Double-precision Dynamic Array type. For example, a formatted data array that includes five measurement points is stored as shown in Figure 4-1. For more information on contained data, see the section on "Reading/Writing Measurement Data" in the *Programmer's Guide*.

Figure 4-1

Example of storing data into a Variant variable

e5052ave038

**NOTE**

When you use one of the objects listed above, the base index number of the array is always 0 even if the declaration section contains the "Option Base 1" statement, which specifies the use of the base array index of 1.

## **Limit Test**

This section describes how to define the limit lines and determine pass or fail with regard to the limit test function. For more on the concept of the limit test, refer to the Chapter describing “Data Analysis and Result Output” in the User’s Guide.

### **Using Commands to define Limit Lines**

You can define the limit lines by specifying any limit value to the parameter of SCPI commands.

The program is described in detail below:

- |                 |   |
|-----------------|---|
| Line 20 to 30   | Define the data array (variable) for the limit lines.                                 |
| Line 40 to 50   | Redefine the data array (variable) depending on the number of limit lines (segments). |
| Line 70 to 140  | Set the upper limit value for the limit lines in the array.                           |
| Line 160 to 190 | Set the lower limit value for the limit lines in the array.                           |
| Line 220 to 230 | Specify the segment number for the upper and lower limit values.                      |
| Line 250 to 260 | Specify the upper and lower limit values on the trace.                                |
| Line 280 to 320 | Trigger the instrument.   |
| Line 340        | Display the limit lines.  |
| Line 350        | Display the determination result. (For fail only.)                                    |
| Line 360        | Activate the limit test function.   |

### Reading Limit Lines from Files

You can create any upper and lower value for limit lines in the specified format in advance, and read the file later to specify the limit lines.

For information about creating upper and lower values for limit lines, refer to the chapter describing “Data analysis and Result Output” in the User’s Guide.

The file must be saved in the CSV format (with the extension \*.csv).

The program is described in detail below:

#### **NOTE**

Save the upper limit values together into one file, and the lower limit values into another.

- Line 20            Read the lower limit value for the limit lines from the file.
- Line 30            Read the upper limit value for the limit lines from the file.
- Line 50 to 100    Trigger the instrument.
- Line 120          Display the limit lines.
- Line 130          Display the determination result. (For fail only.)
- Line 140          Activate the limit test function.

#### **Example 4-3**

#### Reading Limit Lines from File

```

010| Sub Main()
020|     SCPI.MMEMory.FP.TRACe.Load.LIMit.LOWER = "f:\lower.csv"
030|     SCPI.MMEMory.FP.TRACe.Load.LIMit.UPPER = "f:\upper.csv"
040|
050|     SCPI.DISPlay.WINDOW.ACTive = "FP1"
060|     SCPI.TRIGger.MODE = "FP1"
070|     SCPI.TRIGger.FP.Source = "bus"

```

## Executing a Procedure with a Softkey (user menu function)

The E5052A lets you perform procedures assigned to specific softkeys (**[Macro Setup] - User Menu - User Label 1/2/3/4/5/6/7/8**) without using user forms for the event activated by pressing the softkey. This function is called the user menu function.

---

**NOTE**

You must create and execute a VBA program when using the user menu function.

### Preparing to use the User Menu Function

Before using the user menu function, perform the following preparation.

#### Settings for Softkey Label Name

When you want to change the softkey label names for the user menu function, you need to code within the VBA program. For details, refer to “Sample Program of Settings for Softkey Label and Softkey Enabled/Disabled (object name: Module1)” on page 78.

For more information on this object, see Chapter 7, “COM Object Reference.”

- SCPI.PROGram.SKEY.ITEM(1-8).LABEL on page 308

### Enabling/Disabling Softkey

When you want to enable or disable the softkey for the user menu function, you need to code within the VBA program. For details, refer to “Sample Program of Settings for Softkey Label and Softkey Enabled/Disabled (object name: Module1)” on page 78. For more information on this object, see Chapter 7, “COM Object Reference.”.

Use the following COM objects to enable or disable the softkey. For more information on this object, see Chapter 7, “COM Object Reference.”.

- SCPI.PROGraM.SKEY.ITEM(1-8).ENABLE on page 307

### How to use the User Menu Function

To execute the procedure assigned to a softkey, you need to generate an event by pressing the softkey.

For this, you need to code within the VBA program to execute a procedure. For more information, refer to “Sample Program Executing User Menu (object name: Class1)” on page 79.

Use the following function to execute a procedure in the user menu.

**Step 1.** Enable the softkey to generate an event.

- [Macro Setup] - E5052 Event ON

**Step 2.** Press the softkey.

- [Macro Setup] - User Menu - User Label No.

“No.” represents the button number. You can set the label for “User Label No.” as you like. For details, refer to the “Enabling/Disabling Softkey.” section.

---

#### NOTE

You can use the user menu function only when the VBA program is running. For information on how to verify whether the VBA is running, refer to “Running a VBA Program” on page 51.

**Controlling the E5052A**  
**Executing a Procedure with a Softkey (user menu function)**

### Simple usage example

The following is a simple example that uses a standard module and a class module.

**Table 4-1**

Object name	Module type	Function
Module1	Standard module	Sets the softkey labels and enables interrupts from the softkeys
Class1	Class module	Specifies the processing to be followed when an event occurs

The program (object name: Module1) is described in detail below:

- Line 60            The instance of the class module specified by Class1 is assigned to clsEvent (Object creation).  
Lines 80 to 140    Set the first and second softkey (*id*: 1 to 2) to enabled and set the third to eighth softkey (*id*: 3 to 8) to disabled.  
Lines 160 to 170    Set the first softkey label (*id*: 1) to "Preset" and the second softkey label (*id*: 2) to "Exit".  
Lines 190 to 210    Processing repeated until the event occurs.  
Line 200           Detects an event when a specific softkey is pressed and enables the interrupt from the event.

**Example 4-1**

### Sample Program of Settings for Softkey Label and Softkey Enabled/Disabled (object name: Module1)

```
10| Sub Main()
20|
30|     Dim clsEvent As Class1
40|     Dim I As Long, J As Long
50|
60|     Set clsEvent = New class1
70|
80|     For I = 1 To 2
90|         SCPI.PROGram.SKEY.Item(I).ENABLE = True
100|    Next I
110|
120|    For J = 3 To 8
130|        SCPI.PROGram.SKEY.Item(J).ENABLE = False
140|    Next J
150|
160|    SCPI.PROGram.SKEY.Item(1).LABEL = "Preset"
170|    SCPI.PROGram.SKEY.Item(2).LABEL = "Exit"
180|
190|    Do
200|        DoEvents
210|    Loop
220|
230|    Set clsEvent = Nothing
240|
250| End Sub
```

The program (object name: Class1) is described in detail below:

Lines 50 to 130 An event occurs when the softkey is pressed from the user menu.

Lines 70 to 80: E5052A are reset to the initial setting when the first softkey is pressed.

Lines 90 to 120: The program ends with a message box displayed when the second softkey is pressed.

Lines 140 to 150 An event occurs when the triggered sweep ends.

Line 150: A message box appears when the sweep ends.

Lines 190 to 210 Implement the object.

Lines 230 to 250 Release the object.

#### **Example 4-2**

#### **Sample Program Executing User Menu (object name: Class1)**

```
10|  Dim WithEvents app As Application
20|
30|  Private Sub app_OnEvent(ByVal ReasonStr As String, ByVal
OptionStr As String)
40|      Select Case ReasonStr
50|          Case "UserLabel"
60|              Select Case OptionStr
70|                  Case 1
80|                      SCPI.SYSTEM.PRESet
90|                  Case 2
100|                     SCPI.PROGRAM.COM.EVENT = False
110|                     MsgBox "Program ended"
120|                     End
130|             End Select
140|             Case "SweepEnd"
150|                 MsgBox "Sweep ended"
160|             End Select
170|         End Sub
180|
190|     Private Sub Class_Initialize()
200|         Set app = Application
210|     End Sub
220|
230|     Private Sub Class_Terminate()
240|         Set app = Nothing
250|     End Sub
```

---

#### **NOTE**

The E5052A's VBA program is executed as a part of E5052A's applications. Therefore, if any executed VBA program takes a long time before returning control to Windows, all processing operations other than VBA are suspended during this time. To prevent this, use DoEvents to return the control to E5052A applications.

**Controlling the E5052A**  
**Executing a Procedure with a Softkey (user menu function)**

**Argument for event occurrence**

The arguments for event occurrence are described below. An event represents app\_OnEvent, which is described in Example 4-2 of the “Simple usage example”.

**Table 4-2**

Event	First argument	Second argument
User menu	UserLabel	Softkey label NO. (1-8)
End of sweep	SweepEnd	Measurement window (FP/PN/SP/TR/USER)
Request for service	RQS	Nothing

---

**NOTE**

OnEvent(id1 As String, id2 As String) is a event handler of the events from the application and can refer to the instance (data) of the class. By declaring the object a variable “app” in the class module, it can be utilized as a procedure to obtain the event occurrence.

Within the event handler (lines 30-170), the processing should be the minimum necessary before an event ends. Nesting is also not allowed.

## Controlling VBA Externally

This section describes how to control the E5052A's VBA externally.

### Executing VBA Using External Controller

You can execute VBA from an external PC by running either macros or the user menu.

#### Running Macro

To start VBA from an external PC, use the following command:

- SCPI.MMEmory.LOAD.PROGram on page 296
- SCPI.PROGram.COM.EVENT on page 306
- SCPI.PROGram.SElected.STATE on page 307

#### Running User Menu

To execute the user menu from an external PC, use the following command: This command executes the first of the menu.

To execute the user menu, you must execute the user menu function in advance. For more information, refer to “Running User Menu” on page 81.

- SCPI.PROGram.SKEY.Item(1).IMMEDIATE

### Receiving the Termination of VBA Using External Controller

To allow the external controller to receive the termination of VBA from the E5052A, you may either confirm the operational status of VBA or use the user-defined register.

#### Confirming VBA’s Operational Status

To confirm the operational status of VBA, use the following command:

- SCPI.PROGram.SElected.STATE on page 307

#### Using User-defined Register

To use the user-defined register, use the following command: For more information, refer to “Using User-defined Register” on page 82.

- SCPI.STATUS.OPERATION.BIT12.CLEAR on page 362
- SCPI.STATUS.OPERATION.BIT12.CONDITION on page 362
- SCPI.STATUS.OPERATION.BIT12.ENABLE on page 363
- SCPI.STATUS.OPERATION.BIT12.EVENT on page 363
- SCPI.STATUS.OPERATION.BIT12.NTRANSITION on page 363
- SCPI.STATUS.OPERATION.BIT12.PTRANSITION on page 364
- SCPI.STATUS.OPERATION.BIT12.SET on page 364

## Controlling the E5052A Controlling VBA Externally

### Using User-defined Register

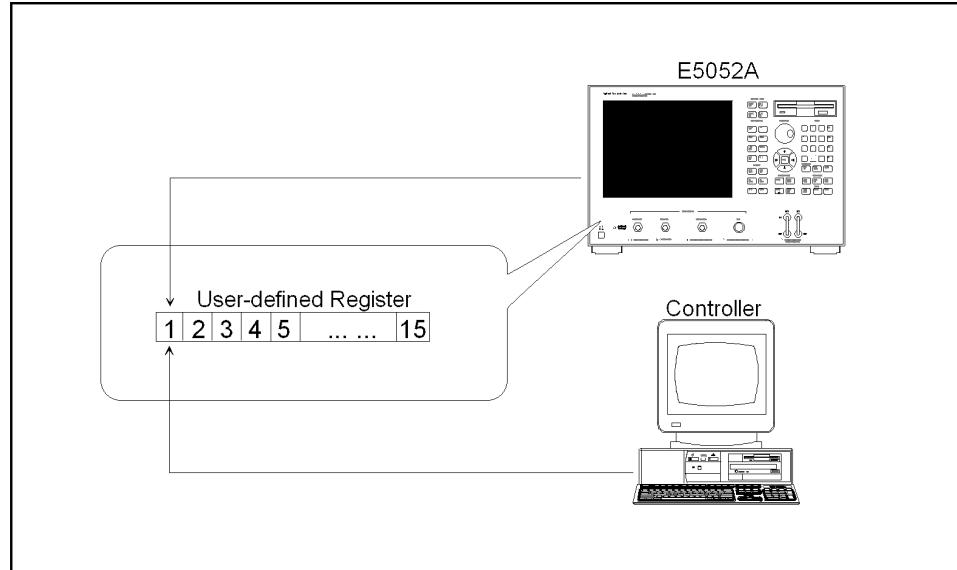

The E5052A does not control the individual status flag of the user-defined register. In order to start the E5052A VBA using the external controller to obtain the end bit, the user must make the user-defined register to be controlled within the program.

The user can assign any register number to the user-defined register which he/she wants to use. Available register numbers are 1 to 15 (0 to 14 bit).

If you use the user-defined register, you must specify the same register number for both the external controller side and the E5052A's program side. (Figure 4-2)

Figure 4-2

Reference of User-defined Register

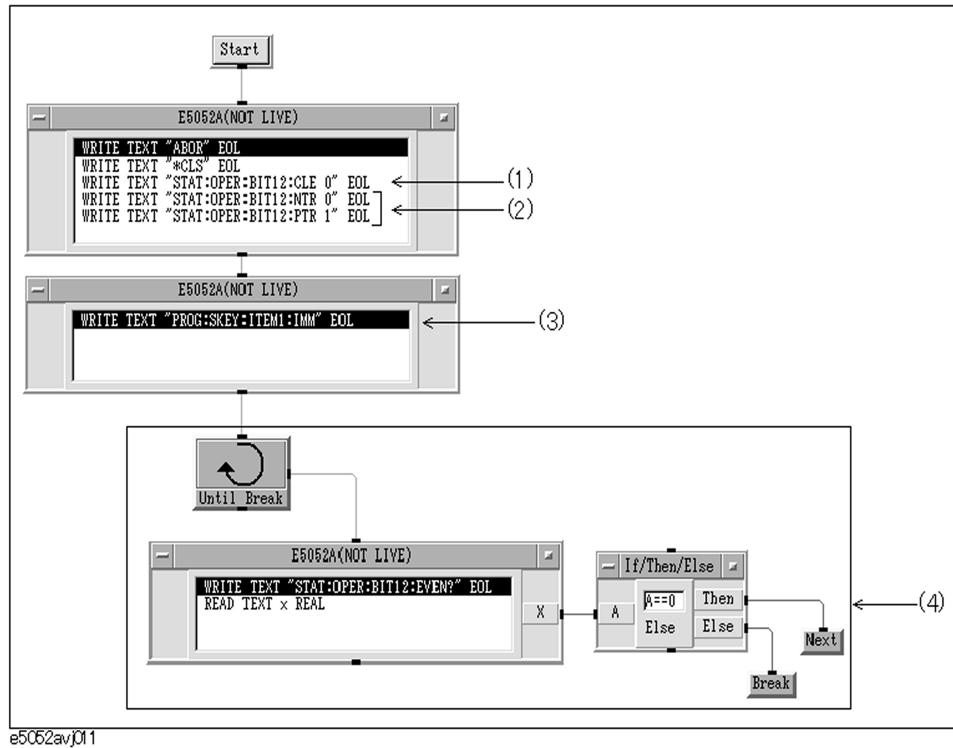

e5052ave010

The following is a sample program.

- (1) Clears the first condition register to be used (bit 0).
- (2) These lines configure the instrument so that the operation use-defined status event register's bit 0 is set to 1, when the operation use-defined condition register's bit 0 is changed from 0 to 1 (i.e. positive transition).
- (3) Executes the user menu.
- (4) Repeats until the termination of VBA is detected.

**Figure 4-3 A Sample Program to Control User-defined Register (On the Controller Side)**

Lines 30 to 90      An event occurs when the softkey is pressed from the user menu.

Lines 50 to 60: E5052A will be reset to the initial setting, when the first softkey is pressed.

Lines 70 to 80: The message box will appear, when the second softkey is pressed.

Lines 100 to 110      An event will occur when the triggered sweep ends.

Line 110: A message box will appear when the sweep ends.

Line 130      Sets a flag to the first of the user-defined register (bit 0).

Line 140      This procedure terminates the program.

#### Example 4-1

```

10|Private Sub app_OnEvent (ByVal ReasonStr As String, ByVal
OptionStr As String)
20|    Select Case ReasonStr
30|        Case "UserLabel"
40|            Select Case OptionStr
50|                Case 1
60|                    SCPI.SYSTEM.PRESet
70|                Case 2
80|                    MsgBox "Program ended"
90|            End Select
100|        Case "SweepEnd"
110|            MsgBox "Sweep ended"
120|    End Select

```

## Controlling the E5052A Controlling VBA Externally

```
130|      SCPI.STATUS.OPERATION.BIT12.SET = 0
140|      End
150|End Sub
```

---

**NOTE**

For more information on the user-defined register, refer to the status reporting system described in the appendix of the programmer's guide

---

## Using User-defined Variables

The E5052A has an area for which the users may set any value. The areas are divided for each data type.

An area can be used up to 10 (1 to 10) for each command.

The values set by a command cannot be removed by executing preset.

- SCPI.PROGram.VARiable.ARRay(1-10).DATA on page 308
- SCPI.PROGram.VARiable.ARRay(1-10).POINts on page 308
- SCPI.PROGram.VARiable.DOUBLE(1-10) on page 309
- SCPI.PROGram.VARiable.INTeger(1-10) on page 309
- SCPI.PROGram.VARiable.STRING(1-10) on page 310

### NOTE

These commands do not refer to or change the results within the E5052A.

The following is a sample program for configuration, which demonstrates how to use the floating-point-formatted user-defind array.

- |               |   |
|---------------|---|
| Line 30 to 50 | Define the variables.   |
| Line 70       | Assign values to the variables.   |
| Line 90       | Call the function to trigger the instrument.  |
| Line 110      | Configure marker X for frequency measurement (trace 1).   |
| Line 120      | Read out marker Y for frequency measurement (trace 1).  |
| Line 130      | Configure marker X for power measurement (trace 2).   |
| Line 140      | Read out marker Y for power measurement (trace 2).  |
| Line 160      | Set the value of marker Y for frequency measurement at the beginning of the user-defined array.         |
| Line 170      | Set the value of marker Y for power measurement to that of the 2nd dimension of the user-defined array. |

### Example 4-2

### How to use floating point formatted user-defined array

```
10 | Sub Main()
20 |
30 |     Dim Vcc1 As Double
40 |     Dim FP_Freq As Double
50 |     Dim FP_Power As Double
60 |
70 |     Vcc1 = 0.5
80 |
90 |     Call FP_SingleSweep
100|
110|     SCPI.CALCulate.FP.Trace(1).MARKer(1).X = Vcc1
120|     FP_Freq = SCPI.CALCulate.FP.Trace(1).MARKer(1).Y
130|     SCPI.CALCulate.FP.Trace(2).MARKer(1).X = Vcc1
140|     FP_Power = SCPI.CALCulate.FP.Trace(2).MARKer(1).Y
150|
```

## Controlling the E5052A Controlling VBA Externally

```
160|     SCPI.PROGRAM.VARIABLE.DOUBLE(1) = FP_Freq
170|     SCPI.PROGRAM.VARIABLE.DOUBLE(2) = FP_Power
180| End Sub
```

The following sample program demonstrates how to use the array-formatted user-defined array.

- Line 30 to 50 Define the variables.
- Line 70 Call the function to trigger the instrument.
- Line 90 Read out the number of points and set it to the variable.
- Line 100 to 110 Redefine the array (variable).
- Line 130 Read out the trace data and set it to the variable.
- Line 140 Read out the X-axis data and set them to the variable.
- Line 160 Specify the number of data points at the beginning of the user-defined array.
- Line 170 Specify the trace data at the beginning of the user-defined array.
- Line 190 Specify the number of data points to that of the 2nd dimension of the user-defined array.
- Line 200 Specify the X-axis data to that of the 2nd dimension of the user-defined array.

### Example 4-3

#### How to use the array formatted user-defined array

```
10| Sub Main()
20|
30|     Dim PN_Nop As Long
40|     Dim PN_Trace() As Double
50|     Dim PN_Freq() As Double

## **User Defined Window**

## Overview

The E5052A's user defined window provides graphics utility for tailoring the measurement and interpreting the results. Users can operate scale, trace, and marker functions as same as that of E5052A's other instrument mode.

## How to use the User Defined Window

This section explains how to use the user defined window on the E5052A.

### Printing Measurement Data in the User Define Window

The E5052A's user defined window enables the display traces by copying the data array to the trace array of the user defined window. Users can access all the data array of the user defined window via either VBA COM commands or SCPI commands. Up to 8 traces can be displayed in the E5052A's user defined window.

The example 5-1 shows a sample procedure that demonstrates how to display traces that users define data array both in X-axis and Y-axis.

- |                  |  |
|------------------|--|
| Lines 20 to 30   | Defines data array to be displayed in the trace of user defined window.  |
| Line 50          | Selects and specifies the user defined window as active window.  |
| Lines 80 to 90   | Copies formatted data trace from the frequency-power measurement results to the data array defined in the VBA program. |
| Line 110         | Specifies trace 1 as active trace  |
| Line 140         | Copies data array to X-axis data on trace 1  |
| Line 170         | Copies data array to Y-axis data on trace 1  |
| Lines 200 to 210 | Sets display unit of X-axis and Y-axis respectively.   |
| Line 240         | Execute autoscale  |
| Line 260         | Returns to the E5052A application  |

**NOTE**

The E5052A's VBA program is executed as an application. Therefore, if any executed VBA program takes a long time before returning control to the E5052A, all processing operations other than VBA are suspended during this time. To prevent this, use DoEvents to return the control to the E5052A.

---

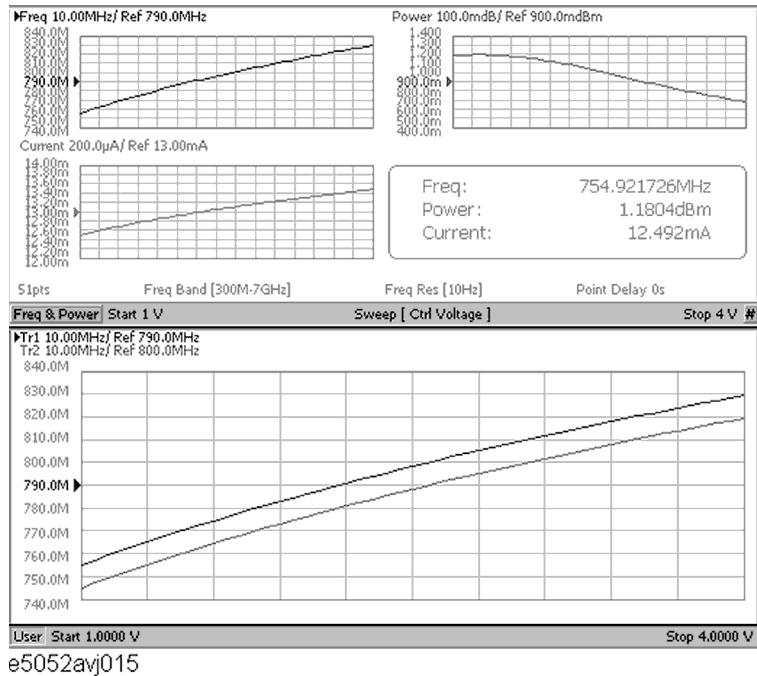

**NOTE**

The value in the X-data array for the user defined window has to have incremental order, that means (the value at N point) < (the value at N+1 point). When the error message, "Illegal parameter value" is received, check the values of the X-data array data on point-to-point to ensure this rule.

# Controlling Peripherals

This chapter explains how to control peripherals connected to the E5052A with GPIB by using the software (VISA library) installed in the E5052A.

## Overview

The E5052A macro function (E5052A VBA) can be used not only to automate measurements but also to control external measurement instruments connected via the USB/GPIB interface cable by acting as a self-contained system controller (see "Overview of Control System Based on Macro Function" on page 29).

The E5052A macro function (E5052A VBA) performs communications via the COM interface when controlling the E5052A itself, but it communicates via VISA (Virtual Instrument Software Architecture) when controlling external measurement instruments.

To control peripherals connected to the E5052A via the USB/GPIB interface cable, the following preparation is required.

## Preparation

### Importing definition files

To use the VISA library in the E5052A macro (E5052A VBA), you need to import two definition files into your project with the Visual Basic editor to define the VISA functions and perform other tasks. You can find the source file of this program saved under the following name on the sample program disk. For importing the module, see "Loading a module (importing)" on page 49

- visa32.bas
- vpptype.bas

## Programming with VISA

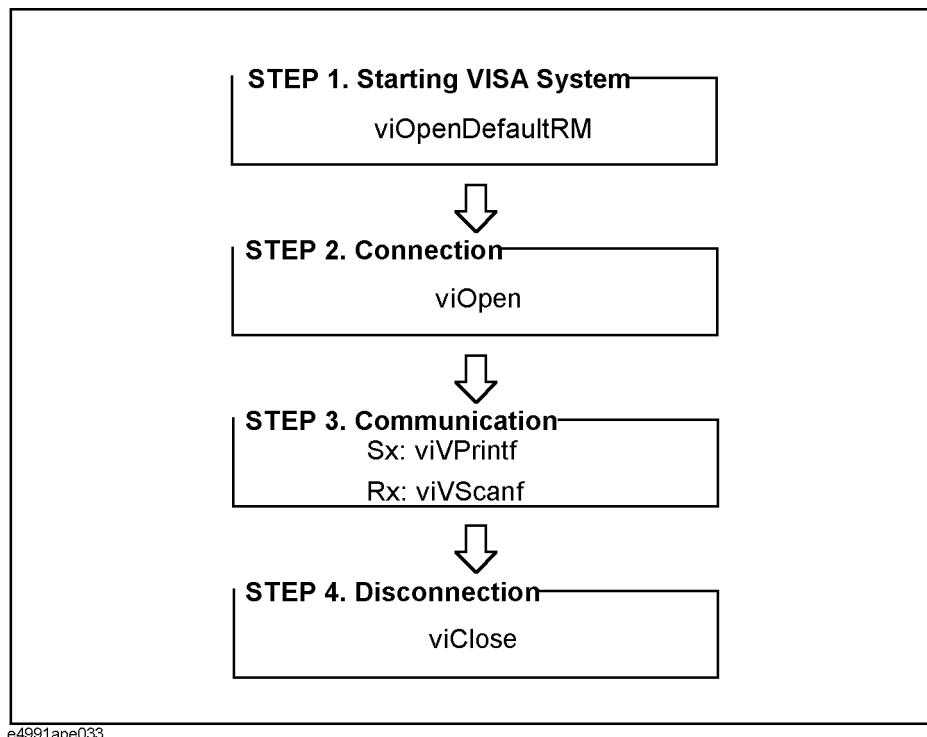

Figure 6-1 shows the flow of controlling the instrument with VISA. When developing a VISA program in the Visual Basic language, a special programming notice (in the readme text file listed below) must be reviewed.

For details on the use of the VISA library and the programming notice for using the VISA library with the E5052A macro (E5052A VBA), refer to the following files on the CD-ROM (Agilent part number: E5052-9050x).

- visa.hlp (on-line help for the VISA library)
- vbreadme.txt (notes on using the VISA library with VB)

**NOTE**

The number position shown by “x” in the part numbers above indicates the edition number.

**Figure 6-1****Flow of instrument control with VISA**

## STEP 1. Starting Up VISA System

VISA's viOpenDefaultRM function initializes and starts up the VISA system. The function viOpenDefaultRM should always be used when initiating VISA functions. The parameter of this function is startup information.

### Syntax

viOpenDefaultRM(*param*)

### Parameter

	<i>param</i>
Description	Startup information (output)
Data type	Long integer type

## STEP 2. Connection

VISA's viOpen function makes connection with the specified instrument. The viOpen function returns a value so that the VISA functions can apply it to the specified instrument. The parameters of this function are startup information, the address information of the specified instrument, access mode, timeout, and connection information.

### Syntax

viOpen(*param1*, *param2*, *param3*, *param4*, *param5*)

### Parameter

	<i>param1</i>
Description	Startup information (input)
Data type	Long integer type

	<i>param2</i>
Description	Address information of specified instrument (input)
Data type	Character string type
Syntax	GPIB[ <i>board</i> ] <sup>*1</sup> :: <i>primary address</i> <sup>*2</sup> ::INSTR

\*1. GPIBO for E5052A

\*2. GPIB address of instrument controlled by E5052A

	<i>param3</i>
Description	Access mode (Enter 0)

	<i>param4</i>
Description	Timeout (Enter 0)

	<i>param5</i>
Description	Connection information (output)
Data type	Long integer type

### STEP 3. Communication

VISA's viVPrintf function sends a program message (GPIB command) to the specified instrument. The parameters of this function are connection information, the program message, and the variable to be formatted.

#### NOTE

To input/output GPIB commands, the viVPrintf function and the viVScanf function are mainly used, but other VISA functions are also available. For more information, refer to visa.hlp (online help for the VISA library).

#### Syntax

viVPrintf(*param1, param2, param3*)

#### Parameter

	<i>param1</i>
Description	Connection information (input)
Data type	Long integer type

	<i>param2</i>
Description	Program message (input) <sup>*1</sup>
Data type	Character string type

\*1. When sending a program message of the GPIB command, a message terminator is required at the end of the message.

	<i>param3</i>
Description	A variable to be formatted <sup>*1</sup>
Data type	Specified data type

\*1. If not applicable, enter 0.

VISA's viVScanf function receives the result from the specified instrument and stores it in the output variable. The parameters of this function are connection information, the format parameter for the output variable, and the output variable.

#### Syntax

viVScanf(*param1, param2, param3*)

## Controlling Peripherals Programming with VISA

### Parameter

	<i>param1</i>
Description	Connection information (input)
Data type	Long integer type

	<i>param2</i>
Description	Format parameter for output variable
Data type	Character string type

	<i>param3</i>
Description	Output variable (output)
Data type	Character string type

### STEP 4. Disconnection

VISA's viClose function disconnects communication and terminates the VISA system. The parameter of this function is startup information.

### Syntax

viClose(*param*)

### Parameter

	<i>param</i>
Description	Startup information (input)
Data type	Long integer type

## COM Object Reference

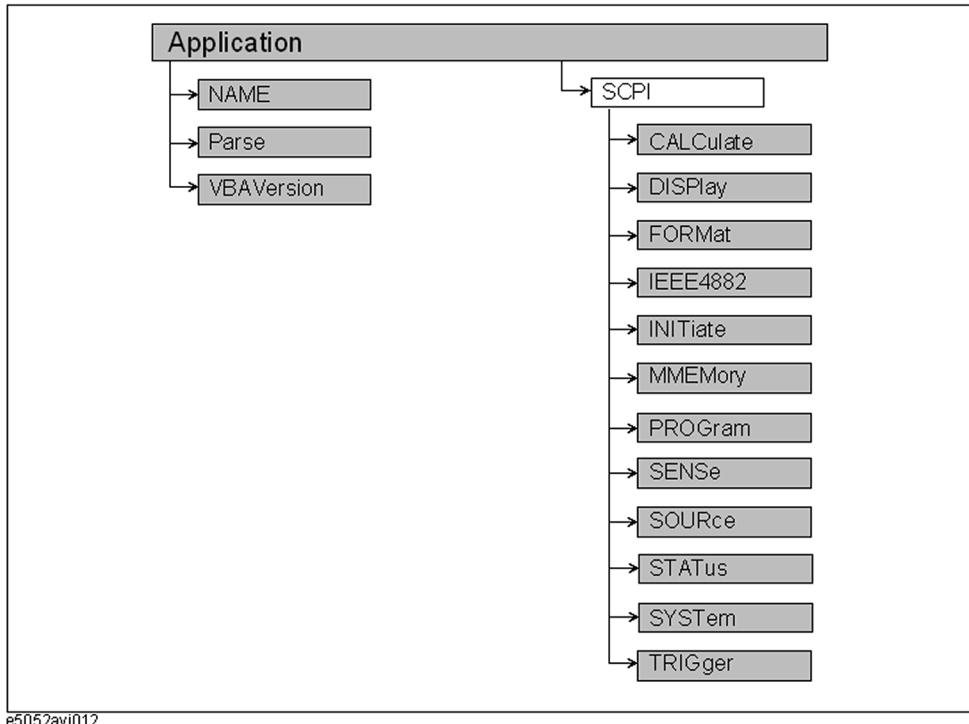

This chapter describes the COM object model of the Agilent E5052A and the COM object reference in alphabetical order. If you want to look up COM objects by corresponding front panel keys, see “COM object list by front panel key.”

## COM Object Model

The COM objects provided for the E5052A are structured hierarchically as shown in Figure 7-1.

**Figure 7-1**

**E5052A COM object model**

## Application Objects

The Application objects are at the top of the hierarchy of the E5052A COM object model. They consist of 3 objects dedicated to the COM interface and SCPI objects corresponding to SCPI commands. For information on the basic use of the 3 objects dedicated to the COM interface, see “Application Objects” on page 100.

## SCPI Objects

The SCPI objects are created to realize the SCPI commands of the E5052A with the COM interface. For information on the basic use of the SCPI objects, see “SCPI Objects” on page 101.

The conversion rules from the SCPI commands when writing SCPI object messages are as follows:

- SCPI must be at the beginning. Notice that the IEEE common commands start with SCPI.IEEE4882. and "\*" is omitted.
- Replace colons (:) used as the hierarchical separator symbol with dots (.)
- The number written in the object message is specified with ( ).
- You cannot omit the command message in the syntax.

SCPI command	COM object
OUTPUT 717;":SENS:SP:AVER:CONT 16"	→ SCPI.SENSE.SP.AVERage.COUNT = 16
OUTPUT 717;":SENS:SP:AVER:STAT?" ENTER 717;A\$	→ A = SCPI.SENSE.SP.AVERage.STATE
OUTPUT 717;"*CLS"	→ SCPI.IEEE4882.CLS

## Notational Rules of COM Objects

This section describes the rules for the description of the COM objects in this chapter.

### Syntax

Part with heading “Syntax” describes the syntax to send a COM object from the E5052A VBA to the E5052A. The syntax consists of the object part and the set/read part, with an equal “=” inserted between them. Variables are indicated by italicized letters. Variables with () are indices. For indices with () having their preset values, you can omit “(variable),” and, if omitted, the preset values are automatically set.

There are the following 3 types of syntax for coding using objects.

"Object (property) = *variable*": to set the stat of the E5052A.

*variable*=object (property): to read the stat of the E5052A.

"Object (method)": to make the E5052A perform some processing.

### Description

Part with heading “Description” describes how to use the COM object or the operation when executed. COM objects used only to read the state of the E5052A are indicated with “Read only” and ones used only to set the state of the E5052A “No read.”

## Variable

Part with heading “Variable” describes necessary variables when using the object. It gives the description, data type, allowable range, preset value, unit, resolution, and notes for *variable* (*italic*) shown in the syntax.

Variables declared as the string data type (String) are case insensitive. For variables of the string type that indicate arguments (written as *Param* in the syntax), you can omit lower-case letters.

The data types of the E5052A COM objects include 5 types as shown in Table 7-1. Before using variables, declare the data type of each variable. If you do not declare the data type of a variable, it is automatically dealt as the variant type.

**Table 7-1 Data type**

Data type	Name	Consumed memory	Range
Long	Long integer type	4 bytes	-2,147,483,648 to 2,147,483,647
Double	Double precision floating point type	8 bytes	For a negative value: -1.79769313486232E+308 to -4.94065645841247E-324  For a positive value: -1.79769313486232E+308 to -4.94065645841247E-324
Boolean	Boolean type	2 bytes	-1 (True) or 0 (False)
String	Character string type *1	1 byte/alphanumeric character	Up to approximately 2 billion characters
Variant	Variant type	16 bytes	No limitation

\*1. For a fixed length string, declare the number of characters.

## Examples

Part with heading “Examples” describes a simple example of how to use the object for coding with E5052A VBA.

## Equivalent Key

Part with heading “Equivalent key” shows the operational procedure of the front panel keys that has the same effect as this object.

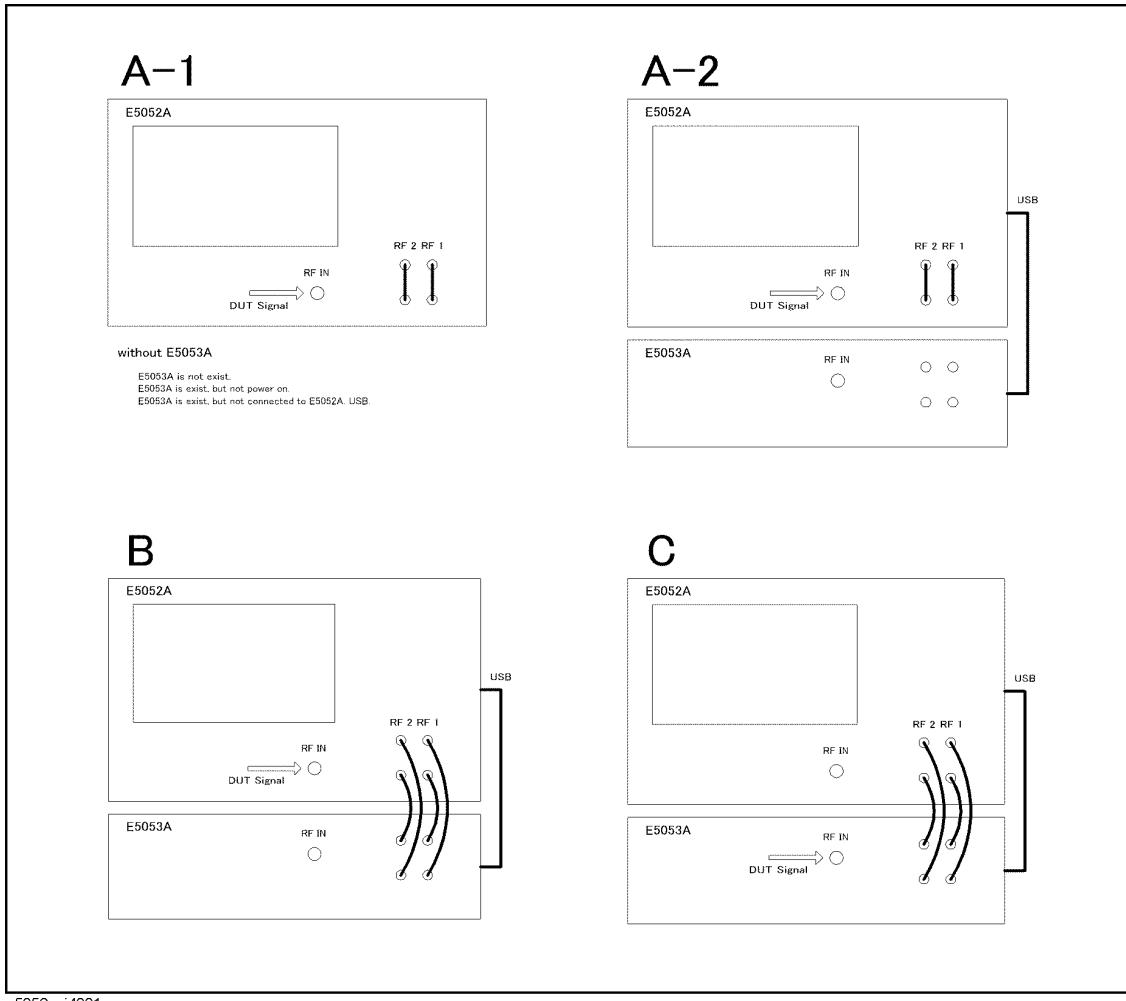

- |                         |   |
|-------------------------|---|
| <b>[Key]</b>            | Indicates that you press the key named Key.   |
| <b>[Key] -&gt; Item</b> | Indicates a series of key operation in which you press the <b>[Key]</b> key, move the focus to the button called Item on the displayed menu using the <b>[←→]</b> key and so on, and then press the <b>[Enter]</b> key. |

## Device Configuration Using E5052A and E5053A Microwave Downconverter

There are 4 types of device configurations using the E5052A and the E5053A Microwave Downconverter including the stand-alone use of the E5052A: A-1, A-2, B, and C(Figure 7-2)

Figure 7-2

Device Configurations Using E5052A and E5053A

e5052auj4001

The table below lists the configuration ID used in this chapter with its description as well.

Configuration ID	Description
A-1	E5052A used stand-alone
A-2	With downconverter turned off

Configuration ID	Description
B	With downconverter turned on and the RF input set to 'E5052A Direct'
C	With downconverter turned on and the RF input set to 'Downconverter'

## Application Objects

The Application objects are at the top of the hierarchy of the E5052A COM object model. They consist of 3 objects dedicated to the E5052A COM interface and SCPI objects corresponding to SCPI commands. This section describes the objects dedicated to the E5052A COM interface.

### **NAME**

Object type

Property

Syntax

*App* = NAME

Description

Reads out the application name of VBA. “E5052A” is always read out. (Read only)

Variable

	<i>App</i>
Description	Application name
Data type	Character string type (String)

Equivalent key

No equivalent key is available on the front panel.

### **Parse**

Object type

Method

Syntax

Parse(*Scpi*)

*Return* = Parse(*Scpi?*)

Description

Executes an SCPI command of the E5052A. For information on the SCPI commands, see Chapter “SCPI Command Reference” in the *E5052A Programmer’s Guide*.

The **Parse** object is a little slower in the execution speed than the COM object which has the same function as the SCPI command because it must parse the message string of the SCPI command.

Variable

	<i>Scpi</i>
Description	SCPI command
Data type	Character string type (String)

	<i>Return</i>
Description	Response (query) of the SCPI command

	<i>Return</i>
Data type	Character string type (String)

Equivalent key      No equivalent key is available on the front panel.

## **VBAVersion**

Object type      Property

Syntax      *Vers* = VBAVersion

Description      Reads out the version information of VBA installed in the E5052A. (Read only)

Variable

	<i>Vers</i>
Description	VBA version information
Data type	Character string type (String)

Equivalent key      From the **Help** menu of the Visual Basic editor, click **About Microsoft Visual Basic....**

## SCPI Objects

SCPI objects are a collection of the COM interface having one-on-one correspondence with the SCPI commands. This section describes the SCPI objects provided for the E5052A.

### SCPI.ABORt

Syntax	SCPI.ABORt
Description	Abort measurement (No Read)
Equivalent key	No equivalent key is available on the front panel.

### SCPI.CALCulate.FP(1-1).ALLTrace.ACTive

Syntax	SCPI.CALCulate.FP(1-1).ALLTrace.ACTive = <long> <long> = SCPI.CALCulate.FP(1-1).ALLTrace.ACTive
Description	Selects active trace
Variable	

	<b>&lt;Long&gt;</b>
Range	1 to 4
Preset value	1
Unit	-
Resolution	-

Equivalent key	No equivalent key is available on the front panel.
----------------	--

### SCPI.CALCulate.FP(1-1).ALLTrace.BDMarker.X.COUPle.STATE

Syntax	SCPI.CALCulate.FP(1-1).ALLTrace.BDMarker.X.COUPle.STATE = <boolean> <boolean> = SCPI.CALCulate.FP(1-1).ALLTrace.BDMarker.X.COUPle.STATE
Description	Turns on/off bandmarker X coupling function
Variable	

	<b>Param</b>
True or -1	Set bandmarker X coupling function mode to 'ON'

	<b>Param</b>
False or 0(Preset value)	Set bandmarker X coupling function mode to 'OFF'

**Equivalent key**      FP Menu -> Marker Function -> Couple  
                         FP Menu -> Marker Search -> Couple

### **SCPI.CALCulate.FP(1-1).ALLTrace.LIMit.FAIL**

<boolean> = SCPI.CALCulate.FP(1-1).ALLTrace.LIMit.FAIL

**Description**      Reads out the limit test result (Query Only)

**Variable**

	<b>Param</b>
True or -1	The limit test result is fail
False or 0(Preset value)	The limit test result is pass

When the limit test is set to OFF, false or 0 is always read out.

**Equivalent key**      No equivalent key is available on the front panel.

### **SCPI.CALCulate.FP(1-1).ALLTrace.MARKer.COUPle.STATE**

**Syntax**      SCPI.CALCulate.FP(1-1).ALLTrace.MARKer.COUPle.STATE = <boolean>  
                         <boolean> = SCPI.CALCulate.FP(1-1).ALLTrace.MARKer.COUPle.STATE

**Description**      Turns on/off marker coupling function

**Variable**

	<b>Param</b>
True or -1	Set marker coupling function mode to 'ON'
False or 0(Preset value)	Set marker coupling function mode to 'OFF'

**Equivalent key**      FP Menu -> Marker -> Couple

**SCPI.CALCulate.FP(1-1).ALLTrace.MARKer.DISCrete.STATE****Syntax**

SCPI.CALCulate.FP(1-1).ALLTrace.MARKer.DISCrete.STATE = <boolean>  
 <boolean> = SCPI.CALCulate.FP(1-1).ALLTrace.MARKer.DISCrete.STATE

**Description**

Enables/disables marker discrete function

**Variable**

	<b>Param</b>
True or -1	Enable marker discrete function
False or 0(Preset value)	Disable marker discrete function

**Equivalent key**

FP Menu -> Marker -> More Functions -> Discrete

**SCPI.CALCulate.FP(1-1).ALLTrace.MARKer.REFERENCE.NUMBer****Syntax**

SCPI.CALCulate.FP(1-1).ALLTrace.MARKer.REFERENCE.NUMBer = <long>  
 <long> = SCPI.CALCulate.FP(1-1).ALLTrace.MARKer.REFERENCE.NUMBer

**Description**

Sets/reads marker reference number

**Variable**

	<Long>
Range	1 to 6
Preset value	1
Unit	-
Resolution	-

**Equivalent key**

FP Menu -> Marker -> More Functions -> Ref Marker

**SCPI.CALCulate.FP(1-1).ALLTrace.MARKer.REFERENCE.STATE****Syntax**

SCPI.CALCulate.FP(1-1).ALLTrace.MARKer.REFERENCE.STATE = <boolean>  
 <boolean> = SCPI.CALCulate.FP(1-1).ALLTrace.MARKer.REFERENCE.STATE

**Description**

Turns on/off delta marker mode

**Variable**

	<b>Param</b>
True or -1	Set delta marker mode to 'ON'
False or 0(Preset value)	Set delta marker mode to 'OFF'

**Equivalent key** FP Menu -> Marker -> More Functions -> Ref Marker Mode

### **SCPI.CALCulate.FP(1-1).DATA.RDATA**

**Syntax**

SCPI.CALCulate.FP(1-1).DATA.RDATA = <variant>

<variant> = SCPI.CALCulate.FP(1-1).DATA.RDATA

**Description**

Sets/reads the measurement raw data

**Variable**

	<b>&lt;Variant&gt;</b>
Range	1...3003
Preset value	-
Unit	-
Resolution	-

**Equivalent key** No equivalent key is available on the front panel.

### **SCPI.CALCulate.FP(1-1).DATA.TDATA**

**Syntax**

<variant> = SCPI.CALCulate.FP(1-1).DATA.TDATA

**Description**

Sets/Reads tester mode data

**Variable**

	<b>&lt;Variant&gt;</b>
Range	1...3
Preset value	-
Unit	-
Resolution	-

**Equivalent key** No equivalent key is available on the front panel.

COM Object Reference  
**SCPI.CALCulate.FP(1-1).DATA.XDATa**

**SCPI.CALCulate.FP(1-1).DATA.XDATa**

Syntax            <variant> = SCPI.CALCulate.FP(1-1).DATA.XDATa

Description        Reads X-axis data (Read Only)

Equivalent key   No equivalent key is available on the front panel.

**SCPI.CALCulate.FP(1-1).TRACe(1-4).ALLMarker.ACTive**

Syntax            SCPI.CALCulate.FP(1-1).TRACe(1-4).ALLMarker.ACTive = <long>

<long> = SCPI.CALCulate.FP(1-1).TRACe(1-4).ALLMarker.ACTive

Description        Selects active marker

Variable

	<Long>
Range	1 to 6
Preset value	1
Unit	-
Resolution	-

Equivalent key   No equivalent key is available on the front panel.

**SCPI.CALCulate.FP(1-1).TRACe(1-4).ALLMarker.SEARch.DOMain.X**

Syntax            SCPI.CALCulate.FP(1-1).TRACe(1-4).ALLMarker.SEARch.DOMain.X = <string>

<string> = SCPI.CALCulate.FP(1-1).TRACe(1-4).ALLMarker.SEARch.DOMain.X

Description        Sets/reads marker search range (X-axis)

Variable

	Param
FRANge(Preset value)	Set marker search range (X-axis) to 'Full Range'
BDMarker	Set marker search range (X-axis) to 'Band Marker'

Equivalent key   FP Menu -> Marker Search -> Search Range (X)

**SCPI.CALCulate.FP(1-1).TRACe(1-4).ALLMarker.SEARch.DOMain.Y**

**Syntax** SCPI.CALCulate.FP(1-1).TRACe(1-4).ALLMarker.SEARch.DOMain.Y = <string>  
 <string> = SCPI.CALCulate.FP(1-1).TRACe(1-4).ALLMarker.SEARch.DOMain.Y

**Description** Sets/reads marker search range (Y-axis)

**Variable**

	<b>Param</b>
FRANge(Preset value)	Set marker search range (Y-axis) to 'Full Range'
BDMarker	Set marker search range (Y-axis) to 'Band Marker'

**Equivalent key** FP Menu -> Marker Search -> Search Range (Y)

**SCPI.CALCulate.FP(1-1).TRACe(1-4).ALLMarker.SEARch.PEAK**

**Syntax** SCPI.CALCulate.FP(1-1).TRACe(1-4).ALLMarker.SEARch.PEAK

**Description** Execute marker search all (No Read)

**Equivalent key** FP Menu -> Marker Search -> Peak -> Search Peak All

**SCPI.CALCulate.FP(1-1).TRACe(1-4).BDMarker.X.CENTer**

**Syntax** SCPI.CALCulate.FP(1-1).TRACe(1-4).BDMarker.X.CENTer = <double>  
 <double> = SCPI.CALCulate.FP(1-1).TRACe(1-4).BDMarker.X.CENTer

**Description** Sets/reads the center value of bandmarker X

**Variable**

	<Double>
Range	-1T to 1T
Preset value	0
Unit	-
Resolution	-

**Equivalent key** FP Menu -> Marker Function -> Band Marker X -> Center

## COM Object Reference

### **SCPI.CALCulate.FP(1-1).TRACe(1-4).BDMarker.X.SPAN**

FP Menu -> Marker Search -> Band Marker X -> Center

### **SCPI.CALCulate.FP(1-1).TRACe(1-4).BDMarker.X.SPAN**

#### Syntax

SCPI.CALCulate.FP(1-1).TRACe(1-4).BDMarker.X.SPAN = <double>

<double> = SCPI.CALCulate.FP(1-1).TRACe(1-4).BDMarker.X.SPAN

#### Description

Sets/reads the span value of bandmarker X

#### Variable

SCPI.CALCulate.FP(1-1).TRACe(1-4).BDMarker.X.STATE = <boolean>

<boolean> = SCPI.CALCulate.FP(1-1).TRACe(1-4).BDMarker.X.STATE

Description Turns on/off bandmarker X

Variable

	<b>Param</b>
True or -1	Set bandmarker X to 'ON'
False or 0(Preset value)	Set bandmarker X to 'OFF'

Equivalent key FP Menu -> Marker Function -> Band Marker X -> Band Marker X

FP Menu -> Marker Search -> Band Marker X -> Band Marker X

### **SCPI.CALCulate.FP(1-1).TRACe(1-4).BDMarker.X.STOP**

Syntax SCPI.CALCulate.FP(1-1).TRACe(1-4).BDMarker.X.STOP = <double>

<double> = SCPI.CALCulate.FP(1-1).TRACe(1-4).BDMarker.X.STOP

Description Sets/reads the stop value of bandmarker X

Variable

	<b>&lt;Double&gt;</b>
Range	-1T to 1T
Preset value	1T
Unit	-
Resolution	-

Equivalent key FP Menu -> Marker Function -> Band Marker X -> Stop

FP Menu -> Marker Search -> Band Marker X -> Stop

### **SCPI.CALCulate.FP(1-1).TRACe(1-4).BDMarker.Y.CENTer**

Description      Sets/reads the number of Y division

Variable

	<Long>
Range	4 to 30
Preset value	10
Unit	-

	<b>&lt;Long&gt;</b>
Resolution	2

Equivalent key      USER Menu -> Scale -> Divisions

## **SCPI.DISPlay.WINDoW.ACTive**

Syntax      SCPI.DISPlay.WINDoW.ACTive = <string>  
                 <string> = SCPI.DISPlay.WINDoW.ACTive

Description      Selects the active measurement window

Variable

	<b>Param</b>
PN1(Preset value)	Set active instrument window to 'Phase Noise'
SP1	Set active instrument window to 'Spectrum Monitor'
FP1	Set active instrument window to 'Freq & Power'
TR1	Set active instrument window to 'Transient'
USER1	Set active instrument window to 'User'

Equivalent key      PN Menu -> Measurement View -> Phase Noise

## **SCPI.SENSE.UDConverter.LO**

Syntax            SCPI.SENSE.UDConverter.LO = <double>  
<double> = SCPI.SENSE.UDConverter.LO

Description        Sets/reads the LO frequency of the frequency offset  
**Maximum value which can be set is 100/Harmonic (GHz).**

Variable        **When the conversion mode used in the frequency offset is RF=N\*LO+IF (Allowable setting range varies depending on the set value of Harmonic)**

	<Double>
Range	10M to 110G
Preset value	3G
Unit	-
Resolution	100m

**When the conversion mode used in the frequency offset is RF=N\*LO+IF (Allowable setting range varies depending on the set value of Harmonic)**

	<Double>
Range	500M to 110G
Preset value	3G
Unit	-
Resolution	100m

**Equivalent key**

## **SCPI.SENSE.UDConverter.MODE**

**Syntax**

SCPI.SENSE.UDConverter.MODE = <string>  
<string> = SCPI.SENSE.UDConverter.MODE

**Description**

Sets/reads the conversion mode of the frequency offset

**Variable**

	<b>Parameter</b>
USB (Preset value)	Set conversion mode to 'RF = n * LO + IF'
LSB	Set conversion mode to 'RF = n * LO - IF'

**Equivalent key**

## **SCPI.SENSE.UDConverter.STATE**

**Syntax**

SCPI.SENSE.UDConverter.STATE = <boolean>  
<boolean> = SCPI.SENSE.UDConverter.STATE

**Description**

Turn on/off frequency offset

**COM Object Reference**  
**SCPI.SOURce.FP(1-1).SWEep.PARameter**

Variable

	<b>Parameter</b>
True or -1	Enable frequency offset mode
False or 0 (preset value)	Disable frequency offset mode

Equivalent key

Syntax SCPI.SOURce.VOLTage.CONTrol.AFC.FBAND = <string>

<string> = SCPI.SOURce.VOLTage.CONTrol.AFC.FBAND

Description Sets/reads the frequency band in the auto frequency control function

**Variable**

**When the E5052A is used stand-alone, or with the downconverter turned off**

	<b>Description</b>
LOW	Set the frequency band in the auto frequency control function to '10M-1.5GHz'
HIGH(Preset value)	Set the frequency band in the auto frequency control function to '300M-7GHz'

**When the downconverter is turned on and the RF input is set to 'E5052A Direct'**

	<b>Description</b>
LOW	Set the frequency band in the auto frequency control function to '10M-1.5GHz'
HIGH(Preset value)	Set the frequency band in the auto frequency control function to '300M-3GHz'

**When the downconverter is turned on and the RF input is set to 'Downconverter'**

	<b>Description</b>
BAND3	Set the frequency band in the auto frequency control function to '3G-10GHz'
BAND4	Set the frequency band in the auto frequency control function to '9G-26.5GHz'

**Equivalent key**

**SCPI.STATus.OPERation.BIT12.PTRansition**

## **SCPI.STATus.OPERation.BIT12.PTRansition**

Syntax            SCPI.STATus.OPERation.BIT12.PTRansition = <long>  
                <long> = SCPI.STATus.OPERation.BIT12.PTRansition

Description        Sets/reads operation-program status positive transition filter value

Variable

	<Long>
Range	0 to 65535
Preset value	32767
Unit	-
Resolution	-

Equivalent key    No equivalent key is available on the front panel.

## **SCPI.STATus.OPERation.BIT12.SET**

Syntax            SCPI.STATus.OPERation.BIT12.SET = <long>

Description        Sets operation-program status condition register (No Read)

Variable

	<Long>
Range	0 to 14
Preset value	-
Unit	-
Resolution	-

Equivalent key    No equivalent key is available on the front panel.

## **SCPI.STATus.OPERation.CONDITION**

Syntax            <long> = SCPI.STATus.OPERation.CONDITION

Description        Reads operation status conditional register value (Read Only)

Equivalent key    No equivalent key is available on the front panel.

## **SCPI.STATUS.OPERATION.ENABLE**

**Syntax** SCPI.STATUS.OPERATION.ENABLE = <long>  
 <long> = SCPI.STATUS.OPERATION.ENABLE

**Description** Set/reads operation status enable register

**Variable**

## **SCPI.TRIGger.MODE**

Syntax            SCPI.TRIGger.MODE = <string>  
                  <string> = SCPI.TRIGger.MODE

Description        Selects the active measurement mode

Variable

	<b>Param</b>
PN1(Preset value)	Set measurement mode to 'Trigger to Phase Noise'
SP1	Set measurement mode to 'Trigger to Spectrum Monitor'
FP1	Set measurement mode to 'Trigger to Freq & Power'
TR1	Set measurement mode to 'Trigger to Transient'

## Commands with Variable Parameters and/or Setting Ranges Depending on Device Configuration

The table below lists the commands that have variable parameters and/or setting ranges depending on the device configuration.

**Table 7-2 SCPI Commands with Variable Parameters and/or Setting Ranges Depending on Device Configuration**

Command	Description
SCPI.SENSE.ATTenuation.LEVel	Sets/reads the input attenuator level
SCPI.SENSE.DCONverter.INPUT	Sets/reads the signal supplied to the RF input port
SCPI.SENSE.DCONverter.MANual.IFDelta	Sets/reads the differential frequency between CH1 and CH2 from the external mixer
SCPI.SENSE.DCONverter.MANual.IFGain(1-2)	Sets/reads the IF gain of the external mixer
SCPI.SENSE.DCONverter.MANual.LO(1-2).FREQuency	Sets/reads the LO frequency of the external mixer
SCPI.SENSE.DCONverter.MANual.LO(1-2).LEVel	Sets/reads the LO level of the external mixer
SCPI.SENSE.DCONverter.MANual.MEXTernal(1-2).BIAS.CURRent	Sets/reads the bias current to be supplied to the external mixer
SCPI.SENSE.DCONverter.MANual.MEXTernal(1-2).BIAS.STATe	Sets the bias current supplied to the external mixer on or off and reads its settings
SCPI.SENSE.DCONverter.MEXTernal	Sets the use of the external mixer on or off and reads its settings
SCPI.SENSE.FP(1-1).DCONverter.FREQuency	Sets/reads the input frequency to be supplied to the downconverter
SCPI.SENSE.FP(1-1).DCONverter.SSEarch.EXECute	Searches carrier signal and reflects the result to the input frequency of the downconverter (No Query)
SCPI.SENSE.FP(1-1).FBAND	Sets/reads frequency band
SCPI.SENSE.FP(1-1).POWER.INPUT.LEVel.MAXimum	Sets/reads the maximum input level of the downconverter in order to determine the IF Gain
SCPI.SENSE.PN(1-1).DCONverter.FREQuency	Sets/reads input frequency of the downconverter
SCPI.SENSE.PN(1-1).DCONverter.SSEarch.EXECute	Searches carrier signal and reflects the result to the input frequency of the downconverter (No Query)
SCPI.SENSE.PN(1-1).FBAND	Sets/reads frequency band
SCPI.SENSE.SP(1-1).CARRier.FBAND	Sets/reads the carrier frequency band
SCPI.SENSE.SP(1-1).FREQuency.CENTER	Sets/reads the center value
SCPI.SENSE.SP(1-1).FREQuency.START	Sets/reads the start value
SCPI.SENSE.SP(1-1).FREQuency.STOP	Sets/reads the stop value
SCPI.SENSE.TR(1-1).NARRow.FREQuency.PREFerence	Sets/reads the phase reference frequency of the narrowband mode $\zeta\mu$
SCPI.SENSE.TR(1-1).NARRow.FREQuency.TARGet	Sets/reads the target frequency of the narrowband mode

Command	Description
SCPI.SENSE.TR(1-1).WIDE.FREQuency.MAXimum	Set/reads transient frequency range in the wideband mode
SCPI.SENSE.UDConverter.HARMonic	Sets/reads the frequency offset factor
SCPI.SENSE.UDConverter.LO	Sets/reads the LO frequency of the frequency offset
SCPI.SENSE.UDConverter.MODE	Sets/reads the conversion mode of the frequency offset
SCPI.SENSE.UDConverter.STATE	Sets/reads the frequency offset
SCPI.SOURce.VOLTage.CONTrol.AFC.FBAND	Sets/reads the frequency band in the auto frequency control function
SCPI.SOURce.VOLTage.CONTrol.AFC.INPut.LEVel.MAXimum	Sets/reads the maximum input level of the downconverter in order to determine the IF Gain
SCPI.SOURce.VOLTage.CONTrol.AFC.TARGet	Sets/reads the target frequency
SCPI.TRIGger.TR(1-1).NARRow.VIdeo.FREQuency.CENTer	Sets/reads video trigger frequency value of the narrowband mode
SCPI.TRIGger.TR(1-1).WIDE.VIdeo.FREQuency.CENTer	Sets/reads video trigger frequency value of the wideband mode

## Manual Changes

This appendix contains the information required to adapt this manual to the versions or configurations of the Agilent E5052A which were manufactured earlier than the printing date of this manual.

## **Manual Changes**

The information in this manual applies directly to your Agilent E5052A model that has the applicable firmware version and serial number prefix listed on the title page of this manual. If your model is not listed there, this manual is not applicable to it as is written. To adapt this manual to your E5052A, refer to Table A-1 and Table A-2.

**Table A-1 Manual Changes by Serial Number**

<b>Serial Prefix or Number</b>	<b>Make Manual Changes</b>
MY442 or later	Change 4

**Table A-2 Manual Changes by Firmware Version**

<b>Version</b>	<b>Make Manual Changes</b>
A.01.10 or later	Change 1
A.01.50 or later	Change 2
A.02.00 or later	Change 3

Agilent Technologies uses a two-part, ten-character serial number that is stamped on the serial number plate (Figure A-1). The first five characters are the serial prefix and the last five digits are the suffix.

**Figure A-1**

**Serial Number Plate (Example)**

## Change 4

The equipment with prefix MY441 or earlier does not support the USB (USBTMC) interface port nor the removable hard disk function.

## Change 3

The following functions are integrated newly into the firmware version A.01.50 onward. They are not supported by the firmware version A.02.00 or earlier.

- E5053A Control function
- UserCAL executive function of power measurement
- Frequency blanking
- Frequency offset function
- External mixer support
- Carrier signal search function
- Support of USB(USBTMC) interface port

## Change 2

The following functions are integrated newly into the firmware version A.01.50 onward. They are not supported by the firmware version A.01.10 or earlier.

- Limit test function
- Auto frequency control function
- X-axis divisions
- Selectable preset
- Copy function of measurement result to user window
- Recall function of state file from softkey
- Selectable trace layout in frequency/power measurement mode.
- Integral phase noise, jitter and residual FM measurement in phase noise measurement
- Selectable quality level during phase noise measurement
- Display the progress of phase noise measurement
- Display spurious power value in phase noise measurement
- Moving function of harmonics to the center during spectrum monitor measurement
- Supporting  $\Delta$ Hz,% and ppm data formats in frequency measurement
- Supporting 200kHz frequency range in transient measurement
- Offset adding function to phase reference frequency in transient measurement

### Change 1

The functions listed below are limited when option 011 is installed.

**Table A-3 Limited functions when option 011 is installed**

Functions	Limitations
[PN] Start frequency	Minimum value is 10 Hz
[PN] Correlation	Not Available (The value is fixed as 1)
[PN] IF Gain	Not Available (The value is fixed as 10 dB)
[FP] Trigger Mode	Tester mode only

The SCPI commands that related the limited functions above have also the limitations on the initial values and the range of parameters.
