3070 Board Test System**Kits Available for 3070 Testhead Gas Spring Replacement**

Two new kits have been set up at SMO/SME to provide replacement parts for different models of the Series I and Series II 3070 testheads. These kits would be used to replace a broken or worn out gas spring. The part numbers are as follows:

E4000-66206	Gas Spring Kit for 307X Series I Testheads
E4000-66205	Gas Spring Kit for 317X Series I Testheads and all Series II Testheads

These kits include all the hardware necessary to replace a gas spring, and an installation document to explain the replacement process.

On a Series I testhead, over time it may have gotten harder to lift the testhead. A replacement spring would be appropriate in this case. Some of the gas springs may be fairly noisy. This is not a safety issue and does not affect the operation of the gas spring, but it could be replaced if desired.
