5DX Series II, 2L, 3 and 5000 Systems

Serial Numbers: All

“Automatic” X-ray Safety Test on 5DX Systems with one Loader or one Outer Barrier does not work

Parts Required:

P/N	Description	Qty.
[NONE]		

Situation:

The Automated X-ray Safety Test procedure, included in the 8.2 software release, fails when run on 5DX Systems that only have one loader or one outer barrier. The test exits before the CE can do the radiation survey.

Solution/Action:

Use the manual X-ray Safety Test Procedure (5021-1979).

This is located on the MTBU website at: <http://agilent.com/see/5DX>

Select “Product & Safety Notifications”

Select “X-ray Safety Test”

Select “X-ray Safety Test Procedure - Software Release 8.1 and Earlier”

The Automated X-ray Safety test will be corrected in the 8.3 software release.
