

# Agilent E1476A 64-Channel 3-Wire T/C Relay Multiplexer

## Data Sheet

- 1-Slot, C-size, register based
- Low-thermal offset relay <2  $\mu\text{V}$
- 64 channels of temperature with compensation
- 64 channels of voltage — 3-wire high, low, and guard
- 64 channels 2-wire and 32 channels 4-wire resistances
- Includes QUIC easy-to-use terminal block

Agilent E1476A

### Description

The Agilent E1476A High-Density Reed Relay Multiplexer is a **C-size, 1-slot, register-based VXI module**. This low-offset, thermocouple compensated multiplexer is dynamically configurable providing 64 channels of two-, three- or four-wire (32 channels) of switching. This multiplexer module consists of a component card with switches and a QUIC spring clamp terminal block that plugs onto the component card. The E1476A is ideal for applications needing a relay multiplexer that is dynamically configurable, and makes maximum high-quality, high-point count measurements.

High-integrity voltage measurements are possible with three-wire high, low, and guard switching. In addition to making two-wire resistance and precision four-wire resistance measurements, you can make up to 64 channels of thermocouple temperature measurements with automatic cold junction compensation.

Refer to the Agilent Technologies Website for instrument driver availability and downloading instructions, as well as for recent product updates, if applicable.

### Temperature Measurements

The reference thermistor is also accessible by both banks, each bank having a control switch allowing for either a two-wire or four-wire resistance measurement of the 5000  $\Omega$  reference thermistor mounted on the isothermal plane located in the terminal block. Using a scanning multimeter configuration, the channel relays and five control relays are programmed by SCPI commands or by register read/writes. SCPI command syntax to make a temperature scan of K type thermocouples is:

```
MEAS:TEMP? TC, K, (@100:163)
```

### Configuration

Each of the 64 channels provides separate high, low, and guard connections, all easily accessible via the quick connect screwless terminals on the companion terminal block. The multiplexer is organized in two banks of 32 with each bank having its own voltage sense control switch and one bank having a current source control switch. This dual bank configuration makes it possible to use half the channels as sense channels, while the other half are used as current source channels, thus obtaining 32 four-wire measurement channels, each with high, low, and guard connections.

One 6 cm (2.5-in) analog bus cable (E1400-61605) is shipped with each module to allow you to interconnect the E1411B 5.5-digit multimeter to one or more E1476A multiplexers via its front panel analog bus connector. For connection to an external voltmeter or other VXI multimeter with conventional front panel connectors, access to the analog bus lines is available in the terminal block. This allows you to connect the analog bus signal lines to the multimeter inputs using ordinary hookup wire.

## Product Specifications

### Input

#### DC:

Maximum voltage (any terminal to any other terminal or chassis): 120 Vdc

#### AC rms:

Maximum voltage (any terminal to any other terminal or chassis): 120 V rms

Maximum current (per channel common, non-inductive): 35 mA

Maximum power per channel: 4 VA

### DC

Maximum thermal offset per channel, differential

Hi-Lo: <4  $\mu$ V, <2  $\mu$ V (10 samples averaged)

Closed channel resistance: 100  $\Omega \pm 5 \Omega$

Insulation resistance (between any two points): 10E9  $\Omega$ , 40  $^{\circ}$ C, 95% RH

Insulation resistance (Hi to Lo, power off): n/a

### AC

Minimum bandwidth (-3 dB, 50  $\Omega$  source/load): 100 kHz

Crosstalk (channel-to-channel):

100 kHz: -70 dB

10 MHz: -45 dB

Both: n/a

Closed channel capacitance: <175 pf H-L, <300 pf L-G, <1500 pf G-C

### General Characteristics

Relays: Reed relays  
Break-before-make  
Power down state: Relays open on power down  
Power up state: Relays open on power up

Minimum relay life:

No load: 5x10E9 operations

Rated load: 10E7 operations

Reference junction measurement accuracy (18 to 28  $^{\circ}$ C operating): 0.38  $^{\circ}$ C

Strain gage excitation: n/a

Screw terminal wire size: 22 to 26 AWG (0.5, 0.75, 0.9 mm)

Scanning rate: 333 channels/s typ.

## Agilent Technologies' test and measurement service/support commitment

Agilent strives to maximize the value our test and measurement products give you, while minimizing your risk and service/support problems. We work to ensure that each product is realistically described in the literature, meets its stated performance and functionality, has a clearly stated global warranty, and is supported at least five years beyond its production life. Our extensive self-help tools include many online resources ([www.agilent.com](http://www.agilent.com)).

Experienced Agilent test engineers throughout the world offer practical recommendations for product evaluation and selection. After you purchase an Agilent product, they can provide no-charge assistance with operation verification and basic measurement setups for advertised capabilities. To enhance the features, performance, and flexibility of your test and measurement products—and to help you solve application challenges—Agilent offers free or extra-cost product options and upgrades, and sell expert engineering, calibration, and other consulting services.
