ELECTROSTATICALLY SENSITIVE (ES) DEVICES

Some semiconductor (solid state) devices can be damaged easily by static electricity. Such components commonly are called Electrostatically Sensitive (ES) Devices. Examples of typical ES devices are integrated circuits and some field effect transistors and semiconductor "chip" components.

The following techniques should be used to help reduce the incidence of component damage caused by static electricity.

1. Immediately before handling any semiconductor component or semiconductor-equipped assembly, drain off any electrostatic charge on your body by touching a known earth ground. Alternatively, obtain and wear a commercially available discharging wrist strap device, which should be removed for potential shock reasons prior to applying power to the unit under test.
2. After removing an electrical assembly equipped with ES devices, place the assembly on a conductive surface such as aluminum foil, to prevent electrostatic charge build-up or exposure of the assembly.
3. Use only a grounded-tip soldering iron to solder or unsolder ES devices.
4. Use only an anti-static solder removal device. Some solder removal devices not classified as "anti-static" can generate electrical charges sufficient to damage ES devices.
5. Do not use freon-propelled chemicals. These can generate electrical charge sufficient to damage ES devices.
6. Do not remove a replacement ES device from its protective package until immediately before you are ready to install it. (Most replacement ES devices are packaged with leads electrically shorted together by conductive foam, aluminum foil or comparable conductive material.)
7. Immediately before removing the protective material from the leads of a replacement ES device, touch the protective material to the chassis or circuit assembly into which the device will be installed.

CAUTION : Be sure no power is applied to the chassis or circuit, and observe all other safety precautions.

8. Minimize bodily motions when handling unpackaged replacement ES devices. (Otherwise harmless motion such as the brushing together of your clothes fabric or the lifting of your foot from a carpeted floor can generate static electricity sufficient to damage an ES devices.

PRODUCT SAFETY NOTICE

Each precaution in this manual should be followed during servicing.

Components identified with the IEC symbol  in the parts list are special significance to safety. When replacing a component identified with , use only the replacement parts designated, or parts with the same ratings or resistance, wattage, or voltage that are designated in the parts list in this manual. Leakage-current or resistance measurements must be made to determine that exposed parts are acceptably insulated from the supply circuit before returning the product to the customer.

SAFETY PRECAUTIONS

The following check should be performed for the continued protection of the customer and service technician.

LEAKAGE CURRENT CHECK

Measure leakage current to a known earth ground (water pipe, conduit, etc.) by connecting a leakage current tester between the earth ground and all exposed metal parts of the appliance (input/output terminals, screwheads, metal overlays, control shaft, etc.). Plug the AC line cord of the appliance directly into a 120V AC 60Hz outlet and turn the AC power switch on. Any current measured must not exceed 0.5mA.

AC Leakage Test

ANY MEASUREMENTS NOT WITHIN THE LIMITS OUTLINED ABOVE ARE INDICATIVE OF A POTENTIAL SHOCK HAZARD AND MUST BE CORRECTED BEFORE RETURNING THE APPLIANCE TO THE CUSTOMER.

Audio Section

Stereo Mode	
Continuous Average Power (FTC)	
55 Watts per channel, @ < 0.07% THD, 20Hz – 20kHz, both channels driven into 8 ohms	
Five-Channel Surround Modes	
Power Per Individual Channel	
Front L&R channels:	
45 Watts per channel	
@ < 0.07% THD, 20Hz–20kHz into 8 ohms	
Center channel:	
45 Watts @ < 0.07% THD, 20Hz–20kHz into 8 ohms	
Surround channels:	
45 Watts per channel	
@ < 0.07% THD, 20Hz–20kHz into 8 ohms	
Input Sensitivity/Impedance	
Linear (High-Level)	200mV/47k ohms
Signal-to-Noise Ratio (IHF-A)	95dB
Surround System Adjacent Channel Separation	
Pro Logic II	45dB
Dolby Digital (AC-3)	55dB
DTS	55dB
Frequency Response	
@ 1W (+0dB, –3dB)	10Hz–100kHz
High Instantaneous	
Current Capability (HCC)	±25 Amps
Transient Intermodulation	
Distortion (TIM)	Unmeasurable
Slew Rate	40V/μsec

FM Tuner Section

Frequency Range	87.5–108.0MHz
Usable Sensitivity	IHF 1.3μV/13.2dBf
Signal-to-Noise Ratio	Mono/Stereo 70dB/68dB
Distortion	Mono/Stereo 0.2%/0.3%
Stereo Separation	40dB @ 1kHz
Selectivity	±400kHz, 70dB
Image Rejection	80dB
IF Rejection	90dB

AM Tuner Section

Frequency Range	520–1710kHz
Signal-to-Noise Ratio	45dB
Usable Sensitivity	Loop 500μV
Distortion	1kHz, 50% Mod 0.8%
Selectivity	±10kHz, 30dB

Video Section

Television Format	NTSC
Input Level/Impedance	1Vp-p/75 ohms
Output Level/Impedance	1Vp-p/75 ohms
Video Frequency	
Response	10Hz–8MHz (–3dB)

General

Power Requirement	AC 125V/60Hz
Power Consumption	68W idle, 540W maximum (2 channels driven)
Dimensions	
Width	17.3 inches (440mm)
Height	6.6 inches (168mm)
Depth	15.4 inches (390mm)
Weight	23.8 lb (10.8kg)

Depth measurement includes knobs, buttons and terminal connections.

Height measurement includes feet and chassis.

| 6 Tone Mode | 16 Video 3 Audio Input Jacks | 26 Channel Select Button |
| 7 Surround Mode Selector | 17 Bass Control | 27 Speaker Select Button |
| 8 Tuning Selector | 18 Balance Control | 28 Test Tone Selector |
| 9 AM/FM Selector | 19 Treble Control | 29 Surround Mode Indicators |
| 10 Preset Stations Selector | 20 Volume Control | 30 Remote Sensor Window |

1 Main Power Switch: Press this button to apply power to the AVR 125. When the switch is pressed in, the unit is placed in a Standby mode, as indicated by the amber LED **3** surrounding the **System Power Control 2**. This button **MUST** be pressed in to operate the unit. To turn the unit off and prevent the use of the remote control, this switch should be pressed until it pops out from the front panel so that the word "OFF" may be read at the top of the switch.

NOTE: This switch is normally left in the "ON" position.

2 System Power Control: When the **Main Power Switch 1** is "ON," press this button to turn on the AVR 125; press it again to turn the unit off. Note that the **Power Indicator 3** surrounding the switch will turn green when the unit is on.

3 Power Indicator: This LED will be illuminated in amber when the unit is in the Standby mode to signal that the unit is ready to be turned on. When the unit is

in operation, the indicator will turn green. Should the indicator turn red, turn the unit off using the **Main Power Switch 1** and check the speaker wire connections to make certain that there are no short circuits.

4 Headphone Jack: This jack may be used to listen to the AVR 125's output through a pair of headphones. Be certain that the headphones have a standard 1/4" stereo phone plug. The speakers will automatically be turned off when the headphone jack is in use.

5 Selector Buttons: When you are establishing the AVR 125's configuration settings, use these buttons to select from the choices available, as shown in the **Main Information Display 25**.

6 Tone Mode: Pressing this button enables or disables the Bass and Treble tone controls. When the button is pressed so that the words **TONE IN** appear in the **Main Information Display 25**, the

settings of the **Bass 17** and **Treble 19** controls may be used to adjust the output signals. When the button is pressed once or twice so that the words **TONE OUT** appear in the **Main Information Display 25**, the output signal will be "flat," without any bass or treble alteration, no matter how the actual **Bass and Treble Controls 17/19** are adjusted.

7 Surround Mode Selector: Press this button to change the surround mode by scrolling through the list of available modes. Depending on the type of input, some modes are not always available. (See page 22 for more information about surround modes.)

8 Tuning Selector: Press the left side of the button to tune lower-frequency stations and the right side of the button to tune higher-frequency stations. When a station with a strong signal is reached, the **TUNED Indicator Q** will be illuminated in the **Main Information Display 25**.

FRONT - PANEL CONTROLS

In Manual tuning mode, tap the button lightly and note that the tuner will step up one frequency increment per button press. When the button is held for a few seconds you will note that the unit will quickly advance through the frequency band. Release it and the tuner will stop. In Auto tuning mode, each press of the button will search for the next station with an acceptable signal. Press and hold the button to skip through the acceptable stations. When the button is released, the tuner will not stop until it reaches a station with an acceptable frequency.

To switch back and forth between the Auto and Manual tuning modes, press the **Tuning Mode Selector 12**.

9 AM/FM Selector: Pressing this button will automatically switch the AVR 125 to the Tuner mode. Pressing it again will switch between the AM and FM frequency bands. (See page 25 for more information on the tuner.)

10 Preset Stations Selector: Press this button to scroll up or down through the list of stations that have been entered into the preset memory. (See page 25 for more information on tuner presets.)

11 Input Source Selector: Press this button to change the input by scrolling up or down through the list of **Input Indicators 22**.

12 Tuning Mode Selector: Press this button to select Auto or Manual tuning. When the button is pressed so that the **AUTO Indicator R** lights, the tuner will search for the next station with an acceptable signal when the **Tuning Selector 8 21** is pressed. When the button is pressed so that the **AUTO Indicator R** is not lit, each press of the **Tuning Selector 8 21** will increase the frequency. This button may also be used to switch between Stereo and Mono modes for FM radio reception. When weak reception is encountered, press the button until the **STEREO Indicator P** goes out to switch to Mono reception. Press and hold again to switch back to STEREO mode. (See page 25 for more information on using the tuner.)

13 Digital Optical 3 Input: Connect the optical digital audio output of an audio or video product to this jack. When the input is not in use, be certain to keep the plastic cap installed to avoid dust contamination that might degrade future performance.

14 Digital Coax 3 Input: This jack is used for connection to the output of portable audio devices, video game consoles or other products that have a coax digital audio jack.

15 Video 3 Video Input Jacks: These jacks may be used for temporary connection to the composite or S-Video output of video games, camcorders or other portable video products.

16 Video 3 Audio Input Jacks: These audio jacks may be used for temporary connection to video games or portable audio/video products such as camcorders and portable audio players.

17 Bass Control: Turn this control to modify the low-frequency output of the left/right channels by as much as $\pm 10\text{dB}$, when the unit is in the "Surround Off" mode. Set this control to a suitable position for your taste or room acoustics.

18 Balance Control: Turn this control to change the relative volume for the front left/right channels.

NOTE: For proper operation of the surround modes this control should be at the midpoint or "12 o'clock" position.

19 Treble Control: Turn this control to modify the high frequency output of the left/right channels by as much as $\pm 10\text{dB}$, when the unit is in the "Surround Off" mode. Set this control to a suitable position for your taste or room acoustics.

20 Volume Control: Turn this knob clockwise to increase the volume, counterclockwise to decrease the volume. If the AVR 125 is muted, adjusting the **Volume Control 20 43** will automatically release the unit from the silenced condition.

21 Set Button: When making choices during the setup and configuration process, press this button to enter the desired setting as shown in the **Main Information Display 25** into the AVR 125's memory. The set button may also be used to change the display brightness. (See page 26.)

22 Input Indicators: A green LED will light in front of the input that is currently being used as the source for the AVR 125.

23 Delay: Press this button to begin the sequence of steps required to enter delay time settings. (See page 19 for more information on delay times.)

24 Digital Input Selector: When playing a source that has a digital output, press this button to select between the **Optical 13 22** and **Coaxial 14 19** Digital inputs or to select the source's analog input. (See pages 23–25 for more information on digital audio.)

25 Main Information Display: This display delivers messages and status indications to help you operate

the receiver. (See pages 7–8 for a complete explanation of the Information Display.)

26 Channel Select Button: Press this button to begin the process of trimming the channel output levels using an external audio source. (For more information on output level trim adjustment, see page 25.)

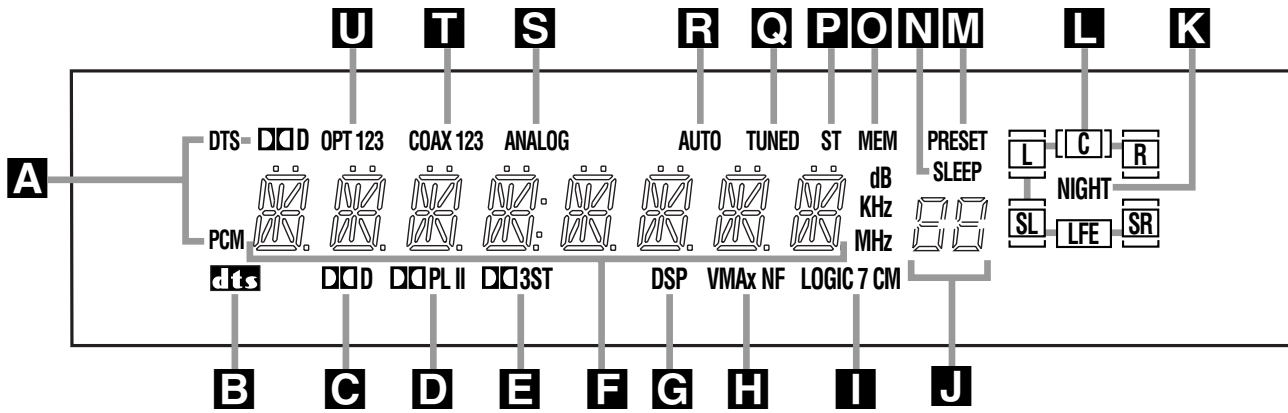

27 Speaker Select Button: Press this button to begin the process of configuring the unit to match the type of speakers used in your listening room. (See pages 16–19 for more information on speaker setup and configuration.)

28 Test Tone Selector: Press this button to begin the process of adjusting the channel output levels using the internal test tone as a reference. (For more information on output level adjustment, see page 18.)

29 Surround Mode Indicators: A green LED will light in front of the surround mode that is currently in use.

30 Remote Sensor Window: The sensor behind this window receives infrared signals from the remote control. Aim the remote at this area and do not block or cover it.

FRONT-PANEL INFORMATION DISPLAY

- A** Bitstream Indicators
- B** DTS Mode Indicator
- C** Dolby Digital Indicator
- D** Dolby Pro Logic II Indicator
- E** Dolby 3 Stereo Indicator/Stereo Indicator
- F** Main Information Display
- G** DSP Mode Indicator
- H** VMAx Mode Indicators
- I** Logic 7 Mode Indicators
- J** Preset Number/Sleep Timer
- K** Night Mode Indicator
- L** Speaker/Channel Input Indicators
- M** Preset Indicator
- N** Sleep Indicator
- O** Memory Indicator
- P** Stereo Indicator
- Q** Tuned Indicator
- R** Auto Indicator
- S** Analog Input Indicator
- T** Coaxial Digital Input Indicators
- U** Optical Digital Input Indicators

A Bitstream Indicators: When the input is a digital source, one of these indicators will light to display the specific type of data signal in use.

B DTS Mode Indicator: This indicator lights when a DTS-encoded source is playing and DTS Surround decoding is in use.

C Dolby Digital Indicator: This indicator lights when a Dolby Digital source is being played and Dolby Digital surround decoding is in use.

D Dolby Pro Logic II Indicator: This indicator lights when the Dolby Pro Logic II mode has been selected.

- It is possible to see the Dolby Pro Logic II indicator lit simultaneously with the Dolby Digital indicator, even though the Dolby Digital surround mode has been selected. This is due to the specifications for Dolby Digital processing, which require that the Dolby Pro Logic II mode be used any time a 2-channel Dolby signal is detected.

- If you desire 5.1-channel audio, check the audio settings in the menus for both your DVD player and your DVD disc to make sure that a 5.1-channel Dolby Digital sound track is available and has been selected.

E Dolby 3 Stereo Indicator/Stereo Indicator: The entire indicator lights when the Dolby 3 Stereo mode has been selected. When the surround modes are turned off so that two-channel stereo playback is in use, only the "ST" indicator will light.

F Main Information Display: This display shows messages relating to the status, input source, surround mode, tuner, volume level or other aspects of the AVR 125's operation.

G DSP Mode Indicator: This indicator lights when any of the surround modes created by Digital Signal Processing, or DSP are in use. These modes include Hall 1, Hall 2, Theater and 5-Channel Stereo.

H VMAx Mode Indicators: This indicator lights when the VMAx mode is in use. **VMAx F** appears when the Far Field VMAx mode is selected; **VMAx N** appears when the Near Field VMAx mode is selected. (See page 22 for a description of the VMAx modes.)

I Logic 7 Mode Indicators: These indicators light when the Logic 7 mode is in use. **LOGIC 7C** appears for the Cinema version of Logic 7; **LOGIC 7M** appears for the Music version of Logic 7. (See page 22 for a description of the Logic 7 modes.)

J Preset Number/Sleep Timer: When the tuner is in use, these numbers indicate the specific preset memory location in use. (See page 25 for more information on preset stations.) When the Sleep function is in use, these numbers show how many minutes remain before the unit goes into the Standby mode. (See page 21 for information on the Sleep Function.)

K Night Mode Indicator: This indicator lights when the AVR 125 is in the Night mode, which preserves the dynamic range of digital program material at low

volume levels. This mode is only available with specially encoded Dolby Digital sources. (See page 24 for a description of the Night Mode.)

L Speaker/Channel Input Indicators: These indicators are multipurpose, indicating either the speaker type selected for each channel or the incoming data-signal configuration. The left, center, right, right surround and left surround speaker indicators are composed of three boxes, while the subwoofer is a single box. The center box lights when a "small" speaker is selected, and the two outer boxes light when "large" speakers are selected. When none of the boxes are lit for the center, surround or subwoofer channels, no speaker has been assigned to one of those positions. (See page 17 for more information on configuring speakers.) The letters inside each of the center boxes display active input channels. For standard analog inputs, only the L and R will light, indicating a stereo input. When a digital source is playing, the indicators will light to display the channels being received at the digital input. When the letters flash, the digital input has been interrupted. (See pages 18–19 for more information on the Channel Indicators.)

M Preset Indicator: This indicator lights when the tuner is in use to show that the **Preset Number/Sleep Timer J** is showing the station's preset memory number. (See page 25 for more information on tuner presets.)

N Sleep Indicator: This indicator lights when the Sleep function is in use. The numbers in the Preset Number/Sleep Timer Indicators will show the minutes

FRONT - PANEL INFORMATION DISPLAY

remaining before the AVR 125 goes into the Standby mode. (See page 21 for more information.)

M **Memory Indicator:** This indicator flashes when entering presets and other information into the tuner's memory.

P **Stereo Indicator:** This indicator lights when an FM station is being tuned in stereo.

T **Tuned Indicator:** This indicator lights when a station is being received with sufficient signal strength to provide acceptable listening quality.

A **Auto Indicator:** This indicator lights when the tuner's Auto mode is in use.

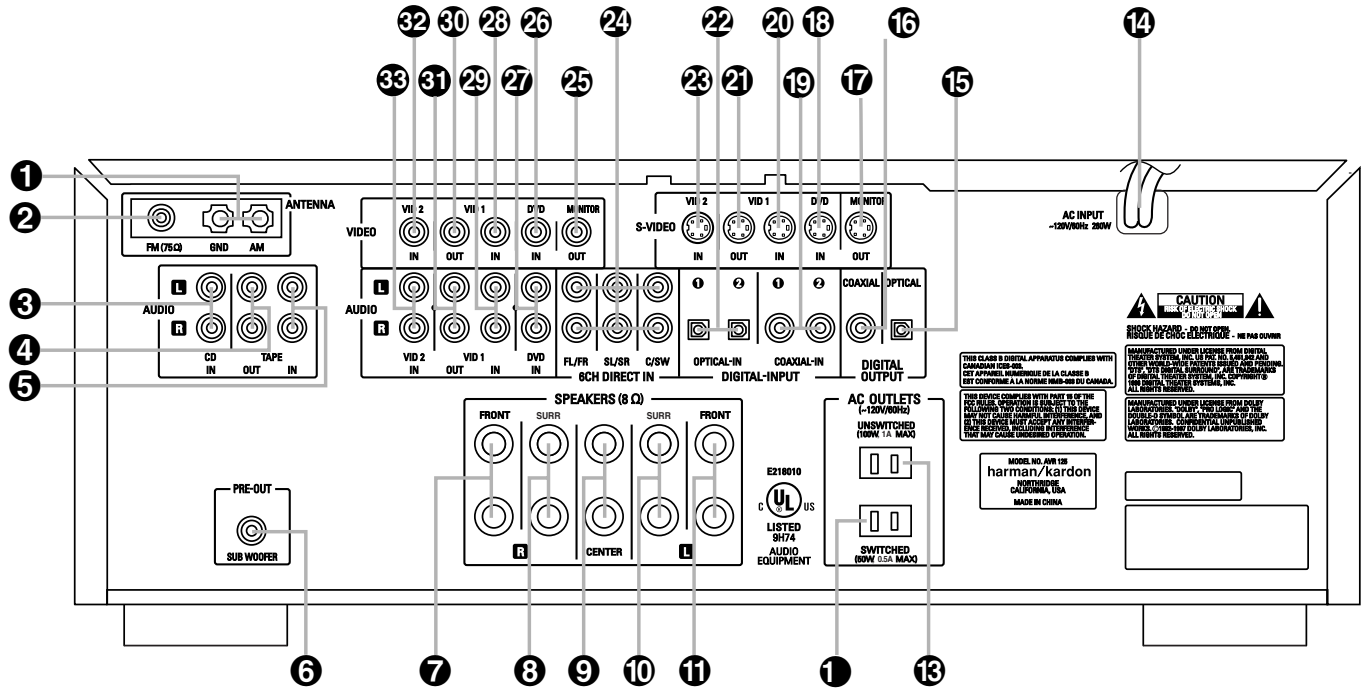

S **Analog Input Indicator:** This indicator lights when an analog input source has been selected.

C **Coaxial Digital Input Indicators:** These indicators light to show when a Coaxial Digital Input has been selected.

O **Optical Digital Input Indicators:** These indicators light to show when an Optical Digital Input has been selected.

NOTE: See page 23 for information on assigning either an analog input or one of the digital inputs to the source currently in use.

REAR-PANEL CONNECTIONS

- 1 AM Antenna
- 2 FM Antenna
- 3 CD Inputs
- 4 Tape Outputs
- 5 Tape Inputs
- 6 Subwoofer Output
- 7 Front Speaker Outputs
- 8 Surround Speaker Outputs
- 9 Front Speaker Outputs
- 10 Surround Speaker Outputs
- 11 Front Speaker Outputs
- 1 Switched AC Accessory Outlet
- 13 Unswitched AC Accessory Outlet

- 14 AC Power Cord
- 15 Optical Digital Output
- 16 Coaxial Digital Output
- 17 Video Monitor S-Video Output
- 18 DVD S-Video Input
- 19 Coaxial Digital Inputs
- 20 Video 1 S-Video Input
- 21 Video 1 S-Video Output
- 22 Optical Digital Inputs
- 23 Video 2 S-Video Input
- 24 6-Channel Direct Inputs
- 25 Video Monitor Composite Video Output
- 26 DVD Composite Video Input

- 27 DVD Audio Inputs
- 28 Video 1 Composite Video Input
- 29 Video 1 Audio Inputs
- 30 Video 1 Composite Video Output
- 31 Video 1 Audio Outputs
- 32 Video 2 Composite Video Input
- 33 Video 2 Audio Inputs

1 AM Antenna: Connect the AM loop antenna supplied with the receiver to these terminals. If an external AM antenna is used, make connections to the **AM** and **GND** terminals in accordance with the instructions supplied with the antenna.

2 FM Antenna: Connect the supplied indoor or an optional external FM antenna to this terminal.

3 CD Inputs: Connect these jacks to the output of a compact disc player or CD changer.

4 Tape Outputs: Connect these jacks to the **RECORD/INPUT** jacks of an audio recorder.

5 Tape Inputs: Connect these jacks to the **PLAY/OUT** jacks of an audio recorder.

6 Subwoofer Output: Connect this jack to the line-level input of a powered subwoofer. If an external subwoofer amplifier is used, connect this jack to the subwoofer amplifier input.

7 9 11 Front Speaker Outputs: Connect these outputs to the matching + or – terminals on your front speakers. When making speaker connections, always make certain to maintain correct polarity by connecting the black terminal to the negative (–) terminal on the speakers. Connect the white terminal to the positive (+) terminal on the left front speaker, the red terminal to the positive (+) terminal on the right front speaker and the green terminal to the positive (+) terminal on the center front speaker. Newer speakers may have matching color terminals in accordance with the new CEA specifications, while existing speakers typically use a red terminal for the positive (+) speaker wire

connection. (See page 14 for more information on speaker polarity.)

8 10 Surround Speaker Outputs: Connect these outputs to the matching + or – terminals on your left and right surround speakers. When making speaker connections always make certain to maintain correct polarity by connecting the black terminal to the negative (–) terminal on the speakers. Connect the blue terminal to the positive (+) terminal on the left surround speaker and the gray terminal to the positive (+) terminal on the right surround speaker. Newer speakers may have matching color terminals in accordance with the new CEA specifications, while existing speakers typically use a red terminal for the positive (+) speaker wire connection. (See page 14 for more information on speaker polarity.)

REAR-PANEL CONNECTIONS

1 **Switched AC Accessory Outlet:** This outlet may be used to power any device you wish to have turned on or off at the same time as the AVR 125. Any device connected to this outlet will be off when the AVR 125 is in the Standby mode, and power will be supplied to the outlet when the AVR 125 is turned on.

13 **Unswitched AC Accessory Outlet:** This outlet may be used to power any AC device. The power will remain on at this outlet regardless of whether the AVR 125 is on or off.

IMPORTANT NOTE: The total power consumption of all devices connected to the accessory outlets should not exceed 100 watts. Do not connect power amplifiers or other high-current draw devices to these outlets.

14 **AC Power Cord:** Connect the AC plug to an unswitched AC wall outlet.

15 **Optical Digital Output:** Connect this jack to the matching digital audio input connector on a digital recorder such as a CD-R or MiniDisc recorder.

16 **Coaxial Digital Output:** Connect this jack to the matching digital audio input connector on a digital recorder such as a CD-R or MiniDisc recorder.

17 **25** **Video Monitor Outputs:** Connect these jacks to the composite or S-Video input of a TV monitor or video projector to view the output of any standard video source selected by the receiver's video switcher.

18 **26** **DVD Video Inputs:** Connect one of these jacks to the composite or S-Video output jacks on a DVD or other video source.

19 **Coaxial Digital Inputs:** Connect the coax digital audio output from a DVD player, HDTV receiver, LD player, satellite receiver, cable box, MiniDisc recorder or CD player to these jacks. The signal may be either a Dolby Digital signal, DTS signal or a standard PCM digital source. Do not connect the RF digital output of an LD player to these jacks.

20 **23** **Video 1 Video Inputs:** Connect one of these jacks to the **PLAY/OUT** composite or S-Video jacks on a VCR or other video source.

21 **30** **Video 1 Video Outputs:** Connect one of these jacks to the **RECORD/INPUT** composite or S-Video jack on a VCR.

22 **Optical Digital Inputs:** Connect the optical digital audio output from a DVD player, HDTV receiver, LD player, satellite receiver, cable box, MiniDisc player or recorder, or CD player to these jacks. The signal may be either a Dolby Digital signal, a DTS signal or a standard PCM digital source.

23 **32** **Video 2 Video Inputs:** Connect one of these jacks to the **PLAY/OUT** composite or S-Video jacks on a TV, VCR or other video source.

24 **6-Channel Direct Inputs:** If an external digital audio decoder is used, connect the outputs of that decoder to these jacks.

These jacks have been color-coded as follows to assist you in making correct channel connections:

Front Left	White
Front Right	Red
Center	Green
Surround Left	Blue
Surround Right	Gray
Subwoofer	Purple

27 **DVD Audio Inputs:** Connect these jacks to the analog audio jacks on a DVD player or other source device.

NOTE: The default setting for the audio input associated with DVD is the **Coaxial Digital Input 1** **19**. If you connect the audio outputs of a DVD player to the analog jacks **27**, change the input setting as shown on page 20.

29 **Video 1 Audio Inputs:** Connect these jacks to the **PLAY/OUT** audio jacks on a VCR or other video source.

31 **Video 1 Audio Outputs:** Connect these jacks to the **RECORD/INPUT** audio jacks on a VCR.

33 **Video 2 Audio Inputs:** Connect these jacks to the **PLAY/OUT** audio jacks on a VCR, satellite receiver, cable box, video game or other composite video source.

NOTE: The function names shown here refer to each button's feature when used with the AVR 125. Most buttons have additional functions when used with other devices. See pages 31–32 for a list of these functions.

REMOTE CONTROL FUNCTIONS

IMPORTANT NOTE: The AVR 125's remote may be programmed to control up to seven devices, including the AVR 125. Before using the remote, remember to press the **Input Selector Button 5** that corresponds to the unit you wish to operate. In addition, the AVR 125's remote is shipped from the factory to operate the AVR 125 and most recent Harman Kardon products. The remote is also capable of operating a wide variety of other products using the control codes that are part of the remote. Before using the remote with other products, follow the instructions on pages 27–30 to program the proper codes for the products in your system.

It is also important to remember that many of the buttons on the remote take on different functions, depending on the product selected using the Device Control Selectors. The descriptions shown here primarily detail the functions of the remote when it is used to operate the AVR 125. (See pages 31–32 for information about alternate functions for the remote's buttons.)

1 Power Off Button: Pressing this button turns off (places in the Standby mode) the device that was last selected by pressing one of the **Input Selectors 5**. To place the AVR 125 in the Standby mode, first press the **AVR Selector Button 6** and then press this button.

2 IR Transmitter Window: Point this window towards the AVR 125 when pressing buttons on the remote to make certain that infrared commands are properly received.

3 Program Indicator: This three-color indicator is used to guide you through the process of programming the remote. (See pages 27–30 for information on programming the remote.)

4 Power On Button: After selecting a device by pressing one of the **Input Selectors 5**, press this button to turn the device on. To turn on the AVR 125, press the **AVR Selector Button 6**.

5 Input Selectors: Pressing one of these buttons will perform three actions at the same time. First, if the AVR 125 is not turned on, this will power up the unit. Next, it will select the source shown on the button as the input to the AVR 125. Finally, it will change the remote control so that it controls the device selected. After pressing one of these buttons you must press the **AVR Selector Button 6** again to operate the AVR 125's functions with the remote.

6 AVR Selector: Pressing this button will switch the remote so that it will operate the AVR 125's functions. If the AVR 125 is in the Standby mode, it will also turn the AVR 125 on.

7 AM/FM Tuner Select: Press this button to select the AVR 125's tuner as the listening choice. Pressing this button when the tuner is already in use will switch between the AM and FM bands.

8 Test Button: Press this button to begin the sequence used to calibrate the AVR 125's output levels. (See pages 18–19 for more information on calibrating the AVR 125.)

9 Sleep Button: Press this button to place the unit in the Sleep mode. After the time shown in the display, the AVR 125 will automatically go into the Standby mode. Each press of the button changes the time until turn-off in the following order:

This button is also used to change channels on your TV when the TV is selected, and it is also used to end the process of creating a macro command. (See page 28 for more information on creating macros.)

10 Surround Mode Selector: Press this button to begin the process of changing the surround mode. After the button has been pressed, use the **▲/▼ Buttons 13 17** to select the desired surround mode. (See page 22 for more information.) This button is also used to tune channels when the TV is selected, and during the process of erasing stored macro commands. (See page 28 for more information on macros.)

NOTE: The **Sleep Button 9** and **Surround Mode Selector 10** may also function as the Channel + and – keys when the remote is programmed for use with TVs, cable boxes, VCRs, satellite receivers or other video devices with tuners. See page 29 for information on programming the remote for Channel Control Punch-Through capability so that you may change channels on a separate device when the remote is in AVR mode.

11 Night Mode: Press this button to activate the Night mode. This mode is available in specially encoded digital sources to preserve dialog (center channel) intelligibility at low volume levels.

12 Channel Select Button: This button is used to start the process of setting the AVR 125's output levels to an external source. Once this button is pressed, use the **▲/▼ Buttons 13 17** to select the channel being adjusted, then press the **Set Button 15**, followed by the **▲/▼ Buttons 13 17** again, to change the level setting. (See page 25 for more information.)

13 ▲ Button: This multipurpose button is used to change configuration settings such as output levels. When changing an item such as the surround mode or digital input directly, first press the function or mode to be changed (e.g., press the **Surround Mode Selector 10** to select a surround mode or the **Digital Select Button 16** to change the digital input) and then press this button to scroll through the list of available choices.

14 ◀ Button: This button is used to change the setting during some of the setup procedures for the AVR 125.

15 Set Button: This button is used to enter settings into the AVR 125's memory. It is also used in the setup procedures for delay time, speaker configuration and channel output level adjustment.

16 Digital Select: Press this button to assign one of the digital inputs **19 22 13 14** to the source currently in use. (See page 23 for more information on using digital inputs.)

17 ▼ Button: This multipurpose button is used to change configuration settings such as output levels. When changing an item such as the surround mode or digital input directly, first press the function or mode to be changed (e.g., press the **Surround Mode Selector 10** to select a surround mode or the **Digital Select Button 16** to change the digital input) and then press this button to scroll through the list of available choices.

18 Numeric Keys: These buttons serve as a ten-button numeric keypad to enter tuner preset positions. They are also used to select channel numbers when TV has been selected on the remote, or to select track numbers on a CD, DVD or LD player, depending on how the remote has been programmed.

19 Tuner Mode: Press this button when the tuner is in use to select between automatic tuning and manual tuning. In automatic tuning mode, the **AUTO Indicator R** will be lit, and only stations with acceptable signal quality may be tuned by pressing the **Tuning Up/Down Buttons 8 21**. When the button is pressed so that the **AUTO Indicator R** goes out, manual tuning mode is engaged, and pressing the **Tuning Buttons 21 8** will move the frequency up or down in single-step increments. When the FM band is in use, pressing this button when a station's signal is weak will change to monaural reception. (See page 25 for more information.)

20 Direct Button: When the tuner is in use, press this button to start the sequence for direct entry of a station's frequency. After pressing the button simply press the proper **Numeric Keys 18** to select a station. (See page 25 for more information on the tuner.)

REMOTE CONTROL FUNCTIONS

21 Tuning Up/Down: When the tuner is in use, these buttons will tune up or down through the selected frequency band. If the **Tuner Mode Button 19 12** has been pressed so that the **AUTO Indicator R** is illuminated, pressing either of the buttons will cause the tuner to seek the next station with acceptable signal strength for quality reception. When the **AUTO Indicator R** is NOT illuminated, pressing these buttons will tune stations in single-step increments. (See page 25 for more information.)

22 Macro Buttons: Press these buttons to store or recall a "Macro", which is a preprogrammed sequence of commands stored in the remote. (See page 28 for more information on storing and recalling macros.)

23 Transport Controls: These buttons do not have any functions for the AVR 125, but they may be programmed for the forward/ reverse play operation of a wide variety of CD or DVD players, and audio or video cassette recorders. (See page 29 for more information on programming the Transport Control Punch-Through capability of the remote.)

24 Skip Up/Down Button: These buttons have no direct function with the AVR 125, but when used with a compatibly programmed CD or DVD changer, they will change the track or chapter of the disc currently being played in the changer.

25 Disc Skip Button: This button has no direct function for the AVR 125, but when used with a compatibly programmed CD or DVD changer, it will change the disc currently being played in the changer. (See page 28 for more information on using the remote with other devices.)

26 Preset Up/Down: When the tuner is in use, press these buttons to scroll through the stations programmed into the AVR 125's memory. When some source devices, such as CD players, VCRs and cassette decks, are selected using the device **Input Selectors 5**, these buttons may function as Chapter Step or Track Advance.

27 Clear Button: Press this button to clear incorrect entries when using the remote to directly enter a radio station's frequency.

28 Memory Button: Press this button to enter a radio station into the AVR 125's preset memory. Once the **Memory Indicator O** flashes, you have five seconds to enter a preset memory location using the **Numeric Keys 18**. (See page 25 for more information.)

29 Delay/Prev Ch.: Press this button to begin the process for setting the delay times used by the

AVR 125 when processing surround sound. After pressing this button, the delay times are entered by pressing the **Set Button 15** and then using the **▲/▼ Buttons 13 17** to change the setting. Press the **Set Button 15** again to complete the process. (See page 19 for more information.)

30 ► Button: Press this button to change a setting or selection when configuring many of the AVR 125's settings.

31 Speaker Select: Press this button to begin the process of configuring the AVR 125's bass management system for use with the type of speakers used in your system. Once the button has been pressed, use the **▲/▼ Buttons 13 17** to select the channel you wish to set up. Press the **Set Button 15** and then select another channel to configure. When all adjustments have been completed, press the **Set Button 15** twice to exit the settings and return to normal operation. (See page 17 for more information.)

32 Spare Button: This button does not have any function for the operation of the AVR 125, but it is available for use when programmed with the code from another remote. (See page 27 for information on programming the remote with codes for other devices.)

33 Volume Up/Down: Press these buttons to raise or lower the system volume. See page 29 for more information on programming the Volume Punch-Through capability of the remote, which allows you to change the AVR 125's volume while the remote is set to control another device.

34 TV/Video Selector: This button does not have a direct function on the AVR 125, but when used with a compatibly programmed VCR, DVD or satellite receiver that has a "TV/Video" function, pressing this button will switch between the output of the player or receiver and the external video input to that player. Consult the owner's manual for your specific player or receiver for the details of how it implements this function.

35 6-Channel Direct Input: Press this button to select the component connected to the **6-Channel Direct Input 24** as the source.

36 Mute: Press this button to momentarily silence the AVR 125 or TV set being controlled, depending on which device has been selected. When the AVR 125 is muted, press this button or use the **Volume Control 20 33** to return to the previous volume level. When the AVR 125 remote is being programmed

to operate another device or when a macro command is being programmed, this button is pressed with the **Input Selector Button 5** to begin the programming process. (See page 27 for more information on programming the remote.)

INSTALLATION AND CONNECTIONS

System Installation

After unpacking the unit, and placing it on a solid surface capable of supporting its weight, you will need to make the connections to your audio and video equipment.

Audio Equipment Connections

We recommend that you use high-quality interconnect cables when making connections to source equipment and recorders to preserve the integrity of the signals.

When making connections to audio source equipment or speakers it is always a good practice to unplug the unit from the AC wall outlet. This prevents any possibility of accidentally sending audio or transient signals to the speakers that may damage them.

1. Connect the analog output of a CD player to the **CD Inputs 3**.

NOTE: When the CD player has both fixed and variable audio outputs it is best to use the fixed output unless you find that the input to the receiver is so low that the sound is noisy, or so high that the signal is distorted.

2. Connect the analog Play/Out jacks of a cassette deck, MD, CD-R or other audio recorder to the **Tape Input Jacks 5**. Connect the analog Record/In jacks on the recorder to the **Tape Output Jacks 4** on the AVR 125.

3. Connect the output of any digital sources to the appropriate input connections on the AVR 125 rear panel. Note that the **Optical and Coaxial Digital Inputs 19 22 13 14** may be used with a Dolby Digital or DTS source such as a DVD player, or the output of a conventional CD or LD player's PCM (S/P-DIF) output.

4. Connect the **Optical Digital Output 15** or **Coaxial Digital Output 16** on the rear panel of the AVR 125 to the matching digital input connections on a CD-R or MiniDisc recorder.

5. Assemble the AM Loop Antenna supplied with the unit as shown below. Connect it to the **AM and GND Screw Terminals 1**.

6. Connect the supplied FM antenna to the **FM Antenna (75 ohm) Connection 2**. The FM antenna may also be an external roof antenna, an inside powered or wire lead antenna or a connection from a

cable TV system. Note that if the antenna or connection uses 300-ohm twin-lead cable, you must use the 300-ohm-to-75-ohm adapter supplied with the unit to make the connection.

7. If you have a DVD-Audio or SACD player, or other component that includes an onboard surround decoder and 6-channel line-level audio outputs, you may connect these audio outputs to the **6-Channel Direct Inputs 24**. It is also necessary to connect the coax or optical digital output of a DVD player to coax or optical digital inputs on the AVR 125 **19 22 13 14** to take advantage of Dolby Digital or DTS soundtracks. Connect the DVD player's video outputs to the **DVD Video Input Jacks 18 25**. For audio-only sources, such as DVD audio or SACD, select the 6-Channel Direct Input source. For video sources, such as a DVD select the DVD Input.

8. Connect the front, center and surround **Speaker Outputs 7 8 9 10 11** to the respective speakers.

To ensure that all the audio signals are carried to your speakers without loss of clarity or resolution, we suggest that you use high-quality speaker cable. Many brands of cable are available and the choice of cable may be influenced by the distance between your speakers and the receiver, the type of speakers you use, personal preferences and other factors. Your dealer or installer is a valuable resource to consult in selecting the proper cable.

Regardless of the brand of cable selected, we recommend that you use a cable constructed of fine, multi-strand copper with a gauge of 14 or smaller. Remember that in specifying cable, the lower the number, the thicker the cable.

Cable with a gauge of 16 may be used for short runs of less than ten feet. We do not recommend that you use cables with an AWG equivalent of 18 or higher due to the power loss and degradation in performance that will occur.

Cables that are run inside walls should have the appropriate markings to indicate listing with UL, CSA or other appropriate testing agency standards. Questions about running cables inside walls should be referred to your installer or a licensed electrical contractor who is familiar with the NEC and/or the applicable local building codes in your area.

When connecting wires to the speakers, be certain to observe proper polarity. Remember to connect the "negative" or "black" wire to the same terminal on both the receiver and the speaker. The AVR 125 conforms to the latest CEA-recommended color-coding for speaker terminals. Accordingly, the positive (+) terminal, which was previously red, is now a specific

color to assist you in making the correct connections. If your speakers have color-coded connections, match the terminal on the AVR 125 to the like terminal on your speakers. For existing speakers with a red terminal for the positive connection, the connections on the AVR 125 are as follows:

Front Left = White	Front Right = Red
Center = Green	
Surround Left = Blue	Surround Right = Gray

While most speaker manufacturers adhere to an industry convention of using black terminals for negative and red ones for positive, some manufacturers may vary from this configuration. To ensure proper phase and optimal performance, consult the identification plate on your speaker or the speaker's manual to verify polarity. If you do not know the polarity of your speaker, ask your dealer for advice before proceeding, or consult the speaker's manufacturer.

We also recommend that the length of cable used to connect speaker pairs be identical. For example, use the same length piece of cable to connect the front-left and front-right or surround-left and surround-right speakers, even if the speakers are a different distance from the AVR 125.

9. Connections to a subwoofer are normally made via a line-level audio connection from the **Subwoofer Output 6** to the line-level input of a subwoofer with a built-in amplifier. When a passive subwoofer is used, the connection first goes to a power amplifier, which will be connected to one or more subwoofer speakers. If you are using a powered subwoofer that does not have line-level input connections, follow the instructions furnished with the speaker for connection information.

Video Equipment Connections

Video equipment is connected in the same manner as audio components. Again, the use of high-quality interconnect cables is recommended to preserve signal quality.

Although any compatible video device may be connected to any video input (with the exception of the **Video 1 Output Jacks 21 30 31**, which may only be connected to a video recorder), to make programming device codes into the remote control easier, we recommend that you connect your VCR to the **Video 1 Connectors 20 21 23 29 30 31**, your television to the **Video 2 Connectors 23 32 33**, and your cable-TV converter or satellite receiver to the **Video 3 Connectors 15 16**.

1. Connect a VCR's audio and video Play/Out jacks to the **Video 1 Input Jacks 20 23 29** on the rear panel. The Audio and Video Record/In jacks on the VCR

INSTALLATION AND CONNECTIONS

should be connected to the **Video 1 Out Jacks** **21****30****31** on the AVR 125.

2. Connect the analog audio and video outputs of a television set or any other video source to the **Video 2 Jacks** **25****22****23**.

3. Connect the analog audio and video outputs of a cable TV converter or satellite receiver, or any other video source, to the **Video 3 Jacks** **15****16** on the front panel of the AVR 125.

4. Connect the analog audio and video outputs of a DVD or laser disc player to the **DVD Jacks** **18****26****27**. When a digital audio connection is used for your DVD player, the default connection is the **Coaxial Digital Input 1 Jack** **19**. However, the connection may also be made to any of the **Optical** **22****13** or **Coaxial** **19****14** **Digital Inputs**, provided that the digital input source selection is changed as shown on page 23. If your DVD or DVD-Audio player includes an onboard surround decoder and 6-channel line-level audio outputs, you may connect these audio outputs to the **6-Channel Direct Inputs** **24**. When you wish to hear this decoded audio, select the DVD Input first in order to select the video signal from the DVD player, then select the 6-Channel Direct Input source for the audio.

5. Connect the digital audio outputs of a DVD player, satellite receiver, cable box or HDTV converter to the appropriate **Optical** or **Coaxial Digital Inputs** **19****22****13****14**.

6. Connect the **Video Monitor Output** **17****25** jacks on the receiver to the composite or S-Video input of your television monitor or video projector.

VIDEO CONNECTION NOTE:

- Composite and S-Video signals may only be viewed in their native formats. The AVR 125 will not convert signals from composite to S-Video, or vice versa. S-Video inputs may only be viewed when the AVR 125 is connected to a TV set or video display with S-Video capability. If you use both standard composite video and S-Video sources in your system, it is important that you connect both an S-Video cable and a standard composite video cable (a coax cable with an RCA plug on both ends) between the AVR 125 and your TV or projector. When it is necessary to make both types of connections to your TV set, use different inputs if possible. Consult the instructions for your TV set or projector for more information on connecting both types of signals.

Power Connections

This unit is equipped with two accessory AC outlets. They may be used to power accessory devices, but they should not be used with high-current draw equipment such as power amplifiers. The total power draw to each outlet may not exceed 100 watts.

The **Switched AC Accessory Outlet** **1** will receive power only when the unit is on. This is recommended for devices that have no power switch or a mechanical power switch that may be left in the "ON" position.

NOTE: Many audio and video products go into a Standby mode when they are used with switched outlets, and cannot be fully turned on using the outlet alone without a remote control command.

The **Unswitched AC Accessory Outlet** **13** will receive power as long as the unit is plugged into a powered AC outlet.

Finally, when all connections are complete, plug the **Power Cord** **14** into a nonswitched 120-volt AC wall outlet. You're almost ready to enjoy the AVR 125!

TROUBLESHOOTING GUIDE

Your AVR 125 receiver has been designed to provide many years of trouble-free service. In the event that you are experiencing difficulties, please check the suggestions below for a possible solution to your problem. Additional information on the AVR 125, including updated information and user hints, is available from our Web site at www.harmankardon.com.

SYMPTOM	CAUSE	SOLUTION
Unit does not function when Main Power Switch is pushed	<ul style="list-style-type: none"> No AC Power 	<ul style="list-style-type: none"> Make certain AC power cord is plugged into a live outlet Check to see whether outlet is switch-controlled
Display lights, but no sound or picture	<ul style="list-style-type: none"> Intermittent input connections Mute is on Volume control is down 	<ul style="list-style-type: none"> Make certain that all input and speaker connections are secure Press Mute button Turn up volume control
Unit turns on, but front-panel display does not light up	<ul style="list-style-type: none"> Display brightness is turned off 	<ul style="list-style-type: none"> Follow the instructions in the Display Brightness section on page 26 so that the display is set to VFD FULL
No sound from any speaker; light around power switch is red	<ul style="list-style-type: none"> Amplifier is in protection mode due to possible short Amplifier is in protection mode due to internal problems 	<ul style="list-style-type: none"> Check speaker wire connections for shorts at receiver and speaker ends Contact your local Harman Kardon service center, which you can locate by visiting our Web site at www.harmankardon.com
No sound from surround or center speakers	<ul style="list-style-type: none"> Incorrect surround mode Input is monaural Incorrect configuration Stereo or Mono program material 	<ul style="list-style-type: none"> Select a mode other than Stereo or Dolby 3 Stereo There is no surround information from mono sources Check speaker mode configuration The surround decoder may not create center- or rear-channel information from nonencoded programs
Unit does not respond to remote commands	<ul style="list-style-type: none"> Weak batteries in remote Wrong device selected Remote sensor is obscured 	<ul style="list-style-type: none"> Change remote batteries Press the AVR selector Make certain front-panel sensor is visible to remote or connect remote sensor
Intermittent buzzing in tuner	<ul style="list-style-type: none"> Local interference 	<ul style="list-style-type: none"> Move unit or antenna away from computers, fluorescent lights, motors or other electrical appliances
Letters flash in the channel indicator display and digital audio stops	<ul style="list-style-type: none"> Digital audio feed paused 	<ul style="list-style-type: none"> Resume play for DVD Check that Digital Input is selected

Processor Reset

In the rare case where the unit's operation or the displays seem abnormal, the cause may involve the erratic operation of the system's memory or micro-processor.

To correct this problem, first unplug the unit from the AC wall outlet and wait at least three minutes. After the pause, reconnect the AC power cord and check the unit's operation. If the system still malfunctions, a system "reset" may clear the problem.

To clear the AVR 125's entire system memory including tuner presets, output level settings, delay times and speaker configuration data, first put the unit in Standby by pressing the **System Power Control Button** **2**.

Next, press and hold the **Tone Mode** **6** button for three seconds.

The unit will turn on automatically and display the **RESET** message in the **Main Information Display** **F**. Note that once you have cleared the memory in this manner, it is necessary to reestablish all system configuration settings and tuner presets.

The reset will not affect settings that were programmed into the remote control. To reset the remote control and restore it to its factory default settings, please follow the instructions on page 29.

If these steps do not solve the problem, consult an authorized Harman Kardon service center. You can locate the service center nearest to you by visiting our Web site at www.harmankardon.com.

Memory Backup

This product is equipped with a memory backup system that preserves the system configuration information and tuner presets if the unit is accidentally unplugged or subjected to a power outage. This memory will last for approximately one week, after which time all information must be reentered.

AVR125/225 DISASSEMBLY PROCEDURE

<1> TOP-CABINET(21) REMOVAL

1. Remove 13 screws(S1,S7) and then remove the Top-cabinet.

<2> FRONT PANEL ASS'Y REMOVAL

1. Remove the Top-cabinet, referring to the previous step<1>.
2. Disconnect the connect (BN72-Card canle)) on the FP PCB(37-1) from connector(CN72) on the Input PCB(39-1)
3. Disconnect the lead wire(BN80-8P) on the FP PCB(37-1) from connector(CN80) on the Main PCB(38).
4. Disconnect the lead wire(BN16-8P,BN10-4P) on the Tone PCB(37-3) from connector(CN16,CN10) on the Connect PCB(37-7).
5. Disconnect the lead wire(BN41-6P) on the Tone PCB(37-3) from connector(CN41) on the Video PCB(39-2).
6. Disconnect the lead wire(BN18-5P) on the Digital input PCB(37-8) from connector(CN18) on the Input PCB(39-1).
7. Disconnect the lead wire(BN81-6P,BN83-2P) on the FP PCB(37-1) from connector(CN81.CN83) on the Trans PCB(39-3).
8. Disconnect the lead wire(BN88-2P) on the Main PCB(38) from connector(CN88) on the Moms PCB(37-5).
9. Remove 1 screw(S10) and then lead wire(JW82-2P) on the Phone PCB(37-4).
10. Remove 9 screws(S1) and then remove the Front Panel ASS'Y.

<3> TONE PCB(37-3) REMOVAL

1. Remove the Top-cabinet, referring to the previous step<1>.
2. Remove the Front Panel ASS'Y, referring to the previous step<2>.
3. Pull out the Volume Knob ASS'Y & 3 Rotary Knobs(5).
4. Remove 1 Nut(40), 1 Washer(41)
5. Remove 7 screws(S2) and then remove the Tone PCB(37-3).
6. Disconnect the lead wire(BN84-5P,BN90-2P) One the Tone PCB(37-3) from connector(CN84,CN90) on the FP PCB(37-1)
7. Disconnect the lead wire (BN87-6P) One the Tone PCB(37-3) from connector(CN87) on the Phone PCB(37-4)

<4>PHONE PCB(37-4) REMOVAL

1. Remove the Top-cabinet, referring to the previous step<1>.
2. Remove the Front Panel ASS'Y, referring to the previous step<2>.
3. Disconnect the lead wire (BN87-6P) One the Tone PCB(37-3) from connector(CN87) on the Phone PCB(37-4)
4. Remove 2 screws(S2,S3) and then remove the Phone PCB(37-4)

<5>POWER LED PCB(37-6) REMOVAL

1. Remove the Top-cabinet, referring to the previous step<1>.
2. Remove the Front Panel ASS'Y, referring to the previous step<2>.
3. Remove 2 screws(S2) and then remove the Power led PCB(37-6).
4. Disconnect the lead wire(BN88-4P) from connector(CN88) on the FP PCB(37-1).

<6>FRONT PCB(37-1) REMOVAL

1. Remove the Top-cabinet, referring to the previous step<1>.
2. Remove the Front Panel ASS'Y, referring to the previous step<2>.
3. Remove the Tone PCB(37-3), referring to the previous step<3>.
4. Remove the Phone PCB(37-4), referring to the previous step<4>.
5. Remove the Power led PCB(37-6), referring to the previous step<5>.
6. Remove 6 screws(S2) and then remove the Front PCB(37-1)

<7>TUNER MODULE(40) REMOVAL

1. Remove the Top-cabinet, referring to the previous step<1>.
2. Disconnect the connector(CON1-Card cable) from connector(CN13) on the Input PCB ASS'Y(39-1).
3. Remove 2 screws(S8) and then remove the Tuner Module(40).

<8>VIDEO PCB(39-2) REMOVAL

1. Remove the Top-cabinet, referring to the previous step<1>.
2. Disconnect the lead wire(BN41-6P) on the Tone PCB(37-3) from connector(CN41) on the Video PCB(39-2).
3. Disconnect the connector (CN15-Card cable) on the Input PCB(39-1) from lead wire(CN43) on the Video PCB(39-2).
4. Remove 6 screws(S8) and then remove the Video PCB(39-2).

<9>INPUT PCB(39-1) REMOVAL

1. Remove the Top-cabinet, referring to the previous step<1>.
2. Remove the Connect PCB(37-7).
3. Disconnect the lead wire(BN18-5P) on the Digital input PCB(37-8) from connector(CN18) on the Input PCB(39-1).
4. Disconnect the connect (BN72-Card canle)) on the FP PCB(37-1) from connector(CN72) on the Input PCB(39-1)
5. Remove 13 screws(S8,S11) and then remove the Input PCB(39-1).

<10>POWER TRANS(31) REMOVAL

1. Remove the Top-cabinet, referring to the previous step<1>.
2. Disconnect the connector (CN20,BN96) on the Trans PCB from lead wire(CN20-3P,BN96-6P) on the Main PCB(38).
3. Remove 1 screw(S5) and then remove the Tr PCB(39-6)
4. Remove 1 screw(S5) and then remove the Bridge Diode PCB(39-8)
3. Remove 4 Trans screws(S9) and then remove the Power Trans(31).

<11>MAIN PCB ASS'Y(38) REMOVAL

1. Remove the Top-cabinet, referring to the previous step<1>.
2. Remove the Tuner module, referring to the previous step<7>.
3. Remove the Video PCB, referring to the previous step<8>.
4. Remove the Input PCB, referring to the previous step<9>.
5. Disconnect the lead wire(BN80-8P) on the FP PCB(37-1) from connector(CN80) on the Main PCB(38).
6. Disconnect the lead wire(BN88-2P) on the Main PCB(38) from connector(CN88) on the Moms PCB(37-5).
7. Disconnect the connector (CN20,BN96) on the Trans PCB from lead wire(CN20-3P,BN96-6P) on the Main PCB(38)..
8. Remove 11 screws(S1-1EA, S4-2EA, S6-2EA, S8-6EA) and then remove the Main PCB ASS'Y(38).

DISASSEMBLY

1) REMOVAL OF TOP COVER

2) REMOVAL OF FRONT PANEL

3) PRINCIPAL PARTS LOCATION

AMPLIFIER SECTION BIAS ADJUSTMENT

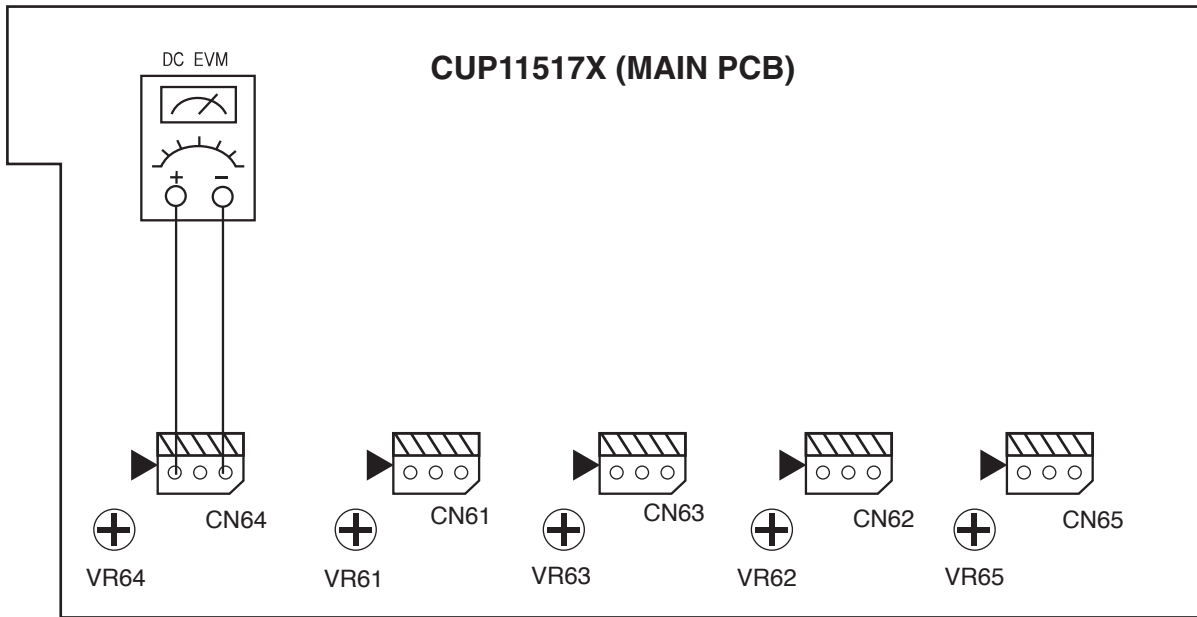

Measurement condition

. No input signal or volume position is minimum.

Standard value.

. Ideal current = 48mA (± 5%)

. Ideal DC Voltage = 21.12mV (± 5%)

DC VOLTMETER.....Connect to CN61, CN62, CN63, CN64, CN65

NO.	Channel	Adjust for	Adjustment
1	Front Left	21.12mV (±5%)	VR61
2	Front Right	21.12mV (±5%)	VR62
3	Center	21.12mV (±5%)	VR63
4	Surround Left	21.12mV (±5%)	VR64
5	Surround Right	21.12mV (±5%)	VR65

* After approximately two weeks of being disconnected from AC supply, even a normally functioning receiver may lose any programmed settings and switch to default settings. (Four weeks for the DPR1005 & 2005)

harman/kardon**TECH TIPS****Troubleshooting tips and solutions to common service problems****TIP# HKTT2004-03**

Isolating audio problems in an AVR receiver Using 6/8 Direct In

The following charts are used to help the tech quickly isolate audio problems in an AVR receiver. Use the following procedures to help find what is working, then to quickly locate the problem area.

Equipment needed:

- ✓ 1 set of (RCA) Y adaptors.
- ✓ Function/signal generator.
- ✓ Oscilloscope.

Models covered:	
AVR210	AVR310
AVR220	AVR320
AVR520	AVR225
AVR125	AVR525
AVR130	AVR230
AVR330	AVR430
AVR630	

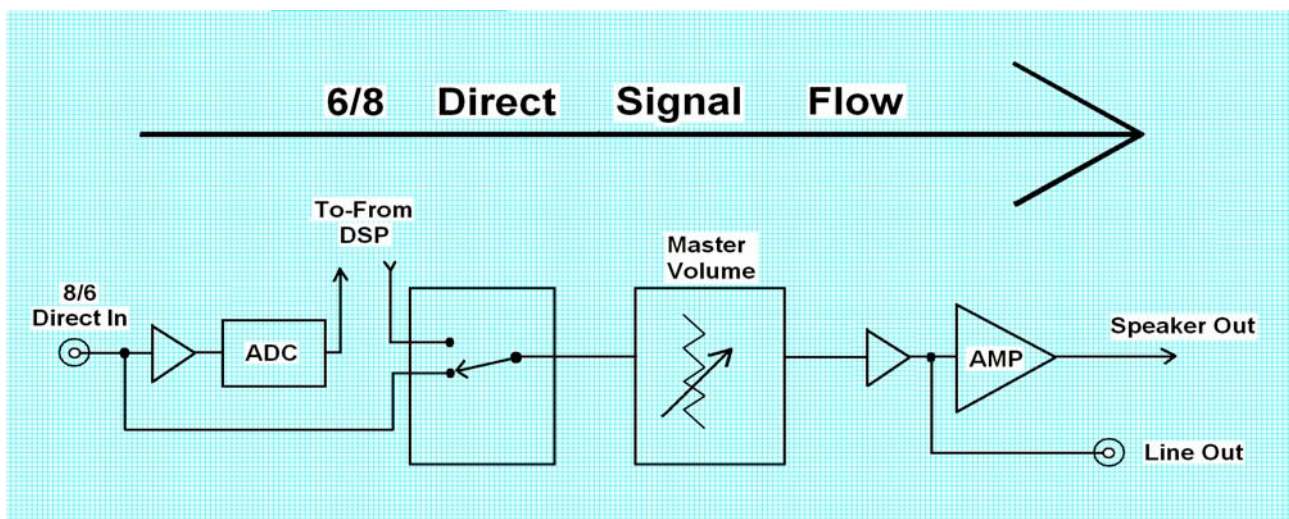

Procedure:

- 1) Do a factory reset of the receiver. (This will eliminate any common micro processor problems.) Reset List can be found in this service manual.
- 2) Print the block diagram from the service manual.
- 3) With no inputs or speakers attached to the AVR turn on the receiver and turn the volume all the way down.
- 4) Turn unit off.
- 5) Hook up an oscillator to the 6/8 Direct in jacks using the Y adaptors. Adjust the oscillator to about 0db (.775Volts RMS).
- 6) Hook up an oscilloscope to monitor the line out jacks. Or, if there are no line out (preamp out) jacks monitor the input to the power amps or the speaker outs. (AVR125, 225, 130 do not have preamp out jacks)
- 7) Turn the AVR on. Select 6 or 8 direct in, depending on the receiver.
- 8) Slowly turn the volume control up until you can easily measure the voltage at the line out jacks. (-40 to -25db)

Isolating audio problems in an AVR receiver Using 6/8 Direct In

- 9) At this point you will be able to check and assure all output levels are the same.
- 10) IF THE OUTPUT LEVELS ARE NOT THE SAME STOP! Go no further. At this point you will need to use the charts to see where you are losing your signal. The chart shows the analog signal flow from the input jacks to the output jacks.
- 11) If the output levels are the same check the power out stage at the speaker out jacks.
- 12) If you find the levels at the speaker out jacks are OK, your problem will be in the DSP part of the receiver.

Congratulations! You have now eliminated 90% of the electronics in the AVR and confirmed that the problem is in the DSP section.

November 1988
Revised November 1999

74AC04 • 74ACT04

Hex Inverter

74ACT04SC : IC83, 84

General Description

The AC/ACT04 contains six inverters.

Features

- I_{CC} reduced by 50% on 74AC only
- Outputs source/sink 24 mA
- ACT04 has TTL-compatible inputs

Ordering Code:

Order Number	Package Number	Package Description
74AC04SC	M14A	14-Lead Small Outline Integrated Circuit (SOIC), JEDEC MS-120, 0.150" Narrow Body
74AC04SJ	M14D	14-Lead Small Outline Package (SOP), EIAJ TYPE II, 5.3mm Wide
74AC04MTC	MTC14	14-Lead Thin Shrink Small Outline Package (TSSOP), JEDEC MO-153, 4.4mm Wide
74AC04PC	N14A	14-Lead Plastic Dual-In-Line Package (PDIP), JEDEC MS-001, 0.300" Wide
74ACT04SC	M14A	14-Lead Small Outline Integrated Circuit (SOIC), JEDEC MS-120, 0.150" Narrow Body
74ACT04MTC	MTC14	14-Lead Thin Shrink Small Outline Package (TSSOP), JEDEC MO-153, 4.4mm Wide
74ACT04PC	N14A	14-Lead Plastic Dual-In-Line Package (PDIP), JEDEC MS-001, 0.300" Wide

Device also available in Tape and Reel. Specify by appending suffix letter "X" to the ordering code. (PC not available in Tape and Reel.)

BLOCK DIAGRAM

A/D CONVERTER IC PIN FUNCTION (AK5380VT) : IC77

PIN/FUNCTION			
No.	Pin Name	I/O	Description
1	AINR	I	Rch Analog Input Pin
2	AINL	I	Lch Analog Input Pin
3	NC	-	NC Pin No internal bonding.
4	VCOM	O	Common Voltage Output Pin Normally connected to AGND with a 0.1 μ F ceramic capacitor in parallel with an electrolytic capacitor less than 2.2 μ F.
5	AGND	-	Analog Ground Pin, 0V
6	VA	-	Analog Power Supply Pin, +4.5~+5.5V
7	VD	-	Digital Power Supply Pin, +2.7~+5.5V(fs=48kHz), +4.5~+5.5V(fs=96kHz)
8	DGND	-	Digital Ground Pin, 0V
9	SDTO	O	Serial Data Output Pin Data bits are presented MSB first, in 2's complement format. This pin is "L" in the power-down mode.
10	LRCK	I	Left/Right Channel Select Pin The fs clock is input to this pin.
11	MCLK	I	Master Clock Input Pin
12	SCLK	I	Serial Data Input Pin Output data is clocked out on the falling edge of SCLK.
13	PDN	I	Power-Down Pin When "L", the circuit is in power-down mode. The AK5380 should always be reset upon power-up.
14	DIF	I	Serial Interface Format Pin "L": MSB justified, "H": I ² S
15	TTL	I	Digital Input Level Select Pin "L": CMOS level (VD=2.7~5.5V), "H": TTL level (VD=4.5~5.5V)
16	TST	I	Test Pin (Internal pull-down pin) This pin should be left open.

Note: All input pins except pull-down pins should not be left floating.

AUDIO DSP (CS493263 - CLG : IC79)

PIN No.	Pin Name	I/O	Function
1,12,23	+VD1	-	Digital Power supply. Normally +2.5v
2,13,24	DGND	-	Digital Ground
3	AUD3	O	SPDIF transmitter output/Digital audio output(N.C)
4	WR	I	Host write strobe pin(connected to GND with an external resistor)
5	RD	I	Host parallel output enable pin(pulled up with an external resistor)
6	CS_DA	I	SPI Serial data input pin
7	CS_CK	I	Serial control clock input pin
8	EMAD7	I/O	Serial data IN/OUTPUT pins(pulled up with an external resistor)
9	EMAD6	I/O	
10	EMAD5	I/O	
11	EMAD4	I/O	
14	EMAD3	I/O	
15	EMAD2	I/O	
16	EMAD1	I/O	
17	EMAD0	I/O	
18	CS_CE	I	Host parallel chip select pin
19	SCDIO(AK_DOUT)	O	Serial control port data ouput pin
20	INTREQ	O	Control port interrupt request output pin
21	EXTMEM	I/O	External Memory Chip Selector(pulled up with an external resistor)
22	SDATAN1(SDI)	I	PCM audio data input number 1 pin
25	SCLKN1(BICK)	I	PCM audio input bit clock pin
26	LRCLKN1(LRCK)	I	PCM audio input sample rate clock pin
27	CMPDAT(SDI)	I	PCM audio data input number 2 pin
28	CMPCLK(BICK)	I	PCM audio input bit clock pin
29	CREQ(LRCK)	I	PCM audio input sample rate clock pin
30	CLKIN(XIN)	I	Master clock input(used external clock)
31	CLKSEL(GND)	I	DSP clock mode select pin: connect the GND
32	FILT1		Connects to an external filter for the on-chip phase-locked loop
33	FILT1		Connects to an external filter for the on-chip phase-locked loop
34	+2.5V	-	Analog Power supply for clock generator . Normally +2.5V
35	AGND	-	Analog ground supply for clock generator PLL.
36	RESET(CS_RST)	I	Master reset input pin
37	DBDATA	-	Reserved pin and should be pulled up with an external resistor.
38	DBCLK	-	Reserved pin and should be pulled up with an external resistor.
39	AUD2(SDO2)	O	PCM multi-format digital-audio data ouput2 pin
40	AUD1(SDO1)	O	PCM multi-format digital-audio data ouput1 pin
41	AUD0(SDO0)	O	PCM multi-format digital-audio data ouput0 pin
42	LRCLK	I	Audio output sample rate clock pin
43	SCLK(BICK)	I	Audio ouput bit clock pin
44	MCLK	I	Audio master clock output pin

VFD DRIVER IC PIN FUNCTION (LC75725E) : IC74

Pin	Pin No.	Function	I/O	Handling when unused
V _{FL}	1, 13	Driver block power supply connection. (Both pins must be connected.)	—	—
V _{DD}	60	Logic block power supply connection. Provide a voltage between 4.5 and 5.5 V.	—	—
V _{SS}	57	Power supply connection. Connect to the ground.	—	—
OSCI	59	Oscillator connection. An oscillator circuit is formed by connecting an external resistor and capacitor to these pins.	I	GND
OSCO	58		O	OPEN
$\overline{\text{BLK}}$	61	Display off control input. BLK = Low (V _{SS}) ... Display off. (S1 to S43 and G1 to G11 at V _{FL} level.) BLK = High (V _{DD}) ... Display on. Note that serial data can be transferred while the display is turned off.	I	GND
CL	63	Serial data transfer inputs. These pins must be connected to the system microcontroller. CL: Synchronization clock DI: Transfer data CE: Chip enable	I	GND
DI	64			
CE	62			
G1 to G11	2 to 12	Digit outputs. These pins are P-channel open drain outputs with pull-down resistors.	O	OPEN
S1 to S43	56 to 14	Segment outputs for displaying the display data transferred by serial data input. These pins are P-channel open drain outputs with pull-down resistors.	O	OPEN

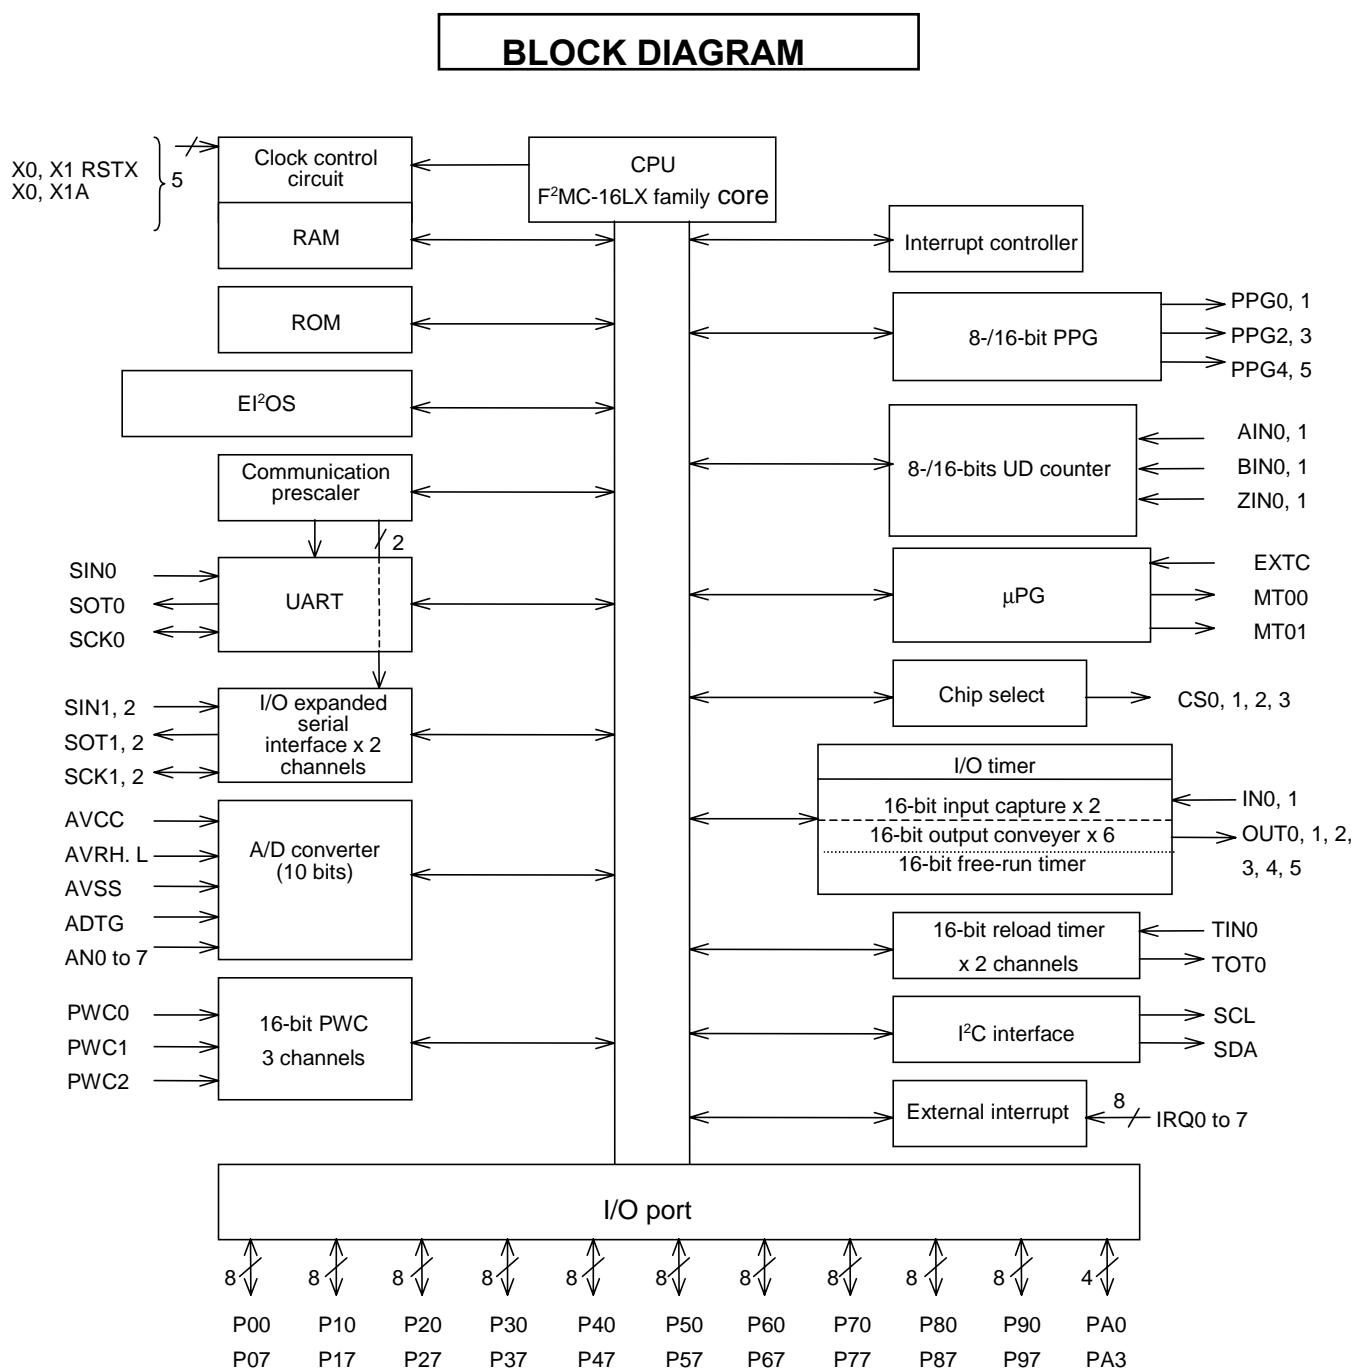

Fig. 1.1 Block Diagram (MB90470)

P00 to P07 (8): Provided with input pull-up resistor setting register

P10 to P17 (8): Provided with input pull-up resistor setting register

P40 to P47 (8): Provided with open-drain setting register

P70 to P75 (6): Provided with open-drain setting register

P76 to P77 (2): Open-drain

Note: In the figure above, the I/O port shares the pins with each internal functional block. When the pins are used as internal module pins, they cannot be used as I/O port pins.

LQFP	QFP	Pin Name	Circuit Type	Function
80	82	X0	A	Oscillator pin
81	83	X1	A	Oscillator pin
78	80	X0A	A	32 kHz Oscillator pin
77	79	X1A	A	32 kHz Oscillator pin
75	77	RSTX	B	Reset input pin
83 to 90	85 to 92	P00 to P07	C (CMOS)	General-purpose I/O ports A pull-up resistor can be attached using the pull-up resistor setting register (RDR0) (RD07 to RD00 = 1). (Invalid when set to output)
		AD00 to AD07		In the multiplex mode, the pins function as external address/data bus lower I/O pins.
		D00 to D07		In the non-multiplex mode, they function as external data bus lower output pins.
91 to 98	93 to 100	P10 to P17	C (CMOS)	General-purpose I/O ports A pull-up resistor can be attached using the pull-up resistor setting register (RDR1) (RD17 to RD10 = 1). (Invalid when set to output)
		AD08 to AD15		In the multiplex mode, the pins function as external address/data bus upper I/O pins.
		D08 to D15		In the non-multiplex mode, they function as external data upper output pins.
99 100 1 and 2	1 to 4	P20 to P23	E (CMOS/H)	General-purpose I/O ports When the corresponding bit of the HACR register is 0, the pins function as address upper output pins (A20 to A23).
		A16 to A19		When the multiplex mode is enabled and the corresponding bit of the HACR register is 1, the pins function as general-perpose I/O port.
		A16 to A19		In the non-multiplex mode, they function as external address upper output pins.
3 to 6	5 to 8	P24 to P27	E (CMOS/H)	General-purpose I/O ports When the corresponding bit of the HACR register is 0, the pins function as address upper output pins (A20 to A23).
		A20 to A23		When the multiplex mode is enabled and the corresponding bit of the HACR register is 1, the pins function as general-perpose I/O port.
		A20 to A23		In the non-multiplex mode, they function as external address upper output pins.
		PPG0 to 3		The pins function as PPG timer output pin.

LQFP	QFP	Pin Name	Circuit Type	Function
7	9	P30	E (CMOS/H)	General-purpose I/O ports
		A00		In the external bus mode, the pin functions as an external address pin.
		AIN0		The pin is an 8-/16-bit up-and-down timer input pin (ch0).
8	10	P31	E (CMOS/H)	General-purpose I/O port
		A01		In the external bus mode, the pin functions as an external address pin.
		BIN1		The pin is the 8-/16-bit up-and-down timer input pin (ch0).
10	12	P32	E (CMOS/H)	General-purpose I/O port
		A02		In the external bus mode, the pin functions as an external address pin.
		ZIN0		The pin is an 8-/16-bit up-and-down timer input pin (ch0).
11	13	P33	E (CMOS/H)	General-purpose I/O port
		A03		In the external bus mode, the pin functions as an external address pin.
		AIN1		The pin is an 8-/16-bit up-and-down timer input pin (ch1).
12	14	P34	E (CMOS/H)	General-purpose I/O port
		A04		In the external bus mode, the pin functions as an external address pin.
		BIN1		The pin is an 8-/16-bit up-and-down timer input pin (ch1).
13	15	P35	E (CMOS/H)	General-purpose I/O port
		A05		In the external bus mode, the pin functions as an external address pin.
		ZIN1		The pin is an 8-/16-bit up-and-down timer input pin (ch1).
14 and 15	16 and 17	P36, P37	E (CMOS/H)	General-purpose I/O port
		A06, A07		In the external bus mode, the pins function as external address pins.
		PWC0, PWC1		This pin functions as PWC input pin.
16	18	P40	G (CMOS/H)	General-purpose I/O port
		A08		In the external bus mode, the pin functions as an external address pin.
		SIN2		Simple serial I/O input pin
17	19	P41	F (CMOS/H)	General-purpose I/O port
		A09		In the external bus mode, the pin functions as an external address pin.
		SOT2		SCI Output pin
18	20	P42	G (CMOS)	General-purpose I/O port
		A10		In the external bus mode, the pin functions as an external address pin.
		SCK2		SCI Clock I/O pin
19 and 20	21 and 22	P43, P44	F (CMOS)	General-purpose I/O port
		A11, A12		In the external bus mode, the pins function as external address pins.
		MT00, MT01		μPG Output pins
22	24	P45	G (CMOS)	General-purpose I/O port
		A13		In the external bus mode, the pin functions as an external address pin.
		EXTC		μPG Input pin
23 and 24	25 and 26	P46, P47	D (CMOS)	General-purpose I/O ports
		A14, A15		In the external bus mode, the pins function as external address pins.
		OUT4/ OUT5		The pins are captured as output-compare event output pins.

LQFP	QFP	Pin Name	Circuit Type	Function
68	70	P50	D (CMOS)	General-purpose I/O port In the external bus mode, the pin functions as ALE pin.
		ALE		In the external bus mode, the pin functions as an address capture enable signal (ALE) pin.
69	71	P51	D (CMOS)	General-purpose I/O port In the external bus mode, the pin functions as the RDX pin.
		RDX		When the external bus mode is enabled, the pin functions as the read strobe output (RDX) pin.
70	72	P52	D (CMOS)	General-purpose I/O port When the external bus mode is enabled and the WRE bit of the EPCR register is 1, the pin functions as the WRLX pin
		WRLX		When the external bus mode is enabled, the pin functions as the lower-order side data write strobe output (WRLX) pin. When the WRE bit of the EPCR register is 0, the pin functions as a general-purpose I/O port.
71	73	P53	D (CMOS)	General-purpose I/O port When the external bus mode is enabled (the bus is 16-bits long) and the WRE bit of the EPCR register is 1, the pin functions as the WRHX pin.
		WRHX		When the external bus mode is enabled (the bus is 16-bits long), the pin functions as the higher-order side data write strobe output (WRHX) pin. When the WRE bit of the EPCR register is 0, the pin functions as a general-purpose I/O port.
72	74	P54	D (CMOS)	General-purpose I/O port When the external bus mode is enabled and the HDE bit of the EPCR register is 1, the pin functions as the HRQ pin.
		HRQ		When the external bus mode is enabled, the pin functions as the hold request input (HRQ) pin. When the HDE bit of the EPCR register is 0, the pin functions as a general-purpose I/O port.
73	75	P55	D (CMOS)	General-purpose I/O port When the external bus mode is enabled and the HDE bit of the EPCR register is 1, the pin functions as the HAKX pin.
		HAKX		When the external bus mode is enabled, the pin functions as the hold acknowledge output (HAKX) pin. When the HDE bit of the EPCR register is 0, the pin functions as a general-purpose I/O port.
74	76	P56	D (CMOS)	General-purpose I/O port When the external bus mode is enabled and the RYE bit of the EPCR register is 1, the pin functions as the RDY pin.
		RDY		When the external bus mode is enabled, the pin functions as the external ready input (RDY) pin. When the RYE bit of the EPCR register is 0, the pin functions as a general-purpose I/O port.
76	78	P57	D (CMOS)	General-purpose I/O port When the external bus mode is enabled and the CKE bit of the EPCR register is 1, the pin functions as the CLK pin.
		CLK		When the external bus mode is enabled, the pin functions as the machine cycle clock output (CLK) pin. When the CKE bit of the EPCR register is 0, the pin functions as a general-purpose I/O port.
36 to 39	38 to 41	P60 to P63	H (CMOS)	General-purpose I/O port
		AN0 to AN3		The pins function as analog input pins.
41 to 44	43 to 46	P64 to P67	H (CMOS)	General-purpose I/O port
		AN4 to AN7		The pins function as analog input pins.
25	27	P70	G (CMOS/H)	General-purpose I/O port
		SIN0		The pin functions as an UART data input pin.

LQFP	QFP	Pin Name	Circuit Type	Function
26	28	P71	F (CMOS)	General-purpose I/O port
		SOT0		The pin functions as an UART data output pin.
27	29	P72	G (CMOS/H)	General-purpose I/O port
		SCK0		The pin functions as an UART clock I/O pin.
28	30	P73	G (CMOS/H)	General-purpose I/O port
		TIN0		The pin functions as the event input pin of the 16-bit reload timer.
29	31	P74	F (CMOS/H)	General-purpose I/O port
		TOT0		The pin functions as the output pin of the 16-bit reload timer.
30	32	P75	G (CMOS/H)	General-purpose I/O port
		PWC2		The pin functions as a PWC input pin.
31	33	P76	I (NMOS/H)	General-purpose I/O port
		SCL		The pin functions as the I ² C interface data I/O pin. While the I ² C interface is operating, set the port output to Hi-Z.
32	34	P77	I (NMOS/H)	General-purpose I/O port
		SDA		The pin functions as the I ² C interface clock I/O pin. While the I ² C interface is operating, set the port output to Hi-Z.
45	47	P80, P81	E (CMOS/H)	General-purpose I/O port
46	48	IRQ0, IRQ1		The pins function as external interrupt input pins.
50 to 55	52 to 57	P82 to P87	E (CMOS/H)	General-purpose I/O port
		IRQ2 to IRQ7		The pins function as external interrupt input pins.
56	58	P90	E (CMOS/H)	General-purpose I/O port
		SIN1		The pin functions as the simple serial I/O data input pin.
		CS0		Chip select 0
57	59	P91	D (CMOS)	General-purpose I/O port
		SOT1		The pin functions as the I/O clock I/O pins.
		CS1		Chip Select 1
58	60	P92	E (CMOS/H)	General-purpose I/O port
		SCK1		The pin functions as the SCI clock I/O pin.
		CS2		Chip Select 2
59	61	P93	E (CMOS/H)	General-purpose I/O port
		FRCK		The pin functions as the external clock input pin while the free-running timer is in use.
		ADTG		The pin functions as the external trigger input pin while the A/D converter is in use.
		CS3		Chip Select 3
60	62	P94	D (CMOS/H)	General-purpose I/O port
		PPG4		The pin functions as a PPG timer output pin.
61	63	P95	D (CMOS)	General-purpose I/O port
		PPG5		The pin functions as a PPG timer output pin.
62	64	P96	E (CMOS/H)	General-purpose I/O port
		IN0		The pin is captured as the input capture ch0 trigger input pin.
63	65	P97	E (CMOS/H)	General-purpose I/O port
		IN1		The pin is captured as the input capture ch1 trigger input pin.
64 to 67	66 to 69	PA0 to PA3	D (CMOS)	General-purpose I/O port
		OUT0 to OUT3		The pins are captured as the output-compare event output pins.
33	35	AVCC	-	Pin for power supply to A/D converter
34	36	AVRH	-	Pin for external reference power supply to A/D converter
35	37	AVSS	-	Pin for power supply to A/D converter
47 to 49	49 to 51	MD0 to MD2	J (CMOS/H)	Input pins for selecting operation mode
82	84	VCC3	-	Pin for power supply 3.3 V ± 0.3 V (VCC3)

NJM2068M : IC23~29 , 32~34 , 82,88

NJM2068

LOW-NOISE DUAL OPERATIONAL AMPLIFIER

■ GENERAL DESCRIPTION

The NJM2068 is a high performance, low noise dual operational amplifier. This amplifier features popular pin-out, superior noise performance, and superior total harmonic distortion. This amplifier also features guaranteed noise performance with substantially higher gain-bandwidth product and slew rate which far exceeds that of the 4558 type amplifier. The specially designed low noise input transistors allow the NJM2068 to be used in very low noise signal processing applications such as audio preamplifiers and servo error amplifier.

■ PACKAGE OUTLINE

NJM2068D

NJM2068M

NJM2068V

NJM2068L

■ FEATURES

- Operating Voltage (±4V ~ ±18V)
- Low Total Harmonic Distortion (0.001% typ.)
- Low Noise Voltage (FLAT+JISA, 0.56 μV typ.)
- High Slew Rate (6V/μs typ.)
- Unity Gain Bandwidth (27MHz @f=10kHz)
- Package Outline DIP8, DMP8, SIP8, SSOP8
- Bipolar Technology

■ PIN CONFIGURATION

NJM2068D
NJM2068M
NJM2068V

NJM2068L

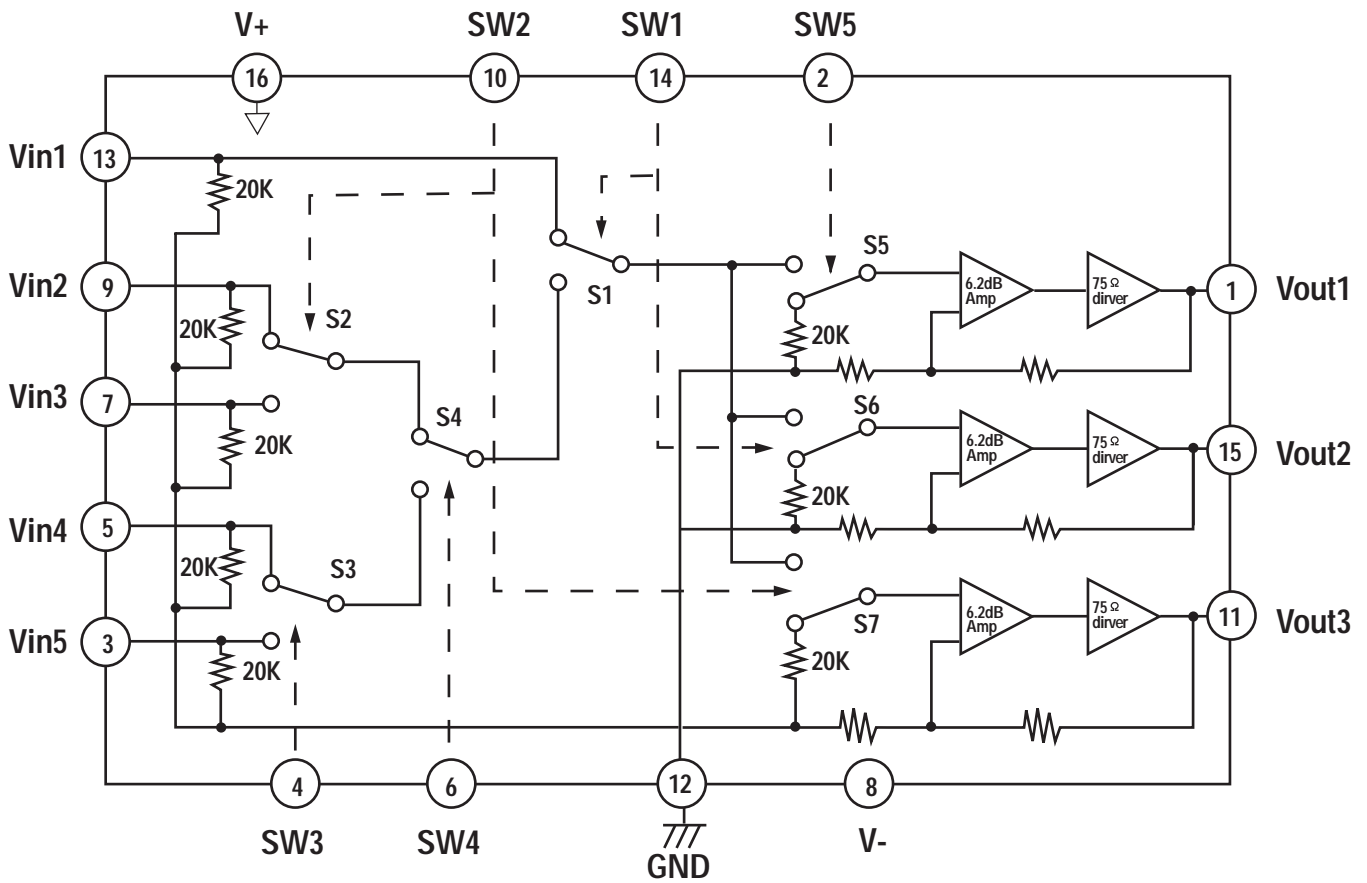

PIN FUNCTION

1. A OUTPUT
2. A-INPUT
3. A+INPUT
4. V-
5. B+INPUT
6. B-INPUT
7. B OUTPUT
8. V+

■ BLOCK DIAGAM (NJM2296M) : IC41, 43, 44

*** Normally mute**
Above circuits show that the switches are set at low.

NJM4556AM : IC86

NJM4556A

DUAL HIGH CURRENT OPERATIONAL AMPLIFIER

■ GENERAL DESCRIPTION

The NJM4556A integrated circuit is a high-gain, high output current dual operational amplifier capable of driving $\pm 70\text{mA}$ into $150\ \Omega$ loads ($\pm 10.5\text{V}$ output voltage), and operating low supply voltage ($V^+/V^- = \pm 2\text{V} \sim$).

The NJM4556A combines many of the fetures of the popular NJM4558 as well as having the capability of driving $150\ \Omega$ loads. In addition, the wide band-width, low noise, high slew rate and low distortion of the NJM4556A make it ideal for many audio, telecommu- nications and instrumentation applications.

■ FEATURES

- Operating Voltage ($\pm 2\text{V} \sim \pm 18\text{V}$)
- High Output Current ($I_o = 70\text{mA}$)
- Slew Rate ($3\text{V}/\mu\text{s}$ typ.)
- Gain Band Width Product (8MHz typ.)
- Package Outline DIP8, DMP8, SIP8, SSOP8
- Bipolar Technology

 * SB 6.3A 250V : FOR 180V/110V/120V Area
 * T 4A L 250V : FOR 220V/230V Area

** IMPORTANT SAFETY NOTICE
 COMPONENTS IDENTIFIED BY MARK HAVE SPECIAL CHARACTERISTICS.
 IMPORTANT FOR SAFETY WHEN REPLACING ANY OF THESE COMPONENTS
 USE ONLY MANUFACTURER'S SPECIFIED PARTS.
 ** THE UNIT OF RESISTANCE IS OHM
 ** THE UNIT OF CAPACITANCE IS MICROFARAD (UF)
 ** IF "S" IS
 ** THIS SCHEMATIC DIAGRAM MAY MODIFIED AT ANY TIME WITH THE
