### **ELECTROSTATICALLY SENSITIVE (ES) DEVICES**

Some semiconductor (solid state) devices can be damaged easily by static electricity. Such components commonly are called Electrostatically Sensitive (ES) Devices. Examples of typical ES devices are integrated circuits and some field effect transistors and semiconductor "chip" components.

The following techniques should be used to help reduce the incidence of component damage caused by static electricity.

- Immediately before handling any semiconductor component or semiconductor-equipped assembly, drain off any electrostatic charge on your body by touching a known earth ground. Alternatively, obtain and wear a commercially available discharging wrist strap device, which should be removed for potential shock reasons prior to applying power to the unit under test.
- 2. After removing an electrical assembly equipped with ES devices, place the assembly on a conductive surface such as aluminum foil, to prevent electrostatic charge build-up or exposure of the assembly.
- 3. Use only a grounded-tip soldering iron to solder or unsolder ES devices.
- 4. Use only an anti-static solder removal device. Some solder removal devices not classified as "anti-static" can generate electrical charges sufficient to damage ES devices.
- 5. Do not use freon-propelled chemicals. These can generate electrical change sufficient to damage ES devices.
- 6. Do not remove a replacement ES device from its protective package until immediately before you are ready to install it. (Most replacement ES devices are packaged with leads electrically shorted together by conductive foam, aluminum foil or comparable conductive material.)
- 7. Immediately before removing the protective material from the leads of a replacement ES device, touch the protective material to the chassis or circuit assembly into which the device will be installed.

CAUTION : Be sure no power is applied to the chassis or circuit, and observe all other safety precautions.

8. Minimize bodily motions when handling unpackaged replacement ES devices. (Otherwise harmless motion such as the brushing together or your clothes fabric or the lifting of your foot from a carpeted floor can generate static electricity sufficient to damage an ES devices.

### **PRODUCT SAFETY NOTICE**

Each precaution in this manual should be followed during servicing.

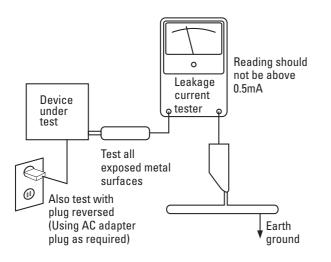

Components identified with the IEC symbol  $\bigstar$  in the parts list are special significance to safety. When replacing a component identified with  $\bigstar$ , use only the replacement parts designated, or parts with the same ratings or resistance, wattage, or voltage that are designated in the parts list in this manual. Leakage-current or resistance measurements must be made to determine that exposed parts are acceptably insulated from the supply circuit before returning the product to the customer.

#### SAFETY PRECAUTIONS

The following check should be performed for the continued protection of the customer and service technician.

#### LEAKAGE CURRENT CHECK

Measure leakage current to a known earth ground (water pipe, conduit, etc.) by connecting a leakage current tester between the earth ground and all exposed metal parts of the appliance (input/output terminals, screwheads, metal overlays, control shaft, etc.). Plug the AC line cord of the appliance directly into a 120V AC 60Hz outlet and turn the AC power switch on. Any current measured must not exceed o.5mA.

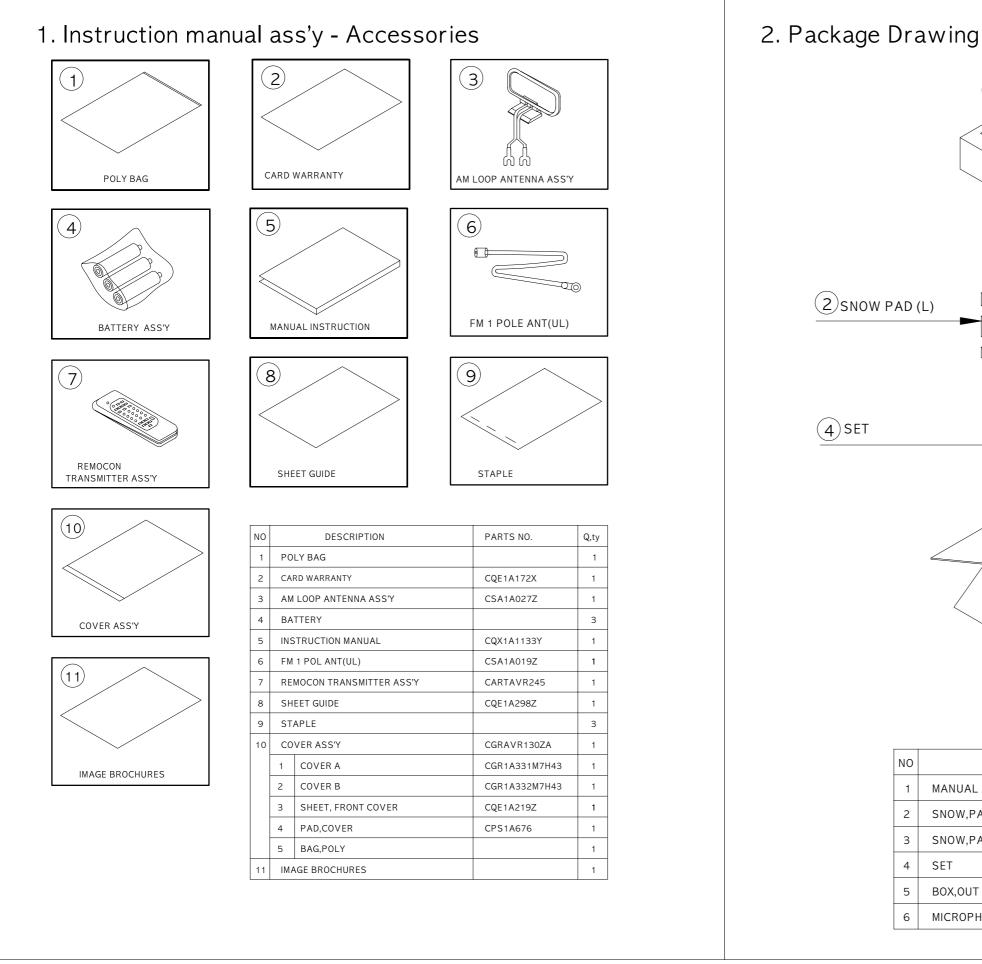

**AC Leakage Test** 

ANY MEASUREMENTS NOT WITHIN THE LIMITS OUTLINED ABOVE ARE INDICATIVE OF A POTENTIAL SHOCK HAZARD AND MUST BE CORRECTED BEFORE RETURNING THE APPLIANCE TO THE CUSTOMER.

SET

# **FRONT-PANEL CONTROLS**

**Main Power Switch:** This is a mechanical switch that turns the power supply on or off. It is usually left pressed in (On position), and cannot be turned on using the remote control.

**Standby/On Switch:** This is an electrical switch that turns the receiver on for playback, or leaves it in standby mode for quick turn-on using this switch or the remote control.

**Power Indicator:** This LED has three possible modes. When main power is turned off, the LED is dark and the receiver won't respond to any button presses. When main power is turned on, but before the Standby/On Switch is used, the LED turns amber to indicate that the receiver is in Standby mode and ready to be turned on. When the receiver is turned on, the LED turns blue.

**Source Select:** Press this button to select a source device, which is a component where a playback signal originates, e.g., DVD, CD, cable TV, satellite or HDTV tuner.

**Source Indicators:** The name of the current source input lights up. The indicated input changes each time the Source Select button is pressed.

Volume Knob: Turn this knob to raise or lower the volume, which will be shown in decibels (dB) in the Message Display.

**Message Display:** Various messages appear in this two-line display in response to commands. When the on-screen display menu system (OSD) is in use, the message OSD ON will appear to remind you to check the video display.

Tuner Band: Press this button to select the tuner as the source, to switch between the AM and FM bands, or to select XM satellite radio.

**Tuning:** Press either side of this button to tune a radio station or XM channel.

**Tuning Mode:** This button toggles between manual (one frequency step at a time) and automatic (seeks frequencies with acceptable signal strength) tuning mode. It also toggles between stereo and mono modes when an FM station is tuned.

When XM Radio is in use, pressing this button repeatedly displays the channel name, category, artist and track title in the lower line of the Message Display. For traffic-and-weather channels, this button displays the city, channel name, local weather and local temporature.

Preset Stations: Press this button to select a preset radio station.

**Headphone Jack/EzSet+ Microphone Input:** Plug a 1/4" headphone plug into this jack for private listening.

This jack is also used to connect the supplied microphone before beginning the EzSet+ procedure described in the Initial Setup section. To begin EzSet+, plug the supplied microphone into this jack, place the microphone at the listening position, and follow the directions given in the EzSet+ on-screen menu. **Surround Mode:** Press this button to select a surround sound (e.g., multichannel) mode group. Choose from the Dolby modes, DTS modes, Logic 7 modes, DSP modes or Stereo modes.

**Surround Select:** After you have selected the desired surround mode group, press this button to select a specific mode.

**Surround Mode Indicators:** One or more of these icons may light up as you select different surround modes. The Message Display also indicates the surround mode.

Analog Audio, Video and Digital Audio Inputs: Connect a source component that will only be used temporarily, such as a camera or game console, to these jacks. Remember to select only one type of audio and one type of video connection.

**Speaker/Channel Input Indicators:** The box icons indicate which speaker positions you have configured, and the size (frequency range) of each speaker. When a digital audio input is used, letters will light inside the boxes to indicate which channels are present in the incoming signal.

**Navigation:** These buttons are used together with the following five buttons to make selections.

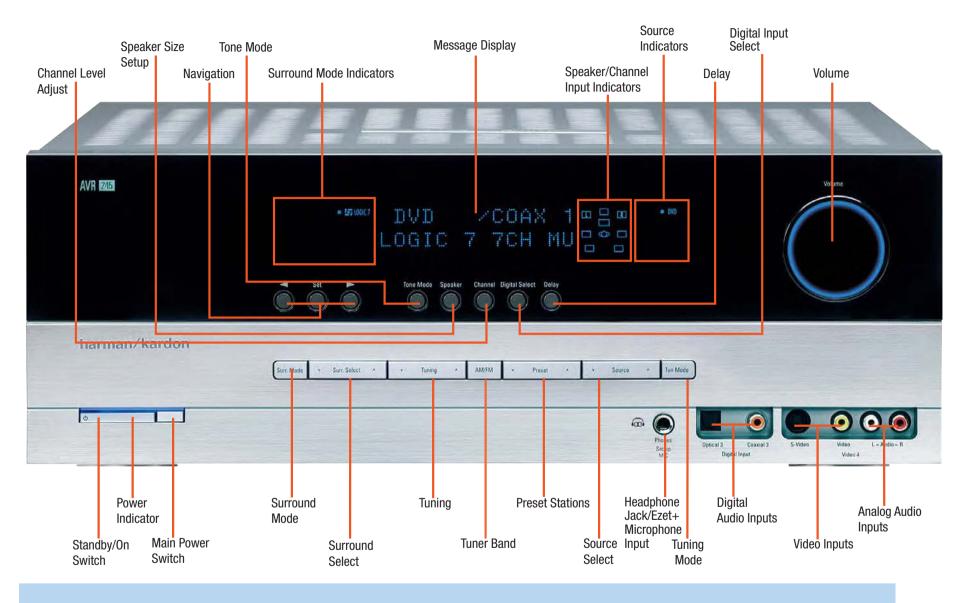

**Tone Mode:** Press this button to access the tone controls (bass and treble). Use the  $\checkmark$  Navigation Buttons to make your selections.

**Speaker:** Press this button to configure speaker sizes, that is, the low-frequency-range capability of each speaker.

**Channel Level Adjust:** Press this button to set the output level for each channel so that all speakers sound equally loud at the listening position.

**Digital Input Select:** Press this button to select the specific digital audio input (or analog audio input) you used for the current source.

**Delay:** Press this button to set delay times that compensate for placing the speakers at different distances from the listening position.

**NOTE:** To make it easier to follow the instructions throughout the manual that refer to this illustration, a copy of this page may be downloaded from the Product Support section at www.harmankardon.com.

# **REAR-PANEL CONNECTIONS**

**AM and FM Antenna Terminals:** Connect the included AM and FM antennas to their respective terminals for radio reception.

XM Antenna Jack: Plug in an XM antenna module here. The XM antenna module is purchased separately, and should specify that it is for home use with an XM-Ready<sup>®</sup> product. You will need to subscribe to the XM service, which is available separately, and activate the service for your antenna module. (XM service is not available in Alaska and Hawaii.)

**Front, Center and Surround Speaker Outputs:** Use two-conductor speaker wire to connect each set of terminals to the correct speaker. Remember to observe the correct polarity (positive and negative connections). Always connect the positive lead to the colored terminal on the receiver and the red terminal on the speaker. Connect the negative lead to the black terminal on both the receiver and the speaker. See the Connections section for more information on connecting your speakers.

**Surround Back/Multiroom Speaker Outputs:** These speaker outputs may be used either for the surround back channels in a 7.1-channel home theater, or they may be reassigned to a remote room for use with a multiroom system. When these outputs are reassigned for multiroom operation, only a 5.1-channel configuration will be available in the main listening room. Use the on-screen menu system to configure these channels as desired.

As with the other speaker outputs, remember to observe proper polarity by connecting the positive and negative output terminals to the corresponding terminals on each speaker.

**Subwoofer Output:** If you have a powered subwoofer, connect it to this jack.

**Preamp Outputs:** Connect these jacks to an external amplifier if more power is desired.

Surround Back/Multiroom Preamp Outputs: These outputs may be used with an external amplifier either to power the surround back channels, or to power the speakers in the remote zone of a multichannel system. Use the on-screen menu system to configure these channels as desired.

**Remote Infrared (IR) Input and Output:** When the remote IR receiver on the front panel is blocked, such as when the AVR is placed inside a cabinet, connect an optional IR receiver to the Remote IR Input jack for use with the remote control. The Remote IR Output may be connected to the Remote IR Input of a compatible source device (or other product) to enable remote control through the AVR. This is particularly useful in multiroom applications, when you wish to control the source device from the remote room (when used with the Multiroom IR Input). When several source devices are used, connect them in "daisy chain" fashion.

**Multiroom Infrared (IR) Input:** Connect a remote IR receiver located in the remote zone of a multiroom system to this jack to control the AVR and any source devices connected to the Remote IR Output from the remote zone.

Video 1, Video 2, Video 3 and DVD Audio/Video Inputs:

These jacks may be used to connect your video-capable source components (e.g., VCR, DVD player, cable TV box) to the receiver. Remember to use only one type of video connection for each source. See the Connections section for more information on audio and video connection options for each source component.

Video 1 Audio/Video Outputs: These jacks may be used to connect your VCR or another recorder.

**Composite and S-Video Monitor Outputs:** If any of your sources use composite or S-video connections, you may need to connect one or both of these monitor outputs to the corresponding inputs on your television or video display in order to view the sources and to view the on-screen displays. If your video display is equipped with component video inputs, you may take advantage of the AVR 245's transcoding capability, which transcodes composite and S-video signals to component video, allowing for only a single video connection from the AVR to the video display. However, the on-screen displays are not available using component video.

**HDMI Inputs and Output:** HDMI (High-Definition Multimedia Interface) is a newer type of connection for transmitting digital audio and video signals between devices. Although the AVR 245 is not capable of processing HDMI signals, if your video display is HDMI-capable, you may connect up to two HDMI sources here, and then connect the HDMI output to your video display for improved video performance. It is recommended that you disable the HDMI audio function of your video display, and make a separate digital audio connection from the source device to one of the AVR's coaxial or optical digital audio inputs to benefit from the AVR 245's multichannel audio processing.

The AVR 245 will not convert other types of video to HDMI, and you will not be able to view the on-screen displays using the HDMI connection.

**CD and Tape Audio Inputs:** These jacks may be used to connect audio-only source components (e.g., CD player, tape deck). Do not connect a turntable to these jacks without a phono preamp.

**Tape Outputs:** These jacks may be used to connect a CDR or another audio-only recorder.

**Coaxial and Optical Digital Audio Inputs:** If a source has a compatible digital audio output, connect it to one of these jacks for improved audio performance. Remember to use only one type of digital audio connection for each source.

**Coaxial and Optical Digital Audio Outputs:** If a source is also an audio recorder, you may connect a compatible digital audio output to the recorder's input for improved recording quality.

Bridge ge/DMP Input: Connect the optional Harman Kardon to this input for use with your iPod (not included). Make sure the receiver is turned off (in Standby mode) when connecting The Bridge. **6-/8-Channel Inputs:** Connect the analog audio outputs of a DVD-Audio, SACD<sup>™</sup>, Blu-ray Disc<sup>™</sup> or HD-DVD<sup>™</sup> player (or any other external decoder) to these jacks to enjoy these proprietary formats.

**Component Video Inputs:** If both a video source (e.g., DVD player or HDTV tuner) and your television or video display have analog component video (Y/Pb/Pr) capability, then you may connect the component video outputs of the source to one of the two component video inputs. Do not make any other video connections to that source.

**Component Video Monitor Outputs:** If you are using either of the Component Video Inputs and your television or video display is component-video-capable, you may connect these jacks to the corresponding inputs on your video display. You will also need to connect the composite and/or S-video monitor outputs to your video display to view the AVR 245's on-screen displays.

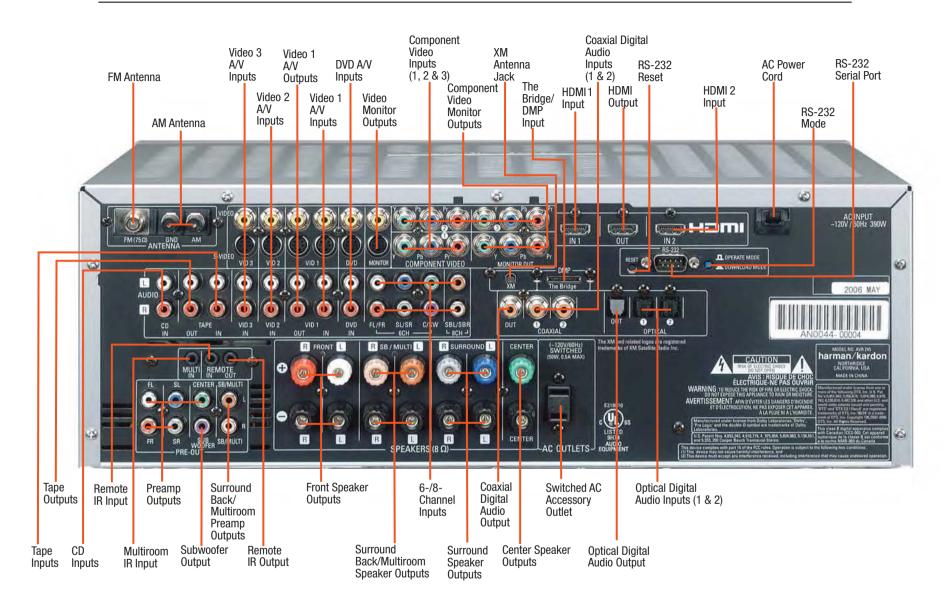

**RS-232 Serial Port:** This specialized connector may be used with your personal computer in case Harman Kardon offers a software upgrade for the receiver at some time in the future.

**RS-232 Mode:** Leave this switch popped out in the Operate position unless the AVR 245 is being upgraded.

**RS-232 Reset:** This switch is only used during a software upgrade. A standard processor reset is performed by pressing and holding the front-panel Tone button.

Switched AC Accessory Outlet: You may plug the AC power cord of one source device into this outlet, and it will turn on whenever you turn on the receiver. Do not use a source that consumes more than 50 watts of power.

**AC Power Cord:** After you have made all other connections, plug the AC power cord into an unswitched outlet.

**NOTE:** To make it easier to follow the instructions throughout the manual that refer to this illustration, a copy of this page may be downloaded from the Product Support section at www.harmankardon.com.

# **REMOTE CONTROL FUNCTIONS**

The AVR 245 remote is capable of controlling 11 devices, including the AVR itself and an iPod docked in the optional The Bridge accessory. During the installation process, you may program the codes for each of your source components into the remote. Each time you wish to use the codes for any component, you will need to first press the Selector button for that component. This changes the button functions to the appropriate codes for that product.

**NOTE:** Several of the Input Selectors are shared between two devices. Each press of those Input Selectors will toggle between the device whose name is printed on the button and the device whose name is printed above the button.

Each Input Selector has been preprogrammed to control certain types of components, with only the codes specific to each brand and model changing, depending on which product code is programmed. The device types programmed into each selector may not be changed.

DVD: Controls DVD players and recorders.

CD: Controls CD players and recorders.

Tape: Controls cassette decks.

Video 1: Controls VCRs, TiVo and DVRs.

Video 2: Controls cable and satellite television set-top boxes.

Video 3: Controls televisions and other video displays.

Video 4: Controls any device connected to the front-panel inputs.

**HDMI 1 and 2:** Each code set controls a source device (such as a DVD player) connected to one of these two inputs.

XM: Controls the AVR functions for XM Satellite Radio.

The Bridge/DMP: Controls an iPod docked in The Bridge.

For example, if you have inserted a disc in your CD player and you would like to skip ahead three tracks, but you then find that the volume is too loud, you would follow this procedure:

**1.** Press the CD Input Selector to switch to the codes that control your CD player.

**2.** Press the Play Button (in the Transport Controls section) if the disc is not already playing.

3. Press the Skip Up Button three times to advance three tracks.

4. Press the AVR Button so that you can access the Volume Controls.

5. Press the Volume Down Button until the volume level is satisfactory.

Any given button may have different functions, depending on which component is being controlled. Some buttons are labeled with these functions. For example, the Sleep and DSP Surround Buttons are labeled for use as Channel Up/Down Buttons when controlling a television or cable box. See Table A8 in the appendix for listings of the different functions for each type of component.

**IR Transmitter Lens:** As buttons are pressed on the remote, infrared codes are emitted through this lens. Make sure it is pointing toward the component being operated.

**Power On Button:** Press this button to turn on the AVR or another device. The Master Power Switch on the AVR 245's front panel must first have been switched on.

**Mute Button:** Press this button to mute the AVR 245's speaker and headphone outputs temporarily. To end the muting, press this button or adjust the volume. Muting is also canceled when the receiver is turned off.

**Program Indicator:** This LED lights up or flashes in one of three colors as the remote is programmed with codes.

**Power Off Button:** Press this button to turn off the AVR 245 or another device.

**AVR Selector:** Press this button to switch the remote to the codes that operate the receiver.

**Input Selectors:** Press one of these buttons to select a source device, which is a component where a playback signal originates, e.g., DVD, CD, cable TV, satellite or HDTV tuner, or an iPod docked in the optional The Bridge. This will also turn on the receiver and switch the remote to the codes that operate the source device.

XM Radio Button: Press this button to select XM Satellite Radio as the source. You will need to have purchased and activated an XM antenna module, and you will also need to subscribe to the XM Radio service. Visit www.xmradio.com for more information.

**AM/FM Button:** Press this button to select the tuner as the source, or to switch between the AM and FM bands, or XM Radio.

**6-/8-Channel Input Selector:** Press this button to select the 6-/8-Channel Inputs as the audio source. The receiver will use the video input and remote control codes for the last-selected video source.

**Test Tone:** Press this button to activate the test tone for manual output-level calibration.

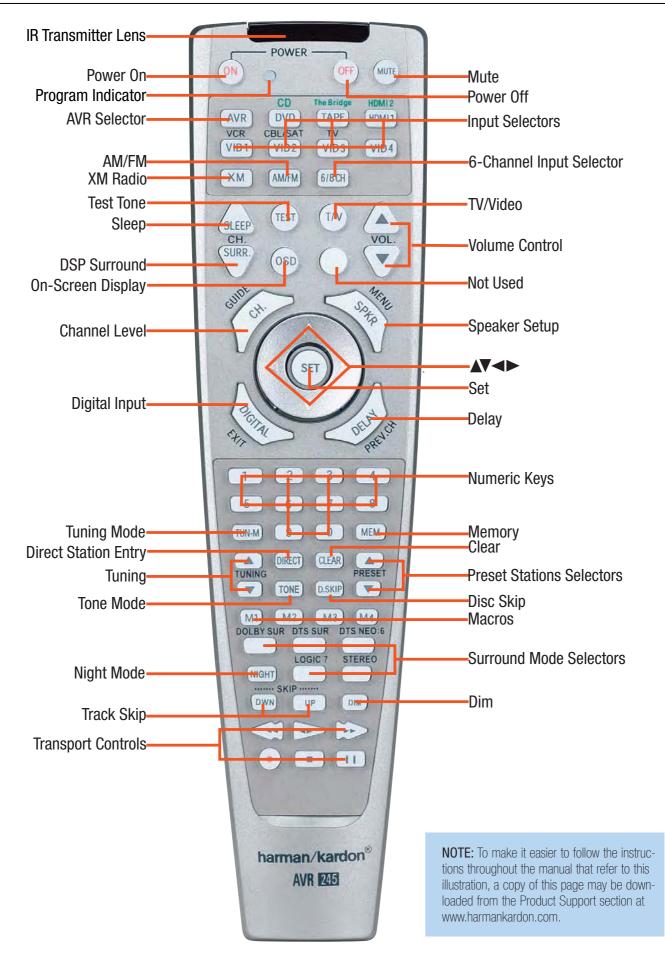

**TV/Video:** This button has no effect on the receiver, but is used to switch video inputs on some video source components.

**Sleep Button:** Press this button to activate the sleep timer, which turns off the receiver after a programmed period of time of up to 90 minutes.

Volume Controls: Press these buttons to raise or lower the volume, which will be shown in decibels (dB) in the Message Display.

**DSP Surround:** Press this button to select a DSP surround mode (Hall 1, Hall 2, Theater).

**On-Screen Display (OSD):** Press this button to activate the onscreen menu system.

# **REMOTE CONTROL FUNCTIONS**

**Channel Level:** Press this button to adjust the output levels for each channel so that all speakers sound equally loud at the listening position. Usually this is done while playing an audio selection, such as a favorite CD, after you have calibrated the levels using EzSet+, as described in the Initial Setup section.

**Speaker Setup:** Press this button to configure speaker sizes, that is, the low-frequency capability of each speaker. Usually this is done using the on-screen menu system, as described in the Initial Setup section.

**Navigation**  $(\blacktriangle/\checkmark/\checkmark/>)$  and **Set Buttons:** These buttons are used to make selections within the on-screen menu system, or when accessing the functions of the four buttons surrounding this area of the remote – Channel Level, Speaker Setup, Digital Input or Delay.

**Digital Input Select:** Press this button to select the specific digital audio input (or analog audio input) you used for the current source.

**Delay:** Press this button to set delay times that compensate for placing the speakers at different distances from the listening position, or to resolve a "lip sync" issue that may be caused by digital video processing. This is done using the on-screen menu system, as described in the Initial Setup section.

**Numeric Keys:** Use these buttons to enter radio station frequencies or to select station presets. When the AM or FM band is in use, press the Direct button before entering the station frequency.

When listening to XM Radio, you may enter channel numbers without first pressing the Direct Button; however, to access the preset stations, you will need to use the Preset Stations Selectors. To access another bank of XM presets, press the Set Button repeatedly until PRESET SEARCH appears, then use the A/T Buttons to select the letter of the desired bank.

**Tuning Mode:** This button toggles between manual (one frequency step at a time) and automatic (seeks frequencies with acceptable signal strength) tuning mode. It also toggles between stereo and mono modes when an FM station is tuned.

When listening to XM Radio, press the Tuning Mode Button once to view the category name of the current channel. Additional presses will display the artist, song title and channel name.

**Memory:** After you have tuned a particular radio station, press this button, then the numeric keys, to save that station as a radio preset.

For XM Radio, the procedure for saving a preset is a little different. To save the current channel in one of the 40 available preset locations, press the Set Button repeatedly until PRESET SEARCH appears. Use the  $\bigwedge/\bigtriangledown$  Buttons to select a letter (A through E) representing one of the five banks of preset memory slots. Then press the Memory button, followed by a Numeric Key (1 through 8) for the precise preset memory location you wish to save the channel in.

**Tuning:** Press these buttons to tune a radio station or XM Radio channel. Depending on whether the tuning mode has been set to manual or automatic, each press will either change one frequency step at a time, or seek the next frequency with acceptable signal strength.

**Direct:** Press this button before using the Numeric Keys to directly enter a radio station frequency (AM or FM bands only).

**Clear:** Press this button to clear a radio station frequency you have started to enter.

**Preset Stations Selector:** Press these buttons to select a preset radio station.

For XM Radio, first press the Set Button repeatedly until PRESET SEARCH appears and then use the  $\checkmark/\checkmark$  Buttons to select the letter of the desired bank of presets.

**Tone Mode:** Press this button to access the tone controls (bass and treble). Use the Navigation Buttons to make your selections.

**Disc Skip:** This button has no effect on the receiver, but is used with some optical disc changers to skip to the next disc.

**Macros:** These buttons may be programmed to execute long command sequences with a single button press. They are useful for programming the command to turn on or off all of your components, or for accessing specialized functions for a different component than you are currently operating.

**Surround Mode Selectors:** Press any of these buttons to select a type of surround sound (e.g., multichannel) mode. Choose from the Dolby modes, DTS modes, Logic 7 modes or Stereo modes. Each press of a button will cycle to the next available variant of that mode. Not all modes or mode groups are available with all sources.

**Night Mode:** Press this button to activate Night mode with specially encoded Dolby Digital discs or broadcasts. Night mode compresses the audio so that louder passages are reduced in volume to avoid disturbing others, while dialogue remains intelligible.

**Track Skip:** These buttons have no effect on the receiver, but are used with many source components to change tracks or chapters.

**Dim:** Press this button to partially or fully dim the front-panel display.

**Transport Controls:** These buttons have no effect on the receiver, but are used to control many source components. By default, when the remote is operating the receiver, these buttons will control a DVD player.

# CONNECTIONS

There are different types of audio and video connections used to connect the receiver to the speakers and video display, and to connect the source devices to the receiver. To make it easier to keep them all straight, the Consumer Electronics Association (CEA) has established a color-coding standard. Table 1 may be helpful to you as a reference while you set up your system.

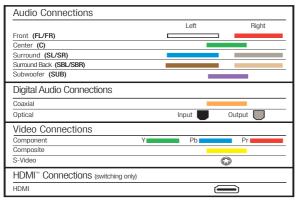

Table 1- Connection Color Guide

### Types of Cables

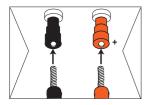

This section will briefly review different types of cables and connections that you may use to set up your system.

### Speaker Cables

Speaker cables carry an amplified signal from the receiver's speaker terminals to each loudspeaker. Speaker cables contain two wire conductors, or leads, inside plastic insulation. The two conductors are usually differentiated in some way, by using different colors, or stripes, or even by adding a ridge to the insulation. Sometimes the actual wires are different, one being copper-colored and the other silver.

The differentiation is important because each speaker must be connected to the receiver's speaker-output terminals using two wires, one positive (+) and one negative (-). This is called speaker polarity. It's important to maintain the proper polarity for all speakers in the system. If some speakers have their negative terminals connected to the receiver's positive terminals, performance can suffer, especially for the low frequencies.

Always connect the positive terminal on the loudspeaker, which is usually colored red, to the positive terminal on the receiver, which is colored as shown in the Connection Color Guide (Table 1). Similarly, always connect the black negative terminal on the speaker to the black negative terminal on the receiver.

The AVR 245 uses binding-post speaker terminals that can accept banana plugs or bare-wire cables. Banana plugs are simply plugged into the hole in the middle of the terminal cap. See Figure 1.

Figure 1 - Binding-Post Speaker Terminals With Banana Plugs

Bare wire cables are installed as follows (see Figure 2):

- 1. Unscrew the terminal cap until the pass-through hole in the collar is revealed.
- 2. Insert the bare end of the wire into the hole.
- 3. Hand-tighten the cap until the wire is held snugly.

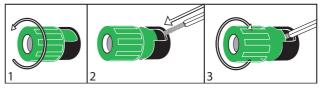

Figure 2 - Binding-Post Speaker Terminals With Bare Wires

#### Subwoofer

The subwoofer is a specialized type of loudspeaker that is usually connected in a different way. The subwoofer is used to play only the low frequencies (bass), which require much more power than the other speaker channels. In order to obtain the best results, most speaker manufacturers offer powered subwoofers, in which the speaker contains its own amplifier on board. Sometimes the subwoofer is connected to the receiver using the front left and right speaker outputs, and then the front left and right speakers are connected to terminals on the subwoofer. More often, a line-level (nonamplified) connection is made from the receiver's Subwoofer Output to a corresponding jack on the subwoofer, as shown in Figure 3.

Although the subwoofer output looks similar to the analog audio jacks used for the various components, it is filtered and only allows the low frequencies to pass. Don't connect this output to any other devices. Although doing so won't cause any harm, performance will suffer.

### Connecting Source Devices to the AVR

The AVR 245 is designed to process audio and video input signals, playing back the audio and displaying the video on a television or monitor connected to the AVR. These signals originate in what are known as "source devices," including your DVD player, CD player, DVR (digital video recorder) or other recorder, tape deck, game console, cable or satellite television box or MP3 player. Although the tuner is built into the AVR, it also counts as a source, even though no external connections are needed, other than the FM and AM antennas and the XM antenna module.

Separate connections are required for the audio and video portions of the signal. The types of connections used depend upon what's available on the source device, and for video signals, the capabilities of your video display.

# CONNECTIONS

#### Audio Connections

There are two formats for audio connections: digital and analog. Digital audio signals are of higher quality, and are required for listening to sources encoded with digital surround modes, such as Dolby Digital and DTS. There are two types of digital audio connections: coaxial and optical. Either type of digital audio connection may be used for each source device, but never both simultaneously for the same source. However, it's okay to make both analog and digital audio connections at the same time to the same source.

**NOTE**: Although HDMI cables are capable of carrying digital audio signals, the AVR 245 is not designed to process those signals. Therefore, if your source and video display are both HDMI-capable, use the HDMI connections for video only. You will need to make a separate audio connection from the source device to the AVR 245, and you should make sure to turn the volume on your television all the way off.

#### **Digital Audio**

Coaxial digital audio jacks are usually color-coded in orange. Although they look similar to analog jacks, they should not be confused, and you should not connect coaxial digital audio outputs to analog inputs or vice versa. See Figure 4.

Figure 4 – Coaxial Digital Audio

Optical digital audio connectors are often covered by a shutter to protect them from dust. The shutter opens as the cable is inserted. Input connectors are color-coded using a black shutter, while outputs use a gray shutter. See Figure 5.

Figure 5 – Optical Digital Audio

Due to the nature of digital signals as binary bits, they aren't subject to signal degradation the way analog signals are. Therefore, the quality of coaxial and optical digital audio connections should be the same, although it is important to limit the length of the cable. Whichever type of connection you choose, Harman Kardon recommends that you always select the highest quality cables available within your budget.

#### Analog Audio

Analog connections require two cables, one for the left channel (white) and one for the right channel (red). These two cables are often attached to each other for most of their length. See Figure 6.

Most sources that have digital audio jacks also have analog audio jacks, although some older types of sources, such as tape decks, have only analog jacks. For sources that are capable of both digital and analog audio, you may wish to make both connections.

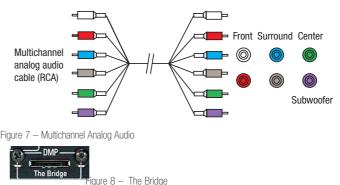

The analog audio connection is strongly recommended if you intend to use the source with the multiroom system. It's required if you will be using the multiroom preamp outputs with an external amplifier to power your remote speakers, as the AVR 245's multiroom system is not capable of converting the digital signal to analog format. It's suggested that you also use the analog audio connections when using the surround back/multiroom speaker outputs, in case another two-channel digital audio source is in use in the main listening area. The AVR 245 is only capable of processing one PCM source at a time.

If you wish to record materials from DVDs or other copy-protected sources, you may only do so using analog connections. (Remember to comply with all copyright laws, if you choose to make a copy for your own personal use.)

Multichannel analog connections are used with advanced sources where the digital content is copy-protected and all surround processing is performed inside the source. These types of connections are usually used with DVD-Audio, SACD, Blu-ray Disc, HD-DVD and other advanced players. See Figure 7.

Harman Kardon receivers also include a proprietary, dedicated audio connection called "The Bridge/DMP". If you own an iPod with a dock connector, you may separately purchase The Bridge and connect it to The Bridge/DMP port on the receiver. See Figure 8. Dock your iPod (not included) in The Bridge, and you may listen to your audio materials through your high-performance audio system. You may even use the AVR 245 remote to control the iPod, with navigation messages displayed on the front panel and on a video display connected to the AVR.

### **Video Connections**

Although some sources produce an audio signal only (e.g., CD player, tape deck), many sources output both audio and video signals (e.g., DVD player, cable television box, HDTV tuner, satellite box, VCR, DVR). In addition to the audio connection, you will need to connect one type of video connection for each source (never more than one at the same time for any source).

# CONNECTIONS

### **Digital Video Connections**

The AVR 245 is equipped with two HDMI (High-Definition Multimedia Interface) inputs, and one output. HDMI is capable of carrying digital audio and video information using a single cable, thus delivering the highest possible quality picture and sound.

There are different versions of HDMI, depending on the capability of the source device and the type of signal it is capable of transmitting via the HDMI connection.

In addition, receivers and processors such as the AVR 245 may handle the incoming signal in several different ways, depending on their capability as well. The AVR 245 is only capable of switching the HDMI data. That is, the incoming audio and video data will be passed directly to your HDMI-capable video display, without the AVR 245 processing any of the data. Although this enables the AVR 245 to be compatible with virtually any HDMI-capable source device and video display, it requires a separate audio connection for each source since the AVR 245 doesn't have access to the audio data in the HDMI stream.

The AVR 245 will not convert analog video signals to the HDMI format, and the on-screen displays are not visible when using an HDMI source. Therefore, you will need to connect the component, composite or S-video monitor output to your video display (or both, depending on which video connections your sources use).

The physical HDMI connection is simple. The connector is shaped for easy plug-in (see Figure 9). If your video display has a DVI input, you may use an HDMI-to-DVI adapter (not included) to connect it to the AVR's HDMI Output.

### Analog Video Connections

There are three types of analog video connections: composite video, S-video and component video.

Composite video is the basic connection most commonly available. The jack is usually color-coded yellow, and looks like an analog audio jack, although it is important never to confuse the two. Do not plug a composite video cable into an analog or coaxial digital audio jack, or vice versa. Both the chrominance (color) and luminance (intensity) components of the video signal are transmitted using a single cable. See Figure 10.

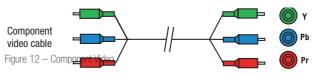

S-video, or "separate" video, transmits the chrominance and luminance components using separate wires contained within a single cable. The plug on an S-video cable contains four metal pins, plus a plastic guide pin. Be careful to line up the plug correctly when you insert it into the jack on the receiver, source or video display. See Figure 11.

Figure 11 – S-Video S-video cable

Component video separates the video signal into three components – one luminance ("Y") and two sub-sampled color signals ("Pb" and "Pr") – that are transmitted using three separate cables. The "Y" cable is color-coded green, the "Pb" cable is colored blue and the "Pr" cable is colored red. See Figure 12.

If it's available on your video display, HDMI is recommended as the best quality connection, followed by component video, S-video and then composite video.

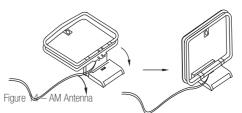

### Antennas

The AVR 245 uses separate terminals for the included FM and AM antennas that provide proper reception for the tuner.

The FM antenna uses a 75-ohm F-connector. See Figure 13.

The AM loop antenna needs to be assembled. Then connect the two leads to the screw terminals on the receiver. See Figure 14.

### **RS-232 Serial Port**

The RS-232 serial port on the AVR 245 is used only for data. If Harman Kardon releases a software upgrade for the receiver's operating system at some time in the future, the upgrade may be downloaded to the AVR using this port. Complete instructions will be provided at that time.

You are now ready to connect your various components to your receiver. Before beginning, make sure that all components, including the AVR 245, are turned completely off and their power cords are unplugged. **Don't** plug any of the power cords back in until you have finished making all of your connections.

Remember that your receiver generates heat while it is playing. Select a location that leaves several inches of space on all sides of the receiver. It is preferable to avoid completely enclosing the receiver inside a cabinet. It is also preferable to stack components on separate shelves rather than directly on top of the receiver. Some surface finishes are delicate. Try to select a location with a sturdy surface finish.

### Step One - Connect the Speakers

If you have not yet done so, place your speakers in the listening room, as described in the Speaker Placement section above.

Connect the center, front left, front right, surround left, surround right, surround back left and surround back right loudspeakers to the corresponding speaker terminals on the AVR 245. See Figure 17. Remember to maintain the proper polarity by always connecting the positive and negative terminals on each speaker to the positive and negative terminals on the receiver. Use the Connection Color Guide on page 16 as a reference.

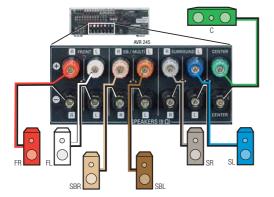

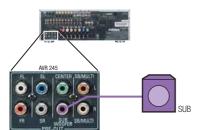

Figure 17 – Speaker Connections

**NOTE:** If you only have one surround back speaker, wait until after you have run EzSet+ in the Initial Setup section before connecting it to the Surround Back Left speaker outputs.

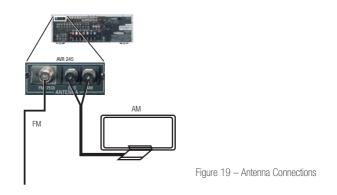

### Step Two – Connect the Subwoofer

Connect the Subwoofer Output on the AVR 245 to the line-level input on your subwoofer. See Figure 18. Consult the manufacturer's guide for the subwoofer for additional information.

### Step Three – Connect the Antennas

Connect the FM and AM antennas to their terminals. See Figure 19.

### Step Four - Connect the Source Components

Use the worksheets in the Appendix to note which connections you will use for each of your source devices.

For each source, select a source input (Video 1, Video 2, Video 3, etc.). In Table 2 we recommend connecting certain types of sources to certain source inputs to make it easier to program and use the remote control.

Decide which audio connections you will use. If your source device has them, use *either* the coaxial digital or the optical digital audio connection. Referring to Table 2, we recommend you connect the DVD source to the Coaxial 1 input jack, and the source designated Video 2 to the Optical 1 input jack. If you are using the HDMI inputs for video switching, then we recommend using the Coaxial 2 digital audio connection for the source connected to the HDMI 1 input, and the Optical 2 digital audio connection for the source connected to the HDMI 2 input. However, you may make whatever connections are best for your system.

In addition to the digital audio connections, we recommend that you connect the analog audio connections for each source, as a backup to the digital connections, for recording, for use with the multiroom system, or in the event that you use all six of the digital audio inputs for other devices. For sources that don't have digital audio outputs, you must use the analog audio connections.

For each video source, select one type of video connection. HDMI video is preferred, but both your source device and your video display must have this type of video capability. If either device does not, then use component video, S-video or composite video.

Referring to Table 2, we recommend that you connect the DVD source to the Component Video 1 inputs, the Video 1 source to the Component Video 2 inputs, and the Video 2 source to the Component Video 3 inputs. Any HDMI-capable source devices should be connected to one of the two HDMI inputs. All other source devices should be connected to either the component, S- or composite video input for that source. However, you may make whatever video connections are best for your system.

Figure 18 – Subwoofer Connection

**NOTE**: It's possible for a source to use none of the connections named for that source. For example, you might connect your DVD player to the Component Video 1 inputs and the Coax 1 digital audio input. However, we will refer to this source as "DVD," and in the Initial Setup section you will program the receiver so that these connections are assigned to the DVD source. When you select "DVD" as your source using the front panel or the remote, the correct connections for your DVD player will be used. We recommend connecting your various sources using the connections shown in Table 2 (below) in order to simplify programming your receiver and remote control. However, you may connect any device to any source input.

Device Type	AVR 245 Source Input	Audio Connections	Video Connections
VCR, DVR, PVR, TiVo or other audio/video recorder	Video 1	<ul> <li>Video 1 Analog (inputs and outputs) and</li> <li>Any one available coaxial or optical digital, audio input, with corresponding coax or optical digital output</li> </ul>	<ul> <li>One of component Video 2, Video 1 S-video or Video 1 composite video</li> <li>For recording, use Video 1 S-video or composite video output, and do not use component video connections at all</li> </ul>
Cable TV, satellite TV, HDTV or other device that delivers television programs	Video 2	<ul> <li>Video 2 Analog and</li> <li>Optical 1</li> </ul>	One of component Video 3, Video 2 S-video or Video 2 composite video
TV or other audio/video device	Video 3	<ul> <li>Video 3 Analog and</li> <li>Any one available coaxial or optical digital audio input</li> </ul>	<ul> <li>Video 3 S-video or Video 3 composite video</li> </ul>
TV, game console, camera or other audio/video device	Video 4 (front-panel jacks)	<ul> <li>Video 4 Analog and</li> <li><i>Either</i> Coax 3 <i>or</i> Optical 3</li> </ul>	Video 4 S-video <i>or</i> Video 4 composite video
DVD Audio/Video, SACD, HD-DVD, Blu-ray Disc	DVD	<ul> <li>DVD Analog</li> <li>6-/8-Channel inputs (optional) and</li> <li>Coax 1</li> </ul>	• Component Video 1
HDMI-capable DVD player or other audio/ video device	HDMI 1	• Coaxial 2 digital audio input	• HDMI 1 Input
HDMI-capable DVD player or other audio/ video device	HDMI 2	Optical 2 digital audio input	• HDMI 2 Input
CD player	CD	<ul> <li>CD Analog and</li> <li>Any one available coaxial or optical digital audio input</li> </ul>	Not required
CDR, MiniDisc, cassette	Таре	<ul> <li>Tape Analog (inputs and outputs) and</li> <li>Any one available coaxial or optical digital, audio input, with corresponding coax or optical digital output</li> </ul>	<ul> <li>Not required</li> </ul>

Table 2 - Recommended Source Component Connections

**NOTE:** The AVR 245 is equipped with a total of six digital audio inputs, four on the rear panel (Coaxial 1 and 2, Optical 1 and 2) and two on the front panel (Coaxial 3 and Optical 3). However, there are a total of nine sources that may be connected to devices that have digital audio outputs. We recommend certain digital audio connections simply because, as reflected in Table A1 of the Appendix, those digital audio inputs are assigned to the particular sources by default at the factory. But any digital audio input may be reassigned to any source. Since you may not be using all nine source inputs, you may reassign a digital audio input that is recommended for a source you aren't using to another device. Table 2 is a guideline; you may need to make adjustments to fit your system.

### Video 1 Source

Since this source includes audio and video recording output jacks, it is best suited to a video recorder, such as your VCR or DVR.

Referring to Table 2, connect your recorder to the Video 1 Analog Audio inputs and outputs **and** to any available coaxial or optical digital audio input (and corresponding digital audio output). See Figure 20. Use either the Video 1 S-video or composite video input and output if you wish to make recordings. If you don't plan on recording, you may use the Component Video 2 inputs.

Remember to connect the audio and video *output* jacks on your recorder to the Video 1 or digital audio *input* jacks on the AVR, and the audio and video *input* jacks on your recorder to the Video 1 or digital audio *output* jacks on the AVR.

**NOTE:** It isn't possible to make recordings using component video connections. Keep this in mind as you connect other source devices that you may wish to make recordings from.

### Video 2 Source

The Video 2 source is used only for playback, never recording. The AVR 245 remote control is programmed to operate many brands and models of cable and satellite television devices, and we recommend connecting your cable or satellite set-top box to this source.

Referring to Table 2, connect your set-top box to the Video 2 Analog Audio inputs **and** to the Optical 1 Digital Audio input. If possible, use the Component Video 3 inputs. Otherwise, connect the set-top box's S-video or composite video output to the matching Video 2 video input. See Figure 21.

Figure 21 - Video 2 A/V, Digital Audio and Component Video Inputs

### Video 3 Source

The Video 3 source is used for playback only, never recording. The remote control is programmed to accept codes that will operate a TV, but you may connect any audio/video source device to the Video 3 inputs and use the device's own remote to control it.

If you receive your television programming using your TV with an antenna or direct cable connection, then you will need to connect the analog audio outputs (if available on your TV) to the Video 3 Analog Audio inputs. See Figure 22. *Do not* connect any video output on the television set to any video input on the receiver. See Step Five for information on connecting the receiver's video monitor outputs to the TV.

gure 22 – Video 3 Audio Inputs

### Video 4 Source

The Video 4 source is used only for playback, never recording. It is also generally reserved for components that are only temporarily connected to the receiver, such as cameras and game consoles. When not in use, you may place the supplied covers over the front-panel Video 4 jacks for a cleaner appearance. Simply snap the covers in place. When you wish to use the jacks, gently press on the left side of each cover to pivot it out for removal.

Referring to Table 2, connect your camera or game console to the Video 4 Analog Audio inputs **and** to either the Coaxial 3 or Optical 3 digital audio input. Connect the component's S-video or composite video output to the matching Video 4 video input. See Figure 23.

Figure 23 – Video 3 A/V and Digital Audio Inputs

### DVD

The DVD source is used for a DVD player. If you have a more advanced multichannel device, such as a Blu-ray Disc or HD-DVD player, you may connect it to the DVD source.

Referring to Table 2, connect your DVD player to the DVD Analog Audio inputs **and** to the Coaxial 1 Digital Audio input. If possible, use the Component Video 1 inputs. Otherwise, connect the DVD player's S-video or composite video output to the matching DVD video input. See Figure 24.

e 24 – DVD A/V, Digital Audio and Component Video Inputs

If your DVD player plays multichannel lossless discs, such as SACD or DVD-Audio, or when an HD-DVD or Blu-Ray Disc player is used, you will also need to connect the 6- or 8-channel analog audio outputs on the player to the 6-/8-channel analog audio inputs on the receiver, in order to enjoy these discs to their fullest. See Figure 25.

The HDMI 1 source is used with a device that is capable of outputting digital video through an HDMI connection, such as an HD-DVD or Blu-ray Disc player or HDTV tuner. The HDMI 1 source is not used with any of the 2-channel analog audio or video inputs on the AVR 245.

Since the AVR 245 is not capable of processing either the audio or video signal transmitted via the HDMI connection, you will need to connect the source's coaxial digital audio output to the Coaxial 2 digital audio input on the AVR 245, or use the 6-/8-channel inputs. See Figure 26. You will also need to make sure your video display is HDMI-capable, and for many source devices, the display must be HDCP-compliant (High-Bandwidth Digital Content Protection) in order to display copy-protected materials.

If your video display is equipped with a DVI (Digital Video Interface) input, you may use an HDMI-to-DVI adapter (not included).

### HDMI 2 Source

The HDMI 2 source is used with a second device that is capable of outputting digital video through an HDMI connection, such as an HD-DVD or Blu-ray Disc player. The HDMI 2 source is not used with any of the 2-channel analog audio or video inputs on the AVR 245.

Since the AVR 245 is not capable of processing either the audio or video signal transmitted via the HDMI connection, you will need to connect the source's optical digital audio output to the Optical 2 digital audio input on the AVR 245, or use the 6-/8-channel inputs. See Figure 27. You will also need to make sure your video display is HDMI-capable, and for many source devices, the display must be HDCP-compliant (High-Bandwidth Digital Content Protection) in order to display copy-protected materials.

If your video display is equipped with a DVI (Digital Video Interface) input, you may use an HDMI-to-DVI adapter (not included).

The CD source is used for a strictly audio device, such as a CD player.

Referring to Table 2, connect your CD player to the CD Analog Audio inputs **and** to any available digital audio input. See Figure 28.

No video connections are needed.

#### Таре

The Tape source is used for audio-only recorders, such as a CDR, MiniDisc or cassette deck.

Referring to Table 2, connect your recorder to the Tape Analog Audio inputs and outputs, and to any available digital audio input (and corresponding digital audio output). See Figure 29.

Remember to connect the *output* jacks on your recorder to the Tape or digital audio *input* jacks on the AVR, and the *input* jacks on your recorder to the Tape or digital audio *output* jacks on the AVR.

No video connections are needed.

### **™Bridge**<sup>™</sup>

With Harman Kardon's optional The Bridge, you can listen to audio stored on your iPod (not included), use your AVR 245 remote control to operate the iPod, and even charge the iPod while it's docked in The Bridge.

Simply plug the proprietary cable from The Bridge into the special The Bridge/DMP connector on the rear of the AVR 245. See Figure 30. Refer to the owner's manual for The Bridge to select the appropriate insert to match your iPod.

Figure 30 – The Bridge/DMP Connector

### Step Five – Connect Video Display

Only video connections should be made between the receiver and your video display (TV), unless your TV is the source for your television programming (see Video 3 Source on page 23).

You will need to make a video connection for each type of video used for your sources. In addition, even if you didn't use S-video or composite video for any of your sources, you will still need to use one of these two video monitor connections in order to view the AVR 245's onscreen menus and displays.

First, determine what types of video your display is capable of handling. Remember that HDMI is preferred, followed by component video, Svideo and then composite video. Ideally, this guided you in selecting the video connections for your sources.

Next, note which types of video connections you used for your source devices. Make sure you didn't use a better type of video connection for a source than your video display can handle. If so, you will need to disconnect the source and use a video connection that's compatible with your display.

If you used an HDMI video connection for any of your sources, then connect the HDMI Output on the AVR to an HDMI input on your video display. See Figure 31. As mentioned previously, you will need to make a separate digital audio connection from each source device to the AVR 245, and you will also need to consult the owner's guide for your television to learn the proper procedure for disabling or muting the audio.

Figure 31 - HDMI Output

If you used component video for any sources, connect the Component Video Monitor outputs on the receiver to one set of component video inputs on your display. See Figure 32. Make a note of how these inputs are labeled on the display.

Figure 32 - Component Video Monitor Outputs

If you used S-video for any sources, or if all of your sources used HDMI or component video, connect the S-video Monitor output on the receiver to an S-video input on your display. See Figure 33. Make a note of how the input is labeled.

If you used composite video for any sources, but not component video or S-video, connect the composite video Monitor output on the receiver to a composite video input on the display. See Figure 33. Again, make a note of how this input is labeled on the display.

Figure 33 - S-Video and Composite Video Monitor Outputs

Consult the manual for your TV to make sure you understand how to select each video input. As you play different source devices that use different types of video connections, you will need to select the correct video input on your video display.

### Step Six – Plug in AC Power

Having made all of your wiring connections, it is now time to plug each component's AC power cord into a working outlet.

You may plug one device into the AC Switched Accessory Outlet on the rear of the AVR 245. See Figure 34. Make sure this device draws no more than 50 watts. The device should have its mechanical or master power switch turned on, and it will power on any time the AVR 245 is turned on.

AC OUTLET - Figure 34 - Switched AC Accessory Outlet

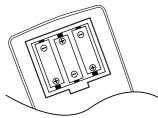

Before plugging the AVR 245's AC Power Cord into an electrical outlet, make sure that the Master Power Switch on the front panel is popped out so that the word OFF appears on its top. Gently press the button to turn the switch off. This will prevent the possibility of damaging the AVR in case of a transient power surge.

### Step Seven – Insert Batteries in Remote

The AVR 245 remote control uses three AAA batteries, which are included.

To remove the battery cover located on the back of the remote, firmly press the ridged depression and slide the cover toward the top of the remote.

Insert the batteries, as shown in Figure 35, making sure to observe the correct polarity.

Hyure 30 - Hemole Dallery Compariment

When using the remote, remember to point the lens toward the front panel of the AVR 245. Make sure no objects, such as furniture, are blocking the remote's path to the receiver. Bright lights, fluorescent lights and plasma video displays may interfere with the remote's functioning. The remote has a range of about 20 feet, depending on the lighting conditions. It may be used at an angle of up to 30 degrees to either side of the AVR.

If the remote seems to operate intermittently, or if pressing a button on the remote does not cause the AVR Selector or one of the Input Selectors to light up, then make sure the batteries have been inserted correctly, or replace all three batteries with fresh ones.

### Step Eight - Program Sources Into the Remote

The AVR 245 remote not only is capable of controlling the receiver, but it may also be programmed to control many brands and models of VCRs, DVD players, CD players, cable boxes, satellite receivers, cassette decks and TVs, as well as The Bridge.

It may help to think of the remote as a book with pages. Each page represents the button functions for a different device. In order to access the functions for a particular device, you first need to turn to that page. This is done by pressing the AVR Button to access the codes that control the receiver, or the Input Selector Buttons to access the codes for the devices programmed into the remote.

You may have noticed that three of the Input Selectors look different from the others (see Figure 36). For the DVD/CD, TAPE/The Bridge and HDMI 1/HDMI 2 Selectors, there is a primary source, whose name is printed on the button, and a secondary source, whose name is printed in green above the button. To access the code set for the primary source (which also selects that source input on the AVR and turns on the device programmed for that source), press the Input Selector once. The Input Selector will light in red to indicate that the primary source is active.

To access the code set for the secondary source (which also selects that source input on the AVR and turns on the device programmed for that source), press the Input Selector a second time. The Input Selector will light in green to indicate that the secondary source is active.

The AVR 245's remote is factory-programmed to control an iPod docked in The Bridge and many Harman Kardon DVD and CD players. If you have other source devices in your system, follow these steps to program the correct codes into the remote.

- Using the codes in Tables A9–A16 of the Appendix, look up the product type (e.g., DVD, cable TV box) and the brand name of your source. The number(s) listed is/are potential candidates for the correct code set for your particular device.
- 2. Turn on your source device.
- 3. This step places the remote in program mode, and varies slightly, depending on which Input Selector is being programmed. Refer to Figure 36.
  - a) DVD, Tape, Video 1, Video 2 and Video 3 Sources: Press and hold the Input Selector until the LED on the remote starts to flash, then release it. Follow the directions in Step 4, below.
  - b) CD Source: Press the DVD/CD Input Selector once and release it, then quickly press and hold the Input Selector until it turns green, then release it. Follow the directions in Step 4, below.
  - c) Video 4 Source: Press and hold the Input Selector until the LED on the remote starts to flash, then release it. Next, press the Input Selector that corresponds to the device type you want to program into the Video 4 mode, i.e., DVD, CD (access CD by pressing the DVD/CD button *twice*), VCR, CBL/SAT, TAPE or TV. Then follow the directions in Step 4, below.
  - d) HDMI 1 Source: Press and hold the Input Selector until it turns red, then release it. Next, press the Input Selector that corresponds to the device type you want to program into the HDMI 1 mode, i.e., DVD, CD (access CD by pressing the DVD/CD button *twice*), VCR, CBL/SAT, TAPE or TV. Then follow the directions in Step 4, below.
  - e) HDMI 2 Source: Press and release the Input Selector once, then quickly press the Input Selector again and hold it until it turns green, then release it. Next, press the Input Selector that corresponds to the device type you want to program into the HDMI 2 mode, i.e., DVD, CD (access CD by pressing the DVD/CD button *twice*), VCR, CBL/SAT, TAPE or TV. Then follow the directions in Step 4, below.

- 4. Enter a code from Step 1, above.
  - a) If the device turns off, then press the Input Selector again to accept the code; it will flash. The remote will exit the Program mode.
  - b) If the device does not turn off, try entering another code. If you run out of codes, you may search through all of the codes in the remote's library for that product type by pressing the ▲ or ▼ Button repeatedly until the device turns off. When the device turns off, enter the code by pressing the Input Selector, which will flash. The remote then exits Program mode.
- 5. Once you have programmed a code, it's a good idea to try using some other functions to control the device. Sometimes, manufacturers use the same Power code for several different models, while other codes will vary. You may wish to repeat this process until you've programmed a satisfactory code set that operates most of the functions you frequently use.
- 6. You may find out which code number you have programmed by pressing and holding the Input Selector to enter the Program mode. Then press the Set Button, and the LED will blink in the code sequence. One blink represents "1", two blinks for "2", and so forth. A series of many fast blinks represents "0". Record the codes programmed for each device here.

Source Input	Product Type (circle one)	Remote Control Code
Video 1	VCR, PVR	
Video 2	Cable, Satellite	
Video 3	TV	
Video 4	Any	
HDMI 1	Any	
HDMI 2	Any	
DVD	DVD	
CD	CD, CDR	

Table 3 - Remote Control Codes

If you are unable to locate a code set that correctly operates your source device, it will not be possible to use the AVR remote to control that device. However, you may still connect the source to the AVR 245 and operate it using the device's original remote control. Alternatively, you may wish to consider purchasing Harman Kardon's optional TC 30 activity-based remote, which is programmed by accessing a large database of product codes on the Internet. The TC 30 is also capable of "learning" codes from your device's original remote.

Most of the button labels on the remote describe the button's function when used to control the AVR 245. However, the button may perform a very different function when used to control another device. Refer to the Remote Control Function List, Table A8 in the Appendix, for a list of each button's functions with the various product types.

If you wish, you may program Macros, which are preprogrammed code sequences that execute many code commands with a single button press. You may also program "punch-through" codes, which allow the

remote to operate the volume, channel or transport controls of another device without having to switch the remote to the mode for that device. See pages 54–55 for instructions on these advanced programming functions.

**NOTE:** The AVR 245 remote is preprogrammed to operate the transport controls of Harman Kardon DVD players when the AVR or the Video 2 (cable/satellite) or Video 3 (TV) source is selected. The volume and mute controls operate the AVR when any device except Tape has been selected. You may change this punch-through programming at any time.

### Step Nine – Turn On the AVR 245

Two steps are required the first time you turn on the AVR 245.

 Gently press the Master Power Switch until the word OFF is no longer visible. The Power Indicator above the two power switches should light up in amber, indicating that the AVR is in Standby mode and is ready to be turned on. See Figure 37. Normally, you may leave the Master Power Switch in the ON position, even when the receiver is not being used.

Figure 37 - Power Switches

- 2. There are several ways in which the AVR 245 may be turned on from Standby mode.
  - a) Press the Standby/On Switch on the front panel. See Figure 37.

b) Press the Source Select Button on the front panel. See figure 38.

Figure 38 - Source Select Button

c) Using the remote, press any one of these buttons: AVR, DVD/CD, TAPE/The Bridge, HDMI 1/2, VID1, VID2, VID3, VID4, XM, AM/FM or 6/8CH. See Figure 39.

Figure 39 - AVR and Input Selectors

**NOTE:** Any time you press one of the Input Selectors on the remote (i.e., DVD/CD, TAPE/The Bridge, HDMI 1/HDMI 2, VID1, VID2, VID3 or VID4), the remote will switch modes so that it will only transmit the codes programmed to operate that device. In order to control the receiver, you will need to press the AVR button to return the remote to AVR mode.

Now that you have installed your system components and completed at least a basic configuration of your receiver, you are ready to begin enjoying your home theater system.

### Turning On the AVR 245

Gently press the Master Power Switch until the word OFF is no longer visible. The Power Indicator above the two power switches should light up in amber. This indicates that the AVR is in Standby mode and is ready to be turned on. Normally, you may leave the Master Power Switch in the ON position, even when the receiver is not being used. See Figure 57.

	Surr. Mode	Surr. Select *
	1000	
0		

Figure 57 - Power Switches

There are several ways in which the AVR 245 may be turned on:

a) Press the Standby/On Switch on the front panel. See Figure 57.

b) Press the Source Select Button on the front panel. See Figure 58.

Figure 58 - Source Select Button

c) Using the remote, press any one of these buttons: AVR, DVD, CD, TAPE/The Bridge, HDMI 1/HDMI 2, VID1, VID2, VID3, VID4, XM, AM/FM, 6/8CH. See Figure 59.

Figure 59 - AVR and Input Selectors

**NOTE:** Any time you press one of the remote's Input Selectors (i.e., DVD/CD, TAPE/The Bridge, VID1, VID2, VID3, VID4 or HDMI 1/HDMI 2), the remote will switch modes so that it will transmit only the codes programmed to operate that device. In order to control the receiver, you will need to press the AVR Button to return the remote to AVR mode.

To turn the receiver off, press either the Standby/On Switch on the front panel, or press the AVR Button and the OFF Button on the remote. Unless the receiver will not be used for an extended period of time (for

example, if you will be on vacation), it is not necessary to turn off the Master Power Switch. When the Master Power Switch is turned off, any settings you have programmed, including system configuration and preset radio stations, will be preserved for up to four weeks.

### **Sleep Timer**

You may program the AVR to play for up to 90 minutes and then turn off automatically using the sleep timer.

Press the Sleep Button on the remote, and the time until turn-off will be displayed. See Figure 60. Each additional press of the Sleep Button will reduce the time until turn-off by 10 minutes, until the OFF setting is reached, which disables the sleep timer.

Figure 60 - Sleep Button

When the sleep timer has been set, the front-panel display will automatically dim to half-brightness. If you press any button on the remote or front panel, the display will return to full-brightness. The display will dim again several seconds after your last command.

If you press the Sleep Button after the timer has been set, the remaining time until turn-off will be displayed. You may press the Sleep Button to change the time until turn-off. Pressing and holding the Sleep Button will disable the sleep timer, and the SLEEP OFF message will appear.

### **Volume Control**

The volume may be adjusted either by turning the knob on the front panel (clockwise to increase volume or counterclockwise to decrease volume), or by pressing the Volume Control Buttons on the remote. See Figure 61. The volume is displayed as a negative number of decibels (dB) below the OdB reference point, and may be changed in 0.5dB increments.

Unlike some volume controls on other products, OdB is the maximum volume for the AVR 245. Although it's physically possible to turn the volume to a higher level, doing so may damage your hearing and your speakers. For certain more dynamic audio materials, even OdB may be too high, allowing for damage to equipment.

Figure 61 - Volume Controls

The AVR 245 is designed to reproduce audio with a minimum amount of distortion, which may lead you to think that your hearing and the equipment can handle higher volumes. We urge caution with regard to volume levels.

### **Mute Function**

To temporarily mute all speakers and the headphones, press the Mute Button on the remote. See Figure 62. Any recording in progress will not be affected. The MUTE message will flash in the display as a reminder. To restore normal audio, either press the Mute Button again, or adjust the volume. Turning off the AVR will also end muting.

Figure 62 - Mute Button

### **Tone Controls**

You may boost or cut either the treble or the bass frequencies by up to 10dB in 2dB increments.

Using the front-panel controls or the remote, press the Tone Mode Button once. See Figure 63. This will indicate whether the tone controls are in or out of the circuitry. If you wish to return the tone controls to 0, or "flat" response, press the  $\checkmark$  Buttons ( $\checkmark$ / $\checkmark$  on the remote) until the TONE OUT message appears, which preserves any changes you have made to the bass or treble settings for later use. To reactivate your changes, the tone control must again be set to TONE IN.

With the TONE IN message displayed, press the Tone Mode Button repeatedly to access TREBLE MODE and BASS MODE. Use the  $\checkmark$  Buttons ( $\checkmark$ / $\checkmark$  on the remote) to change the treble or bass settings, as desired. The display will return to normal a few seconds after your last command.

Figure 63 - Tone Button

You may alternatively adjust the tone controls using the full-OSD menu system. Press the OSD Button on the remote to view the Master Menu. The cursor will be pointing to the INPUT SETUP line; press the Set Button to display that menu and view the current tone settings. If you wish to make any changes to the TONE, BASS or TREBLE settings, use the arrow keys on the remote to move the cursor to the line you wish to change. Once you have changed the setting using the ◀/► Buttons, simply move the cursor up or down to a different line; it isn't necessary to press the Set Button to enter the new setting. When you have finished, either wait until the display times out and disappears, press the OSD Button to clear the display, or move the cursor to the BACK TO MASTER MENU line if you wish to make other changes using the menu system.

**NOTE:** The AVR 245 does not have a conventional balance control. The EzSet+ process compensates for any characteristics of your room or speakers, and we recommend that you leave the settings as they are after EzSet+ has been run. However, you may manually adjust the levels of the left and right channels – decreasing one and increasing the other by the same amount – using the Channel Adjust submenu, as described on page 52. This achieves the same effect as a balance control.

### Headphones

Plug the 1/4" plug on a pair of headphones into the headphone jack on the front of the receiver for private listening. See Figure 64. The first time you use the headphones, the DOLBY H:BP message will be displayed, indicating that Dolby Headphone surround processing is in the bypass mode, which delivers a conventional 2-channel signal to the headphones.

Press the Surround Select Button on the front panel, or the Dolby Button on the remote, to switch to Dolby Headphone virtual surround processing, indicated by the DOLBY H:DH message. Dolby Headphone delivers an enhanced sound field that emulates a 5.1-channel speaker system. No other surround modes are available for the headphones.

### Source Selection

Press the front-panel Source Select Button to scroll through the sources. The left side of the button scrolls down the list that appears in the display; the right side scrolls upward. For direct access to the tuner, press the Tuner Band Button, which switches to the last-used band and frequency. See Figure 65.

*	Tuning	*	AM/FM		Preset	*	*	Source	*	Tun Mode	
				-					6		0

Figure 65 - Source Select and Tuner Band Buttons

**NOTE:** The Bridge/DMP source has no icon in the Source Indicators display. When selected, the DMP indication will appear in the message display's upper line, and one of two messages will scroll on the right side to indicate whether The Bridge is unplugged or connected. If you have retitled this source, then only the new name will appear in the upper line.

For direct access to any source, press its Input Selector on the remote (see Figure 59). Since the AVR 245 allows for more source input devices than the remote has buttons for, some sources are required to share buttons. These are the DVD and CD sources, the Tape and

The Bridge sources, and the HDMI 1 and HDMI 2 sources. The first press of any of these three Input Selectors will select the source whose name appears on the button, i.e., DVD, Tape or HDMI 1. Press that Input Selector again to select the source whose name appears above the button (i.e., CD, The Bridge or HDMI 2), and the LED on the remote will light in green to indicate that you have selected the source whose name is printed in green above the button. Each additional press toggles between the two sources.

The AVR 245 will switch to the audio and video inputs assigned to the source. If you set the BASS MGR setting in the Speaker X-over menu to INDEPENDENT, as described in the Advanced Functions section, the AVR 245 will change the speaker size configuration to the one you programmed for the source. If you selected a surround mode for the source, the AVR 245 will switch to that mode.

The source name will appear in the upper line of the front-panel display. If you retitled the source, only the new title will appear. Otherwise, the audio input assigned to the source (analog or one of the digital audio inputs) will also appear. The surround mode will be displayed on the lower line. The same information will also appear on screen in the semi-OSD, unless you have set the semi-OSD to OFF in the System Setup menu, as described in the Advanced Functions section.

### Audio Input Selection

The AVR 245 is programmed at the factory to use the analog audio inputs for each source (except for the DVD, Video 2, HDMI 1 and HDMI 2 sources; see Table 4). To assign a digital audio input to a source (if you have not done so using the Input Setup menu during Initial Setup), press the Digital Button on the remote or front panel. The current audio input selection will flash in the display, and you may press the  $\blacktriangle$ / $\checkmark$  (or  $\triangleleft$ / $\triangleright$  on the front panel) Buttons to scroll through the audio inputs. When the desired input appears, press the Set Button to select it. See Figure 66.

Figure 66 - Digital Input Selection

If the Auto Poll feature is ON in the Input Setup menu, and if a digital audio input has been assigned to the source, the AVR 245 will first check the digital audio input for a signal. If a signal is present, the AVR 245 will select the digital audio input. If no signal is present, the AVR 245 will switch to the analog audio inputs for the source.

#### Video Input Selection

When a source is selected, the AVR 245 switches to a video input as follows:

The COMPONENT IN line of the Input Setup menu indicates which of the component video inputs on the AVR 245 is assigned to each source. By default the Component Video 1 input is assigned to the DVD source, the Component Video 2 input is assigned to the Video 1 source, and the Component Video 3 input is assigned to the Video 2 source. All other sources default to the CONVERT setting, meaning that they may only be used with their composite or S-video inputs (or the HDMI inputs for the two HDMI sources). The AVR 245 will transcode the incoming composite or S-video signal and make it available using the component video monitor outputs, enabling a single-cable connection to your television. Only signals originating at one of the two HDMI inputs will be available at the HDMI output.

The component video inputs may be reassigned to other source inputs as needed, depending on the physical connections you made during the Installation procedure.

If a signal is present at the component video input assigned to that source, it will be selected.

If no signal is present at the component video input, then the S-video or composite video input for the source will be selected. It is not possible to reassign the S-video or composite video inputs to other sources.

For audio-only sources, such as the tuner or CD inputs, when no component video signal is present, the last-used video source will be selected.

### 6-/8-Channel Direct Inputs

If you wish to hear audio through the 6-/8-Channel Direct Inputs together with video, then connect your multichannel player to the Component Video 1 Inputs, and connect the player's 6- or 8-channel analog audio outputs to the 6-/8-Channel Inputs on the AVR. Assign the component video inputs you selected to the 6-/8-Channel Input source. The AVR will automatically select the correct component video and audio inputs when you select this source.

If you need to use composite or S-video for your multichannel player, e.g., if your video display does not have component video inputs, then you will need to use the video inputs for another source. Since the AVR automatically selects the last-used video inputs for audio sources, you would first select the source you connected the video cables to, and then the 6-/8-Channel Inputs for the audio.

Example 1: You would like to connect a DVD-Audio player to the AVR 245. You plan on playing a variety of discs using this player, including conventional DVDs and even CDs as well as multichannel discs. When playing DVDs and CDs, it is preferable to use a digital audio connection to obtain the best sound quality and the benefit of any digital surround formats contained on the DVD. However, when playing DVD-Audio discs, you will need to use the 6-/8-channel analog audio connections. In addition, some of these discs contain video materials, although the player does not have an HDMI output.

We recommend that you connect this player as follows:

- a) Connect the player's coaxial digital audio output to the Coaxial 1 input on the AVR. This input is assigned by default to the DVD source.
- b) Connect the player's component video outputs to the Component Video 1 inputs on the AVR, which are assigned by default to the DVD

source. If your video display doesn't have component video inputs, then connect the player's composite or S-video output to the DVD's corresponding video input.

- c) Connect the player's 6-channel analog audio outputs to the AVR's 6-/8-Channel Inputs and assign the Component Video 1 inputs to this source using the Input Setup menu, as described in the Initial Setup section.
- d) Program the player's remote control codes into the DVD Input Selector. Note that not all commands will necessarily be available.

When you wish to view a DVD, simply select the DVD source.

When you wish to listen to a DVD-Audio disc and view the menus and other still images on the disc, select the 6-/8-Channel Inputs as the source.

Example 2: In this example, your multichannel disc player is equipped with an HDMI output. Connect it as follows:

- a) Connect the player's coaxial digital audio output to the Coaxial 2 input on the AVR. This input is assigned by default to the HDMI 1 source.
- b) Connect the player's HDMI output to the HDMI 1 source input, and make sure to connect the AVR's HDMI Output to your video display.
- c) Connect the player's 6-channel analog audio outputs to the AVR's 6-/8-Channel Inputs and then select the CONVERT setting at the COMPONENT IN line to avoid inadvertently selecting the video signal from another device.
- d) Program the player's remote control codes into the HDMI 1 Input Selector.

When you wish to view a DVD, simply select the HDMI 1 source.

When you wish to play a multichannel disc, first select the HDMI 1 source to obtain the correct video signal, then select the 6-/8-Channel Inputs to select the audio signal.

To select the 6-/8-Channel Inputs as the source, use either the Source Selector on the front panel or press the 6/8CH Input Selector on the remote. See Figure 67.

**NOTE:** The 6-/8-Channel Inputs pass the incoming signals directly to the volume control, without digitizing or processing them. Therefore, you will need to configure bass management settings (i.e., speaker size, delay and output level) on your source device so that they match the settings you programmed using EzSet+, which may be viewed using the Manual Setup menu (see Advanced Functions section). Consult the owner's guide for your multichannel player for more information.

### Using the Tuner

The AVR 245's built-in tuner may be selected in one of three ways (see Figure 68):

- 1. Press the Source Selector Button on the front panel repeatedly until the tuner is selected. The last-used band (AM or FM) will be active.
- 2. Press the Tuner Band Button (marked AM/FM). Press this button again to switch bands. This will also enable you to select XM Radio, which is described separately in the next section.
- 3. Press the Tuner Input Selector (marked AM/FM) on the remote. Press this button again to switch bands.

Figure 68 - Tuner Input Selection

Radio stations may be selected in one of four ways (see Figure 69):

- 1. If you know the frequency number, enter it directly by first pressing the Direct Button on the remote, and then using the Numeric Keys.
- After you have programmed Preset stations (see below), either enter the Preset number (1 through 30) using the remote or use the Preset Stations Buttons (front panel or remote) to scroll through the list of presets.
- 3. In Auto tuning mode, with each press of the Tuning Buttons (front panel or remote), the AVR 245 will scan in the chosen direction until a station with acceptable signal strength is detected. Press the Tuning Button again to stop scanning.
- 4. In Manual tuning mode, with each press of the Tuning Buttons, the AVR 245 will tune the next frequency increment (0.1MHz for FM, or 10kHz for AM) in the selected direction. Press and hold the Tuning Button for faster scanning.

Figure 69 - Tuning a Station

Press the Tuning Mode Button (TUN-M on the remote) to switch between Auto and Manual tuning modes. See Figure 70. When an

FM station has been tuned, pressing the Tuning Mode Button will switch between stereo and mono tuning, which may improve reception of weaker stations.

Figure 70 - Tuning Mode

To store a station in one of the 30 presets:

- 1. Tune the desired station.
- 2. Press the Memory Button on the remote.
- 3. Use the Numeric Keys to enter the desired preset number.

Figure 71 – Storing a Preset Station

### XM Radio Operation

XM Radio is a satellite-delivered service that offers hundreds of program channels, as well as local traffic and weather information for select cities. The AVR 245 is "XM Ready," which means that it is able to receive the XM service when an optional XM antenna module is connected and the service activated. As of this writing, the Audiovox<sup>®</sup> CNP 1000 "Connect and Play" module for home audio use is compatible with the AVR 245. Additional modules may become available in the future. Modules produced for automotive, or "mobile," use are not compatible with the AVR 245.

**NOTE:** To listen to XM Radio using the AVR 245, you will need to purchase an XM antenna module and subscription, and you will need to activate your module. (Note that XM service is not available in Alaska or Hawaii.) Visit the XM Radio Web site at www.xmradio.com for more information.

Plug the module into the XM Antenna Jack on the rear of the AVR 245. Place the antenna module so that it has a clear view through a southfacing window in order to obtain reception from the XM satellite.

Select XM Radio as the source in one of the following three ways (see Figure 72):

- 1. Press the Source Selector button on the front panel repeatedly until XM Radio is selected. XM is available as a source separately from the AM/FM tuner.
- 2. Press the Tuner Band Button repeatedly until XM Radio is selected.
- 3. Press the XM Radio Input Selector on the remote.

You should be able to tune in Channel 1, the Preview Channel, to confirm that your equipment is ready for activation. There are three ways to tune an XM Radio channel (see Figure 69):

- 1. Enter the channel number directly using the Numeric Keys on the remote. It is not necessary to press the Direct Button first.
- 2. Press the Tuning Buttons on the front panel or remote to scan through the channels.
- 3. The AVR 245 is capable of storing up to 40 XM Radio preset channels. The presets are divided into five banks, denoted by the letters A through E, with eight numeric presets per bank. After you have programmed preset stations (see below), you may select one by pressing the Set Button repeatedly until PRESET SEARCH appears, then use the ▲/▼ Buttons to change the bank (A through E). Use the Preset Buttons to scan through the eight numeric positions within a bank.

When you are able to hear Channel 1, you are ready to activate your module. If you don't hear Channel 1, make sure the module's plug is firmly seated in the XM Antenna jack, and that the module is near a south-facing window. Try unfolding the module and rotating it to obtain reception. You may need to purchase an extension cable, available on the XM Radio site, to ensure that the module is near the window.

Tune to Channel O for a display of your antenna module's Radio ID number.

The current channel number and preset location will appear in the upper line of the Message Display, and the channel's name will appear in the lower line. If you wish to display the category, current artist or song title, press the Tuning Mode Button repeatedly.

For traffic and weather channels, the current city's name will appear instead of the channel name, and pressing the Tuning Mode Button repeatedly will display the local traffic and weather.

Press the Set Button to search all channels. Press it again to search by category, using the  $\blacktriangle/\checkmark$  Buttons to change the category. Press the Set Button again to change the preset bank, using the  $\bigstar/\checkmark$  Buttons to change the bank letter. Press the Set Button again to return to the all-channel search.

To store a channel in one of the 40 preset locations:

- Press the Set Button repeatedly until PRESET SEARCH appears, then use the ▲/▼ Buttons until the desired bank of presets (A through E) appears in the upper line of the message display.
- 2. Press the Memory Button, and a line will appear next to the preset bank letter.
- 3. Use the Numeric Keys to enter the preset location (1 through 8) you wish to store the channel in.

Figure 72 - XM Radio Source Selection

### Recording

Two-channel analog and digital audio signals, as well as composite and S-video signals, are normally available at the appropriate recording outputs. Thus, to make a recording, you need only make sure to connect your audio or video recorder to the appropriate output jacks, as described in the Installation section, insert blank media and make sure the recorder is turned on and recording while the source is playing.

#### NOTES:

- Analog audio signals are not converted to digital form, and digital audio signals are not converted to analog audio form. However, you may record a coaxial or optical digital audio source using either type of digital audio output.
- 2. Only PCM digital audio signals are available for recording. Proprietary formats such as Dolby Digital and DTS may not be recorded using the digital audio connections, although if the source is connected to the AVR using the analog audio connections, an analog recording may be made.
- 3. Component video sources are not available for recording.
- 4. Please make certain that you are aware of any copyright restrictions on any material you record. Unauthorized duplication of copyrighted materials is prohibited by federal law.

### Using **™Bridge**

The Bridge is an optional dock that may be used with a compatible iPod (not included). When The Bridge is connected to its proprietary input on the AVR 245 and the iPod is docked, you may play the audio materials on your iPod through your high-quality audio system, operate the iPod using the AVR remote or the AVR's front-panel controls, view navigation messages on the AVR's front panel or a connected video display, and charge the iPod.

Either press the front-panel Source Selector repeatedly until the message "DMP/The Bridge is CONNECTED" scrolls across the front panel and semi-OSD displays, or press the DMP Button on the remote to select The Bridge as the input source.

Figure 74 – Using The Bridge (Front Panel)

Table 5 summarizes the controls available when The Bridge is in use. See also Figures 73 and 74.

iPod Function	Remote Control Key	Front-Panel Button
Play	Play (>)	Tuner Mode
Pause	Pause (II)	Tuner Mode
Menu	Menu (Spkr)	Tuner Band (AM/FM)
Select	Set	Set
Scroll Forward	Left Arrow (	Preset Down
Scroll Reverse	Right Arrow (	Preset Up
Forward Search/Next Track	Forward/Next (►►)	Tuning Up
Reverse Search/Previous Track	Reverse/Previous (	Tuning Down

Table 5 – Using The Bridge

**NOTE:** For the Search function, press and hold the indicated button. Pressing the Previous Track Button once skips to the beginning of the current track. Press the Previous Track Button *twice* to skip to the beginning of the previous track.

It is possible to activate Repeat (one track or one album/playlist) and Shuffle (songs or albums) modes using the DMP SETTING menu (see Figure 56). This menu may also be used to turn on the Resume feature, which resumes play of the current track from the point it was interrupted, or to enable charging while the AVR is in Standby mode.

Access the DMP SETTING menu by pressing OSD to display the MASTER MENU. Press the Set button to display the INPUT SETUP menu. When DMP/The Bridge is selected as the current source, you may scroll down to the GO TO DMP SETTING line and press the Set button to display the DMP SETTING menu. See the Initial Setup section for more information on using the DMP SETTING menu.

### Selecting a Surround Mode

Surround mode selection can be as simple or sophisticated as your individual system and tastes. Feel free to experiment with the many available surround modes on the AVR 245, and you may find a few that become your favorites for certain sources or program types. Although more detailed information on surround modes may be found in the Advanced Functions section, it is easy to select any of the modes available at a given time:

To select a surround mode using the front-panel controls, press the Surround Mode Button repeatedly until the desired group of modes is selected: Logic 7, Dolby, DTS, DSP or Stereo. Then press the Surround Select Button repeatedly to select the desired mode within the group. See Figure 75.

harman/kardon	
	Sen. Mode + Sun Select + + Taning +
0	

Figure 75 - Select a Surround Mode (Front Panel)

To select a surround mode using the remote control, locate the button dedicated to the desired group of modes: Logic 7, Dolby Sur, DTS Sur, DTS Neo:6, Surr (DSP) or Stereo. Press that button repeatedly to select the desired mode. See Figure 76.

To select a surround mode using the full-OSD menu system, press the OSD Button to display the Master Menu. Navigate to the SURROUND SELECT line and press the Set Button to view the Surround Select menu. Each of the major surround mode groups is listed here. Select that group to access the MODE setting for selection of an individual mode. As explained in the Advanced Functions section, there are also some additional settings that may be made.

You are now ready to enjoy the best in home theater entertainment with your AVR 245. As you become more familiar with the receiver, you may wish to explore some of its advanced functions, which are described in the following section.

Figure 76 - Select a Surround Mode (Remote)

# **TROUBLESHOOTING GUIDE**

SYMPTOM	CAUSE	SOLUTION
Unit does not function when Main Power Switch is pushed	No AC Power	<ul> <li>Make certain AC power cord is plugged into a live outlet</li> <li>Check to see whether outlet is switch-controlled</li> </ul>
Display lights, but no sound or picture	<ul> <li>Intermittent input connections</li> <li>Mute is on</li> <li>Volume control is down</li> </ul>	<ul> <li>Make certain that all input and speaker connections are secure</li> <li>Press Mute Button</li> <li>Turn up volume control</li> </ul>
No sound from any speaker; light around power switch is red	<ul> <li>Amplifier is in protection mode due to possible short</li> <li>Amplifier is in protection mode due to internal problems</li> </ul>	<ul> <li>Check speaker wire connections for shorts at receiver and speaker ends</li> <li>Contact your local Harman Kardon service center</li> </ul>
No sound from surround or center speakers	<ul> <li>Incorrect surround mode</li> <li>Input is monaural</li> <li>Incorrect configuration</li> <li>Stereo or Mono program material</li> </ul>	<ul> <li>Select a mode other than Stereo</li> <li>There is no surround information from mono sources</li> <li>Check speaker mode configuration</li> <li>The surround decoder may not create center- or rear-channel information from nonencoded programs</li> </ul>
Unit does not respond to remote commands	<ul><li>Weak batteries in remote</li><li>Wrong device selected</li><li>Remote sensor is obscured</li></ul>	<ul> <li>Change remote batteries</li> <li>Press the AVR selector</li> <li>Make certain front panel sensor is visible to remote or connect an optional remote sensor</li> </ul>
Intermittent buzzing in tuner	Local interference	<ul> <li>Move unit or antenna away from computers, fluorescent lights, motors or other electrical appliances</li> </ul>
Letters flash in the channel indicator display and digital audio stops	Digital audio feed paused	<ul><li>Resume play for DVD</li><li>Check that Digital Input is selected</li></ul>
Surround Back Speaker settings cannot be accessed, and test tone does not play through Surround Back Speakers	• Multiroom system has been turned on, automatically reassigning the surround back channels to multiroom operation	<ul> <li>Use the OSD menu system to access the MULTI ROOM SETUP menu and turn off the multiroom system.</li> </ul>
The XM Preview Channel (001) is silent	<ul> <li>XM antenna is not plugged in</li> <li>XM antenna is not located in such a way as to enable reception</li> </ul>	<ul> <li>Make sure you are using a home audio XM antenna module designed for use with XM Ready home audio equipment, and that the module is plugged into the XM Radio Jack on the rear panel of the receiver.</li> <li>The XM Antenna module needs to be placed with an unobstructed view of the southern sky, or within range of an XM terrestrial repeater. If necessary, purchase an extension cable from your XM Radio dealer.</li> </ul>

In addition to the items shown above, additional information on troubleshooting possible problems with your AVR 245, or installation-related issues, may be found in the list of "Frequently Asked Questions" which is located in the Product Support section of our Web site at www.harmankardon.com.

### **Erasing Macros**

It isn't possible to "edit" a command within a macro. However, you may erase the macro as follows:

1. Simultaneously press and hold the Mute Button and the Macro Button containing the macro until the LED flashes.

2. Press the Surround Button to erase the macro.

#### **Resetting the Remote**

To reset the remote to its factory defaults, enter Program mode by simultaneously pressing and holding any Input Selector and the Mute Button. When the LED flashes, enter the code "333". When the LED goes out, the remote will have been fully reset.

#### **Processor Reset**

There may be instances where you wish to fully reset the AVR 245 to its factory defaults, or the unit may behave erratically after a power surge.

For erratic behavior, we recommend you try turning the Master Power Switch off and unplugging the AC Power Cord for at least three minutes. Try plugging the cord back in and turning the receiver back on. If this

doesn't work, you may want to try a system reset. NOTE: A system reset erases all user configurations, including speaker and level settings and tuner presets. After a reset, you will need to re-enter all of these settings.

To reset the AVR 245, place the receiver in Standby mode (press the front-panel Standby/On Switch so that the Power Indicator turns amber). Then press and hold the front-panel Tone Mode Button for at least five

seconds until the RESET message appears in the display. If the receiver still does not function correctly after a processor reset, contact an authorized Harman Kardon service center for assistance.

Service centers may be located by visiting our Web site at www.harmankardon.com.

### Memory

If the AVR 245 is unplugged or experiences a power outage, it will retain user settings for up to four weeks.

# AVR245

### AVR245 DISASSEMBLY PROCEDURE

#### 1 TOP-CABINET(21) REMOVAL

1. Remove 13 screws (S1,S7) and then remove the Top-cabinet.

#### 2 FRONT PANEL ASS'Y REMOVAL

- 1. Remove the Top-cabinet, referring to the previous step 1 .
- 2. Disconnect the card cable between connector (CN72-17p) on the Fip PCB (37-1) and connector (CN72) on the Input PCB (39-1).
- 3. Disconnect the lead wire (BN81-8P) on the Fip PCB (37-1) from connector (CN81) on the Trans PCB (40-4).
- 4. Disconnect the lead wire (BN22-6P) on the Phone PCB (37-5) from connector (CN22) on the Input PCB (39-1).
- 5. Disconnect the lead wire (BN18-5P) on the Phone PCB (37-5) from connector (CN18) on the Input PCB (39-1)
- 6. Disconnect the lead wire (BN10-4P) on the Volume PCB (37-6) from connector (CN10) on the Input PCB (39-1)
- 7. Disconnect the lead wire (BN41-6P) on the Volume PCB (37-6) from connector (CN41) on the Video PCB (41)
- 8. Remove 1 screw (S10) and then lead wire (JW82-1P,JW83-1P) on the Phone PCB (37-5).
- 9 .Remove 1screw (S10) and then lead wire (JW84-1P) on the Volume PCB (37-3).
- 10. Remove 10 screws (S1) and then remove the Front Panel ASS'Y.

#### 3 Volume PCB (37-6) REMOVAL

- 1. Remove the Top-cabinet, referring to the previous step 1 .
- 2. Remove the Front Panel ASS'Y, referring to the previous step 2 .
- 3. Pull out the Volume Knob ASS'Y.
- 4. Disconnect connector (CN84) on the Volume PCB (37-6) from the lead wire (BN84-5P) on the Fip PCB (37-1).
- 5. Disconnect the lead wire (BN92-5P) on the Volume PCB (37-6) from connector (CN92) on the Phone PCB (37-5).
- 6. Remove 8 screws (S2,S14), and then remove the Volume PCB (37-6).

#### 4 PHONE PCB (37-5) REMOVAL

- 1. Remove the Top-cabinet, referring to the previous step 1.
- 2. Remove the Front Panel ASS'Y, referring to the previous step 2 .
- 3. Disconnect connector (CN92) on the Phone PCB (37-5) from the lead wire (BN92-5P) on the Volume PCB (37-6).
- 4.. Disconnect connector (CN85) on the Phone PCB (37-5) from the lead wire (BN85-3P) on the Fip PCB (37-1).
- 5. Remove 2 screws (S2) and then remove the Phone PCB (37-5).

#### 5 POWER LED PCB (37-3) REMOVAL

- 1. Remove the Top-cabinet, referring to the previous step 1 .
- 2. Remove the Front Panel ASS'Y, referring to the previous step 2 .
- 3. Disconnect connector (CN88) on the Power Led PCB (37-3) from the lead wire (BN88-4P) on the Fip PCB (37-1).
- 4. Remove 2 screws (S2) and then remove the Power led PCB (37-3).

#### 6 FIP PCB (37-1) REMOVAL

- 1. Remove the Top-cabinet, referring to the previous step 1 .
- 2. Remove the Front Panel ASS'Y, referring to the previous step 2 .
- 3. Disconnect the lead wire (BN84-5P) on the Fip PCB (37-1) from connector (CN84) on the Volume PCB (37-6).
- 4. Disconnect the lead wire (BN85-3P) on the Fip PCB (37-1) from connector (CN85) on the Phone PCB (37-5).
- 5. Disconnect the lead wire (BN88-4P) on the Fip PCB (37-1) from connector (CN88) on the Power Led PCB (37-3).
- 6. Disconnect the connector (CN89) on the Fip PCB (37-1) from lead wire (BN89-4P) on the Key PCB (37-2).
- 7. Remove 3 screws (S2) and then remove the Guide PCB (37-8) & the Fip PCB (37-1).

7 KEY PCB (37-2) REMOVAL

- 1. Remove the Top-cabinet, referring to the previous step 1.
- 2. Remove the Front Panel ASS'Y, referring to the previous step 2.
- 3. Remove the Fip PCB (37-1), referring to the previous step 6 .
- 4. Remove 10 screws (S2) and then remove the Key PCB (37-2).

#### 8 TUNER MODULE (42) REMOVAL

- 1. Remove the Top-cabinet, referring to the previous step 1 .
- 2. Disconnect the card cable between connector (CON1-13p) on the Tuner module (42) and connector (CN13) on Input PCB (39-1).
- 3. Remove 2 screws (S8) and then remove the Tuner Module (42).

#### 9 VIDEO PCB (41) REMOVAL

- 1. Remove the Top-cabinet, referring to the previous step 1 .
- 2. Disconnect the card cable between connector (BN14-13p) on the Video PCB (41) and connector (CN14) on the Input PCB (39-1).
- 3. Disconnect connector (CN43) on the Video PCB (41) from the lead wire (BN43-4P) on the Regulator PCB (A)(40-2).
- 4. Disconnect connector (CN41) on the Video PCB (41) from the lead wire (BN41-6P) on the Volume PCB (37-6).
- 5. Disconnect the card cable between connector (CN42) on the Video PCB (41) and connector (BN44-11p) on the I-Pod PCB (39-2).
- 6. Disconnect the card cable between connector (BN45-7p) on the Video PCB (41) and connector (CN45) on the HDMI PCB (42).
- 7. Remove 6 screws (S8) and then remove the Video PCB (41).

#### 10 I-POD PCB (39-2) REMOVAL

- 1. Remove the Top-cabinet, referring to the previous step 1 .
- 2. Remove the Video PCB (41), referring to the previous step 9
- 3. Disconnect the card cable between connector (BN19-15p) on the I-Pod PCB (39-2) and connector (CN19) on the Input PCB (39-1).
- 4. Disconnect the card cable between connector (BN44-11p) on the I-Pod PCB (39-2) and connector (CN42) on the Video PCB (41).
- 5. Disconnect the card cable between connector (CN47-7p) on I-Pod PCB (39-2) and connector (CN47) on the RS232 PCB (37-7).
- 6. Disconnect board to board wafer between connector (BN17-12p) on I-Pod PCB (39-2) and connector (CN23) on the XM PCB (43).
- 7. Remove 2 screws (S13) and then remove the I-Pod PCB (39-2).

#### 11 RS232 PCB (37-7) REMOVAL

- 1. Remove the Top-cabinet, referring to the previous step 1.
- 2. Remove the Video PCB (41), referring to the previous step 9
- 3. Disconnect the card cable between connector (CN47) on the RS232 PCB (37-7) and connector (CN47-7) on RS232 PCB (37-7).
- 4. Remove 2 screws and then remove the RS232 PCB (37-7).

#### 12 HDMI PCB (42) REMOVAL

- 1. Remove the Top-cabinet, referring to the previous step 1 .
- 2. Disconnect the card cable between connector (CN45) on the HDMI PCB (42) and connector (BN45-7p) on the Video PCB (41)
- 3. Remove 3 screws (S15) and then remove the hdmi PCB (42).

#### 13 XM PCB (43) REMOVAL

- 1. Remove the Top-cabinet, referring to the previous step 1 .
- 2. Remove the Video PCB (41), referring to the previous step 9
- 3. Disconnect board to board wafer between and connector (CN23) on XM PCB (43) and connector (BN17-12p) on I-Pod PCB (39-2)
- 4. Disconnect the card cable between connector (BN21-7p) on xm PCB (43) nd connector (CN21) on the input PCB (39-1)

- 5. Disconnect the lead wire (BN85-2P) on the Xm PCB (43) from connector (CN85) on the Regulator PCB (A)(40-2).
- 6. Remove 1 screws (S15) and then remove the xm PCB (43).

## 14 INPUT PCB (39-1) REMOVAL

- 1. Remove the Top-cabinet, referring to the previous step 1.
- 2. Remove the Tuner module (42), referring to the previous step 8
- 3. Remove the Video PCB (41), referring to the previous step 9
- 4. Disconnect connector (CN20) on the the Input PCB (39-1) from the lead wire (BN20-5P) on the Regulator PCB (B)(40-5).
- 5. Disconnect connector (CN22) on the Input PCB (39-1) from the lead wire (BN22-6P) on the Phone PCB (37-5).
- 6. Disconnect connector (CN18) on the Input PCB (39-1) from the lead wire (BN18-5P) on the Phone PCB (37-5)
- 7. Disconnect connector (CN10) on the Input PCB (39-1) from the lead wire (BN10-4P) on the Volume PCB (37-6).
- 8. Disconnect the card cable between connector (CN14) on the Input PCB (39-1) and connector (BN14-13p) on the Video PCB (41).
- 9. Disconnect the card cable between connector (CN19) on the Input PCB (39-1) and connector (BN19-15p) on the I-Pod PCB (39-2)
- 10. Disconnect the card cable between connector (CN21) on the input PCB (39-1) and connector (BN21-7p) on XM PCB (43).
- 11. Disconnect the card cable between connector (CN12-21p) on Input PCB (39-1) and connector (CN12-21p) on main PCB (38-1)
- 12. Disconnect the card cable between connector (CN11-17p) on the Input PCB (39-1) and connector (CN11) on the main PCB (38-1)
- 13. Disconnect the card cable between connector (CN72) on the Input PCB (39-1) and connector (CN72-17p) on the Fip PCB (37-1)
- 14. Remove 11 screws (S8,S15) and then remove the Input PCB (39-1).

### 15 POWER TRANS (36) & POWER PCB ASS'Y(40) REMOVAL

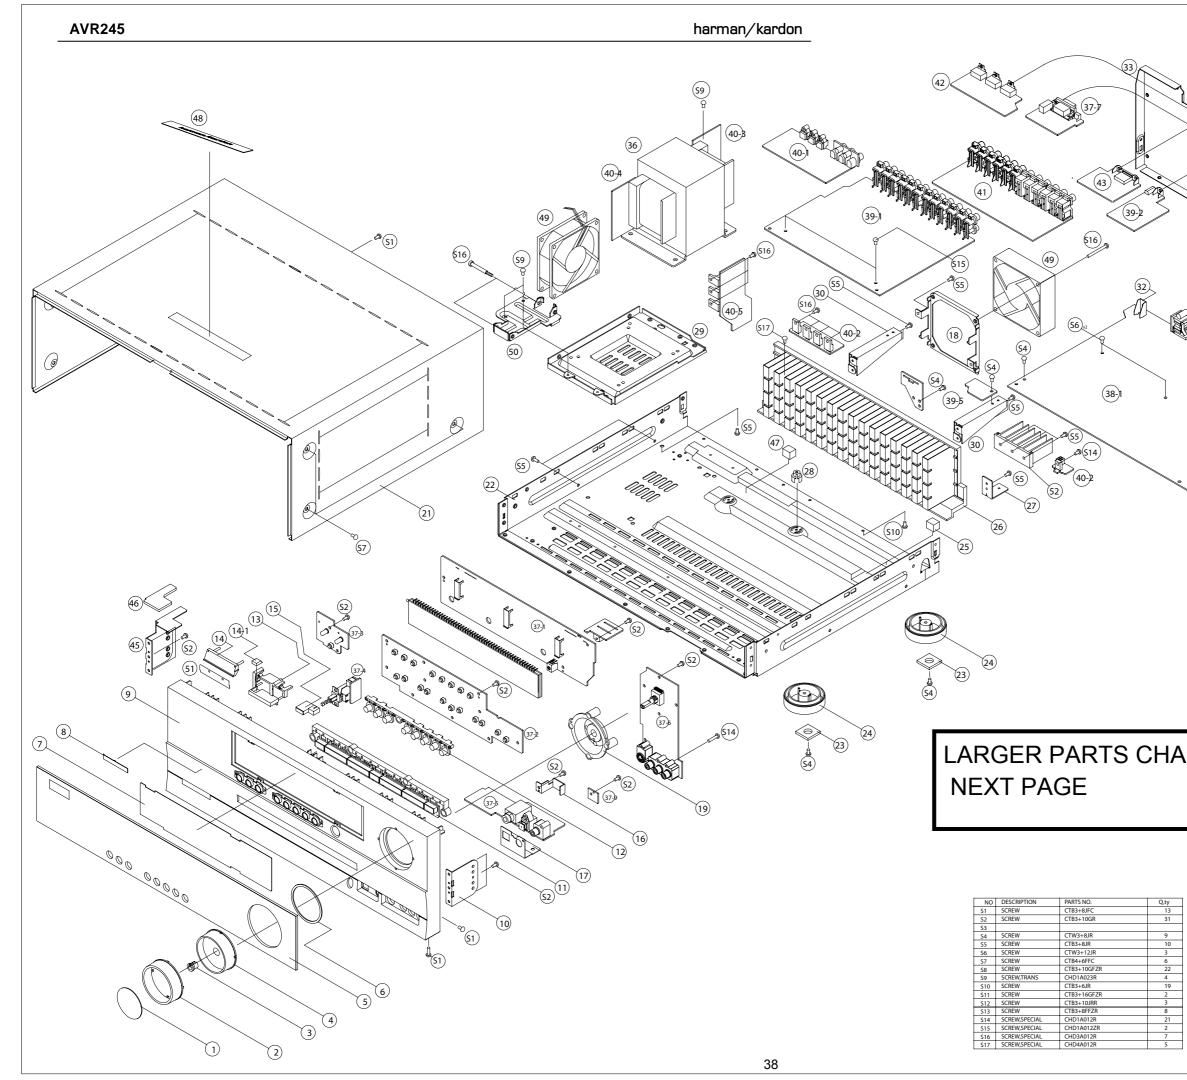

- 1. Remove the Top-cabinet, referring to the previous step 1 .
- 2. Disconnect lead wire of the Power Trans (36) from connector (CN91-3P) on the Main PCB (38-1)
- 3. Disconnect connector (CN19-3P,CN20-4P) on TRANS PCB (40-3) from the lead wire (BN19-3P,BN20-4P) on the Main PCB (38-1).
- 4. Disconnect the lead wire (BN96-8P) on the Power PCB (40-4) from connector (CN96) on the Regulator PCB (B)(40-5).
- 5. Disconnect the lead wire (BN99-8P) on the Power PCB (40-4) from connector (CN99) on the Regulator PCB (A)(40-2).
- 6. Disconnect connector (CN81) on the Trans PCB (40-4) from the lead wire (BN81-8P) on the Fip PCB (37-1).
- 6. Disconnect connector (CN85) on the Regulator PCB (A)(40-2) from the lead wire (BN85-2P) on the Xm PCB (43).
- 7. Remove 4 Trans screws (S9) and then remove the Power Trans (36) & Power PCB ASS'Y(40) REMOVAL .

### 16 REMOTE PCB ASS'Y(40-7) REMOVAL

- 1. Remove the Top-cabinet, referring to the previous step 1 .
- 2. Disconnect connector (CN88) on remote PCB (40-7) from the lead wire (BN88-3P) on the Main PCB (38-1)
- 3. Remove 3screws (S13) and then remove the Remote PCB ASS'Y(40-7).

## 17 MAIN PCB ASS'Y(38-1) REMOVAL

- 1. Remove the Top-cabinet, referring to the previous step 1.
- 2. Remove the Tuner module (42), referring to the previous step 8.
- 3. Remove the Video PCB (41) referring to the previous step 9.
- 4. Remove the I-Pod PCB (39-2), referring to the previous step 10.
- 5. Remove the RS232 PCB (37-7), referring to the previous step 11.
- 6. Remove the XM PCB (43), referring to the previous step 13.
- 7. Remove the Input PCB (39-1), referring to the previous step 14.
- 8. Remove the AC Cord(35) on the Main PCB (38-1)
- 9. Disconnect the lead wire (BN90-2P) on the Main PCB (38-1) from connector (CN86) on Moms PCB (37-4).
- 10. Disconnect connector (CN91-3P) on the Main PCB (38-1) from lead wire of the Power Trans (36)
- 11. Disconnect the lead wire (BN89-2P) on the Main PCB (38-1) from connector (CN89) on Regulator PCB (A)(40-2).
- 12. Disconnect the lead wire (BN19-3P,BN20-4P) on Main PCB (38-1) from connector (CN19-3P,CN20-4P) on TRANS PCB (40-4).
- 13. Disconnect the lead wire (BN88-3P) on the Main PCB (38-1) from connector (CN88) on remote PCB (40-7).
- 14. Remove 11screws (S13-1EA, S4-2EA, S6-2EA, S8-6EA) and then remove the Main PCB ASS'Y(38-1).

# WIDE BAND VIDEO SWITCH WITH I<sup>2</sup>C BUS

## ■ GENERAL DESCRIPTION

The NJW1321 is a Wide Band Video Switch with  $I^2C$  BUS.

The NJW1321 includes switch of 4-input 2-output and 6dB amplifier. It is suitable for RGB or Y, Pb, and Pr signal because frequency range is 100MHz.

The NJW1321 includes external logic control terminals and external logic discernment terminals.

The NJW1321 is suitable for PTV, DTV, PDP and other high quality AV systems.

+9.0V

## FEATURES

- Operating Voltage
- I<sup>2</sup>C BUS Interface
- 4-input 2-output 3-Circuits
- Wide frequency range

0dB at 100MHz typ. -3dB at 300MHz typ.

QFP48

### Internal 6dB amplifier (Selectable Bypass or 6dB)

- External logic discernment terminal
- External logic control terminal
- Selectable slave address
- Power Save Circuit
- Bi-CMOS Technology

#### Philips Semiconductors

## Hex inverter

# Product specification

74HCU04

### FEATURES

- Output capability: standard
- I<sub>CC</sub> category: SSI

#### **GENERAL DESCRIPTION**

The 74HCU04 is a high-speed Si-gate CMOS device and is pin compatible with low power Schottky TTL (LSTTL). It is specified in compliance with JEDEC standard no. 7A.

The 74HCU04 is a general purpose hex inverter. Each of the six inverters is a single stage

### QUICK REFERENCE DATA

GND = 0 V;  $T_{amb} = 25 \text{ °C}$ ;  $t_r = t_f = 6 \text{ ns}$ 

SYMBOL	PARAMETER	CONDITIONS	TYP.	UNIT
t <sub>PHL</sub> / t <sub>PLH</sub>	propagation delay nA to nY	$C_L = 15 \text{ pF}; V_{CC} = 5 \text{ V}$	5	ns
CI	input capacitance		3.5	pF
C <sub>PD</sub>	power dissipation capacitance per inverter	note 1	10	pF

#### Note

1.  $C_{PD}$  is used to determine the dynamic power dissipation ( $P_D$  in  $\mu W$ ):

 $P_D = C_{PD} \times V_{CC}^2 \times f_i + \sum (C_L \times V_{CC}^2 \times f_O)$  where:

 $f_i$  = input frequency in MHz

fo = output frequency in MHz

C<sub>L</sub> = output load capacitance in pF

 $V_{CC}$  = supply voltage in V

 $\Sigma (C_L \times V_{CC}^2 \times f_o) = \text{sum of outputs}$

# 6CH VIDEO AMPLIFIER FOR DVD

### ■GENERAL DESCRIPTION

The NJM2587 is a dual supply voltage 6ch Video Amplifier. It includes 6dB amplifier and  $75\Omega$  driver, Low Pass Filter.

The input corresponds to the composite signal, the Y/C signal, and the component signal.

The NJM2587 is suitable for the DVD player and DVD recorder corresponding to the progressive video signal.

## HY57V161610E 2 Banks x 512K x 16 Bit Synchronous DRAM

## DESCRIPTION

THE Hynix HY57V161610E is a 16,777,216-bits CMOS Synchronous DRAM, ideally suited for the main memory and graphic applications which require large memory density and high bandwidth. HY57V161610E is organized as 2banks of 524,288x16.

HY57V161610E is offering fully synchronous operation referenced to a positive edge clock. All inputs and outputs are synchronized with the rising edge of the clock input. The data paths are internally pipelined to achieve very high bandwidth. All input and output voltage levels are compatible with LVTTL.

Programmable options include the length of pipeline (Read latency of 1,2 or 3), the number of consecutive read or write cycles initiated by a single control command (Burst length of 1,2,4,8 or full page), and the burst count sequence(sequential or interleave). A burst of read or write cycles in progress can be terminated by a burst terminate command or can be interrupted and replaced by a new burst read or write command on any cycle. (This pipeline design is not restricted by a `2N` rule.)

### FEATURES

- Single 3.0V to 3.6V power supply
- All device pins are compatible with LVTTL interface
- JEDEC standard 400mil 50pin TSOP-II with 0.8mm of pin pitch
- All inputs and outputs referenced to positive edge of system clock
- Data mask function by UDQM/LDQM
- Internal two banks operation

**ORDERING INFORMATION** 

- Auto refresh and self refresh
- 4096 refresh cycles / 64ms
- Programmable Burst Length and Burst Type
  - 1, 2, 4, 8 and Full Page for Sequence Burst
  - 1, 2, 4 and 8 for Interleave Burst
- Programmable CAS Latency ; 1, 2, 3 Clocks

### **PIN CONFIGURATION**

### **PIN DESCRIPTION**

PIN	PIN NAME	DESCRIPTION
CLK	Clock	The system clock input. All other inputs are referenced to the SDRAM on the rising edge of CLK.
CKE	Clock Enable	Controls internal clock signal and when deactivated, the SDRAM will be one of the states among power down, suspend or self refresh.
CS	Chip Select	Command input enable or mask except CLK, CKE and DQM
BA	Bank Address	Select either one of banks during both RAS and CAS activity.
A0 ~ A10	Address	Row Address : RA0 ~ RA10, Column Address : CA0 ~ CA7 Auto-precharge flag : A10
$\overline{RAS}, \overline{CAS}, \overline{WE}$	Row Address Strobe, Column Address Strobe, Write Enable	RAS, CAS and WE define the operation. Refer function truth table for details
LDQM, UDQM	Data Input/Output Mask	DQM control output buffer in read mode and mask input data in write mode
DQ0 ~ DQ15	Data Input/Output	Multiplexed data input / output pin
VDD/VSS	Power Supply/Ground	Power supply for internal circuit and input buffer
VDDQ/VSSQ	Data Output Power/Ground	Power supply for DQ
NC	No Connection	No connection

- PIN AND FUNCTION COMPATIBLE WITH 74 SERIES 04
- IMPROVED LATCH-UP IMMUNITY

#### DESCRIPTION

The 74ACT04 is an advanced high-speed CMOS HEX INVERTER fabricated with sub-micron silicon gate and double-layer metal wiring  $C^2MOS$  technology.

The internal circuit is composed of 3 stages including buffer output, which enables high noise immunity and stable output.

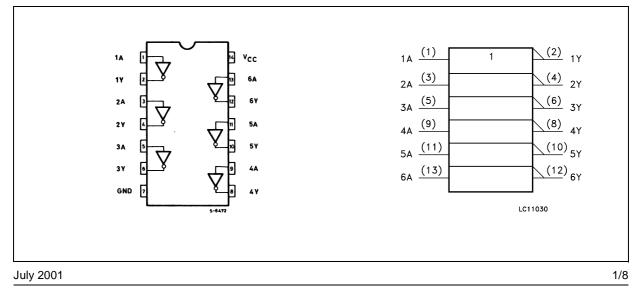

#### **ORDER CODES**

PACKAGE	TUBE	T & R
DIP	74ACT04B	
SOP	74ACT04M	74ACT04MTR
TSSOP		74ACT04TTR

The device is designed to interface directly High Speed CMOS systems with TTL, NMOS and CMOS output voltage levels.

All inputs and outputs are equipped with protection circuits against static discharge, giving them 2KV ESD immunity and transient excess voltage.

#### PIN CONNECTION AND IEC LOGIC SYMBOLS

## ANALOG DEVICES

## 2:1 HDMI/DVI Switch with Equalization

## AD8190

#### **FEATURES** Two inputs, one output HDMI/DVI links **Enables HDMI 1.2a-compliant receiver** Four TMDS channels per link Supports 250 Mbps to 1.65 Gbps data rates Supports 25 MHz to 165 MHz pixel clocks Equalized inputs for operation with long HDMI cables (20 meters at 1080p) Fully buffered unidirectional inputs/outputs Globally switchable 50 $\Omega$ on-chip terminations **Pre-emphasized outputs** Low added jitter Single-supply operation (3.3 V) Four auxiliary channels per link **Bidirectional unbuffered inputs/outputs** Flexible supply operation (3.3 V to 5 V) **HDCP standard compatible** Allows switching of DDC bus and two additional signals **Output disable feature Reduced power dissipation Output termination removal** Two AD8190s support HDMI/DVI dual-link Standards compliant: HDMI receiver, HDCP, DVI Serial (I<sup>2</sup>C slave) control interface 56-lead, 8 mm x 8 mm, LFCSP, Pb-free package

#### APPLICATIONS

Multiple input displays Projectors A/V receivers Set-top boxes Advanced television (HDTV) sets

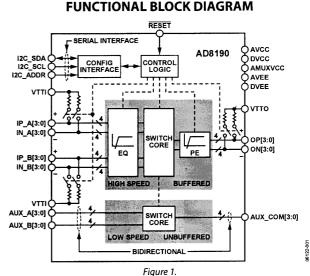

#### **GENERAL DESCRIPTION**

The AD8190 is an HDMI/DVI switch featuring equalized TMDS inputs and pre-emphasized TMDS outputs, ideal for systems with long cable runs. Outputs can be set to a high impedance state to reduce the power dissipation and/or allow the construction of larger arrays using the wire-OR technique.

The AD8190 is provided in a space saving, 56-lead, LFCSP, surface-mount, Pb-free, plastic package and is specified to operate over the  $-40^{\circ}$ C to  $+85^{\circ}$ C temperature range.

#### **TYPICAL APPLICATION**

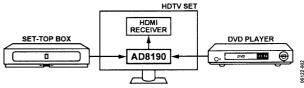

Figure 2. Typical AD8190 Application for HDTV Sets

#### **PRODUCT HIGHLIGHTS**

- Supports data rates up to 1.65 Gbps, enabling UXGA (1600 × 1200) DVI resolutions and 1080p HDMI formats.
- 2. Input cable equalizer enables use of long cables at the input (more than 20 meters of 24 AWG cable at 1080p).
- 3. Auxiliary switch allows routing of the DDC bus and two additional single-ended signals for a single chip, fully HDMI 1.2a receive-compliant solution.

- PIN AND FUNCTION COMPATIBLE WITH 74 SERIES 32
- LATCH-UP PERFORMANCE EXCEEDS 500mA (JESD 17)
- ESD PERFORMANCE: HBM > 2000V (MIL STD 883 method 3015); MM > 200V

#### DESCRIPTION

The 74LCX32 is a low voltage CMOS QUAD 2-INPUT OR GATE fabricated with sub-micron silicon gate and double-layer metal wiring  $C^2MOS$ 

#### Table 1: Order Codes

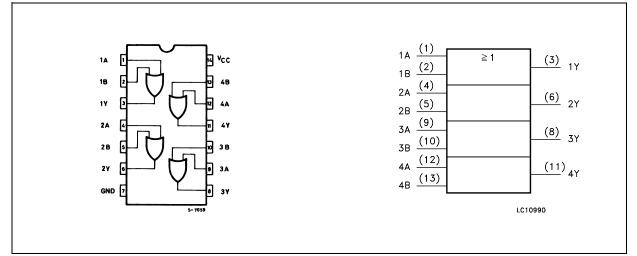

PACKAGE	T & R
SOP	74LCX32MTR
TSSOP	74LCX32TTR

technology. It is ideal for low power and high speed 3.3V applications; it can be interfaced to 5V signal environment for inputs.

It has same speed performance at 3.3V than 5V AC/ACT family, combined with a lower power consumption.

All inputs and outputs are equipped with protection circuits against static discharge, giving them 2KV ESD immunity and transient excess voltage.

## **AK4384** 106dB 192kHz 24-Bit 2ch ΔΣ DAC

#### **GENERAL DESCRIPTION**

The AK4384 offers the perfect mix for cost and performance based audio systems. Using AKM's multi bit architecture for its modulator the AK4384 delivers a wide dynamic range while preserving linearity for improved THD+N performance. The AK4384 integrates a combination of SCF and CTF filters increasing performance for systems with excessive clock jitter. The 24 Bit word length and 192kHz sampling rate make this part ideal for a wide range of applications including DVD-Audio. The AK4384 is offered in a space saving 16pin TSSOP package.

#### FEATURES

- □ Sampling Rate Ranging from 8kHz to 192kHz
- □ 128 times Oversampling (Normal Speed Mode)
- □ 64 times Oversampling (Double Speed Mode)
- □ 32 times Oversampling (Quad Speed Mode)
- □ 24-Bit 8 times FIR Digital Filter
- □ SCF with High Tolerance to Clock Jitter
- □ 2nd order Analog LPF
- □ Single Ended Output Buffer
- □ Digital de-emphasis for 32k, 44.1k and 48kHz sampling
- □ Soft mute
- □ Digital Attenuator (Linear 256 steps)
- □ I/F format: 24-Bit MSB justified, 24/20/16-Bit LSB justified or I<sup>2</sup>S
- □ Master clock: 256fs, 384fs, 512fs, 768fs or 1152fs (Normal Speed Mode)
  - 128fs, 192fs, 256fs or 384fs (Double Speed Mode) 128fs, 192fs (Quad Speed Mode)
- □ THD+N: -94dB
- □ Dynamic Range: 106dB
- □ Power supply: 4.5 to 5.5V
- □ Very Small Package: 16pin TSSOP (6.4mm x 5.0mm)

## NEGATIVE VOLTAGE REGULATORS

2

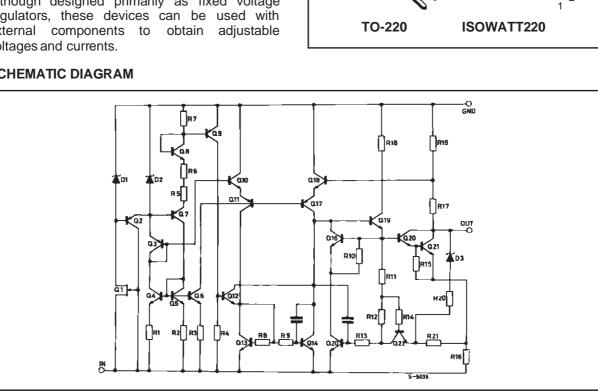

**TO-3** 

- **OUTPUT CURRENT UP TO 1.5 A**
- OUTPUT VOLTAGES OF -5; -5.2; -6; -8; -9; -12; -15; -18; -20; -22; -24V
- THERMAL OVERLOAD PROTECTION
- SHORT CIRCUIT PROTECTION
- OUTPUT TRANSITION SOA PROTECTION

#### DESCRIPTION

The L7900 series of three-terminal negative regulators is available in TO-220, ISOWATT220 TO-3 and D<sup>2</sup>PAK packages and several fixed output voltages, making it useful in a wide range of applications. These regulators can provide local on-card regulation, eliminating the distribution problems associated with single point regulation; furthermore, having the same voltage option as the L7800 positive standard series, they are particularly suited for split power supplies. In addition, the -5.2V is also available for ECL system. If adequate heat sinking is provided, they can deliver over 1.5A output current. Although designed primarily as fixed voltage regulators, these devices can be used with external components to obtain adjustable voltages and currents.

### 1A LOWDROP OUT VOLTAGE REGULATOR (ADJUSTABLE & FIXED)

**FEATURES** 

- Output Current up to 1 A
- Low Dropout Voltage (700mV at 1A Output Current)
- Three Terminal Adjustable or Fixed 1.5V, 1.8V, 2.5V, 2.85V, 3.0V, 3.3V, 5.0V
- 2.85V Device for SCSI-II Active Terminator
- 0.04% Line Regulaion, 0.1% Load Regulation
- Very Low Quiescent Current
- Internal Current and Terminal Limit
- Logic-Controlled Electronics Shutdown
- Surface Mount Package SOT-223 & TO-263 (D2-Pack)
- 100% Thermal Limit Burn-In

### APPLICATION

- Active SCSI Terminators
- Portable/Plan Top/Notebook Computers
- High Efficiency Linear Regulators
- SMPS Post Regulators
- Mother B/D Clock Supplies
- Disk Drives
- Battery Chargers

TO-263 (D2)

LM1117S-XX

LM1117T

LM1117T-XX

The LM1117 is a low power positive-voltage regulator designed to meet 1A output current and comply with SCSI-II specifications with a fixed output voltage of 2.85V. This device is an excellent choice for use in battery-powered applications, as active terminators for the SCSI bus, and portable computers. The LM1117 features very low quiescent current and very **low dropout voltage of 700mV at a full load** and lower as output current decreases. LM1117 is available as an adjustable or fixed 1.5V, 1.8V, 2.5V, 2.85V, 3.0V, 3.3V, and 5.0V output voltages.

The LM1117 is offered in a 3-pin surface mount package SOT-223 & TO-263. The output capacitor of  $10\mu$ F or larger is needed for output stability of LM1117 as required by most of the other regulator circuits.

### ULTRA WIDE BAND, HIGH SLUE RATE DUAL OPERATIONAL AMPLIFIER

#### GENERAL DESCRIPTION

The NJM2137 is an ultra wide band, high slew rate dual operational amplifier operated from low voltage ( $\pm 1.35V$ ).

It can apply to active filter, high speed analog and digital signal processor, line driver, HDTV, industrial measurement equipment and others.

It can also apply to portable communication items because of low operating voltage and low operating current.

 $(\pm 1.35V \sim \pm 6V)$

## ST202E ST232E ± 15KV ESD PROTECTED 5V RS-232 TRANSCEIVER

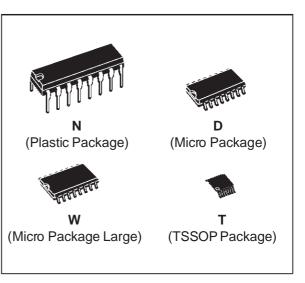

- ESD PROTECTION FOR RS-232 I/O PINS: ± 15 KV HUMAN BODY MODEL
- GUARANTEED 120 kbps DATE RATE
- GUARANTEED SLEW RATE RANGE 3 to 30V/µs
- OPERATE FROM A SINGLE 5V POWER SUPPLY

#### DESCRIPTION

The ST202E/ST232E are a 2 driver 2 receiver devices designed for RS-232 and V.28 communications in harsh enviroments. Each transmitter output and receiver input is protected against  $\pm$  15KV electrostatic discharge (ESD) shocks. The drivers meet all EIA/TIA-232E and CCITT V.28 specifications at data rates up to 120Kbps, when loaded in accordance with the EIA/TIA-232E specification.

The ST202E/232E use a single 5V supply voltage.

The ST232E operates with four  $1\mu F$  capacitors,

while the ST202E operates with four  $0.1 \mu F$  capacitors, further reducing cost and board space.

#### HEX INVERTER

The TC74HCU04A is a high speed CMOS INVERTER fabricated with silicon gate  $C^2MOS$  technology.

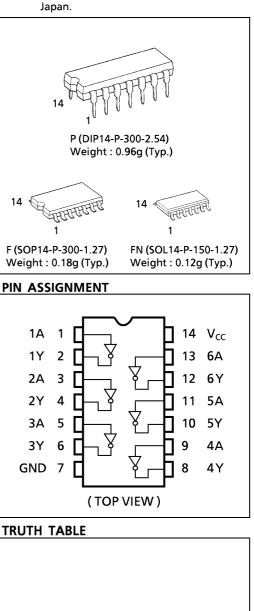

It achieves the high speed operation similar to equivalent LSTTL while maintaining the CMOS low power dissipation.

Since the internal circit is composed of a single stage inverter, it can be used in analog applications such as crystal oscillators.

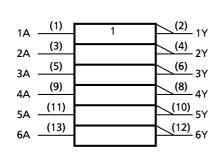

All inputs are equipped with protection circuits against static discharge or transient excess voltage.

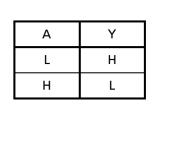

#### FEATURES:

- High Speed------t<sub>pd</sub> = 4ns(typ.) at  $V_{CC} = 5V$
- Low Power Dissipation  $\dots I_{CC} = 1 \mu A(Max.)$  at Ta = 25°C
- High Noise Immunity  $V_{NIH} = V_{NIH} = 10\% V_{CC}$  (Min.)
- Output Drive Capability ..... 10 LSTTL Loads
- Symmetrical Output Impedance...  $|I_{OH}| = I_{OL} = 4mA(Min.)$
- Balanced Propagation Delays  $\cdots t_{pLH} \simeq t_{pHL}$
- Wide Operating Voltage Range  $V_{CC}(opr.) = 2V \sim 6V$
- Pin and Function Compatible with 74LS04

## PAL/NTSC VIDEO AND CHROMA SYNC PROCESSING SYSTEM FOR PIP/POP/PAP

TA1270BF is a PAL/NTSC color TV signal processor IC suitable for PIP/POP/PAP. The IC integrates video and chroma sync processor circuits. It comes in a 48pin flat package.

The video block uses a chroma trap, the chroma block a PAL/NTSC automatic identifier circuit, and the sync processor block a 50/60 Hz automatic identifier circuit. The PAL demodulator circuit contains a baseband signal processor, making the circuit adjustment free.

The TA1270BF incorporates an  $\mathsf{I}^2\mathsf{C}$  bus, enabling control to be set via the bus line.

Weight: 0.83 g (Typ.)

#### FEATURES

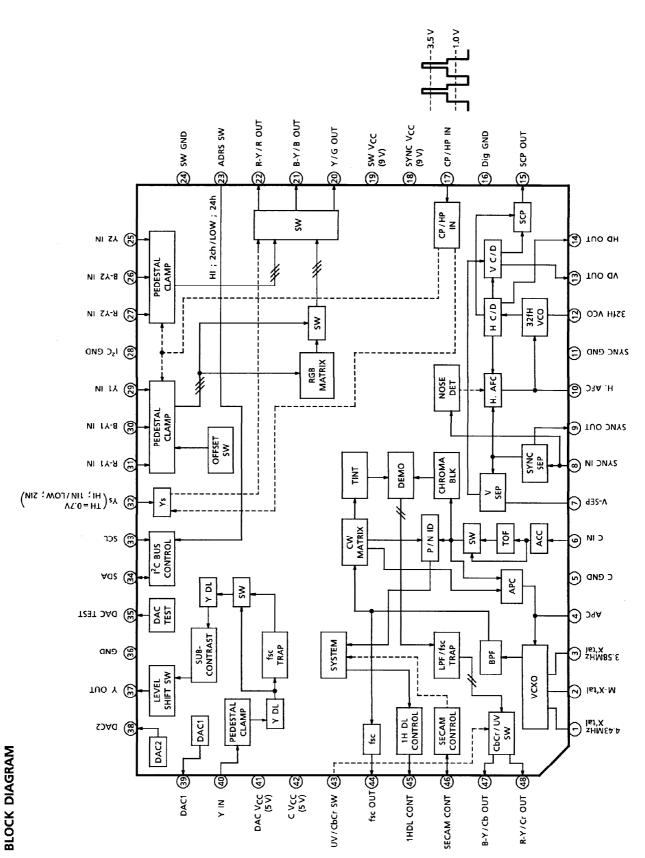

Video block

- Chroma trap
- Y delay line
- Sub contrast adjustment (±3 dB)

CHROMA block

- UV/CbCr demodulation for NTSC ; UV demodulation for PAL
- Tint control
- PAL demodulation baseband signal processing
- PAL/NTSC automatic identification
- Sub color adjustment (±3 dB)

## NJM2595

### 5-INPUT 3-OUTPUT VIDEO SWITCH

#### ■ GENERAL DESCRIPTION

#### PACKAGE OUTLINE

The **NJM2595** is a 5-input 3-output video switch. Its switches select one from five signals received from VTR,TV,DVD, TV-GAME and others.

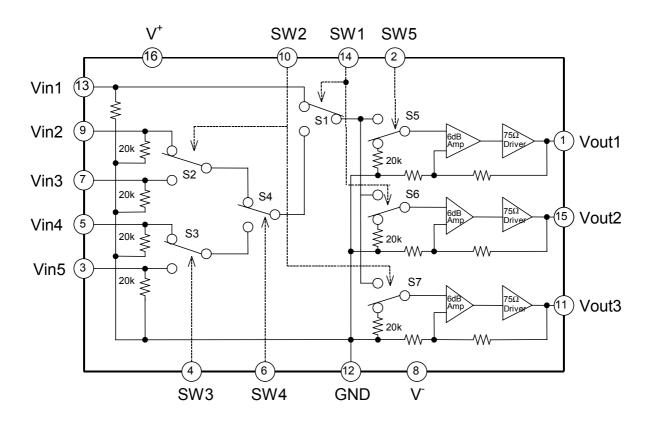

The NJM2595 is designed for audio items, such as AV amplifier and others.

#### ■ FEATURES

- 5-input 3-output
- Operating Voltage ±4.0 to ±6.5V
- Operating current
- Crosstalk
- ±15mAtyp. at Vcc=±5V -65dBtyp.
- Internal 6dB Amplifier
- Internal 75Ω Driver
- Bipolar Technology
- Package Outline DIP16,DMP16

## FEATURES

- Powerful 32-bit Dual-core Audio DSP
- Multi-standard 32-bit Audio Decoding plus Post Processing, Dual-decode Capable
- Framework Applications Library
  - Dolby<sup>®</sup> Digital Pro Logic<sup>®</sup> IIx, Dolby<sup>®</sup> Digital EX, Dolby<sup>®</sup> Digital Headphone<sup>™</sup>, Dolby<sup>®</sup> Digital Virtual Speaker<sup>™</sup>
  - DTS-ES 96/24<sup>™</sup>, DTS-ES<sup>™</sup> Discrete 6.1, DTS-ES<sup>™</sup> Matrix 6.1, DTS<sup>®</sup> Digital Surround
  - MPEG-2 Multichannel
  - AAC™ Multichannel 5.1
  - MP3 ~ MPEG-1/2, Layer III
  - THX<sup>®</sup> Surround EX<sup>™</sup>, THX<sup>®</sup> Ultra2 Cinema<sup>™</sup>
  - DVD Audio/Video/SACD Multichannel Bass Management
- 10 Channels of 32-bit Serial Audio Input
- 16 Channels of 32-bit PCM Output
- Two Master/slave SPI or I<sup>2</sup>C Format Control Ports for Audio Subsystem Management
- Parallel Host Control & UART
- Customer Software Security Keys
- □ Large On-chip X, Y, and Program RAM & ROM
- □ SDRAM, SRAM, and FLASH Memory Support
- Dual 192-kHz SPDIF Transmitters

## CS495xx Data Sheet

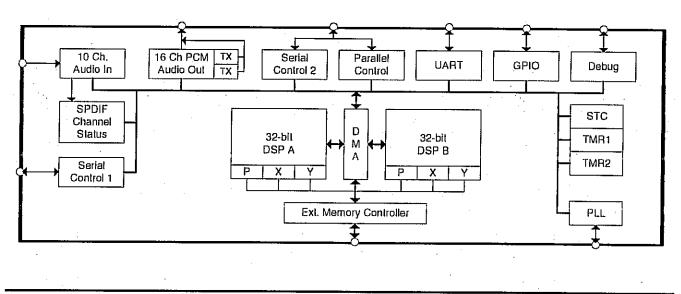

## 32-bit Audio Decoder DSP Family

The CS495xx DSP family integrates two programmable, 32-bit DSP cores and a DMA engine with a full set of audio peripherals. Feature-rich AVR designs can be easily developed using the Framework applications library, which includes both certified application programs and a modular programming environment for easy customization. The framework includes certified state-of-the-art audio decoders, virtualizers. surround simulators, and audio enhancement algorithms.

The CS495xx family was designed to reduce system costs and development time and to provide advanced features and flexibility for competitive system-level solutions. The difficult processing tasks of Dolby<sup>®</sup> Digital Surround EX<sup>™</sup>, AAC mulitichannel, DTS-ES 96/24, and THX Ultra2 Cinema can be accomplished without the expense of external logic or memory. Additionally, the CS495xx can meet the needs of dual-decode applications with twin DSP cores, and audio-I/O-intensive designs with support for up to 10 input and 16 output channels.

CS495xx Data Sheet 32-bit Audio Decoder DSP Family

## 4. Hardware Functional Description

## 4.1 DSP Core

The CS495xx is a dual-core DSP with seperate X- and Y-data memory spaces, and a seperate P-code memory space. Each core is a high-performance, 32-bit, user-programmable, fixed-point DSP that is capable of performing two memory access control (MAC) operations per clock cycle. Each core has eight 72-bit accumulators, four X- and four Y-data registers, and 12 index registers.

Both DSP cores are coupled to a flexible DMA engine. The DMA engine can move data between peripherals such as the DAI and DAO, external memory, or any DSP core memory, all without the intervention of the DSP. The DMA engine offloads data move instructions from the DSP core, leaving more MIPS available for signal processing instructions.

The DSP obtains its functionality from application codes that are downloaded to the CS495xx and are provided through the Cirrus Logic Crystal Ware<sup>™</sup> Software Licensing Program.

Both DSP cores are user-programmable in order to offer the customer the ability to implement unique post-processing algorithms. Additionally, users can choose to download standard audio decoder and post-processing modules which are available through the Cirrus Logic Crystal Ware™ Software Licensing Program.

The CS495xx is suitable for AVR/Outboard Decoder, DVD Audio/Video Player, and Digital Broadcast applications.

#### 4.1.1 DSP Memory

Each DSP core has its own on-chip data and program memory and does not require external memory for any of today's popular audio algorithms including Dolby Digital Surround EX, AAC Mulitichannel, DTS-ES 96/24, and THX Ultra2 Cinema.

The memory maps for the DSPs are as follows. All memory sizes are composed of 32-bit words.

Memory Type	DSP A	DSP B
X	16k SRAM, 32k ROM	8k SRAM, 8k ROM
Y	16k SRAM, 32k ROM	16k SRAM, 8k ROM
P	8k SRAM, 32k ROM	8k SRAM, 8k ROM

Table 2. DSP Memory Sizes

#### 4.1.2 DMA Controller

The powerful 12-channel DMA controller can move data between 8 on-chip resources. Each resource has its own arbiter: X-, Y-, and P-RAMs on DSP A; X-, Y-, P-RAMs on DSP B; external memory; and the peripherial bus. Modulo and linear addressing modes are supported, with flexible start address and increment controls. The service interval for each DMA channel as well as up to 6 interrupt events, is programmable.

#### 4.2 On-chip DSP Peripherals

### 4.2.1 Digital Audio Input Port (DAI)

The 10-channel DAI port supports a wide variety of data input formats. The port is capable of accepting PCM or IEC61937. Up to 32-bit PCM and 16-bit compressed data input word lengths are supported. The port has two independent slave-only clock domains, each data input can be independently assigned to a clock domain. The sample rate of the input clock domains can be determined automatically by the DSP, eliminating the host from the task of monitoring the SPDIF receiver. A special channel status word function separates IEC channel status data from PCM data and places it into a separate data buffer for analysis by the DSP. A time-stamping feature allows the input data to be sample-rate converted via software.

## 4.2.2 Digital Audio Output Port (DAO)

There are two DAO ports, each port can output 8 channels of up to 32-bit PCM data. The port supports data rates from 32kHz to 192kHz. Each port can be configured as an independent clock domain in slave mode, or the ratio of the two clocks can be set to even multiples of each other in master mode. The two ports can be ganged together into a single clock domain. Each port has a 192kHz SPDIF transmitter that can be used instead of a PCM output.

## 4.2.3 Serial Control Port 1 & 2 (I<sup>2</sup>C or SPI)

There are two on-chip serial control ports that are capable of operating in master or slave mode in either I<sup>2</sup>C or SPI modes. Serial control port 2 shares pins with the parallel control port.

#### 4.2.4 Parallel Control Port

The CS495xx parallel port can be used for either parallel control (Motorola<sup>®</sup>, Intel<sup>®</sup>, or multiplexed Intel modes). The parallel port pins are muxed with serial control port 2.

#### 4.2.5 External Memory Interface

The external memory interface controller supports up to 128 Mbit of SDRAM, using a 16-bit data bus. The memory controller supports up to 1MB of SRAM and 1MB of FLASH memory in either 8-bit or 16-bit bus widths.

#### 4.2.6 GPIO

The CS495xx has 42 GPIO pins multiplexed with other peripherial functions. Each GPIO can be configured as an output, an input, or an input with interrupt. Each input-pin interrupt can be configured as rising edge, falling edge, active-low, or active-high.

#### 4.2.7 Channel Status Word (CSW)

The Channel Status Word peripheral extracts SPDIF IEC data and stores it in the CS495xx's internal memory for use by application code. The CSW operates in two modes: 1. extracting data from a DAI channel that is connected to a SPDIF receiver such as the Cirrus Logic CS8416 configured in IEC format mode (IEC data embedded in the I<sup>2</sup>S stream); or 2. capturing IEC data output from a SPDIF receiver on discrete data, clock, and frame clock pins. The CSW has two data input pins to capture two simultaneous synchronous data streams (U and C).

#### 4.2.8 PLL-based Clock Generator

The PLL-based clock generator provides clock generation and system synchronization for the device. The low-jitter PLL generates integer multiples of a reference frequency which are used to clock the DSP core and peripherals. A second, dependent clock domain can be output on the DAO port for driving Delta-Sigma audio converters. The CS495xx is clocked from the external reference frequency until the

8 ©Copyright 2005 Cirrus Logic, Inc.

9

Ecology the Object Laboration and the Control 
CS495xx Data Sheet 32-bit Audio Decoder DSP Family

PLL is configured and locked, at which time the clocks can be switched. A built-in crystal oscillator circuit with dedicated, buffered output pin is provided to eliminate an external crystal oscillator.

## 4.3 DSP I/O Description

## 4.3.1 Multiplexed Pins

The CS495xx incorporates a large amount of flexibility into a 144-pin package. The pins are internally multiplexed to serve multiple purposes. Some pins are designed to operate in one mode at power up, and serve a different purpose when the DSP is running. Other pins have functionality which can be controlled by the application running on the DSP. In order to better explain the behavior of the part, the pins which are multiplexed have been given multiple names. Each name is specific to the pin's operation in a particular mode.

## 4.3.2 Termination Requirements

The CS495xx incorporates open-drain pins which must be pulled high for proper operation. PCP\_IRQ# and SCP\_IRQ# are always open drain which requires a pull-up for proper operation. The SCP\_SDA and SCP\_CLK lines are open drain in I<sup>2</sup>C communication mode.

The specific termination requirements may vary since the state of some of the GPIO pins will determine the communication mode at the rising edge of Reset. For the explicit termination requirements of each communication mode please see the *Typical Connection* diagrams in the CS495xx Hardware User's Manual.

Generally a 3.3 k $\Omega$  resistor is recommended for open-drain and mode-select pins. A 10 k $\Omega$  resistor is sufficient for all other unused inputs.

#### 4.3.3 Pads

DS631PP4

The CS495xx has two different I/O voltage levels. All signal pins operate from the 3.3 V supply and are 5 V-tolerant.

## 4.4 Application Code Security

The external program code is encrypted by the programmer to protect any intellectual property it may contain. A secret, customer-specific key is used to encrypt the program code that is to be stored external to the device.

## HCF4053B

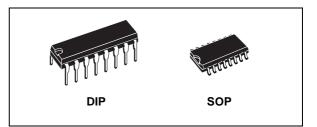

- LOW "ON" RESISTANCE : 125Ω (Typ.) OVER 15V p.p SIGNAL-INPUT RANGE FOR V<sub>DD</sub> - V<sub>EE</sub> = 15V
- HIGH "OFF" RESISTANCE : CHANNEL LEAKAGE ± 100pA (Typ.) at V<sub>DD</sub> - V<sub>EE</sub> = 18V
- BINARY ADDRESS DECODING ON CHIP
- HIGH DEGREE OF LINEARITY : < 0.5% DISTORTION TYP. at  $f_{IS} = 1 \text{KHz}$ ,  $V_{IS} = 5 \text{ V}_{pp}$ ,  $V_{DD} - V_{SS} \ge 10 \text{V}$ ,  $\text{RL} = 10 \text{K}\Omega$
- VERY LOW QUIESCENT POWER DISSIPATION UNDER ALL DIGITAL CONTROL INPUT AND SUPPLY CONDITIONS : 0.2 μW (Typ.) at V<sub>DD</sub> - V<sub>SS</sub> = V<sub>DD</sub> - V<sub>EE</sub> =10V
- MATCHED SWITCH CHARACTERISTICS :  $R_{ON} = 5\Omega$  (Typ.) FOR V<sub>DD</sub> - V<sub>EE</sub> = 15V
- WIDE RANGE OF DIGITAL AND ANALOG SIGNAL LEVELS : DIGITAL 3 to 20, ANALOG TO 20V p.p.
- QUIESCENT CURRENT SPECIF. UP TO 20V
- 5V, 10V AND 15V PARAMETRIC RATINGS
- INPUT LEAKAGE CURRENT
   I<sub>I</sub> = 100nA (MAX) AT V<sub>DD</sub> = 18V T<sub>A</sub> = 25°C
- 100% TESTED FOR QUIESCENT CURRENT
- MEETS ALL REQUIREMENTS OF JEDEC JESD13B " STANDARD SPECIFICATIONS FOR DESCRIPTION OF B SERIES CMOS DEVICES"

#### DESCRIPTION

The HCF4053B is a monolithic integrated circuit fabricated in Metal Oxide Semiconductor

#### **PIN CONNECTION**

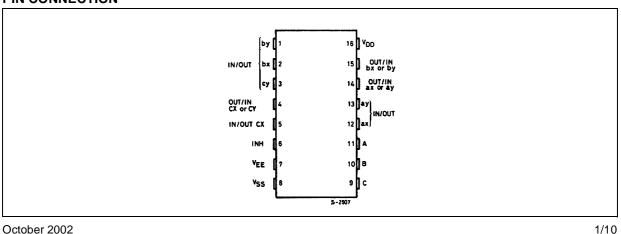

#### **ORDER CODES**

PACKAGE	TUBE	T & R						
DIP	HCF4053BEY							
SOP	HCF4053BM1	HCF4053M013TR						

technology available in DIP and SOP packages.

The HCF4053B analog multiplexer/demultiplexer is a digitally controlled analog switch having low ON impedance and very low OFF leakage current. This multiplexer circuit dissipate extremely low quiescent power over the full  $V_{DD} - V_{SS}$  and  $V_{DD} - V_{EE}$  supply voltage range, independent of the logic state of the control signals.

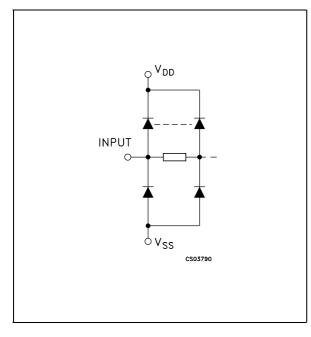

When a logic "1" is present at the inhibit input terminal all channel are off. This device is a triple 2-channel multiplexer having three separate digital control inputs, A, B, and C, and an inhibit input. Each control input selects one of a pair of channels which are connected in a single pole double-throw configuration.

#### FUNCTIONAL DIAGRAM

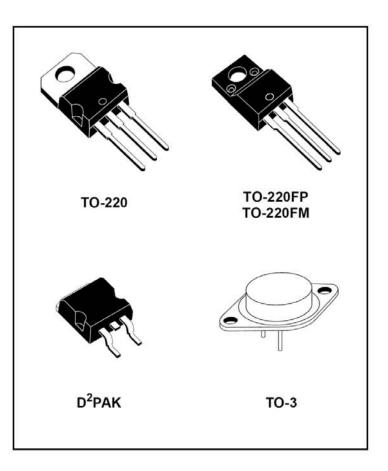

# L7800 SERIES

## POSITIVE VOLTAGE REGULATORS

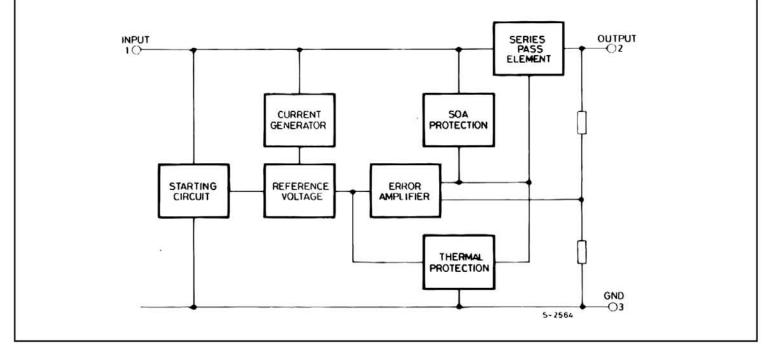

- OUTPUT CURRENT TO 1.5A
- OUTPUT VOLTAGES OF 5; 5.2; 6; 8; 8.5; 9; 10; 12; 15; 18; 24V
- THERMAL OVERLOAD PROTECTION
- SHORT CIRCUIT PROTECTION
- OUTPUT TRANSITION SOA PROTECTION

#### DESCRIPTION

The L7800 series of three-terminal positive regulators is available in TO-220, TO-220FP, TO-220FM, TO-3 and D<sup>2</sup>PAK packages and several fixed output voltages, making it useful in a wide range of applications. These regulators can provide local on-card regulation, eliminating the distribution problems associated with single point regulation. Each type employs internal current limiting, thermal shut-down and safe area protection, making it essentially indestructible. If adequate heat sinking is provided, they can deliver over 1A output current. Although designed primarily as fixed voltage regulators, these devices can be used with external components to obtain adjustable voltage and currents.

#### Figure 1: Schematic Diagram

## XM SATELLITE RADIO XM Digital Transceiver Integrated Circuit (XM/DT IC)

## 1. Overview

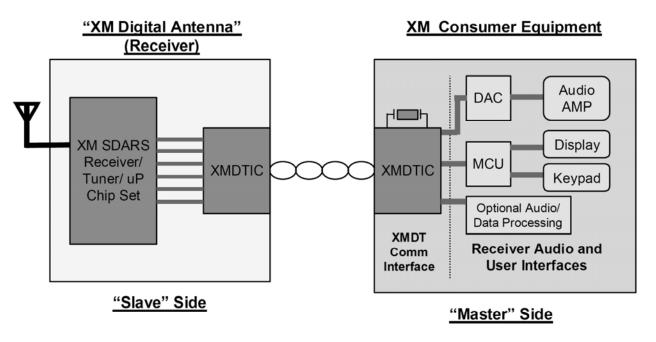

The XM Digital Transceiver Integrated Circuit (XM/DT IC) provides a cost effective means for an electronics equipment manufacturer to be XM Satellite Radio compatible by multiplexing data and audio streams between the XM Receiver and User Interface Controller into a 2 wire time division duplex (TDD) high frequency serial link.

In a typical application, two XM/ DT IC devices connect to each other via a differential link as depicted on Figure 1.1 below. In the 'Slave' unit ("XM/DT Digital Transceiver" (antenna)), the XM/DT IC interfaces directly to the XM Radio receiver chipset taking in a real-time PCM (I2S) audio stream along with data information. The XM/DT IC stores this data in internal RAM and then time division multiplexes the data on a 2-wire serial communication link. This link provides for the physical decoupling of the Slave and Master side of up 100 meters with software transparency between the Master side processor and audio circuitry and the Slave side XM Satellite Radio receiver chip set.

In the Master unit ("XM/DT Ready Radio"), the XM/DT IC demultiplexes the received data, buffers it internally and reproduces it for consumption. The XM/DT IC is capable of simultaneously sending and receiving serial frames while multiplexing and de-multiplexing them in real time, formatting them and then routing them into the appropriate Slave or Master side interfaces.

The software interface between the user interface and the receiver is unaffected by the introduction of the XM/DT IC link pair.

An input pin on the XM/DT IC configures the part's functionality as either Master (user interface end) or Slave (XM Digital Transceiver end) allowing the same IC to be used at either end of the link.

## Figure 1.1 - Typical XM/DT Application

## 2. Functional Description

Figure 2.1 below shows a basic top level diagram showing each functional block in the XM/DT device.

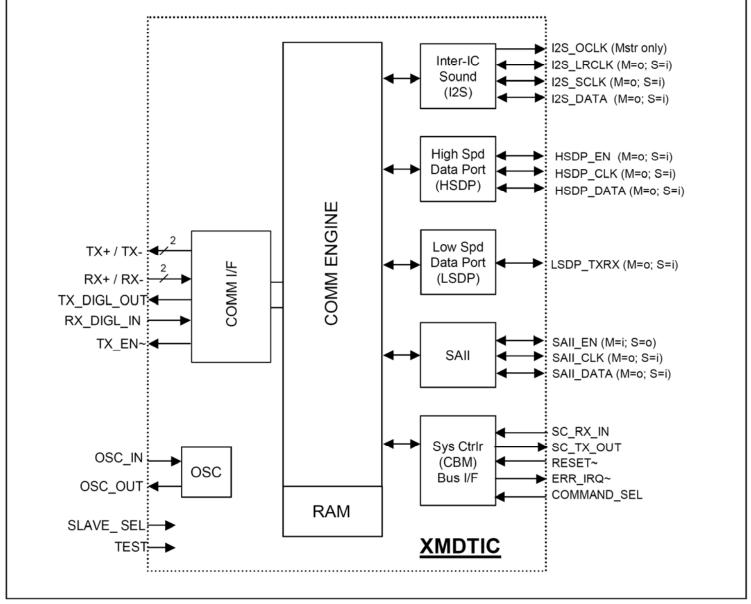

Figure 2.1 XM/DT Top Level Diagram

The XM/DT IC is broken into the following functional blocks:

## SC I/F – System Controller Interface

The System Controller Interface transports the serial communication commands and data between the microprocessor in the user interface device and the microprocessor in the XM Digital Antenna. The commands and data transported follow typically follow the XM CBM (Common Bus Messaging) protocol. The System Controller Interface functional block consists of a full duplex asynchronous serial interface. The SC I/F is used for both the software configuration of the XM/DT IC, monitoring of XM/DT link status, and transparent communications with the SC I/F at the other end of the communications link. The SC I/F block contains five signals, SC\_RX\_IN, SC\_TX\_OUT, COMMAND\_SEL, ERR\_IRQ#, and RESET#.

The SC\_RX\_IN and SC\_TX\_OUT connect the asynchronous serial communications to the respective microprocessors. The SC I/F

communicates at a default mode of 9600 baud, no parity, 8 data bits, and 1 stop bit. The baud rate can be changed using the XM/DT IC Command Mode. The Master and Slave baud rates must be set to the same rate by their respective microprocessors.

The COMMAND\_SEL input allows configuration of the XM/DT IC and to retrieve feedback of the link status during normal operation. This signal is logic low for normal operation and logic high for Command/Stat Mode. Details of the operation of this signal are described in the Programming section of this specification.

The ERR\_IRQ# output signal is active low when an error occurs on the link if interrupts are enabled via the Interrupt Mask register. Access to the Interrupt Mask register is gained via the Command Mode and the interrupt source identification is obtained via the Status Mode. Details of these modes are described in the Programming section of this specification.

The RESET# input signal is used to perform a complete asynchronous reset of the XM/DT IC. The RESET# signal is also used to place the XM/DT IC into Command Mode. Refer to the Programming section.

## SAII – Synchronous Audio Input Interface

The SAII Interface functional block provides a synchronous interface with hardware flow control from the Master to the Slave devices.

In Master mode, the XM/DT IC receives SAII Data and SAII Clock from the SAII source in the "playback unit". The SAII Enable (SAII\_EN) output signal is fed back to the SAII source to control the flow of input data based on the state of the SAII\_EN signal at the Slave Device.

In Slave mode, the XM/DT IC sends SAII Data and SAII Clock to the Slave device SAII receiver, and receives the SAII\_EN signal from the SAII receiver to control the flow of transmitted data.

The Master XM/DT IC adapts to the incoming SAII data rate.

## LSDP - Low Speed Data Port

The LSDP functional block consists of a unidirectional asynchronous serial interface.

In Master mode, the LSDP transmits data out of the device. In Slave mode, the LSDP receives data into the device.

This interface operates in default mode at 115200, no parity, 8 data bits, and 1 stop bit.

## HSDP – High Speed Data Port Interface

The HSDP Interface functional block provides a synchronous serial interface combined with a framing signal from the Slave XM/DT IC to the Master XM/DT IC.

The source of the HSDP is typically the XM receiver chipset. The HSDP data is typically received by the Host microprocessor. The HSDP signals include a serial data bitstream (HSDP\_DA), a synchronous clock (HSDP\_CLK), and a framing signal (HSDP\_EN). The framing signal can be used as a gating mechanism for the clock or an interrupt source to indicate the beginning and end of the HSDP data burst.

In Slave mode, the HSDP Interface receives HSDP\_DA, HSDP\_CLK, and HSDP\_EN from the HSDP source. In Master mode, the HSDP Interface transmits HSDP\_DA, HSDP\_CLK, and HSDP\_EN.

## I2S – Inter-IC Sound (I2S) digital audio Interface

The I2S functional block receives and transmits timing and frame sensitive data. The I2S interface is also referred to as the PCM interface.

In Slave mode, the XM/DT IC I2S Interface receives the I2S digital audio from the XM Receiver chipset. The XM/DT IC automatically adjusts to the incoming I2S data sampling rate.

In Master mode, the XM/DT IC I2S Interface generates all required signals to drive an I2S compatible audio DAC.

## COMM2W – Two Wire Communications Interface

The COMM2W functional block enables communications between two XM/DT ICs. The COMM2W is differential Time-Division-Duplex Interface.

#### T5CC1

## CMOS 16-Bit Microcontrollers T5CC1

## 1. Outline and Features

T5CC1 is a high-speed 16-bit microcontroller designed for the control of various mid- to large-scale equipment.

T5CC1 comes in a 100-pin flat package.

Listed below are the features.

- (1) High-speed 16-bit CPU (900/L1 CPU)
  - Instruction mnemonics are upward-compatible with TLCS-90/900
  - General-purpose registers and register banks
  - 16 Mbytes of linear address space
  - 16-bit multiplication and division instructions; bit transfer and arithmetic instructions
  - Micro DMA: 4-channels (593 ns/2 bytes at 27 MHz)
- (2) Minimum instruction execution time: 148 ns (at 27 MHz)
- (3) Built-in RAM: 16 Kbytes
   Built-in ROM: 256 Kbytes Flash memory
   4 Kbytes mask ROM (used for booting)

This product uses the Super Flash® technology under the license of Silicon Storage Technology,Inc. Super Flash® is a registered trademark of Silicon Storage Technology,Inc.

T5CC1

- (4) External memory expansion
  - Expandable up to 16 Mbytes (shared program/data area)
  - Can simultaneously support 8-/16-bit width external data bus
     ··· Dynamic data bus sizing
- (5) 8-bit timers: 8 channels
- (6) 16-bit timer/event counter: 2 channels
- (7) General-purpose serial interface: 2 channels
  - UART/ Synchronous mode: 2 channels
  - IrDA ver1.0 (115.2 kbps) supported: 1 channel
- (8) Serial bus interface: 1 channel
  - I<sup>2</sup>C bus mode/clock synchronous Select mode
- (9) 10-bit AD converter (built-in sample hold circuit) : 8 channels
- (10) Watchdog timer
- (11) Special timer for clock
- (12) Chip Select/Wait controller: 4 channels
- (13) Interrupts: 45 interrupts
  - 9 CPU interrupts: Software interrupt instruction and illegal instruction

  - 10 external interrupts -
- (14) Input/Output ports: 81 pins
- (15) Standby function

Three HALT modes IDLE2 (programmable), IDLE1, STOP

- (16) Clock controller
  - Clock Gear function: Select a high-frequency clock (fc to fc/16)
  - Special timer for CLOCK (fs = 32.768 kHz)
- (17) Operating voltage
  - V<sub>CC</sub> = 2.7 V to 3.6 V (fc max = 27 MHz, flash memory read operation)
  - V<sub>CC</sub> = 3.0 V to 3.6 V (fc max = 27 MHz, flash memory erase/program operations)
- (18) Package
  - 100-pin LQFP: LQFP100-P-1414-0.50F

Note: This LSI does not build in Clock doubler (DFM.)

## 2.2 Pin Names and Functions

The names of the input/output pins and their functions are described below. Table 2.2.1 Pin names and functions.

Pin Name	Number of Pins	I/O	Functions	
P00~P07	8	I/O	Port 0: I/O port that allows I/O to be selected at the bit level	
AD0~AD7		I/O	Address and data (lower): Bits 0 to 7 of address and data bus	
P10~P17	8	I/O	Port 1: I/O port that allows I/O to be selected at the bit level	
AD8~AD15		I/O	Address and data (upper): Bits 8 to 15 for address and data bus	
A8~A15		Output	Address: Bits 8 to 15 of address bus	
P20~P27	8	I/O	Port 2: I/O port that allows I/O to be selected at the bit level	
A0~A7		Output	Address: Bits 0 to 7 of address bus	
A16~A23		Output	Address: Bits 16 to 23 of address bus	
P30	1	Output	Port 30: Output port	
RD		Output	Read: Strobe signal for reading external memory	
			This port output RD signal also case of reading internal-area by setting P3	
			<p30> = 0 and P3FC <p30f> = 1.</p30f></p30>	
P31	1	Output	Port 31: Output port	
WR		Output	Write: Strobe signal for writing data to pins AD0 to AD7	
P32	1	1/0	Port 32: I/O port (with pull-up resistor)	
HWR		Output	High Write: Strobe signal for writing data to pins AD8 to AD15	
P33	1	1/0	Port 33: I/O port (with pull-up resistor)	
WAIT		Input	Wait: Pin used to request CPU bus wait	
			((1+N) WAIT mode)	
P34	1	I/O	Port 34: I/O port (with pull-up resistor)	
BUSRQ		Input	Bus Request: Signal used to request Bus Release	
P35	1		Port 35: I/O port (with pull-up resistor)	
BUSAK		Output	Bus Acknowledge: Signal used to acknowledge Bus Release	
	1	I/O	Port 36: I/O port (with pull-up resistor)	
P36 R/W		Output	Read/Write: 1 represents Read or Dummy cycle; 0 represents Write cycle.	
	+	1/0	Port 36: I/O port (with pull-up resistor)	
P37	1		This pin sets single boot mode.	
BOOT		Input	When released reset, Single boot mode is started at P37=Low level.	
<b>D</b> 40	1	1/0	Port 40: I/O port (with pull-up resistor)	
P40		Output	Chip Sclect 0: Outputs 0 when address is within specified address area	
CS0				
P41	1	I/O	Port 41: I/O port (with pull-up resistor) Chip Select 1: Outputs 0 if address is within specified address area	
CS1		Output		
P42	1	I/O	Port 42: I/O port (with pull-up resistor)	
CS2		Output		
P43	1	I/O	Port 43: I/O port (with pull-up resistor)	
CS3		Output	Chip Select 3: Outputs 0 if address is within specified address area	
P50~P57	8	Input	Port 5: Pin used to input port	
AN0~AN7		Input	Analog input: Pin used to input to AD converter	
ADTRG		Input	AD Trigger: Signal used to request start of AD converter (Shared with 53 pin)

INT1~INT4		· Input	Interrupt Request Pins 1 to 4: Interrupt request pins with programmable rising	
			edge / falling edge.	
PA4~PA7	4	I/O	Ports A4 to A7: I/O ports	
ALE	1	Output	Address Latch Enable	
			Can be disabled to reduce noise.	
NIVII	1	Input	Non-Maskable Interrupt Request Fin: Interrupt request pin with programmable falling edge or both edge.	
	2	Input	Operation mode:	
AM0~1	.2	mpur	Fixed to $AM1 = 1$ , $AM0 = 1$	
EMUO	1	Output	Open pin	
EMU1	1	Output	Open pin	
	1	Input	Reset: initializes T5CC1. (With pull-up resistor)	
RESET				
VREFH	1	Input	Pin for reference voltage input to AD converter (H)	
VREFL	1	Input		
AVCC	1		Power supply pin for AD converter	
AVSS	1		GND pin for AD converter (0 V)	
X1/X2	2	I/O	High-frequency oscillator connection pins	
DVCC	3		Power supply pins (All DVCC pins should be connected with the power supply pin.)	
DVSS	3		GND pins (0 V) (All DVSS pins should be connected with the power supply pin.)	

Note: An external DMA controller cannot access the device's built-in memory or built-in I/O devices using the BUSRQ and BUSAK signal.

## 3. Operation

This following describes block by block the functions and operation of the T5CC1.

3.1 CPU

The T5CC1 incorporates a high-performance 16-bit CPU (The 900/L1 CPU). For CPU operation, see the "TLCS-900/L1 CPU".

The following describe the unique function of the CPU used in the T5CC1; these functions are not covered in the TLCS-900/L1 CPU section.

3.1.1 Reset

When resetting the T5CC1 microcontroller, ensure that the power supply voltage is within the operating voltage range, and that the internal high-frequency oscillator has stabilized. Then hold the  $\overline{\text{RESET}}$  input to low level for at least 10 system clocks (12µs at 27MHz).

Thus, when turn on the switch, be set to the power supply voltage is within the operating voltage range, and that the internal high-frequency oscillator has stabilized. Then hold the  $\overline{\text{RESET}}$  input to low level at least for 10 system clocks.

Clock gear is initialized 1/16 mode by reset operation. It means that the system clock mode fsys is set to fc/32 (=  $fc/16 \times 1/2$ ).

When the reset is accept, the CPU:

• Sets as follows the program counter (PC) in accordance with the reset vector stored at address FFFF00H to FFFF02H:

 $PC < 7:0> \leftarrow Value at FFFF00H address$ 

 $PC<15:8> \leftarrow$  Value at FFFF01H address

 $\Gamma C < 23:16 \rightarrow \leftarrow Value at FFFF02II address$ 

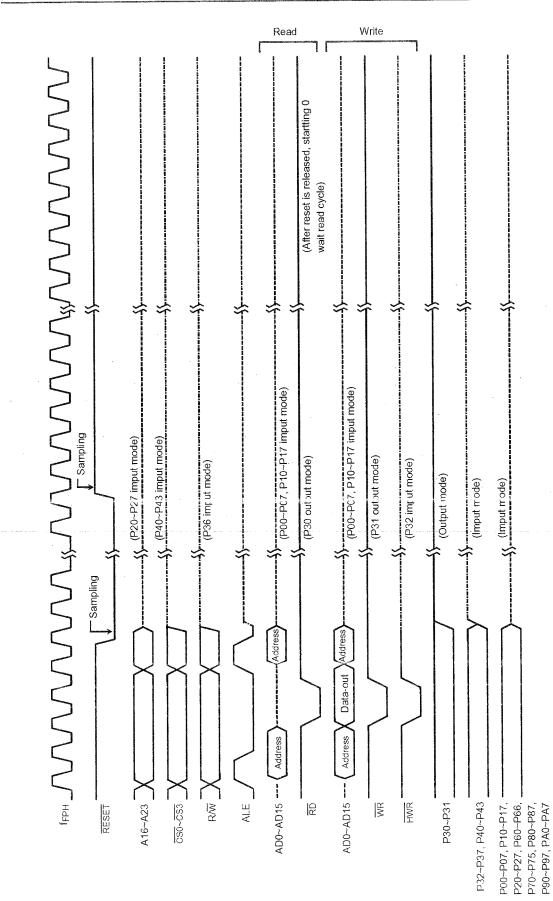

- Sets the stack pointer (XSP) to 100H.
- Sets bits <IFF2:0> of the status register (SR) to 111 (Sets the interrupt level mark register to level 7).
- Sets the <MAX> bit of the status register to 1 (MAX mode).
   (Note: As this product does not support MIN mode, do not write a 0 to the <MAX>.)
- Clears bits <RFP2:0> of the status register to 000 (Sets the register bank to 0).

When reset is released the CPU starts executing instructions in accordance with the program counter settings. CPU internal registers not mentioned above do not change when the reset is released.

When the reset is accepted, the CPU sets internal I/O, ports, and other pins as follows.

- Initializes the internal I/O registers.
- Sets the port pins, including the pins that also act as internal I/O, to general-purpose input or output port mode.
- Sets ALE pin to "High-Z"
- Note: The CPU internal register (except to PC, SR, XSP) and internal RAM data do not change by resetting.

Figure 3.1.1 is a reset timing of the T5CC1.

### 3.1.2 Outline of Operation Modes

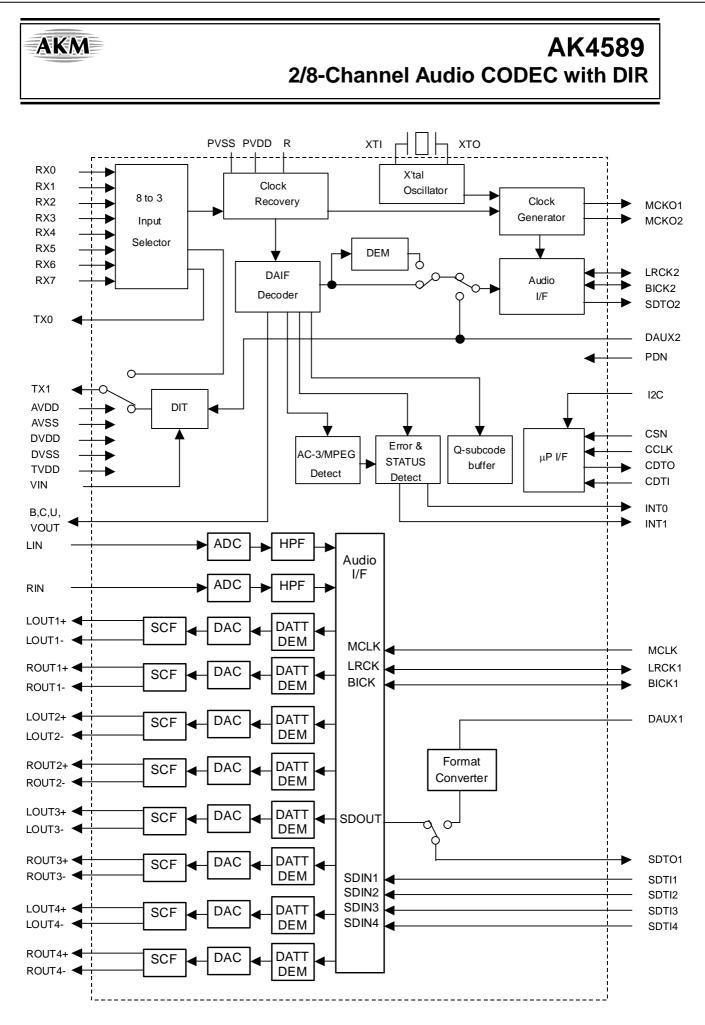

There are single-chip and single-boot modes. Which mode is selected depends on the device's pin state after a reset.

- Single-chip mode: The device normally operations in this mode. After a reset, the device starts executing the internal memory program.
- Single-boot mode: This mode is used to rewrite the internal flash memory by serial transfer (UART).

After a reset, internal boot program starts up, executing an on-board rewrite program.

On anotion Made	Mode Setup Input Pin					
Operation Mode	RESET	воот (Р37)	AM0	AM1		
Single-chip mode	1	Н	н	н		
Single-boot mode		L		. '

JRC

## NJM7900

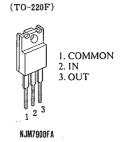

## **3-TERMINAL NEGATIVE VOLTAGE REGULATOR**

#### GENERAL DESCRIPTION

The NJM7900 series of Monolithic 3-Terminal Negative Regulators is constructed using the New JRC Planar epitaxial process. These negative regulators are intended as complements to the popular NJM7800 series of positive voltage regulators, and they are available in the same voltage options from -5 to -24V. The 7900 series employ internal current-limiting, safe-area protection, and thermal shutdown, making the virtually indestructible.

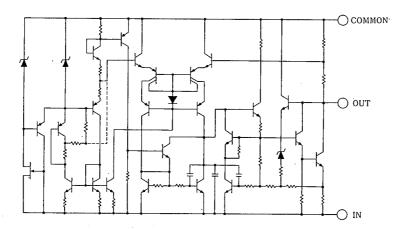

#### FEATURES

- Internal Short Circuit Current Limit
- Internal Thermal Overload Protection
- Excellent Ripple Rejection
- Guarantee'd 1.5A Output Current
- Package Outline TO-220F
- Bipolar Technology

PACKAGE OUTLINE

(note) The radiation fin is connected to Pin 2.

## 8 Mbit (1Mb x8 or 512Kb x16, Boot Block) 3V Supply Flash Memory

## FEATURES SUMMARY

- SUPPLY VOLTAGE
  - $V_{CC}$  = 2.7V to 3.6V for Program, Erase and Read
- ACCESS TIMES: 45, 70, 90ns
- PROGRAMMING TIME
  - 10µs per Byte/Word typical
- 19 MEMORY BLOCKS
  - 1 Boot Block (Top or Bottom Location)
  - 2 Parameter and 16 Main Blocks
- PROGRAM/ERASE CONTROLLER
  - Embedded Byte/Word Program algorithms
- ERASE SUSPEND and RESUME MODES
  - Read and Program another Block during Erase Suspend
- UNLOCK BYPASS PROGRAM COMMAND
  - Faster Production/Batch Programming
- TEMPORARY BLOCK UNPROTECTION MODE
- COMMON FLASH INTERFACE
  - 64 bit Security Code
- LOW POWER CONSUMPTION
   Changeline and Australia Strangeline
- Standby and Automatic Standby
   100,000 PROGRAM/ERASE CYCLES per
- BLOCK
- ELECTRONIC SIGNATURE
  - Manufacturer Code: 0020h
  - Top Device Code M29W800DT: 22D7h
  - Bottom Device Code M29W800DB: 225Bh

### SUMMARY DESCRIPTION

The M29W800D is a 8 Mbit (1Mb x8 or 512Kb x16) non-volatile memory that can be read, erased and reprogrammed. These operations can be performed using a single low voltage (2.7 to 3.6V) supply. On power-up the memory defaults to its Read mode where it can be read in the same way as a ROM or EPROM.

The memory is divided into blocks that can be erased independently so it is possible to preserve valid data while old data is erased. Each block can be protected independently to prevent accidental Program or Erase commands from modifying the memory. Program and Erase commands are written to the Command Interface of the memory. An on-chip Program/Erase Controller simplifies the process of programming or erasing the memory by taking care of all of the special operations that are required to update the memory contents.

The end of a program or erase operation can be detected and any error conditions identified. The

Figure 2. Logic Diagram

## 

## command set required to control the memory is consistent with JEDEC standards.

The blocks in the memory are asymmetrically arranged, see Figures 6 and 7, Block Addresses. The first or last 64 Kbytes have been divided into four additional blocks. The 16 Kbyte Boot Block can be used for small initialization code to start the microprocessor, the two 8 Kbyte Parameter Blocks can be used for parameter storage and the remaining 32K is a small Main Block where the application may be stored.

Chip Enable, Output Enable and Write Enable signals control the bus operation of the memory. They allow simple connection to most microprocessors, often without additional logic.

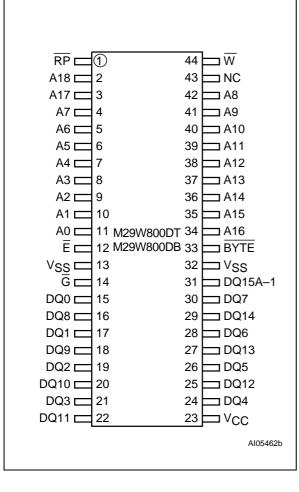

The memory is offered in SO44, TSOP48 (12 x 20mm), TFBGA48 6 x 9mm (0.8mm pitch) and TFBGA48 6 x 8mm (0.8mm pitch) packages. The memory is supplied with all the bits erased (set to '1').

57

### SIGNAL DESCRIPTIONS

See Figure 2., Logic Diagram, and Table 1., Signal Names, for a brief overview of the signals connected to this device.

Address Inputs (A0-A18). The Address Inputs select the cells in the memory array to access during Bus Read operations. During Bus Write operations they control the commands sent to the Command Interface of the internal state machine.

**Data Inputs/Outputs (DQ0-DQ7).** The Data Inputs/Outputs output the data stored at the selected address during a Bus Read operation. During Bus Write operations they represent the commands sent to the Command Interface of the internal state machine.

**Data Inputs/Outputs (DQ8-DQ14).** The Data Inputs/Outputs output the data stored at the selected address during a Bu<u>s Rea</u>d operation when BYTE is High,  $V_{IH}$ . When BYTE is Low,  $V_{IL}$ , these pins are not used and are high impedance. During Bus Write operations the Command Register does not use these bits. When reading the Status Register these bits should be ignored.

**Data Input/Output or Address Input (DQ15A-1).** When BYTE is High,  $V_{IH}$ , this pin behaves as <u>a Data</u> Input/Output pin (as DQ8-DQ14). When BYTE is Low,  $V_{IL}$ , this pin behaves as an address pin; DQ15A–1 Low will select the LSB of the Word on the other addresses, DQ15A–1 High will select the MSB. Throughout the text consider references to the Data Input/Output to include this pin when BYTE is High and references to the Address Inputs to include this pin when BYTE is Low except when stated explicitly otherwise.

**Chip Enable (E).** The Chip Enable,  $\overline{E}$ , activates the memory, allowing Bus Read and Bus Write operations to be performed. When Chip Enable is High, V<sub>IH</sub>, all oth<u>er</u> pins are ignored.

**Output Enable (G).** The Output Enable,  $\overline{G}$ , controls the Bus Read operation of the memory.

Write Enable ( $\overline{W}$ ). The Write Enable,  $\overline{W}$ , controls the Bus Write operation of the memory's Command Interface.

**Reset/Block Temporary Unprotect (RP).** The Reset/Block Temporary Unprotect pin can be used to apply a Hardware Reset to the memory or to temporarily unprotect all Blocks that have been protected.

A Hardware Reset is achieved by holding Reset/ Block Temporary Unprotect Low,  $V_{IL}$ , for at least  $t_{PLPX}$ . After Reset/Block Temporary Unprotect goes High,  $V_{IH}$ , the memory will be ready for Bus Read and Bus Write operations after  $t_{PHEL}$  or  $t_{RHEL}$ , whichever occurs last. See the Ready/Busy Output section, Table 15. and Figure 15., Reset/ Block Temporary Unprotect AC Waveforms, for more details.

Holding  $\overline{RP}$  at V<sub>ID</sub> will temporarily unprotect the protected Blocks in the memory. Program and Erase operations on all blocks will be possible. The transition from V<sub>IH</sub> to V<sub>ID</sub> must be slower than t<sub>PHPHH</sub>.

**Ready/Busy Output (RB).** The Ready/Busy pin is an open-drain output that can be used to identify when the device is performing a Program or Erase operation. During Program or Erase operations Ready/Busy is Low, V<sub>OL</sub>. Ready/Busy is high-impedance during Read mode, Auto Select mode and Erase Suspend mode.

After a Hardware Reset, Bus Read and Bus Write operations cannot begin until Ready/Busy becomes high-impedance. See Table 15., Reset/ Block Temporary Unprotect AC Characteristics and Figure 15., Reset/Block Temporary Unprotect AC Waveforms.

The use of an open-drain output allows the Ready/ Busy pins from several memories to be connected to a single pull-up resistor. A Low will then indicate that one, or more, of the memories is busy.

**Byte/Word Organization Select (BYTE).** The Byte/Word Organization Select pin is used to switch between the 8-bit and 16-bit Bus modes of the memory. When Byte/Word Organization Select is Low,  $V_{IL}$ , the memory is in 8-bit mode, when it is High,  $V_{IH}$ , the memory is in 16-bit mode.

 $V_{CC}$  Supply Voltage. The  $V_{CC}$  Supply Voltage supplies the power for all operations (Read, Program, Erase etc.).

The Command Interface is disabled when the V<sub>CC</sub> Supply Voltage is less than the Lockout Voltage, V<sub>LKO</sub>. This prevents Bus Write operations from accidentally damaging the data during power up, power down and power surges. If the Program/ Erase Controller is programming or erasing during this time then the operation aborts and the memory contents being altered will be invalid.

A 0.1 $\mu$ F capacitor should be connected between the V<sub>CC</sub> Supply Voltage pin and the V<sub>SS</sub> Ground pin to decouple the current surges from the power supply. The PCB track widths must be sufficient to carry the currents required during program and erase operations, I<sub>CC3</sub>.

**V**<sub>SS</sub> **Ground.** The V<sub>SS</sub> Ground is the reference for all voltage measurements.

### **BUS OPERATIONS**

There are five standard bus operations that control the device. These are Bus Read, Bus Write, Output Disable, Standby and Automatic Standby. See Tables 2 and 3, Bus Operations, for a summary. Typically glitches of less than 5ns on Chip Enable or Write Enable are ignored by the memory and do not affect bus operations.

**Bus Read.** Bus Read operations read from the memory cells, or specific registers in the Command Interface. A valid Bus Read operation involves setting the desired address on the Address Inputs, applying a Low signal,  $V_{IL}$ , to Chip Enable and Output Enable and keeping Write Enable High,  $V_{IH}$ . The Data Inputs/Outputs will output the value, see Figure 12., Read Mode AC Waveforms, and Table 12., Read AC Characteristics for details of when the output becomes valid.

**Bus Write.** Bus Write operations write to the Command Interface. A valid Bus Write operation begins by setting the desired address on the Address Inputs. The Address Inputs are latched by the Command Interface on the falling edge of Chip Enable or Write Enable, whichever occurs last. The Data Inputs/Outputs are latched by the Command Interface on the rising edge of Chip Enable or Write Enable, whichever occurs first. Output Enable must remain High, V<sub>IH</sub>, during the whole Bus Write operation. See Figures 13 and 14, Write AC Waveforms, and Tables 13 and 14, Write AC Characteristics, for details of the timing requirements.

**Output Disable.** The Data Inputs/Outputs are in the high impedance state when Output Enable is High,  $V_{\text{IH}}$ .

**Standby.** When Chip Enable is High, V<sub>IH</sub>, the memory enters Standby mode and the Data Inputs/Outputs pins are placed in the high-imped-

ance state. To reduce the Supply Current to the Standby Supply Current, I<sub>CC2</sub>, Chip Enable should be held within V<sub>CC</sub>  $\pm$  0.2V. For the Standby current level see Table 11., DC Characteristics.

During program or erase operations the memory will continue to use the Program/Erase Supply Current,  $I_{CC3}$ , for Program or Erase operations until the operation completes.

Automatic Standby. If CMOS levels ( $V_{CC} \pm 0.2V$ ) are used to drive the bus and the bus is inactive for 150ns or more the memory enters Automatic Standby where the internal Supply Current is reduced to the Standby Supply Current,  $I_{CC2}$ . The Data Inputs/Outputs will still output data if a Bus Read operation is in progress.

**Special Bus Operations.** Additional bus operations can be performed to read the Electronic Signature and also to apply and remove Block Protection. These bus operations are intended for use by programming equipment and are not usually used in applications. They require  $V_{\text{ID}}$  to be applied to some pins.

**Electronic Signature.** The memory has two codes, the manufacturer code and the device code, that can be read to identify the memory. These codes can be read by applying the signals listed in Tables 2 and 3, Bus Operations.

### Block Protection and Blocks Unprotection.

Each block can be separately protected against accidental Program or Erase. Protected blocks can be unprotected to allow data to be changed.

There are two methods available for protecting and unprotecting the blocks, one for use on programming equipment and the other for in-system use. Block Protect and Chip Unprotect operations are described in APPENDIX C.

### Table 3. Bus Operations, BYTE = VIH

Note:  $X = V_{IL}$  or  $V_{IH}$ .

## COMMAND INTERFACE

All Bus Write operations to the memory are interpreted by the Command Interface. Commands consist of one or more sequential Bus Write operations. Failure to observe a valid sequence of Bus Write operations will result in the memory returning to Read mode. The long command sequences are imposed to maximize data security.

The address used for the commands changes depending on whether the memory is in 16-bit or 8bit mode. See either Table 4, or 5, depending on the configuration that is being used, for a summary of the commands.

**Read/Reset Command.** The Read/Reset command returns the memory to its Read mode where it behaves like a ROM or EPROM, unless otherwise stated. It also resets the errors in the Status Register. Either one or three Bus Write operations can be used to issue the Read/Reset command.

The Read/Reset Command can be issued, between Bus Write cycles before the start of a program or erase operation, to return the device to read mode. Once the program or erase operation has started the Read/Reset command is no longer accepted. The Read/Reset command will not abort an Erase operation when issued while in Erase Suspend.

Auto Select Command. The Auto Select command is used to read the Manufacturer Code, the Device Code and the Block Protection Status. Three consecutive Bus Write operations are required to issue the Auto Select command. Once the Auto Select command is issued the memory remains in Auto Select mode until a Read/Reset command is issued. Read CFI Query and Read/ Reset commands are accepted in Auto Select mode, all other commands are ignored. From the Auto Select mode the Manufacturer Code can be read using a Bus Read operation with  $A0 = V_{IL}$  and  $A1 = V_{IL}$ . The other address bits may be set to either  $V_{IL}$  or  $V_{IH}$ . The Manufacturer Code for STMicroelectronics is 0020h.

The Device Code can be read using a Bus Read operation with  $A0 = V_{IH}$  and  $A1 = V_{IL}$ . The other address bits may be set to either  $V_{IL}$  or  $V_{IH}$ . The Device Code for the M29W800DT is 22D7h and for the M29W800DB is 225Bh.

The Block Protection Status of each block can be read using a Bus Read operation with  $A0 = V_{IL}$ ,  $A1 = V_{IH}$ , and A12-A18 specifying the address of the block. The other address bits may be set to either  $V_{IL}$  or  $V_{IH}$ . If the addressed block is protected then 01h is output on Data Inputs/Outputs DQ0-DQ7, otherwise 00h is output.

**Program Command.** The Program command can be used to program a value to one address in the memory array at a time. The command requires four Bus Write operations, the final write operation latches the address and data in the internal state machine and starts the Program/Erase Controller.

If the address falls in a protected block then the Program command is ignored, the data remains unchanged. The Status Register is never read and no error condition is given.

During the program operation the memory will ignore all commands. It is not possible to issue any command to abort or pause the operation. Typical program times are given in Table 6. Bus Read operations during the program operation will output the Status Register on the Data Inputs/Outputs. See the section on the Status Register for more details.

12/42

After the program operation has completed the memory will return to the Read mode, unless an error has occurred. When an error occurs the memory will continue to output the Status Register. A Read/Reset command must be issued to reset the error condition and return to Read mode.

Note that the Program command cannot change a bit set at '0' back to '1'. One of the Erase Commands must be used to set all the bits in a block or in the whole memory from '0' to '1'.

**Unlock Bypass Command.** The Unlock Bypass command is used in conjunction with the Unlock Bypass Program command to program the memory. When the access time to the device is long (as with some EPROM programmers) considerable time saving can be made by using these commands. Three Bus Write operations are required to issue the Unlock Bypass command.

Once the Unlock Bypass command has been issued the memory will only accept the Unlock Bypass Program command and the Unlock Bypass Reset command. The memory can be read as if in Read mode.

Unlock Bypass Program Command. The Unlock Bypass Program command can be used to program one address in memory at a time. The command requires two Bus Write operations, the final write operation latches the address and data in the internal state machine and starts the Program/Erase Controller.

The Program operation using the Unlock Bypass Program command behaves identically to the Program operation using the Program command. A protected block cannot be programmed; the operation cannot be aborted and the Status Register is read. Errors must be reset using the Read/Reset command, which leaves the device in Unlock Bypass Mode. See the Program command for details on the behavior.

**Unlock Bypass Reset Command.** The Unlock Bypass Reset command can be used to return to Read/Reset mode from Unlock Bypass Mode. Two Bus Write operations are required to issue the Unlock Bypass Reset command. Read/Reset command does not exit from Unlock Bypass Mode.

**Chip Erase Command.** The Chip Erase command can be used to erase the entire chip. Six Bus Write operations are required to issue the Chip Erase Command and start the Program/Erase Controller.

If any blocks are protected then these are ignored and all the other blocks are erased. If all of the blocks are protected the Chip Erase operation appears to start but will terminate within about 100µs, leaving the data unchanged. No error condition is given when protected blocks are ignored. During the erase operation the memory will ignore all commands. It is not possible to issue any command to abort the operation. Typical chip erase times are given in Table 6. All Bus Read operations during the Chip Erase operation will output the Status Register on the Data Inputs/Outputs. See the section on the Status Register for more details.

After the Chip Erase operation has completed the memory will return to the Read Mode, unless an error has occurred. When an error occurs the memory will continue to output the Status Register. A Read/Reset command must be issued to reset the error condition and return to Read Mode.

The Chip Erase Command sets all of the bits in unprotected blocks of the memory to '1'. All previous data is lost.

Block Erase Command. The Block Erase command can be used to erase a list of one or more blocks. Six Bus Write operations are required to select the first block in the list. Each additional block in the list can be selected by repeating the sixth Bus Write operation using the address of the additional block. The Block Erase operation starts the Program/Erase Controller about 50µs after the last Bus Write operation. Once the Program/Erase Controller starts it is not possible to select any more blocks. Each additional block must therefore be selected within 50µs of the last block. The 50µs timer restarts when an additional block is selected. The Status Register can be read after the sixth Bus Write operation. See the Status Register for details on how to identify if the Program/Erase Controller has started the Block Erase operation.

If any selected blocks are protected then these are ignored and all the other selected blocks are erased. If all of the selected blocks are protected the Block Erase operation appears to start but will terminate within about  $100\mu$ s, leaving the data unchanged. No error condition is given when protected blocks are ignored.

During the Block Erase operation the memory will ignore all commands except the Erase Suspend command. Typical block erase times are given in Table 6. All Bus Read operations during the Block Erase operation will output the Status Register on the Data Inputs/Outputs. See the section on the Status Register for more details.

After the Block Erase operation has completed the memory will return to the Read Mode, unless an error has occurred. When an error occurs the memory will continue to output the Status Register. A Read/Reset command must be issued to reset the error condition and return to Read mode.

The Block Erase Command sets all of the bits in the unprotected selected blocks to '1'. All previous data in the selected blocks is lost.

**Erase Suspend Command.** The Erase Suspend Command may be used to temporarily suspend a Block Erase operation and return the memory to Read mode. The command requires one Bus Write operation.

The Program/Erase Controller will suspend within the Erase Suspend Latency Time (refer to Table 6. for value) of the Erase Suspend Command being issued. Once the Program/Erase Controller has stopped the memory will be set to Read mode and the Erase will be suspended. If the Erase Suspend command is issued during the period when the memory is waiting for an additional block (before the Program/Erase Controller starts) then the Erase is suspended immediately and will start immediately when the Erase Resume Command is issued. It is not possible to select any further blocks to erase after the Erase Resume.

During Erase Suspend it is possible to Read and Program cells in blocks that are not being erased; both Read and Program operations behave as normal on these blocks. If any attempt is made to program in a protected block or in the suspended block then the Program command is ignored and the data remains unchanged. The Status Register is not read and no error condition is given. Reading from blocks that are being erased will output the Status Register.

It is also possible to issue the Auto Select, Read CFI Query and Unlock Bypass commands during an Erase Suspend. The Read/Reset command must be issued to return the device to Read Array mode before the Resume command will be accepted.

**Erase Resume Command.** The Erase Resume command must be used to restart the Program/ Erase Controller from Erase Suspend. An erase can be suspended and resumed more than once.

**Read CFI Query Command.** The Read CFI Query Command is used to read data from the Common Flash Interface (CFI) Memory Area. This command is valid when the device is in the Read Array mode, or when the device is in Auto Select mode.

One Bus Write cycle is required to issue the Read CFI Query Command. Once the command is issued subsequent Bus Read operations read from the Common Flash Interface Memory Area.

The Read/Reset command must be issued to return the device to the previous mode (the Read Array mode or Auto Select mode). A second Read/ Reset command would be needed if the device is to be put in the Read Array mode from Auto Select mode.

See APPENDIX B., Tables 23, 24, 25, 26, 27 and 28 for details on the information contained in the Common Flash Interface (CFI) memory area.

**Block Protect and Chip Unprotect Commands.** Each block can be separately protected against accidental Program or Erase. The whole chip can be unprotected to allow the data inside the blocks to be changed.

Block Protect and Chip Unprotect operations are described in APPENDIX C.

with  $75\Omega$  driver: 7MHz

# Video Switch $\cdot$ 75 $\Omega$ driver $\cdot$ Y/C mix Monolithic IC MM1501 Series

## Outline

This IC extends the series of ICs for video/audio signal switching, with a 2-input 1-output single video switch, video signal/chroma signal 75 $\Omega$  driver, and Y/C mixing circuit in one small package (SOT-26).

### Features

- (1) Low power consumption achieved.
- (2) Low power supply voltage realized.
- (3) Frequency bandwidth without  $75\Omega$  driver: 10MHz
- (4) Cross talk 70dB When 4.43MHz
- (5) With SAG measures pin (75 $\Omega$  driver and Y/C mix driver)

### Package

SOT-26A (with  $75\Omega$  driver) SOT-26B (without  $75\Omega$  driver)

## **Applications**

- (1) TV
- (2) VTR
- (3) Video camera
- (4) Digital still camera
- (5) Other visual equipment

# NJL31H/31V/32H/33H/34H000A

## INFRARED REMOTE CONTROL RECEIVER

## GENERAL DESCRIPTION

The NJL30H/V000A series are small and high performance receiving devices for infrared remote control system. They can operate under low and wide supply voltage (2.7V to 5.5V) with enhanced immunity against power saving light. The NJL30H/V000A series have six kinds of package including seven types of metal case to meet the various applications.

## FEATURES

- 1. Wide and low supply voltage 2.7V to 5.5V
- 2. Low supply current 0.43mA typ. Vcc=3.3V
- 3. Six kinds of metal case type to meet the design of front panel.
- 4. Line-up for various center carrier frequencies.

## ■ APPLICATIONS

1. Home application such as Room light, Fan, etc.

2. AV instruments such as Audio, TV, DVD, STB etc.

# MC78XX/LM78XX/MC78XXA 3-Terminal 1A Positive Voltage Regulator

## Features

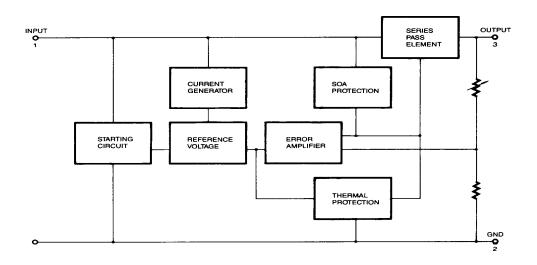

- Output Current up to 1A
- Output Voltages of 5, 6, 8, 9, 10, 12, 15, 18, 24V
- Thermal Overload Protection
- Short Circuit Protection
- Output Transistor Safe Operating Area Protection

## Description

The MC78XX/LM78XX/MC78XXA series of three terminal positive regulators are available in the TO-220/D-PAK package and with several fixed output voltages, making them useful in a wide range of applications. Each type employs internal current limiting, thermal shut down and safe operating area protection, making it essentially indestructible. If adequate heat sinking is provided, they can deliver over 1A output current. Although designed primarily as fixed voltage regulators, these devices can be used with external components to obtain adjustable voltages and currents.

### JRC

## NJM2068

## LOW-NOISE DUAL OPERATIONAL AMPLIFIER

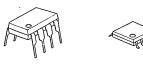

#### GENERAL DESCRIPTION

The NJM2068 is a high performance, low noise dual operational amplifier. This amplifier features popular pin-out, superior noise performance, and superior total harmonic distortion. This amplifier also features guaranteed noise performance with substantially higher gain-bandwidth product and slew rate which far exceeds that of the 4558 type amplifier. The specially designed low noise input transistors allow the NJM2068 to be used in very low noise signal processing applications such as audio preamplifiers and servo error amplifier.

#### FEATURES

- Operating Voltage
- Low Total Harmonic Distortion
- Low Noise Voltage
- High Slew Rate
- Unity Gain Bandwidth
- Package Outline
- Bipolar Technology
- $(\pm 4V \sim \pm 18V)$ (0.001% typ.)
- (FLAT+JISA, 0.56 µV typ.)
- (6V/ μs typ.)
- (27MHz @f=10kHz)

## NJM4556A

## DUAL HIGH CURRENT OPERATIONAL AMPLIFIER

#### GENERAL DESCRIPTION

The NJM4556A integrated circuit is a high-gain, high output current dual operational amplifier capable of driving  $\pm$ 70mA into 150  $\Omega$  loads ( $\pm$ 10.5V output voltage), and operating low supply voltage (V<sup>+</sup>/V<sup>-</sup>= $\pm$ 2V $\sim$ ).

The NJM4556A combines many of the fetures of the popular NJM4558 as well as having the capability of driving 150 $\Omega$  loads. In addition, the wide band-width, low noise, high slew rate and low distortion of the NJM4556A make it ideal for many audio, telecommunications and instrumentation applications.

- FEATURES
- Operating Voltage
- High Output Current
- Slew Rate
- Gain Band Width Product

## **3-TERMINAL POSITIVE VOLTAGE REGULATOR**

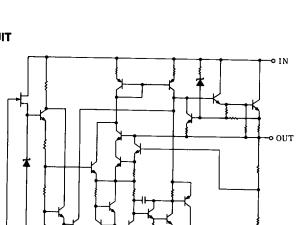

#### GENERAL DESCRIPTION

The NJM7800 series of monolithic 3-Terminal Positive Voltage Regulators is constructed using the New JRC Planar epitaxial process. These regulators employ internal current-limiting, thermal-shutdown and safe-area compensation making them essentially indestructible. If adequate heat sinking is provided, they can deliver over 1A output current. They are intended as fixed voltage regulators in a wide range of applications including local (on card) regulation for elimination of distribution problems associated with single point regulation. In addition to use as fixed voltage regulators, these devices can be used with external components to obtain adjustable output voltages and currents.

## NJM7800

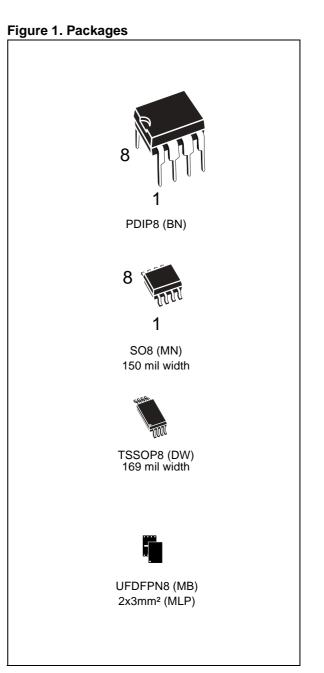

## 64Kbit and 32Kbit Serial I<sup>2</sup>C Bus EEPROM

## FEATURES SUMMARY

- Two-Wire I<sup>2</sup>C Serial Interface Supports 400kHz Protocol
- Single Supply Voltage:
  - 4.5 to 5.5V for M24Cxx
    - 2.5 to 5.5V for M24Cxx-W
    - 1.8 to 5.5V for M24Cxx-R
- Write Control Input
- BYTE and PAGE WRITE (up to 32 Bytes)
- RANDOM and SEQUENTIAL READ Modes
- Self-Timed Programming Cycle
- Automatic Address Incrementing
- Enhanced ESD/Latch-Up Protection
- More than 1 Million Erase/Write Cycles
- More than 40-Year Data Retention

### SUMMARY DESCRIPTION

These  $I^2$ C-compatible electrically erasable programmable memory (EEPROM) devices are organized as 8192 x 8 bits (M24C64) and 4096 x 8 bits (M24C32).

### Figure 2. Logic Diagram

 $I^2C$  uses a two-wire serial interface, comprising a bi-directional data line and a clock line. The devices carry a built-in 4-bit Device Type Identifier code (1010) in accordance with the  $I^2C$  bus definition.

The device behaves as a slave in the  $I^2C$  protocol, with all memory operations synchronized by the serial clock. Read and Write operations are initiated by a Start condition, generated by the bus master. The Start condition <u>is followed by</u> a Device Select Code and Read/Write bit (RW) (as described in Table 3.), terminated by an acknowledge bit.

When writing data to the memory, the device inserts an acknowledge bit during the 9<sup>th</sup> bit time, following the bus master's 8-bit transmission. When data is read by the bus master, the bus master acknowledges the receipt of the data byte in the same way. Data transfers are terminated by a Stop condition after an Ack for Write, and after a NoAck for Read.

#### **Table 2. Signal Names**

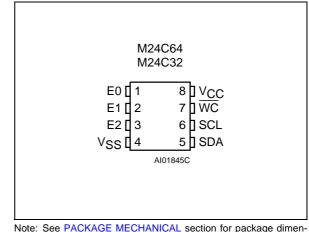

E0, E1, E2	Chip Enable
SDA	Serial Data
SCL	Serial Clock
WC	Write Control
Vcc	Supply Voltage
V <sub>SS</sub>	Ground

Power On Reset: V<sub>CC</sub> Lock-Out Write Protect

In order to prevent data corruption and inadvertent Write operations during Power-up, a Power On Reset (POR) circuit is included. At Power-up, the internal reset is held active until  $V_{CC}$  has reached the Power On Reset (POR) threshold voltage, and all operations are disabled – the device will not respond to any command. In the same way, when  $V_{CC}$  drops from the operating voltage, below the Power On Reset (POR) threshold voltage, all operations are disabled and the device will not respond to any command.

A stable and valid  $V_{CC}$  (as defined in Table 9. and Table 10.) must be applied before applying any logic signal.

# Figure 3. DIP, SO, TSSOP and UFDFPN Connections

sions, and how to identify pin-1.

### SIGNAL DESCRIPTION

**Serial Clock (SCL).** This input signal is used to strobe all data in and out of the device. In applications where this signal is used by slave devices to synchronize the bus to a slower clock, the bus master must have an open drain output, and a pull-up resistor must be connected from Serial Clock (SCL) to  $V_{CC}$ . (Figure 4. indicates how the value of the pull-up resistor can be calculated). In most applications, though, this method of synchronization is not employed, and so the pull-up resistor is not necessary, provided that the bus master has a push-pull (rather than open drain) output.

Serial Data (SDA). This bi-directional signal is used to transfer data in or out of the device. It is an open drain output that may be wire-OR'ed with other open drain or open collector signals on the bus. A pull up resistor must be connected from Serial Data (SDA) to  $V_{CC}$ . (Figure 4. indicates how the value of the pull-up resistor can be calculated).

Chip Enable (E0, E1, E2). These input signals are used to set the value that is to be looked for on the three least significant bits (b3, b2, b1) of the 7-bit Device Select Code. These inputs must be tied to  $V_{CC}$  or  $V_{SS}$ , to establish the Device Select Code.

**Write Control (WC).** This input signal is useful for protecting the entire contents of the memory from inadvertent write operations. Write operations are disabled to the entire memory array when Write Control (WC) is driven High. When unconnected, the signal is internally read as  $V_{IL}$ , and Write operations are allowed.

When Write Control (WC) is driven High, Device Select and Address bytes are acknowledged, Data bytes are not acknowledged.

Figure 4. Maximum R<sub>L</sub> Value versus Bus Capacitance (C<sub>BUS</sub>) for an I<sup>2</sup>C Bus

### **MEMORY ORGANIZATION**

The memory is organized as shown in Figure 6..

### Figure 6. Block Diagram

### **DEVICE OPERATION**

The device supports the I<sup>2</sup>C protocol. This is summarized in Figure 5.. Any device that sends data on to the bus is defined to be a transmitter, and any device that reads the data to be a receiver. The device that controls the data transfer is known as the bus master, and the other as the slave device. A data transfer can only be initiated by the bus master, which will also provide the serial clock for synchronization. The M24Cxx device is always a slave in all communication.

### Start Condition

Start is identified by a falling edge of Serial Data (SDA) while Serial Clock (SCL) is stable in the High state. A Start condition must precede any data transfer command. The device continuously monitors (except during a Write cycle) Serial Data (SDA) and Serial Clock (SCL) for a Start condition, and will not respond unless one is given.

### Stop Condition

Stop is identified by a rising edge of Serial Data (SDA) while Serial Clock (SCL) is stable and driven High. A Stop condition terminates communication between the device and the bus master. A Read command that is followed by NoAck can be followed by a Stop condition to force the device into the Stand-by mode. A Stop condition at the end of a Write command triggers the internal Write cycle.

### Acknowledge Bit (ACK)

The acknowledge bit is used to indicate a successful byte transfer. The bus transmitter, whether it be bus master or slave device, releases Serial Data (SDA) after sending eight bits of data. During the 9<sup>th</sup> clock pulse period, the receiver pulls Serial Data (SDA) Low to acknowledge the receipt of the eight data bits.

### Data Input

During data input, the device samples Serial Data (SDA) on the rising edge of Serial Clock (SCL). For correct device operation, Serial Data (SDA) must be stable during the rising edge of Serial Clock (SCL), and the Serial Data (SDA) signal must change *only* when Serial Clock (SCL) is driven Low.

### Memory Addressing

To start communication between the bus master and the slave device, the bus master must initiate a Start condition. Following this, the bus master sends the Device Select Code, shown in Table 3. (on Serial Data (SDA), most significant bit first).

The Device Select Code consists of a 4-bit Device Type Identifier, and a 3-bit Chip Enable "Address" (E2, E1, E0). To address the memory array, the 4bit Device Type Identifier is 1010b.

Up to eight memory devices can be connected on a single  $l^2C$  bus. Each one is given a unique 3-bit code on the Chip Enable (E0, E1, E2) inputs. When the Device Select Code is received, the device only responds if the Chip Enable Address is the same as the value on the Chip Enable (E0, E1, E2) inputs.

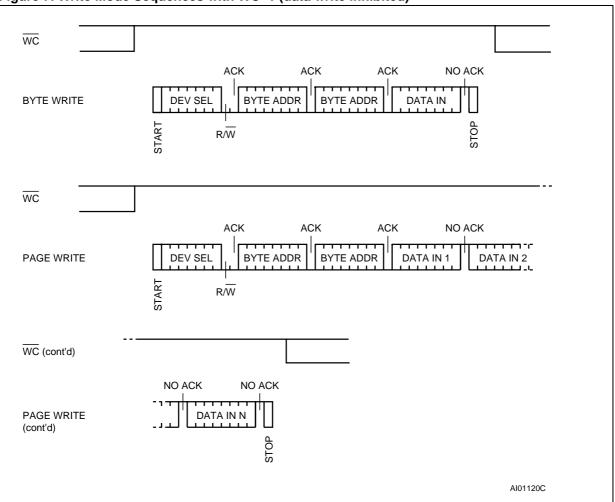

The 8<sup>th</sup> bit is the Read/Write bit (RW). This bit is set to 1 for Read and 0 for Write operations.

If a match occurs on the Device Select code, the corresponding device gives an acknowledgment on Serial Data (SDA) during the 9<sup>th</sup> bit time. If the device does not match the Device Select code, it deselects itself from the bus, and goes into Standby mode.

Mode	RW bit	WC <sup>1</sup>	Bytes	Initial Sequence
Current Address Read	1	Х	1	START, Device Select, $R\overline{W} = 1$
Random Address Read	0	Х	1	START, Device Select, $R\overline{W} = 0$ , Address
Kandoni Address Kead	1	Х		reSTART, Device Select, $R\overline{W} = 1$
Sequential Read	1	Х	≥ 1	Similar to Current or Random Address Read
Byte Write	0	V <sub>IL</sub>	1	START, Device Select, $R\overline{W} = 0$
Page Write	0	V <sub>IL</sub>	≤ 32	START, Device Select, $R\overline{W} = 0$

### Table 6. Operating Modes

Note: 1.  $X = V_{IH} \text{ or } V_{IL}$ .

### Figure 7. Write Mode Sequences with $\overline{WC}$ =1 (data write inhibited)

### Write Operations

Following a Start condition the bus master sends a <u>Device</u> Select Code with the Read/Write bit (RW) reset to 0. The device acknowledges this, as shown in Figure 8., and waits for two address bytes. The device responds to each address byte with an acknowledge bit, and then waits for the data byte.

Writing to the memory may be inhibited if Write Control (WC) is driven High. Any Write instruction with Write Control (WC) driven High (during a period of time from the Start condition until the end of the two address bytes) will not modify the memory contents, and the accompanying data bytes are *not* acknowledged, as shown in Figure 7..

Each data byte in the memory has a 16-bit (two byte wide) address. The Most Significant Byte (Table 4.) is sent first, followed by the Least Significant Byte (Table 5.). Bits b15 to b0 form the address of the byte in memory.

When the bus master generates a Stop condition immediately after the Ack bit (in the "10<sup>th</sup> bit" time

slot), either at the end of a Byte Write or a Page Write, the internal Write cycle is triggered. A Stop condition at any other time slot does not trigger the internal Write cycle.

After the Stop condition, the delay  $t_W$ , and the successful completion of a Write operation, the device's internal address counter is incremented automatically, to point to the next byte address after the last one that was modified.

During the internal Write cycle, Serial Data (SDA) is disabled internally, and the device does not respond to any requests.

### **Byte Write**

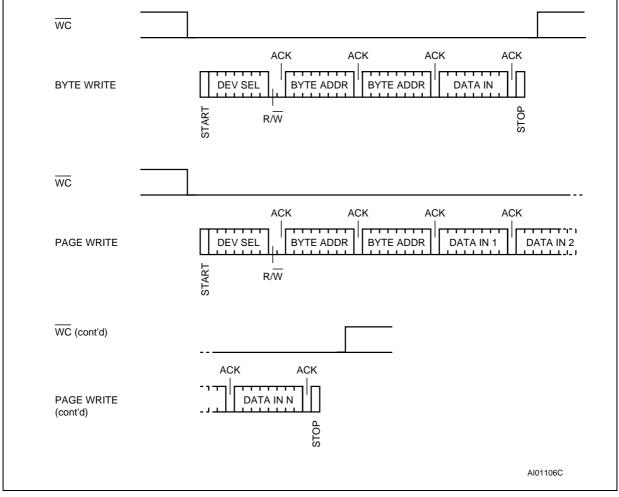

After the Device Select code and the address bytes, the bus master sends one data byte. If the addressed location is Write-protected, by Write Control (WC) being driven High, the device replies with NoAck, and the location is not modified. If, instead, the addressed location is not Write-protected, the device replies with Ack. The bus master terminates the transfer by generating a Stop condition, as shown in Figure 8..

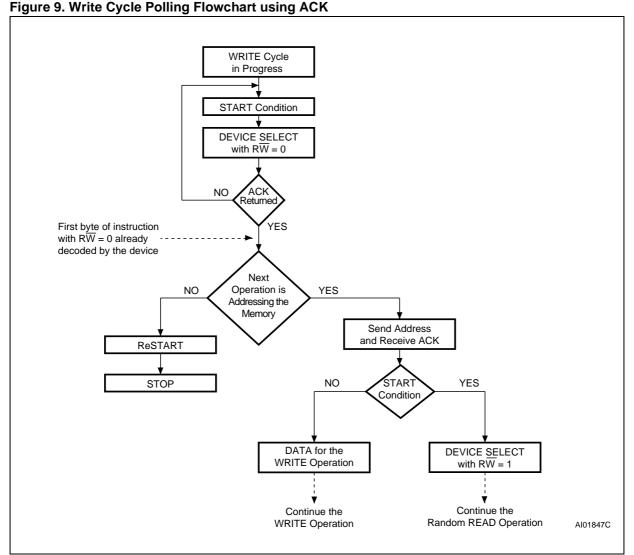

### **Page Write**

The Page Write mode allows up to 32 bytes to be written in a single Write cycle, provided that they are all located in the same 'row' in the memory: that is, the most significant memory address bits (b12-b5 for M24C64, and b11-b5 for M24C32) are the same. If more bytes are sent than will fit up to the end of the row, a condition known as 'roll-over' occurs. This should be avoided, as data starts to become overwritten in an implementation dependent way.

The bus master sends from 1 to 32 bytes of data, each of which is acknowledged by the device if Write Control (WC) is Low. If Write Control (WC) is High, the contents of the addressed memory location are not modified, and each data byte is followed by a NoAck. After each byte is transferred, the internal byte address counter (the 5 least significant address bits only) is incremented. The transfer is terminated by the bus master generating a Stop condition.

Figure 8. Write Mode Sequences with WC=0 (data write enabled)

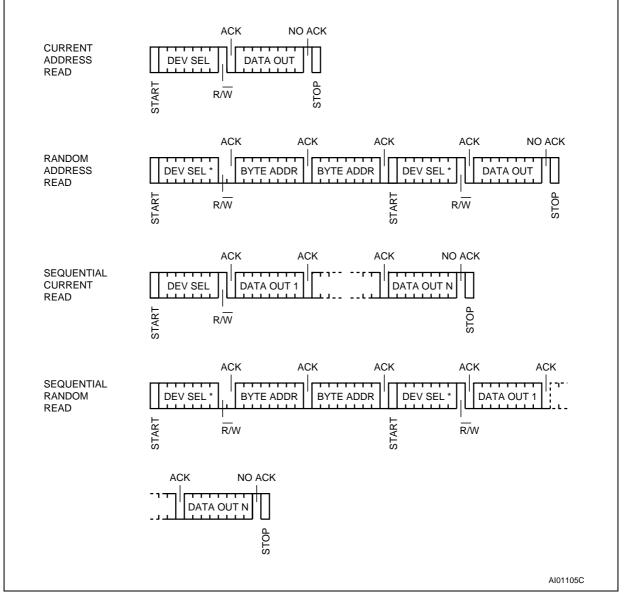

### Minimizing System Delays by Polling On ACK

During the internal Write cycle, the device disconnects itself from the bus, and writes a copy of the data from its internal latches to the memory cells. The maximum Write time  $(t_w)$  is shown in Table 16. and Table 17., but the typical time is shorter. To make use of this, a polling sequence can be used by the bus master.

The sequence, as shown in Figure 9., is:

- Initial condition: a Write cycle is in progress.
- Step 1: the bus master issues a Start condition followed by a Device Select Code (the first byte of the new instruction).
- Step 2: if the device is busy with the internal Write cycle, no Ack will be returned and the bus master goes back to Step 1. If the device has terminated the internal Write cycle, it responds with an Ack, indicating that the device is ready to receive the second part of the instruction (the first byte of this instruction having been sent during Step 1).

### Figure 10. Read Mode Sequences

Note: 1. The seven most significant bits of the Device Select Code of a Random Read (in the 1<sup>st</sup> and 4<sup>th</sup> bytes) must be identical.

### Read Operations

Read operations are performed independently of the state of the Write Control (WC) signal.

After the successful completion of a Read operation, the device's internal address counter is incremented by one, to point to the next byte address.

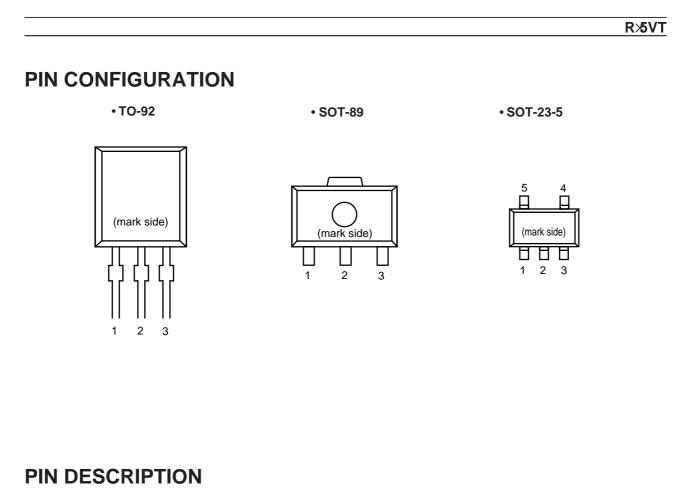

#### **Random Address Read**

A dummy Write is first performed to load the address into this address counter (as shown in Figure 10.) but *without* sending a Stop condition. Then, the bus master sends another Start condition, and repeats the Device Select Code, with the Read/Write bit (RW) set to 1. The device acknowledges this, and outputs the contents of the addressed byte. The bus master must *not* acknowledge the byte, and terminates the transfer with a Stop condition.

#### **Current Address Read**

For the Current Address Read operation, following a Start condition, the bus master <u>only</u> sends <u>a</u> Device Select Code with the Read/Write bit (RW) set to 1. The device acknowledges this, and outputs the byte addressed by the internal address counter. The counter is then incremented. The bus master terminates the transfer with a Stop condition, as shown in Figure 10., *without* acknowledging the byte.

TOSHIBA CMOS DIGITAL INTEGRATED CIRCUIT SILICON MONOLITHIC

## TC74VHC157F, TC74VHC157FN, TC74VHC157FT

### QUAD 2-CHANNEL MULTIPLEXER

The TC74VHC157 is an advanced high speed CMOS QUAD 2 - CHANNEL MULTIPLEXER fabricated with silicon gate  $C^2MOS$  technology.

It achieves the high speed operation similar to equivalent Bipolar Schottky TTL while maintaining the CMOS low power dissipation.

It consists of four 2-input digital multiplexers with common select and strobe inputs.

When the STROBE input is held "H" level, selection of data is inhibited and all the outputs become "L" level.

The SELECT decoding determines whether the A or B inputs get routed to their corresponding Y outputs.

An Input protection circuit ensures that 0 to 5.5V can be applied to the input pins without regard to the supply voltage. This device can be used to interface 5V to 3Vsystems and on two supply systems such as battery back up. This circuit prevents device destruction due to mismatched supply and input voltages.

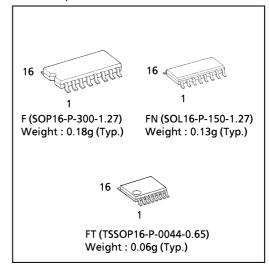

### FEATURES:

- High Speed------t<sub>pd</sub> = 4.1ns(typ.) at  $V_{CC}$  = 5V
- High Noise Immunity  $V_{\text{NIH}} = V_{\text{NIL}} = 28\% V_{\text{CC}}$  (Min.)
- Power Down Protection is provided on all inputs.
- Balanced Propagation Delays  $\cdots t_{pLH} \simeq t_{pHL}$
- + Wide Operating Voltage Range  $\cdots$  V\_{CC} (opr) = 2V  $\sim$  5.5V
- Pin and Function Compatible with 74ALS157
