#### DPR1001 ELECTROSTATICALLY SENSITIVE (ES) DEVICES

Some semiconductor (solid state) devices can be damaged easily by static electricity. Such components commonly are called Electrostatically Sensitive (ES) Devices. Examples of typical ES devices are integrated circuits and some field effect transistors and semiconductor "chip" components.

The following techniques should be used to help reduce the incidence of component damage caused by static electricity.

- Immediately before handling any semiconductor component or semiconductor-equipped assembly, drain off any electrostatic charge on your body by touching a known earth ground. Alternatively, obtain and wear a commercially available discharging wrist strap device, which should be removed for potential shock reasons prior to applying power to the unit under test.
- 2. After removing an electrical assembly equipped with ES devices, place the assembly on a conductive surface such as aluminum foil, to prevent electrostatic charge build-up or exposure of the assembly.
- 3. Use only a grounded-tip soldering iron to solder or unsolder ES devices.
- 4. Use only an anti-static solder removal device. Some solder removal devices not classified as "anti-static" can generate electrical charges sufficient to damage ES devices.
- 5. Do not use freon-propelled chemicals. These can generate electrical change sufficient to damage ES devices.
- 6. Do not remove a replacement ES device from its protective package until immediately before you are ready to install it. (Most replacement ES devices are packaged with leads electrically shorted together by conductive foam, aluminum foil or comparable conductive material.)
- 7. Immediately before removing the protective material from the leads of a replacement ES device, touch the protective material to the chassis or circuit assembly into which the device will be installed2

CAUTION : Be sure no power is applied to the chassis or circuit, and observe all other safety precautions.

8. Minimize bodily motions when handling unpackaged replacement ES devices. (Otherwise harmless motion such as the brushing together or your clothes fabric or the lifting of your foot from a carpeted floor can generate static electricity sufficient to damage an ES devices.

#### PRODUCT SAFETY NOTICE DPR1001

Each precaution in this manual should be followed during servicing.

Components identified with the IEC symbol  $\bigstar$  in the parts list are special significance to safety. When replacing a component identified with  $\bigstar$ , use only the replacement parts designated, or parts with the same ratings or resistance, wattage, or voltage that are designated in the parts list in this manual. Leakage-current or resistance measurements must be made to determine that exposed parts are acceptably insulated from the supply circuit before returning the product to the customer.

# AVR1001

Before returning the unit to the user, perform the following safety checks :

- Inspect all lead dress to make certain that leads are not pinched or that hardware is not lodged between the chassis and other metal parts in the unit.
- 2. Be sure that any protective devices such as nonmetallic control knobs, insulating fishpapers, cabinet backs, adjustment and compartment covers or shields, isolation resistor-capacity networks, mechanical insulators, etc. Which were removed for the servicing are properly re-installed.
- 3. Be sure that no shock hazard exists ; check for leakage current using Simpson Model 229 Leakage Tester, standard equipment item No. 21641, RCA Model WT540A or use alternate method as follows : Plug the power cord directly Into a 120 volt AC receptacle (do not use an Isolation Transformer for this test). Using two clip leads, connect a

1500 ohms, 10watt Resistor paralleled by a 0.15uF capacitor, in series with all exposed metal cabinet parts and a known earth ground, such as a water pipe or conduit. Use a VTVM or VOM with 1000 ohms per volt, or higher sensitivity to measure the AC voltage drop across the resistor. (See diagram) Move the resistor connection to each exposed metal part having a return path to the chassis (antenna, metal, cabinet, screw heads, knobs and control shafts, escutcheon, etc.) and measure the AC voltage drop across the resistor. (This test should be performed with the 0.35 volt RMS or more is excessive and indicates a potential shock hazard which must be corrected before returning the unit to the owner.

#### B) DIGITAL INPUT, BASELINE AUDIO PARAMETERS (STEREO SURROUND MODE)

/ All channels loaded.

Measuring methods are based on IHF and IEC standard 268-3 Measurement conditions, unless otherwise noted :

Output resistive load = (8) ohms

Tone Off or Tone(Bass, Treble), Balance, EQ control : Center Position , Other SW's : OFF, Volume:Max

All Voltage Measurements are made with RMS detector, unless otherwise specified.

Filter : IHF-A filter

R/O = Rated Output, which is 50 W into 8 ohm resistive load, for PCM Digital inputs.

UUT= Unit Under Test.

All measurements are made in Stereo mode, at FL and FR Speaker Output jacks, unless otherwise noted.

#### Power supply: 120 V, 60 Hz

#### FRONT PANEL CONTROLS

**NOTE:** To make it easier to follow the installation instructions that refer to this illustration, a larger copy may be downloaded from the Product Support section at www.harmankardon.com.

**Power Indicator:** This LED turns red when the unit is in the Standby mode to signal that the unit is ready to be turned on. When the unit is in operation, the indicator will turn green.

2 Standby/On Button: When the Main Power
 Switch 19 is "ON," press this button to turn on the DPR 1001; press it again to turn the unit off. The Power Indicator 1 will turn green when the unit is on.

NOTE: The Main Power Switch 19 must be turned on before this button will operate.

**3** Surround Mode Selector: Press this button to choose a surround processing format category by scrolling through the list of available formats as indicated in the Surround Mode Indicators **18**.

These format categories are: Dolby surround modes, DTS Digital modes, DTS Neo:6 modes, Logic 7 modes, DSP modes and Stereo modes. Once you have selected a format category, use the **Surround Select Button 4** to choose a specific mode within the overall category.

4 Surround Select Button: After choosing a surround processing format category by using the Surround Mode Selector 3, press this button to scroll through the list of available modes for that format category. For example, to select the 7.1 Logic 7 Cinema mode, press the Surround Mode Selector 3 until the indicator next to Logic 7 13 is lit. Then press the Surround Select Button 4 to scroll through the available choices until the desired mode appears in the Main Information Display 16. (For more information see page 26.)

**5** AM/FM Selector: Pressing this button will automatically switch the DPR 1001 to the Tuner mode. Pressing it again will switch between the AM and FM frequency bands. (See page 28 for more information on the tuner.)

**6 Input Source Selector**: Press this button to change the input by scrolling up or down through the list of input sources.

Tuning Mode Selector: This button is used to switch back and forth between the Auto and Manual tuning modes. In Auto mode, you may use the Tuning Selector 3 to scan through stations with an acceptable signal. In Manual mode, you may use the Tuning Selector 3 to step through one frequency increment at a time.

#### DPR1001 FRONT PANEL CONTROLS (CONT'D)

This button is also used to switch between Stereo and Mono modes for FM radio reception. When weak reception is encountered, press the button to switch to the Mono mode. Press it again to switch back to Stereo mode. (See page 28 for more information on using the tuner.)

**8** Tuning Selector: Press the left side of the button to tune lower-frequency stations and the right side of the button to tune higher-frequency stations.

In Manual tuning mode, tap the button lightly and the tuner will step up one frequency increment per button press. When the button is held for a few seconds, the unit will quickly advance through the frequency band. Release it and the tuner will stop. In Auto tuning mode, each press of the button will search for the next station with an acceptable signal. Press and hold the button to skip through the acceptable stations. When the button is released, the tuner will not stop until it reaches a station with an acceptable signal.

To switch back and forth between the Auto and Manual tuning modes, press the **Tuning Mode Selector 7**.

**9 Preset Station Selector:** Press this button to scroll up or down through the list or stations that have been entered into the preset memory. (See page 28 for more information on tuner programming.)

✓ Button: Use this button to scroll through the System Configuration modes indicated on the front panel: i.e., Test Tone, Speaker, Channel, Digital Select and Delay. Press the Set Button 11 to select a configuration mode, and use this button or the ▲ Button
 12 to scroll through the available adjustments for each System Configuration mode. (See pages 17–23 for more information on configuring the DPR 1001.)

**Set Button:** Press this button to access the configuration menus for Test Tone, Speakers Channel Trim, Digital Input Select or Delay. After pressing the button, use the A/V Buttons **1012** to select the desired menu. (See pages 17–23 for more information.)

▲ Button: Use this button to scroll through the System Configuration modes indicated on the front panel: i.e., Test Tone, Speaker, Channel, Digital Select and Delay. Press the Set Button 11 to select a configuration mode, and use this button or the
 ▼ Button 10 to scroll through the available adjustments for each System Configuration mode. (See pages 17–23 for more information on configuring the DPR 1001.)

**Door**: Gently pull the upper right corner of this door, indicated by the word "Open", toward you to reveal additional front panel jacks and controls.

**14** Volume Control: Turn this knob clockwise to increase the volume, counterclockwise to decrease the volume. If the DPR 1001 is muted, adjusting the volume control will automatically release the unit from the silenced condition.

**T** System Configuration Indicators: One of these indicators will light, after the Set Button **11** has been pressed, to indicate which configuration option is in use. Press the A/V Buttons **10 12** to change the selection. (See pages 17–23 for more information.)

**16** Main Information Display: This display delivers messages and status indications to help you operate the receiver. (See page 7 for a complete explanation of the Main Information Display.)

**17** Input Indicators: An LED will light to the left of the input that is currently the input source for the DPR 1001.

**TB** Surround Mode Indicators: An LED will light in front of the surround mode that is currently in use.

Main Power Switch: Press this button in to apply power to the DPR 1001. When the switch is pressed in, the unit is placed in a Standby mode, as indicated by the red Power Indicator 1. This button *must* be pressed in to operate the unit. To turn the unit off and prevent the use of the remote control, this switch should be pressed until it pops out from the front panel.

NOTE: This switch is normally left in the "ON" position.

**20** Headphone Jack: This jack may be used to listen to the DPR 1001's output through a pair of headphones. Be certain that the headphones have a standard 1/4" stereo phone plug. The main room speakers will automatically be turned off when the headphone jack is in use.

**21** Digital Optical 3 Input: Connect the optical digital audio output of an audio or video product to this jack. When the input is not in use, be certain to keep the plastic cap installed to avoid dust contamination that might degrade future performance.

**22** Input/Output Status Indicators: These LED indicators will normally light green to show that the front panel Digital Coax 3 Jack 23 or Video 4 Input/ Output Jacks 23 are operating as inputs. When either of these jacks has been configured for use as an output, the indicator will turn red to show that the jack may be used for recording. (See page 18 or 29 for more information on configuring the front panel jacks as outputs, rather than inputs.)

**23** Digital Coax 3 Jack: This jack is normally used for connection to the output of portable audio devices, video game consoles or other products that have a coax digital audio jack. It may also be configured as an output jack, to feed a digital signal to a CD-R, MiniDisc or other digital recording device. (See page 18 or 29 for information on configuring the Digital Coax 3 Jack as an output.)

22 Video 4 Input/Output Jacks: These audio/video jacks may be used for temporary connection to video games or portable audio/video products such as camcorders and portable audio players. These jacks may also be configured as an output to feed an analog audio/video signal to a VCR, camcorder, tape deck or other recording device. (See page 18 or 29 for information on configuring the Video 4 jacks as outputs.)

#### REAR PANEL CONNECTIONS

NOTE: To make it easier to follow the installation instructions that refer to this illustration, a larger copy may be

downloaded from the Product Support section at www.harmankardon.com.

**1** FM Antenna: Connect the supplied indoor (or an optional external) FM antenna to this terminal.

② AM Antenna: Connect the AM loop antenna supplied with the receiver to these terminals. Connect the black antenna wire marked GND to the top terminal screw on the DPR with the grounding symbol.

**3** Multiroom IR Input: Connect the output of an IR sensor in a remote room to this jack to operate the DPR 1001's multiroom control system. (See pages 31 for more information on multiroom systems.)

4 Remote IR Output: This connection permits the

IR sensor in the receiver to serve other remote con trolled devices. Connect this jack to the "IR IN" jack on Harman Kardon (or other compatible) equipment.

**(b)** Remote IR Input: If the DPR 1001's front panel IR sensor is blocked due to cabinet doors or other obstructions, an external IR sensor may be used. Connect the output of the sensor to this jack.

**(6)** Tape Inputs: Connect these jacks to the PLAY/OUT jacks of an audio recorder.

**7** Tape Outputs: Connect these jacks to the RECORD/INPUT jacks of an audio recorder.

**8** CD Inputs: Connect these jacks to the output of a compact disc player or changer.

 Multiroom Outputs: Connect these jacks to an optional audio power amplifier to listen to the source selected by the mulitroom system. (See page 31 for more information on the multiroom system.)

**()** Video 1 Video Inputs: Connect these jacks to the PLAY/OUT composite or S-Video jacks on a VCR or other video source.

**(i)** Video 1 Audio Inputs: Connect these jacks to the PLAY/OUT audio jacks on a VCR or other video source.

#### DPR1001 REAR PANEL CONNECTIONS (CONT'D)

**Wideo 1 Video Outputs:** Connect these jacks to the **RECORD/INPUT** composite or S-Video jack on a VCR.

(B) Video 1 Audio Outputs: Connect these jacks to the RECORD/INPUT audio jacks on a VCR.

**Wideo 2 Video Inputs:** Connect these jacks to the **PLAY/OUT** composite or S-Video jacks on a TV or other video source.

Svideo 2 Audio Inputs: Connect these jacks to the PLAY/OUT audio jacks on a TV or other video source.

**(b)** Video 2 Video Outputs: Connect these jacks to the **RECORD/INPUT** composite or S-Video jacks on a TV or other video source.

Video 2 Audio Outputs: Connect these jacks to the RECORD/INPUT audio jacks on a TV or other video source.

Wideo 3 Video Inputs: Connect these jacks to the PLAY/OUT composite or S-Video jacks on a cable box or other video source.

(D) Video 3 Audio Inputs: Connect these jacks to the PLAY/OUT audio jacks on a cable box or other video source.

2 DVD Audio Inputs: Connect these jacks to the analog audio jacks on a DVD or other video source.

 Digital Audio Outputs: Connect these jacks to the matching digital input connector on a digital recorder such as a CD-R or MiniDisc recorder.

Surround Back/Multiroom Speaker Outputs: These speaker terminals may be used with 7.1-channel systems or to power the output of the multiroom system when the multiroom system and the main room are using the same input. Connect these outputs to the matching + and - terminals on your surround back channel speakers. In conformance with the CEA color-code specification, the brown terminal is the positive (+) terminal that should be connected to the red (+) terminal on the Surround Back Left speaker with older color-coding, while the tan terminal should be connected to the red (+) terminal on the Surround Back Right speaker with older color-coding. Connect the black (-) terminal on the receiver to the matching black negative (-) terminals for each surround back speaker. (See page 14 for more information on speaker polarity and pages 19-20 for information on configuring the DPR 1001 for 7.1 speaker channels. See page 31 for information on powering the multiroom system with the DPR 1001's internal amplifier.)

Surround Speaker Outputs: Connect these outputs to the matching + and – terminals on your surround channel speakers. In conformance with the

new CEA color-code specification, the blue terminal is the positive (+) terminal that should be connected to the red (+) terminal on the Surround Left speaker with older color-coding, while the gray terminal should be connected to the red (+) terminal on the Surround Right speaker with the older color-coding. Connect the black (–) terminal on the receiver to the matching black negative (–) terminals for each surround speaker. (See page 14 for more information on speaker polarity.)

Center Speaker Outputs: Connect these terminals to the matching + and – terminals on your center channel speaker. In conformance with the new CEA color-code specification, the green terminal is the positive (+) terminal that should be connected to the red (+) terminal on speakers with the older color-coding. Connect the black (–) terminal on the receiver to the black negative (–) terminal on your speaker. (See page 14 for more information on speaker polarity.)

● Front Speaker Outputs: Connect these outputs to the matching + or – terminals on your left and right speakers. The white terminal is the positive (+) terminal that should be connected to the red (+) terminal on the Front Left speaker with older color-coding, while the red terminal should be connected to the red (+) terminal on the Front Right speaker with the older color-coding. Connect the black (-) terminal on the receiver to the matching black negative (-) terminals for each front speaker. (See page 14 for more information on speaker polarity.)

AC Accessory Outlets: These outlets provide power for low-current devices such as a VCR, cable box, CD or DVD player. However, they should *not* be used with high-current devices such as amplifiers. The total power consumption of all devices connected to the accessory outlets should not exceed 100 watts.

The bottom outlet is switched, which means that power is supplied only when the DPR is turned on. Since the power is removed when the DPR is turned off, this outlet should not be used for devices such as VCRs where a constant power source is required for a clock or timer.

The top outlet is unswitched, which means that power is available only when the DPR is plugged in.

AC Power Cord: Connect the AC plug to an unswitched AC wall output.

 Preamp Outputs: These jacks may be connected to an external power amplifier.

LFE/Subwoofer Output: Connect this jack to the line-level input of a powered subwoofer. This output is filtered, and should be connected to your subwoofer's LFE or other input that bypasses the subwoofer's internal crossover. Consult the owner's manual for your subwoofer for further information. If an external subwoofer amplifier is used, connect this jack to the subwoofer amplifier input.

Coaxial Digital Audio Inputs: Connect the coax digital audio output from a DVD player, HDTV receiver, cable box or satellite receiver, the S/P-DIF output of a compatible computer sound card playing MP3 files or streams, an LD player or a CD player to these jacks. The signal may be a Dolby Digital, DTS or compatible MP3 signal, or standard PCM digital source. Do not connect the RF digital output of an LD player directly to these jacks.

Optical Digital Audio Inputs: Connect the optical digital audio output from a DVD player, HDTV receiver, cable box or satellite receiver, the S/P-DIF output of a compatible computer sound card playing MP3 files or streams, an LD player or a CD player to these jacks. The signal may be a Dolby Digital signal, DTS signal, compatible MP3 signal or standard PCM digital source.

**2** DVD Video Inputs: Connect these jacks to the composite or S-Video output jacks on a DVD or other video source.

6-Channel Direct Inputs: When an optional playback device such as a DVD-Audio or SACD player with 5.1 audio capability is in use, connect the player's output jacks here.

8-Channel Direct Inputs: When an optional playback device such as a DVD-Audio or SACD player with 6.1 or 7.1 audio capability is in use, first connect the Front, Center and Surround Channel outputs to the 6-Channel Direct Input Jacks (3), then connect the Surround Back channel outputs of the player to these input jacks.

SVideo Monitor Outputs: Connect this jack to the composite or S-Video input of a TV monitor or video projector to view the on-screen menus and the output of a composite or S-Video source selected by the DPR 1001.

 Video Monitor Component Video Outputs: Connect these outputs to the component video inputs of a video projector or monitor. When a source connected to one of the two Component Video Inputs
 is selected the signal will be sent to these jacks.

**TVD Component Video Inputs:** Connect the Y/Pr/Pb component video outputs of a DVD player to these jacks.

Video 2 Component Video Inputs: Connect the Y/Pr/Pb component video outputs of an HDTV set-top convertor, satellite receiver or other video source device with component video outputs to these jacks.

#### NOTES:

- The function names shown here are each button's feature when used with the DPR 1001. Most buttons have additional functions when used with other devices. When a button is pressed, the function name will appear in the bottom line of the LCD Information Display (3).
- The jack on the upper right side of the remote is reserved for future use. Do not remove the plug provided or connect any device to the jack.
- To make it easier to follow the installation instructions that refer to this illustration, a larger copy may be downloaded from the Product Support section at www.harmankardon.com.

#### DPR1001 REMOTE CONTROL FUNCTIONS (CONT'D)

IMPORTANT NOTE: The DPR 1001's remote may be programmed to control up to eight devices, including the DPR 1001. Before using the remote, it is important to remember to press the **Input** Selector Button (4) that corresponds to the unit you wish to operate. In addition, the DPR 1001's remote is shipped from the factory to operate the DPR 1001 and most Harman Kardon CD or DVD players and cassette decks. The remote is also capable of operating a wide variety of other products using the control codes that are part of the remote. Before using the remote with other products, follow the instructions on pages 32–34 to program the proper codes for the products in your system.

It is also important to remember that many of the buttons on the remote take on different functions, depending on the product selected using the Device Control Selectors. The descriptions shown here primarily detail the functions of the remote when it is used to operate the DPR 1001.

• Power Off Button: Press this button to place the DPR 1001 or a selected device in the Standby mode. Note that this will turn off the main room functions, but if the Multiroom system is activated, it will continue to function.

**2** Power On Button: Press this button to turn on the power to a device selected by first pressing one of the Input Selectors **4**.

**3** LCD Information Display: This two-line screen displays various information depending on the commands that have been entered into the remote.

Input Selectors: Pressing one of these buttons will perform three actions at the same time. First, if the DPR 1001 is not turned on, this will power up the unit. Next, it will select the source shown on the button as the input to the DPR 1001. Finally, it will change the remote control so that it controls the device selected. After pressing one of these buttons you must press the AVR Selector Button (5) again to operate the DPR 1001's functions with the remote.

**5 AVR Selector:** Pressing this button will switch the remote so that it will operate the DPR 1001's functions. If the DPR 1001 is in the Standby mode, it will also turn the DPR 1001 on.

**6** Test Button: Press this button to begin the sequence used to calibrate the DPR 1001's output levels. (See page 23 for more information on calibrating the DPR 1001.)

**OSP Surround Mode Selector:** Press this button to select from among the available DSP surround modes. (See page 26 for more information on the Theater, Hall and VMAx modes.) **8** Logic 7 Selector: Press this button to select from among the available Logic 7 surround modes. (See page 26 for the available Logic 7 options.)

**9** Direct Button: Press this button when the tuner is in use to start the sequence for direct entry of a station's frequency. After pressing the button, simply press the proper **Numeric Keys 1** to select a station. (See page 28 for more information on the tuner.)

**(D)** Clear Button: When programming the remote or using the EZSet feature, press this button to cancel the current function. When using the remote to enter frequencies for direct tuner access, press this button to clear previous entries.

 Numeric Keys: These buttons serve as a tenbutton numeric keypad to enter tuner preset positions. They are also used to select channel numbers when TV, Cable or SAT has been selected on the remote, or to select track numbers on a CD, DVD or LD player, depending on how the remote has been programmed.

**Tuning Mode:** Press this button when the tuner is in use to select between automatic tuning and manual tuning. When the button is pressed so that **MANUAL TUNING** appears in the Lower Display Line **B**, pressing the **Tuning Selector <b>B 23** will move the frequency up or down in single-step increments. When the FM band is in use, pressing this button for manual tuning when a station's signal is weak will change to monaural reception. (See page 28 for more information.)

(B) Channel Select Button: This button is used to start the process of setting the DPR 1001's output levels to an external source. Once this button is pressed, press the ▲/▼ on the Navigation Button (2) to select the channel being adjusted, then press the Set Button
(D), followed by the ▲/▼ on the Navigation Button
(Q) again, to change the level setting. (See page 29 for more information.)

Navigation Button: This single disc-like button is used to navigate through the on-screen configuration menus, to scroll through the options list and to select choices for the various settings such as delay, speakers, surround modes, digital inputs, etc. To use the button, simply press it left, right, up or down in the direction indicated by the ▲▼▲▶ icons printed on the button disc. Depending on the menu being used, pressing the button will either change the video highlight that indicates a specific choice or it will change the option shown in the on-screen or front panel display. The sections in this manual describing the unit's individual features and configuration options contain specific information on how the navigation controls are used.

(**b** Digital Select Button: Press this button to assign one of the digital inputs (1) (3) (2) (3) (2) (23) to a source. (See page 27 for more information on using digital inputs.) **(b)** Set Button: This button is used to enter settings into the DPR 1001's memory. It is also used in the setup procedures for delay time, speaker configuration and channel output level adjustment.

Transport Play Buttons: These buttons have no direct function on the DPR 1001, but they are used when the remote is programmed for a compatible DVD, CD or tape player. Pressing these buttons will transmit a forward- or reverse-play command, according to the capabilities of the player being controlled. In the factory default setting, these buttons are programmed for Harman Kardon DVD players so that you may control a compatible player without having to switch devices.

(B) Volume Up/Down Buttons: These controls share the common disc in the lower third of the remote. To raise the volume, press the button marked ▲ by pressing towards the top of the remote. To lower the volume, press the button marked ▼ by pressing towards the bottom of the remote. The </ > buttons on the left and right sides of this disc change channels up or down when the TV, cable box or satellite Input Selectors ④ have been pressed.

Transport Fast-Play/Scan Buttons: These buttons have no direct function on the DPR 1001, but they are used when the remote is programmed for a compatible DVD, CD or tape player. Pressing these buttons will transmit a fast-play forward, fast-play reverse, or fast-forward or -reverse scan command, according to the capabilities of the player being controlled. In the factory default setting, these buttons are preprogrammed with the remote codes for Harman Kardon DVD players so that you may control a compatible player without having to switch devices.

Main Transport Controls: These buttons have no direct function on the DPR 1001, but they are used when the remote is programmed for a compatible DVD, CD or tape player. Pressing these buttons will transmit a stop (n) record (o) or pause (II) command, according to the capabilities of the player being controlled. In the factory default setting, these buttons are programmed with the remote codes for Harman Kardon DVD players so that you may control a compatible player without having to switch devices.

Track Skip Up/Down Button: This button does not have a direct function with the DPR 1001, but when used with a compatibly programmed CD or DVD changer it will change the track or chapter currently being played. In the factory default setting, this button is programmed with the remote codes for Harman Kardon DVD players so that you may control a compatible player without having to switch devices.

**Preset Up/Down Button:** When the tuner is in use, press this button to scroll through the stations programmed into the DPR 1001's memory.

#### DPR1001 REMOTE CONTROL FUNCTIONS (CONT'D)

✓ Tuning Up/Down: When the tuner is in use, this button will tune up or down through the selected frequency band. If the Tuning Mode Button (2) 7 has been pressed so that AUT O appears in the Lower Display Line , pressing either button will cause the tuner to seek the next station with acceptable signal strength for quality reception. When MANUAL appears in the Lower Display Line , pressing this button will tune stations in single-step increments. (See page 28 for more information.)

**23 Disc Skip Button:** This button has no direct function for the DPR 1001 but may be used to change the disc in a CD or DVD changer when the remote is programmed for that type of device. (See page 35 for more information.)

**23** Program Button: This button is used to begin the process of programming the remote. Press and hold this button for three seconds to place the remote in the programming mode. Once the red LED under the Set Button () lights, release the button. You may then select from the desired option. (See pages 32–41 for more information on configuring the remote.)

**26** Light Button: Press this button to activate the remote's backlight for ease of use in darkened rooms.

**Wultiroom:** Press this button to activate the multiroom system or to begin the process of changing the input or volume level for the second zone. (See page 31 for more information on the multiroom system.)

**23** Macro Buttons: Press these buttons to store or recall a "Macro", which is a preprogrammed sequence of commands stored in the remote. (See page 35 for more information on macros.)

Sleep Button: Press this button to place the unit in the Sleep mode. After the time shown in the display, the DPR 1001 will automatically go into the Standby mode. Each press of the button changes the time until turn-off in the following order:

• Night Mode: Press this button to activate the Night mode. This mode is available in specially encoded Dolby Digital sources, and it preserves dialogue (center channel) intelligibility at low volume levels.

**GD OSD Button:** Press this button to activate the On-Screen Display (OSD) system used to set up or adjust the DPR 1001's parameters.

Tone Control Button: This button controls whether or not the Bass and Treble controls are active, and, if so, the degree to which they are used. The first press of this button tells the current status of the tone controls: If **TONE OUT** is displayed in the Lower

Display Line , the tone controls are not in the signal path, and the DPR's output is "flat." If **TONE IN** is displayed, the controls are active. To switch the tone controls in or out, press the ▲/▼ Navigation Button ② so that the desired setting appears. To change the actual bass or treble settings, first make certain that **TONE IN** has been activated, and then press the button again so that either **BASS MODE** or **TREBLE MODE** appears. Within five seconds, press the ▲/▼ Navigation Button ② to enter the desired setting.

**33** Mute: Press this button to momentarily silence the DPR 1001 or TV set being controlled, depending on which device has been selected.

**3** AM/FM Tuner Select: Press this button to select the DPR 1001's tuner as the listening choice. Pressing this button when the tuner is already in use will select between the AM and FM bands.

Channel Up/Down Selector: These buttons have no function when the DPR is being controlled, but when programmed for use with a VCR, TV, cable box, satellite receiver or other similar product they will change the channel up or down. See pages 32–34 for more information on programming the remote.

③ Delay/Select: Press this button to begin the process for setting the delay times used by the DPR 1001 when processing surround sound. After pressing this button, the delay times are entered by pressing the Set Button () and then the ▲/▼ Navigation Button () to change the setting. Press the Set Button () again to complete the process. (See page 21 for more information on setting delay times.)

Speaker Select: Press this button to begin the process of configuring the DPR 1001's bass management system. Then press the ▲/▼ Navigation Button 1 to select the channel you wish to set up. Press the Set Button 1 and then select the speaker type. When all adjustments have been completed, press the Set Button 1 twice to exit the settings and return to normal operation. (See page 19 for more information on speaker setup.)

 Memory Button: Press this button to enter a radio station into the DPR 1001's preset memory. Once **PRESET MEMORY** flashes in the Lower Display Line **E**, you have five seconds to enter a preset memory location using the Numeric Keys **()**. (See page 28 for more information.)

Stereo Mode Selector: Press this button to select a stereo listening mode. The first press of the button places the DPR 1001 in a true, two-channel, left/right Stereo mode with no surround processing. The next press selects either five-channel Stereo or seven-channel Stereo, depending on the speaker configuration.

**(DTS Neo:6 Mode Selector:** Press this button to select a DTS Neo:6 mode. (See page 26 for the available DTS Neo: 6 options.)

(1) DTS Digital Mode Selector: When a DTSencoded digital source is playing, each press of this button will scroll through the available DTS modes. The specific choice of modes will vary according to the type of encoding on the disc and your system's speaker configuration. When a DTS source is not in use, this button has no function. (See page 26 for the available DTS digital options.)

Dolby Surround Mode Selector: This button is used to select from the available Dolby Surround modes. Each press of this button will select one of the Dolby Pro Logic II modes or Dolby 3 Stereo. When a Dolby Digital-encoded source is in use, the Dolby Digital mode may also be selected. (See page 26 for the available Dolby surround mode options.)

G-Channel/8-Channel Input Select: Press this button to select the device connected to the G-Channel Direct Inputs
 or the 8-Channel Direct Inputs
 (See page 29 for more information.)

**CP** SPL Select: This button activates the DPR 1001's EZSet function to quickly and accurately calibrate the DPR 1001's output levels. When the button is pressed you will then need to select between automatic EZSet operation or using the remote as a manual SPL meter by pressing the ▲/▼ Navigation Button ① until your choice appears in the remote's LCD display. Press the Set Button ① to enter the setting, and then follow the instructions as displayed in the LCD display. For complete information, see page 22.

EzSet Microphone Sensor: The microphone sensor that is used by the EzSet system is behind the three slots at the top of the remote control. When using EzSet to calibrate the DPR 1001 be certain that the slots are not covered. (See page 22 for more information on using EzSet.)

**(⊕**) **Lens:** The infrared emitters behind the plastic lens at the top of the remote communicate the remote codes to the DPR 1001. Be certain that the lens is not covered when using the remote, and point the lens toward the DPR for best results. In learning mode, the remote receives IR codes to be learned through a sensor behind the lens.

**NOTE:** DO NOT remove the rubber plug that is supplied to cover the jack on the upper right side of the remote. The jack is not active and is reserved for future use.

#### BASIC TROUBLESHOOTING/PROCESSOR RESET

SYMPTOM	CAUSE	SOLUTION
Unit does not function when Main Power Switch is pushed.	No AC Power	<ul><li>Make certain AC power cord is plugged into a live outlet.</li><li>Check to see whether outlet is switch-controlled.</li></ul>
Display lights, but there is no sound or picture.	<ul> <li>Intermittent input connections</li> <li>Mute is on</li> <li>Volume control is down</li> </ul>	<ul> <li>Make certain that all input and speaker connections are secure.</li> <li>Press Mute button.</li> <li>Turn up volume control.</li> </ul>
Unit turns on, but front panel display does not light up.	Display brightness is turned off	<ul> <li>Follow the instructions in the Display Brightness section on page 30 so that the display is set to VFD FULL.</li> </ul>
No sound from any speaker; light around power switch is red.	<ul> <li>Amplifier is in protection mode due to possible short</li> <li>Amplifier is in protection mode due to internal problems</li> </ul>	<ul> <li>Check speaker wire connections for shorts at receiver and speaker ends.</li> <li>Contact your local Harman Kardon service center.</li> </ul>
No sound from surround or center speakers.	<ul><li>Incorrect surround mode</li><li>Input is monaural</li><li>Incorrect configuration</li></ul>	<ul> <li>Select a mode other than Stereo.</li> <li>There is no surround information from mono sources.</li> <li>Check speaker configuration. (See pages 19–21.)</li> </ul>
Receiver does not play correct soundtrack from DTS or Dolby Digital DVDs.	DVD disc or player menus set incorrectly	<ul> <li>Check the setup menu in your DVD player or the "Audio" menu in the disc being played to make certain that the player is set for the desired output signal.</li> </ul>
Unit does not respond to remote commands.	<ul><li>Weak batteries in remote</li><li>Wrong device selected</li><li>Remote sensor is obscured</li></ul>	<ul><li>Change remote batteries.</li><li>Press the AVR selector.</li><li>Make certain front panel sensor is visible to remote, or connect remote sensor.</li></ul>
Intermittent buzzing in tuner.	Local interference	<ul> <li>Move unit or antenna away from computers, fluorescent lights, motors or other electrical appliances.</li> </ul>
Speaker Channel Input indicators flash and digital audio stops.	Digital audio feed paused	<ul><li>Resume play for DVD.</li><li>Check that Digital Input is selected.</li></ul>

#### Processor Reset

In the rare case in which the unit's operation or the displays seem abnormal, the cause may involve the erratic operation of the system's memory or microprocessor.

To correct this problem, first unplug the unit from the AC wall outlet and wait at least three minutes. After the pause, reconnect the AC power cord and check the unit's operation. If the system still malfunctions, a system reset may clear the problem.

To totally reset the DPR 1001's processor and clear all setting and configuration data, including all tuner presets, output level settings, delay times, surround mode choices, speaker configuration and crossover data, follow these steps:

1. Turn the unit completely off by pressing the Main Power Switch 19 so that it is in the OFF position.

- 2. Press and hold the **Tuning Mode Selector 7** and the **Tuning ▼ Button 8**, and at the same time press the **Main Power Switch 19** in so that it is in the ON position.
- When the Upper Display Line F reads
   RESET, release the Tuning Mode Selector
   7 and Tuning ▼ Button 8.
- 4. After a few seconds the unit will go into a display test mode that will illuminate all segments of the Main Information Display 16.
- 5. Press the **Standby/On Button 2** to return the DPR to normal operation.

When the reset is complete you may return to normal operation, but remember that all system configuration settings and tuner presets will have to be reentered.

**NOTE:** Resetting the processor will erase any configuration settings you have made for speakers, output levels, surround modes and digital input assignments, as well as the tuner presets. After a reset, the unit will be returned to the factory presets, and all settings for these items must be reentered.

If the system is still operating incorrectly, there may have been an electronic discharge or severe AC line interference that has corrupted the memory or microprocessor.

If these steps do not solve the problem, consult an authorized Harman Kardon service center.

# **DDX Technology**

- Traditional Amplifier Technology
  - Class A/B Designs
  - Analog
  - Low Efficiency
- High Efficiency Designs Emerged
  - Analog Class D Designs
  - Class G/H: Vary PS with Class A/B
- Development Goal
  - High Efficiency + Digital = DDX

# AP

# **DDX The New Standard**

- Patented Amplifier Design
- All-Digital
  - Direct Interface to Digital Audio
  - IC Integration
- High Efficiency
  - 3 Times Higher Efficiency
  - Reduced Heat = Smaller Size/Package
  - Power Supply Savings

#### **Theoretical Performance**

0 dB, 1.0 kHz Input
30 kHz 2<sup>nd</sup> Order LPF

DDX is 16 dB Lower Carrier Than 2-State Modulation!

# DDX-2100 Power IC

50W Stereo DDX Power IC Samples Q4'01

PowerSO36

Operation (with DDX-2000) •Single Supply (+10V to +36V) •Output Power •2x50+ W into 8Ω •1x100+ W into 4Ω •Efficiency 88% •Short Circuit Protection •Thermal Protection •Powerdown Mode

# **DDX-4100 Controller**

Multi-Channel Design Providing Complete End-to-End Digital Solution

TQFP 44, 3.3V CMOS Device

#### FEATURES

Interface/Control •4 Channel Serial, ACLink, S/PDIF Inputs •32kHz - 96kHz •4.1 Channel DDX Outputs •6 Channel Serial Output •12C Control

Enhanced Digital Audio Functions •Volume Control •Bass/Treble •Parametric EQ •Bass Management •Automatic Mute •Anti Clipping

# **DDX-4100** Processing

APOG

Multiple Digital Interface Standards
SRC Conversion to 48 kHz for DSP Operations
20 Bit DSP Performs Preamplifier and EQ Functions
5 Channel DDX + Serial Outputs

# DDX-2100 Power Output - Stereo

Output Power of 2x50 Watts at 33V, 8  $\Omega$  (Minimum) Power Reaches over 2x75 Watts (36V, Typical) at 10% THD

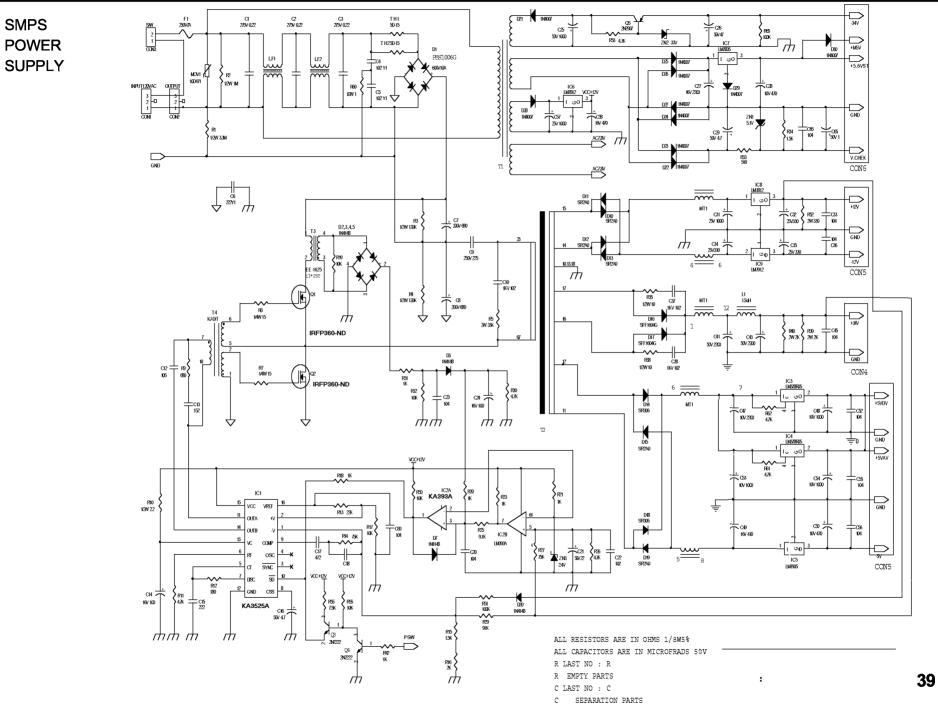

# DDX-2100 Power Output - Mono

Mono Mode Parallels Outputs to Double Current To Load Up to 150 Watts Output (36V, 10%) and 100 Watts (Min) into 4  $\varOmega$

#### **1. DESCRIPTION.**

This document defines the functional requirement of KJP-3011 Power Supply. This power supply is specially designed for AVD This unit is intended to operate with indoor AC 120V voltage, KJP- 3011 and rated output is :+ 34/7.2A, +12V/150mA, -12V/70mA, +5V(AV) /500mA, +5V(DV)/1A, -5V/100mA

> VFD : -34V/40mA, FL±(7.8V)/200mA,. STAND-BY : 5.6V/50mA, M+5V/60mA

#### 2. SCORE

This specification is intented to be used as an acceptance of electrical and mechanical characteristics for KJP-3011

#### **3. REFERENCE**

3-1. RELIABILITY TEST :

#### 4. ELECTRICAL CHARACTERISTICS

- 4-1. AC INPUT CHARACTERISTICS
- 4-1-1. AC Input Rated Voltage : 120 Vac
- 4-1-2. AC Input operating Voltage : 110 ~ 130 Vac
- 4-1-3. AC Input Current : 120V / 4.3A,
- 4-1-4. Input Frequency : 47 ~ 63 Hz
- 4-1-5. Input Inrush Current : 50A max at 120 Vac

- 4-1-5-1. Input inrush current is measured with 120Vac input and output MAX.
- 4-1-5-2. Input inrush current is measured under condition of cold start.
- 4-1-6. Efficiency : 70 % minimum
- 4-1-6-1. Efficiency is measured with 120Vac input and output max.
- 4-1-7. Input On/Off cycle : 1 second minimum
- 4-2. DC OUTPUT CHARACTERISTICS
- 4-2-1. DC Output Voltage
- 4-2-1-1. Output voltage regulation limit :

OUTPUT VOLTAGE		OUTPUT	TOLERANCE	RIPPLE & NOISE		
VOEIMOE	MIN	TYPE	MAX	PEAK		NOIDE
+34V	0A		7.2A		±10%	150mV
+12V		150mA			±10%	70mV
-12V		70mA			±10%	50mV
+5V(AV)		500mA			±5%	50mV
+5V(DV)		1A			±5%	50mV
-5V		100mA			±5%	50mV
ST(+5.6)		50mA			±5%	50mV
M+5V		60mA			±10%	150mV
-34		40mA			±10%	150mV
FL±7.8V		200mA			±10%	

4-2-1-2. The unit shall meet voltage regulation limit under all input voltage range.

4-2-1-3. On/Off Control

High(3.5 ~ 5V) Main on.

Low or Open(0V) Main off..

- 4-2-2. Ripple and Noise
- 4-2-2-1. Ripple and noise shall be measured at the end of output and with a 47uF EL-Capacitor and a 0.1uF ceramic capacitor between output to ground.
- 4-2-2-2. Ripple and noise shall be measured with 20MHz bandwidth.

#### 4-3. ABNORMAL CONDITION AND REQUIRED RESPONSE

- 4-3-1. Output Short Circuit Protection
- 4-3-1-1. On the output, Application of a short-circuit to ground shall not be damaged to the power supply.
- 4-3-1-2. When short problem is occurred, Hiccup or Fold back After removing of short, the power supply will be auto-recovered
- 4-3-2. Min Load Operation.
- 4-3-2-1. The power supply shall not be damaged by on load operation.
- 4-3-2-2. The power supply does not required to maintain output voltage within regulation limit.
- 4-3-3. Overload Protection
- 4-3-3-1. Input : AC 120V

Output : 120% Minimum

- 4-4. Safety Agency and Regulatory
- 4-4-1. Safety Agency
- 4-4-1-1. Safety :UL.CSA.Meete
- 4-4-2 HI-POT and Insulation Resistance
- 4-4-2-1. Dielectric Withstanding Voltage

Primary to Secondary : 2.5K Vac, 1Minite.

For production test procedure, the duration is 1 sec.

#### MODEL NO: KJP-3011

4-4-2-2. Hi-pot test is performed with minimum 10mA cut-off current.

4-4-2-3. Insulation resistance : MIN 100M (Primary to Secondary)

4-4-3. EMI

4-3-3-1. FCC class B. Meete

4-5. Environmental Requirements

4-5-1. Operating Temperature : 0 to 40

4-5-2. Storage Temperature : -40 to 85

4-5-3. Operating Humidity : 20 to 80% RH

4-5-4. Storage Humidity : 10 to 90% RH

#### 4-5-5 ALTITUDE

Operating : 10,000 ft

Storage : 50,000ft

#### 5. MEAN TIME BETWEEN FAILURES(MTBF)

50,000 hours (full load and 25 ambient conditions)

#### 6. BURN-IN

#### TEST CONDITION

4 hours referance (@70% Load min., 40 , 120Vrms)

### **TUNER SCHEMATICS**

\*Note. The Component values of this Schematic diagram are subject to change without notice for improvement.

DPR1001

harman/kardon

### TUNER

#### 1. APPLICATION

This specification cover the tuner to be used for AM+FM broadcast reception, which AM+FM Front End with Detector, MPX.

#### 2. APPENDED DOOLMENTS

2-1. Dimensions and terminal connection.

Refer to the attached drawing No. (TOS - 082 - 80R)

2-2. Schematic diagram

As show in the attached drawing No. (KSD - M081 - 65)

#### 3. RECEI VI NG METHOD

AMHFM section is designed super heterodyne receiving circuit with RF.

Amp (As shown in the attached drawings)

#### 4. ELECTRI CAL SPECI FI CATI ON & CHARACTERI STI CS

#### 4-1. Electrical specification

#### uPD78F4216

 100-pin plastic QFP (14 × 20) μPD78F4216AGF-3BA, μPD78F4218AGF-3BA, μPD78F4216AYGF-3BA, μPD78F4218AYGF-3BA

- **Notes 1.** Connect the VPP pin to Vss directly or via a pull-down resistor in normal operation mode. Connect the VPP pin to Vss via a pull-down resistor in a system in which the on-chip flash memory is written while mounted on the target board. For the pull-down connection, it is recommended to use a resistor with a resistance ranging from 470 Ω to 10 kΩ.
  - 2. Connect the AVDD pin to VDD.
  - Connect the AVss pin to Vss.
  - 4. The SCL0 and SDA0 pins are available in the μPD78F4216AY, 78F4218AY only.
  - 5. The EXA pin is available in the  $\mu$ PD78F4218A, 78F4218AY only.

# LC75725E

## Overview

The LC75725E is a 1/4 to 1/11 duty dynamic drive VFD driver. It provides 43 segment outputs and 11 digit outputs. It facilitates the construction of display systems operating under the control of a controller.

#### Features

- Dynamic drive display technique to display four to eleven digits on the VFD.
- Serial data input supports CCB\* format communication with the system controller.
- The dimmer level is controlled by serial data input. (The dimmer has a resolution of 10 bits.)
- High generality since display data is displayed without the intervention of a decoder.
- All segments can be turned off with the  $\overline{BLK}$  pin.
- · CR oscillator circuit.

## **Package Dimensions**

unit: mm 3159-QFP64E

- CCB is a trademark of SANYO ELECTRIC CO., LTD.
- CCB is SANYO's original bus format and all the bus addresses are controlled by SANYO.

# CS49326

# Multi-Standard Audio Decoder Family

#### Features

- CS4930X: DVD Audio Sub-family
- PES layer decode for A/V sync
- DVD Audio Pack Layer Support Meridian Lossless Packing (MLP)™

- Dolby Digital™
   MPEG Multi-Channel
   DTS Digital Surround™
- CS4931X: Broadcast Sub-family
  - PES layer decode for A/V sync
  - MPEG Advanced Audio Coding Algorithm (AAC)
  - MPEG Multi Channel
  - Dolby Digital
- CS4932X: AVR Sub-family
  - Dolby Digital with integrated code
  - DTS decoding with integrated DTS tables & code
  - Crystal Original Surround with integrated code
  - MPEG Advanced Audio Coding Algorithm (AAC)
  - MPEG Multi-Channel
- CS4933X: General Purpose Audio DSP
  - THX<sup>™</sup> and THX Surround EX
  - Car Audio
  - Mixer Applications
- Features are a super-set of the CS4923/4/5/6/7/8 8 channel output, including dual zone output capability
  - Supports up to 192 kHz Fs @ 24 bit throughput Increased memory/MIPs
  - SRAM Interface for increased delay and buffer capability
  - MPEG Layer 3 (MP3)

#### Description

The CS493XX is a family of multichannel audio decoders intended to supersede the CS4923/4/5/6/7/8 family as the leader of audio decoding in both the DVD, broadcast and receiver markets. The family will be split into parts tailored for each of these distinct market segments.

For the DVD market, parts will be offered which support Meridian Lossless Packing (MLP), Dolby Digital, MPEG Multi-Channel, DTS and subsets thereof. For the receiver market, parts will be offered which support Dolby Digital, MPEG Multi-Channel, DTS, AAC and subsets thereof. For the broadcast market parts will be offered which support Dolby Digital, MPEG Advanced Audio Coding (AAC), and MPEG Multi-Channel.

Under the Crystal brand, Cirrus Logic is the only single supplier of high-performance 24-bit multi-standard audio DSP decoders, DSP firmware, and high-resolution data converters. This combination of DSPs, system firmware, and data converters simplify rapid creation of world-class high-fidelity products.

#### Ordering Information: See page 68

	APPLICATION	FEATURES
CS49300	DVD Audio	MLP, AC3, DTS and MPEG5.1
CS49310	Broadcast	AAC, AC3, MPEG5.1
CS49325	AVR	AC3(IBA), MPEG5.1
CS49326	AVR	AC3(IBA), DTS(IBA), MPEG5.1
CS49329	AVR	AC3(IBA), AAC, DTS, MPEG5.1, PCM Pass-through (IBA)
CS49330	Audio DSP	THX

Preliminary Product Information

This document contains information for a new product. Cirrus Logic reserves the right to modify this product without notice.

#### **11. PIN DESCRIPTIONS**

#### VA—Analog Positive Supply: Pin 34

Analog positive supply for clock generator. Nominally +2.5 V.

#### AGND—Analog Supply Ground: Pin 35

Analog ground for clock generator PLL.

#### VD1, VD2, VD3—Digital Positive Supply: Pins 1, 12, 23

Digital positive supplies. Nominally +2.5 V.

# DGND1, DGND2, DGND3—Digital Supply Ground: Pins 2, 13, 24

## Digital ground.

#### FILT1—Phase-Locked Loop Filter: Pin 33

Connects to an external filter for the on-chip phase-locked loop.

#### FILT2—Phase Locked Loop Filter: Pin 32

Connects to an external filter for the on-chip phase-locked loop.

#### CLKIN—Master Clock Input: Pin 30

CS493XX clock input. When in internal clock mode (CLKSEL == DGND), this input is connected to the internal PLL from which all internal clocks are derived. When in external clock mode (CLKSEL == VD), this input is connected to the DSP clock. *INPUT* 

#### CLKSEL—DSP Clock Select: Pin 31

This pin selects the clock mode of the CS493XX. When CLKSEL is low, CLKIN is connected to the internal PLL from which all internal clocks are derived. When CLKSEL is high CLKIN is connected to the DSP clock. *INPUT* 

```
DATA7, EMAD7, GPIO7—Pin 8
DATA6, EMAD6, GPIO6—Pin 9
DATA5, EMAD5, GPIO5—Pin 10
DATA4, EMAD4, GPIO4—Pin 11
DATA3, EMAD3, GPIO3—Pin 14
DATA2, EMAD2, GPIO2—Pin 15
DATA1, EMAD1, GPIO1—Pin 16
DATA0, EMAD0, GPIO0—Pin 17
```

In parallel host mode, these pins provide a bidirectional data bus. If a serial host mode is selected, these pins can provide a multiplexed address and data bus for connecting an 8-bit external memory. Otherwise, in serial host mode, these pins can act as general-purpose input or output pins that can be individually configured and controlled by the DSP. *BIDIRECTIONAL - Default: INPUT* 

#### A0, SCCLK—Host Parallel Address Bit Zero or Serial Control Port Clock: Pin 7

In parallel host mode, this pin serves as one of two address input pins used to select one of four parallel registers. In serial host mode, this pin serves as the serial control clock signal, specifically as the SPI clock input or the  $I^2C$  clock input. *INPUT* 

#### A1, SCDIN-Host Address Bit One or SPI Serial Control Data Input: Pin 6

In parallel host mode, this pin serves as one of two address input pins used to select one of four parallel registers. In SPI serial host mode, this pin serves as the data input. *INPUT* 

#### **RD**, **R/W**, **EMOE**, **GPIO11**—Host Parallel Output Enable or Host Parallel R/W or External Memory Output Enable or General Purpose Input & Output Number 11: Pin 5

In Intel parallel host mode, this pin serves as the active-low data bus enable input. In Motorola parallel host mode, this pin serves as the read-high/write-low control input signal. In serial host mode, this pin can serve as the external memory active-low data-enable output signal. Also in serial host mode, this pin can serve as a general purpose input or output bit. *BIDIRECTIONAL - Default: INPUT* 

WR, DS, EMWR

#### CMPCLK, SCLKN2—PCM Audio Input Bit Clock: Pin 28

Bidirectional digital-audio bit clock that is an output in master mode and an input in slave mode. In slave mode, SCLKN2 operates asynchronously from all other CS493XX clocks. In master mode, SCLKN2 is derived from the CS493XX internal clock generator. In either master or slave mode, the active edge of SCLKN2 can be programmed by the DSP. If the CDI is configured for bursty delivery, CMPCLK is an input used to sample CMPDAT. *BIDIRECTIONAL - Default: INPUT* 

#### CMPREQ, LRCLKN2—PCM Audio Input Sample Rate Clock: Pin 29

When the CDI is configured as a digital audio input, this pin serves as a bidirectional digitalaudio frame clock that is an output in master mode and an input in slave mode. LRCLKN2 typically is run at the sampling frequency. In slave mode, LRCLKN2 operates asynchronously from all other CS493XX clocks. In master mode, LRCLKN2 is derived from the CS493XX internal clock generator. In either master or slave mode, the polarity of LRCLKN2 for a particular subframe can be programmed by the DSP. When the CDI is configured for bursty delivery, or parallel audio data delivery is being used, CMPREQ is an output which serves as an internal FIFO monitor. CMPREQ is an active low signal that indicates when another block of data can be accepted. *BIDIRECTIONAL - Default: INPUT* 

#### CMPDAT, SDATAN2—PCM Audio Data Input Number Two: Pin 27

Digital-audio data input that can accept from one to six channels of compressed or PCM data. SDATAN2 can be sampled with either edge of SCLKN2, depending on how SCLKN2 has been configured. Similarly CMPDAT is the compressed data input pin when the CDI is configured for bursty delivery. When in this mode, the CS493XX internal PLL is driven by the clock recovered from the incoming data stream. *INPUT* 

#### DC—Reserved: Pin 38

This pin is reserved and should be pulled up with an external 4.7k resistor.

#### DD—Reserved: Pin 37

This pin is reserved and should be pulled up with an external 4.7k resistor.

#### **12. ORDERING INFORMATION**

CS493002-CL 44-Pin PLCC	Temp Range 0-70° C
CS493102-CL 44-Pin PLCC	Temp Range 0-70° C
CS493253-CL 44-Pin PLCC	Temp Range 0-70° C
CS493263-CL 44-Pin PLCC	Temp Range 0-70° C
CS493292-CL 44-Pin PLCC	Temp Range 0-70° C

#### MCLK—Audio Master Clock: Pin 44

Bidirectional master audio clock. MCLK can be an output from the CS493XX that provides an oversampled audio-output clock at either 128 Fs, 256 Fs, or 512 Fs. MCLK can be an input at 128 Fs, 256 Fs, 384 Fs, or 512 Fs. MCLK is used to derive SCLK and LRCLK when SCLK and LRCLK are driven by the CS493XX. *BIDIRE CTIONAL - Default: INPUT* 

#### SCLK—Audio Output Bit Clock: Pin 43

Bidirectional digital-audio output bit clock. SCLK can be an output that is derived from MCLK to provide 32 Fs, 64 Fs, 128 Fs, 256 Fs, or 512 Fs, depending on the MCLK rate and the digital-output configuration. SCLK can also be an input and must be at least 48Fs or greater. As an input, SCLK is independent of MCLK. *BIDIRECTIONAL - D efaul t: INPUT* 

#### LRCLK—Audio Output Sample Rate Clock: Pin 42

Bidirectional digital-audio output-sample-rate clock. LRCLK can be an output that is divided from MCLK to provide the output sample rate depending on the output configuration. LRCLK can also be an input. As an input LRCLK is independent of MCLK. *BIDIREC TIONAL - De fault: INPUT* 

#### AUDATA3,XMT958—SPDIF Transmitter Output, Digital Audio Output 3: Pin 3

CMOS level output that contains a biphase-encoded clock for synchronously providing two channels of PCM digital audio or a IEC61937 compressed-data interface or both. This output typically connects to the input of an RS-422 transmitter or to the input of an optical transmitter. Conversely this pin can be configured to be a third digital audio output. *OUTPUT* 

#### SCLKN1, STCCLK2—PCM Audio Input Bit Clock: Pin 25

Bidirectional digital-audio bit clock that is an output in master mode and an input in slave mode. In slave mode, SCLKN1 operates asynchronously from all other CS493XX clocks. In master mode, SCLKN1 is derived from the CS493XX internal clock generator. In either master or slave mode, the active edge of SCLKN1 can be programmed by the DSP. For applications supporting PES layer synchronization this pin can be used as STCCLK2, which provides a path to the internal STC 33 bit counter. *BIDIRECTIO NAL - De fault: INPUT* 

#### LRCLKN1—PCM Audio Input Sample Rate Clock: Pin 26

Bidirectional digital-audio frame clock that is an output in master mode and an input in slave mode. LRCLKN1 typically is run at the sampling frequency. In slave mode, LRCLKN1 operates asynchronously from all other CS493XX clocks. In master mode, LRCLKN1 is derived from the CS493XX internal clock generator. In either master or slave mode, the polarity of LRCLKN1 for a particular subframe can be programmed by the DSP. *BIDIREC TIONAL - De fault: INPUT* 

#### SDATAN1—PCM Audio Data Input Number One: Pin 22

Digital-audio data input that can accept from one to six channels of compressed or PCM data. SDATAN1 can be sampled with either edge of SCLKN1, depending on how SCLKN1 has been configured. *INPUT* 

#### CMPCLK, SCLKN2—PCM Audio Input Bit Clock: Pin 28

Bidirectional digital-audio bit clock that is an output in master mode and an input in slave mode. In slave mode, SCLKN2 operates asynchronously from all other CS493XX clocks. In master mode, SCLKN2 is derived from the CS493XX internal clock generator. In either master or slave mode, the active edge of SCLKN2 can be programmed by the DSP. If the CDI is configured for bursty delivery, CMPCLK is an input used to sample CMPDAT. *BIDIRECTIONAL - Default: INPUT* 

#### CMPREQ, LRCLKN2—PCM Audio Input Sample Rate Clock: Pin 29

When the CDI is configured as a digital audio input, this pin serves as a bidirectional digitalaudio frame clock that is an output in master mode and an input in slave mode. LRCLKN2 typically is run at the sampling frequency. In slave mode, LRCLKN2 operates asynchronously from all other CS493XX clocks. In master mode, LRCLKN2 is derived from the CS493XX internal clock generator. In either master or slave mode, the polarity of LRCLKN2 for a particular subframe can be programmed by the DSP. When the CDI is configured for bursty delivery, or parallel audio data delivery is being used, CMPREQ is an output which serves as an internal FIFO monitor. CMPREQ is an active low signal that indicates when another block of data can be accepted. *BIDIRECTIONAL - Default: INPUT* 

#### CMPDAT, SDATAN2—PCM Audio Data Input Number Two: Pin 27

Digital-audio data input that can accept from one to six channels of compressed or PCM data. SDATAN2 can be sampled with either edge of SCLKN2, depending on how SCLKN2 has been configured. Similarly CMPDAT is the compressed data input pin when the CDI is configured for bursty delivery. When in this mode, the CS493XX internal PLL is driven by the clock recovered from the incoming data stream. *INPUT* 

#### DC—Reserved: Pin 38

This pin is reserved and should be pulled up with an external 4.7k resistor.

#### DD—Reserved: Pin 37

This pin is reserved and should be pulled up with an external 4.7k resistor.

# DDX-4100A

## FEATURES

- SOURCE-TO-SPEAKER INTEGRATED DIGITAL AUDIO SOLUTION w/DDX-2060 Power IC's
- DIGITAL PREAMP FUNCTIONS:
  - Digital Volume Control
  - Bass and Treble
  - Parametric EQ on each Channel
  - Bass Management for LFE Channel
  - Soft Mute
  - Automatic mute for Zero Inputs
- 4+1 CHANNELS DDX PROCESSING
- STEREO S/PDIF INPUT INTERFACE
- 4 CHANNEL PROGRAMMABLE SERIAL INPUT INTERFACE
- 6 CHANNEL PROGRAMMABLE SERIAL OUTPUT INTERFACE
- Intel AC'97 LINK (rev.2.1) INPUT INTERFACE for AUDIO AND CONTROL
- AUTOMATIC INPUT SAMPLING
   FREQUENCY DETECTION AND SAMPLE
   RATE CONVERTER
- I<sup>2</sup>C CONTROL BUS
- LOW POWER 3.3V CMOS TECHNOLOGY
- EXTERNAL INPUT CLOCK OR BUILT-IN XTAL OSCILLATOR
- DIGITAL GAIN CONTROL; UP TO +24dB @ 0.75dB/STEP

# DDX ™ Multichannel Digital Audio Processor

#### **1.0 GENERAL DESCRIPTION**

The DDX-4100A Digital Audio Processor is a single chip device for implementing complete digital solutions for audio amplification. In conjunction with multiple DDX-2060 Power IC's, the solution provides a full digital, multi-channel, high quality, power processing chain without the need of Digital-to-Analog converters between the DSP and power amplifier.

The device supports two input configurations, AC'97 input mode or IIS/SPDIF input mode, with the selection made via a dedicated pin (AC97\_MODE pin).

The AC'97 input mode can be configured to work in either a 'Fully Compliant' mode or a 'Proprietary' mode. The selection of this compliance mode is made in a Vendor Reserved register. The 'Fully Compliant' mode conforms to rev 2.1 of AC'97 specification. The 'Proprietary' mode enables additional features not found in the 'Fully Compliant' mode. The link supports up to 6 input channels with discrete sampling frequencies of 44.1, 48, 88.2, or 96 kHz.

# DPR1001 IC DATA SHEET

DDX-2100

# All-Digital High Efficiency Power Amplifier

#### **FEATURES**

- HIGH OUTPUT CAPABILITY
- **2 x 50W** into 8Ω or **1 x 100W** into 4Ω
- SINGLE SUPPLY (+9V to +36V)
- SMALL PACKAGE
- HIGH EFFICIENCY, >88%
- THERMAL OVERLOAD AND SHORT CIRCUIT PROTECTION

#### BENEFITS

- COMPLETE SURFACE MOUNT DESIGN
- POWER SUPPLY SAVINGS

#### APPLICATIONS

- DIGITAL POWERED SPEAKERS
- PC SOUND CARDS
- CAR AUDIO
- SURROUND SOUND SYSTEMS
- DIGITAL AUDIO COMPONENTS

## **GENERAL DESCRIPTION**

The DDX-2100 power device is a monolithic dual channel H-Bridge that can provide up to 50 watts per channel of audio power at very high efficiency. The DDX-2100 power device contains a logic interface, integrated bridge drivers, high efficiency MOSFET output transistors and protection circuitry. The device may be used as a dual bridge or reconfigured as a single bridge with double the output current capability.

The benefits of the DDX amplification system are an all-digital design that eliminates the need for a digital to analog converter (DAC) and the high efficiency operation derived from the use of Apogee's patented damped ternary pulse width modulation (PWM). This approach provides an efficiency advantage over conventional Class-D designs and up to three times the efficiency of typical Class A/B amplifiers with music input signals.

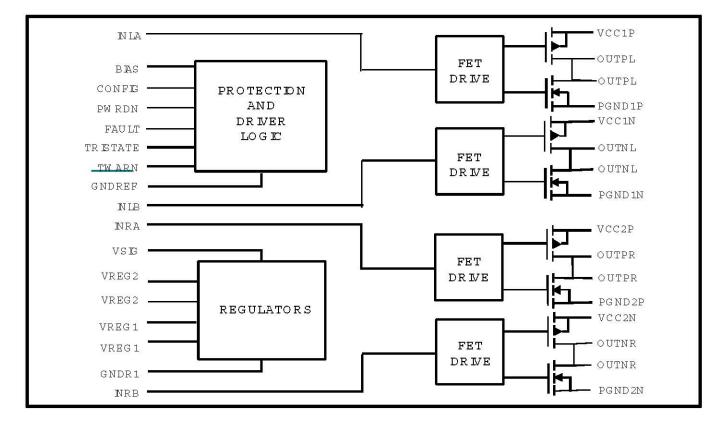

Figure 1.B bck Diagram

## **Electrical Characteristics (continued)**

Note 1: Permanent device damage may occur if ABSOLUTE MAXIMUM RATINGS are exceeded. Exposure to absolute maximum rating conditions for extended periods may affect device reliability.

Note 2: Performance not guaranteed beyond recommended operating conditions. Note 3: Characteristics are for the DDX-2100 power device driven by DDX-2000 processor.

DPR1001

## AK4114VQ

# = Target Spec =

## High Feature 192kHz 24bit Digital Audio Interface Transceiver

#### GENERAL DESCRIPTION

The AK4114 is a digital audio transceiver supporting 192kHz, 24bits. The channel status decoder supports both consumer and professionalm odes. The AK4114 can automatically detect a Non-PCM bit stream .W hen combined with the AK4527 multichannel codec, the two chips provide a system solution for AC-3 applications. The dedicated pins or a serial µP I/F can control the mode setting. The small package, 48pin LQFP saves the system space.

\*AC-3 is a tradem ark of Doby Laboratories.

#### FEATURES

- AES3, IEC60958, S/PDIF, EIAJ CP1201 Compatible
- Low jitter Analog PLL
- PLL Lock Range : 32k~192kHz
- Clock Source: PLL or X'tal
- □ 8-channel Receiver input
- □ 2-channel Transmission output (Through output or DIT)
- Auxiliary digital input
- De-emphasis for 32kHz, 44.1kHz, 48kHz and 96kHz
- Detection Functions
  - Non-PCM Bit Stream Detection
  - DTS-CD Bit Stream Detection
  - Sampling Frequency Detection
  - (32kHz, 44.1kHz, 48kHz, 88.2kHz, 96kHz, 176.4kHz, 192kHz)
  - Unlock & Parity Error Detection
  - Validity Flag Detection
- Up to 24bit Audio Data Format
- □ Audio I/F: Master or Slave Mode
- □ 40-bit Channel Status Buffer
- □ Burst Preamble bit Pc and Pd Buffer for Non-PCM bit stream
- □ Q-subcode Buffer for CD bit stream
- □ Serial µP I/F
- □ Two Master Clock Outputs: 64fs/128fs/256fs/512fs
- □ Operating Voltage: 2.7 to 3.6V with 5V tolerance
- Small Package: 48pin LQFP
- □ Ta: -10~70°C

Pin Layout

# M4A3-32/32

## **FEATURES**

- ♦ High-performance, E<sup>2</sup>CMOS 3.3-V & 5-V CPLD families
- Flexible architecture for rapid logic designs
  - Excellent First-Time-Fit<sup>TM</sup> and refit feature
  - SpeedLocking<sup>TM</sup> performance for guaranteed fixed timing
  - Central, input and output switch matrices for 100% routability and 100% pin-out retention
- High speed
  - 5.0ns  $t_{PD}$  Commercial and 7.5ns  $t_{PD}$  Industrial
  - 182MHz f<sub>CNT</sub>
- ◆ 32 to 512 macrocells; 32 to 768 registers
- 44 to 388 pins in PLCC, PQFP, TQFP, BGA, fpBGA and caBGA packages
- Flexible architecture for a wide range of design styles
  - D/T registers and latches
  - Synchronous or asynchronous mode
  - Dedicated input registers
  - Programmable polarity
  - Reset/ preset swapping
- Advanced capabilities for easy system integration
  - 3.3-V & 5-V JEDEC-compliant operations
  - JTAG (IEEE 1149.1) compliant for boundary scan testing
  - 3.3-V & 5-V JTAG in-system programming
  - --- PCI compliant (-5/-55/-6/-65/-7/-10/-12 speed grades)
  - Safe for mixed supply voltage system designs
  - Programmable pull-up or Bus-Friendly<sup>TM</sup> inputs and I/Os
  - Hot-socketing
  - Programmable security bit
  - Individual output slew rate control
- Advanced E<sup>2</sup>CMOS process provides high-performance, cost-effective solutions
- Supported by ispDesignEXPERT<sup>TM</sup> software for rapid logic development
  - Supports HDL design methodologies with results optimized for ispMACH 4A
  - Flexibility to adapt to user requirements
  - Software partnerships that ensure customer success

# FUNCTIONAL DESCRIPTION

The fundamental architecture of ispMACH 4A devices (Figure 1) consists of multiple, optimized PAL<sup>®</sup> blocks interconnected by a central switch matrix. The central switch matrix allows communication between PAL blocks and routes inputs to the PAL blocks. Together, the PAL blocks and central switch matrix allow the logic designer to create large designs in a single device instead of having to use multiple devices.

The key to being able to make effective use of these devices lies in the interconnect schemes. In the ispMACH 4A architecture, the macrocells are flexibly coupled to the product terms through the logic allocator, and the I/O pins are flexibly coupled to the macrocells due to the output switch matrix. In addition, more input routing options are provided by the input switch matrix. These resources provide the flexibility needed to fit designs efficiently.

#### Notes:

- 1. 16 for ispMACH 4A devices with 1:1 macrocell-I/O cell ratio (see next page).
- 2. Block clocks do not go to I/O cells in M4A(3,5)-32/32.
- 3. M4A(3,5)-192, M4A(3,5)-256, M4A3-384, and M4A3-512 have dedicated clock pins which cannot be used as inputs and do not connect to the central switch matrix.

- Simple Drive Requirements

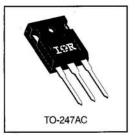

$$V_{DSS} = 400V$$
  
 $R_{DS(on)} = 0.20\Omega$   
 $I_D = 23A$ 

#### Description

Third Generation HEXFETs from International Rectifier provide the designer with the best combination of fast switching, ruggedized device design, low on-resistance and cost-effectiveness.

The TO-247 package is preferred for commercial-industrial applications where higher power levels preclude the use of TO-220 devices. The TO-247 is similar but superior to the earlier TO-218 package because of its isolated mounting hole. It also provides greater creepage distance between pins to meet the requirements of most safety specifications.

# KA3525A

#### Features

- 5V ±1% Reference
- Oscillator Sync Term inal
- InternalSoftStart
- DeadtimeControl
- UnderVoltage Lockout

## Description

The KA 3525A is a monolithic integrated circuit that includes all of the control circuits necessary for a pulse width modulating regulator. There are a voltage reference, an error amplifier, a pulse width modulator, an oscillator, an under voltage lockout, a soft start circuit, and the output driver in the chip.

- Short C incuit Protection
- Output Transistor Safe Operating A rea Protection

## Description

The KA78XX/KA78XXA series of three-term inal positive regulator are available in the TO-220/D-PAK package and with several fixed output voltages, making them useful in a wide range of applications. Each type employs internal current limiting, therm al shut down and safe operating area protection, making it essentially indestructible. If adequate heat sinking is provided, they can deliver over 1A output current. A lihough designed primarily as fixed voltage regulators, these devices can be used with external components to obtain adjustable voltages and currents.
