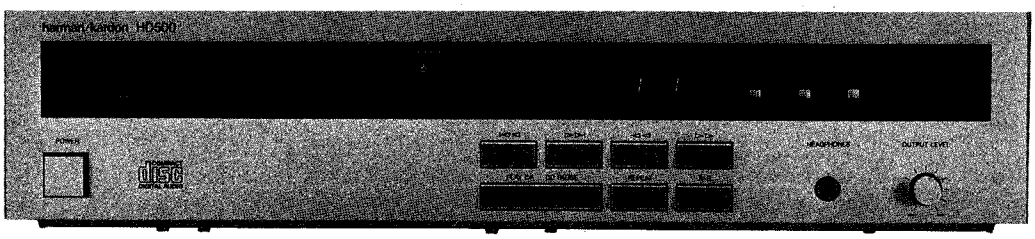
The Harman Kardon
Model HD500

Manual 96A

COMPACT DISC PLAYER

Technical Manual



SPECIFICATIONS

System	Compact Disc Digital Audio
Signal Detection	3-Beam Semiconductor Laser
Error Correction	CIRC System
Sampling Frequency	44.1kHz
Quantization	16 Bit Linear
Channels	2 Channel Stereo
Frequency Response	4—20,000 Hz ±0.5dB
Total Harmonic Distortion	0.01% (1kHz)
Dynamic Range	94dB
Signal-to-Noise Ratio	100dB
Channel Separation	83dB (1kHz)
Wow & Flutter	Immeasurable
Line Output Level/Load Impedance	Variable, Max. 2.4V/10k Ohms
Headphone Output Level/Load Impedance	25mW/32 Ohms
Power Requirements	
USA & Canada models	AC 120V, 60Hz
General model	AC 100/120/220/240 V, 50/60Hz
Power Consumption	20 W
Dimensions (W x H x D)	17-1/2" x 4-1/16" x 13-3/16" (443 x 103 x 335 mm)
Weight	12.8lbs (5.8kg)
Accessories	Stereo Connecting Cords Remote Control AA Battery (x 2)

All specifications and features subject to change without notice.

TABLE OF CONTENTS

SAFETY PRECAUTIONS

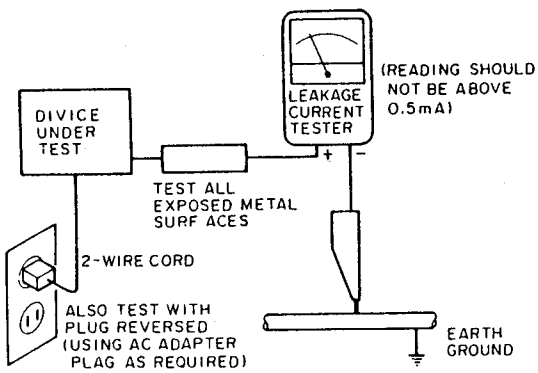
Before returning an instrument to the customer, always make a safety check of the entire instrument, including, but not limited to, the following items:

a. Be sure that no built-in protective devices are defective and/or have been defeated during servicing.
   (1) Protective shields are provided to protect both the technician and the customer. Correctly replace all missing protective shields, including any removed for servicing convenience.
   (2) When reinstalling the chassis and/or other assembly in the cabinet, be sure to put back in place all protective devices, including, but not limited to, nonmetallic control knobs, insulating fishpapers, adjustment and compartment covers/shields, and isolation resistor/capacitor networks. **Do not operate this instrument or permit it to be operated without all protective devices correctly installed and functioning.**

b. Be sure that there are no cabinet openings through which an adult or child might be able to insert their fingers and contact a hazardous voltage. Such openings include, both are not limited to, excessively wide cabinet ventilation slots, and an improperly fitted and/or incorrectly secured cabinet back cover.

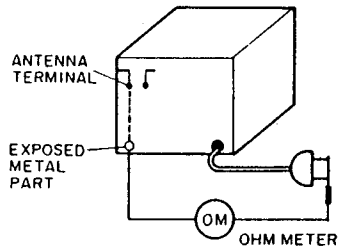
c. **Leakage Current Hot Check** — With the instrument completely reassembled, plug the AC line cord directly into a 120V AC outlet. (Do not use an isolation transformer during this test.) Use a leakage current tester or a metering system that complies with American National Standards Institute (ANSI) C101.1 "Leakage Current for Appliances" and Underwriters Laboratories (UL) 1270, (34.6). With the instrument AC switch first in the ON position and then in the OFF position, measure from a known earth ground (metal waterpipe, conduit, etc.) to all exposed metal parts of the instrument (antennas, handle bracket, metal cabinet, screwheads, metallic overlays, control shafts, etc.), especially any exposed metal parts that offer an electrical return path to the chassis. Any current measured must not exceed 0.5 milliamp. Reverse the instrument power cord plug in the outlet and repeat test. **ANY MEASUREMENTS NOT WITHIN THE LIMITS SPECIFIED HEREIN INDICATE A POTENTIAL SHOCK HAZARD THAT MUST BE ELIMINATED BEFORE RETURNING THE INSTRUMENT TO THE CUSTOMER.**

AC Leakage Test



d. **Insulation Resistance Test**
   (1) Unplug the power supply cord and connect a jumper wire between the two prongs of the plug.
   (2) Turn on the power switch of the instrument.
   (3) Measure the resistance with an ohmmeter between the jumpered AC plug and each **exposed metallic** cabinet part on the instrument, such as screwheads, antenna, control shafts, handle brackets, etc. The reading should be as shown below. If it is not within the limits specified, there is the possibility of a shock hazard, and the instrument must be repaired and rechecked before it is returned to the customer.

e. **Insulation Resistance Test Cold Check**
   (1) Unplug the power supply cord and connect a jumper wire between the two prongs of the plug.
   (2) Turn on the power switch of the instrument.
   (3) Measure the resistance with an ohmmeter between the jumpered AC plug and each **exposed metallic** cabinet part on the instrument, such as screwheads, antenna, control shafts, handle brackets, etc. When the exposed metallic part has a return path to the chassis, the reading should be between 1 and 5.2 Megohm. When there is no return path to the chassis, the reading must be "infinite". If it is not within the limits specified, there is the possibility of a shock hazard, and the instrument must be repaired and rechecked before it is returned to the customer.



2. PRODUCT SAFETY NOTICE

Some electrical and mechanical parts have special safety related characteristics which are often not evident from visual inspection, nor can the protection they give necessarily be obtained by replacing them with components rated for higher voltage, wattage, etc. Parts that have special safety characteristics are identified by shading, by (⚠) on schematics and parts listed. Use of a substitute replacement that does not have the same safety characteristics as the recommended replacement part might create shock, fire, and/or other hazards. Products Safety is under review continuously and new instructions are issued whenever appropriate.

3. SERVICING PRECAUTIONS

CAUTION: Before servicing instruments covered by this service manual and its supplements, read and follow the SAFETY PRECAUTIONS on this page. NOTE: If unforeseen circumstances created conflict between the following servicing precautions and any of the safety precautions, **always follow the safety precautions.** Remember: Safety First.

General Servicing Precautions

a. Always unplug the instrument AC power cord from the AC power source before:
   (1) Removing or reinstalling any component, circuit board, module, or any other instrument assembly.
   (2) Disconnecting or reconnecting any instrument electrical plug or other electrical connection.
   (3) Connecting a test substitute in parallel with an electrolytic capacitor in the instrument.
   Caution: A wrong part substitution or incorrect polarity installation of electrolytic capacitors may result in an explosion hazard.

b. Do **not** defeat any plug/socket B+ voltage interlocks with which instruments covered by this service manual might be equipped.

c. Do **not** apply AC power to this instrument and/or any of its electrical assemblies unless **all** solid-state device heat sinks are correctly installed.

d. Always connect a test instrument's ground lead to the instrument chassis ground **before** connecting the test instrument positive lead. Always remove the test instrument ground lead last.

NOTE: Refer to Safety Precautions on Page 3.
(1) The service precautions are indicated or printed on the cabinet, chassis or components. When servicing, follow the printed or indicated service precautions and service materials.
(2) The Components used in the unit has a specified conflammability and dielectric strength. When replacing any components, use components which has the same ratings. Components marked (⚠) in the circuit diagram are important for safety or for the characteristics of the unit. Always replace with the appointed components.
(3) An insulation tube or tape is sometimes used and some components are raised above the printed wiring board for safety. The internal wiring is sometimes clamped to prevent contact with heating components. Install them as they were.
(4) After servicing, always check that the removed screws, components and wiring have been installed correctly and that the portion around the service part have not been damaged and so on. Further check the insulation between the blades of attachment plug and accessible conductive parts.

Insulation Checking Procedure

Disconnect the attachment plug from the AC outlet and turn the power on. Connect the insulation resistance meter (500V) to the blades of the attachment plug. The insulation resistance between the each blade of the attachment plug and accessible conductive parts (Note 1) should be more than 1M-ohm.

Note 1: Accessible Conductive Parts including Metal panels, Input terminals, Earphone jacks, etc.

ELECTROSTATICALLY SENSITIVE (ES) DEVICES

Some semiconductor (solid state) devices can be damaged easily by static electricity. Such components commonly are called Electrostatically Sensitive (ES) Devices. Examples of typical ES devices are integrated circuits and some field-effect transistors and semiconductor "chip" components. The following techniques should be used to help reduce the incidence of component damage caused by static electricity.

1. Immediately before handling any semiconductor component or semiconductor-equipped assembly, drain off any electrostatic charge on your body by touching a known earth ground. Alternatively, obtain and wear a commercially available discharging wrist strap device, which should be removed for potential shock reasons prior to applying power to the unit under test.
2. After removing an electrical assembly equipped with ES devices, place the assembly on a conductive surface such as aluminum foil, to prevent electrostatic charge buildup or exposure of the assembly.
3. Use only a grounded-tip soldering iron to solder or unsolder ES devices.
4. Use only an anti-static solder removal device. Some solder removal devices not classified as "anti-static" can generate electrical charges sufficient to damage ES devices.
5. Do not use freon-propelled chemicals. These can generate electrical charge sufficient to damage ES devices.
6. Do not remove a replacement ES device from its protective package until immediately before you are ready to install it. (Most replacement ES devices are packaged with leads electrically shorted together by conductive foam, aluminum foil or comparable conductive material).
7. Immediately before removing the protective material from the leads of a replacement ES device, touch the protective material to the chassis or circuit assembly into which the device will be installed.
   CAUTION: Be sure no power is applied to the chassis or circuit, and observe all other safety precautions.
8. Minimize bodily motions when handling unpackaged replacement ES devices. (Otherwise harmless motion such as the brushing together of your clothes fabric or the lifting of your foot from a carpeted floor can generate static electricity sufficient to damage an ES device).

FEATURES

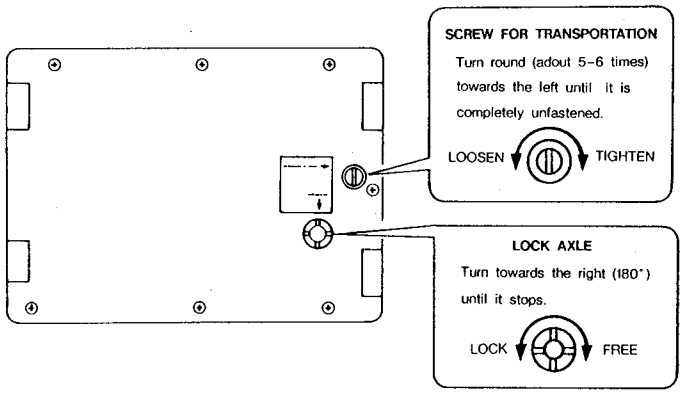
Performance Features

- 3-Beam Laser
- 16-Bit Linear Digital-to-Analog Converter with Digital Filter and 88.2kHz Sampling Frequency
- 4-Pole Analog Filter for Excellent Phase Response
- Ultrawideband, Discrete Analog Amplifiers for Low IM Distortion
- Output Level Control

Convenience Features

- Wireless Remote Control
- 15-Track Programability
- Auto Repeat
- Section Repeat
- Bi-Directional Track Skip
- Bi-Directional Audible Cueing
- Track/Time Display

IMPORTANT



Before plugging the unit in, be sure to loosen the transportation screw and the lock axle on the bottom of the unit with a screw driver.

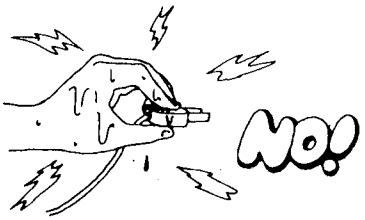
Note:

- Place a cloth under the unit in order to prevent it from being scratched.
- Turn the unit upside down.
- The screw and lock axle can not be removed.
- Be sure to tighten them by the reverse procedure before transporting the unit.

GENERAL INSTRUCTIONS

Safety Precautions

Be sure to observe the following precautions:



■ Power plug

Insert the plug firmly into the socket to avoid electric shocks. When removing the power plug from the wall socket, pull only on the plug head. Never pull the cord itself.

■ Do not open up the cabinet

To avoid electric shocks and fire hazards, do not open the cabinet and attempt to service or modify the unit yourself. Under no circumstances should the cabinet be opened.

■ Avoid touching with wet hands

To avoid the danger of electric shocks, do not touch the electric power cord with wet hands. Dry your hands thoroughly before handling the unit.
If you should accidentally spill water on the unit, contact your sales representative or the nearest authorized Harman Kardon service station.

■ Do not insert any foreign objects into the jacks or the ventilation openings of the unit.

■ Do not cover the ventilation openings

The upper and lower ventilation openings prevent the internal temperature from rising excessively. Therefore, do not place any objects where they will block the air flow from these openings.

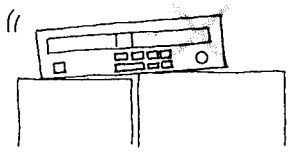
■ Do not place the HD500

- Directly on top of high power amplifiers and other heat generating components.
- On top of carpets or blankets.
- In a place where the air flow is restricted.
- Inside an enclosed space while it is in operation.

Failure to observe the above can cause malfunctions and fires.

■ Unit placement

To prevent the unit from dropping, do not place the HD500 in an unstable location, such as uneven or tilted surfaces.



■ Leaving the unit unattended

When leaving the unit unattended for a long period of time, such as when you are vacationing, be sure to remove the power cord from the wall socket.

Unit Placement

■ **Place the unit as far away as possible from tuners and TV sets.**

This unit uses high frequency signals and therefore accidental signal leakage can cause reception interference in tuners and TV sets. If such should be the case, move the HD500 further away from the tuner or TV set. If you are using an indoor antenna, this should be replaced with an outdoor antenna.

■ Avoid the following locations since not only will they lower the quality of the unit, but are hazardous as well.

Locations:

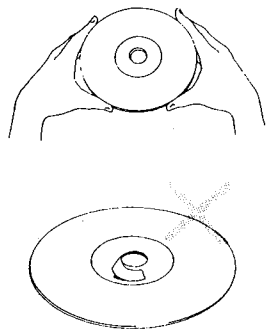
- Subject to high temperatures (in excess of 113°F/45°C). (Be especially careful during summer time.)
- Subject to direct sunlight.
- Excessively cold (under 32°F/0°C)
- Subject to high humidity.
- Close to heat sources.
- With excessive smoke and dust.
- Subject to vibrations.
- Tilted or uneven surfaces or other unstable positioning.
- Where strong magnetic fields are present.

Handling Compact Discs

Dirt, fingerprints, scratches and warps on a compact disc can cause noise. Observe the following precautions to keep your compact discs sounding their best.

■ **Handling compact discs**

Do not touch the playback surface (the rainbow colored side).
Do not attach adhesive tape, stickers, etc. to the disc label.

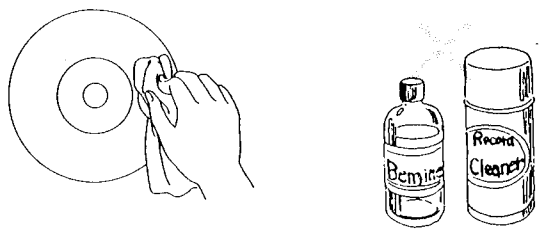


■ **Disc storage**

Avoid storing the discs in locations subject to high temperature, high humidity and direct sunlight. Also do not keep discs inside a closed vehicle as it is often subject to extreme temperatures.

■ **Disc care**

Before playing the disc, wipe off all dust, dirt and fingerprints on the playing surface with a soft cloth. Do not use benzine and record cleaners designed for analog records. Static prevention treatments can also damage compact discs and should therefore be avoided.



Only compact discs with the mark shown below can be used with the HD500.

COMPACT
disc
DIGITAL AUDIO

Handling Precautions

■ Dew formation

Window frames inside a warm room during winter will rapidly accumulate dew on the surface. This unit features a precision lens element. This lens element is also subject to dew formation under the following circumstances:

- When subject to sudden changes in temperature.
- When the room in which the unit placed is subject to high humidity.
- When moving the unit suddenly from a cold to a warm place.

The HD500 will not be able to correctly read the programs under these circumstances, and the player will not operate properly. In such cases, after turning the power switch on, wait for 20 to 30 minutes before operating the unit.

■ Do not remove the cabinet

This unit uses an invisible laser pickup to detect the signals recorded on the compact disc. The HD500 has been designed so that the laser rays will not radiate outside. To avoid laser exposure in case the safety interlocks are defeated or out of action, do not remove the cabinet.

■ Be careful of the laser pickup

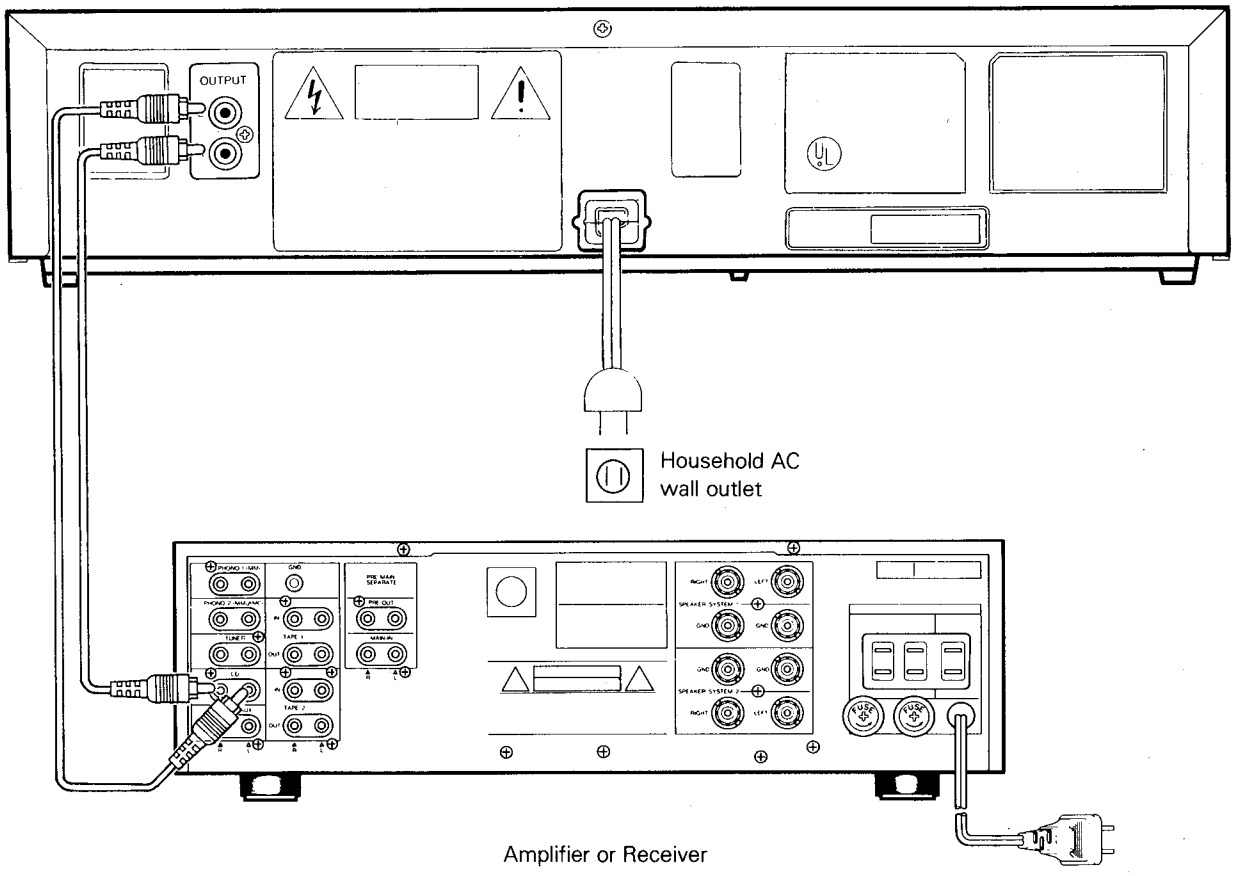
Although you cannot see it from the outside, a laser pickup is located under the disc tray and a precision lens is built in it. Since the laser pickup, including the lens element, is especially sensitive to dust, keep the disc tray closed when not in use. Also do not put your hand inside the unit.

Unit Care

■ Wipe off the cabinet with a soft, dry cloth

Do not apply alcohol, benzine, paint thinners, insecticides, other chemicals and adhesive tape to the cabinet, as these can remove the luster of the cabinet and can also impair the finish. Avoid chemically treated cloth as well.

CONNECTIONS



1. Using the supplied shielded cords with RCA-type plugs, connect the left (L) and right (R) OUTPUT jacks on the rear panel of the unit to the left (L) and right (R) input jacks (CD or AUX) or the TAPE playback jacks on the rear panel of the amplifier or receiver.
2. Plug the power cord of the HD500 into the convenience AC outlet on the rear panel of the amplifier or a household AC outlet.

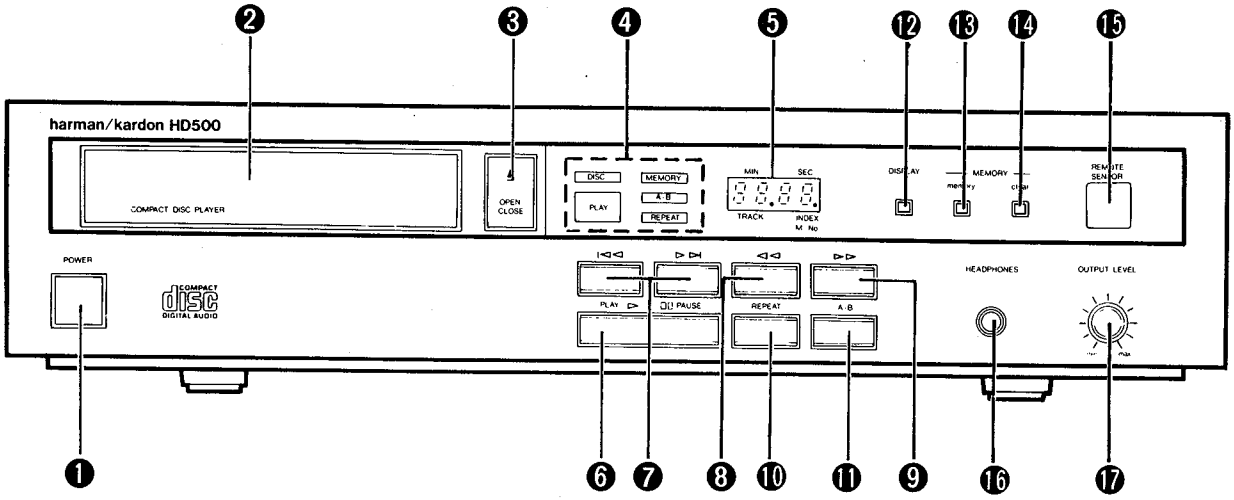
Notes on connection

- Turn off the power switch and disconnect the power cords of all components before making connections.
- Make sure that the left and right jacks of the HD500 are properly connected to the left and right jacks, respectively, of the amplifier or receiver.
- To avoid incomplete connections, be sure that the shielded cords with RCA-type plugs are fully inserted into the corresponding jacks.
- Do not connect the output of the CD player to the phonograph input of the amplifier.

Volume Setting

The digital recording format of compact discs enable them to accurately reproduce all peaks contained in the music signals without noise. Therefore, if attempting to adjust the volume setting as you would for analog record players and cassette tape recorders, by listening to the noise level, the sudden unexpected surge in the amplifier power may harm your speakers. Avoid excessively high volume setting.

CONTROLS AND FUNCTIONS



❶ POWER SWITCH
Press this switch to turn the power of the main unit on and off. Pressing it once will turn the power on, and pressing it once again will turn the power off.

❷ DISC TRAY
By pressing the OPEN/CLOSE button, the tray onto which the discs are loaded will slide out. (See page 9 for details of loading compact discs.)

❸ OPEN/CLOSE BUTTON
Press this button to open or close the DISC TRAY. Press it once to make the DISC TRAY slide out, and again to make the DISC TRAY slide in.

❹ FUNCTION DISPLAY

DISC
Flashes when DISC TRAY is opened or closed. The indicator will light up when the disc has been correctly loaded and the unit is in the standby mode. It will continue to be lit during playback.

REPEAT
Lights when repeat playback has been programmed.

A-B
Lights during repetition of one section of the disc.

PLAY
Lights during playback, or blinks when in pause.

MEMORY
Lights during memory playback.

❺ TIME/TRACK DISPLAY
Displays elapsed playback time from the beginning of the program being played, or displays the track and index number during playback.

❻ PLAY/PAUSE BUTTON
Press this button to start playback. Pressing this button during playback activates the pause mode. Playback continues when this button is pressed again. Playback stops if this button is held down for more than two seconds.

❼ PROGRAM SELECTION (SKIP) BUTTONS
(⏮, ⏭)
⏮: Pressing this button once skips playback backward to the beginning of the present program. Holding the button down skips playback backward to the beginning of previous programs.
⏭: Pressing this button once skips playback forward to the beginning of the next program. Holding the button down skips playback forward to the beginning of subsequent programs.

❽ REVERSE BUTTON (◁◁)
Pressing this button starts low speed reverse. Holding the button down longer than three seconds changes the reverse mode to high speed. Sound can be heard at a reduced level in this mode.

❾ FAST-FORWARD BUTTON (▷▷)
Pressing this button starts low speed fast-forwarding. Holding the button down longer than three seconds changes the fast-forward mode to high speed. Sound can be heard at a reduced level in this mode.

⑩ REPEAT BUTTON
Pressing this button enables continuous repeat playback of the disc. Pressing this button again disables the repeat playback mode.

⑪ A–B REPEAT BUTTON
Use this button to specify the beginning and end points for section repetition.

⑫ DISPLAY BUTTON
Press to change the display. When pressed, display is switched between the elapsed playback time of a track and the program and index number.

⑬ MEMORY BUTTON
Used to program the memory for non-sequential playback of disc tracks.

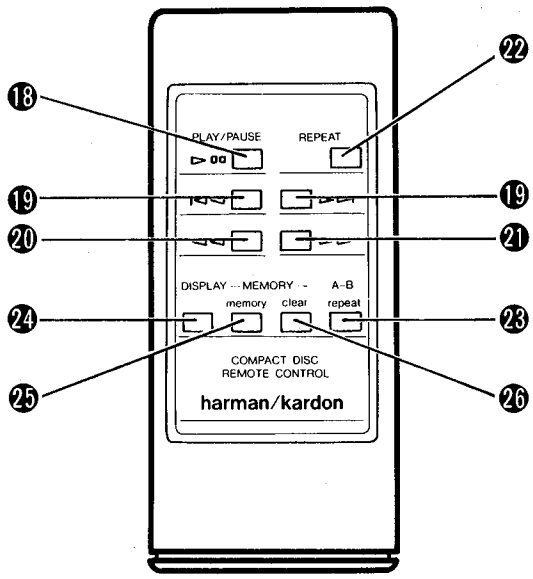
⑭ MEMORY CLEAR BUTTON
Pressing this button clears the entire contents of the memory.

⑮ REMOTE CONTROL SENSOR
Receives signals from the supplied remote control unit.

⑯ HEADPHONES JACK
Connect the headphone plug to this jack for private listening.

⑰ OUTPUT LEVEL CONTROL
This control adjusts the volume level of the rear panel OUTPUT jacks and the HEADPHONES jack. Volume increases when turned to the right.

Remote Control



⑱ PLAY/PAUSE BUTTON
Same as ⑥.

⑲ PROGRAM SELECTION BUTTON (⏮◁, ▷⏭)
Same as ⑦.

⑳ REVERSE BUTTON (◁◁)
Same as ⑧.

㉑ FAST-FORWARD BUTTON (▷▷)
Same as ⑨.

㉒ REPEAT BUTTON
Same as ⑩.

㉓ A–B REPEAT BUTTON
Same as ⑪.

㉔ DISPLAY BUTTON
Same as ⑫.

㉕ MEMORY BUTTON
Same as ⑬.

㉖ MEMORY CLEAR BUTTON
Same as ⑭.

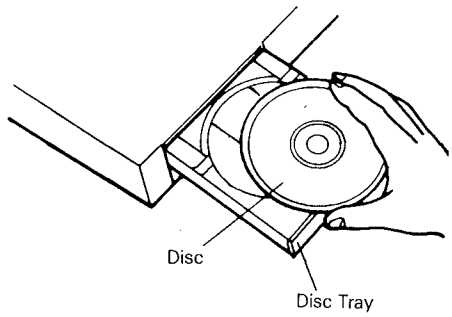
- When changing the batteries of the remote control, insert the batteries with their polarity aligned according to the diagram on the back of the battery case.
- 2 AA size (UM-3) batteries are recommended.

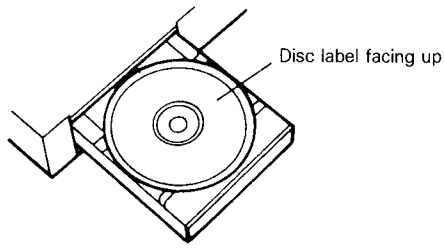
OPERATIONS

Loading Compact Discs

1. Press the POWER switch to turn on the power.
2. Press the OPEN/CLOSE button to slide out the DISC TRAY.
3. Place the disc label facing up.
   Center, the disc on the tray.
4. Press the OPEN/CLOSE button to close the DISC TRAY.

   Pressing the PLAY button even when the DISC TRAY is open, closes the tray and begins play-back from the first program.

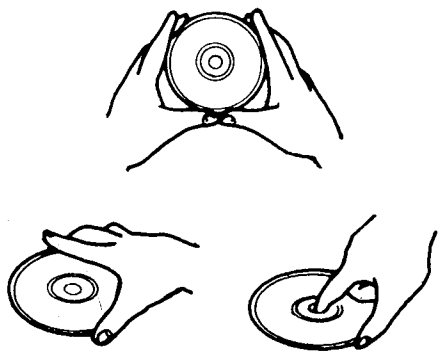




CAUTION

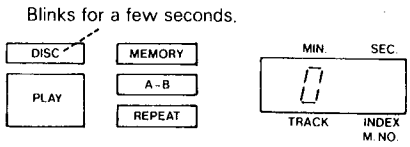
Wait until the disc holder is completely open before loading the compact disc. Failure to observe this precaution can result in damage to the disc.

To prevent fingerprints from getting on the disc, handle it only by the edges or center, as shown in the illustration below.



Playing a Disc

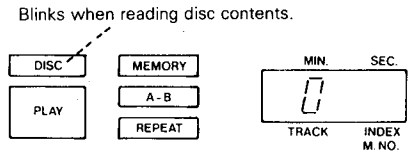
1. Press the POWER switch.

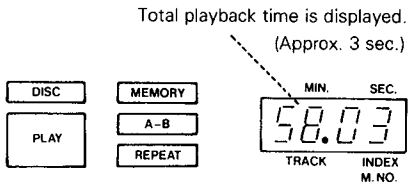


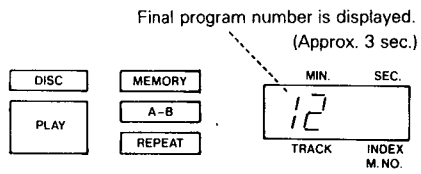
2. Press the OPEN/CLOSE button.
(DISC TRAY opens)

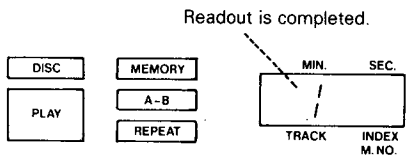
3. Carefully insert disc.
(Label side up)

4. Press the OPEN/CLOSE button.

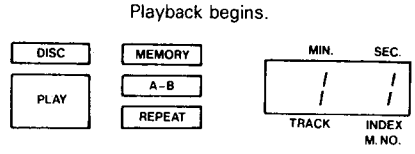








5. Press the PLAY/PAUSE button.



- The DISC TRAY will also close if step 5, pressing the PLAY/PAUSE button, is carried out instead of step 4. In this case, the unit will directly commence playback from the beginning of the first program.

- To Temporarily Halt Playback
Pressing the PLAY/PAUSE button causes the unit to enter the pause mode. The PLAY indicator will blink. Pressing the PLAY/PAUSE button again defeats the pause mode and re-enters the play mode.

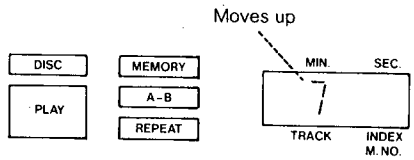
- Stopping Playback
When the PLAY/PAUSE button is pressed for more than 2 seconds, the disc stops turning and the unit enters the ready mode.

- Removing a disc
Pressing the OPEN/CLOSE button opens the DISC TRAY.

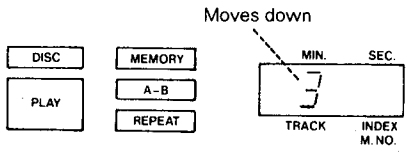
Desired Program Playback

This feature allows you to move forward or backward directly to a desired program, skipping the rest. This function can be activated from any mode (disc set, play, pause).

1. To skip forward, press the ▷▷| button until the desired track appears in the DISPLAY.



2. To skip backward, press the |◁◁ button until the desired track appears in the DISPLAY.

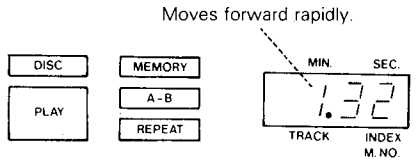


- When the DISC TRAY is open, the track number is set using the ▷▷| or |◁◁ buttons, and the operation will be carried out when the DISC TRAY is closed using the PLAY/PAUSE button.

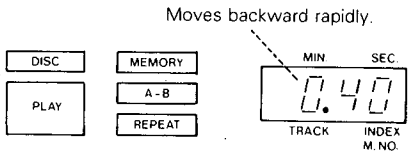
Audible Search

This feature can allows you to search either forward of backward to find a desired location. In addition, low volume audio can be heard.

1. To search forward, press and hold the ▷▷ button.



2. To search backward, press and hold the ◁◁ button.



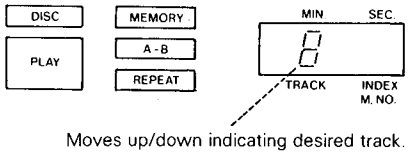
- Rapid, non-audible search, both fast-forward and backward, can be activated from pause mode.

Programming the Memory

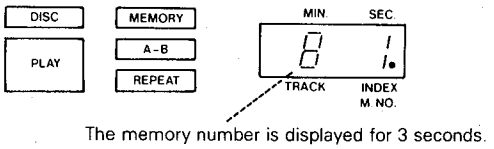
This feature allows you to select certain desirable programs, in any order, for playback, automatically skipping the rest. A maximum of 15 programs can be entered into the memory.

1. Pressing the PLAY/PAUSE button for more than 2 seconds changes the mode to the stop mode.

2. Press the ▷▷| or |◁◁ button until the desired track is displayed.



3. Press the MEMORY button.



The MEMORY indicator blinks for approx. 3 seconds when the memory is being registered.

4. Repeat steps 2 and 3.

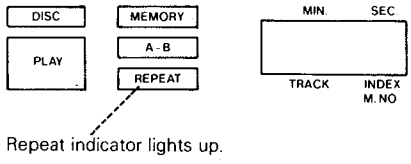
A maximum of 15 tracks can be entered into the memory.
(Full is displayed when a 16th entry is attempted.)

5. Press the PLAY/PAUSE button to begin memory playback.

- When clearing the memory, press the MEMORY CLEAR button.
- If the ▷▷| or |◁◁ button are pressed during memory playback, only those tracks registered in the memory will be skipped. The contents of the memory may be verified by doing this while in the pause mode.

Repeat Playback

This feature allows you to repeat all tracks on the disc, or the programs selected in memory. To activate, press the REPEAT button.



Repeat indicator lights up.

To release repeat function, press the REPEAT button again.

Repeat One Section of the Disc

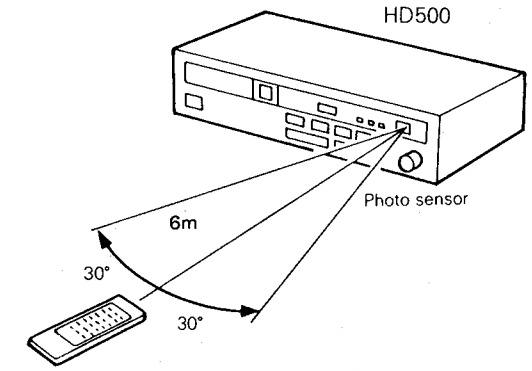
1. During playback, press the A—B REPEAT button at the beginning of the desired section. The A—B indicator blinks, and the starting point for repeat playback is set.
2. Press the A—B REPEAT button again during playback at the end of the desired section. The A—B indicator will remain lit, and the end point for repeated playback is set. The set section will be repeated continuously.
3. To discontinue an A—B repeat, press the REPEAT button.

Timer Playback

When the disc is set and the power is turned on, playback will begin automatically. In this way, operation of this unit together with a timer allows playback to begin automatically from a desired time.

Operational Range of Remote Control Unit

Use the remote control unit within the range shown in the diagram below.



Remote control unit

TROUBLESHOOTING CHECKLIST

Check items listed below before requesting repair service. This may prove time saving in the long run.

Problem	Cause	Remedy
The unit will not play although the disc has been loaded.	• The disc has been loaded upside down. • The disc is dirty. • The disc is scratched. • The disc is excessively warped. • Condensation has formed on the disc or optical head. • The disc does not conform to the appropriate standards.	• Reinsert the disc. • Clean the disc. • Replace the disc with a new one. • Replace the disc with a new one. • Wait for 20—30 minutes before operating the unit. • Use a different disc.
Certain portions of the disc do not play.	• The disc is dirty. • The disc is scratched.	• Clean the disc. • Skip over the scratched portion during playback.
The sound is distorted.	• Check the amplifier and CD player connections.	• Connect the amplifier and player together correctly.
Nothing happens when function keys are pressed. The display has characters that are neither numbers or letters.		• Turn the power off and then back on again.

REMOVING THE CABINET

1. **Removal of Cover** (Figure 1)
   Remove screws (A), then lift and remove the cabinet as shown in Figure 1.

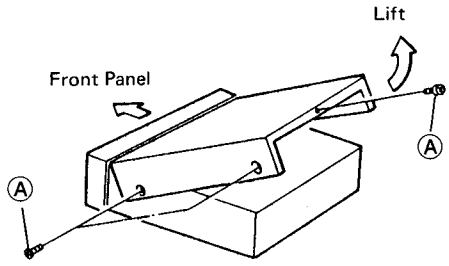

Figure 1

2. **Removal of Servo PCB Assembly**
   The servo PCB rises when the bottom panel (seven screws) and the two (B) screws are removed. (Figures 2 and 3)
   Remove the PCB supports and connectors (P101, P102, P103, W202, and W203) to allow for removal of the servo PWB assembly.

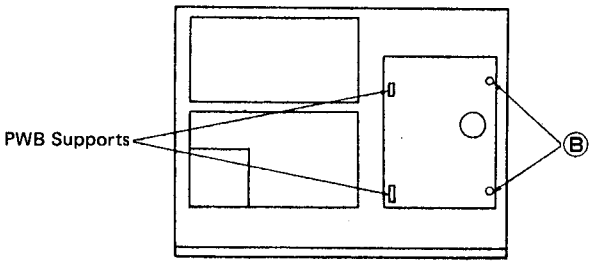

Figure 2

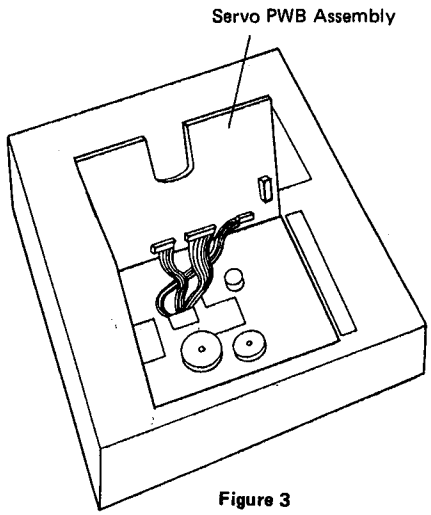

Figure 3
As Seen From Below

3. **Removal of Front Panel**
   Open the disc holder and remove the ornament. (Figure 4)
   Remove the cover, the five screws fastening the front panel (two on top, 3 on buttom), then release the catches located on both sides of the chassis.

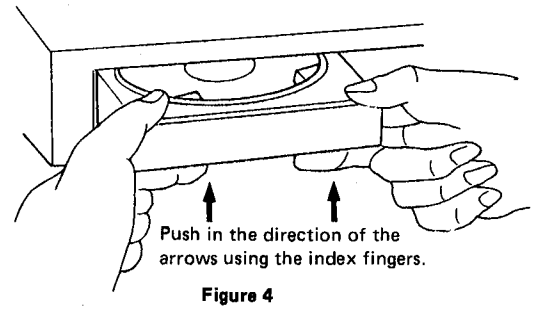

Figure 4

4. **Removal of Front PCB Assembly**
   Remove the front panel, connectors P401 and P402, the three screws (C), and catches (D). (Figure 5)

5. **Removal of Main PCB Assembly**
   Remove the cover and the five (E) screws and (G) screws holding the output jack (Figure 5).

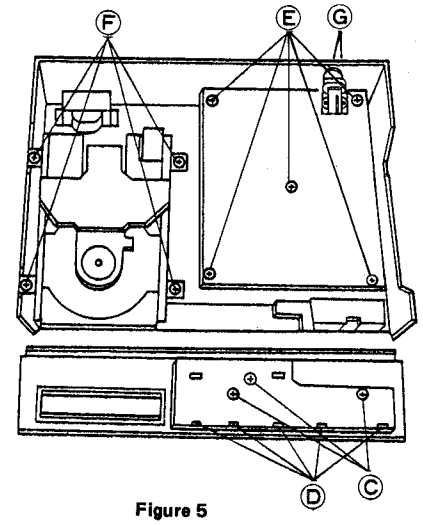

Figure 5

6. **Removal of Mechanism Unit**
   Remove the cover, the four (F) screws, and the P201 – P204 connectors on the main PCB assembly.

DISASSEMBLING THE MECHANISM UNIT

1. **Removal of Optical Pickup (Be sure to read 1—4 before replacement)**
   (1-1) Remove the optical pickup located on the servo PCB assembly, as well as the P101, P102, and P103 connectors. (Refer to page 11 for procedure for cabinet removal)
   (1-2) Remove the six (H) screws fastening the clamper, the spring, and finally the clamper. (Figure 6)

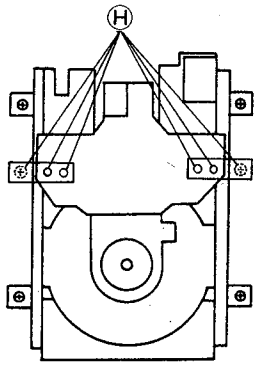

Figure 6

(1-3) Pull out the table then remove the (K) screw, allowing for removal of the optical pickup rail by rail. (Figure 7)

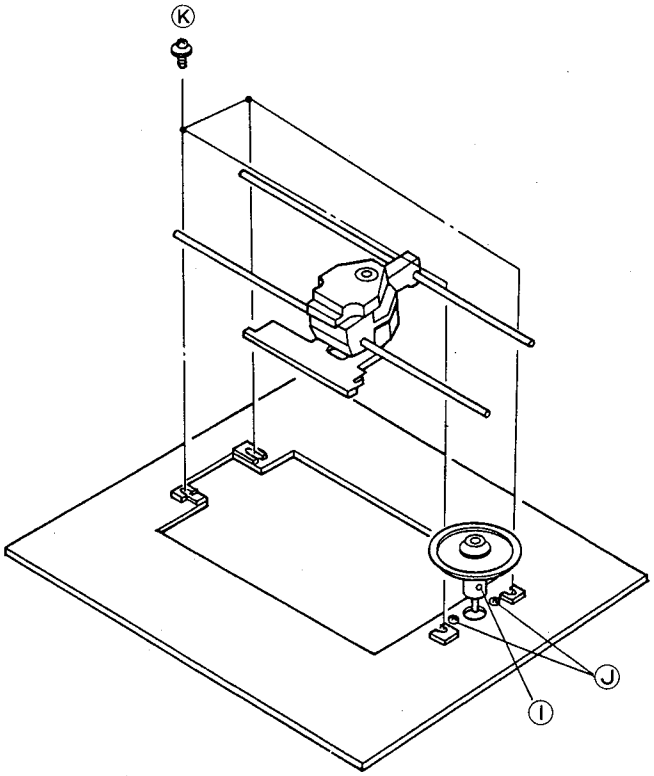

Figure 7

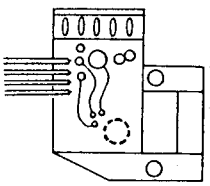
(1-4) Caution When Replacing
The optical pickups which are held in stock at parts centers are short-circuited and soldered.
(1) Connect the connectors (P101, P102, P103) to the servo PCB assembly.
(2) Check that the there is no leak in the soldering iron before removing the soldering. (Voltage below 10mV.)

If the leak voltage of the soldering iron is not known, short-circuit servo PCB TP109 and TP110 then remove the soldered portion of the optical pickup.



NOTE:
The ◌ portion of the Optical pickups available at your parts center is short-circuited and soldered.

Figure 8

2. **Removal of Spindle Motor (Figure 7)**
   (2-1) Perform instructions (1-1) and (1-2) for removal of the optical pickup.
   (2-2) Use a 2.0mm hexagonal wrench to loosen the special screw (I) and remove the turntable.
   (2-3) Remove the two (J) screws to allow for removal of the spindle motor.
   (Use the turntable base spacer jig to set to the height of the turntable upon assembly.)

2-1 VR and TP Layout for Servo PCB Adjustment

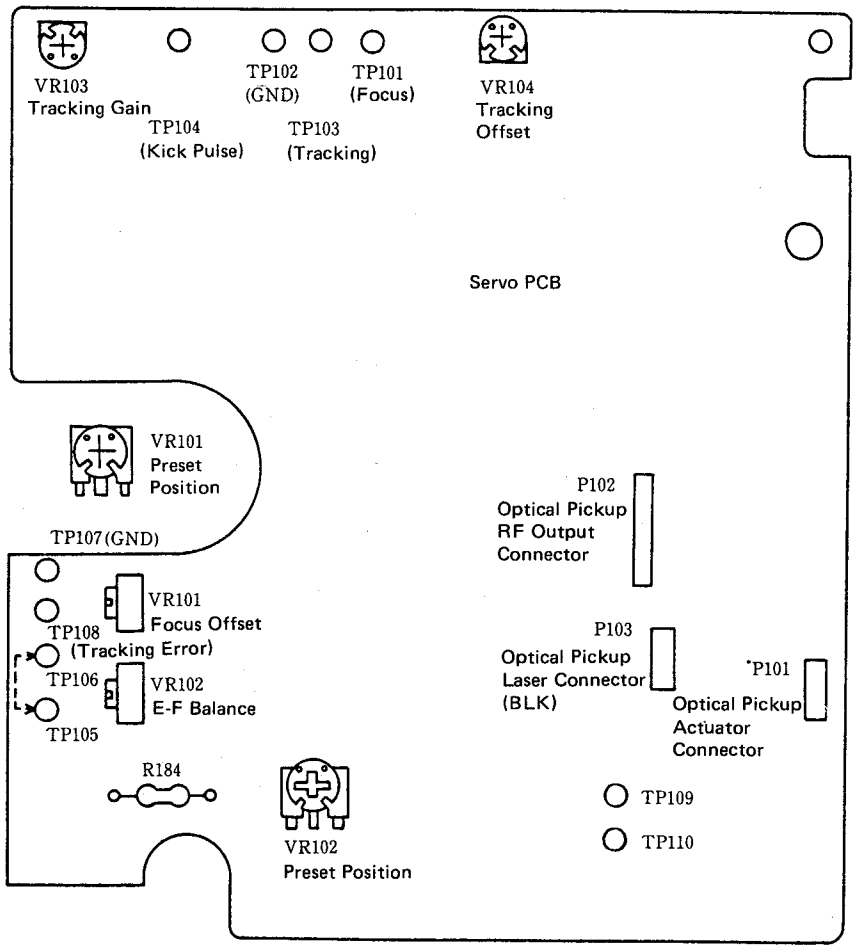

Figure 9

NOTE: The above VR directions are for the preset mode.

2-2 Coil and TP Layout for Main PCB Adjustment

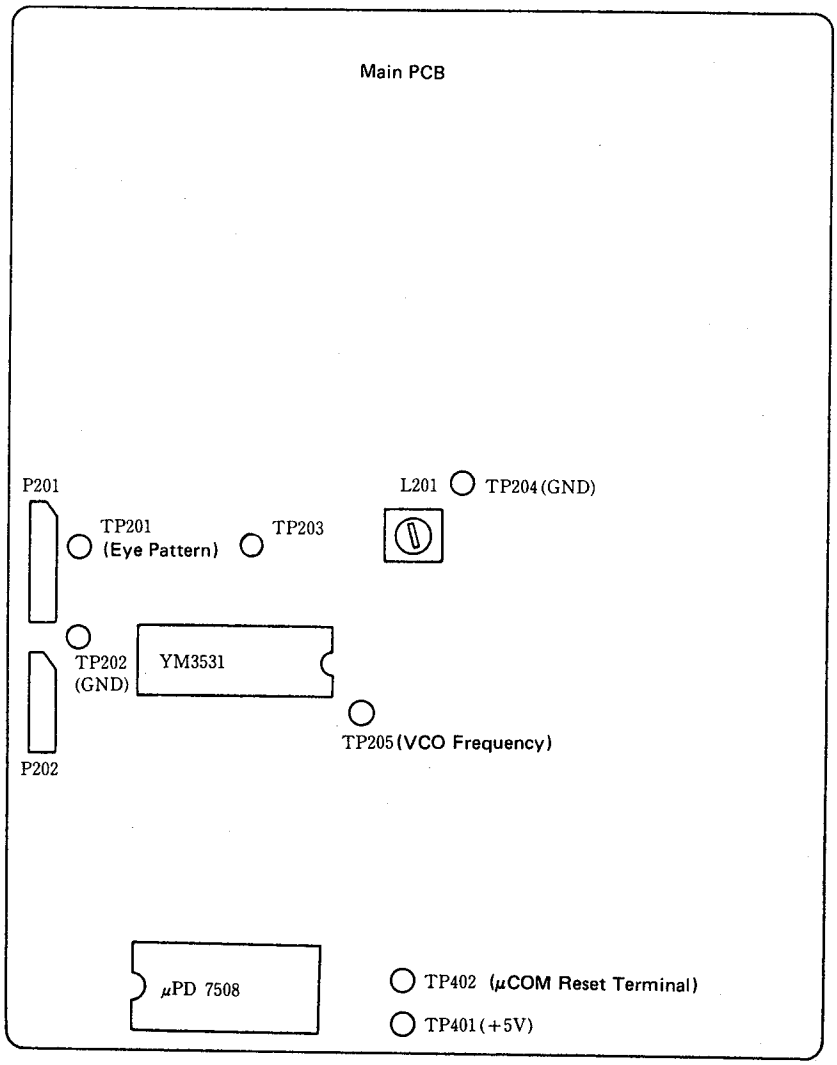

Figure 10

3. Optical Pickup Laser Power Check

(1) Short-circuit TP105 and TP106 located on the servo PWB.
(2) Remove the cabinet, place the optical power meter against the pickup, and check that the power is between 0.15mW and 0.4mW.

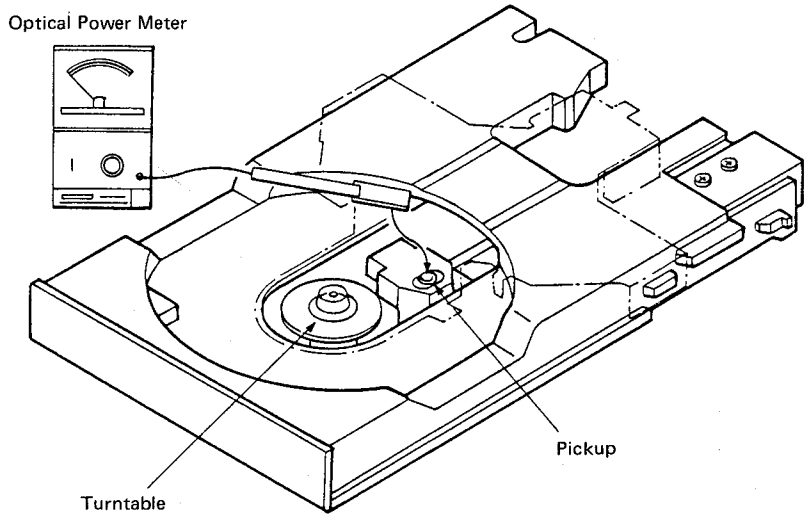

Figure 11

4. Adjustment of Main PWB

4-1 VCO Frequency Adjustment (Set is No signal).
(1) Connect the frequency counter to TP205 (CLK) and TP204. (Figure 12)
(2) Remove wire connector W201, turn the power switch on, and short-circuit TP201 and TP202.
(3) Rotate the L201 core and adjust so that the frequency counter shows a value of 4.322MHz ± 0.005MHz.
(4) After adjusting, turn the power off and connect the W201 wire connector.

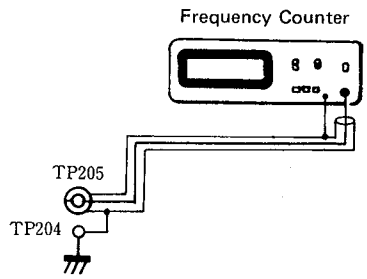

Figure 12

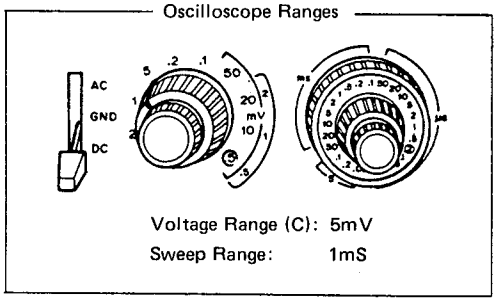
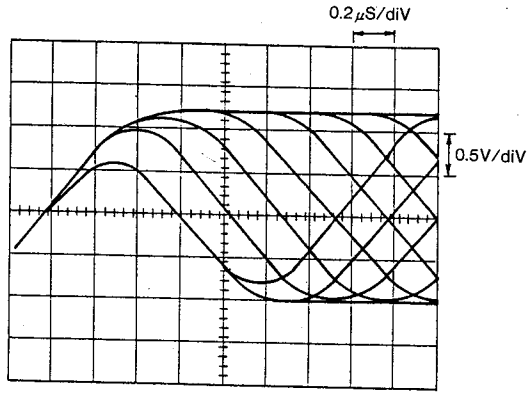
5. Adjustment of Servo PWB

5-1 Setting of Initial Volume
Before adjusting, preset all semi-fixed resistors.
Mechanically center VR101, 102, 103, 104 . . . .

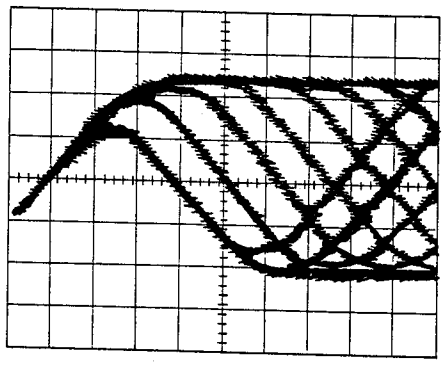
5-2 Tracking Offset Adjustment
(1) Rotate VR103 clockwise.
(2) Connect TP105 and TP106, and without inserting a disc adjust VR104 so that the voltage of TP103 (tracking coil output) and TP102 (GND) is of 0 ± 5mV.
(3) Disconnect TP105 and TP106, then preset VR103 to the mechanical center.



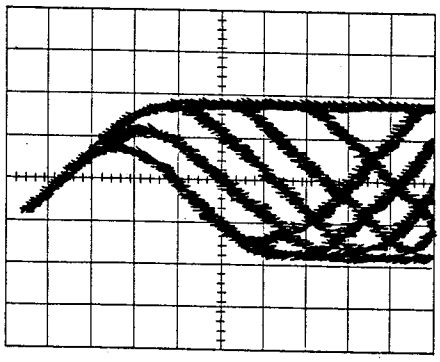
5-3 Focus Offset Adjustment:
with power switch off and no disc.
(1) Check that the optical pickup connector P103 is properly connected.
(2) Short-circuit TP109 and TP110, and remove the short-circuited portion of the optical pickup using a soldering iron. (Take sufficient measures against static electricity)
(3) Connect the voltmeter to both ends of R194 (50Ω).
(4) Connect TP105 and TP106 together. (Laser On)
(5) Turn the power switch on compute a current from voltage on both ends of R184, and check that the difference compared to the optical pickup indication (figure 14) is within +10mA for the + side and -10mA for the - side. Next turn the power switch off and disconnect the voltmeter.
(6) Turn the power back on, set the Philips Test Sample 4 test disc, and observe the TP201 output waveform (eye pattern).
(7) Adjust VR101 so that the eye pattern level becomes high and the waveform becomes distinct (so that the lines do are not thick). (Figure 13)



Focus Offset VR Adjustment



Focus Offset VR at Maximum
(Level is high but waveform is unclear)



Focus Offset VR at Minimum
(Level is low and waveform is unclear)

Figure 13 Focus Offset VR Eye Pattern Waveforms

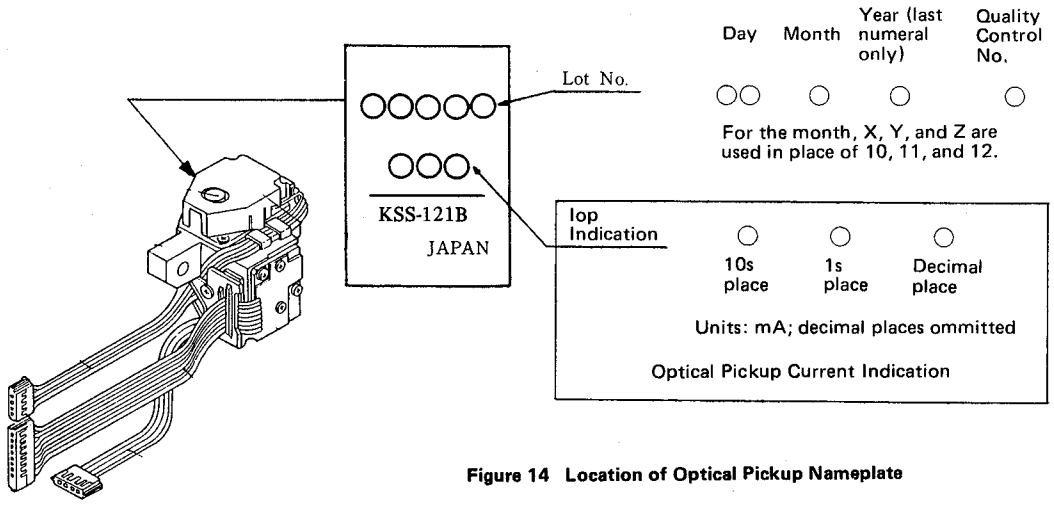


Figure 14 Location of Optical Pickup Nameplate

5-4 E-F Balance Adjustment (Supplementary Beam Balance Adjustment)

(1) Turn the power off and connect TP105 and TP106.

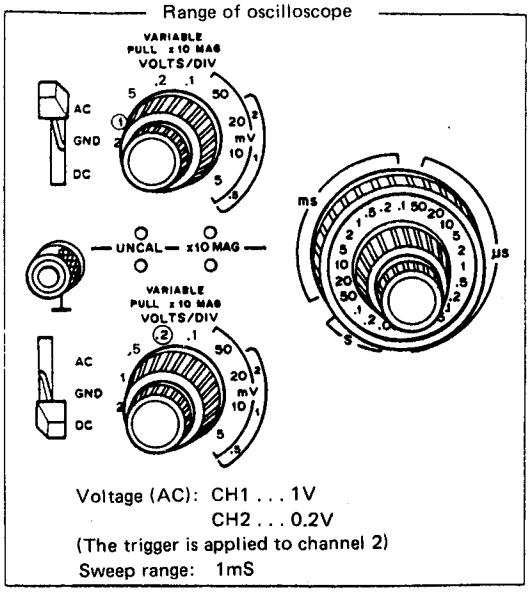
(2) Connect the oscilloscope between TP201 (eye pattern output) and TP202 (GND), and also between TP108 Tracking error and TP107 (GND).

(3) Turn the power switch, insert the Philips Test Sample 5 test disc and playback from the first selection. selection.

(4) Connect the main PWB TP402 (reset pin) and TP401 (+5V).
(As the microprocessor is in the Reset mode, the LED does not light)

(5) Rotate VR103 (tracking VR) clockwise.

a) Oscilloscope Ranges
b) Voltage Range (AC): CH1 . . . . 1V
CH2 . . . . 0.2V
c) (Set trigger on CH2)
d) Sweep Range: 1mS



(6) Observe the tracking error waveforms (Figure 15) and adjust VR102 so that the GND line is positioned at exactly half the waveform P-P value.

(7) Turn the power switch off, disconnect the oscilloscope, TP401 and TP402, and set VR103 to the mechanical center.

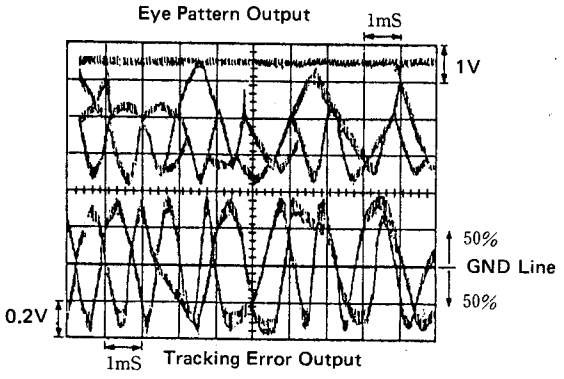


Figure 15

5-5 Tracking Gain Adjustment

(1) Insert the Philips Test Sample 4 test disc (non-scratched), observe the noise voltage on the voltmeter, and adjust VR103 so that the noise voltage on TP103 and TP102 is of 0.3V RMS ± 0.01V. (Figure 16)

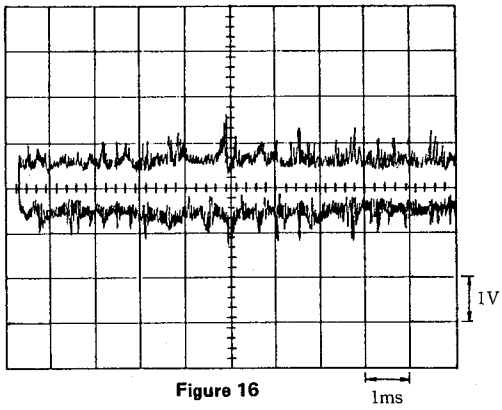

Figure 16

5-6 Kick Gain Adjustment

(1) Connect TP201 (eye pattern) and TP202 (GND) to CH1 on the oscilloscope, and TP104 (lens kick pulse) and TP102 (GND) to CH2.

(2) Insert the Philips Test Sample 4 test disc and check the size of the TP201 (eye pattern) output waveform. (Figure 17)

(3) Pause at selection 10 on the Philips Test Sample 4 test disc.

Oscilloscope Range:

Voltage Range (AC): CH1 . . . 1V
CH2 . . . 2V

Sweep Range: 0.2mS

Set a trigger on the leading edge of the TP104 waveform on CH2 (lens kick) and observe the TP201 waveform. (Figure 18)

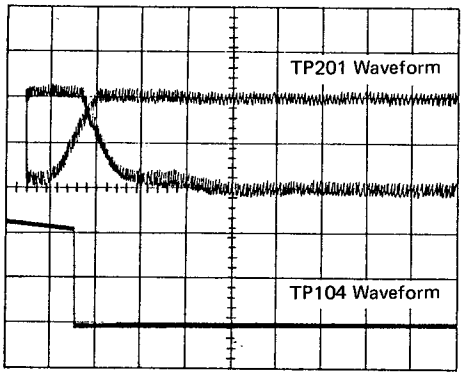
REW Waveform



FF Waveform

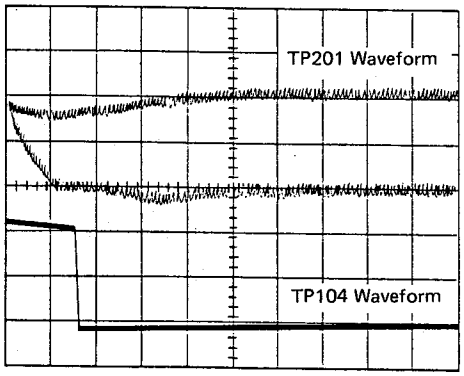


Figure 18 Eye Pattern Waveforms Upon Track Jump

6. Mechanism Unit Adjustment

6-1 Adjustment of Turntable Height (Figure 16)

(1) Loosen screw Ⓘ and insert the turntable base spacer.

(2) Rotate the turntable, check that there are no gaps or rattling, then tighten screw Ⓘ

(3) If there is no turntable base spacer, adjust to a height of 18.8mm.

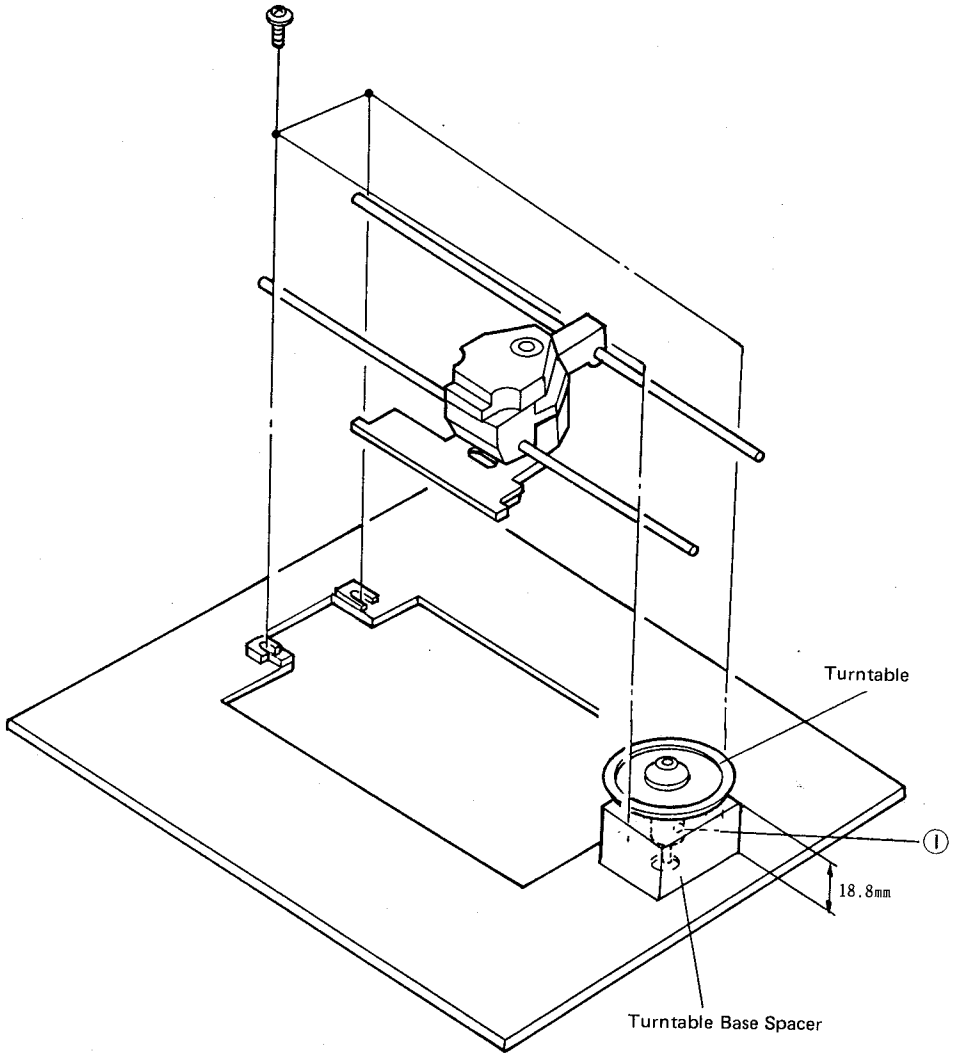

Figure 19

7. Operation Check

7-1 Playability

Use the Philips Test 5A (scratched) test disc, play the following portions and make sure no tracks are jumped.

(1) Wedge (Interruption)

700 μm Selection 8 0'00" – 0'30"

(2) Black Spot (Black Dot)

600 μm Selection 13 4'10" – Selection 14 0'30"

(3) Fingerprint

Selection 19 0'00" – 0'30"

6-2 Discs for Adjustments

	Adjustment	Disc	Check
1	Frequency Response	SONY TEST CD TYPE III	20Hz – 20kHz $^{+0.5}_{-0.7}$ dB
2	Distortion Rate	SONY TYPE III Selection 1	0.05% or below
3	S/N	SONY TYPE III Selection 1 PLAY/PAUSE	93dB or greater
4	Emphasis Response	SONY TYPE III Selection 39 – 41	(39) 1kHz –0.37dB ±0.5dB (40) 5kHz –4.53dB ±0.5dB (41) 16kHz –9.04dB ±0.5dB
5	Cross Talk	SONY TYPE III Selection 30 (L), Selection 34 (R)	75dB or greater

TROUBLE SHOOTING

1. Does not initialize

"E" (error) appears on display — YES →
- Door close switch defective

NO ↓

"DISC SET" display does not go off — YES →
- Pickup inner switch defective
- Check pickup slide mechanism (rack installation etc.)
- Check pickup FEED motor and circuit

NO ↓

Does disc rotate properly after disc holder is closed? — NO →
- Check spindle motor driving circuit
- Spindle motor defective
- Friction between disc and disc holder

YES ↓

Is pickup laser output normal? — NO →
- Check APC circuit
- Check pickup (laser current)

YES ↓

Is focus search waveform output from TP101? — NO →
- Check focus search circuit
- Check IC201 (12 pin)
- Pickup defective (laser)

YES ↓

Does pickup lens move vertically? — NO →
- Check pickup connector
- Pickup defective (actuator)

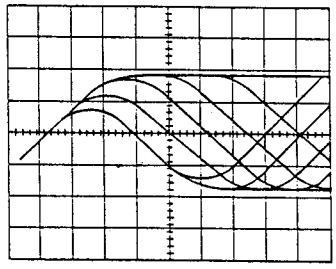
YES ↓

Do FRF and FZC become "active"? — NO →
- Check focus offset adjustment
- Check for improper turntable height
- Check RF pre-amp circuit
- Check pickup (photodiode)

YES ↓

Is eye pattern level normal? (2Vp-p ± 0.5V) — NO →
- Focus offset adjustment improper
- Pickup objective lens dirty
- Check RF pre-amp circuit, RF circuit

YES ↓



Eye Pattern

Is bit synchronization normal? —NO→
- PLL adjustment improper
- Friction between disc and disc holder

YES ↓

Is TP104 kick pulse waveform normal? —NO→
- Check tracking control circuit
- Check IC201 control pin

3. IC201 Terminal Functions

Terminal number	Terminal code	I/O	Outline of functions
1	VDD	I	+5V power supply terminal
2 3	VCOX VCOI	0 I	The LC resonance circuit is connected between these terminals. These terminals are used for the VCO clock oscillation (average 8.6436MHz).
4	PCO	0	This is the VCO clock control output terminal. This sets the VCO clock oscillation circuit so that the frequency increases when the average DC voltage between these terminals is high.
5 20	VCC VSS	I I	These are the grounding terminals.
6 7	EFMX $\overline{\text{EFMX}}$	0 0	Connect to the EFM signal slice level control circuit. This is the amplification-limited EFM signal output terminal. 8 > 7. The gain of 7 > 6 is 15.
8	EFMI	I	Input the EFI signal (1 – 2VPP) into this terminal
9	SYEQ	0	This is the monitor output terminal that gives a "H" level signal when the synchronization signal of the EFM pattern and the synchronization signal of the internal counter correspond.
10 11	DM + DM -	0 0	These are the PWM output terminals, connected to the disc motor drive circuit. It is not possible for both terminals to register "H" simultaneously.
12	FCS	0	This is the focusing output terminal.
13	$\overline{\text{FZC}}$	I +	Based on the focus error signal, a "L" signal will be input when the focus point is reached.
14	FRF	I	A "H" signal will be entered into this terminal when reflected light is received.
15	HF	I	The EFM envelope signal (amplitude logic level) is entered into this terminal.
16	TER	I	The tracking error signal (amplitude logic level) is entered into this terminal.
17	$\overline{\text{TEST}}$	I +	This test terminal is to be grounded, and contains pull-up resistors.
34	TCL	I +	This test terminal is ungrounded, and contains pull-up resistors.
18	TROF	0	This is the output terminal that switches off the tracking signal of the tracking servo circuit.
19	TRGL	0	This output terminal minimizes the gain of the tracking servo circuit.
20	TRHD	0	This output terminal holds the tracking error signal of the tracking servo circuit while KP+ or KP- (see below) are being output.
22 23	KP + KP -	0 0	These output terminals are for the track kick function, and are connected to the tracking servo circuit.
24	FEOF	0	This output terminal is used to switch off the input signal of the feed servo circuit.
25 26	FEM + FEM -	0 0	These output terminals are for the high-speed feed function, and are connected to the feed servo circuit.
27	WQ	0	This request output terminal is connected to μCOM, and requests that data data be sent from SVC > μCOM.

Terminal number	Terminal code	I/O	Outline of functions
28	R/W	O	This output terminal is connected to μCOM, and is used for the switching of the data transmission mode. When R/W = "L", data is transmitted from SVC > μCOM, and when R/W = "H", data is transmitted from μCOM > SVC.
29	DOUT	O	This data output terminal is connected to μCOM. When R/W = "L", data can be transmitted from SVC > μCOM according to the SCK clock input.
30	DIN	I	This data input terminal is connected to μCOM. When R/W = "H", data is transmitted from μCOM > SVC according to the SC key clock input.
31	SCK	I	Connected to μCOM, this terminal is for the clock input, required for data transmission.
32	XFSY	I	This is the frame synchronization signal (7.35kHz) input terminal, connected to the SCG output.
33	φ4	I	This is the crystal clock (4.321MHz) input terminal, connected to the SGP output.
35	RCX	I +	Connected to μCOM, this terminal is for the clock input, required for the subcode transmission. It is disconnected when not being used.
36	VFSY	O	This is the VCO frame synchronization signal (average 7.35kHz) output terminal, connected to μCOM. Detecting the change from "H" > "L", this can be used as a request signal, requesting that the subcode be transmitted from SVC > μCOM.
37	SUB	O	This is the subcode output terminal, connected μCOM. The subcode can be transmitted from SVC > μCOM, according to the $\overline{RCK}$ clock input.
38	DSY	O	This is the synchronization signal output terminal for the serial signals (see below), connected to the SGP input.
39	DATA	O	This is the serial signal output terminal for the 8 bit EFM demodulation signals and the 5 bit control signals, connected to theSGP input.
40	CK	O	This is the VCO clock (average 4.3218MHz) output terminal, connected to the SGP input.

4. IC202 Terminal Functions

Terminal number	Terminal code	I/O	Outline of functions
1 17	VSS VSS	I I	These are the grounding terminals.
2 3 7 8	$\overline{\text{TEST 1}}$ $\overline{\text{TEST 2}}$ $\overline{\text{TEST 3}}$ $\overline{\text{TCL}}$	I + I + I + I +	These test terminals are ungrounded, and contain pull-up resistors.
4	CK	I	This is the VCO clock (average 4.3218MHz) input terminal, connected to the SVC output.
5	DATA	I	This is the serial signal input terminal for the 8 bit EFM demodulation signals and the 5 bit control signals, connected to the SVC output.
6	DSY	I	This is the synchronization signal input terminal for the serial signals (see above), connected to the SVC output.
9	ϕ4	O	This is the crystal clock (4.3218MHz) output terminal, connected to the SVC input.
10	$\overline{\text{XFSY}}$	I/O	This is the frame synchronization signals (7.35kHz) output terminal, connected to the SVC input. (During test operations, the synchronization can be resynchronized by setting this terminal to the "L level".)
11 12 13 14 15 16 18 19 20 21 24	A0 A1 A2 A3 A4 A5 A6 A7 A8 A9 A10	O O O O O O O O O O O	These are the address output terminals, connected to the RAM address terminals.
22	$\overline{\text{WE}}$	O	This is connected to the RAM WE terminal. When a "L level" signal is registered, the RAM will be set to the WRITE mode.
23	$\overline{\text{OE}}$	O	This is connected to the RAM OE terminal. When a "L level" signal is registered, the RAM will be set to the READ mode.
25 26 27 28 29 30 31 32	D8 D7 D6 D5 D4 D3 D2 D1	I/O I/O I/O I/O I/O I/O I/O I/O	These are connected to the RAM data terminals. The output mode is set when the cycle at the data input terminal is WE = "L", and the input mode is set when the cycle is WE = "H".
33	DEP	O	This is the output terminal for the audio frequency characteristics switching signals of the audio filter. The emphasis will be required when "H" is registered.

Terminal number	Terminal code	I/O	Outline of functions
34	$\overline{Q1}$	0	Connected to the DAC input, the parallel signals are output by way of the internal digital filter form these terminals. The output is in alternation from the left and right channels. The output rate for each channel is 88.2kHz. Connect either Q16 or ($\overline{Q16}$), according to the DAC to be used.
35	$\overline{Q2}$	0	
36	$\overline{Q3}$	0	
37	$\overline{Q4}$	0	
38	$\overline{Q5}$	0	
39	$\overline{Q6}$	0	
40	$\overline{Q7}$	0	
41	$\overline{Q8}$	0	
42	$\overline{Q9}$	0	
43	$\overline{Q10}$	0	
44	$\overline{Q11}$	0	
45	$\overline{Q12}$	0	
46	$\overline{Q13}$	0	
47	$\overline{Q14}$	0	
48	$\overline{Q15}$	0	
49	$\overline{Q16}$	0	
50	Q16	0	
51	$\phi 2$	0	This is the crystal clock (2.1609MHz) output.
52	SDO	I/0	This is the serial signal output for the DAC. Using a $\phi 2$ clock beat rate, the signals are output from LSB in the order of L channel 24 bit – R channel 25 bit.
53	SDSY	0	This is the synchronization signal output for the above serial signals. The level is "H" for L channel and "L" for R channel.
56	TEST	I+	This test terminal contains pull-up resistors, and is normally disconnected. Using a "L" signal, it is also possible to input serial signals with the same format as the above serial signals from the SDO terminal into the digital filter.
54	C1F1	0	This monitor output terminal depicts the C1 and C2 error correction operation mode.
55	C1F2	0	
57	C2F1	0	
58	C2F2	0	
59	R/L	0	This is the output terminal for the channel allocation signal of the DAC analog output. "H" is for the R channel, and "L" is for the L channel.
60	SWR	0	This is the degliche signal for the respective channels of the DAC analog output.
61	SWL	0	
62	VDD	I	This is the +5V power supply terminal.
63	XIN	I	A crystal oscillator is connected between these terminals, which are used for the crystal clock (8.6436MHz) oscillation.
64	XOUT	0	

5. IC401 Terminal Functions

Terminal number	Terminal code	I/O	Outline of functions	Active Level

MAIN CIRCUIT DIAGRAM

(FOR USA AND CANADA (A) MODELS)

PRODUCT SAFETY SHOULD BE CONSIDERED WHEN COMPONENT REPLACEMENT IS MADE IN ANY AREA OF A UNIT. THE ⚠ BESIDE A PART IN THE PARTS LIST THE SCHEMATIC DIAGRAM DESIGNATES COMPONENTS IN WHICH SAFETY CAN BE OF SPECIAL SIGNIFICANCE. IT IS PARTICULARLY RECOMMENDED THAT EXACT CATALOGED PARTS BE USED FOR REPLACEMENT OF COMPONENTS WHICH ARE DESIGNATED BY A ⚠, IN THE PARTS LIST AND THE SHADED AREAS ON THE SCHEMATIC DIAGRAM. USE OF SUBSTITUTE REPLACEMENT PARTS WHICH DO NOT HAVE THE SAME SAFETY CHARACTERISTICS AS RECOMMENDED IN FACTORY SERVICE INFORMATION MAY CREATE SHOCK, FIRE OR OTHER HAZARDS.
