# SERVICING PRECAUTIONS

## NOTES REGARDING HANDLING OF THE PICK-UP

### 1. Notes for transport and storage

- 1) The pick-up should always be left in its conductive bag until immediately prior to use.
- 2) The pick-up should never be subjected to external pressure or impact.

Storage in conductive bag

Drop impact

### 2. Repair notes

- 1) The pick-up incorporates a strong magnet, and so should never be brought close to magnetic materials.
- 2) The pick-up should always be handled correctly and carefully, taking care to avoid external pressure and impact. If it is subjected to strong pressure or impact, the result may be an operational malfunction and/or damage to the printed-circuit board.
- 3) Each and every pick-up is already individually adjusted to a high degree of precision, and for that reason the adjustment point and installation screws should absolutely never be touched.
- 4) Laser beams may damage the eyes!  
 Absolutely never permit laser beams to enter the eyes!  
 Also NEVER switch ON the power to the laser output part (lens, etc.) of the pick-up if it is damaged.

NEVER look directly at the laser beam, and don't let contact fingers or other exposed skin.

### 5) Cleaning the lens surface

If there is dust on the lens surface, the dust should be cleaned away by using an air bush (such as used for camera lens). The lens is held by a delicate spring. When cleaning the lens surface, therefore, a cotton swab should be used, taking care not to distort this.

Magnet

How to hold the pick-up

Pressure

Pressure

Cotton swab

Conductive Sheet

### 6) Never attempt to disassemble the pick-up.

Spring by excess pressure. If the lens is extremely dirty, apply isopropyl alcohol to the cotton swab. (Do not use any other liquid cleaners, because they will damage the lens.) Take care not to use too much of this alcohol on the swab, and do not allow the alcohol to get inside the pick-up.

# NOTES REGARDING COMPACT DISC PLAYER REPAIRS

## 1. Preparations

- 1) Compact disc players incorporate a great many ICs as well as the pick-up (laser diode). These components are sensitive to, and easily affected by, static electricity. If such static electricity is high voltage, components can be damaged, and for that reason components should be handled with care.
- 2) The pick-up is composed of many optical components and other high-precision components. Care must be taken, therefore, to avoid repair or storage where the temperature or humidity is high, where strong magnetism is present, or where there is excessive dust.

## 2. Notes for repair

- 1) Before replacing a component part, first disconnect the power supply lead wire from the unit
- 2) All equipment, measuring instruments and tools must be grounded.
- 3) The workbench should be covered with a conductive sheet and grounded.  
When removing the laser pick-up from its conductive bag, do not place the pick-up on the bag. (This is because there is the possibility of damage by static electricity.)
- 4) To prevent AC leakage, the metal part of the soldering iron should be grounded.
- 5) Workers should be grounded by an armband (1M $\Omega$ )
- 6) Care should be taken not to permit the laser pick-up to come in contact with clothing, in order to prevent static electricity changes in the clothing to escape from the armband.
- 7) The laser beam from the pick-up should NEVER be directly facing the eyes or bare skin.

# ESD PRECAUTIONS

## Electrostatically Sensitive Devices (ESD)

Some semiconductor (solid state) devices can be damaged easily by static electricity. Such components commonly are called Electrostatically Sensitive Devices (ESD). Examples of typical ESD devices are integrated circuits and some field-effect transistors and semiconductor chip components. The following techniques should be used to help reduce the incidence of component damage caused by static electricity.

1. Immediately before handling any semiconductor component or semiconductor-equipped assembly, drain off any electrostatic charge on your body by touching a known earth ground. Alternatively, obtain and wear a commercially available discharging wrist strap device, which should be removed for potential shock reasons prior to applying power to the unit under test.
2. After removing an electrical assembly equipped with ESD devices, place the assembly on a conductive surface such as aluminum foil, to prevent electrostatic charge buildup or exposure of the assembly.
3. Use only a grounded-tip soldering iron to solder or unsolder ESD devices.
4. Use only an anti-static solder removal device. Some solder removal devices not classified as "anti-static" can generate electrical charges sufficient to damage ESD devices.
5. Do not use freon-propelled chemicals. These can generate electrical charges sufficient to damage ESD devices.
6. Do not remove a replacement ESD device from its protective package until immediately before you are ready to install it. (Most replacement ESD devices are packaged with leads electrically shorted together by conductive foam, aluminum foil or comparable conductive materials).
7. Immediately before removing the protective material from the leads of a replacement ESD device, touch the protective material to the chassis or circuit assembly into which the device will be installed.

**CAUTION : BE SURE NO POWER IS APPLIED TO THE CHASSIS OR CIRCUIT, AND OBSERVE ALL OTHER SAFETY PRECAUTIONS.**

8. Minimize bodily motions when handling unpackaged replacement ESD devices. (Otherwise harmless motion such as the brushing together of your clothes fabric or the lifting of your foot from a carpeted floor can generate static electricity sufficient to damage an ESD device).

## HD 990

## Basic Specifications

**Specifications****Signal Format**

|                     |  |
|---------------------|--|
| Sampling Frequency: | 32kHz to 96kHz                                   |
| D/A Conversion:     | Multilevel delta-sigma, dual DAC configuration   |
| Oversampling:       | 24-bit/384kHz asynchronous sample rate converter |

**Discrete Analog Output Section**

|                                  |  |
|----------------------------------|--|
| Error Correction:                | Error correction                             |
| Frequency Response:              | 20Hz – 20kHz +0/-0.5dB                       |
| Total Harmonic Distortion (THD): | <0.0006% @ 1kHz                              |
| Dynamic Range:                   | >120dB                                       |
| Signal-to-Noise Ratio:           | 116dB  |
| Channel Separation:              | >115dB                                       |
| Line-Output Level:               | 2.0V RMS (unbalanced)<br>4.0V RMS (balanced) |

**General**

|                                      |  |
|--------------------------------------|--|
| Power Requirement:                   | 100V – 240V 50Hz/60Hz                                  |
| Power Consumption:                   | <20 watts (on)<br><2 watts (standby)                   |
| Dimensions (width x height x depth): | 17-5/16" x 2-1/2" x 13-1/16"<br>(440mm x 64mm x 332mm) |

Depth measurement includes knobs, buttons and connection jacks.  
Height measurement includes feet and chassis.

Weight 8.4 lbs (3.8kg)

## Front Panel Controls

- |   |                                 |
|---|---------------------------------|
| <b>1</b> Main Information Display                         | <b>6</b> Stop                   |
| <b>2</b> Power On/Off (Standby) and Status Mode Indicator | <b>7</b> Skip/Search (Previous) |
| <b>3</b> Open/Close                                       | <b>8</b> Skip/Search (Next)     |
| <b>4</b> Play   | <b>9</b> Display Dimmer         |
| <b>5</b> Pause  |                                 |

**1 Main Information Display:** This display delivers messages and status indications to help you operate the CD player.

**2 Power On/Off (Standby):** Press the button once to turn the CD player on, press it again to put the unit in the Standby mode.

**3 Open/Close:** Press this button to open or close the disc tray.

**4 Play:** Press to initiate playback or to resume playback after Pause has been pressed.

**5 Pause:** Press this button to momentarily pause playback. To resume playback, press the button again. If a CD is playing, the sound will be muted.

**6 Stop:** Press this button to stop the disc currently being played or to exit program mode (see page 11 for complete information).

**7 Skip/Search (Previous):** Press this button to move backward through the music tracks on a CD disc. Keep the button pressed to search backward at one of the available speeds.

**8 Skip/Search (Next):** Press to move forward through the music tracks on a CD. Keep the button pressed to search forward at one of the available speeds.

**9 Display Dimmer:** Press this button to reduce the brightness of the Information Display by 50% or to turn the display off completely in the following order: FULL BRIGHTNESS → HALF BRIGHTNESS → OFF → FULL BRIGHTNESS.

**Important Note:** When the unit is turned off (to Standby), pressing the Play button **4** **10** on the front or on the remote will automatically turn on the player and start playback.

# HD 990

## Rear Panel Connections

- 1 Digital Output
- 2 Audio Outputs
- 3 Remote Control Input
- 4 Remote Control Output
- 5 AC Power Cord
- 6 Coaxial and Optical Digital Inputs
- 7 HRS-Link Output

**1 Digital Output:** Connect this jack to the coaxial or optical digital input of an external digital-to-analog converter for direct access to the digital signals of the CD player or the external digital audio source. DO NOT connect this jack to the standard audio inputs of any device.

**2 Audio Outputs:** Connect these jacks to the CD audio inputs of your receiver, surround processor or preamplifier. If your amplifier features balanced XLR inputs, you may use the XLR outputs instead. Sound quality via balanced connection is usually more dynamic, with even better signal-to-noise ratio. Pin configuration for the XLR Outputs: Pin 1 is Ground, Pin 2 is Plus/Hot, Pin 3 is Minus/Cold.

**3 Remote Control Input:** Connect the output of a remote infrared sensor or the remote control output of another compatible Harman Kardon product. This will enable the remote control system to operate even when the front panel remote sensor is blocked. It will also allow use of the CD player with optional, external control systems.

**4 Remote Control Output:** Connect this jack to the input of another compatible Harman Kardon remote-controlled device to have the remote sensor on the CD player provide signals to other products.

**5 AC Power Cord:** Connect this plug to an AC outlet. If the outlet is switch-controlled, make certain that the switch is in the On position.

**6 Coaxial and Optical Digital Inputs:** Connect these jacks to the coaxial or optical digital output of an external audio source. This will enable you to have the digital-to-analog conversion of that source done by the highgrade audiophile digital-to-analog converters in the HD 990 rather than the (older ones) in the external source, for better audio quality.

**7 HRS-Link Output:** The special High-Resolution Synchronization Link cable (optional) connects to the HRS jack on the matching HK 990 amplifier (or other compatible HK amplifiers) to attain an even higher quality of sound. You need only connect the HRS-Link cable for complete synchronization and audio. No further cable is necessary.

# HD 990

## Remote Control Functions

### HD 990 Remote Control Functions

- 1 Power Off
- 2 Power On
- 3 Numeric Controls
- 4 Program Button
- 5 Clear Button
- 6 Repeat Button
- 7 Repeat A ▶ B Button
- 8 Skip Buttons
- 9 Search Buttons
- 10 Play/Pause Button
- 11 Stop Button
- 12 +10/-10 Buttons
- 13 Random Button
- 14 Time Button
- 15 Check Button
- 16 Open/Close Button
- 17 Display Button
- 18 Folder Buttons
- 19 Source Button
- 20 Info Button

- 1 Power Off:** Press this button to put the unit in the Standby mode.
- 2 Power On:** Press this button to turn on the CD player. Note that in order for the Power On button to operate, AC power must be applied to the unit, and the Status Mode Indicator **2** should glow orange (see page 9 for more information). The unit will also turn on when the Play **4** **10** or Open/Close **3** **16** button is pressed.
- 3 Numeric Controls:** Press these buttons to select a specific track on a disc. The unit will immediately search for the track and begin to play it. For tracks 1 through 9 on a disc, you need only press the desired number. For tracks 10 and above, the second and third digit of the number must be entered within two seconds of the first digit. (See page 9 for more information.) These buttons are also used to enter track numbers into the memory for pre-programmed play lists. (See page 11 for complete information on programming the CD player.)
- 4 Program Button:** Press this button to begin the process of programming the CD player to play the tracks on a disc in a specific order. Once the button is pressed, enter each of the desired track numbers in quick succession using the Numeric Controls button **3**. When you have entered the tracks to be played, press the Play button **10** to begin the programmed sequence. (See page 11 for complete information on programming the CD player.)

- 5 Clear Button:** Press this button to remove selected or all tracks from the programmed sequence. (See page 11 for complete information on programming the CD player.)
- 6 Repeat Button:** Press this button once to repeat only the track that is currently being played, and note that the Repeat and One indicators will light in the Information Display. Press the button a second time so that the Repeat and All indicators are illuminated to repeat all tracks on the disc. (See page 12 for more information on Repeat Play.)
- 7 Repeat A-B Button:** Press this button to repeat a segment of the disc. Press the button once to mark the start of the portion to be repeated. Press it again at the end of the desired sequence. The marked passage will play continuously until the Stop button **11** is pressed. (See page 12 for more information on Repeat Play.)
- 8 Skip Buttons:** Press one of these buttons to move to the next track **▶▶▶**, or to move back to the previous track **◀◀◀** (see page 10).
- 9 Search Buttons:** Press one of these buttons to search forward **▶▶▶** or backward **◀◀◀** through a disc to locate a particular portion of the selection being played. Holding the buttons pressed for some seconds will increase the search speed (see page 10).
- 10 Play/Pause Button:** Press this button to start the playback of a CD. If the CD drawer is open, pressing this button will automatically close the drawer. Press this button once during playback to momentarily stop a disc. When the button is pressed again, the disc will resume play at the point it was stopped.
- 11 Stop Button:** Press this button to stop the disc currently being played or to escape from the program mode (see page 11 for complete information).
- 12 +10/-10 Buttons:** Press the +10 button to move to the 10th track after the current track playing. Press the -10 button to move to the 10th track before the track currently playing.
- 13 Random Button:** Press this button to have all of the tracks played in a random order. (See page 9 for more information.)
- 14 Time Button:** Press this button to select the time display. In normal operation, the display will show the running time of a track being played. Press the button once to check the time remaining for the track in play. Press the button a third time to view the elapsed time for the CD being played, and a last time for the total play time remaining for the disc in play (see page 10).
- 15 Check Button:** Press this button to check the order of tracks programmed into the CD player's memory. (See page 11 for complete information on programming the CD player.)
- 16 Open/Close Button:** Press this button to open or close the disc drawer. The drawer may also be closed by pressing the Play button **4** **10** or by gently pressing the edge of the drawer. However, we do not recommend pushing the drawer, as damage to the transport mechanism may result.
- 17 Display Button:** Press this button once to dim the front panel display to half brightness. Press it again to turn the display lights off completely. Another press will return the display to normal brightness.
- 18 Folder Buttons:** Press the Folder + button to move to the next folder with MP3 data, and the Folder - button to move to the previous folder with MP3 data.
- 19 Source Button:** Press this button to switch between the CD player's output and the output of other sources connected to one of the digital inputs **6** (see page 10 for more information).
- 20 Info Button:** Pressing this button consecutive times shows the different CD text information available on a CD, or ID3 and other information available on a disc with MP3 data. To return to normal Track number/Time indication, press the Time button **14**. (See page 10 for more information.)

## HD 990

## Operation

## Operation

### Loading and Unloading Discs

To load a disc, first turn the unit on (if it is not already) by pressing the Power Switch **2** on the front panel or the Power On button **2** on the remote, then press the Open/Close button **3** **16**, taking care to make certain that the space in front of the drawer is not obstructed. When the unit is turned off (to Standby), pressing the Play button **4** **10** on the front or on the remote will automatically turn on the CD player and start playback. Also, pressing the Open/Close button from Standby switches on the player directly and opens the drawer.

Load the disc in the tray with the printed (label) side facing up. Make certain that the disc is centered in the tray. Either 12cm (5") or 8cm (3") discs may be used. When an 8cm disc is played, it should be carefully centered within the smaller ridges inside the cassette drawer.

To retract the drawer back into the player after loading a disc, press the Open/Close button **3** **16**. When the drawer is closed the display will indicate the total number of tracks on the disc and the total running time of the disc.

The drawer will also close when the Play button **4** **10** is pressed. The drawer will close and the disc will start playing the first track.

To remove a disc from the player, press the Open/Close button **3** **16**. The drawer will open, allowing the disc to be removed.

**Disc Handling Notes:** When loading or unloading discs, it is best to hold them by the edges. While compact discs are very reliable, rough handling may damage them. Avoid scratching the bottom (non-printed) side of discs, or any handling that will leave fingerprints.

To avoid damage to the disc and player, always seat discs so that they are centered in the tray. Do not lift the player while the disc tray is opening or closing, as this may cause the disc to unseat from the tray and possibly jam.

### Normal Play

To play a disc, first turn the HD 990 on using the Power Switch **2** on the front panel or the Power On button **2** on the remote control. When the unit is turned off (to Standby), pressing the Play button **4** **10** on the front or on the remote will automatically turn on the CD player and start playback.

To load or change a disc, open the disc drawer by pressing the Open/Close button **3** **16**. Place a disc in the tray following the instructions shown above.

Pressing the Open/Close button once a disc has been carefully seated will close the disc drawer while the message "Closing" will appear in the information display. As soon as the tray is closed the display will show the message "Reading" while the table of contents (TOC) of the disc is read. Note that particularly with CD-RW discs this tracking may take some time due to the reflectibility and data structure being different from normal discs. Afterward, the information display will show the total number of tracks and the total running time of the disc. Note that with MP3 CDs, the total running time will not be shown.

The drawer will also close when the Play button **4** **10** is pressed. The drawer will close and the disc will start playing the first track.

To play all of the tracks on the disc in order, press the Play button **4** **10**. A play symbol **▶** will appear in the Main Information Display **1**, as well as indication of track number and time elapsed.

To play all of the tracks in random order, press the Random button **13**. The Random indicator will light when that mode is in use. Random can be activated also while a track is playing. When Random is activated while programmed play is in use (see page 11), all programmed tracks will be played in random order.

You may also select a specific track by pressing the Skip buttons **7** **8** until the desired track number is displayed (see page 10). The track may also be selected directly by entering the track number via the Numeric Controls **6**, simply enter the track number by pressing the buttons that correspond to the desired track. Note that when a two- or three-digit track number is being entered, the second and third digit of the number must be pressed within two seconds of the first digit. After the track is selected, press the Play button **4** **10**.

While the disc is playing, the track being played will show as a number in the middle of the display just below the word "Track." The elapsed time of the track being played will also appear in the display. As a disc plays, the track numbers will change, and the time will reset to **00 : 00** at the start of each new track.

To momentarily pause the play of a disc, press the Pause button **5** **10**. Note that a red pause indication **||** will appear in the display to remind you that the disc is paused. Press either the Play button **4** **10** or the Pause button **5** **10** to resume normal play.

To stop the disc, press the Stop button **6** **11**. When the Stop button is pressed the display again will show the total number of tracks and total running time of the disc.

To remove a disc from the player, press the Open/Close button **3** **16**. To prevent dirt and dust from entering the unit, do not leave the disc tray open.

To place the unit in a Standby mode, press the Power Switch **2** on the front panel or the Power Off button **1** on the remote. The display will show a "Standby" message for a moment and the Status Mode Indicator will glow orange, indicating that the unit is off, but ready to accept a Power On command from the remote. If the disc drawer is open, it will automatically close when the unit is placed in the Standby mode. This ensures that the unit will not be harmed by dust, dirt or inadvertent damage to the drawer mechanism.

Note that the unit is not removed from AC main power when it is in the Standby mode but its power consumption is reduced to a low value. To remove the AC power completely from the unit its AC Power Cord **5** must be plugged into a switch-controlled AC outlet that is turned off. We recommend using the switched AC outlet on the rear side of a receiver or amplifier. When that AC outlet will be turned on, the HD 990 will always turn to the Standby mode even if it was on before the AC power was removed.

### Display Dim

In some situations, it may be desirable to reduce the brightness of the display or to turn it off completely. To do this, press the Display button **17** on the remote or the Display Dimmer button **9** on the main unit to dim the display to half brightness. Press it again to turn the display off. A third press will return the display to normal level.

## HD 990

## Operation

**Time Display**

The CD player's time display is capable of showing a wide range of information about a CD.

In normal operation the display will show the total running time of a CD after the disc is first put in the unit. When the disc is played, the display will show the running time of a track in play. Each time the track changes, the time display will reset to  $\square\square : \square\square$  and begin to increase again as the new track plays.

To view the time remaining on an individual track, press the Time button **14** on the remote once. The display will now show the time left in the track in play, and a “-” will light in front of the time display as a reminder of the display's status.

To view the elapsed time of the disc currently playing, press the Time button **14** again.

To view the total time remaining to play on the disc, press the Time button **14** again, a number greater than the formerly shown track remaining time (except the last track of the disc is played) will appear in the display, again with a “-” in front.

When the Time button is pressed again the display will return to show the running time of the track in play.

**Note:** When a program is played (see page 11), all time modes are selectable, too, except the total time remaining on the disc.

The Time mode is not available when playing back discs containing compressed MP3 data.

**Disc Info**

The HD 990 is able to show CD-text information from CD discs, as well as ID3 tag and other information from discs containing MP3 data. Please note that not all CDs contain CD-text. In that case, the Main Information Display will show “No CD-Text” and will return to the Time mode previously selected. If you play back a CD that contains CD-text information the Text indicator will light in the Information display **11**. During play, the artist name, track name and album name can be made visible on the Main Information Display **11** by pressing the Info button **20** several consecutive times. Each press of the Info button **20** will show the next line of information. If the text is longer than 12 characters, the text will scroll continuously from right to left on the Main Information Display **11**.

If you play a disc with MP3 data, the file name, the data rate (constant bit rate CBR and variable bit rate VBR) and folder/root name can be made visible on the Main Information Display **11** by pressing the Info button **20** several consecutive times. If ID3 tag information is included in the MP3 data, the artist name, track name and album name can also be made visible. Each press of the Info button **20** will show the next line of information. If the text is longer than 12 characters, the text will scroll continuously from right to left on the Main Information Display **11**. To return to the normal track/time indication press the Time button **14**.

**Search**

If you wish to quickly scan through a disc to locate a particular passage or track, press and hold the Search buttons. The Forward Search button **8 9** plays the disc forward in high speed, while the Reverse Search button **7 9** plays the disc backward in high speed. Holding the buttons pressed will triple the search speed after 3 seconds. When the desired part of the disc is heard, release the Search button to resume normal play speed.

**Skip**

To move from one track on the disc to another during play mode, press one of the Skip buttons. Pressing the Forward Skip button **8 8** will move you forward through the disc, one track at a time, while pressing the Reverse Skip button **7 8** once will move you back to the start of the actual track (as long as >3 seconds of the track have elapsed), and pressing it multiple times will move you back one track at a time. Holding any Skip button pressed enables scanning quickly through all tracks on the disc, as described previously.

The Skip buttons may be used when the CD player is either playing or stopped. If the unit is stopped, the Skip buttons may be used to locate the first track to be played. The Play button **4 10** must be pressed to begin play. If the Skip buttons are used while the unit is already playing (as described above), the audio output will stop while the new track is located, and play will automatically resume with the new track.

If the Skip buttons are pressed when program play is in use (see page 11), the unit will move from one programmed track to another.

**Folder**

Discs containing compressed MP3 data often contain several directories and folders with data. To show the name of the current directory or folder playing, press one of the Folder +/- buttons once. To change to the next directory or folder, press the Folder + button **18** again within three seconds after the first press. For the previous directory or folder, press the Folder - button **18**.

The CD player counts each directory and folder as one folder. The player starts to count in the main directory, and pressing the Folder + button **18** will start playback of the first folder in this directory. Pressing the Folder + button **18** again will start playback of the second folder in the directory. Continue pressing the Folder + button **18** until the last folder in the directory has been played. At this time, pressing the Folder + button **18** will start playing the next directory.

Note that the Folder +/- buttons do not function when the CD player is playing the tracks of a disc containing MP3 data in random order.

**+10/-10**

Due to the compressed format of MP3 data, discs can contain several hundred audio tracks. In order to find the right track within these hundreds of tracks, the CD player lets you skip through the contents of your disc in steps of 10 tracks. Press the +10 button **12** to change to the 10th track after the track currently playing. If there are less than 10 tracks remaining on the disc, the last track will be played. Press the -10 button **12** to change to the 10th track before the track currently playing. If there are less than 10 tracks since the beginning of the disc, the first track will be played.

**Input/Source Selection**

A unique feature of the HD 990 is that it allows other source components to be played back using the high-grade audiophile digital-to-analog convertors inside the CD player. Especially source components using older and less powerful convertors will benefit from this feature.

Connect the coaxial or optical digital output of the external source component to the Coaxial or Optical Digital Inputs **6** on the rear panel of the CD player.

In order to select the external source component for playback, press the Source Button **19**. The first press of this button will show the input currently played, indicated by “Player” for the CD player, “Coaxial In” (Digital in 1) or “Optical In” (Digital in 2). Within 2 seconds, press the Source Button **19** again until the requested source has been selected.

Note that in order to hear the sound from the external source when connected via the HD 990, the input of your amplifier or receiver should be the one to which the HD 990 is connected.

**Important Note:** The player will only output 2-channel PCM signals. Neither multi-channel Dolby Digital or DTS nor their 2-channel downmix signals will be.

## HD 990

## Programmed Play Operation

## Programmed Play

The HD 990's advanced programming capability enables you to select certain tracks, to preset the order in which these tracks play, and to clear specific programmed tracks after the program was made.

Programmed play allows you to program up to 32 tracks into the HD 990's memory. To begin programming the CD player, make sure that the unit is in Stop mode, then press the Program button **4**. The Program indicator will light in the Information Display **1**, the number **001** will blink below the Program indicator, showing the track number selected, and **PR OG - 01 : 001** will appear in the Information Display, replacing the track time. This indicates that you are about to program the first track.

You may now begin to enter the tracks in the order in which you wish to have them play. To select a track on the disc, press the Numeric buttons **3** corresponding to the desired track. Be certain to enter the second and/or third number of two- or three-digit numbers within two seconds after the first number was entered. You may also use the Skip buttons **7 8 9** to select a track. When the track is selected, press the Program button **4**. Note that the program-step indication on the right side of the Information Display will change to **PR OG - 02 : 001**.

You may now select another track for the next program step, following the instructions shown above. When the track is selected, press the Program button **4** again. Repeat this procedure for each program step until you have completed the desired programming. Press the Stop button **6 11** once to complete a program sequence, or press Play **4 10** to begin immediate play of a program sequence. If the maximum of 99 program steps is reached, the program-step indication at the right side of the Information Display will go out, and the disc and track that have been programmed as the first program step will be shown.

Once a program list has been entered, press the Play button **4 10** to begin listening to the sequence. After the entire program has been played, the CD player will stop. As long as the Stop button **6 11** has not been pressed twice and the Program indicator remains lit, you may repeat the programmed-play sequence again by pressing the Play button **4 10**.

### Editing a Program

A program can be edited even after it was completed by pressing the Stop button **6 11** once: Each time you press the Program button **4** the track number and program step number will be displayed in the programmed order, but with steady track numbers (not blinking) in contrast to the programming mode. As soon as the track number starts blinking (this will take 1 second), the appropriate program step number shown at the left side is not programmed yet; now you can change the track number with the Skip buttons **7 8 9** or the Numeric buttons **3** as described above and add it to the program list by pressing the Program button **4**.

Pressing the Stop button **6 11** twice will return to normal mode and the Program indicator will go out, but the program will stay in memory and can be recalled easily by pressing the Program button. But pressing the Clear button **5** (see below) or opening the disc drawer by pressing Open/Close **3 16**, will erase the program information from the unit's memory.

### Checking Program Contents

To check the contents of a program while the unit is stopped at first note that the Program indicator is lit (otherwise press Program) and the program step indication **PR OG - 01 :** is not lit (otherwise press Stop once). Each time the Check button **15** is pressed now, the Information Display will step through each of the programmed tracks. To cancel the check mode press the Stop button twice.

### Clearing Programs

To clear a single track from the program list, press the Program button **4** until the track to be deleted from the program sequence appears in the Information Display **1**. When the track number appears, press the Clear button **5** once, the track selected will be deleted and the track number will be replaced by the next programmed one. Now you can delete that track too with the Clear button or press the Stop button **6 11** and again the Program **4** button to select lower track numbers to be deleted.

When the unit is stopped and the program step indication **PR OG - 01 : 001** is not lit (otherwise press Stop once), but the Program indicator is still lit (otherwise press Program **4**) you may clear the entire contents of a program by pressing the Clear button **5**.

**Important Note:** When you've pressed the Program button **4** (once or several times) and the track number on the right starts blinking, the appropriate program step number (e.g. **PR OG - 02 : 001**) shown at the left display side is not programmed yet. Do not continue to press the Program button now, otherwise the track selected will be memorized too. If you're in doubt, press Stop button **6 11** and start the procedure again with Program **4**.

**Important Note:** Tracks programmed as described above can be played repeatedly too. When you press Repeat **6** once after a program is created (the Program indicator must be lit, otherwise press Program) and the program is played, the Repeat 1 indicator will light and the track currently playing will be repeated continuously. If Repeat is pressed twice, "Repeat All" will be displayed, all programmed tracks will be played subsequently and the sequence will be repeated continuously until the Stop button is pressed.

## HD 990

## Repeat Play Operation

## Repeat Play

The HD 990's programming system enables you to repeat either a single track, the entire disc (respectively all programmed tracks) or a specially programmed passage that you select.

### Repeat One Track

To repeat the track in play, press the Repeat button **6** once. The Repeat and 1 indicators will light and the track will continue to play over and over again continuously. If the track is changed by pressing the Skip buttons **7** **8** **8** while the Repeat function is in use, the newly selected track will be played normally. To stop the repeat play, press the Stop button **6** **11** or press the Repeat button **6** until the Repeat indicator goes out.

### Repeat All Tracks

To repeat all of the tracks on a disc during play mode, press the Repeat button **6** until the Repeat and All indicators light up. When you see these indicators, the entire disc or all programmed tracks will play through to the end, and then start again from the beginning. The disc will play continually until the Stop button **6** **11** is pressed.

### Repeat A-B

The CD player may be programmed to repeat any section within a track, or a complete passage or program that includes material in a series of tracks.

To program the unit for A-B play, first locate the point on the disc where you wish to begin the repeated section. At that point, press the Repeat A-B button **7**. The Repeat indicators will light in the Information Display and an A- indicator to show that the program process has started. Let the disc continue to play or press the Search **▶▶▶** button **7** **8** **8** or Skip **▶▶▶|** button **7** **8** **8** on the front or remote until you have reached the end of the section to be repeated. When the end point is reached, press the Repeat A-B button **7** again. Note that the Repeat and A-B indicators will now be illuminated.

Once the Repeat A-B button **7** is pressed for the second time to complete the programming, the CD player will automatically go to the beginning of the selected passage and continue to play the section over and over.

To resume normal play press the Repeat A-B button **7** again. The Repeat and A-B indicators will go out, and the rest of the disc will play normally.

**Important Note:** Tracks programmed as described in "Programmed Play" on page 11 can be repeated too. When you press Repeat **6** once after a program is created (the Program indicator must be lit, otherwise press Program **4**) and the program is played, the Repeat 1 indicator will light and the track currently playing will be repeated continuously. If Repeat is pressed twice, Repeat All will be displayed, all programmed tracks will be played subsequently and the sequence will be repeated continuously until Stop **6** **11** is pressed.

**Photo Modules for PCM Remote Control Systems**

**Description**

The HS0038B – series are miniaturized receivers for infrared remote control systems. PIN diode and preamplifier are assembled on lead frame, the epoxy package is designed as IR filter.

The demodulated output signal can directly be decoded by a microprocessor. HS0038B is the standard IR remote control receiver series, supporting all major transmission codes.

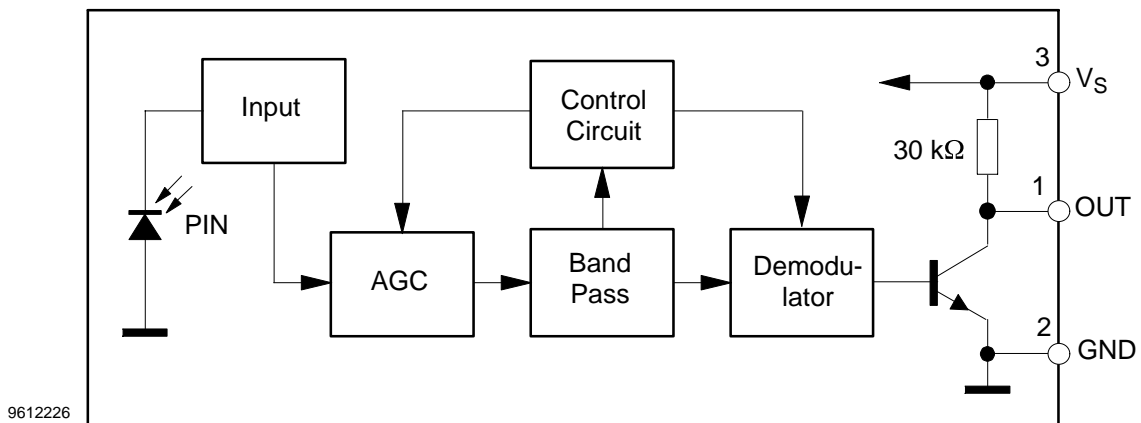

14 500

**Features**

- Photo detector and preamplifier in one package
- Internal filter for PCM frequency
- TTL and CMOS compatibility
- Output active low
- Improved shielding against electrical field disturbance
- Suitable burst length  $\geq 10$  cycles/burst
- Low power consumption
- High immunity against ambient light
- Continuous data transmission possible (800 bit/s)
